libstdc++

Generated by Doxygen 1.9.1

1 Todo List

Module mathsf

Provide accuracy comparisons on a per-function basis for a small number of targets.

Member __gnu_cxx::distance (_InputIterator __first, _InputIterator __last, _Distance &__n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_map< _Key, _Tp, _HashFn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_multimap< _Key, _Tp, _HashFn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_multiset< _Value, _HashFcn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::hash_set< _Value, _HashFcn, _EqualKey, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::power (_Tp __x, _Integer __n, _MonoidOperation __monoid_op)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::power (_Tp __x, _Integer __n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample (_InputIterator __first, _InputIterator __last, _RandomAccessIterator __out_first, _RandomAccessIterator __out_last, _RandomNumberGenerator &__rand)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member __gnu_cxx::random_sample_n (_ForwardIterator __first, _ForwardIterator __last, _OutputIterator __out, const _Distance __n, _RandomNumberGenerator &__rand)

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::rb_tree< _Key, _Value, _KeyOfValue, _Compare, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::rope< _CharT, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class __gnu_cxx::slist< _Tp, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Class std::basic_string< _CharT, _Traits, _Alloc >

Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Member std::regex_traits< _Ch_type >::transform_primary (_Fwd_iter __first, _Fwd_iter __last) const

Implement this function correctly.

2 Module Documentation

2.1 Adaptors for pointers to functions

Collaboration diagram for Adaptors for pointers to functions:

Functions

- template<typename _Arg , typename _Result >
  pointer_to_unary_function< _Arg, _Result > std::ptr_fun (_Result(*__x)(_Arg))
- template<typename _Arg1 , typename _Arg2 , typename _Result >
  pointer_to_binary_function< _Arg1, _Arg2, _Result > std::ptr_fun (_Result(*__x)(_Arg1, _Arg2))

2.1.1 Detailed Description

The advantage of function objects over pointers to functions is that the objects in the standard library declare nested typedefs describing their argument and result types with uniform names (e.g., `result_type` from the base classes `unary_function` and `binary_function`). Sometimes those typedefs are required, not just optional.

Adaptors are provided to turn pointers to unary (single-argument) and binary (double-argument) functions into function objects. The long-winded functor `pointer_to_unary_function` is constructed with a function pointer `f`, and its `operator()` called with argument `x` returns `f(x)`. The functor `pointer_to_binary_function` does the same thing, but with a double-argument `f` and `operator()`.

The function `ptr_fun` takes a pointer-to-function `f` and constructs an instance of the appropriate functor.

2.1.2 Function Documentation

2.1.2.1 ptr_fun() [1/2]

```
template<typename _Arg , typename _Result >
pointer_to_unary_function<_Arg, _Result> std::ptr_fun (
            _Result(*)(_Arg) __x )  [inline]
```

One of the adaptors for function pointers.

Definition at line 1100 of file stl_function.h.

2.1.2.2 ptr_fun() [2/2]

```
template<typename _Arg1 , typename _Arg2 , typename _Result >
pointer_to_binary_function<_Arg1, _Arg2, _Result> std::ptr_fun (
            _Result(*)(_Arg1, _Arg2) __x )  [inline]
```

One of the adaptors for function pointers.

Definition at line 1126 of file stl_function.h.

2.2 Adaptors for pointers to members

Collaboration diagram for Adaptors for pointers to members:

Functions

- template<typename _Ret , typename _Tp >
  mem_fun_t< _Ret, _Tp > **std::mem_fun** (_Ret(_Tp::*__f)())
- template<typename _Ret , typename _Tp , typename _Arg >
  mem_fun1_t< _Ret, _Tp, _Arg > **std::mem_fun** (_Ret(_Tp::*__f)(_Arg))
- template<typename _Ret , typename _Tp >
  mem_fun_ref_t< _Ret, _Tp > **std::mem_fun_ref** (_Ret(_Tp::*__f)())
- template<typename _Ret , typename _Tp , typename _Arg >
  mem_fun1_ref_t< _Ret, _Tp, _Arg > **std::mem_fun_ref** (_Ret(_Tp::*__f)(_Arg))

2.2.1 Detailed Description

There are a total of 8 = 2^3 function objects in this family. (1) Member functions taking no arguments vs member functions taking one argument. (2) Call through pointer vs call through reference. (3) Const vs non-const member function.

All of this complexity is in the function objects themselves. You can ignore it by using the helper function mem_fun and mem_fun_ref, which create whichever type of adaptor is appropriate.

2.3 Algorithms

Collaboration diagram for Algorithms:

Modules

- Generalized Numeric operations
- Mutating
- Non-Mutating
- Sorting

2.3.1 Detailed Description

Components for performing algorithmic operations. Includes non-modifying sequence, modifying (mutating) sequence, sorting, searching, merge, partition, heap, set, minima, maxima, and permutation operations.

2.4 Allocators

Collaboration diagram for Allocators:

Files

- file scoped_allocator

Classes

- class std::allocator< _Tp >
- struct std::allocator_traits< _Alloc >
- struct std::uses_allocator< _Tp, _Alloc >

Typedefs

- template<typename _Tp >
  using std::__allocator_base = __gnu_cxx::new_allocator< _Tp >

Functions

- template<typename _T1 , typename _T2 >
  constexpr bool **std::operator!=** (const allocator< _T1 > &, const allocator< _T2 > &) noexcept
- template<typename _OutA1 , typename _OutA2 , typename... _InA>
  bool **operator!=** (const scoped_allocator_adaptor< _OutA1, _InA... > &__a, const scoped_allocator_adaptor< _OutA2, _InA... > &__b) noexcept
- template<typename _T1 , typename _T2 >
  constexpr bool **std::operator==** (const allocator< _T1 > &, const allocator< _T2 > &) noexcept
- template<typename _OutA1 , typename _OutA2 , typename... _InA>
  bool **operator==** (const scoped_allocator_adaptor< _OutA1, _InA... > &__a, const scoped_allocator_adaptor< _OutA2, _InA... > &__b) noexcept

2.4.1 Detailed Description

Classes encapsulating memory operations.

2.4.2 Typedef Documentation

2.4.2.1 __allocator_base `template<typename _Tp >`

```
using std::__allocator_base = typedef __gnu_cxx::new_allocator<_Tp>
```

An alias to the base class for std::allocator.

Used to set the std::allocator base class to __gnu_cxx::new_allocator.

Template Parameters

_Tp	Type of allocated object.

Definition at line 48 of file c++allocator.h.

2.5 Arithmetic Classes

Collaboration diagram for Arithmetic Classes:

Classes

- struct std::divides< _Tp >
- struct std::minus< _Tp >
- struct std::modulus< _Tp >
- struct std::multiplies< _Tp >
- struct std::negate< _Tp >
- struct std::plus< _Tp >

Macros

- #define **__cpp_lib_transparent_operators**

2.5.1 Detailed Description

Because basic math often needs to be done during an algorithm, the library provides functors for those operations. See the documentation for the base classes for examples of their use.

2.6 Array creation functions

Collaboration diagram for Array creation functions:

Functions

- template<typename _Tp , size_t _Nm, size_t... _Idx>
  constexpr array< remove_cv_t< _Tp >, _Nm > **std::experimental::__to_array** (_Tp(&__a)[_Nm], index_sequence< _Idx... >)
- template<typename _Dest = void, typename... _Types>
  constexpr array< typename __make_array_elem< _Dest, _Types... >::type, sizeof...(_Types)> std::experimental::make_array (_Types &&... __t)
- template<typename _Tp , size_t _Nm>
  constexpr array< remove_cv_t< _Tp >, _Nm > std::experimental::to_array (_Tp(&__a)[_Nm]) noexcept(is_nothrow_constructible< remove_cv_t< _Tp >, _Tp & >::value)

2.6.1 Detailed Description

Array creation functions as described in N4529, Working Draft, C++ Extensions for Library Fundamentals, Version 2

2.6.2 Function Documentation

2.6.2.1 make_array()

```
template<typename _Dest = void, typename... _Types>
constexpr array<typename __make_array_elem<_Dest, _Types...>::type, sizeof...(_Types)> std::experimental::fundamentals_v2::make_array (
            _Types &&... __t ) [constexpr]
```

Create a std::array from a variable-length list of arguments.

Definition at line 86 of file experimental/array.

2.6.2.2 to_array()

```
template<typename _Tp , size_t _Nm>
constexpr array<remove_cv_t<_Tp>, _Nm> std::experimental::fundamentals_v2::to_array (
            _Tp(&) __a[_Nm] ) [constexpr], [noexcept]
```

Create a std::array from an array.

Definition at line 101 of file experimental/array.

2.7 Associative

Collaboration diagram for Associative: Associative containers allow fast retrieval of data based on keys.

Each container type is parameterized on a `Key` type, and an ordering relation used to sort the elements of the container.

All associative containers must meet certain requirements, summarized in `tables`.

2.8 Atomics

Classes

- struct std::__atomic_base< _ITp >
- struct std::atomic< _Tp >

Macros

- #define **_GLIBCXX20_INIT**(I)
- #define **_GLIBCXX20_INIT**(I)
- #define ATOMIC_BOOL_LOCK_FREE
- #define **ATOMIC_CHAR16_T_LOCK_FREE**
- #define **ATOMIC_CHAR32_T_LOCK_FREE**
- #define **ATOMIC_CHAR_LOCK_FREE**
- #define **ATOMIC_FLAG_INIT**
- #define **ATOMIC_INT_LOCK_FREE**
- #define **ATOMIC_LLONG_LOCK_FREE**
- #define **ATOMIC_LONG_LOCK_FREE**
- #define **ATOMIC_POINTER_LOCK_FREE**
- #define **ATOMIC_SHORT_LOCK_FREE**
- #define **ATOMIC_VAR_INIT**(_VI)
- #define **ATOMIC_WCHAR_T_LOCK_FREE**

Typedefs

- template<typename _Tp >
  using **std::__atomic_diff_t** = typename atomic< _Tp >::difference_type
- typedef unsigned char **std::__atomic_flag_data_type**
- template<typename _Tp >
  using **std::__atomic_val_t** = __type_identity_t< _Tp >
- typedef atomic< bool > std::atomic_bool
- typedef atomic< char > std::atomic_char
- typedef atomic< char16_t > std::atomic_char16_t
- typedef atomic< char32_t > std::atomic_char32_t
- typedef atomic< int > std::atomic_int
- typedef atomic< int16_t > std::atomic_int16_t
- typedef atomic< int32_t > std::atomic_int32_t
- typedef atomic< int64_t > std::atomic_int64_t
- typedef atomic< int8_t > std::atomic_int8_t
- typedef atomic< int_fast16_t > std::atomic_int_fast16_t
- typedef atomic< int_fast32_t > std::atomic_int_fast32_t
- typedef atomic< int_fast64_t > std::atomic_int_fast64_t
- typedef atomic< int_fast8_t > std::atomic_int_fast8_t
- typedef atomic< int_least16_t > std::atomic_int_least16_t
- typedef atomic< int_least32_t > std::atomic_int_least32_t
- typedef atomic< int_least64_t > std::atomic_int_least64_t
- typedef atomic< int_least8_t > std::atomic_int_least8_t
- typedef atomic< intmax_t > std::atomic_intmax_t
- typedef atomic< intptr_t > std::atomic_intptr_t
- typedef atomic< long long > std::atomic_llong
- typedef atomic< long > std::atomic_long
- typedef atomic< ptrdiff_t > std::atomic_ptrdiff_t
- typedef atomic< signed char > std::atomic_schar
- typedef atomic< short > std::atomic_short
- typedef atomic< size_t > std::atomic_size_t
- typedef atomic< unsigned char > std::atomic_uchar

- typedef atomic< unsigned int > std::atomic_uint
- typedef atomic< uint16_t > std::atomic_uint16_t
- typedef atomic< uint32_t > std::atomic_uint32_t
- typedef atomic< uint64_t > std::atomic_uint64_t
- typedef atomic< uint8_t > std::atomic_uint8_t
- typedef atomic< uint_fast16_t > std::atomic_uint_fast16_t
- typedef atomic< uint_fast32_t > std::atomic_uint_fast32_t
- typedef atomic< uint_fast64_t > std::atomic_uint_fast64_t
- typedef atomic< uint_fast8_t > std::atomic_uint_fast8_t
- typedef atomic< uint_least16_t > std::atomic_uint_least16_t
- typedef atomic< uint_least32_t > std::atomic_uint_least32_t
- typedef atomic< uint_least64_t > std::atomic_uint_least64_t

2.8.1 Detailed Description

Components for performing atomic operations.

2.8.2 Macro Definition Documentation

2.8.2.1 ATOMIC_BOOL_LOCK_FREE `#define ATOMIC_BOOL_LOCK_FREE`

Lock-free property.

0 indicates that the types are never lock-free. 1 indicates that the types are sometimes lock-free. 2 indicates that the types are always lock-free.

Definition at line 49 of file atomic_lockfree_defines.h.

2.8.3 Typedef Documentation

2.8.3.1 atomic_bool `typedef atomic<bool> std::atomic_bool`

atomic_bool

Definition at line 991 of file atomic.

2.8.3.2 atomic_char `typedef atomic<char> std::atomic_char`

atomic_char

Definition at line 994 of file atomic.

2.8.3.3 atomic_char16_t `typedef atomic<char16_t> std::atomic_char16_t`

atomic_char16_t

Definition at line 1035 of file atomic.

2.8.3.4 atomic_char32_t `typedef atomic<char32_t> std::atomic_char32_t`

atomic_char32_t

Definition at line 1038 of file atomic.

2.8.3.5 atomic_int `typedef atomic<int> std::atomic_int`

atomic_int

Definition at line 1009 of file atomic.

2.8.3.6 atomic_int16_t `typedef atomic<int16_t> std::atomic_int16_t`

atomic_int16_t

Definition at line 1051 of file atomic.

2.8.3.7 atomic_int32_t `typedef atomic<int32_t> std::atomic_int32_t`

atomic_int32_t

Definition at line 1057 of file atomic.

2.8.3.8 atomic_int64_t `typedef atomic<int64_t> std::atomic_int64_t`

atomic_int64_t

Definition at line 1063 of file atomic.

2.8.3.9 atomic_int8_t `typedef atomic<int8_t> std::atomic_int8_t`

atomic_int8_t

Definition at line 1045 of file atomic.

2.8.3.10 atomic_int_fast16_t `typedef atomic<int_fast16_t> std::atomic_int_fast16_t`

atomic_int_fast16_t

Definition at line 1101 of file atomic.

2.8.3.11 atomic_int_fast32_t `typedef atomic<int_fast32_t> std::atomic_int_fast32_t`

2.14.1 Detailed Description

2.14.2 Function Documentation

2.14.2.1 operator"!=() [1/4]

```
bool std::operator!= (
            const std::bernoulli_distribution & __d1,
            const std::bernoulli_distribution & __d2 )  [inline]
```

Return true if two Bernoulli distributions have different parameters.

Definition at line 3690 of file random.h.

2.14.2.2 operator"!=() [2/4]

```
template<typename _IntType >
bool std::operator!= (
            const std::binomial_distribution< _IntType > & __d1,
            const std::binomial_distribution< _IntType > & __d2 )  [inline]
```

Return true if two binomial distributions are different.

Definition at line 3965 of file random.h.

2.14.2.3 operator"!=() [3/4]

```
template<typename _IntType >
bool std::operator!= (
            const std::geometric_distribution< _IntType > & __d1,
            const std::geometric_distribution< _IntType > & __d2 )  [inline]
```

Return true if two geometric distributions have different parameters.

Definition at line 4144 of file random.h.

2.14.2.4 operator"!=() [4/4]

```
template<typename _IntType >
bool std::operator!= (
            const std::negative_binomial_distribution< _IntType > & __d1,
            const std::negative_binomial_distribution< _IntType > & __d2 )  [inline]
```

Return true if two negative binomial distributions are different.

Definition at line 4398 of file random.h.

2.14.2.5 operator<<() [1/2]

```
template<typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::bernoulli_distribution & __x )
```

Inserts a bernoulli_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A bernoulli_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 970 of file bits/random.tcc.

2.14.2.6 operator<<() [2/2]

```
template<typename _IntType , typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::geometric_distribution< _IntType > & __x )
```

Inserts a geometric_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A geometric_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 1036 of file bits/random.tcc.

2.14.2.7 operator>>() [1/2]

```
template<typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::bernoulli_distribution & __x )  [inline]
```

Extracts a bernoulli_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A bernoulli_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 3720 of file random.h.

References std::bernoulli_distribution::param().

2.14.2.8 operator>>() [2/2]

```
template<typename _IntType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::geometric_distribution< _IntType > & __x )
```

Extracts a geometric_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A geometric_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 1090 of file bits/random.tcc.

References std::ios_base::flags(), std::geometric_distribution< _IntType >::param(), and std::skipws().

2.15 Binary Search

Collaboration diagram for Binary Search:

  constexpr _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__↩ val)
- template<typename _ForwardIterator , typename _Tp , typename _Compare >
  constexpr _ForwardIterator std::upper_bound (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__↩ val, _Compare __comp)

2.15.1 Detailed Description

These algorithms are variations of a classic binary search, and all assume that the sequence being searched is already sorted.

The number of comparisons will be logarithmic (and as few as possible). The number of steps through the sequence will be logarithmic for random-access iterators (e.g., pointers), and linear otherwise.

The LWG has passed Defect Report 270, which notes: *The proposed resolution reinterprets binary search. Instead of thinking about searching for a value in a sorted range, we view that as an important special case of a more general algorithm: searching for the partition point in a partitioned range. We also add a guarantee that the old wording did not: we ensure that the upper bound is no earlier than the lower bound, that the pair returned by equal_range is a valid range, and that the first part of that pair is the lower bound.*

The actual effect of the first sentence is that a comparison functor passed by the user doesn't necessarily need to induce a strict weak ordering relation. Rather, it partitions the range.

2.15.2 Function Documentation

2.15.2.1 binary_search() [1/2] template<typename _ForwardIterator , typename _Tp >

```
constexpr bool std::binary_search (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val )  [constexpr]
```

Determines whether an element exists in a range.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

True if __val (or its equivalent) is in [__first,__last].

Note that this does not actually return an iterator to __val. For that, use std::find or a container's specialized find member functions.

Definition at line 2267 of file stl_algo.h.

2.15.2.2 binary_search() [2/2]

```
template<typename _ForwardIterator , typename _Tp , typename _Compare >
constexpr bool std::binary_search (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val,
            _Compare __comp )  [constexpr]
```

Determines whether an element exists in a range.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

True if __val (or its equivalent) is in [__first,__last].

Note that this does not actually return an iterator to __val. For that, use std::find or a container's specialized find member functions.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2301 of file stl_algo.h.

2.15.2.3 equal_range() [1/2]

```
template<typename _ForwardIterator , typename _Tp >
constexpr pair<_ForwardIterator, _ForwardIterator> std::equal_range (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val )  [inline], [constexpr]
```

Finds the largest subrange in which __val could be inserted at any place in it without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An pair of iterators defining the subrange.

This is equivalent to
```
std::make_pair(lower_bound(__first, __last, __val),
               upper_bound(__first, __last, __val))
```

but does not actually call those functions.

Definition at line 2196 of file stl_algo.h.

2.15.2.4 equal_range() [2/2]

```
template<typename _ForwardIterator , typename _Tp , typename _Compare
>
constexpr pair<_ForwardIterator, _ForwardIterator> std::equal_range (
             _ForwardIterator __first,
             _ForwardIterator __last,
             const _Tp & __val,
             _Compare __comp )  [inline], [constexpr]
```

Finds the largest subrange in which `__val` could be inserted at any place in it without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An pair of iterators defining the subrange.

This is equivalent to
```
std::make_pair(lower_bound(__first, __last, __val, __comp),
               upper_bound(__first, __last, __val, __comp))
```

but does not actually call those functions.

Definition at line 2233 of file stl_algo.h.

2.15.2.5 lower_bound() [1/2] template<typename _ForwardIterator , typename _Tp >

```
constexpr _ForwardIterator std::lower_bound (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val )  [inline], [constexpr]
```

Finds the first position in which *val* could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An iterator pointing to the first element *not less than val*, or end() if every element is less than *val*.

Definition at line 1348 of file stl_algobase.h.

2.15.2.6 lower_bound() [2/2] template<typename _ForwardIterator , typename _Tp , typename _Compare >

```
constexpr _ForwardIterator std::lower_bound (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val,
            _Compare __comp )  [inline], [constexpr]
```

Finds the first position in which `__val` could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An iterator pointing to the first element *not less than* `__val`, or end() if every element is less than `__val`.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2036 of file stl_algo.h.

2.15.2.7 upper_bound() [1/2] template<typename _ForwardIterator , typename _Tp >

```
constexpr _ForwardIterator std::upper_bound (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val )  [inline], [constexpr]
```

Finds the last position in which __val could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.

Returns

An iterator pointing to the first element greater than __val, or end() if no elements are greater than __val.

Definition at line 2092 of file stl_algo.h.

2.15.2.8 upper_bound() [2/2] template<typename _ForwardIterator , typename _Tp , typename _Compare >

```
constexpr _ForwardIterator std::upper_bound (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __val,
            _Compare __comp )  [inline], [constexpr]
```

Finds the last position in which __val could be inserted without changing the ordering.

Parameters

__first	An iterator.
__last	Another iterator.
__val	The search term.
__comp	A functor to use for comparisons.

Returns

An iterator pointing to the first element greater than __val, or end() if no elements are greater than __val.

The comparison function should have the same effects on ordering as the function used for the initial sort.

Definition at line 2123 of file stl_algo.h.

2.16 Binder Classes

Collaboration diagram for Binder Classes:

Classes

- struct std::_Placeholder< _Num >
- struct std::is_bind_expression< _Tp >
- struct std::is_bind_expression< _Bind< _Signature > >
- struct std::is_bind_expression< _Bind_result< _Result, _Signature > >
- struct std::is_bind_expression< const _Bind< _Signature > >
- struct std::is_bind_expression< const _Bind_result< _Result, _Signature > >
- struct std::is_bind_expression< const volatile _Bind< _Signature > >
- struct std::is_bind_expression< const volatile _Bind_result< _Result, _Signature > >
- struct std::is_bind_expression< volatile _Bind< _Signature > >
- struct std::is_bind_expression< volatile _Bind_result< _Result, _Signature > >
- struct std::is_placeholder< _Tp >
- struct std::is_placeholder< _Placeholder< _Num > >

Functions

- template<typename _Func , typename... _BoundArgs>
  constexpr _Bind_helper< __is_socketlike< _Func >::value, _Func, _BoundArgs... >::type std::bind (_Func &&↩ __f, _BoundArgs &&... __args)
- template<typename _Result , typename _Func , typename... _BoundArgs>
  constexpr _Bindres_helper< _Result, _Func, _BoundArgs... >::type std::bind (_Func &&__f, _BoundArgs &&... __args)
- template<typename _Operation , typename _Tp >
  binder1st< _Operation > std::bind1st (const _Operation &__fn, const _Tp &__x)
- template<typename _Operation , typename _Tp >
  binder2nd< _Operation > std::bind2nd (const _Operation &__fn, const _Tp &__x)

2.16.1 Detailed Description

Binders turn functions/functors with two arguments into functors with a single argument, storing an argument to be applied later. For example, a variable `B` of type `binder1st` is constructed from a functor `f` and an argument `x`. Later, B's `operator()` is called with a single argument `y`. The return value is the value of `f(x,y)`. `B` can be *called* with various arguments (y1, y2, ...) and will in turn call `f(x,y1)`, `f(x,y2)`, ...

The function `bind1st` is provided to save some typing. It takes the function and an argument as parameters, and returns an instance of `binder1st`.

The type `binder2nd` and its creator function `bind2nd` do the same thing, but the stored argument is passed as the second parameter instead of the first, e.g., `bind2nd`(std::minus<float>(),1.3) will create a functor whose `operator()` accepts a floating-point number, subtracts 1.3 from it, and returns the result. (If `bind1st` had been used, the functor would perform *1.3 - x* instead.

Creator-wrapper functions like `bind1st` are intended to be used in calling algorithms. Their return values will be temporary objects. (The goal is to not require you to type names like `std::binder1st<std::plus<int>>` for declaring a variable to hold the return value from `bind1st(std::plus<int>(),5)`.

These become more useful when combined with the composition functions.

These functions are deprecated in C++11 and can be replaced by `std::bind` (or `std::tr1::bind`) which is more powerful and flexible, supporting functions with any number of arguments. Uses of `bind1st` can be replaced by `std::bind(f, x, std::placeholders::_1)` and `bind2nd` by `std::bind(f, std↩ ::placeholders::_1, x)`.

2.16.2 Function Documentation

2.16.2.1 bind() [1/2] template<typename _Func , typename... _BoundArgs>

```
constexpr _Bind_helper<__is_socketlike<_Func>::value, _Func, _BoundArgs...>::type std::bind (
            _Func && __f,
            _BoundArgs &&... __args ) [inline], [constexpr]
```

Function template for std::bind.

Definition at line 785 of file functional.

2.16.2.2 bind() [2/2] template<typename _Result , typename _Func , typename... _BoundArgs>

```
constexpr _Bindres_helper<_Result, _Func, _BoundArgs...>::type std::bind (
            _Func && __f,
            _BoundArgs &&... __args ) [inline], [constexpr]
```

Function template for std::bind<R>.

Definition at line 809 of file functional.

2.16.2.3 bind1st() template<typename _Operation , typename _Tp >

```
binder1st<_Operation> std::bind1st (
            const _Operation & __fn,
            const _Tp & __x ) [inline]
```

One of the binder functors.

Definition at line 135 of file binders.h.

2.16.2.4 bind2nd() template<typename _Operation , typename _Tp >

```
binder2nd<_Operation> std::bind2nd (
            const _Operation & __fn,
            const _Tp & __x ) [inline]
```

One of the binder functors.

Definition at line 170 of file binders.h.

2.17 Bit manipulation

Collaboration diagram for Bit manipulation: Utilities for examining and manipulating individual bits.

2.18 Boolean Operations Classes

Collaboration diagram for Boolean Operations Classes:

Classes

- struct std::logical_and< _Tp >
- struct std::logical_not< _Tp >
- struct std::logical_or< _Tp >

2.18.1 Detailed Description

Here are wrapper functors for Boolean operations: `&&`, `||`, and `!`.

2.19 Branch-Based

Collaboration diagram for Branch-Based:

Modules

- Base and Policy Classes

Macros

- #define **PB_DS_BRANCH_BASE**
- #define **PB_DS_TREE_BASE**
- #define **PB_DS_TREE_NODE_AND_IT_TRAITS**
- #define **PB_DS_TRIE_BASE**
- #define **PB_DS_TRIE_NODE_AND_IT_TRAITS**

2.19.1 Detailed Description

2.20 Comparison Classes

Collaboration diagram for Comparison Classes:

Classes

- struct std::equal_to< _Tp >
- struct std::greater< _Tp >
- struct std::greater_equal< _Tp >
- struct std::less< _Tp >
- struct std::less_equal< _Tp >
- struct std::not_equal_to< _Tp >

2.20.1 Detailed Description

The library provides six wrapper functors for all the basic comparisons in C++, like <.

2.21 Complex Numbers

Collaboration diagram for Complex Numbers:

Classes

- struct std::complex< _Tp >

Functions

- constexpr **std::complex< float >::complex** (const complex< double > &)

2.21.1 Detailed Description

Classes and functions for complex numbers.

2.21.2 Function Documentation

2.21.2.1 abs() template<typename _Tp >

```
_Tp std::abs (
            const complex< _Tp > & __z )  [inline]
```

Return magnitude of *z*.

Definition at line 629 of file complex.

Referenced by std::binomial_distribution< _IntType >::operator()(), and std::poisson_distribution< _IntType >↩ ::operator()().

2.21.2.2 arg() template<typename _Tp >

```
_Tp std::arg (
            const complex< _Tp > & __z )  [inline]
```

Return phase angle of *z*.

Definition at line 656 of file complex.

2.21.2.3 conj() template<typename _Tp >

```
constexpr complex< _Tp > std::conj (
            const complex< _Tp > & __z )  [inline], [constexpr]
```

Return complex conjugate of *z*.

Definition at line 708 of file complex.

2.21.2.4 cos() template<typename _Tp >

```
complex< _Tp > std::cos (
            const complex< _Tp > & __z )  [inline]
```

Return complex cosine of *z*.

Definition at line 740 of file complex.

2.21.2.5 cosh() template<typename _Tp >

```
complex< _Tp > std::cosh (
            const complex< _Tp > & __z )  [inline]
```

Return complex hyperbolic cosine of *z*.

Definition at line 770 of file complex.

2.21.2.6 exp() template<typename _Tp >

```
complex< _Tp > std::exp (
            const complex< _Tp > & __z )  [inline]
```

Return complex base e exponential of *z*.

Definition at line 796 of file complex.

2.21.2.7 fabs() template<typename _Tp >

```
std::complex< _Tp > std::tr1::fabs (
            const std::complex< _Tp > & __z )  [inline]
```

fabs(__z) [8.1.8].

Definition at line 309 of file tr1/complex.

2.21.2.8 log() template<typename _Tp >

```
complex< _Tp > std::log (
            const complex< _Tp > & __z )  [inline]
```

Return complex natural logarithm of *z*.

Definition at line 823 of file complex.

Referenced by std::generate_canonical(), std::normal_distribution< _RealType >::operator()(), std::gamma_distribution< _RealType >::operator()(), std::binomial_distribution< _IntType >::operator()(), and std::poisson_distribution< _IntType >::operator()().

2.21.2.9 log10() template<typename _Tp >

```
complex< _Tp > std::log10 (
            const complex< _Tp > & __z )  [inline]
```

Return complex base 10 logarithm of *z*.

Definition at line 828 of file complex.

2.21.2.10 norm() template<typename _Tp >

```
constexpr _Tp std::norm (
            const complex< _Tp > & __z )  [inline], [constexpr]
```

Return *z* magnitude squared.

Definition at line 692 of file complex.

2.21.2.11 operator"!=() [1/3] template<typename _Tp >

```
constexpr bool std::operator!= (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return false if *x* is equal to *y*.

Definition at line 492 of file complex.

2.21.2.12 operator"!=() [2/3] template<typename _Tp >

```
constexpr bool std::operator!= (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return false if *x* is equal to *y*.

Definition at line 487 of file complex.

2.21.2.13 operator"!=() [3/3] template<typename _Tp >

```
constexpr bool std::operator!= (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return false if *x* is equal to *y*.

Definition at line 482 of file complex.

2.21.2.14 operator*() [1/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator* (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* times *y*.

Definition at line 409 of file complex.

2.21.2.15 operator*() [2/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator* (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return new complex value *x* times *y*.

Definition at line 400 of file complex.

2.21.2.16 operator*() [3/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator* (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* times *y*.

Definition at line 391 of file complex.

2.21.2.17 operator*=() [1/2] template<typename _Tp >

```
constexpr complex< _Tp > & std::complex< _Tp >::operator*= (
            const _Tp & __t )  [constexpr]
```

Multiply this complex number by a scalar.

Definition at line 250 of file complex.

2.21.2.18 operator*=() [2/2] template<typename _Tp > template<typename _Up >

```
constexpr complex< _Tp > & std::complex< _Tp >::operator*= (
            const complex< _Up > & __z )  [constexpr]
```

Multiply this complex number by another.

Definition at line 304 of file complex.

2.21.2.19 operator+() [1/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator+ (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* plus *y*.

Definition at line 349 of file complex.

2.21.2.20 operator+() [2/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator+ (
            const complex< _Tp > & __x )  [inline], [constexpr]
```

Return *x*.

Definition at line 450 of file complex.

2.21.2.21 operator+() [3/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator+ (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return new complex value *x* plus *y*.

Definition at line 340 of file complex.

2.21.2.22 operator+() [4/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator+ (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* plus *y*.

Definition at line 331 of file complex.

2.21.2.23 operator+=() template<typename _Tp >

```
template<typename _Up >
constexpr complex< _Tp > & std::complex< _Tp >::operator+= (
            const complex< _Up > & __z )  [constexpr]
```

Add another complex number to this one.

Definition at line 281 of file complex.

2.21.2.24 operator-() [1/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator- (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* minus *y*.

Definition at line 379 of file complex.

2.21.2.25 operator-() [2/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator- (
            const complex< _Tp > & __x )  [inline], [constexpr]
```

Return complex negation of *x*.

Definition at line 456 of file complex.

2.21.2.26 operator-() [3/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator- (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return new complex value *x* minus *y*.

Definition at line 370 of file complex.

2.21.2.27 operator-() [4/4] template<typename _Tp >

```
constexpr complex<_Tp> std::operator- (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* minus *y*.

Definition at line 361 of file complex.

2.21.2.28 operator-=() template<typename _Tp >

```
template<typename _Up >
constexpr complex< _Tp > & std::complex< _Tp >::operator-= (
            const complex< _Up > & __z )  [constexpr]
```

Subtract another complex number from this one.

Definition at line 292 of file complex.

2.21.2.29 operator/() [1/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator/ (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* divided by *y*.

Definition at line 439 of file complex.

2.21.2.30 operator/() [2/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator/ (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return new complex value *x* divided by *y*.

Definition at line 430 of file complex.

2.21.2.31 operator/() [3/3] template<typename _Tp >

```
constexpr complex<_Tp> std::operator/ (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return new complex value *x* divided by *y*.

Definition at line 421 of file complex.

2.21.2.32 operator/=() [1/2] template<typename _Tp >

```
constexpr complex< _Tp > & std::complex< _Tp >::operator/= (
            const _Tp & __t )  [constexpr]
```

Divide this complex number by a scalar.

Definition at line 260 of file complex.

2.21.2.33 operator/=() [2/2] template<typename _Tp >

```
template<typename _Up >
constexpr complex< _Tp > & std::complex< _Tp >::operator/= (
            const complex< _Up > & __z )  [constexpr]
```

Divide this complex number by another.

Definition at line 317 of file complex.

2.21.2.34 operator<<() template<typename _Tp , typename _CharT , class _Traits >

```
basic_ostream<_CharT, _Traits>& std::operator<< (
            basic_ostream< _CharT, _Traits > & __os,
            const complex< _Tp > & __x )
```

Insertion operator for complex values.

Definition at line 500 of file complex.

2.21.2.35 operator=() [1/2] template<typename _Tp >

```
constexpr complex< _Tp > & std::complex< _Tp >::operator= (
            const _Tp & __t )  [constexpr]
```

Assign a scalar to this complex number.

Definition at line 240 of file complex.

2.21.2.36 operator=() [2/2] template<typename _Tp >

```
template<typename _Up >
constexpr complex< _Tp > & std::complex< _Tp >::operator= (
            const complex< _Up > & __z )  [constexpr]
```

Assign another complex number to this one.

Definition at line 270 of file complex.

2.21.2.37 operator==() [1/3] template<typename _Tp >

```
constexpr bool std::operator== (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return true if *x* is equal to *y*.

Definition at line 474 of file complex.

2.21.2.38 operator==() [2/3] template<typename _Tp >

```
constexpr bool std::operator== (
            const complex< _Tp > & __x,
            const _Tp & __y )  [inline], [constexpr]
```

Return true if *x* is equal to *y*.

Definition at line 468 of file complex.

2.21.2.39 operator==() [3/3] template<typename _Tp >

```
constexpr bool std::operator== (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline], [constexpr]
```

Return true if *x* is equal to *y*.

Definition at line 463 of file complex.

2.21.2.40 operator>>() template<typename _Tp , typename _CharT , class _Traits >

```
basic_istream<_CharT, _Traits>& std::operator>> (
            basic_istream< _CharT, _Traits > & __is,
            complex< _Tp > & __x )
```

Extraction operator for complex values.

Definition at line 500 of file complex.

2.21.2.41 polar() template<typename _Tp >

```
complex< _Tp > std::polar (
            const _Tp & __rho,
            const _Tp & __theta = 0 )  [inline]
```

Return complex with magnitude *rho* and angle *theta*.

Definition at line 700 of file complex.

2.21.2.42 pow() [1/5] template<typename _Tp >

```
complex< _Tp > std::pow (
            const _Tp & __x,
            const complex< _Tp > & __y )  [inline]
```

Return *x* to the *y'th* power.

Definition at line 1072 of file complex.

2.21.2.43 pow() [2/5] template<typename _Tp >

```
complex< _Tp > std::pow (
            const complex< _Tp > & __x,
            const _Tp & __y )
```

Return *x* to the *y'th* power.

Definition at line 1027 of file complex.

2.21.2.44 pow() [3/5] template<typename _Tp >

```
complex< _Tp > std::pow (
            const complex< _Tp > & __x,
            const complex< _Tp > & __y )  [inline]
```

Return *x* to the *y'th* power.

Definition at line 1066 of file complex.

2.21.2.45 pow() [4/5] template<typename _Tp >

```
complex< _Tp > std::pow (
            const complex< _Tp > & __z,
            int __n )  [inline]
```

Return *x* to the *y'th* power.

Definition at line 1018 of file complex.

Referenced by std::gamma_distribution< _RealType >::operator()().

2.21.2.46 pow() [5/5] template<typename _Tp , typename _Up >

```
std::complex<typename __gnu_cxx::__promote_2<_Tp, _Up>::__type> std::tr1::pow (
            const std::complex< _Tp > & __x,
            const _Up & __y )  [inline]
```

Additional overloads [8.1.9].

Definition at line 350 of file tr1/complex.

2.21.2.47 sin() template<typename _Tp >

```
complex< _Tp > std::sin (
            const complex< _Tp > & __z )  [inline]
```

Return complex sine of *z*.

Definition at line 858 of file complex.

2.21.2.48 sinh() template<typename _Tp >

```
complex< _Tp > std::sinh (
            const complex< _Tp > & __z )  [inline]
```

Return complex hyperbolic sine of *z*.

Definition at line 888 of file complex.

2.21.2.49 sqrt() template<typename _Tp >

```
complex< _Tp > std::sqrt (
            const complex< _Tp > & __z )  [inline]
```

Return complex square root of *z*.

Definition at line 932 of file complex.

Referenced by std::student_t_distribution< _RealType >::operator()(), and std::normal_distribution< _RealType >↩ ::operator()().

2.21.2.50 tan() template<typename _Tp >

```
complex< _Tp > std::tan (
            const complex< _Tp > & __z )  [inline]
```

Return complex tangent of *z*.

Definition at line 959 of file complex.

2.21.2.51 tanh() template<typename _Tp >

```
complex< _Tp > std::tanh (
            const complex< _Tp > & __z )  [inline]
```

Return complex hyperbolic tangent of *z*.

Definition at line 987 of file complex.

2.22 Concurrency

Collaboration diagram for Concurrency:

Modules

- Condition Variables
- Futures
- Mutexes
- Threads

2.22.1 Detailed Description

Components for concurrent operations, including threads, mutexes, and condition variables.

2.23 Condition Variables

Collaboration diagram for Condition Variables:

Enumerations

- enum class std::cv_status { **no_timeout** , **timeout** }

Functions

- void **std::notify_all_at_thread_exit** (condition_variable &, unique_lock< mutex >)

2.23.1 Detailed Description

Classes for condition_variable support.

2.23.2 Enumeration Type Documentation

2.23.2.1 cv_status enum std::cv_status [strong]

cv_status

Definition at line 68 of file condition_variable.

2.24 Const-propagating wrapper

Collaboration diagram for Const-propagating wrapper:

Functions

- template<typename _Tp >
  constexpr const _Tp & **std::experimental::get_underlying** (const propagate_const< _Tp > &__pt) noexcept
- template<typename _Tp >
  constexpr _Tp & **std::experimental::get_underlying** (propagate_const< _Tp > &__pt) noexcept
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator!=** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator!=** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator!=** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp >
  constexpr bool **std::experimental::operator!=** (const propagate_const< _Tp > &__pt, nullptr_t)
- template<typename _Tp >
  constexpr bool **std::experimental::operator!=** (nullptr_t, const propagate_const< _Tp > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<=** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<=** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator<=** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator==** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator==** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator==** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp >
  constexpr bool **std::experimental::operator==** (const propagate_const< _Tp > &__pt, nullptr_t)

- template<typename _Tp >
  constexpr bool **std::experimental::operator==** (nullptr_t, const propagate_const< _Tp > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>=** (const _Tp &__t, const propagate_const< _Up > &__pu)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>=** (const propagate_const< _Tp > &__pt, const _Up &__u)
- template<typename _Tp , typename _Up >
  constexpr bool **std::experimental::operator>=** (const propagate_const< _Tp > &__pt, const propagate_const< _Up > &__pu)
- template<typename _Tp >
  constexpr void **std::experimental::swap** (propagate_const< _Tp > &__pt, propagate_const< _Tp > &__pt2) noexcept(__is_nothrow_swappable< _Tp >::value)

2.24.1 Detailed Description

A const-propagating wrapper that propagates const to pointer-like members, as described in n4388 "A Proposal to Add a Const-Propagating Wrapper to the Standard Library".

2.25 Containers

Collaboration diagram for Containers:

Modules

- Branch-Based
- Hash-Based
- Heap-Based
- List-Based

2.25.1 Detailed Description

2.26 Containers

Collaboration diagram for Containers:

Modules

- Associative
- Sequences
- Unordered Associative

2.26.1 Detailed Description

Containers are collections of objects.

A container may hold any type which meets certain requirements, but the type of contained object is chosen at compile time, and all objects in a given container must be of the same type. (Polymorphism is possible by declaring a container of pointers to a base class and then populating it with pointers to instances of derived classes. Variant value types such as the `any` class from `Boost` can also be used.

All contained types must be `Assignable` and `CopyConstructible`. Specific containers may place additional requirements on the types of their contained objects.

Containers manage memory allocation and deallocation themselves when storing your objects. The objects are destroyed when the container is itself destroyed. Note that if you are storing pointers in a container, `delete` is *not* automatically called on the pointers before destroying them.

All containers must meet certain requirements, summarized in `tables`.

The standard containers are further refined into Sequences and Associative Containers. Unordered Associative Containers.

2.27 Data Structure Type

Collaboration diagram for Data Structure Type:

Classes

- struct __gnu_pbds::associative_tag
- struct __gnu_pbds::basic_branch_tag
- struct __gnu_pbds::basic_hash_tag
- struct __gnu_pbds::binary_heap_tag
- struct __gnu_pbds::binomial_heap_tag
- struct __gnu_pbds::cc_hash_tag
- struct __gnu_pbds::container_tag
- struct __gnu_pbds::gp_hash_tag
- struct __gnu_pbds::list_update_tag
- struct __gnu_pbds::ov_tree_tag
- struct __gnu_pbds::pairing_heap_tag
- struct __gnu_pbds::pat_trie_tag
- struct __gnu_pbds::priority_queue_tag
- struct __gnu_pbds::rb_tree_tag
- struct __gnu_pbds::rc_binomial_heap_tag
- struct __gnu_pbds::sequence_tag
- struct __gnu_pbds::splay_tree_tag
- struct __gnu_pbds::string_tag
- struct __gnu_pbds::thin_heap_tag
- struct __gnu_pbds::tree_tag
- struct __gnu_pbds::trie_tag

2.27.1 Detailed Description

2.28 Decimal Floating-Point Arithmetic

Collaboration diagram for Decimal Floating-Point Arithmetic: Classes and functions for decimal floating-point arithmetic.

2.29 Diagnostics

Collaboration diagram for Diagnostics:

Modules

- Exceptions

Classes

- struct std::is_error_code_enum< _Tp >
- struct std::is_error_condition_enum< _Tp >

Functions

- **std::_V2::error_category::error_category** (const error_category &)=delete
- template<typename _ErrorCodeEnum , typename = typename enable_if<is_error_code_enum<_ErrorCodeEnum>::value>::type>
  std::error_code::error_code (_ErrorCodeEnum __e) noexcept

- error_condition **make_error_condition** (errc) noexcept

- error_code **make_error_code** (errc __e) noexcept

2.29.1 Detailed Description

Components for error handling, reporting, and diagnostic operations.

2.29.2 Function Documentation

2.29.2.1 generic_category() const error_category& std::_V2::generic_category ( ) [noexcept]

Error category for errno error codes.

2.29.2.2 make_error_condition() error_condition make_error_condition (errc __e) [related]

Create an error_condition representing a standard errc condition.

Definition at line 335 of file system_error.

2.29.2.3 operator<() bool operator< (const error_condition & __lhs, const error_condition & __rhs) [related]

Define an ordering for error_condition objects.

Definition at line 378 of file system_error.

2.29.2.4 system_category() const error_category& std::_V2::system_category ( ) [noexcept]

Error category for other error codes defined by the OS.

2.30 Dynamic Bitset.

Collaboration diagram for Dynamic Bitset.:

Functions

- template<typename _CharT , typename _Traits , typename _Alloc1 >
  void **std::tr2::dynamic_bitset< _WordT, _Alloc >::_M_copy_to_string** (std::basic_string< _CharT, _Traits, ↩
  _Alloc1 > &__str, _CharT __zero=_CharT('0'), _CharT __one=_CharT('1')) const
- template<typename _CharT , typename _Traits , typename _WordT , typename _Alloc >
  std::basic_ostream< _CharT, _Traits > & std::tr2::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const dynamic_bitset< _WordT, _Alloc > &__x)
- template<typename _CharT , typename _Traits , typename _WordT , typename _Alloc >
  std::basic_istream< _CharT, _Traits > & std::tr2::operator>> (std::basic_istream< _CharT, _Traits > &__↩
  is, dynamic_bitset< _WordT, _Alloc > &__x)

  dynamic_bitset< _WordT, _Alloc > std::tr2::operator^ (const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y)
- template<typename _WordT , typename _Alloc >
  dynamic_bitset< _WordT, _Alloc > std::tr2::operator- (const dynamic_bitset< _WordT, _Alloc > &__x, const dynamic_bitset< _WordT, _Alloc > &__y)

2.30.1 Detailed Description

2.30.2 Function Documentation

2.30.2.1 operator"!=() `template<typename _WordT , typename _Alloc >`

```
bool std::tr2::operator!= (
            const dynamic_bitset< _WordT, _Alloc > & __lhs,
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1123 of file dynamic_bitset.

2.30.2.2 operator&() template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator& (const dynamic_bitset< _WordT, _Alloc > & __x, const dynamic_bitset< _WordT, _Alloc > & __y) [inline]

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1158 of file dynamic_bitset.

2.30.2.3 operator-() template<typename _WordT , typename _Alloc > dynamic_bitset<_WordT, _Alloc> std::tr2::operator- (const dynamic_bitset< _WordT, _Alloc > & __x, const dynamic_bitset< _WordT, _Alloc > & __y) [inline]

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1188 of file dynamic_bitset.

2.30.2.4 operator<<() template<typename _CharT , typename _Traits , typename _WordT , typename _Alloc >

```
std::basic_ostream<_CharT, _Traits>& std::tr2::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const dynamic_bitset< _WordT, _Alloc > & __x )  [inline]
```

Stream output operator for dynamic_bitset.

Definition at line 1188 of file dynamic_bitset.

2.30.2.5 operator<=() template<typename _WordT , typename _Alloc >

```
bool std::tr2::operator<= (
            const dynamic_bitset< _WordT, _Alloc > & __lhs,
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1128 of file dynamic_bitset.

2.30.2.6 operator>() template<typename _WordT , typename _Alloc >

```
bool std::tr2::operator> (
            const dynamic_bitset< _WordT, _Alloc > & __lhs,
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1135 of file dynamic_bitset.

2.30.2.7 operator>=() template<typename _WordT , typename _Alloc >

```
bool std::tr2::operator>= (
            const dynamic_bitset< _WordT, _Alloc > & __lhs,
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

These comparisons for equality/inequality are, well, *bitwise*.

Definition at line 1141 of file dynamic_bitset.

2.30.2.8 operator>>() template<typename _CharT , typename _Traits , typename _WordT , typename ↩ _Alloc >

```
std::basic_istream<_CharT, _Traits>& std::tr2::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            dynamic_bitset< _WordT, _Alloc > & __x )
```

Stream input operator for dynamic_bitset.

Input will skip whitespace and only accept '0' and '1' characters. The dynamic_bitset will grow as necessary to hold the string of bits.

Definition at line 207 of file dynamic_bitset.tcc.

References std::basic_string< _CharT, _Traits, _Alloc >::reserve(), std::tr2::dynamic_bitset< _WordT, _Alloc >::size(), and std::basic_ios< _CharT, _Traits >::widen().

2.30.2.9 operator^() template<typename _WordT , typename _Alloc >

```
dynamic_bitset<_WordT, _Alloc> std::tr2::operator^ (
            const dynamic_bitset< _WordT, _Alloc > & __x,
            const dynamic_bitset< _WordT, _Alloc > & __y )  [inline]
```

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1178 of file dynamic_bitset.

2.30.2.10 operator"|() template<typename _WordT , typename _Alloc >

```
dynamic_bitset<_WordT, _Alloc> std::tr2::operator| (
            const dynamic_bitset< _WordT, _Alloc > & __x,
            const dynamic_bitset< _WordT, _Alloc > & __y )  [inline]
```

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.

Definition at line 1168 of file dynamic_bitset.

2.31 Exceptions

Collaboration diagram for Exceptions:

Classes

- struct __gnu_cxx::forced_error

Macros

- #define **__cpp_lib_uncaught_exceptions**

Typedefs

- typedef void(∗ std::terminate_handler) ()
- typedef void(∗ std::unexpected_handler) ()

Functions

- void __gnu_cxx::__verbose_terminate_handler ()
- exception_ptr std::current_exception () noexcept
- terminate_handler std::get_terminate () noexcept
- unexpected_handler std::get_unexpected () noexcept
- template<typename _Ex >
  exception_ptr std::make_exception_ptr (_Ex __ex) noexcept
- void std::rethrow_exception (exception_ptr)
- template<typename _Ex >
  void std::rethrow_if_nested (const _Ex &__ex)
- terminate_handler std::set_terminate (terminate_handler) noexcept
- unexpected_handler std::set_unexpected (unexpected_handler) noexcept
- void std::terminate () noexcept
- template<typename _Tp >
  void std::throw_with_nested (_Tp &&__t)
- bool std::uncaught_exception () noexcept
- int std::uncaught_exceptions () noexcept
- void std::unexpected ()

2.31.1 Detailed Description

Classes and functions for reporting errors via exceptions.

2.31.2 Typedef Documentation

2.31.2.1 terminate_handler `typedef void(* std::terminate_handler) ()`

If you write a replacement terminate handler, it must be of this type.

Definition at line 65 of file exception.

2.31.2.2 unexpected_handler `typedef void(* std::unexpected_handler) ()`

If you write a replacement unexpected handler, it must be of this type.

Definition at line 68 of file exception.

2.31.3 Function Documentation

2.31.3.1 __verbose_terminate_handler() `void __gnu_cxx::__verbose_terminate_handler ( )`

A replacement for the standard terminate_handler which prints more information about the terminating exception (if any) on stderr.

Call
`std::set_terminate(__gnu_cxx::__verbose_terminate_handler)`

to use. For more info, see http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt02ch06s02.html

In 3.4 and later, this is on by default.

2.31.3.2 current_exception() `exception_ptr std::current_exception ( ) [noexcept]`

Obtain an exception_ptr to the currently handled exception. If there is none, or the currently handled exception is foreign, return the null value.

2.31.3.3 get_terminate() terminate_handler std::get_terminate ( ) [noexcept]

Return the current terminate handler.

2.31.3.4 get_unexpected() unexpected_handler std::get_unexpected ( ) [noexcept]

Return the current unexpected handler.

2.31.3.5 make_exception_ptr() template<typename _Ex >

```
exception_ptr std::make_exception_ptr (
            _Ex __ex ) [noexcept]
```

Obtain an exception_ptr pointing to a copy of the supplied object.

Definition at line 190 of file exception_ptr.h.

2.31.3.6 rethrow_exception() void std::rethrow_exception (

```
            exception_ptr ) 
```

Throw the object pointed to by the exception_ptr.

2.31.3.7 rethrow_if_nested() template<typename _Ex >

```
void std::rethrow_if_nested (
            const _Ex & __ex ) [inline]
```

If __ex is derived from nested_exception, __ex.rethrow_nested().

Definition at line 159 of file nested_exception.h.

References std::__addressof().

2.31.3.8 set_terminate() terminate_handler std::set_terminate (

```
            terminate_handler ) [noexcept]
```

Takes a new handler function as an argument, returns the old function.

2.31.3.9 set_unexpected() unexpected_handler std::set_unexpected (unexpected_handler) [noexcept]

Takes a new handler function as an argument, returns the old function.

2.31.3.10 terminate() void std::terminate ( ) [noexcept]

The runtime will call this function if exception handling must be abandoned for any reason. It can also be called by the user.

2.31.3.11 throw_with_nested() template<typename _Tp >
void std::throw_with_nested (_Tp && __t) [inline]

If __t is derived from nested_exception, throws __t. Else, throws an implementation-defined object derived from both.

Definition at line 118 of file nested_exception.h.

2.31.3.12 uncaught_exception() bool std::uncaught_exception ( ) [noexcept]

[18.6.4]/1: 'Returns true after completing evaluation of a throw-expression until either completing initialization of the exception-declaration in the matching handler or entering unexpected() due to the throw; or after entering terminate() for any reason other than an explicit call to terminate(). [Note: This includes stack unwinding [15.2]. end note]'

2: 'When uncaught_exception() is true, throwing an exception can result in a call of terminate() (15.5.1).'

2.31.3.13 uncaught_exceptions() int std::uncaught_exceptions ( ) [noexcept]

The number of uncaught exceptions.

2.31.3.14 unexpected() void std::unexpected ( )

The runtime will call this function if an exception is thrown which violates the function's exception specification.

2.32 Exceptions

Collaboration diagram for Exceptions:

Classes

- struct __gnu_pbds::insert_error
- struct __gnu_pbds::join_error
- struct __gnu_pbds::resize_error

Functions

- void **__gnu_pbds::__throw_container_error** ()
- void **__gnu_pbds::__throw_insert_error** ()
- void **__gnu_pbds::__throw_join_error** ()
- void **__gnu_pbds::__throw_resize_error** ()

2.32.1 Detailed Description

2.33 Extensions

Collaboration diagram for Extensions:

Modules

- Dynamic Bitset.
- Policy-Based Data Structures
- SGI

Classes

- class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >

2.33.1 Detailed Description

Components generally useful that are not part of any standard.

2.34 Filesystem TS

Collaboration diagram for Filesystem TS:

Files

- file experimental/filesystem

Typedefs

- using **std::experimental::filesystem::file_time_type** = std::chrono::system_clock::time_point

Enumerations

- enum class std::experimental::filesystem::copy_options : unsigned short {

2.34.1 Detailed Description

Utilities for performing operations on file systems and their components, such as paths, regular files, and directories.

ISO/IEC TS 18822:2015 C++ File System Technical Specification

2.34.2 Enumeration Type Documentation

2.34.2.1 copy_options `enum std::experimental::filesystem::v1::copy_options : unsigned short [strong]`

Bitmask type.

Definition at line 88 of file experimental/bits/fs_fwd.h.

2.34.2.2 perms `enum std::experimental::filesystem::v1::perms : unsigned [strong]`

Bitmask type.

Definition at line 141 of file experimental/bits/fs_fwd.h.

2.35 Function Objects

Collaboration diagram for Function Objects:

Modules

- Adaptors for pointers to functions
- Adaptors for pointers to members
- Arithmetic Classes
- Binder Classes
- Boolean Operations Classes
- Comparison Classes
- Hashes
- Negators

Functions

- template<typename _Tp , typename _Class >
  constexpr _Mem_fn< _Tp _Class::* > std::mem_fn (_Tp _Class::*__pm) noexcept

2.35.1 Detailed Description

Function objects, or *functors*, are objects with an `operator()` defined and accessible. They can be passed as arguments to algorithm templates and used in place of a function pointer. Not only is the resulting expressiveness of the library increased, but the generated code can be more efficient than what you might write by hand. When we refer to *functors*, then, generally we include function pointers in the description as well.

Often, functors are only created as temporaries passed to algorithm calls, rather than being created as named variables.

Two examples taken from the standard itself follow. To perform a by-element addition of two vectors `a` and `b` containing `double`, and put the result in `a`, use

```
transform (a.begin(), a.end(), b.begin(), a.begin(), plus<double>());
```

To negate every element in `a`, use

```
transform(a.begin(), a.end(), a.begin(), negate<double>());
```

The addition and negation functions will be inlined directly.

The standard functors are derived from structs named `unary_function` and `binary_function`. These two classes contain nothing but typedefs, to aid in generic (template) programming. If you write your own functors, you might consider doing the same.

2.35.2 Function Documentation

2.35.2.1 mem_fn() `template<typename _Tp , typename _Class >`

```
constexpr _Mem_fn<_Tp _Class::*> std::mem_fn (
            _Tp _Class::* __pm )  [inline], [constexpr], [noexcept]
```

Returns a function object that forwards to the member pointer *pm*.

Definition at line 170 of file functional.

2.36 Futures

Collaboration diagram for Futures:

Classes

- class std::future< _Res >
- struct std::is_error_code_enum< future_errc >
- class std::promise< _Res >
- class std::shared_future< _Res >

Typedefs

- template<typename _Fn , typename... _Args>
  using **std::__async_result_of** = typename __invoke_result< typename decay< _Fn >::type, typename decay< _Args >::type... >::type

Enumerations

- enum class std::future_errc { **future_already_retrieved** , **promise_already_satisfied** , **no_state** , **broken_promise** }
- enum class std::future_status { **ready** , **timeout** , **deferred** }
- enum class std::launch { **async** , **deferred** }

Functions

- **std::__basic_future< _Res >::__basic_future** (const shared_future< _Res > &) noexcept
- **std::__basic_future< _Res >::__basic_future** (future< _Res > &&) noexcept
- **std::__basic_future< _Res >::__basic_future** (shared_future< _Res > &&) noexcept
- template<typename _Signature , typename _Fn , typename _Alloc = std::allocator<int>>
  static shared_ptr< __future_base::_Task_state_base< _Signature > > **std::__create_task_state** (_Fn &&__fn, const _Alloc &__a=_Alloc())
- template<typename _BoundFn >
  static std::shared_ptr< _State_base > **std::__future_base::_S_make_async_state** (_BoundFn &&__fn)
- template<typename _BoundFn >
  static std::shared_ptr< _State_base > **std::__future_base::_S_make_deferred_state** (_BoundFn &&__fn)
- template<typename _Fn , typename... _Args>
  future< __async_result_of< _Fn, _Args... > > std::async (_Fn &&__fn, _Args &&... __args)
- template<typename _Fn , typename... _Args>
  future< __async_result_of< _Fn, _Args... > > std::async (launch __policy, _Fn &&__fn, _Args &&... __args)
- const error_category & std::future_category () noexcept
- error_code std::make_error_code (future_errc __errc) noexcept
- error_condition std::make_error_condition (future_errc __errc) noexcept
- constexpr launch **std::operator&** (launch __x, launch __y)
- launch & **std::operator&=** (launch &__x, launch __y)
- constexpr launch **std::operator^** (launch __x, launch __y)
- launch & **std::operator^=** (launch &__x, launch __y)

- constexpr launch **std::operator|** (launch __x, launch __y)
- launch & **std::operator|=** (launch &__x, launch __y)
- constexpr launch **std::operator~** (launch __x)
- shared_future< _Res > **std::future< _Res >::share** () noexcept
- shared_future< _Res & > **std::future< _Res & >::share** () noexcept
- shared_future< void > **std::future< void >::share** () noexcept
- template<typename _Res , typename... _ArgTypes>
  void std::swap (packaged_task< _Res(_ArgTypes...)> &__x, packaged_task< _Res(_ArgTypes...)> &__y) noexcept
- template<typename _Res >
  void **std::swap** (promise< _Res > &__x, promise< _Res > &__y) noexcept

2.36.1 Detailed Description

Classes for futures support.

2.36.2 Enumeration Type Documentation

2.36.2.1 future_errc `enum std::future_errc [strong]`

Error code for futures.

Definition at line 66 of file future.

2.36.2.2 future_status `enum std::future_status [strong]`

Status code for futures.

Definition at line 174 of file future.

2.36.2.3 launch `enum std::launch [strong]`

Launch code for futures.

Definition at line 137 of file future.

2.36.3 Function Documentation

2.36.3.1 async() [1/2] template<typename _Fn , typename... _Args>

```
future< __async_result_of< _Fn, _Args... > > std::async (
            _Fn && __fn,
            _Args &&... __args )  [inline]
```

async, potential overload

Definition at line 1784 of file future.

2.36.3.2 async() [2/2] template<typename _Fn , typename... _Args>

```
future< __async_result_of< _Fn, _Args... > > std::async (
            launch __policy,
            _Fn && __fn,
            _Args &&... __args )
```

async

Definition at line 1751 of file future.

2.36.3.3 future_category() const error_category& std::future_category ( ) [noexcept]

Points to a statically-allocated object derived from error_category.

2.36.3.4 make_error_code() error_code std::make_error_code (

```
            future_errc __errc )  [inline], [noexcept]
```

Overload for make_error_code.

Definition at line 84 of file future.

2.36.3.5 make_error_condition() error_condition std::make_error_condition (

```
            future_errc __errc )  [inline], [noexcept]
```

Overload for make_error_condition.

Definition at line 89 of file future.

2.36.3.6 swap() template<typename _Res , typename... _ArgTypes>

```
void std::swap (
            packaged_task< _Res(_ArgTypes...)> & __x,
            packaged_task< _Res(_ArgTypes...)> & __y )  [inline], [noexcept]
```

swap

Definition at line 1615 of file future.

2.37 Generalized Numeric operations

Collaboration diagram for Generalized Numeric operations:

Functions

- template<typename _InputIterator , typename _Tp >
  constexpr _Tp std::accumulate (_InputIterator __first, _InputIterator __last, _Tp __init)

  __init)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _Tp , typename _BinaryOperation1 , typename _BinaryOperation2
  >
  constexpr _Tp std::inner_product (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Tp
  __init, _BinaryOperation1 __binary_op1, _BinaryOperation2 __binary_op2)
- template<typename _ForwardIterator , typename _Tp >
  constexpr void std::iota (_ForwardIterator __first, _ForwardIterator __last, _Tp __value)
- template<typename _InputIterator , typename _OutputIterator >
  constexpr _OutputIterator std::partial_sum (_InputIterator __first, _InputIterator __last, _OutputIterator __result)
- template<typename _InputIterator , typename _OutputIterator , typename _BinaryOperation >
  constexpr _OutputIterator std::partial_sum (_InputIterator __first, _InputIterator __last, _OutputIterator __result,
  _BinaryOperation __binary_op)

2.37.1 Detailed Description

2.37.2 Function Documentation

2.37.2.1 accumulate() [1/2]

```
template<typename _InputIterator , typename _Tp >
constexpr _Tp std::accumulate (
            _InputIterator __first,
            _InputIterator __last,
            _Tp __init )  [inline], [constexpr]
```

Accumulate values in a range.

Accumulates the values in the range [first,last) using operator+(). The initial value is *init*. The values are processed in order.

Parameters

__first	Start of range.
__last	End of range.
__init	Starting value to add other values to.

Returns

The final sum.

Definition at line 134 of file stl_numeric.h.

Referenced by __gnu_parallel::__parallel_partial_sum_linear().

2.37.2.2 accumulate() [2/2]

```
template<typename _InputIterator , typename _Tp , typename _Binary↩
Operation >
constexpr _Tp std::accumulate (
            _InputIterator __first,
            _InputIterator __last,
            _Tp __init,
            _BinaryOperation __binary_op )  [inline], [constexpr]
```

Accumulate values in a range with operation.

Accumulates the values in the range `[first,last)` using the function object `__binary_op`. The initial value is `__init`. The values are processed in order.

Parameters

__first	Start of range.
__last	End of range.
__init	Starting value to add other values to.
__binary_op	Function object to accumulate with.

Returns

The final sum.

Definition at line 161 of file stl_numeric.h.

2.37.2.3 adjacent_difference() [1/2]

```
template<typename _InputIterator , typename _OutputIterator >
constexpr _OutputIterator std::adjacent_difference (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result )  [constexpr]
```

Return differences between adjacent values.

Computes the difference between adjacent values in the range [first,last) using operator-() and writes the result to __result.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sums.

Returns

Iterator pointing just beyond the values written to result.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 539. partial_sum and adjacent_difference should mention requirements

Definition at line 338 of file stl_numeric.h.

2.37.2.4 adjacent_difference() [2/2]

```
template<typename _InputIterator , typename _OutputIterator ,
typename _BinaryOperation >
constexpr _OutputIterator std::adjacent_difference (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _BinaryOperation __binary_op )  [constexpr]
```

Return differences between adjacent values.

Computes the difference between adjacent values in the range [__first,__last) using the function object __binary_op and writes the result to __result.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.
__binary_op	Function object.

Returns

Iterator pointing just beyond the values written to result.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 539. partial_sum and adjacent_difference should mention requirements

Definition at line 382 of file stl_numeric.h.

2.37.2.5 inner_product() [1/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename
_Tp >
constexpr _Tp std::inner_product (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _Tp __init )  [inline], [constexpr]
```

Compute inner product of two ranges.

Starting with an initial value of `__init`, multiplies successive elements from the two ranges and adds each product into the accumulated value using operator+(). The values in the ranges are processed in order.

Parameters

__first1	Start of range 1.
__last1	End of range 1.
__first2	Start of range 2.
__init	Starting value to add other values to.

Returns

The final inner product.

Definition at line 190 of file stl_numeric.h.

2.37.2.6 inner_product() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename
_Tp , typename _BinaryOperation1 , typename _BinaryOperation2 >
constexpr _Tp std::inner_product (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _Tp __init,
            _BinaryOperation1 __binary_op1,
            _BinaryOperation2 __binary_op2 )  [inline], [constexpr]
```

Compute inner product of two ranges.

Starting with an initial value of `__init`, applies `__binary_op2` to successive elements from the two ranges and accumulates each result into the accumulated value using `__binary_op1`. The values in the ranges are processed in order.

Parameters

__first1	Start of range 1.
__last1	End of range 1.
__first2	Start of range 2.
__init	Starting value to add other values to.
__binary_op1	Function object to accumulate with.
__binary_op2	Function object to apply to pairs of input values.

Returns

The final inner product.

Definition at line 223 of file stl_numeric.h.

2.37.2.7 iota()

```
template<typename _ForwardIterator , typename _Tp >
constexpr void std::iota (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Tp __value )  [constexpr]
```

Create a range of sequentially increasing values.

For each element in the range [first,last) assigns `value` and increments `value` as if by `++value`.

Parameters

__first	Start of range.
__last	End of range.
__value	Starting value.

Returns

Nothing.

Definition at line 88 of file stl_numeric.h.

2.37.2.8 partial_sum() [1/2]

```
template<typename _InputIterator , typename _OutputIterator >
constexpr _OutputIterator std::partial_sum (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result )  [constexpr]
```

Return list of partial sums.

Accumulates the values in the range [first,last) using the + operator. As each successive input value is added into the total, that partial sum is written to __result. Therefore, the first value in __result is the first value of the input, the second value in __result is the sum of the first and second input values, and so on.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.

Returns

Iterator pointing just beyond the values written to __result.

Definition at line 256 of file stl_numeric.h.

Referenced by __gnu_parallel::__parallel_random_shuffle_drs_pu(), and __gnu_parallel::__sequential_random_↩ shuffle().

2.37.2.9 partial_sum() [2/2]

```
template<typename _InputIterator , typename _OutputIterator , typename
_BinaryOperation >
constexpr _OutputIterator std::partial_sum (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _BinaryOperation __binary_op )  [constexpr]
```

Return list of partial sums.

Accumulates the values in the range [first,last) using __binary_op. As each successive input value is added into the total, that partial sum is written to __result. Therefore, the first value in __result is the first value of the input, the second value in __result is the sum of the first and second input values, and so on.

Parameters

__first	Start of input range.
__last	End of input range.
__result	Output sum.
__binary_op	Function object.

Returns

Iterator pointing just beyond the values written to __result.

Definition at line 298 of file stl_numeric.h.

2.38 Hash-Based

Collaboration diagram for Hash-Based:

Modules

- Base and Policy Classes

Macros

- #define **PB_DS_CC_HASH_BASE**
- #define **PB_DS_GP_HASH_BASE**
- #define **PB_DS_HASH_BASE**

2.38.1 Detailed Description

2.39 Hashes

Collaboration diagram for Hashes:

Classes

- struct std::hash< _Tp >

Macros

- #define **_Cxx_hashtable_define_trivial_hash**(_Tp)

2.39.1 Detailed Description

Hashing functors taking a variable type and returning a `std::size_t`.

2.40 Heap

Collaboration diagram for Heap:

Functions

- template<typename _RandomAccessIterator >
  constexpr bool std::is_heap (_RandomAccessIterator __first, _RandomAccessIterator __last)
- template<typename _RandomAccessIterator , typename _Compare >

- template<typename _RandomAccessIterator , typename _Compare >
  constexpr void std::sort_heap (_RandomAccessIterator __first, _RandomAccessIterator __last, _Compare __↩ comp)

2.40.1 Detailed Description

2.40.2 Function Documentation

2.40.2.1 is_heap() [1/2] template<typename _RandomAccessIterator >

```
constexpr bool std::is_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Determines whether a range is a heap.

Parameters

__first	Start of range.
__last	End of range.

Returns

True if range is a heap, false otherwise.

Definition at line 550 of file stl_heap.h.

2.40.2.2 is_heap() [2/2]

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr bool std::is_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Determines whether a range is a heap using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor to use.

Returns

True if range is a heap, false otherwise.

Definition at line 564 of file stl_heap.h.

2.40.2.3 is_heap_until() [1/2]

```
template<typename _RandomAccessIterator >
constexpr _RandomAccessIterator std::is_heap_until (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Search the end of a heap.

Parameters

__first	Start of range.
__last	End of range.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator i in [__first, __last) for which the range [__first, i) is a heap.

Definition at line 496 of file stl_heap.h.

2.40.2.4 is_heap_until() [2/2]

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr _RandomAccessIterator std::is_heap_until (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Search the end of a heap using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor to use.

Returns

An iterator pointing to the first element not in the heap.

This operation returns the last iterator i in [__first, __last) for which the range [__first, i) is a heap. Comparisons are made using __comp.

Definition at line 525 of file stl_heap.h.

2.40.2.5 make_heap() [1/2]

```
template<typename _RandomAccessIterator >
constexpr void std::make_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Construct a heap over a range.

Parameters

__first	Start of heap.
__last	End of heap.

This operation makes the elements in [__first,__last) into a heap.

Definition at line 374 of file stl_heap.h.

2.40.2.6 make_heap() [2/2] template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::make_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Construct a heap over a range using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation makes the elements in [__first,__last) into a heap. Comparisons are made using __comp.

Definition at line 401 of file stl_heap.h.

2.40.2.7 pop_heap() [1/2] template<typename _RandomAccessIterator >

```
constexpr void std::pop_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Pop an element off a heap.

Parameters

__first	Start of heap.
__last	End of heap.

Precondition

[__first, __last) is a valid, non-empty range.

This operation pops the top of the heap. The elements __first and __last-1 are swapped and [__first,__last-1) is made into a heap.

Definition at line 282 of file stl_heap.h.

2.40.2.8 pop_heap() [2/2]

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr void std::pop_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Pop an element off a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation pops the top of the heap. The elements __first and __last-1 are swapped and [__first,__last-1) is made into a heap. Comparisons are made using comp.

Definition at line 316 of file stl_heap.h.

2.40.2.9 push_heap() [1/2]

```
template<typename _RandomAccessIterator >
constexpr void std::push_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Push an element onto a heap.

Parameters

__first	Start of heap.
__last	End of heap + element.

This operation pushes the element at last-1 onto the valid heap over the range [__first,__last-1). After completion, [__first,__last) is a valid heap.

Definition at line 161 of file stl_heap.h.

2.40.2.10 push_heap() [2/2]

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr void std::push_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Push an element onto a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap + element.
__comp	Comparison functor.

This operation pushes the element at __last-1 onto the valid heap over the range [__first,__last-1). After completion, [__first,__last) is a valid heap. Compare operations are performed using comp.

Definition at line 197 of file stl_heap.h.

2.40.2.11 sort_heap() [1/2] template<typename _RandomAccessIterator >

```
constexpr void std::sort_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Sort a heap.

Parameters

__first	Start of heap.
__last	End of heap.

This operation sorts the valid heap in the range [__first,__last).

Definition at line 439 of file stl_heap.h.

2.40.2.12 sort_heap() [2/2] template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::sort_heap (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Sort a heap using comparison functor.

Parameters

__first	Start of heap.
__last	End of heap.
__comp	Comparison functor to use.

This operation sorts the valid heap in the range [__first,__last). Comparisons are made using __comp.

Definition at line 467 of file stl_heap.h.

- typedef basic_stringstream< wchar_t > std::wstringstream

2.42.1 Detailed Description

Nearly all of the I/O classes are parameterized on the type of characters they read and write. (The major exception is ios_base at the top of the hierarchy.) This is a change from pre-Standard streams, which were not templates.

For ease of use and compatibility, all of the basic_* I/O-related classes are given typedef names for both of the builtin character widths (wide and narrow). The typedefs are the same as the pre-Standard names, for example:

```
typedef basic_ifstream<char>  ifstream;
```

Because properly forward-declaring these classes can be difficult, you should not do it yourself. Instead, include the <iosfwd> header, which contains only declarations of all the I/O classes as well as the typedefs. Trying to forward-declare the typedefs themselves (e.g., `class ostream;`) is not valid ISO C++.

For more specific declarations, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html#std.io.objects

2.42.2 Typedef Documentation

2.42.2.1 filebuf typedef basic_filebuf<char> std::filebuf

Class for `char` file buffers.

Definition at line 159 of file iosfwd.

2.42.2.2 fstream typedef basic_fstream<char> std::fstream

Class for `char` mixed input and output file streams.

Definition at line 168 of file iosfwd.

2.42.2.3 ifstream `typedef basic_ifstream<char> std::ifstream`

Class for `char` input file streams.

Definition at line 162 of file iosfwd.

2.42.2.4 ios `typedef basic_ios<char> std::ios`

Base class for `char` streams.

Definition at line 132 of file iosfwd.

2.42.2.5 iostream `typedef basic_iostream<char> std::iostream`

Base class for `char` mixed input and output streams.

Definition at line 144 of file iosfwd.

2.42.2.6 istream `typedef basic_istream<char> std::istream`

Base class for `char` input streams.

Definition at line 138 of file iosfwd.

2.42.2.7 istringstream `typedef basic_istringstream<char> std::istringstream`

Class for `char` input memory streams.

Definition at line 150 of file iosfwd.

2.42.2.8 ofstream `typedef basic_ofstream<char> std::ofstream`

Class for `char` output file streams.

Definition at line 165 of file iosfwd.

2.42.2.9 ostream `typedef basic_ostream<char> std::ostream`

Base class for `char` output streams.

Definition at line 141 of file iosfwd.

2.42.2.10 ostringstream `typedef basic_ostringstream<char> std::ostringstream`

Class for `char` output memory streams.

Definition at line 153 of file iosfwd.

2.42.2.11 streambuf `typedef basic_streambuf<char> std::streambuf`

Base class for `char` buffers.

Definition at line 135 of file iosfwd.

2.42.2.12 stringbuf `typedef basic_stringbuf<char> std::stringbuf`

Class for `char` memory buffers.

Definition at line 147 of file iosfwd.

2.42.2.13 stringstream `typedef basic_stringstream<char> std::stringstream`

Class for `char` mixed input and output memory streams.

Definition at line 156 of file iosfwd.

2.42.2.14 wfilebuf `typedef basic_filebuf<wchar_t> std::wfilebuf`

Class for `wchar_t` file buffers.

Definition at line 199 of file iosfwd.

2.42.2.15 wfstream `typedef basic_fstream<wchar_t> std::wfstream`

Class for `wchar_t` mixed input and output file streams.

Definition at line 208 of file iosfwd.

2.42.2.16 wifstream `typedef basic_ifstream<wchar_t> std::wifstream`

Class for `wchar_t` input file streams.

Definition at line 202 of file iosfwd.

2.42.2.17 wios `typedef basic_ios<wchar_t> std::wios`

Base class for `wchar_t` streams.

Definition at line 172 of file iosfwd.

2.42.2.18 wiostream `typedef basic_iostream<wchar_t> std::wiostream`

Base class for `wchar_t` mixed input and output streams.

Definition at line 184 of file iosfwd.

2.42.2.19 wistream `typedef basic_istream<wchar_t> std::wistream`

Base class for `wchar_t` input streams.

Definition at line 178 of file iosfwd.

2.42.2.20 wistringstream `typedef basic_istringstream<wchar_t> std::wistringstream`

Class for `wchar_t` input memory streams.

Definition at line 190 of file iosfwd.

2.42.2.21 wofstream `typedef basic_ofstream<wchar_t> std::wofstream`

Class for `wchar_t` output file streams.

Definition at line 205 of file iosfwd.

2.42.2.22 wostream `typedef basic_ostream<wchar_t> std::wostream`

Base class for `wchar_t` output streams.

Definition at line 181 of file iosfwd.

2.42.2.23 wostringstream `typedef basic_ostringstream<wchar_t> std::wostringstream`

Class for `wchar_t` output memory streams.

Definition at line 193 of file iosfwd.

2.42.2.24 wstreambuf `typedef basic_streambuf<wchar_t> std::wstreambuf`

Base class for `wchar_t` buffers.

Definition at line 175 of file iosfwd.

2.42.2.25 wstringbuf `typedef basic_stringbuf<wchar_t> std::wstringbuf`

Class for `wchar_t` memory buffers.

Definition at line 187 of file iosfwd.

2.42.2.26 wstringstream `typedef basic_stringstream<wchar_t> std::wstringstream`

Class for `wchar_t` mixed input and output memory streams.

Definition at line 196 of file iosfwd.

2.43 Invalidation Guarantees

Collaboration diagram for Invalidation Guarantees:

Classes

- struct __gnu_pbds::basic_invalidation_guarantee
- struct __gnu_pbds::point_invalidation_guarantee
- struct __gnu_pbds::range_invalidation_guarantee

2.43.1 Detailed Description

2.44 Iterator Tags

Collaboration diagram for Iterator Tags:

Classes

- struct std::bidirectional_iterator_tag
- struct std::forward_iterator_tag
- struct std::input_iterator_tag
- struct std::output_iterator_tag
- struct std::random_access_iterator_tag

2.44.1 Detailed Description

These are empty types, used to distinguish different iterators. The distinction is not made by what they contain, but simply by what they are. Different underlying algorithms can then be used based on the different operations supported by different iterator types.

2.45 Iterators

2.45.1 Detailed Description

Abstractions for uniform iterating through various underlying types.

2.45.2 Function Documentation

2.45.2.1 __iterator_category() template<typename _Iter >

```
constexpr iterator_traits<_Iter>::iterator_category std::__iterator_category (
            const _Iter &  )  [inline], [constexpr]
```

This function is not a part of the C++ standard but is syntactic sugar for internal library use only.

Definition at line 238 of file stl_iterator_base_types.h.

Referenced by std::deque< _Tp, _Alloc >::deque(), std::vector< _Tp, _Alloc >::vector(), __gnu_debug::__valid_↩ range_aux(), std::advance(), std::deque< _Tp, _Alloc >::assign(), std::distance(), and std::deque< _Tp, _Alloc >↩ ::insert().

2.45.2.2 back_inserter() template<typename _Container >

```
constexpr back_insert_iterator<_Container> std::back_inserter (
            _Container & __x )  [inline], [constexpr]
```

Parameters

_↩ _x	A container of arbitrary type.

Returns

An instance of back_insert_iterator working on __x.

This wrapper function helps in creating back_insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 705 of file bits/stl_iterator.h.

Referenced by std::match_results< _Bi_iter, _Alloc >::format(), and std::regex_replace().

2.45.2.3 front_inserter() template<typename _Container >

```
constexpr front_insert_iterator<_Container> std::front_inserter (
            _Container & __x )  [inline], [constexpr]
```

Parameters

_↩ _x	A container of arbitrary type.

Returns

An instance of front_insert_iterator working on `x`.

This wrapper function helps in creating front_insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 808 of file bits/stl_iterator.h.

2.45.2.4 inserter()

```
template<typename _Container >
insert_iterator<_Container> std::inserter (
            _Container & __x,
            typename _Container::iterator __i )  [inline]
```

Parameters

__x	A container of arbitrary type.
__i	An iterator into the container.

Returns

An instance of insert_iterator working on `__x`.

This wrapper function helps in creating insert_iterator instances. Typing the name of the iterator requires knowing the precise full type of the container, which can be tedious and impedes generic programming. Using this function lets you take advantage of automatic template parameter deduction, making the compiler match the correct types for you.

Definition at line 951 of file bits/stl_iterator.h.

2.45.2.5 make_reverse_iterator()

```
template<typename _Iterator >
constexpr reverse_iterator<_Iterator> std::make_reverse_iterator (
            _Iterator __i )  [inline], [constexpr]
```

Generator function for reverse_iterator.

Definition at line 572 of file bits/stl_iterator.h.

2.45.2.6 operator==()

```
template<typename _Iterator >
constexpr bool std::operator== (
            const reverse_iterator< _Iterator > & __x,
            const reverse_iterator< _Iterator > & __y )  [inline], [constexpr]
```

Parameters

_↩ _x	A reverse_iterator.
_↩ _y	A reverse_iterator.

Returns

A simple bool.

Reverse iterators forward comparisons to their underlying base() iterators.

Definition at line 389 of file bits/stl_iterator.h.

References std::reverse_iterator< _Iterator >::base().

Classes and functions for internationalization and localization.

2.48.2 Function Documentation

2.48.2.1 has_facet() `template<typename _Facet >`

```
bool std::has_facet (
            const locale & __loc ) throw ( )
```

Test for the presence of a facet.

has_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

_Facet	The facet type to test the presence of.

Parameters

__loc	The locale to test.

Returns

true if __loc contains a facet of type _Facet, else false.

Definition at line 104 of file locale_classes.tcc.

2.48.2.2 use_facet() template<typename _Facet >

```
const _Facet & std::use_facet (
            const locale & __loc )
```

Return a facet.

use_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has_facet(locale) is true, there is a suitable facet to return. It throws std::bad_cast if the locale doesn't contain a facet of type Facet.

Template Parameters

_Facet	The facet type to access.

Parameters

__loc	The locale to use.

Returns

Reference to facet of type Facet.

Exceptions

std::bad_cast	if __loc doesn't contain a facet of type _Facet.

Definition at line 132 of file locale_classes.tcc.

2.49.1 Detailed Description

2.49.2 Mathematical Special Functions

A collection of advanced mathematical special functions, defined by ISO/IEC IS 29124 and then added to ISO C++ 2017.

2.49.2.1 Introduction and History The first significant library upgrade on the road to C++2011, TR1, included a set of 23 mathematical functions that significantly extended the standard transcendental functions inherited from C and declared in <cmath>.

Although most components from TR1 were eventually adopted for C++11 these math functions were left behind out of concern for implementability. The math functions were published as a separate international standard IS 29124 - Extensions to the C++ Library to Support Mathematical Special Functions.

For C++17 these functions were incorporated into the main standard.

2.49.2.2 Contents The following functions are implemented in namespace `std`:

- assoc_laguerre - Associated Laguerre functions
- assoc_legendre - Associated Legendre functions
- beta - Beta functions
- comp_ellint_1 - Complete elliptic functions of the first kind
- comp_ellint_2 - Complete elliptic functions of the second kind
- comp_ellint_3 - Complete elliptic functions of the third kind
- cyl_bessel_i - Regular modified cylindrical Bessel functions
- cyl_bessel_j - Cylindrical Bessel functions of the first kind
- cyl_bessel_k - Irregular modified cylindrical Bessel functions
- cyl_neumann - Cylindrical Neumann functions or Cylindrical Bessel functions of the second kind
- ellint_1 - Incomplete elliptic functions of the first kind
- ellint_2 - Incomplete elliptic functions of the second kind
- ellint_3 - Incomplete elliptic functions of the third kind
- expint - The exponential integral
- hermite - Hermite polynomials
- laguerre - Laguerre functions
- legendre - Legendre polynomials
- riemann_zeta - The Riemann zeta function
- sph_bessel - Spherical Bessel functions

- sph_legendre - Spherical Legendre functions
- sph_neumann - Spherical Neumann functions

The hypergeometric functions were stricken from the TR29124 and C++17 versions of this math library because of implementation concerns. However, since they were in the TR1 version and since they are popular we kept them as an extension in namespace `__gnu_cxx:`

- conf_hyperg - Confluent hypergeometric functions
- hyperg - Hypergeometric functions

2.49.2.3 Argument Promotion The arguments suppled to the non-suffixed functions will be promoted according to the following rules:

1. If any argument intended to be floating point is given an integral value That integral value is promoted to double.
2. All floating point arguments are promoted up to the largest floating point precision among them.

2.49.2.4 NaN Arguments If any of the floating point arguments supplied to these functions is invalid or NaN (std↩ ::numeric_limits<Tp>::quiet_NaN), the value NaN is returned.

2.49.2.5 Implementation We strive to implement the underlying math with type generic algorithms to the greatest extent possible. In practice, the functions are thin wrappers that dispatch to function templates. Type dependence is controlled with std::numeric_limits and functions thereof.

We don't promote `float` to `double` or `double` to `long double` reflexively. The goal is for `float` functions to operate more quickly, at the cost of `float` accuracy and possibly a smaller domain of validity. Similaryly, `long double` should give you more dynamic range and slightly more pecision than `double` on many systems.

2.49.2.6 Testing These functions have been tested against equivalent implementations from the `Gnu Scientific Library, GSL` and `Boost` and the ratio

$$\frac{|f - f_{test}|}{|f_{test}|}$$

is generally found to be within 10^{-15} for 64-bit double on linux-x86_64 systems over most of the ranges of validity.

Todo Provide accuracy comparisons on a per-function basis for a small number of targets.

2.49.2.7 General Bibliography

2.49.3 Function Documentation

2.49.3.1 airy_ai() `template<typename _Tp >`

```
__gnu_cxx::__promote<_Tp>::__type __gnu_cxx::airy_ai (
            _Tp __x )  [inline]
```

Return the Airy function $Ai(x)$ of real argument x.

Definition at line 1242 of file specfun.h.

2.49.3.2 airy_aif() `float __gnu_cxx::airy_aif (`

```
            float __x )  [inline]
```

Return the Airy function $Ai(x)$ of `float` argument x.

Definition at line 1219 of file specfun.h.

2.49.3.3 airy_ail() `long double __gnu_cxx::airy_ail (`

```
            long double __x )  [inline]
```

Return the Airy function $Ai(x)$ of `long double` argument x.

Definition at line 1230 of file specfun.h.

2.49.3.4 airy_bi() template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type __gnu_cxx::airy_bi (_Tp __x) [inline]

Return the Airy function $Bi(x)$ of real argument x.

Definition at line 1277 of file specfun.h.

2.49.3.5 airy_bif() float __gnu_cxx::airy_bif (float __x) [inline]

Return the Airy function $Bi(x)$ of `float` argument x.

Definition at line 1254 of file specfun.h.

2.49.3.6 airy_bil() long double __gnu_cxx::airy_bil (long double __x) [inline]

Return the Airy function $Bi(x)$ of `long double` argument x.

Definition at line 1265 of file specfun.h.

2.49.3.7 assoc_laguerre() template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::assoc_laguerre (unsigned int __n, unsigned int __m, _Tp __x) [inline]

Return the associated Laguerre polynomial of nonnegative order `n`, nonnegative degree `m` and real argument `x` : $L_n^m(x)$.

The associated Laguerre function of real degree α, $L_n^\alpha(x)$, is defined by

$$L_n^\alpha(x) = \frac{(\alpha+1)_n}{n!}\,{}_1F_1(-n;\alpha+1;x)$$

where $(\alpha)_n$ is the Pochhammer symbol and ${}_1F_1(a;c;x)$ is the confluent hypergeometric function.

The associated Laguerre polynomial is defined for integral degree $\alpha = m$ by:

$$L_n^m(x) = (-1)^m \frac{d^m}{dx^m} L_{n+m}(x)$$

where the Laguerre polynomial is defined by:

$$L_n(x) = \frac{e^x}{n!}\frac{d^n}{dx^n}(x^n e^{-x})$$

and $x >= 0$.

See also

laguerre for details of the Laguerre function of degree `n`

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_↩ _n	The order of the Laguerre function, __n >= 0.
_↩ _m	The degree of the Laguerre function, __m >= 0.
_↩ _x	The argument of the Laguerre function, __x >= 0.

Exceptions

std::domain_error	if __x < 0.

Definition at line 252 of file specfun.h.

2.49.3.8 assoc_laguerref()

```
float std::assoc_laguerref (
        unsigned int __n,
        unsigned int __m,
        float __x )  [inline]
```

Return the associated Laguerre polynomial of order n, degree m: $L_n^m(x)$ for float argument.

See also

assoc_laguerre for more details.

Definition at line 206 of file specfun.h.

2.49.3.9 assoc_laguerrel()

```
long double std::assoc_laguerrel (
        unsigned int __n,
        unsigned int __m,
        long double __x )  [inline]
```

Return the associated Laguerre polynomial of order n, degree m: $L_n^m(x)$.

See also

assoc_laguerre for more details.

Definition at line 216 of file specfun.h.

2.49.3.10 assoc_legendre() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::assoc_legendre (
            unsigned int __l,
            unsigned int __m,
            _Tp __x )  [inline]
```

Return the associated Legendre function of degree `l` and order `m`.

The associated Legendre function is derived from the Legendre function $P_l(x)$ by the Rodrigues formula:

$$P_l^m(x) = (1 - x^2)^{m/2} \frac{d^m}{dx^m} P_l(x)$$

See also

legendre for details of the Legendre function of degree `l`

Template Parameters

_Tp	The floating-point type of the argument `__x`.

Parameters

_↩ _l	The degree `__l >= 0`.
_↩ _m	The order `__m <= l`.
_↩ _x	The argument, `abs(__x) <= 1`.

Exceptions

std::domain_error	if `abs(__x) > 1`.

Definition at line 298 of file specfun.h.

2.49.3.11 assoc_legendref() float std::assoc_legendref (

```
            unsigned int __l,
            unsigned int __m,
            float __x )  [inline]
```

Return the associated Legendre function of degree `l` and order `m` for `float` argument.

See also

assoc_legendre for more details.

Definition at line 267 of file specfun.h.

2.49.3.12 assoc_legendrel()

```
long double std::assoc_legendrel (
        unsigned int __l,
        unsigned int __m,
        long double __x )  [inline]
```

Return the associated Legendre function of degree `l` and order `m`.

See also

assoc_legendre for more details.

Definition at line 276 of file specfun.h.

2.49.3.13 beta()

```
template<typename _Tpa , typename _Tpb >
__gnu_cxx::__promote_2<_Tpa, _Tpb>::__type std::beta (
        _Tpa __a,
        _Tpb __b )  [inline]
```

Return the beta function, $B(a, b)$, for real parameters `a`, `b`.

The beta function is defined by

$$B(a,b) = \int_0^1 t^{a-1}(1-t)^{b-1}dt = \frac{\Gamma(a)\Gamma(b)}{\Gamma(a+b)}$$

where $a > 0$ and $b > 0$

Template Parameters

_Tpa	The floating-point type of the parameter __a.
_Tpb	The floating-point type of the parameter __b.

Parameters

_a	The first argument of the beta function, __a > 0 .
_b	The second argument of the beta function, __b > 0 .

Exceptions

std::domain_error	if __a < 0 or __b < 0 .

Definition at line 343 of file specfun.h.

2.49.3.14 betaf() `float std::betaf ( float __a, float __b ) [inline]`

Return the beta function, $B(a, b)$, for `float` parameters `a`, `b`.

See also

beta for more details.

Definition at line 312 of file specfun.h.

2.49.3.15 betal() `long double std::betal ( long double __a, long double __b ) [inline]`

Return the beta function, $B(a, b)$, for long double parameters `a`, `b`.

See also

beta for more details.

Definition at line 322 of file specfun.h.

2.49.3.16 comp_ellint_1() `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::comp_ellint_1 ( _Tp __k ) [inline]`

Return the complete elliptic integral of the first kind $K(k)$ for real modulus `k`.

The complete elliptic integral of the first kind is defined as

$$K(k) = F(k, \pi/2) = \int_0^{\pi/2} \frac{d\theta}{\sqrt{1 - k^2 sin^2\theta}}$$

where $F(k, \phi)$ is the incomplete elliptic integral of the first kind and the modulus $|k| <= 1$.

See also

ellint_1 for details of the incomplete elliptic function of the first kind.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.

Parameters

_↩ _k	The modulus, `abs(__k) <= 1`

Exceptions

std::domain_error	if `abs(__k) > 1` .

Definition at line 391 of file specfun.h.

2.49.3.17 comp_ellint_1f() `float std::comp_ellint_1f ( float __k ) [inline]`

Return the complete elliptic integral of the first kind $E(k)$ for `float` modulus `k`.

See also

comp_ellint_1 for details.

Definition at line 358 of file specfun.h.

2.49.3.18 comp_ellint_1l() `long double std::comp_ellint_1l ( long double __k ) [inline]`

Return the complete elliptic integral of the first kind $E(k)$ for long double modulus `k`.

See also

comp_ellint_1 for details.

Definition at line 368 of file specfun.h.

2.49.3.19 comp_ellint_2() `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::comp_ellint_2 ( _Tp __k ) [inline]`

Return the complete elliptic integral of the second kind $E(k)$ for real modulus `k`.

The complete elliptic integral of the second kind is defined as

$$E(k) = E(k, \pi/2) = \int_0^{\pi/2} \sqrt{1 - k^2 sin^2\theta}$$

where $E(k, \phi)$ is the incomplete elliptic integral of the second kind and the modulus $|k| <= 1$.

See also

ellint_2 for details of the incomplete elliptic function of the second kind.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.

Parameters

_↩ k	The modulus, `abs(__k)` <= 1

Exceptions

std::domain_error	if `abs(__k)` > 1.

Definition at line 438 of file specfun.h.

2.49.3.20 comp_ellint_2f() `float std::comp_ellint_2f ( float __k ) [inline]`

Return the complete elliptic integral of the second kind $E(k)$ for `float` modulus `k`.

See also

comp_ellint_2 for details.

Definition at line 406 of file specfun.h.

2.49.3.21 comp_ellint_2l() `long double std::comp_ellint_2l ( long double __k ) [inline]`

Return the complete elliptic integral of the second kind $E(k)$ for long double modulus `k`.

See also

comp_ellint_2 for details.

Definition at line 416 of file specfun.h.

2.49.3.22 comp_ellint_3() `template<typename _Tp , typename _Tpn > __gnu_cxx::__promote_2<_Tp, _Tpn>::__type std::comp_ellint_3 ( _Tp __k, _Tpn __nu ) [inline]`

Return the complete elliptic integral of the third kind $\Pi(k,\nu) = \Pi(k,\nu,\pi/2)$ for real modulus `k`.

The complete elliptic integral of the third kind is defined as

$$\Pi(k,\nu) = \Pi(k,\nu,\pi/2) = \int_0^{\pi/2} \frac{d\theta}{(1-\nu\sin^2\theta)\sqrt{1-k^2\sin^2\theta}}$$

where $\Pi(k,\nu,\phi)$ is the incomplete elliptic integral of the second kind and the modulus $|k| <= 1$.

See also

ellint_3 for details of the incomplete elliptic function of the third kind.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.
_Tpn	The floating-point type of the argument `__nu`.

Parameters

__k	The modulus, `abs(__k)` <= 1
__nu	The argument

Exceptions

std::domain_error	if `abs(__k)` > 1.

Definition at line 489 of file specfun.h.

2.49.3.23 comp_ellint_3f() `float std::comp_ellint_3f ( float __k, float __nu ) [inline]`

Return the complete elliptic integral of the third kind $\Pi(k,\nu)$ for `float` modulus `k`.

See also

comp_ellint_3 for details.

Definition at line 453 of file specfun.h.

2.49.3.24 comp_ellint_3l() `long double std::comp_ellint_3l ( long double __k, long double __nu ) [inline]`

Return the complete elliptic integral of the third kind $\Pi(k,\nu)$ for `long double` modulus `k`.

See also

comp_ellint_3 for details.

Definition at line 463 of file specfun.h.

2.49.3.25 conf_hyperg() `template<typename _Tpa , typename _Tpc , typename _Tp > __gnu_cxx::__promote_3<_Tpa, _Tpc, _Tp>::__type __gnu_cxx::conf_hyperg ( _Tpa __a, _Tpc __c, _Tp __x ) [inline]`

Return the confluent hypergeometric function ${}_1F_1(a;c;x)$ of real numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

The confluent hypergeometric function is defined by

$$ {}_1F_1(a;c;x) = \sum_{n=0}^{\infty} \frac{(a)_n x^n}{(c)_n n!} $$

where the Pochhammer symbol is $(x)_k = (x)(x+1)...(x+k-1)$, $(x)_0 = 1$

Parameters

_↩ _a	The numeratorial parameter
_↩ _c	The denominatorial parameter
_↩ _x	The argument

Definition at line 1327 of file specfun.h.

2.49.3.26 conf_hypergf() `float __gnu_cxx::conf_hypergf ( float __a, float __c, float __x ) [inline]`

Return the confluent hypergeometric function ${}_1F_1(a;c;x)$ of `float` numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

See also

conf_hyperg for details.

Definition at line 1295 of file specfun.h.

2.49.3.27 conf_hypergl()

```
long double __gnu_cxx::conf_hypergl (
            long double __a,
            long double __c,
            long double __x )  [inline]
```

Return the confluent hypergeometric function ${}_1F_1(a;c;x)$ of `long double` numeratorial parameter `a`, denominatorial parameter `c`, and argument `x`.

See also

conf_hyperg for details.

Definition at line 1306 of file specfun.h.

2.49.3.28 cyl_bessel_i()

```
template<typename _Tpnu , typename _Tp >
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_i (
            _Tpnu __nu,
            _Tp __x )  [inline]
```

Return the regular modified Bessel function $I_\nu(x)$ for real order ν and argument $x >= 0$.

The regular modified cylindrical Bessel function is:

$$I_\nu(x) = i^{-\nu} J_\nu(ix) = \sum_{k=0}^{\infty} \frac{(x/2)^{\nu+2k}}{k!\Gamma(\nu+k+1)}$$

Template Parameters

_Tpnu	The floating-point type of the order `__nu`.
_Tp	The floating-point type of the argument `__x`.

Parameters

__nu	The order
__x	The argument, `__x >= 0`

Exceptions

std::domain_error	if __x < 0 .

Definition at line 535 of file specfun.h.

2.49.3.29 cyl_bessel_if()

```
float std::cyl_bessel_if (
    float __nu,
    float __x )  [inline]
```

Return the regular modified Bessel function $I_\nu(x)$ for `float` order ν and argument $x >= 0$.

See also

cyl_bessel_i for setails.

Definition at line 504 of file specfun.h.

2.49.3.30 cyl_bessel_il()

```
long double std::cyl_bessel_il (
    long double __nu,
    long double __x )  [inline]
```

Return the regular modified Bessel function $I_\nu(x)$ for `long double` order ν and argument $x >= 0$.

See also

cyl_bessel_i for setails.

Definition at line 514 of file specfun.h.

2.49.3.31 cyl_bessel_j()

```
template<typename _Tpnu , typename _Tp >
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_j (
    _Tpnu __nu,
    _Tp __x )  [inline]
```

Return the Bessel function $J_\nu(x)$ of real order ν and argument $x >= 0$.

The cylindrical Bessel function is:

$$J_\nu(x) = \sum_{k=0}^{\infty} \frac{(-1)^k (x/2)^{\nu+2k}}{k!\Gamma(\nu+k+1)}$$

Template Parameters

_Tpnu	The floating-point type of the order __nu.
_Tp	The floating-point type of the argument __x.

Parameters

__nu	The order
__x	The argument, __x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 581 of file specfun.h.

2.49.3.32 cyl_bessel_jf()

```
float std::cyl_bessel_jf (
    float __nu,
    float __x )  [inline]
```

Return the Bessel function of the first kind $J_\nu(x)$ for `float` order ν and argument $x >= 0$.

See also

cyl_bessel_j for setails.

Definition at line 550 of file specfun.h.

2.49.3.33 cyl_bessel_jl()

```
long double std::cyl_bessel_jl (
    long double __nu,
    long double __x )  [inline]
```

Return the Bessel function of the first kind $J_\nu(x)$ for `long double` order ν and argument $x >= 0$.

See also

cyl_bessel_j for setails.

Definition at line 560 of file specfun.h.

2.49.3.34 cyl_bessel_k() `template<typename _Tpnu , typename _Tp > __gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_bessel_k ( _Tpnu __nu, _Tp __x ) [inline]`

Return the irregular modified Bessel function $K_\nu(x)$ of real order ν and argument x.

The irregular modified Bessel function is defined by:

$$K_\nu(x) = \frac{\pi}{2}\frac{I_{-\nu}(x) - I_\nu(x)}{\sin \nu\pi}$$

where for integral $\nu = n$ a limit is taken: $lim_{\nu \to n}$. For negative argument we have simply:

$$K_{-\nu}(x) = K_\nu(x)$$

Template Parameters

_Tpnu	The floating-point type of the order __nu.
_Tp	The floating-point type of the argument __x.

Parameters

__nu	The order
__x	The argument, __x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 633 of file specfun.h.

2.49.3.35 cyl_bessel_kf() `float std::cyl_bessel_kf ( float __nu, float __x ) [inline]`

Return the irregular modified Bessel function $K_\nu(x)$ for `float` order ν and argument $x >= 0$.

See also

cyl_bessel_k for setails.

Definition at line 596 of file specfun.h.

2.49.3.36 cyl_bessel_kl() `long double std::cyl_bessel_kl (`

```
    long double __nu,
    long double __x )  [inline]
```

Return the irregular modified Bessel function $K_\nu(x)$ for `long double` order ν and argument $x >= 0$.

See also

cyl_bessel_k for setails.

Definition at line 606 of file specfun.h.

2.49.3.37 cyl_neumann() `template<typename _Tpnu , typename _Tp >`

```
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::cyl_neumann (
    _Tpnu __nu,
    _Tp __x )  [inline]
```

Return the Neumann function $N_\nu(x)$ of real order ν and argument $x >= 0$.

The Neumann function is defined by:

$$N_\nu(x) = \frac{J_\nu(x)\cos\nu\pi - J_{-\nu}(x)}{\sin\nu\pi}$$

where $x >= 0$ and for integral order $\nu = n$ a limit is taken: $lim_{\nu\to n}$.

Template Parameters

_Tpnu	The floating-point type of the order __nu.
_Tp	The floating-point type of the argument __x.

Parameters

__nu	The order
__x	The argument, __x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 681 of file specfun.h.

2.49.3.38 cyl_neumannf() `float std::cyl_neumannf (`

```
    float __nu,
    float __x )  [inline]
```

Return the Neumann function $N_\nu(x)$ of `float` order ν and argument x.

See also

cyl_neumann for setails.

Definition at line 648 of file specfun.h.

2.49.3.39 cyl_neumannl() `long double std::cyl_neumannl ( long double __nu, long double __x ) [inline]`

Return the Neumann function $N_\nu(x)$ of `long double` order ν and argument x.

See also

cyl_neumann for setails.

Definition at line 658 of file specfun.h.

2.49.3.40 ellint_1() `template<typename _Tp , typename _Tpp > __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::ellint_1 ( _Tp __k, _Tpp __phi ) [inline]`

Return the incomplete elliptic integral of the first kind $F(k,\phi)$ for `real` modulus k and angle ϕ.

The incomplete elliptic integral of the first kind is defined as

$$F(k,\phi) = \int_0^\phi \frac{d\theta}{\sqrt{1 - k^2 sin^2\theta}}$$

For $\phi = \pi/2$ this becomes the complete elliptic integral of the first kind, $K(k)$.

See also

comp_ellint_1.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.
_Tpp	The floating-point type of the angle `__phi`.

Parameters

__k	The modulus, `abs(__k) <= 1`
__phi	The integral limit argument in radians

Exceptions

std::domain_error	if `abs(__k) > 1` .

Definition at line 729 of file specfun.h.

2.49.3.41 ellint_1f() `float std::ellint_1f ( float __k, float __phi ) [inline]`

Return the incomplete elliptic integral of the first kind $E(k, \phi)$ for `float` modulus k and angle ϕ.

See also

ellint_1 for details.

Definition at line 696 of file specfun.h.

2.49.3.42 ellint_1l() `long double std::ellint_1l ( long double __k, long double __phi ) [inline]`

Return the incomplete elliptic integral of the first kind $E(k, \phi)$ for `long double` modulus k and angle ϕ.

See also

ellint_1 for details.

Definition at line 706 of file specfun.h.

2.49.3.43 ellint_2() `template<typename _Tp , typename _Tpp > __gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::ellint_2 ( _Tp __k, _Tpp __phi ) [inline]`

Return the incomplete elliptic integral of the second kind $E(k, \phi)$.

The incomplete elliptic integral of the second kind is defined as

$$E(k, \phi) = \int_0^\phi \sqrt{1 - k^2 sin^2\theta}$$

For $\phi = \pi/2$ this becomes the complete elliptic integral of the second kind, $E(k)$.

See also

comp_ellint_2.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.
_Tpp	The floating-point type of the angle `__phi`.

Parameters

__k	The modulus, `abs(__k) <= 1`
__phi	The integral limit argument in radians

Returns

The elliptic function of the second kind.

Exceptions

std::domain_error	if `abs(__k) > 1` .

Definition at line 777 of file specfun.h.

2.49.3.44 ellint_2f()

```
float std::ellint_2f (
    float __k,
    float __phi )  [inline]
```

Return the incomplete elliptic integral of the second kind $E(k, \phi)$ for `float` argument.

See also

ellint_2 for details.

Definition at line 744 of file specfun.h.

2.49.3.45 ellint_2l()

```
long double std::ellint_2l (
    long double __k,
    long double __phi )  [inline]
```

Return the incomplete elliptic integral of the second kind $E(k, \phi)$.

See also

ellint_2 for details.

Definition at line 754 of file specfun.h.

2.49.3.46 ellint_3() `template<typename _Tp , typename _Tpn , typename _Tpp > __gnu_cxx::__promote_3<_Tp, _Tpn, _Tpp>::__type std::ellint_3 ( _Tp __k, _Tpn __nu, _Tpp __phi ) [inline]`

Return the incomplete elliptic integral of the third kind $\Pi(k, \nu, \phi)$.

The incomplete elliptic integral of the third kind is defined by:

$$\Pi(k, \nu, \phi) = \int_0^\phi \frac{d\theta}{(1 - \nu \sin^2\theta)\sqrt{1 - k^2 \sin^2\theta}}$$

For $\phi = \pi/2$ this becomes the complete elliptic integral of the third kind, $\Pi(k, \nu)$.

See also

comp_ellint_3.

Template Parameters

_Tp	The floating-point type of the modulus `__k`.
_Tpn	The floating-point type of the argument `__nu`.
_Tpp	The floating-point type of the angle `__phi`.

Parameters

__k	The modulus, `abs(__k) <= 1`
__nu	The second argument
__phi	The integral limit argument in radians

Returns

The elliptic function of the third kind.

Exceptions

std::domain_error	if `abs(__k) > 1` .

Definition at line 830 of file specfun.h.

2.49.3.47 ellint_3f() `float std::ellint_3f ( float __k, float __nu, float __phi ) [inline]`

Return the incomplete elliptic integral of the third kind $\Pi(k, \nu, \phi)$ for `float` argument.

See also

ellint_3 for details.

Definition at line 792 of file specfun.h.

2.49.3.48 ellint_3l()

```
long double std::ellint_3l (
        long double __k,
        long double __nu,
        long double __phi )  [inline]
```

Return the incomplete elliptic integral of the third kind $\Pi(k, \nu, \phi)$.

See also

ellint_3 for details.

Definition at line 802 of file specfun.h.

2.49.3.49 expint()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::expint (
        _Tp __x )  [inline]
```

Return the exponential integral $Ei(x)$ for `real` argument `x`.

The exponential integral is given by

$$Ei(x) = -\int_{-x}^{\infty} \frac{e^t}{t} dt$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_x	The argument of the exponential integral function.

Definition at line 870 of file specfun.h.

2.49.3.50 expintf() `float std::expintf ( float __x ) [inline]`

Return the exponential integral $Ei(x)$ for `float` argument `x`.

See also

expint for details.

Definition at line 844 of file specfun.h.

2.49.3.51 expintl() `long double std::expintl ( long double __x ) [inline]`

Return the exponential integral $Ei(x)$ for `long double` argument `x`.

See also

expint for details.

Definition at line 854 of file specfun.h.

2.49.3.52 hermite() `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::hermite ( unsigned int __n, _Tp __x ) [inline]`

Return the Hermite polynomial $H_n(x)$ of order n and `real` argument `x`.

The Hermite polynomial is defined by:

$$H_n(x) = (-1)^n e^{x^2} \frac{d^n}{dx^n} e^{-x^2}$$

The Hermite polynomial obeys a reflection formula:

$$H_n(-x) = (-1)^n H_n(x)$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_↩ _*n*	The order
_↩ _*x*	The argument

Definition at line 918 of file specfun.h.

2.49.3.53 hermitef()

```
float std::hermitef (
        unsigned int __n,
        float __x )  [inline]
```

Return the Hermite polynomial $H_n(x)$ of nonnegative order n and float argument x.

See also

hermite for details.

Definition at line 885 of file specfun.h.

2.49.3.54 hermitel()

```
long double std::hermitel (
        unsigned int __n,
        long double __x )  [inline]
```

Return the Hermite polynomial $H_n(x)$ of nonnegative order n and long double argument x.

See also

hermite for details.

Definition at line 895 of file specfun.h.

2.49.3.55 hyperg()

```
template<typename _Tpa , typename _Tpb , typename _Tpc , typename _Tp >
__gnu_cxx::__promote_4<_Tpa, _Tpb, _Tpc, _Tp>::__type __gnu_cxx::hyperg (
        _Tpa __a,
        _Tpb __b,
        _Tpc __c,
        _Tp __x )  [inline]
```

Return the hypergeometric function ${}_2F_1(a,b;c;x)$ of real numeratorial parameters a and b, denominatorial parameter c, and argument x.

The hypergeometric function is defined by

$$ {}_2F_1(a;c;x) = \sum_{n=0}^{\infty} \frac{(a)_n (b)_n x^n}{(c)_n n!} $$

where the Pochhammer symbol is $(x)_k = (x)(x+1)...(x+k-1)$, $(x)_0 = 1$

Parameters

_↩ _a	The first numeratorial parameter
_↩ _b	The second numeratorial parameter
_↩ _c	The denominatorial parameter
_↩ _x	The argument

Definition at line 1376 of file specfun.h.

2.49.3.56 hypergf() `float __gnu_cxx::hypergf (`

```
float __a,
float __b,
float __c,
float __x )  [inline]
```

Return the hypergeometric function ${}_2F_1(a,b;c;x)$ of @ float numeratorial parameters `a` and `b`, denominatorial parameter `c`, and argument `x`.

See also

hyperg for details.

Definition at line 1343 of file specfun.h.

2.49.3.57 hypergl() `long double __gnu_cxx::hypergl (`

```
long double __a,
long double __b,
long double __c,
long double __x )  [inline]
```

Return the hypergeometric function ${}_2F_1(a,b;c;x)$ of `long double` numeratorial parameters `a` and `b`, denominatorial parameter `c`, and argument `x`.

See also

hyperg for details.

Definition at line 1354 of file specfun.h.

2.49.3.58 laguerre()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::laguerre (
            unsigned int __n,
            _Tp __x )  [inline]
```

Returns the Laguerre polynomial $L_n(x)$ of nonnegative degree n and real argument $x >= 0$.

The Laguerre polynomial is defined by:

$$L_n(x) = \frac{e^x}{n!}\frac{d^n}{dx^n}(x^n e^{-x})$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_↩ _n	The nonnegative order
_↩ _x	The argument __x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 962 of file specfun.h.

2.49.3.59 laguerref()

```
float std::laguerref (
            unsigned int __n,
            float __x )  [inline]
```

Returns the Laguerre polynomial $L_n(x)$ of nonnegative degree n and float argument $x >= 0$.

See also

laguerre for more details.

Definition at line 933 of file specfun.h.

2.49.3.60 laguerrel()

```
long double std::laguerrel (
        unsigned int __n,
        long double __x )  [inline]
```

Returns the Laguerre polynomial $L_n(x)$ of nonnegative degree `n` and `long double` argument $x >= 0$.

See also

laguerre for more details.

Definition at line 943 of file specfun.h.

2.49.3.61 legendre()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::legendre (
        unsigned int __l,
        _Tp __x )  [inline]
```

Return the Legendre polynomial $P_l(x)$ of nonnegative degree l and real argument $|x| <= 0$.

The Legendre function of order l and argument x, $P_l(x)$, is defined by:

$$P_l(x) = \frac{1}{2^l l!}\frac{d^l}{dx^l}(x^2 - 1)^l$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_↩ _l	The degree $l >= 0$
_↩ _x	The argument `abs(__x)` <= 1

Exceptions

std::domain_error	if `abs(__x)` > 1

Definition at line 1007 of file specfun.h.

2.49.3.62 legendref()

```
float std::legendref (
        unsigned int __l,
        float __x )  [inline]
```

Return the Legendre polynomial $P_l(x)$ of nonnegative degree l and `float` argument $|x| <= 0$.

See also

legendre for more details.

Definition at line 977 of file specfun.h.

2.49.3.63 legendrel() `long double std::legendrel ( unsigned int __l, long double __x ) [inline]`

Return the Legendre polynomial $P_l(x)$ of nonnegative degree l and `long double` argument $|x| <= 0$.

See also

legendre for more details.

Definition at line 987 of file specfun.h.

2.49.3.64 riemann_zeta() `template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::riemann_zeta ( _Tp __s ) [inline]`

Return the Riemann zeta function $\zeta(s)$ for real argument s.

The Riemann zeta function is defined by:

$$\zeta(s) = \sum_{k=1}^{\infty} k^{-s} \text{ for } s > 1$$

and

$$\zeta(s) = \frac{1}{1 - 2^{1-s}} \sum_{k=1}^{\infty} (-1)^{k-1} k^{-s} \text{ for } 0 <= s <= 1$$

For s < 1 use the reflection formula:

$$\zeta(s) = 2^s \pi^{s-1} \sin(\frac{\pi s}{2}) \Gamma(1-s) \zeta(1-s)$$

Template Parameters

_Tp	The floating-point type of the argument __s.

Parameters

_↩ _s	The argument s != 1

Definition at line 1058 of file specfun.h.

2.49.3.65 riemann_zetaf() float std::riemann_zetaf (float __s) [inline]

Return the Riemann zeta function $\zeta(s)$ for float argument s.

See also

riemann_zeta for more details.

Definition at line 1022 of file specfun.h.

2.49.3.66 riemann_zetal() long double std::riemann_zetal (long double __s) [inline]

Return the Riemann zeta function $\zeta(s)$ for long double argument s.

See also

riemann_zeta for more details.

Definition at line 1032 of file specfun.h.

2.49.3.67 sph_bessel() template<typename _Tp > __gnu_cxx::__promote<_Tp>::__type std::sph_bessel (unsigned int __n, _Tp __x) [inline]

Return the spherical Bessel function $j_n(x)$ of nonnegative order n and real argument $x >= 0$.

The spherical Bessel function is defined by:

$$j_n(x) = \left(\frac{\pi}{2x}\right)^{1/2} J_{n+1/2}(x)$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_↩ _n	The integral order n >= 0
_↩ _x	The real argument x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 1102 of file specfun.h.

2.49.3.68 sph_besself()

```
float std::sph_besself (
    unsigned int __n,
    float __x )  [inline]
```

Return the spherical Bessel function $j_n(x)$ of nonnegative order n and float argument $x >= 0$.

See also

sph_bessel for more details.

Definition at line 1073 of file specfun.h.

2.49.3.69 sph_bessell()

```
long double std::sph_bessell (
    unsigned int __n,
    long double __x )  [inline]
```

Return the spherical Bessel function $j_n(x)$ of nonnegative order n and long double argument $x >= 0$.

See also

sph_bessel for more details.

Definition at line 1083 of file specfun.h.

2.49.3.70 sph_legendre() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::sph_legendre (
            unsigned int __l,
            unsigned int __m,
            _Tp __theta )  [inline]
```

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and real angle θ in radians.

The spherical Legendre function is defined by

$$Y_l^m(\theta,\phi) = (-1)^m[\frac{(2l+1)}{4\pi}\frac{(l-m)!}{(l+m)!}]P_l^m(\cos\theta)\exp^{im\phi}$$

Template Parameters

_Tp	The floating-point type of the angle `__theta`.

Parameters

__l	The order `__l >= 0`
__m	The degree `__m >= 0` and `__m <= __l`
__theta	The radian polar angle argument

Definition at line 1149 of file specfun.h.

2.49.3.71 sph_legendref() float std::sph_legendref (

```
            unsigned int __l,
            unsigned int __m,
            float __theta )  [inline]
```

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and float angle θ in radians.

See also

sph_legendre for details.

Definition at line 1117 of file specfun.h.

2.49.3.72 sph_legendrel()

```
long double std::sph_legendrel (
    unsigned int __l,
    unsigned int __m,
    long double __theta )  [inline]
```

Return the spherical Legendre function of nonnegative integral degree `l` and order `m` and `long double` angle θ in radians.

See also

sph_legendre for details.

Definition at line 1128 of file specfun.h.

2.49.3.73 sph_neumann()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::sph_neumann (
    unsigned int __n,
    _Tp __x )  [inline]
```

Return the spherical Neumann function of integral order $n >= 0$ and real argument $x >= 0$.

The spherical Neumann function is defined by

$$n_n(x) = \left(\frac{\pi}{2x}\right)^{1/2} N_{n+1/2}(x)$$

Template Parameters

_Tp	The floating-point type of the argument __x.

Parameters

_n	The integral order `n >= 0`
_x	The real argument __x >= 0

Exceptions

std::domain_error	if __x < 0 .

Definition at line 1193 of file specfun.h.

2.49.3.74 sph_neumannf() `float std::sph_neumannf (`

```
unsigned int __n,
float __x )  [inline]
```

Return the spherical Neumann function of integral order $n >= 0$ and `float` argument $x >= 0$.

See also

sph_neumann for details.

Definition at line 1164 of file specfun.h.

2.49.3.75 sph_neumannl() `long double std::sph_neumannl (`

```
unsigned int __n,
long double __x )  [inline]
```

Return the spherical Neumann function of integral order $n >= 0$ and `long double` $x >= 0$.

See also

sph_neumann for details.

Definition at line 1174 of file specfun.h.

  _ForwardIterator std::uninitialized_copy_n (_InputIterator __first, _Size __n, _ForwardIterator __result)
- template<typename _ForwardIterator , typename _Tp >
  void std::uninitialized_fill (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__x)
- template<typename _ForwardIterator , typename _Size , typename _Tp >
  _ForwardIterator std::uninitialized_fill_n (_ForwardIterator __first, _Size __n, const _Tp &__x)

2.50.1 Detailed Description

Components for memory allocation, deallocation, and management.

2.50.2 Function Documentation

2.50.2.1 align()

```
void* std::align (
        size_t __align,
        size_t __size,
        void *& __ptr,
        size_t & __space )  [inline], [noexcept]
```

Fit aligned storage in buffer.

This function tries to fit *__size* bytes of storage with alignment *__align* into the buffer *__ptr* of size *__space* bytes. If such a buffer fits then *__ptr* is changed to point to the first byte of the aligned storage and *__space* is reduced by the bytes used for alignment.

C++11 20.6.5 [ptr.align]

Parameters

__align	A fundamental or extended alignment value.
__size	Size of the aligned storage required.
__ptr	Pointer to a buffer of *__space* bytes.
__space	Size of the buffer pointed to by *__ptr*.

Returns

the updated pointer if the aligned storage fits, otherwise nullptr.

Definition at line 123 of file memory.

2.50.2.2 uninitialized_copy()

```
template<typename _InputIterator , typename _ForwardIterator >
_ForwardIterator std::uninitialized_copy (
            _InputIterator __first,
            _InputIterator __last,
            _ForwardIterator __result )  [inline]
```

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

__result + (__first - __last)

Like copy(), but does not require an initialized output range.

Definition at line 125 of file stl_uninitialized.h.

Referenced by __gnu_parallel::parallel_sort_mwms_pu().

2.50.2.3 uninitialized_copy_n()

```
template<typename _InputIterator , typename _Size , typename _↩
ForwardIterator >
_ForwardIterator std::uninitialized_copy_n (
            _InputIterator __first,
            _Size __n,
            _ForwardIterator __result )  [inline]
```

Copies the range [first,first+n) into result.

Parameters

__first	An input iterator.
__n	The number of elements to copy.
__result	An output iterator.

Returns

__result + __n

Like copy_n(), but does not require an initialized output range.

Definition at line 854 of file stl_uninitialized.h.

2.50.2.4 uninitialized_fill() template<typename _ForwardIterator , typename _Tp >

```
void std::uninitialized_fill (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __x )  [inline]
```

Copies the value x into the range [first,last).

Parameters

__first	An input iterator.
__last	An input iterator.
__x	The source value.

Returns

Nothing.

Like fill(), but does not require an initialized output range.

Definition at line 200 of file stl_uninitialized.h.

2.50.2.5 uninitialized_fill_n() template<typename _ForwardIterator , typename _Size , typename _Tp >

```
_ForwardIterator std::uninitialized_fill_n (
            _ForwardIterator __first,
            _Size __n,
            const _Tp & __x )  [inline]
```

Copies the value x into the range [first,first+n).

Parameters

__first	An input iterator.
__n	The number of copies to make.
__x	The source value.

Returns

Nothing.

Like fill_n(), but does not require an initialized output range.

Definition at line 272 of file stl_uninitialized.h.

2.51.1 Detailed Description

Template utilities for compile-time introspection and modification, including type classification traits, type property inspection traits and type transformation traits.

2.51.2 Typedef Documentation

2.51.2.1 add_const_t `template<typename _Tp >`

```
using std::add_const_t = typedef typename add_const<_Tp>::type
```

Alias template for add_const.

Definition at line 1578 of file type_traits.

2.51.2.2 add_cv_t `template<typename _Tp >`

```
using std::add_cv_t = typedef typename add_cv<_Tp>::type
```

Alias template for add_cv.

Definition at line 1586 of file type_traits.

2.51.2.3 add_lvalue_reference_t `template<typename _Tp >`

```
using std::add_lvalue_reference_t = typedef typename add_lvalue_reference<_Tp>::type
```

Alias template for add_lvalue_reference.

Definition at line 1639 of file type_traits.

2.51.2.4 add_pointer_t `template<typename _Tp >`

```
using std::add_pointer_t = typedef typename add_pointer<_Tp>::type
```

Alias template for add_pointer.

Definition at line 2044 of file type_traits.

2.51.2.5 add_rvalue_reference_t `template<typename _Tp >`

```
using std::add_rvalue_reference_t = typedef typename add_rvalue_reference<_Tp>::type
```

Alias template for add_rvalue_reference.

Definition at line 1643 of file type_traits.

2.51.2.6 add_volatile_t `template<typename _Tp >`

```
using std::add_volatile_t = typedef typename add_volatile<_Tp>::type
```

Alias template for add_volatile.

Definition at line 1582 of file type_traits.

2.51.2.7 aligned_storage_t `template<size_t _Len, size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__type)>`

```
using std::aligned_storage_t = typedef typename aligned_storage<_Len, _Align>::type
```

Alias template for aligned_storage.

Definition at line 2543 of file type_traits.

2.51.2.8 common_type_t `template<typename... _Tp>`

```
using std::common_type_t = typedef typename common_type<_Tp...>::type
```

Alias template for common_type.

Definition at line 2562 of file type_traits.

2.51.2.9 conditional_t

```
template<bool _Cond, typename _Iftrue , typename _Iffalse >
using std::conditional_t = typedef typename conditional<_Cond, _Iftrue, _Iffalse>::type
```

Alias template for conditional.

Definition at line 2558 of file type_traits.

2.51.2.10 decay_t

```
template<typename _Tp >
using std::decay_t = typedef typename decay<_Tp>::type
```

Alias template for decay.

Definition at line 2550 of file type_traits.

2.51.2.11 enable_if_t

```
template<bool _Cond, typename _Tp = void>
using std::enable_if_t = typedef typename enable_if<_Cond, _Tp>::type
```

Alias template for enable_if.

Definition at line 2554 of file type_traits.

2.51.2.12 false_type

```
typedef integral_constant<bool, false> std::false_type
```

The type used as a compile-time boolean with false value.

Definition at line 78 of file type_traits.

2.51.2.13 make_signed_t

```
template<typename _Tp >
using std::make_signed_t = typedef typename make_signed<_Tp>::type
```

Alias template for make_signed.

Definition at line 1961 of file type_traits.

2.51.2.14 make_unsigned_t

```
template<typename _Tp >
using std::make_unsigned_t = typedef typename make_unsigned<_Tp>::type
```

Alias template for make_unsigned.

Definition at line 1965 of file type_traits.

2.51.2.15 remove_all_extents_t `template<typename _Tp >`

```
using std::remove_all_extents_t = typedef typename remove_all_extents<_Tp>::type
```

Alias template for remove_all_extents.

Definition at line 2003 of file type_traits.

2.51.2.16 remove_const_t `template<typename _Tp >`

```
using std::remove_const_t = typedef typename remove_const<_Tp>::type
```

Alias template for remove_const.

Definition at line 1566 of file type_traits.

2.51.2.17 remove_cv_t `template<typename _Tp >`

```
using std::remove_cv_t = typedef typename remove_cv<_Tp>::type
```

Alias template for remove_cv.

Definition at line 1574 of file type_traits.

2.51.2.18 remove_extent_t `template<typename _Tp >`

```
using std::remove_extent_t = typedef typename remove_extent<_Tp>::type
```

Alias template for remove_extent.

Definition at line 1999 of file type_traits.

2.51.2.19 remove_pointer_t `template<typename _Tp >`

```
using std::remove_pointer_t = typedef typename remove_pointer<_Tp>::type
```

Alias template for remove_pointer.

Definition at line 2040 of file type_traits.

2.51.2.20 remove_reference_t `template<typename _Tp >`

```
using std::remove_reference_t = typedef typename remove_reference<_Tp>::type
```

Alias template for remove_reference.

Definition at line 1635 of file type_traits.

2.51.2.21 remove_volatile_t `template<typename _Tp >`

```
using std::remove_volatile_t = typedef typename remove_volatile<_Tp>::type
```

Alias template for remove_volatile.

Definition at line 1570 of file type_traits.

2.51.2.22 result_of_t `template<typename _Tp >`

```
using std::result_of_t = typedef typename result_of<_Tp>::type
```

Alias template for result_of.

Definition at line 2570 of file type_traits.

2.51.2.23 true_type `typedef integral_constant<bool, true> std::true_type`

The type used as a compile-time boolean with true value.

Definition at line 75 of file type_traits.

2.51.2.24 underlying_type_t `template<typename _Tp >`

```
using std::underlying_type_t = typedef typename underlying_type<_Tp>::type
```

Alias template for underlying_type.

Definition at line 2566 of file type_traits.

2.51.2.25 void_t `template<typename... >`

```
using std::void_t = typedef void
```

A metafunction that always yields void, used for detecting valid types.

Definition at line 2576 of file type_traits.

2.51.3 Variable Documentation

2.51.3.1 alignment_value `template<size_t _Len, typename... _Types>`

`const size_t std::aligned_union< _Len, _Types >::alignment_value [static]`

The value of the strictest alignment of _Types.

Definition at line 2117 of file type_traits.

2.52.1 Detailed Description

2.52.2 Function Documentation

2.52.2.1 copy() `template<typename _II , typename _OI >`

```
constexpr _OI std::copy (
            _II __first,
            _II __last,
            _OI __result )  [inline], [constexpr]
```

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

result + (last - first)

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the copy_backward function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 560 of file stl_algobase.h.

2.52.2.2 copy_backward() `template<typename _BI1 , typename _BI2 >`

```
constexpr _BI2 std::copy_backward (
            _BI1 __first,
            _BI1 __last,
            _BI2 __result )  [inline], [constexpr]
```

Copies the range [first,last) into result.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	A bidirectional iterator.

Returns

result - (last - first)

The function has the same effect as copy, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range (first,last]. Use copy instead. Note that the start of the output range may overlap [first,last).

Definition at line 797 of file stl_algobase.h.

2.52.2.3 copy_if()

```
template<typename _InputIterator , typename _OutputIterator , typename _↩
Predicate >
constexpr _OutputIterator std::copy_if (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _Predicate __pred )  [constexpr]
```

Copy the elements of a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) for which __pred returns true to the range beginning at __result.

copy_if() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 688 of file stl_algo.h.

2.52.2.4 copy_n() template<typename _InputIterator , typename _Size , typename _OutputIterator >

```
constexpr _OutputIterator std::copy_n (
            _InputIterator __first,
            _Size __n,
            _OutputIterator __result )  [inline], [constexpr]
```

Copies the range [first,first+n) into [result,result+n).

Parameters

__first	An input iterator.
__n	The number of elements to copy.
__result	An output iterator.

Returns

result+n.

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Definition at line 768 of file stl_algo.h.

2.52.2.5 fill() template<typename _ForwardIterator , typename _Tp >

```
constexpr void std::fill (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __value )  [inline], [constexpr]
```

Fills the range [first,last) with copies of value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__value	A reference-to-const of arbitrary type.

Returns

Nothing.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

Definition at line 937 of file stl_algobase.h.

2.52.2.6 fill_n() template<typename _OI , typename _Size , typename _Tp >

```
constexpr _OI std::fill_n (
            _OI __first,
            _Size __n,
            const _Tp & __value )  [inline], [constexpr]
```

Fills the range [first,first+n) with copies of value.

Parameters

__first	An output iterator.
__n	The count of copies to perform.
__value	A reference-to-const of arbitrary type.

Returns

The iterator at first+n.

This function fills a range with copies of the same value. For char types filling contiguous areas of memory, this becomes an inline call to `memset` or `wmemset`.

If `__n` is negative, the function does nothing.

Definition at line 1089 of file stl_algobase.h.

2.52.2.7 generate() template<typename _ForwardIterator , typename _Generator >

```
constexpr void std::generate (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Generator __gen )  [constexpr]
```

Assign the result of a function object to each value in a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__gen	A function object taking no arguments and returning std::iterator_traits<_ForwardIterator>::value_type

Returns

generate() returns no value.

Performs the assignment `*i = __gen()` for each `i` in the range [__first,__last).

Definition at line 4446 of file stl_algo.h.

2.52.2.8 generate_n() template<typename _OutputIterator , typename _Size , typename _Generator >

```
constexpr _OutputIterator std::generate_n (
            _OutputIterator __first,
            _Size __n,
            _Generator __gen )  [constexpr]
```

Assign the result of a function object to each value in a sequence.

Parameters

__first	A forward iterator.
__n	The length of the sequence.
__gen	A function object taking no arguments and returning std::iterator_traits<_ForwardIterator>::value_type

Returns

The end of the sequence, __first+__n

Performs the assignment *i = __gen() for each i in the range [__first,__first+__n).

If __n is negative, the function does nothing and returns __first.

Definition at line 4480 of file stl_algo.h.

2.52.2.9 is_partitioned() template<typename _InputIterator , typename _Predicate >

```
constexpr bool std::is_partitioned (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Checks whether the sequence is partitioned.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the range [__first,__last) is partioned by __pred, i.e. if all elements that satisfy __pred appear before those that do not.

Definition at line 530 of file stl_algo.h.

2.52.2.10 iter_swap()

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr void std::iter_swap (
            _ForwardIterator1 __a,
            _ForwardIterator2 __b )  [inline], [constexpr]
```

Swaps the contents of two iterators.

Parameters

_↩ _*a*	An iterator.
_↩ _*b*	Another iterator.

Returns

Nothing.

This function swaps the values pointed to by two iterators, not the iterators themselves.

Definition at line 152 of file stl_algobase.h.

2.52.2.11 move()

```
template<typename _II , typename _OI >
constexpr _OI std::move (
            _II __first,
            _II __last,
            _OI __result )  [inline], [constexpr]
```

Moves the range [first,last) into result.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

result + (last - first)

This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling). Result may not be contained within [first,last); the move_backward function should be used instead.

Note that the end of the output range is permitted to be contained within [first,last).

Definition at line 593 of file stl_algobase.h.

2.52.2.12 move_backward() template<typename _BI1 , typename _BI2 >

```
constexpr _BI2 std::move_backward (
            _BI1 __first,
            _BI1 __last,
            _BI2 __result )  [inline], [constexpr]
```

Moves the range [first,last) into result.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	A bidirectional iterator.

Returns

result - (last - first)

The function has the same effect as move, but starts at the end of the range and works its way to the start, returning the start of the result. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).

Result may not be in the range (first,last]. Use move instead. Note that the start of the output range may overlap [first,last).

Definition at line 833 of file stl_algobase.h.

2.52.2.13 partition() template<typename _ForwardIterator , typename _Predicate >

```
constexpr _ForwardIterator std::partition (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Move elements for which a predicate is true to the beginning of a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate functor.

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range [__first,middle) and false for each `i` in the range [middle,__last).

__pred must not modify its operand. partition() does not preserve the relative ordering of elements in each group, use stable_partition() if this is needed.

Definition at line 4668 of file stl_algo.h.

2.52.2.14 partition_copy()

```
template<typename _InputIterator , typename _OutputIterator1 , typename
_OutputIterator2 , typename _Predicate >
constexpr pair<_OutputIterator1, _OutputIterator2> std::partition_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator1 __out_true,
            _OutputIterator2 __out_false,
            _Predicate __pred )  [constexpr]
```

Copy the elements of a sequence to separate output sequences depending on the truth value of a predicate.

Parameters

__first	An input iterator.
__last	An input iterator.
__out_true	An output iterator.
__out_false	An output iterator.
__pred	A predicate.

Returns

A pair designating the ends of the resulting sequences.

Copies each element in the range [__first,__last) for which __pred returns true to the range beginning at out_true and each element for which __pred returns false to __out_false.

Definition at line 805 of file stl_algo.h.

2.52.2.15 partition_point()

```
template<typename _ForwardIterator , typename _Predicate >
constexpr _ForwardIterator std::partition_point (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred )  [constexpr]
```

Find the partition point of a partitioned range.

Parameters

__first	An iterator.
__last	Another iterator.
__pred	A predicate.

Returns

An iterator `mid` such that `all_of(__first, mid, __pred)` and `none_of(mid, __last, __pred)` are both true.

Definition at line 552 of file stl_algo.h.

2.52.2.16 random_shuffle()

```
template<typename _RandomAccessIterator , typename _RandomNumberGenerator >
void std::random_shuffle (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _RandomNumberGenerator && __rand )
```

Shuffle the elements of a sequence using a random number generator.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__rand	The RNG functor or function.

Returns

Nothing.

Reorders the elements in the range [__first,__last) using `__rand` to provide a random distribution. Calling `__rand(N)` for a positive integer `N` should return a randomly chosen integer from the range [0,N).

Definition at line 4627 of file stl_algo.h.

2.52.2.17 remove()

```
template<typename _ForwardIterator , typename _Tp >
constexpr _ForwardIterator std::remove (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __value )  [inline], [constexpr]
```

Remove elements from a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__value	The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

All elements equal to __value are removed from the range [__first,__last).

remove() is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and __last are still present, but their value is unspecified.

Definition at line 875 of file stl_algo.h.

2.52.2.18 remove_copy()

```
template<typename _InputIterator , typename _OutputIterator , typename _Tp >
constexpr _OutputIterator std::remove_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            const _Tp & __value )  [inline], [constexpr]
```

Copy a sequence, removing elements of a given value.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__value	The value to be removed.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) not equal to __value to the range beginning at __result. remove_copy() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 619 of file stl_algo.h.

2.52.2.19 remove_copy_if()

```
template<typename _InputIterator , typename _OutputIterator , typename _Predicate >
constexpr _OutputIterator std::remove_copy_if (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _Predicate __pred )  [inline], [constexpr]
```

Copy a sequence, removing elements for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) for which __pred returns false to the range beginning at __result.

remove_copy_if() is stable, so the relative order of elements that are copied is unchanged.

Definition at line 653 of file stl_algo.h.

2.52.2.20 remove_if()

```
template<typename _ForwardIterator , typename _Predicate >
constexpr _ForwardIterator std::remove_if (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Remove elements from a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate.

Returns

An iterator designating the end of the resulting sequence.

All elements for which __pred returns true are removed from the range [__first,__last).

remove_if() is stable, so the relative order of elements that are not removed is unchanged.

Elements between the end of the resulting sequence and __last are still present, but their value is unspecified.

Definition at line 909 of file stl_algo.h.

2.52.2.21 replace() template<typename _ForwardIterator , typename _Tp >

```
constexpr void std::replace (
            _ForwardIterator __first,
            _ForwardIterator __last,
            const _Tp & __old_value,
            const _Tp & __new_value )  [constexpr]
```

Replace each occurrence of one value in a sequence with another value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__old_value	The value to be replaced.
__new_value	The replacement value.

Returns

replace() returns no value.

For each iterator `i` in the range [__first,__last) if `*i` == `__old_value` then the assignment `*i` = `__new_value` is performed.

Definition at line 4380 of file stl_algo.h.

2.52.2.22 replace_copy_if() template<typename _InputIterator , typename _OutputIterator , typename _Predicate , typename _Tp >

```
constexpr _OutputIterator std::replace_copy_if (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _Predicate __pred,
            const _Tp & __new_value )  [inline], [constexpr]
```

Copy a sequence, replacing each value for which a predicate returns true with another value.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__pred	A predicate.
__new_value	The replacement value.

Returns

The end of the output sequence, __result+(__last-__first).

Copies each element in the range [__first,__last) to the range [__result,__result+(__last-__first)) replacing elements for which __pred returns true with __new_value.

Definition at line 3200 of file stl_algo.h.

2.52.2.23 replace_if()

```
template<typename _ForwardIterator , typename _Predicate , typename _Tp >
constexpr void std::replace_if (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred,
            const _Tp & __new_value )  [constexpr]
```

Replace each value in a sequence for which a predicate returns true with another value.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate.
__new_value	The replacement value.

Returns

replace_if() returns no value.

For each iterator i in the range [__first,__last) if __pred(*i) is true then the assignment *i = __new_value is performed.

Definition at line 4413 of file stl_algo.h.

2.52.2.24 reverse()

```
template<typename _BidirectionalIterator >
constexpr void std::reverse (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last )  [inline], [constexpr]
```

Reverse a sequence.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.

Returns

reverse() returns no value.

Reverses the order of the elements in the range [__first,__last), so that the first element becomes the last etc. For every `i` such that `0<=i<=`(__last-__first)/2), `reverse()` swaps *(__first+i) and *(__last-(i+1))

Definition at line 1170 of file stl_algo.h.

2.52.2.25 reverse_copy()

```
template<typename _BidirectionalIterator , typename _OutputIterator >
constexpr _OutputIterator std::reverse_copy (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last,
            _OutputIterator __result )  [constexpr]
```

Copy a sequence, reversing its elements.

Parameters

__first	A bidirectional iterator.
__last	A bidirectional iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements in the range [__first,__last) to the range [__result,__result+(__last-__first)) such that the order of the elements is reversed. For every `i` such that `0<=i<=`(__last-__first), `reverse_copy()` performs the assignment *(__result+(__last-__first)-1-i) = *(__first+i). The ranges [__first,__last) and [__result,__result+(__last-__first)) must not overlap.

Definition at line 1198 of file stl_algo.h.

2.52.2.26 rotate()

```
template<typename _ForwardIterator >
constexpr _ForwardIterator std::_V2::rotate (
            _ForwardIterator __first,
            _ForwardIterator __middle,
            _ForwardIterator __last )  [inline], [constexpr]
```

Rotate the elements of a sequence.

Parameters

__first	A forward iterator.
__middle	A forward iterator.
__last	A forward iterator.

Returns

first + (last - middle).

Rotates the elements of the range [__first,__last) by (__middle - __first) positions so that the element at __middle is moved to __first, the element at __middle+1 is moved to __first+1 and so on for each element in the range [__first,__last).

This effectively swaps the ranges [__first,__middle) and [__middle,__last).

Performs *(__first+(n+(__last-__middle))%(__last-__first))=*(__first+n) for each n in the range [0,__last-__first).

Definition at line 1430 of file stl_algo.h.

2.52.2.27 rotate_copy()

```
template<typename _ForwardIterator , typename _OutputIterator >
constexpr _OutputIterator std::rotate_copy (
            _ForwardIterator __first,
            _ForwardIterator __middle,
            _ForwardIterator __last,
            _OutputIterator __result )  [inline], [constexpr]
```

Copy a sequence, rotating its elements.

Parameters

__first	A forward iterator.
__middle	A forward iterator.
__last	A forward iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies the elements of the range [__first,__last) to the range beginning at

Returns

, rotating the copied elements by (__middle-__first) positions so that the element at __middle is moved to ↩ __result, the element at __middle+1 is moved to __result+1 and so on for each element in the range [__first,__last).

Performs *(__result+(n+(__last-__middle))%(__last-__first))=*(__first+n) for each n in the range [0,__last-__first).

Definition at line 1468 of file stl_algo.h.

2.52.2.28 shuffle() template<typename _RandomAccessIterator , typename _UniformRandomNumberGenerator >

```
void std::shuffle (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _UniformRandomNumberGenerator && __g )
```

Shuffle the elements of a sequence using a uniform random number generator.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__g	A UniformRandomNumberGenerator (26.5.1.3).

Returns

Nothing.

Reorders the elements in the range [__first,__last) using __g to provide random numbers.

Definition at line 3753 of file stl_algo.h.

2.52.2.29 stable_partition() template<typename _ForwardIterator , typename _Predicate >

```
_ForwardIterator std::stable_partition (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred ) [inline]
```

Move elements for which a predicate is true to the beginning of a sequence, preserving relative ordering.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__pred	A predicate functor.

Returns

An iterator `middle` such that `__pred(i)` is true for each iterator `i` in the range [first,middle) and false for each `i` in the range [middle,last).

Performs the same function as `partition()` with the additional guarantee that the relative ordering of elements in each group is preserved, so any two elements `x` and `y` in the range [__first,__last) such that `__pred(x)==__pred(y)` will have the same relative ordering after calling `stable_partition()`.

Definition at line 1649 of file stl_algo.h.

2.52.2.30 swap_ranges()

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr _ForwardIterator2 std::swap_ranges (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2 )  [constexpr]
```

Swap the elements of two sequences.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.

Returns

An iterator equal to `first2`+(last1-first1).

Swaps each element in the range [first1,last1) with the corresponding element in the range [first2,(last1-first1)). The ranges must not overlap.

Definition at line 201 of file stl_algobase.h.

2.52.2.31 transform() [1/2]

```
template<typename _InputIterator , typename _OutputIterator , typename
_UnaryOperation >
constexpr _OutputIterator std::transform (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _UnaryOperation __unary_op )  [constexpr]
```

Perform an operation on a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__unary_op	A unary operator.

Returns

An output iterator equal to `__result`+(__last-__first).

Applies the operator to each element in the input range and assigns the results to successive elements of the output sequence. Evaluates ∗(__result+N)=unary_op(∗(__first+N)) for each `N` in the range [0,__last-__first).

unary_op must not alter its argument.

Definition at line 4309 of file stl_algo.h.

2.52.2.32 transform() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename
_OutputIterator , typename _BinaryOperation >
constexpr _OutputIterator std::transform (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _OutputIterator __result,
            _BinaryOperation __binary_op )  [constexpr]
```

Perform an operation on corresponding elements of two sequences.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__result	An output iterator.
__binary_op	A binary operator.

Returns

An output iterator equal to result+(last-first).

Applies the operator to the corresponding elements in the two input ranges and assigns the results to successive elements of the output sequence. Evaluates ∗(__result+N)=__binary_op(∗(__first1+N),∗(__first2+N)) for each N in the range [0,__last1-__first1).

binary_op must not alter either of its arguments.

Definition at line 4347 of file stl_algo.h.

2.52.2.33 unique() [1/2]

```
template<typename _ForwardIterator >
constexpr _ForwardIterator std::unique (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Remove consecutive duplicate values from a sequence.

Parameters

__first	A forward iterator.
__last	A forward iterator.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values that compare equal. unique() is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and __last are still present, but their value is unspecified.

Definition at line 978 of file stl_algo.h.

2.52.2.34 unique() [2/2]

```
template<typename _ForwardIterator , typename _BinaryPredicate >
constexpr _ForwardIterator std::unique (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Remove consecutive values from a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__binary_pred	A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Removes all but the first element from each group of consecutive values for which __binary_pred returns true. unique() is stable, so the relative order of elements that are not removed is unchanged. Elements between the end of the resulting sequence and __last are still present, but their value is unspecified.

Definition at line 1009 of file stl_algo.h.

2.52.2.35 unique_copy() [1/2]

```
template<typename _InputIterator , typename _OutputIterator >
constexpr _OutputIterator std::unique_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result )  [inline], [constexpr]
```

Copy a sequence, removing consecutive duplicate values.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) to the range beginning at __result, except that only the first element is copied from groups of consecutive elements that compare equal. unique_copy() is stable, so the relative order of elements that are copied is unchanged.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 241. Does unique_copy() require CopyConstructible and Assignable?

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 538. 241 again: Does unique_copy() require CopyConstructible and Assignable?

Definition at line 4518 of file stl_algo.h.

2.52.2.36 unique_copy() [2/2]

```
template<typename _InputIterator , typename _OutputIterator , typename
_BinaryPredicate >
constexpr _OutputIterator std::unique_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Copy a sequence, removing consecutive values using a predicate.

Parameters

__first	An input iterator.
__last	An input iterator.
__result	An output iterator.
__binary_pred	A binary predicate.

Returns

An iterator designating the end of the resulting sequence.

Copies each element in the range [__first,__last) to the range beginning at __result, except that only the first element is copied from groups of consecutive elements for which __binary_pred returns true. unique_copy() is stable, so the relative order of elements that are copied is unchanged.

_GLIBCXX_RESOLVE_LIB_DEFECTS DR 241. Does unique_copy() require CopyConstructible and Assignable?

Definition at line 4560 of file stl_algo.h.

2.53 Mutexes

Collaboration diagram for Mutexes:

Macros

- #define **__cpp_lib_shared_timed_mutex**

Functions

- template<typename _Callable , typename... _Args>
  void std::call_once (once_flag &__once, _Callable &&__f, _Args &&... __args)
- template<typename _L1 , typename _L2 , typename... _L3>
  void std::lock (_L1 &__l1, _L2 &__l2, _L3 &... __l3)
- template<typename _Lock1 , typename _Lock2 , typename... _Lock3>
  int std::try_lock (_Lock1 &__l1, _Lock2 &__l2, _Lock3 &... __l3)

Variables

- constexpr adopt_lock_t std::adopt_lock
- constexpr defer_lock_t std::defer_lock
- constexpr try_to_lock_t std::try_to_lock

2.53.1 Detailed Description

Classes for mutex support.

2.53.2 Function Documentation

2.53.2.1 call_once() `template<typename _Callable , typename... _Args>`

```
void std::call_once (
            once_flag & __once,
            _Callable && __f,
            _Args &&... __args )
```

Invoke a callable and synchronize with other calls using the same flag.

Definition at line 712 of file mutex.

2.53.2.2 lock() `template<typename _L1 , typename _L2 , typename... _L3>`

```
void std::lock (
            _L1 & __l1,
            _L2 & __l2,
            _L3 &... __l3 )
```

Generic lock.

Parameters

_↩ _l1	Meets Lockable requirements (try_lock() may throw).
_↩ _l2	Meets Lockable requirements (try_lock() may throw).
_↩ _l3	Meets Lockable requirements (try_lock() may throw).

Exceptions

An	exception thrown by an argument's lock() or try_lock() member.

Postcondition

All arguments are locked.

All arguments are locked via a sequence of calls to lock(), try_lock() and unlock(). If the call exits via an exception any locks that were obtained will be released.

Definition at line 589 of file mutex.

2.53.2.3 try_lock()

```
template<typename _Lock1 , typename _Lock2 , typename...  _Lock3>
int std::try_lock (
            _Lock1 & __l1,
            _Lock2 & __l2,
            _Lock3 &...  __l3 )
```

Generic try_lock.

Parameters

_↩ _l1	Meets Lockable requirements (try_lock() may throw).
_↩ _l2	Meets Lockable requirements (try_lock() may throw).
_↩ _l3	Meets Lockable requirements (try_lock() may throw).

Returns

Returns -1 if all try_lock() calls return true. Otherwise returns a 0-based index corresponding to the argument that returned false.

Postcondition

Either all arguments are locked, or none will be.

Sequentially calls try_lock() on each argument.

Definition at line 568 of file mutex.

2.53.3 Variable Documentation

2.53.3.1 adopt_lock `constexpr adopt_lock_t std::adopt_lock [inline], [constexpr]`

Tag used to make a scoped lock take ownership of a locked mutex.

Definition at line 145 of file std_mutex.h.

2.53.3.2 defer_lock `constexpr defer_lock_t std::defer_lock [inline], [constexpr]`

Tag used to prevent a scoped lock from acquiring ownership of a mutex.

Definition at line 139 of file std_mutex.h.

2.53.3.3 try_to_lock `constexpr try_to_lock_t std::try_to_lock [inline], [constexpr]`

Tag used to prevent a scoped lock from blocking if a mutex is locked.

Definition at line 142 of file std_mutex.h.

2.54 Negators

Collaboration diagram for Negators:

Functions

- template<typename _Predicate >
  constexpr unary_negate< _Predicate > std::not1 (const _Predicate &__pred)
- template<typename _Predicate >
  constexpr binary_negate< _Predicate > std::not2 (const _Predicate &__pred)

2.54.1 Detailed Description

The functions `not1` and `not2` each take a predicate functor and return an instance of `unary_negate` or `binary_negate`, respectively. These classes are functors whose `operator()` performs the stored predicate function and then returns the negation of the result.

For example, given a vector of integers and a trivial predicate,

```
struct IntGreaterThanThree
  : public std::unary_function<int, bool>
{
    bool operator() (int x) { return x > 3; }
};
std::find_if (v.begin(), v.end(), not1(IntGreaterThanThree()));
```

The call to `find_if` will locate the first index (i) of `v` for which `!(v[i] > 3)` is true.

The not1/unary_negate combination works on predicates taking a single argument. The not2/binary_negate combination works on predicates which take two arguments.

2.54.2 Function Documentation

2.54.2.1 not1() `template<typename _Predicate >`

```
constexpr unary_negate<_Predicate> std::not1 (
            const _Predicate & __pred )  [inline], [constexpr]
```

One of the negation functors.

Definition at line 1024 of file stl_function.h.

2.54.2.2 not2() `template<typename _Predicate >`

```
constexpr binary_negate<_Predicate> std::not2 (
            const _Predicate & __pred )  [inline], [constexpr]
```

One of the negation functors.

Definition at line 1052 of file stl_function.h.

2.55 Networking-ts

2.55.1 Detailed Description

2.56 Non-Mutating

Collaboration diagram for Non-Mutating:

Functions

2.56.1 Detailed Description

2.56.2 Function Documentation

2.56.2.1 adjacent_find() [1/2] template<typename _ForwardIterator >

```
constexpr _ForwardIterator std::adjacent_find (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Find two adjacent values in a sequence that are equal.

Parameters

__first	A forward iterator.
__last	A forward iterator.

Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in [__first,__last) and such that `*i == *(i+1)`, or `__last` if no such iterator exists.

Definition at line 4031 of file stl_algo.h.

2.56.2.2 adjacent_find() [2/2]

```
template<typename _ForwardIterator , typename _BinaryPredicate >
constexpr _ForwardIterator std::adjacent_find (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Find two adjacent values in a sequence using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__binary_pred	A binary predicate.

Returns

The first iterator `i` such that `i` and `i+1` are both valid iterators in [__first,__last) and such that `__binary_pred`(*i*,(i+1)) is true, or `__last` if no such iterator exists.

Definition at line 4057 of file stl_algo.h.

2.56.2.3 all_of()

```
template<typename _InputIterator , typename _Predicate >
constexpr bool std::all_of (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Checks that a predicate is true for all the elements of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the check is true, false otherwise.

Returns true if __pred is true for each element in the range [__first,__last), and false otherwise.

Definition at line 452 of file stl_algo.h.

2.56.2.4 any_of()

```
template<typename _InputIterator , typename _Predicate >
constexpr bool std::any_of (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Checks that a predicate is true for at least one element of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the check is true, false otherwise.

Returns true if an element exists in the range [__first,__last) such that __pred is true, and false otherwise.

Definition at line 489 of file stl_algo.h.

2.56.2.5 count()

```
template<typename _InputIterator , typename _Tp >
constexpr iterator_traits<_InputIterator>::difference_type std::count (
            _InputIterator __first,
            _InputIterator __last,
            const _Tp & __value )  [inline], [constexpr]
```

Count the number of copies of a value in a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__value	The value to be counted.

Returns

The number of iterators `i` in the range [__first,__last) for which `*i == __value`

Definition at line 4083 of file stl_algo.h.

2.56.2.6 count_if()

```
template<typename _InputIterator , typename _Predicate >
constexpr iterator_traits<_InputIterator>::difference_type std::count_if (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Count the elements of a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

The number of iterators `i` in the range [__first,__last) for which `__pred(*i)` is true.

Definition at line 4107 of file stl_algo.h.

2.56.2.7 equal() [1/4]

```
template<typename _II1 , typename _II2 >
constexpr bool std::equal (
            _II1 __first1,
            _II1 __last1,
            _II2 __first2 )  [inline], [constexpr]
```

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.

Returns

A boolean true or false.

This compares the elements of two ranges using == and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1404 of file stl_algobase.h.

2.56.2.8 equal() [2/4] template<typename _II1 , typename _II2 >

```
constexpr bool std::equal (
            _II1 __first1,
            _II1 __last1,
            _II2 __first2,
            _II2 __last2 )  [inline], [constexpr]
```

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

A boolean true or false.

This compares the elements of two ranges using == and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1525 of file stl_algobase.h.

2.56.2.9 equal() [3/4] template<typename _IIter1 , typename _IIter2 , typename _BinaryPredicate >

```
constexpr bool std::equal (
            _IIter1 __first1,
            _IIter1 __last1,
            _IIter2 __first2,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A boolean true or false.

This compares the elements of two ranges using the binary_pred parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1435 of file stl_algobase.h.

2.56.2.10 equal() [4/4]

```
template<typename _IIter1 , typename _IIter2 , typename _BinaryPredicate >
constexpr bool std::equal (
            _IIter1 __first1,
            _IIter1 __last1,
            _IIter2 __first2,
            _IIter2 __last2,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Tests a range for element-wise equality.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A boolean true or false.

This compares the elements of two ranges using the binary_pred parameter, and returns true or false depending on whether all of the corresponding elements of the ranges are equal.

Definition at line 1558 of file stl_algobase.h.

2.56.2.11 find()

```
template<typename _InputIterator , typename _Tp >
constexpr _InputIterator std::find (
            _InputIterator __first,
            _InputIterator __last,
            const _Tp & __val )  [inline], [constexpr]
```

Find the first occurrence of a value in a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__val	The value to find.

Returns

The first iterator `i` in the range [__first,__last) such that `*i == __val`, or `__last` if no such iterator exists.

Definition at line 3900 of file stl_algo.h.

2.56.2.12 find_end() [1/2]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr _ForwardIterator1 std::find_end (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2,
            _ForwardIterator2 __last2 )  [inline], [constexpr]
```

Find last matching subsequence in a sequence.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of sequence to match.
__last2	End of sequence to match.

Returns

The last iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that `*`(i+N) == `*`(__first2+N) for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) and returns an iterator to the __first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in [__first1,__last1).

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than `__last1-`(__last2-__first2) where `__last2-__first2` is the length of the sub-sequence. This means that the returned iterator `i` will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 367 of file stl_algo.h.

2.56.2.13 find_end() [2/2]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 ,
typename _BinaryPredicate >
constexpr _ForwardIterator1 std::find_end (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2,
            _ForwardIterator2 __last2,
            _BinaryPredicate __comp )  [inline], [constexpr]
```

Find last matching subsequence in a sequence using a predicate.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of sequence to match.
__last2	End of sequence to match.
__comp	The predicate to use.

Returns

The last iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that `predicate`(*(i+N), (__first2+N)) is true for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) using comp as a predicate and returns an iterator to the first element of the sub-sequence, or `__last1` if the sub-sequence is not found. The sub-sequence will be the last such subsequence contained in [__↩ first,__last1).

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than `__last1`-(__last2-__first2) where `__last2`-`__first2` is the length of the sub-sequence. This means that the returned iterator `i` will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 417 of file stl_algo.h.

2.56.2.14 find_first_of() [1/2]

```
template<typename _InputIterator , typename _ForwardIterator >
constexpr _InputIterator std::find_first_of (
            _InputIterator __first1,
            _InputIterator __last1,
            _ForwardIterator __first2,
            _ForwardIterator __last2 )  [constexpr]
```

Find element from a set in a sequence.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of match candidates.
__last2	End of match candidates.

Returns

The first iterator `i` in the range [__first1,__last1) such that `*i` == *(i2) such that i2 is an iterator in [__first2,__last2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for an element that is equal to some element in the range [__first2,__last2). If found, returns an iterator in the range [__first1,__last1), otherwise returns `__last1`.

Definition at line 3957 of file stl_algo.h.

2.56.2.15 find_first_of() [2/2]

```
template<typename _InputIterator , typename _ForwardIterator , typename
_BinaryPredicate >
constexpr _InputIterator std::find_first_of (
            _InputIterator __first1,
            _InputIterator __last1,
            _ForwardIterator __first2,
            _ForwardIterator __last2,
            _BinaryPredicate __comp )  [constexpr]
```

Find element from a set in a sequence using a predicate.

Parameters

__first1	Start of range to search.
__last1	End of range to search.
__first2	Start of match candidates.
__last2	End of match candidates.
__comp	Predicate to use.

Returns

The first iterator `i` in the range [__first1,__last1) such that `comp`(*i, *(i2)) is true and i2 is an iterator in [__first2,↩ __last2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for an element that is equal to some element in the range [__first2,__last2). If found, returns an iterator in the range [__first1,__last1), otherwise returns `__last1`.

Definition at line 3999 of file stl_algo.h.

2.56.2.16 find_if()

```
template<typename _InputIterator , typename _Predicate >
constexpr _InputIterator std::find_if (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Find the first element in a sequence for which a predicate is true.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

The first iterator `i` in the range [__first,__last) such that `__pred(*i)` is true, or `__last` if no such iterator exists.

Definition at line 3925 of file stl_algo.h.

Referenced by std::none_of().

2.56.2.17 find_if_not()

```
template<typename _InputIterator , typename _Predicate >
constexpr _InputIterator std::find_if_not (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Find the first element in a sequence for which a predicate is false.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

The first iterator `i` in the range [__first,__last) such that `__pred(*i)` is false, or `__last` if no such iterator exists.

Definition at line 505 of file stl_algo.h.

2.56.2.18 for_each()

```
template<typename _InputIterator , typename _Function >
constexpr _Function std::for_each (
            _InputIterator __first,
            _InputIterator __last,
            _Function __f )  [constexpr]
```

Apply a function to every element of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__f	A unary function object.

Returns

__f

Applies the function object __f to each element in the range [first,last). __f must not modify the order of the sequence. If __f has a return value it is ignored.

Definition at line 3838 of file stl_algo.h.

2.56.2.19 is_permutation() [1/4]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr bool std::is_permutation (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2 )  [inline], [constexpr]
```

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.

Returns

true if there exists a permutation of the elements in the range [__first2, __first2 + (__last1 - __first1)), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, begin) returns true; otherwise, returns false.

Definition at line 2044 of file stl_algobase.h.

2.56.2.20 is_permutation() [2/4]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 ,
typename _BinaryPredicate >
constexpr bool std::is_permutation (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
```

```
_ForwardIterator2 __first2,
_BinaryPredicate __pred )  [inline], [constexpr]
```

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__pred	A binary predicate.

Returns

true if there exists a permutation of the elements in the range [__first2, __first2 + (__last1 - __first1)), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, __begin, __pred) returns true; otherwise, returns false.

Definition at line 3532 of file stl_algo.h.

2.56.2.21 is_permutation() [3/4]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr bool std::is_permutation (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2,
            _ForwardIterator2 __last2 )  [inline], [constexpr]
```

Checks whether a permutaion of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of first range.

Returns

true if there exists a permutation of the elements in the range [__first2, __last2), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, begin) returns true; otherwise, returns false.

Definition at line 3626 of file stl_algo.h.

2.56.2.22 is_permutation() [4/4]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 ,
typename _BinaryPredicate >
constexpr bool std::is_permutation (
```

```
_ForwardIterator1 __first1,
_ForwardIterator1 __last1,
_ForwardIterator2 __first2,
_ForwardIterator2 __last2,
_BinaryPredicate __pred )  [inline], [constexpr]
```

Checks whether a permutation of the second sequence is equal to the first sequence.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of first range.
__pred	A binary predicate.

Returns

true if there exists a permutation of the elements in the range [__first2, __last2), beginning with ForwardIterator2 begin, such that equal(__first1, __last1, __begin, __pred) returns true; otherwise, returns false.

Definition at line 3655 of file stl_algo.h.

2.56.2.23 mismatch() [1/4]

```
template<typename _InputIterator1 , typename _InputIterator2 >
constexpr pair<_InputIterator1, _InputIterator2> std::mismatch (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2 )  [inline], [constexpr]
```

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using == and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1768 of file stl_algobase.h.

2.56.2.24 mismatch() [2/4] template<typename _InputIterator1 , typename _InputIterator2 , typename _BinaryPredicate >

```
constexpr pair<_InputIterator1, _InputIterator2> std::mismatch (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the binary_pred parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1803 of file stl_algobase.h.

2.56.2.25 mismatch() [3/4] template<typename _InputIterator1 , typename _InputIterator2 >

```
constexpr pair<_InputIterator1, _InputIterator2> std::mismatch (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2 )  [inline], [constexpr]
```

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using == and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1851 of file stl_algobase.h.

2.56.2.26 mismatch() [4/4]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename
_BinaryPredicate >
constexpr pair<_InputIterator1, _InputIterator2> std::mismatch (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Finds the places in ranges which don't match.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.
__binary_pred	A binary predicate functor.

Returns

A pair of iterators pointing to the first mismatch.

This compares the elements of two ranges using the binary_pred parameter, and returns a pair of iterators. The first iterator points into the first range, the second iterator points into the second range, and the elements pointed to by the iterators are not equal.

Definition at line 1888 of file stl_algobase.h.

2.56.2.27 none_of()

```
template<typename _InputIterator , typename _Predicate >
constexpr bool std::none_of (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred )  [inline], [constexpr]
```

Checks that a predicate is false for all the elements of a sequence.

Parameters

__first	An input iterator.
__last	An input iterator.
__pred	A predicate.

Returns

True if the check is true, false otherwise.

Returns true if __pred is false for each element in the range [__first,__last), and false otherwise.

Definition at line 470 of file stl_algo.h.

References std::find_if().

2.56.2.28 search() [1/2]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 >
constexpr _ForwardIterator1 std::search (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2,
            _ForwardIterator2 __last2 )  [inline], [constexpr]
```

Search a sequence for a matching sub-sequence.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.
__last2	A forward iterator.

Returns

The first iterator i in the range [__first1,__last1-(__last2-__first2)) such that *(i+N) == *(__first2+N) for each N in the range [0,__last2-__first2), or __last1 if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2) and returns an iterator to the first element of the sub-sequence, or __last1 if the sub-sequence is not found.

Because the sub-sequence must lie completely within the range [__first1,__last1) it must start at a position less than __last1-(__last2-__first2) where __last2-__first2 is the length of the sub-sequence.

This means that the returned iterator i will be in the range [__first1,__last1-(__last2-__first2))

Definition at line 4148 of file stl_algo.h.

2.56.2.29 search() [2/2]

```
template<typename _ForwardIterator1 , typename _ForwardIterator2 , typename
_BinaryPredicate >
constexpr _ForwardIterator1 std::search (
            _ForwardIterator1 __first1,
            _ForwardIterator1 __last1,
            _ForwardIterator2 __first2,
            _ForwardIterator2 __last2,
            _BinaryPredicate __predicate )  [inline], [constexpr]
```

Search a sequence for a matching sub-sequence using a predicate.

Parameters

__first1	A forward iterator.
__last1	A forward iterator.
__first2	A forward iterator.
__last2	A forward iterator.
__predicate	A binary predicate.

Returns

The first iterator `i` in the range [__first1,__last1-(__last2-__first2)) such that `__predicate`(*(i+N),*(__first2+N)) is true for each `N` in the range [0,__last2-__first2), or `__last1` if no such iterator exists.

Searches the range [__first1,__last1) for a sub-sequence that compares equal value-by-value with the sequence given by [__first2,__last2), using `__predicate` to determine equality, and returns an iterator to the first element of the sub-sequence, or `__last1` if no such iterator exists.

See also

search(_ForwardIter1, _ForwardIter1, _ForwardIter2, _ForwardIter2)

Definition at line 4189 of file stl_algo.h.

2.56.2.30 search_n() [1/2]

```
template<typename _ForwardIterator , typename _Integer , typename _Tp >
constexpr _ForwardIterator std::search_n (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Integer __count,
            const _Tp & __val )  [inline], [constexpr]
```

Search a sequence for a number of consecutive values.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__count	The number of consecutive values.
__val	The value to find.

Returns

The first iterator `i` in the range [__first,__last-__count) such that *(i+N) == `__val` for each `N` in the range [0,_↩ _count), or `__last` if no such iterator exists.

Searches the range [__first,__last) for `count` consecutive elements equal to `__val`.

Definition at line 4224 of file stl_algo.h.

2.56.2.31 search_n() [2/2]

```
template<typename _ForwardIterator , typename _Integer , typename _Tp ,
typename _BinaryPredicate >
constexpr _ForwardIterator std::search_n (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Integer __count,
            const _Tp & __val,
            _BinaryPredicate __binary_pred )  [inline], [constexpr]
```

Search a sequence for a number of consecutive values using a predicate.

Parameters

__first	A forward iterator.
__last	A forward iterator.
__count	The number of consecutive values.
__val	The value to find.
__binary_pred	A binary predicate.

Returns

The first iterator `i` in the range [__first,__last-__count) such that `__binary_pred`(*(i+N),__val) is true for each `N` in the range [0,__count), or `__last` if no such iterator exists.

Searches the range [__first,__last) for `__count` consecutive elements for which the predicate returns true.

Definition at line 4259 of file stl_algo.h.

2.57 Normal Distributions

Collaboration diagram for Normal Distributions:

2.57.1 Detailed Description

2.57.2 Function Documentation

2.57.2.1 operator"!=() [1/7] template<typename _RealType >

```
bool std::operator!= (
            const std::cauchy_distribution< _RealType > & __d1,
            const std::cauchy_distribution< _RealType > & __d2 )  [inline]
```

Return true if two Cauchy distributions have different parameters.

Definition at line 3016 of file random.h.

2.57.2.2 operator"!=() [2/7] template<typename _RealType >

```
bool std::operator!= (
            const std::chi_squared_distribution< _RealType > & __d1,
            const std::chi_squared_distribution< _RealType > & __d2 )  [inline]
```

Return true if two Chi-squared distributions are different.

Definition at line 2842 of file random.h.

2.57.2.3 operator"!=() [3/7] template<typename _RealType >

```
bool std::operator!= (
            const std::fisher_f_distribution< _RealType > & __d1,
            const std::fisher_f_distribution< _RealType > & __d2 )  [inline]
```

Return true if two Fisher f distributions are different.

Definition at line 3280 of file random.h.

2.57.2.4 operator"!=() [4/7] template<typename _RealType >

```
bool std::operator!= (
            const std::gamma_distribution< _RealType > & __d1,
            const std::gamma_distribution< _RealType > & __d2 )  [inline]
```

Return true if two gamma distributions are different.

Definition at line 2618 of file random.h.

2.57.2.5 operator"!=() [5/7] template<typename _RealType >

```
bool std::operator!= (
            const std::lognormal_distribution< _RealType > & __d1,
            const std::lognormal_distribution< _RealType > & __d2 )  [inline]
```

Return true if two lognormal distributions are different.

Definition at line 2387 of file random.h.

2.57.2.6 operator"!=() [6/7] template<typename _RealType >

```
bool std::operator!= (
            const std::normal_distribution< _RealType > & __d1,
            const std::normal_distribution< _RealType > & __d2 )  [inline]
```

Return true if two normal distributions are different.

Definition at line 2176 of file random.h.

2.57.2.7 operator"!=() [7/7] template<typename _RealType >

```
bool std::operator!= (
            const std::student_t_distribution< _RealType > & __d1,
            const std::student_t_distribution< _RealType > & __d2 )  [inline]
```

Return true if two Student t distributions are different.

Definition at line 3502 of file random.h.

2.57.2.8 operator<<() template<typename _RealType , typename _CharT , typename _Traits >

```
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::cauchy_distribution< _RealType > & __x )
```

Inserts a cauchy_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A cauchy_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 2088 of file bits/random.tcc.

2.57.2.9 operator>>() template<typename _RealType , typename _CharT , typename _Traits >

```
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::cauchy_distribution< _RealType > & __x )
```

Extracts a cauchy_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A cauchy_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 2133 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::cauchy_distribution< _RealType >::param(), and std::skipws().

2.58.1 Detailed Description

Classes and functions for representing and manipulating arrays of elements.

2.58.2 Function Documentation

2.58.2.1 gslice() [1/3] std::gslice::gslice ( ) [inline]

Construct an empty slice.

Definition at line 149 of file gslice.h.

2.58.2.2 gslice() [2/3] std::gslice::gslice (const gslice & __g) [inline]

Copy constructor.

Definition at line 158 of file gslice.h.

2.58.2.3 gslice() [3/3] std::gslice::gslice (size_t __o, const valarray< size_t > & __l, const valarray< size_t > & __s) [inline]

Construct a slice.

Constructs a slice with as many dimensions as the length of the *l* and *s* arrays.

Parameters

_↩ _*o*	Offset in array of first element.
_↩ _*l*	Array of dimension lengths.
_↩ _*s*	Array of dimension strides between array elements.

Definition at line 153 of file gslice.h.

2.58.2.4 gslice_array() template<typename _Tp >

```
std::gslice_array< _Tp >::gslice_array (
            const gslice_array< _Tp > & __a )  [inline]
```

Copy constructor. Both slices refer to the same underlying array.

Definition at line 148 of file gslice_array.h.

2.58.2.5 indirect_array() template<typename _Tp >

```
std::indirect_array< _Tp >::indirect_array (
            const indirect_array< _Tp > & __a )  [inline]
```

Copy constructor. Both slices refer to the same underlying array.

Definition at line 143 of file indirect_array.h.

2.58.2.6 mask_array() template<typename _Tp >

```
std::mask_array< _Tp >::mask_array (
            const mask_array< _Tp > & __a )  [inline]
```

Copy constructor. Both slices refer to the same underlying array.

Definition at line 144 of file mask_array.h.

2.58.2.7 slice() [1/2] std::slice::slice ( ) [inline]

Construct an empty slice.

Definition at line 95 of file slice_array.h.

2.58.2.8 slice() [2/2] std::slice::slice (

```
            size_t __o,
            size_t __d,
            size_t __s )  [inline]
```

Construct a slice.

Parameters

_↩ _o	Offset in array of first element.
_↩	Number of elements in slice.
_d	
_↩ _s	Stride between array elements.

Definition at line 99 of file slice_array.h.

2.58.2.9 slice_array() template<typename _Tp >

```
std::slice_array< _Tp >::slice_array (
            const slice_array< _Tp > & __a )  [inline]
```

Copy constructor. Both slices refer to the same underlying array.

Definition at line 217 of file slice_array.h.

2.58.2.10 valarray() [1/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray  [inline]
```

Construct an empty array.

Definition at line 621 of file valarray.

2.58.2.11 valarray() [2/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const _Tp & __t,
            size_t __n )  [inline]
```

Construct an array with *n* elements initialized to *t*.

Definition at line 631 of file valarray.

2.58.2.12 valarray() [3/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const gslice_array< _Tp > & __ga )  [inline]
```

Construct an array with the same size and values in *ga*.

Definition at line 673 of file valarray.

2.58.2.13 valarray() [4/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const indirect_array< _Tp > & __ia )  [inline]
```

Construct an array with the same size and values in *ia*.

Definition at line 693 of file valarray.

2.58.2.14 valarray() [5/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const mask_array< _Tp > & __ma )  [inline]
```

Construct an array with the same size and values in *ma*.

Definition at line 684 of file valarray.

2.58.2.15 valarray() [6/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const slice_array< _Tp > & __sa )  [inline]
```

Construct an array with the same size and values in *sa*.

Definition at line 664 of file valarray.

2.58.2.16 valarray() [7/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            const valarray< _Tp > & __v )  [inline]
```

Copy constructor.

Definition at line 646 of file valarray.

2.58.2.17 valarray() [8/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            initializer_list< _Tp > __l )  [inline]
```

Construct an array with an initializer_list of values.

Definition at line 703 of file valarray.

2.58.2.18 valarray() [9/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            size_t __n )  [inline], [explicit]
```

Construct an array with *n* elements.

Definition at line 625 of file valarray.

2.58.2.19 valarray() [10/10] template<typename _Tp >

```
std::valarray< _Tp >::valarray (
            valarray< _Tp > && __v )  [inline], [noexcept]
```

Move constructor.

Definition at line 654 of file valarray.

2.58.2.20 ~gslice() std::gslice::~gslice ( ) [inline]

Destructor.

Definition at line 163 of file gslice.h.

2.58.2.21 apply() [1/2] template<class _Tp >

```
_Expr< _ValFunClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::apply (
            _Tp  func_Tp ) const  [inline]
```

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func	Function of Tp returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 1065 of file valarray.

2.58.2.22 apply() [2/2] template<class _Tp >

```
_Expr< _RefFunClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::apply (
            _Tp  funcconst _Tp & ) const  [inline]
```

Apply a function to the array.

Returns a new valarray with elements assigned to the result of applying func to the corresponding element of this array. The new array has the same size as this one.

Parameters

func	Function of const Tp& returning Tp to apply.

Returns

New valarray with transformed elements.

Definition at line 1073 of file valarray.

2.58.2.23 begin() [1/2] template<class _Tp >

```
const _Tp * std::begin (
            const valarray< _Tp > & __va )  [inline], [noexcept]
```

Return an iterator pointing to the first element of the const valarray.

Parameters

__va	valarray.

Definition at line 1224 of file valarray.

2.58.2.24 begin() [2/2] template<class _Tp >

```
_Tp * std::begin (
            valarray< _Tp > & __va )  [inline], [noexcept]
```

Return an iterator pointing to the first element of the valarray.

Parameters

__va	valarray.

Definition at line 1214 of file valarray.

Referenced by std::cbegin(), std::vector< _Tp, _Alloc >::insert(), std::list< _Tp, _Alloc >::merge(), std::list< _Tp, _Alloc >::remove(), std::list< _Tp, _Alloc >::remove_if(), and std::list< _Tp, _Alloc >::unique().

2.58.2.25 cshift() template<class _Tp >

```
valarray< _Tp > std::valarray< _Tp >::cshift (
            int __n ) const  [inline]
```

Return a rotated array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index i, the new position is (i - n) % size(). The new valarray has the same size as the current one. Elements that are shifted beyond the array bounds are shifted into the other end of the array. No elements are lost.

Positive arguments shift toward index 0, wrapping around the top. Negative arguments shift towards the top, wrapping around to 0.

Parameters

_↩ _n	Number of element positions to rotate.

Returns

New valarray with elements in shifted positions.

Definition at line 991 of file valarray.

2.58.2.26 end() [1/2] template<class _Tp >

```
const _Tp * std::end (
            const valarray< _Tp > & __va )  [inline], [noexcept]
```

Return an iterator pointing to one past the last element of the const valarray.

Parameters

__va	valarray.

Definition at line 1249 of file valarray.

2.58.2.27 end() [2/2] template<class _Tp >

```
_Tp * std::end (
            valarray< _Tp > & __va )  [inline], [noexcept]
```

Return an iterator pointing to one past the last element of the valarray.

Parameters

__va	valarray.

Definition at line 1234 of file valarray.

Referenced by std::cend(), std::vector< _Tp, _Alloc >::insert(), std::list< _Tp, _Alloc >::merge(), std::vector< double >::operator=(), std::list< _Tp, _Alloc >::remove(), std::list< _Tp, _Alloc >::remove_if(), std::list< _Tp, _Alloc >::resize(), and std::list< _Tp, _Alloc >::unique().

2.58.2.28 max() template<typename _Tp > _Tp std::valarray< _Tp >::max [inline]

Return the maximum element using operator<().

Definition at line 1057 of file valarray.

2.58.2.29 min() template<typename _Tp > _Tp std::valarray< _Tp >::min [inline]

Return the minimum element using operator<().

Definition at line 1049 of file valarray.

2.58.2.30 operator"!() template<typename _Tp > valarray< _Tp >::template _UnaryOp< __logical_not >::_Rt std::valarray< _Tp >::operator! [inline]

Return a new valarray by applying unary ! to each element.

Definition at line 1092 of file valarray.

2.58.2.31 operator%=() [1/6] template<class _Tp > valarray< _Tp > & std::valarray< _Tp >::operator%= (const _Tp & __t) [inline]

Set each element e of array to e % *t*.

Definition at line 1119 of file valarray.

2.58.2.32 operator%=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator%= (
            const valarray< _Tp > & __v )  [inline]
```

Modulo elements of array by corresponding elements of *v*.

Definition at line 1119 of file valarray.

2.58.2.33 operator%=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator%= (
            const valarray< _Tp > & __v ) const  [inline]
```

Modulo slice elements by corresponding elements of *v*.

Definition at line 207 of file gslice_array.h.

2.58.2.34 operator%=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator%= (
            const valarray< _Tp > & __v ) const  [inline]
```

Modulo slice elements by corresponding elements of *v*.

Definition at line 196 of file indirect_array.h.

2.58.2.35 operator%=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator%= (
            const valarray< _Tp > & __v ) const  [inline]
```

Modulo slice elements by corresponding elements of *v*.

Definition at line 197 of file mask_array.h.

2.58.2.36 operator%=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator%= (
            const valarray< _Tp > & __v ) const  [inline]
```

Modulo slice elements by corresponding elements of *v*.

Definition at line 268 of file slice_array.h.

2.58.2.37 operator&=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator&= (
            const _Tp & __t )  [inline]
```

Set each element e of array to e & *t*.

Definition at line 1121 of file valarray.

2.58.2.38 operator&=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator&= (
            const valarray< _Tp > & __v )  [inline]
```

Logical and corresponding elements of *v* with elements of array.

Definition at line 1121 of file valarray.

2.58.2.39 operator&=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator&= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical and slice elements with corresponding elements of *v*.

Definition at line 211 of file gslice_array.h.

2.58.2.40 operator&=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator&= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical and slice elements with corresponding elements of *v*.

Definition at line 200 of file indirect_array.h.

2.58.2.41 operator&=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator&= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical and slice elements with corresponding elements of *v*.

Definition at line 201 of file mask_array.h.

2.58.2.42 operator&=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator&= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical and slice elements with corresponding elements of *v*.

Definition at line 272 of file slice_array.h.

2.58.2.43 operator*=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator*= (
            const _Tp & __t )  [inline]
```

Multiply each element of array by *t*.

Definition at line 1117 of file valarray.

2.58.2.44 operator*=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator*= (
            const valarray< _Tp > & __v )  [inline]
```

Multiply elements of array by corresponding elements of *v*.

Definition at line 1117 of file valarray.

2.58.2.45 operator*=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator*= (
            const valarray< _Tp > & __v ) const  [inline]
```

Multiply slice elements by corresponding elements of *v*.

Definition at line 205 of file gslice_array.h.

2.58.2.46 operator*=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator*= (
            const valarray< _Tp > & __v ) const  [inline]
```

Multiply slice elements by corresponding elements of *v*.

Definition at line 194 of file indirect_array.h.

2.58.2.47 operator*=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator*= (
            const valarray< _Tp > & __v ) const  [inline]
```

Multiply slice elements by corresponding elements of *v*.

Definition at line 195 of file mask_array.h.

2.58.2.48 operator*=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator*= (
            const valarray< _Tp > & __v ) const  [inline]
```

Multiply slice elements by corresponding elements of *v*.

Definition at line 266 of file slice_array.h.

2.58.2.49 operator+() template<typename _Tp >

```
valarray< _Tp >::template _UnaryOp< __unary_plus >::_Rt std::valarray< _Tp >::operator+  [inline]
```

Return a new valarray by applying unary + to each element.

Definition at line 1089 of file valarray.

2.58.2.50 operator+=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator+= (
            const _Tp & __t )  [inline]
```

Add *t* to each element of array.

Definition at line 1115 of file valarray.

2.58.2.51 operator+=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator+= (
            const valarray< _Tp > & __v )  [inline]
```

Add corresponding elements of *v* to elements of array.

Definition at line 1115 of file valarray.

2.58.2.52 operator+=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator+= (
            const valarray< _Tp > & __v ) const  [inline]
```

Add corresponding elements of *v* to slice elements.

Definition at line 208 of file gslice_array.h.

2.58.2.53 operator+=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator+= (
            const valarray< _Tp > & __v ) const  [inline]
```

Add corresponding elements of *v* to slice elements.

Definition at line 197 of file indirect_array.h.

2.58.2.54 operator+=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator+= (
            const valarray< _Tp > & __v ) const  [inline]
```

Add corresponding elements of *v* to slice elements.

Definition at line 198 of file mask_array.h.

2.58.2.55 operator+=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator+= (
            const valarray< _Tp > & __v ) const  [inline]
```

Add corresponding elements of *v* to slice elements.

Definition at line 269 of file slice_array.h.

2.58.2.56 operator-() template<typename _Tp >

```
valarray< _Tp >::template _UnaryOp< __negate >::_Rt std::valarray< _Tp >::operator-  [inline]
```

Return a new valarray by applying unary - to each element.

Definition at line 1090 of file valarray.

2.58.2.57 operator-=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator-= (
            const _Tp & __t )  [inline]
```

Subtract *t* to each element of array.

Definition at line 1116 of file valarray.

2.58.2.58 operator-=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator-= (
            const valarray< _Tp > & __v )  [inline]
```

Subtract corresponding elements of *v* from elements of array.

Definition at line 1116 of file valarray.

2.58.2.59 operator-=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator-= (
            const valarray< _Tp > & __v ) const  [inline]
```

Subtract corresponding elements of *v* from slice elements.

Definition at line 209 of file gslice_array.h.

2.58.2.60 operator-=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator-= (
            const valarray< _Tp > & __v ) const  [inline]
```

Subtract corresponding elements of *v* from slice elements.

Definition at line 198 of file indirect_array.h.

2.58.2.61 operator-=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator-= (
            const valarray< _Tp > & __v ) const  [inline]
```

Subtract corresponding elements of *v* from slice elements.

Definition at line 199 of file mask_array.h.

2.58.2.62 operator-=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator-= (
            const valarray< _Tp > & __v ) const  [inline]
```

Subtract corresponding elements of *v* from slice elements.

Definition at line 270 of file slice_array.h.

2.58.2.63 operator/=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator/= (
            const _Tp & __t )  [inline]
```

Divide each element of array by *t*.

Definition at line 1118 of file valarray.

2.58.2.64 operator/=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator/= (
            const valarray< _Tp > & __v )  [inline]
```

Divide elements of array by corresponding elements of *v*.

Definition at line 1118 of file valarray.

2.58.2.65 operator/=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator/= (
            const valarray< _Tp > & __v ) const  [inline]
```

Divide slice elements by corresponding elements of *v*.

Definition at line 206 of file gslice_array.h.

2.58.2.66 operator/=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator/= (
            const valarray< _Tp > & __v ) const  [inline]
```

Divide slice elements by corresponding elements of *v*.

Definition at line 195 of file indirect_array.h.

2.58.2.67 operator/=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator/= (
            const valarray< _Tp > & __v ) const  [inline]
```

Divide slice elements by corresponding elements of *v*.

Definition at line 196 of file mask_array.h.

2.58.2.68 operator/=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator/= (
            const valarray< _Tp > & __v ) const  [inline]
```

Divide slice elements by corresponding elements of *v*.

Definition at line 267 of file slice_array.h.

2.58.2.69 operator<<=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator<<= (
            const _Tp & __t )  [inline]
```

Left shift each element e of array by *t* bits.

Definition at line 1122 of file valarray.

2.58.2.70 operator<<=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator<<= (
            const valarray< _Tp > & __v )  [inline]
```

Left shift elements of array by corresponding elements of *v*.

Definition at line 1122 of file valarray.

2.58.2.71 operator<<=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator<<= (
            const valarray< _Tp > & __v ) const  [inline]
```

Left shift slice elements by corresponding elements of *v*.

Definition at line 213 of file gslice_array.h.

```
void std::gslice_array< _Tp >::operator= (
            const _Tp & __t ) const  [inline]
```

Assign all slice elements to *t*.

Definition at line 163 of file gslice_array.h.

2.58.2.76 operator=() [2/20] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator= (
            const _Tp & __t ) const  [inline]
```

Assign all slice elements to *t*.

Definition at line 163 of file indirect_array.h.

2.58.2.77 operator=() [3/20] template<typename _Tp >

```
void std::mask_array< _Tp >::operator= (
            const _Tp & __t ) const  [inline]
```

Assign all slice elements to *t*.

Definition at line 163 of file mask_array.h.

2.58.2.78 operator=() [4/20] template<typename _Tp >

```
void std::slice_array< _Tp >::operator= (
            const _Tp & __t ) const  [inline]
```

Assign all slice elements to *t*.

Definition at line 234 of file slice_array.h.

2.58.2.79 operator=() [5/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const _Tp & __t )  [inline]
```

Assign elements to a value.

Assign all elements of array to *t*.

Parameters

↩ _↩ ↩ _↩ *t*	Value for elements.

Definition at line 788 of file valarray.

2.58.2.80 operator=() [6/20] gslice & std::gslice::operator= (

```
            const gslice & __g )  [inline]
```

Assignment operator.

Definition at line 170 of file gslice.h.

2.58.2.81 operator=() [7/20] template<typename _Tp >

```
gslice_array< _Tp > & std::gslice_array< _Tp >::operator= (
            const gslice_array< _Tp > & __a ) [inline]
```

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 153 of file gslice_array.h.

2.58.2.82 operator=() [8/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const gslice_array< _Tp > & __ga ) [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *ga*. Results are undefined if *ga* does not have the same size as this array.

Parameters

__ga	Array slice to get values from.

Definition at line 806 of file valarray.

2.58.2.83 operator=() [9/20] template<typename _Tp >

```
indirect_array< _Tp > & std::indirect_array< _Tp >::operator= (
            const indirect_array< _Tp > & __a ) [inline]
```

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 154 of file indirect_array.h.

2.58.2.84 operator=() [10/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const indirect_array< _Tp > & __ia ) [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *ia*. Results are undefined if *ia* does not have the same size as this array.

Parameters

_↩ _ia	Array slice to get values from.

Definition at line 826 of file valarray.

2.58.2.85 operator=() [11/20] template<typename _Tp >

```
mask_array< _Tp > & std::mask_array< _Tp >::operator= (
            const mask_array< _Tp > & __a )  [inline]
```

Assignment operator. Assigns elements to corresponding elements of *a*.

Definition at line 154 of file mask_array.h.

2.58.2.86 operator=() [12/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const mask_array< _Tp > & __ma )  [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *ma*. Results are undefined if *ma* does not have the same size as this array.

Parameters

__ma	Array slice to get values from.

Definition at line 816 of file valarray.

2.58.2.87 operator=() [13/20] template<typename _Tp >

```
slice_array< _Tp > & std::slice_array< _Tp >::operator= (
            const slice_array< _Tp > & __a )  [inline]
```

Assignment operator. Assigns slice elements to corresponding elements of *a*.

Definition at line 225 of file slice_array.h.

2.58.2.88 operator=() [14/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const slice_array< _Tp > & __sa )  [inline]
```

Assign elements to an array subset.

Assign elements of array to values in *sa*. Results are undefined if *sa* does not have the same size as this array.

Parameters

__sa	Array slice to get values from.

Definition at line 796 of file valarray.

2.58.2.89 operator=() [15/20] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator= (
            const valarray< _Tp > & __v ) const  [inline]
```

Assign slice elements to corresponding elements of *v*.

Definition at line 171 of file gslice_array.h.

References std::valarray< _Tp >::size().

2.58.2.90 operator=() [16/20] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator= (
            const valarray< _Tp > & __v ) const  [inline]
```

Assign slice elements to corresponding elements of *v*.

Definition at line 168 of file indirect_array.h.

2.58.2.91 operator=() [17/20] template<typename _Tp >

```
void std::slice_array< _Tp >::operator= (
            const valarray< _Tp > & __v ) const  [inline]
```

Assign slice elements to corresponding elements of *v*.

Definition at line 239 of file slice_array.h.

2.58.2.92 operator=() [18/20] template<typename _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator= (
            const valarray< _Tp > & __v )  [inline]
```

Assign elements to an array.

Assign elements of array to values in *v*.

Parameters

_↩ _*v*	Valarray to get values from.

Definition at line 724 of file valarray.

2.58.2.93 operator=() [19/20]

```
template<typename _Tp >
valarray< _Tp > & std::valarray< _Tp >::operator= (
            initializer_list< _Tp > __l )  [inline]
```

Assign elements to an initializer_list.

Assign elements of array to values in *__l*. Results are undefined if *__l* does not have the same size as this array.

Parameters

↩ _↩ ↩ _↩ *l*	initializer_list to get values from.

Definition at line 764 of file valarray.

2.58.2.94 operator=() [20/20]

```
template<typename _Tp >
valarray< _Tp > & std::valarray< _Tp >::operator= (
            valarray< _Tp > && __v )  [inline], [noexcept]
```

Move assign elements to an array.

Move assign elements of array to values in *v*.

Parameters

_↩ _*v*	Valarray to get values from.

Definition at line 748 of file valarray.

2.58.2.95 operator>>=() [1/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator>>= (
            const _Tp & __t ) [inline]
```

Right shift each element e of array by *t* bits.

Definition at line 1124 of file valarray.

2.58.2.96 operator>>=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator>>= (
            const valarray< _Tp > & __v ) [inline]
```

Right shift elements of array by corresponding elements of *v*.

Definition at line 1124 of file valarray.

2.58.2.97 operator>>=() [3/6] template<typename _Tp >

```
void std::gslice_array< _Tp >::operator>>= (
            const valarray< _Tp > & __v ) const [inline]
```

Right shift slice elements by corresponding elements of *v*.

Definition at line 214 of file gslice_array.h.

2.58.2.98 operator>>=() [4/6] template<typename _Tp >

```
void std::indirect_array< _Tp >::operator>>= (
            const valarray< _Tp > & __v ) const [inline]
```

Right shift slice elements by corresponding elements of *v*.

Definition at line 203 of file indirect_array.h.

2.58.2.99 operator>>=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator>>= (
            const valarray< _Tp > & __v ) const [inline]
```

Right shift slice elements by corresponding elements of *v*.

Definition at line 204 of file mask_array.h.

2.58.2.100 operator>>=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator>>= (
            const valarray< _Tp > & __v ) const  [inline]
```

Right shift slice elements by corresponding elements of *v*.

Definition at line 275 of file slice_array.h.

2.58.2.101 operator[]() [1/9] template<typename _Tp >

```
gslice_array< _Tp > std::valarray< _Tp >::operator[] (
            const gslice & __s )  [inline]
```

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the gslice argument. The new valarray has the same size as the input gslice.

See also

gslice.

Parameters

_↩ _s	The source gslice.

Returns

New valarray containing elements in __s.

Definition at line 880 of file valarray.

2.58.2.102 operator[]() [2/9] template<typename _Tp >

```
_Expr< _GClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] (
            const gslice & __s ) const  [inline]
```

Return an array subset.

Returns a slice_array referencing the elements of the array indicated by the slice argument.

See also

gslice.

Parameters

_↩ _s	The source slice.

Returns

Slice_array referencing elements indicated by __s.

Definition at line 871 of file valarray.

2.58.2.103 operator[]() [3/9] template<typename _Tp >

```
mask_array< _Tp > std::valarray< _Tp >::operator[] (
            const valarray< bool > & __m )  [inline]
```

Return a reference to an array subset.

Returns a new mask_array referencing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements are part of the subset. Elements of the array are part of the subset if the corresponding element of the argument is true.

Parameters

_↩ _m	The valarray bitmask.

Returns

New valarray containing elements indicated by __m.

Definition at line 900 of file valarray.

2.58.2.104 operator[]() [4/9] template<typename _Tp >

```
valarray< _Tp > std::valarray< _Tp >::operator[] (
            const valarray< bool > & __m ) const  [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The input is a valarray of bool which represents a bitmask indicating which elements should be copied into the new valarray. Each element of the array is added to the return valarray if the corresponding element of the argument is true.

Parameters

_↩ _*m*	The valarray bitmask.

Returns

New valarray containing elements indicated by __*m*.

Definition at line 888 of file valarray.

2.58.2.105 operator[]() [5/9] template<typename _Tp >

```
indirect_array< _Tp > std::valarray< _Tp >::operator[] (
            const valarray< size_t > & __i )  [inline]
```

Return a reference to an array subset.

Returns an indirect_array referencing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to include in the subset. The returned indirect_array refers to these elements.

Parameters

↩ _↩ ↩ _↩ *i*	The valarray element index list.

Returns

Indirect_array referencing elements in __*i*.

Definition at line 919 of file valarray.

2.58.2.106 operator[]() [6/9] template<typename _Tp >

```
_Expr< _IClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] (
            const valarray< size_t > & __i ) const  [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the argument. The elements in the argument are interpreted as the indices of elements of this valarray to copy to the return valarray.

Parameters

↩ _↩ ↩ _↩ *i*	The valarray element index list.

Returns

New valarray containing elements in __*s*.

Definition at line 911 of file valarray.

2.58.2.107 operator[]() [7/9] template<typename _Tp >

```
_Tp & std::valarray< _Tp >::operator[] (
            size_t __i )  [inline]
```

Return a reference to the i'th array element.

Parameters

↩ _↩ ↩ _↩ *i*	Index of element to return.

Returns

Reference to the i'th element.

Definition at line 592 of file valarray.

2.58.2.108 operator[]() [8/9] template<typename _Tp >

```
slice_array< _Tp > std::valarray< _Tp >::operator[] (
            slice __s )  [inline]
```

Return a reference to an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See also

slice.

Parameters

_↩ _s	The source slice.

Returns

New valarray containing elements in __s.

Definition at line 866 of file valarray.

2.58.2.109 operator[]() [9/9]

```
template<typename _Tp >
_Expr< _SClos< _ValArray, _Tp >, _Tp > std::valarray< _Tp >::operator[] (
            slice __s ) const  [inline]
```

Return an array subset.

Returns a new valarray containing the elements of the array indicated by the slice argument. The new valarray has the same size as the input slice.

See also

slice.

Parameters

_↩ _s	The source slice.

Returns

New valarray containing elements in __s.

Definition at line 858 of file valarray.

2.58.2.110 operator^=() [1/6]

```
template<class _Tp >
valarray< _Tp > & std::valarray< _Tp >::operator^= (
            const _Tp & __t )  [inline]
```

Set each element e of array to e ^ *t*.

Definition at line 1120 of file valarray.

2.58.2.111 operator^=() [2/6] template<class _Tp >

```
valarray< _Tp > & std::valarray< _Tp >::operator^= (
            const valarray< _Tp > & __v )  [inline]
```

Logical xor corresponding elements of *v* with elements of array.

Definition at line 1120 of file valarray.

2.58.2.112 operator^=() [3/6] template<typename _Tp >

2.58.2.120 operator"|=() [5/6] template<typename _Tp >

```
void std::mask_array< _Tp >::operator|= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical or slice elements with corresponding elements of *v*.

Definition at line 202 of file mask_array.h.

2.58.2.121 operator"|=() [6/6] template<typename _Tp >

```
void std::slice_array< _Tp >::operator|= (
            const valarray< _Tp > & __v ) const  [inline]
```

Logical or slice elements with corresponding elements of *v*.

Definition at line 273 of file slice_array.h.

2.58.2.122 operator~() template<typename _Tp >

```
valarray< _Tp >::template _UnaryOp< __bitwise_not >::_Rt std::valarray< _Tp >::operator~  [inline]
```

Return a new valarray by applying unary ~ to each element.

Definition at line 1091 of file valarray.

2.58.2.123 resize() template<class _Tp >

```
void std::valarray< _Tp >::resize (
            size_t __size,
            _Tp __c = _Tp() )  [inline]
```

Resize array.

Resize this array to *size* and set all elements to *c*. All references and iterators are invalidated.

Parameters

__size	New array size.
__c	New value for all elements.

Definition at line 1032 of file valarray.

2.58.2.124 shift() template<class _Tp >

```
valarray< _Tp > std::valarray< _Tp >::shift (
            int __n ) const  [inline]
```

Return a shifted array.

A new valarray is constructed as a copy of this array with elements in shifted positions. For an element with index i, the new position is i - n. The new valarray has the same size as the current one. New elements without a value are set to 0. Elements whose new position is outside the bounds of the array are discarded.

Positive arguments shift toward index 0, discarding elements [0, n). Negative arguments discard elements from the top of the array.

Parameters

_↩ _n	Number of element positions to shift.

Returns

New valarray with elements in shifted positions.

Definition at line 950 of file valarray.

2.58.2.125 size() [1/3] valarray< size_t > std::gslice::size ( ) const [inline]

Return array of sizes of slice dimensions.

Definition at line 139 of file gslice.h.

2.58.2.126 size() [2/3] size_t std::slice::size ( ) const [inline]

Return size of slice.

Definition at line 107 of file slice_array.h.

2.58.2.127 size() [3/3] template<class _Tp > size_t std::valarray< _Tp >::size [inline]

Return the number of elements in array.

Definition at line 937 of file valarray.

Referenced by std::gslice_array< _Tp >::operator=().

2.58.2.128 start() [1/2] size_t std::gslice::start ( ) const [inline]

Return array offset of first slice element.

Definition at line 135 of file gslice.h.

2.58.2.129 start() [2/2] size_t std::slice::start ( ) const [inline]

Return array offset of first slice element.

Definition at line 103 of file slice_array.h.

2.58.2.130 stride() [1/2] valarray< size_t > std::gslice::stride ( ) const [inline]

Return array of array strides for each dimension.

Definition at line 143 of file gslice.h.

2.58.2.131 stride() [2/2] size_t std::slice::stride ( ) const [inline]

Return array stride of slice.

Definition at line 111 of file slice_array.h.

2.58.2.132 sum() template<class _Tp >
_Tp std::valarray< _Tp >::sum [inline]

Return the sum of all elements in the array.

Accumulates the sum of all elements into a Tp using +=. The order of adding the elements is unspecified.

Definition at line 942 of file valarray.

2.58.2.133 swap() template<class _Tp >
void std::valarray< _Tp >::swap (
valarray< _Tp > & __v) [inline], [noexcept]

Swap.

Definition at line 928 of file valarray.

2.59 Numerics

Collaboration diagram for Numerics:

Modules

- Bit manipulation
- Complex Numbers
- Decimal Floating-Point Arithmetic
- Mathematical Special Functions
- Numeric Arrays
- Random Number Generation
- TR1 Mathematical Special Functions

2.59.1 Detailed Description

Components for performing numeric operations. Includes support for complex number types, random number generation, numeric (n-at-a-time) arrays, generalized numeric algorithms, and mathematical special functions.

2.60 Optional values

Collaboration diagram for Optional values:

Classes

- struct std::experimental::fundamentals_v1::in_place_t
- class std::experimental::fundamentals_v1::optional< _Tp >

Macros

- #define **__cpp_lib_experimental_optional**

Variables

- constexpr in_place_t std::experimental::in_place
- constexpr nullopt_t std::experimental::nullopt

2.60.1 Detailed Description

Class template for optional values and surrounding facilities, as described in n3793 "A proposal to add a utility class to represent optional objects (Revision 5)".

2.60.2 Variable Documentation

2.60.2.1 in_place `constexpr in_place_t std::experimental::fundamentals_v1::in_place [constexpr]`

Tag for in-place construction.

Definition at line 77 of file experimental/optional.

2.60.2.2 nullopt `constexpr nullopt_t std::experimental::fundamentals_v1::nullopt [constexpr]`

Tag to disengage optional objects.

Definition at line 96 of file experimental/optional.

2.61 Pointer Abstractions

Collaboration diagram for Pointer Abstractions:

Classes

- struct std::hash< unique_ptr< _Tp, _Dp > >
- struct std::owner_less< _Tp >
- struct std::owner_less< shared_ptr< _Tp > >
- struct std::owner_less< void >
- struct std::owner_less< weak_ptr< _Tp > >

Functions

- template<typename _Del , typename _Tp , _Lock_policy _Lp>

  _MakeUniq< _Tp >::__invalid_type make_unique (_Args &&...)=delete
- #define __cpp_lib_make_unique

2.61.1 Detailed Description

Smart pointers, etc.

2.61.2 Macro Definition Documentation

2.61.2.1 __cpp_lib_make_unique `#define __cpp_lib_make_unique`

std::make_unique for single objects

Definition at line 940 of file unique_ptr.h.

2.61.3 Function Documentation

2.61.3.1 allocate_shared() `template<typename _Tp , typename _Alloc , typename... _Args>`

```
shared_ptr< _Tp > allocate_shared (
            const _Alloc & __a,
            _Args &&... __args )  [related]
```

Create an object that is owned by a shared_ptr.

Parameters

__a	An allocator.
__args	Arguments for the *_Tp* object's constructor.

Returns

A shared_ptr that owns the newly created object.

Exceptions

An	exception thrown from *_Alloc::allocate* or from the constructor of *_Tp*.

A copy of *__a* will be used to allocate memory for the shared_ptr and the new object.

Definition at line 857 of file bits/shared_ptr.h.

2.61.3.2 atomic_compare_exchange_strong_explicit() template<typename _Tp >

```
bool atomic_compare_exchange_strong_explicit (
             shared_ptr< _Tp > * __p,
             shared_ptr< _Tp > * __v,
             shared_ptr< _Tp > __w,
             memory_order ,
             memory_order  )  [related]
```

Atomic compare-and-swap for shared_ptr objects.

Parameters

_↩ _p	A non-null pointer to a shared_ptr object.
_↩ _v	A non-null pointer to a shared_ptr object.
_↩ _w	A non-null pointer to a shared_ptr object.

Returns

True if *__p was equivalent to *__v, false otherwise.

The memory order for failure shall not be memory_order_release or memory_order_acq_rel, or stronger than the memory order for success.

Definition at line 225 of file shared_ptr_atomic.h.

References std::move().

2.61.3.3 atomic_exchange_explicit() template<typename _Tp >

```
shared_ptr< _Tp > atomic_exchange_explicit (
             shared_ptr< _Tp > * __p,
             shared_ptr< _Tp > __r,
             memory_order  )  [related]
```

Atomic exchange for shared_ptr objects.

Parameters

_↩ _p	A non-null pointer to a shared_ptr object.
_↩ _r	New value to store in *__p.

Returns

The original value of *__p

Definition at line 176 of file shared_ptr_atomic.h.

References std::shared_ptr< _Tp >::swap().

2.61.3.4 atomic_is_lock_free() template<typename _Tp , _Lock_policy _Lp>

```
bool atomic_is_lock_free (
            const __shared_ptr< _Tp, _Lp > * __p )  [related]
```

Report whether shared_ptr atomic operations are lock-free.

Parameters

_↩ _p	A non-null pointer to a shared_ptr object.

Returns

True if atomic access to *__p is lock-free, false otherwise.

Definition at line 76 of file shared_ptr_atomic.h.

2.61.3.5 atomic_load_explicit() template<typename _Tp >

```
shared_ptr< _Tp > atomic_load_explicit (
            const shared_ptr< _Tp > * __p,
            memory_order  )  [related]
```

Atomic load for shared_ptr objects.

Parameters

_↩ _p	A non-null pointer to a shared_ptr object.

Returns

*__p

The memory order shall not be memory_order_release or memory_order_acq_rel.

Definition at line 103 of file shared_ptr_atomic.h.

2.61.3.6 atomic_store_explicit() template<typename _Tp >

```
void atomic_store_explicit (
             shared_ptr< _Tp > * __p,
             shared_ptr< _Tp > __r,
             memory_order  )  [related]
```

Atomic store for shared_ptr objects.

Parameters

_↩ _p	A non-null pointer to a shared_ptr object.
_↩ _r	The value to store.

The memory order shall not be `memory_order_acquire` or `memory_order_acq_rel`.

Definition at line 139 of file shared_ptr_atomic.h.

References std::shared_ptr< _Tp >::swap().

2.61.3.7 const_pointer_cast() template<typename _Tp , typename _Up >

```
shared_ptr< _Tp > const_pointer_cast (
             const shared_ptr< _Up > & __r )  [related]
```

Convert type of `shared_ptr`, via `const_cast`

Definition at line 590 of file bits/shared_ptr.h.

2.61.3.8 dynamic_pointer_cast() template<typename _Tp , typename _Up >

```
shared_ptr< _Tp > dynamic_pointer_cast (
             const shared_ptr< _Up > & __r )  [related]
```

Convert type of `shared_ptr`, via `dynamic_cast`

Definition at line 599 of file bits/shared_ptr.h.

2.61.3.9 get_deleter() template<typename _Del , typename _Tp >

```
_Del * get_deleter (
             const shared_ptr< _Tp > & __p )  [related]
```

20.7.2.2.10 shared_ptr get_deleter

If `__p` has a deleter of type `_Del`, return a pointer to it.

Definition at line 93 of file bits/shared_ptr.h.

2.61.3.10 make_shared() template<typename _Tp , typename... _Args>
shared_ptr< _Tp > make_shared (
_Args &&... __args) [related]

Create an object that is owned by a shared_ptr.

Parameters

__args	Arguments for the *_Tp* object's constructor.

Returns

A shared_ptr that owns the newly created object.

Exceptions

std::bad_alloc,or	an exception thrown from the constructor of *_Tp*.

Definition at line 874 of file bits/shared_ptr.h.

2.61.3.11 make_unique() [1/3]

```
template<typename _Tp , typename... _Args>
_MakeUniq< _Tp >::__single_object make_unique (
            _Args &&... __args ) [related]
```

std::make_unique for single objects

Definition at line 961 of file unique_ptr.h.

2.61.3.12 make_unique() [2/3]

```
template<typename _Tp , typename... _Args>
_MakeUniq< _Tp >::__invalid_type make_unique (
            _Args && ... ) [related]
```

Disable std::make_unique for arrays of known bound.

2.61.3.13 make_unique() [3/3]

```
template<typename _Tp >
_MakeUniq< _Tp >::__array make_unique (
            size_t __num ) [related]
```

std::make_unique for arrays of unknown bound

Definition at line 967 of file unique_ptr.h.

2.61.3.14 operator"!=() [1/6] template<typename _Tp , typename _Up >

```
bool operator!= (
            const shared_ptr< _Tp > & __a,
            const shared_ptr< _Up > & __b )  [related]
```

Inequality operator for shared_ptr objects, compares the stored pointers.

Definition at line 469 of file bits/shared_ptr.h.

2.61.3.15 operator"!=() [2/6] template<typename _Tp >

```
bool operator!= (
            const shared_ptr< _Tp > & __a,
            nullptr_t  )  [related]
```

shared_ptr comparison with nullptr

Definition at line 475 of file bits/shared_ptr.h.

2.61.3.16 operator"!=() [3/6] template<typename _Tp , typename _Dp , typename _Up , typename _Ep >

```
bool operator!= (
            const unique_ptr< _Tp, _Dp > & __x,
            const unique_ptr< _Up, _Ep > & __y )  [related]
```

Inequality operator for unique_ptr objects, compares the owned pointers.

Definition at line 774 of file unique_ptr.h.

References std::unique_ptr< _Tp, _Dp >::get().

2.61.3.17 operator"!=() [4/6] template<typename _Tp , typename _Dp >

```
bool operator!= (
            const unique_ptr< _Tp, _Dp > & __x,
            nullptr_t  )  [related]
```

unique_ptr comparison with nullptr

Definition at line 781 of file unique_ptr.h.

2.61.3.18 operator"!=() [5/6] template<typename _Tp >

```
bool operator!= (
            nullptr_t ,
            const shared_ptr< _Tp > & __a )  [related]
```

shared_ptr comparison with nullptr

Definition at line 481 of file bits/shared_ptr.h.

2.61.3.19 operator"!=() [6/6] template<typename _Tp , typename _Dp >

```
bool operator!= (
            nullptr_t ,
            const unique_ptr< _Tp, _Dp > & __x )  [related]
```

unique_ptr comparison with nullptr

Definition at line 787 of file unique_ptr.h.

2.61.3.20 operator<() [1/6] template<typename _Tp , typename _Up >

```
bool operator< (
            const shared_ptr< _Tp > & __a,
            const shared_ptr< _Up > & __b )  [related]
```

Relational operator for shared_ptr objects, compares the stored pointers.

Definition at line 486 of file bits/shared_ptr.h.

2.61.3.21 operator<() [2/6] template<typename _Tp >

```
bool operator< (
            const shared_ptr< _Tp > & __a,
            nullptr_t  )  [related]
```

shared_ptr comparison with nullptr

Definition at line 497 of file bits/shared_ptr.h.

2.61.3.22 operator<() [3/6] template<typename _Tp , typename _Dp , typename _Up , typename _Ep >

```
bool operator< (
            const unique_ptr< _Tp, _Dp > & __x,
            const unique_ptr< _Up, _Ep > & __y )  [related]
```

Relational operator for unique_ptr objects, compares the owned pointers.

Definition at line 794 of file unique_ptr.h.

2.61.3.23 operator<() [4/6] template<typename _Tp , typename _Dp >

```
bool operator< (
            const unique_ptr< _Tp, _Dp > & __x,
            nullptr_t  )  [related]
```

unique_ptr comparison with nullptr

Definition at line 806 of file unique_ptr.h.

2.61.3.24 operator<() [5/6] template<typename _Tp >

```
bool operator< (
            nullptr_t ,
            const shared_ptr< _Tp > & __a )  [related]
```

shared_ptr comparison with nullptr

Definition at line 506 of file bits/shared_ptr.h.

2.61.3.25 operator<() [6/6] template<typename _Tp , typename _Dp >

```
bool operator< (
            nullptr_t ,
            const unique_ptr< _Tp, _Dp > & __x )  [related]
```

unique_ptr comparison with nullptr

Definition at line 815 of file unique_ptr.h.

2.61.3.26 operator<<() template<typename _Ch , typename _Tr , typename _Tp , _Lock_policy _Lp>

```
std::basic_ostream< _Ch, _Tr > & operator<< (
            std::basic_ostream< _Ch, _Tr > & __os,
            const __shared_ptr< _Tp, _Lp > & __p )  [related]
```

Write the stored pointer to an ostream.

Definition at line 1 of file bits/shared_ptr.h.

2.61.3.27 operator<=() [1/6] template<typename _Tp , typename _Up >

```
bool operator<= (
            const shared_ptr< _Tp > & __a,
            const shared_ptr< _Up > & __b )  [related]
```

Relational operator for shared_ptr objects, compares the stored pointers.

Definition at line 515 of file bits/shared_ptr.h.

```

unique_ptr comparison with nullptr

Definition at line 885 of file unique_ptr.h.

2.61.3.51 static_pointer_cast() template<typename _Tp , typename _Up >

```
shared_ptr< _Tp > static_pointer_cast (
            const shared_ptr< _Up > & __r )  [related]
```

Convert type of `shared_ptr`, via `static_cast`

Definition at line 581 of file bits/shared_ptr.h.

2.61.3.52 swap() [1/3] template<typename _Tp >

```
void swap (
            shared_ptr< _Tp > & __a,
            shared_ptr< _Tp > & __b )  [related]
```

Swap overload for shared_ptr.

Definition at line 573 of file bits/shared_ptr.h.

References std::shared_ptr< _Tp >::swap().

Referenced by std::shared_ptr< _Tp >::atomic_exchange_explicit(), std::shared_ptr< _Tp >::atomic_store_explicit(), std::shared_ptr< _Tp >::swap(), and std::weak_ptr< _Tp >::swap().

2.61.3.53 swap() [2/3] template<typename _Tp , typename _Dp >

```
enable_if< __is_swappable< _Dp >::value >::type swap (
            unique_ptr< _Tp, _Dp > & __x,
            unique_ptr< _Tp, _Dp > & __y )  [related]
```

Swap overload for unique_ptr

Definition at line 738 of file unique_ptr.h.

2.61.3.54 swap() [3/3] template<typename _Tp >

```
void swap (
            weak_ptr< _Tp > & __a,
            weak_ptr< _Tp > & __b )  [related]
```

Swap overload for weak_ptr.

Definition at line 762 of file bits/shared_ptr.h.

References std::shared_ptr< _Tp >::swap().

2.62 Pointer Safety and Garbage Collection

Collaboration diagram for Pointer Safety and Garbage Collection:

Enumerations

- enum class std::pointer_safety { **relaxed** , **preferred** , **strict** }

Functions

- void std::declare_no_pointers (char *, size_t)
- void std::declare_reachable (void *)
- pointer_safety std::get_pointer_safety () noexcept
- void std::undeclare_no_pointers (char *, size_t)
- template<typename _Tp >
  _Tp * std::undeclare_reachable (_Tp *__p)

2.62.1 Detailed Description

Utilities to assist with garbage collection in an implementation that supports *strict pointer safety*. This implementation only supports *relaxed pointer safety* and so these functions have no effect.

C++11 20.6.4 [util.dynamic.safety], Pointer safety

2.62.2 Enumeration Type Documentation

2.62.2.1 pointer_safety `enum std::pointer_safety [strong]`

Constants representing the different types of pointer safety.

Definition at line 158 of file memory.

2.62.3 Function Documentation

2.62.3.1 declare_no_pointers() `void std::declare_no_pointers ( char * , size_t ) [inline]`

Inform a garbage collector that a region of memory need not be traced.

Definition at line 171 of file memory.

2.62.3.2 declare_reachable() `void std::declare_reachable ( void * ) [inline]`

Inform a garbage collector that an object is still in use.

Definition at line 162 of file memory.

2.62.3.3 get_pointer_safety() `pointer_safety std::get_pointer_safety ( ) [inline], [noexcept]`

The type of pointer safety supported by the implementation.

Definition at line 179 of file memory.

2.62.3.4 undeclare_no_pointers() `void std::undeclare_no_pointers ( char * , size_t ) [inline]`

Unregister a range previously registered with declare_no_pointers.

Definition at line 175 of file memory.

2.62.3.5 undeclare_reachable() `template<typename _Tp > _Tp* std::undeclare_reachable ( _Tp * __p ) [inline]`

Unregister an object previously registered with declare_reachable.

Definition at line 167 of file memory.

2.63 Poisson Distributions

2.63.1 Detailed Description

2.63.2 Function Documentation

2.63.2.1 operator"!=() [1/7] template<typename _IntType >

```
bool std::operator!= (
            const std::discrete_distribution< _IntType > & __d1,
            const std::discrete_distribution< _IntType > & __d2 )  [inline]
```

Return true if two discrete distributions have different parameters.

Definition at line 5500 of file random.h.

2.63.2.2 operator"!=() [2/7] template<typename _RealType >

```
bool std::operator!= (
            const std::exponential_distribution< _RealType > & __d1,
            const std::exponential_distribution< _RealType > & __d2 )  [inline]
```

Return true if two exponential distributions have different parameters.

Definition at line 4815 of file random.h.

2.63.2.3 operator"!=() [3/7] template<typename _RealType >

```
bool std::operator!= (
            const std::extreme_value_distribution< _RealType > & __d1,
            const std::extreme_value_distribution< _RealType > & __d2 )  [inline]
```

Return true if two extreme value distributions have different parameters.

Definition at line 5235 of file random.h.

2.63.2.4 operator"!=() [4/7] template<typename _RealType >

```
bool std::operator!= (
            const std::piecewise_constant_distribution< _RealType > & __d1,
            const std::piecewise_constant_distribution< _RealType > & __d2 )  [inline]
```

Return true if two piecewise constant distributions have different parameters.

Definition at line 5771 of file random.h.

2.63.2.5 operator"!=() [5/7] template<typename _RealType >

```
bool std::operator!= (
            const std::piecewise_linear_distribution< _RealType > & __d1,
            const std::piecewise_linear_distribution< _RealType > & __d2 )  [inline]
```

Return true if two piecewise linear distributions have different parameters.

Definition at line 6044 of file random.h.

2.63.2.6 operator"!=() [6/7] template<typename _IntType >

```
bool std::operator!= (
            const std::poisson_distribution< _IntType > & __d1,
            const std::poisson_distribution< _IntType > & __d2 )  [inline]
```

Return true if two Poisson distributions are different.

Definition at line 4624 of file random.h.

2.63.2.7 operator"!=() [7/7] template<typename _RealType >

```
bool std::operator!= (
            const std::weibull_distribution< _RealType > & __d1,
            const std::weibull_distribution< _RealType > & __d2 )  [inline]
```

Return true if two Weibull distributions have different parameters.

Definition at line 5025 of file random.h.

2.63.2.8 operator<<() [1/3] template<typename _RealType , typename _CharT , typename _Traits >

```
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::exponential_distribution< _RealType > & __x )
```

Inserts a exponential_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A exponential_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 1705 of file bits/random.tcc.

2.63.2.9 operator<<() [2/3] template<typename _RealType , typename _CharT , typename _Traits >

```
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::extreme_value_distribution< _RealType > & __x )
```

Inserts a extreme_value_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A extreme_value_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 2562 of file bits/random.tcc.

2.63.2.10 operator<<() [3/3]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::weibull_distribution< _RealType > & __x )
```

Inserts a weibull_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A weibull_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 2487 of file bits/random.tcc.

2.63.2.11 operator>>() [1/3]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::exponential_distribution< _RealType > & __x )
```

Extracts a exponential_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A exponential_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 1741 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::exponential_distribution< _RealType >::param(), and std::skipws().

2.63.2.12 operator>>() [2/3]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::extreme_value_distribution< _RealType > & __x )
```

Extracts a extreme_value_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A extreme_value_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 2601 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), std::extreme_value_distribution< _RealType >::param(), and std↩ ::skipws().

2.63.2.13 operator>>() [3/3]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::weibull_distribution< _RealType > & __x )
```

Extracts a weibull_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A weibull_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 2527 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), and std::skipws().

2.64 Policy-Based Data Structures

Collaboration diagram for Policy-Based Data Structures:

Modules

- Containers
- Exceptions
- Tags
- Traits

2.64.1 Detailed Description

This is a library of policy-based elementary data structures: associative containers and priority queues. It is designed for high-performance, flexibility, semantic safety, and conformance to the corresponding containers in std (except for some points where it differs by design).

For details, see: http://gcc.gnu.org/onlinedocs/libstdc++/ext/pb_ds/index.html

2.65 Random Number Distributions

Collaboration diagram for Random Number Distributions:

Modules

- Bernoulli Distributions
- Normal Distributions
- Poisson Distributions
- Uniform Distributions

2.65.1 Detailed Description

2.66 Random Number Generation

Collaboration diagram for Random Number Generation:

Modules

- Random Number Distributions
- Random Number Generators
- Random Number Utilities

Functions

- template<typename _RealType , size_t __bits, typename _UniformRandomNumberGenerator >
  _RealType std::generate_canonical (_UniformRandomNumberGenerator &__g)

2.66.1 Detailed Description

A facility for generating random numbers on selected distributions.

2.66.2 Function Documentation

2.66.2.1 generate_canonical()

```
template<typename _RealType , size_t __bits, typename _Uniform↩
RandomNumberGenerator >
_RealType std::generate_canonical (
            _UniformRandomNumberGenerator & __g )
```

A function template for converting the output of a (integral) uniform random number generator to a floatng point result in the range [0-1).

Definition at line 3286 of file bits/random.tcc.

References std::numeric_limits< _Tp >::epsilon(), std::log(), and std::min().

2.67 Random Number Generators

Collaboration diagram for Random Number Generators:

Typedefs

  std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &__os, const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > &__x)

2.67.1 Detailed Description

These classes define objects which provide random or pseudorandom numbers, either from a discrete or a continuous interval. The random number generator supplied as a part of this library are all uniform random number generators which provide a sequence of random number uniformly distributed over their range.

A number generator is a function object with an operator() that takes zero arguments and returns a number.

A compliant random number generator must satisfy the following requirements.

Table 229 Random Number Generator Requirements

To be documented.

2.67.2 Typedef Documentation

2.67.2.1 minstd_rand `typedef linear_congruential_engine<uint_fast32_t, 48271UL, 0UL, 2147483647UL> std::minstd_rand`

An alternative LCR (Lehmer Generator function).

Definition at line 1560 of file random.h.

2.67.2.2 minstd_rand0

```
typedef linear_congruential_engine<uint_fast32_t, 16807UL, 0UL, 2147483647UL>
std::minstd_rand0
```

The classic Minimum Standard rand0 of Lewis, Goodman, and Miller.

Definition at line 1554 of file random.h.

2.67.2.3 mt19937

```
typedef mersenne_twister_engine< uint_fast32_t, 32, 624, 397, 31, 0x9908b0dfUL,
11, 0xffffffffUL, 7, 0x9d2c5680UL, 15, 0xefc60000UL, 18, 1812433253UL> std::mt19937
```

The classic Mersenne Twister.

Reference: M. Matsumoto and T. Nishimura, Mersenne Twister: A 623-Dimensionally Equidistributed Uniform Pseudo-Random Number Generator, ACM Transactions on Modeling and Computer Simulation, Vol. 8, No. 1, January 1998, pp 3-30.

Definition at line 1576 of file random.h.

2.67.2.4 mt19937_64

```
typedef mersenne_twister_engine< uint_fast64_t, 64, 312, 156, 31, 0xb5026f5aa96619e9↩
ULL, 29, 0x5555555555555555ULL, 17, 0x71d67fffeda60000ULL, 37, 0xfff7eee000000000ULL, 43, 6364136223846793005ULL>
std::mt19937_64
```

An alternative Mersenne Twister.

Definition at line 1588 of file random.h.

2.67.3 Function Documentation

2.67.3.1 operator"!=() [1/6]

```
template<typename _RandomNumberEngine , size_t __p, size_t __r>
bool std::operator!= (
            const std::discard_block_engine< _RandomNumberEngine, __p, __r > & __lhs,
            const std::discard_block_engine< _RandomNumberEngine, __p, __r > & __rhs )  [inline]
```

Compares two discard_block_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A discard_block_engine random number generator object.
__rhs	Another discard_block_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1093 of file random.h.

2.67.3.2 operator"!=() [2/6] template<typename _RandomNumberEngine , size_t __w, typename _UIntType >

```
bool std::operator!= (
            const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __lhs,
            const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __rhs )
[inline]
```

Compares two independent_bits_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A independent_bits_engine random number generator object.
__rhs	Another independent_bits_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1290 of file random.h.

2.67.3.3 operator"!=() [3/6] template<typename _UIntType , _UIntType __a, _UIntType __c, _UIntType __m>

```
bool std::operator!= (
            const std::linear_congruential_engine< _UIntType, __a, __c, __m > & __lhs,
            const std::linear_congruential_engine< _UIntType, __a, __c, __m > & __rhs )  [inline]
```

Compares two linear congruential random number generator objects of the same type for inequality.

Parameters

__lhs	A linear congruential random number generator object.
__rhs	Another linear congruential random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 432 of file random.h.

2.67.3.4 operator"!=() [4/6]

```
template<typename _UIntType , size_t __w, size_t __n, size_t __m,
size_t __r, _UIntType __a, size_t __u, _UIntType __d, size_t __s, _UIntType __b, size_t __t, _↩
UIntType __c, size_t __l, _UIntType __f>
bool std::operator!= (
            const std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, _↩
_s, __b, __t, __c, __l, __f > & __lhs,
            const std::mersenne_twister_engine< _UIntType, __w, __n, __m, __r, __a, __u, __d, _↩
_s, __b, __t, __c, __l, __f > & __rhs ) [inline]
```

Compares two % mersenne_twister_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A % mersenne_twister_engine random number generator object.
__rhs	Another % mersenne_twister_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 669 of file random.h.

2.67.3.5 operator"!=() [5/6]

```
template<typename _RandomNumberEngine , size_t __k>
bool std::operator!= (
            const std::shuffle_order_engine< _RandomNumberEngine, __k > & __lhs,
            const std::shuffle_order_engine< _RandomNumberEngine, __k > & __rhs ) [inline]
```

Compares two shuffle_order_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A shuffle_order_engine random number generator object.
__rhs	Another shuffle_order_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 1543 of file random.h.

2.67.3.6 operator"!=() [6/6]

```
template<typename _UIntType , size_t __w, size_t __s, size_t __r>
bool std::operator!= (
            const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > & __lhs,
            const std::subtract_with_carry_engine< _UIntType, __w, __s, __r > & __rhs )  [inline]
```

Compares two % subtract_with_carry_engine random number generator objects of the same type for inequality.

Parameters

__lhs	A % subtract_with_carry_engine random number generator object.
__rhs	Another % subtract_with_carry_engine random number generator object.

Returns

true if the infinite sequences of generated values would be different, false otherwise.

Definition at line 870 of file random.h.

2.67.3.7 operator<<()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType ,
typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __x )
```

Inserts the current state of a independent_bits_engine random number generator engine __x into the output stream __os.

Parameters

__os	An output stream.
__x	A independent_bits_engine random number generator engine.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 1290 of file random.h.

2.70.1 Detailed Description

A facility for performing regular expression pattern matching.

2.70.2 Typedef Documentation

2.70.2.1 cregex_token_iterator `typedef regex_token_iterator<const char*> std::cregex_token_iterator`

Token iterator for C-style NULL-terminated strings.

Definition at line 2963 of file regex.h.

2.70.2.2 csub_match `typedef sub_match<const char*> std::csub_match`

Standard regex submatch over a C-style null-terminated string.

Definition at line 1010 of file regex.h.

2.70.2.3 regex `typedef basic_regex<char> std::regex`

Standard regular expressions.

Definition at line 832 of file regex.h.

2.70.2.4 sregex_token_iterator `typedef regex_token_iterator<string::const_iterator> std::sregex_token_iterator`

Token iterator for standard strings.

Definition at line 2966 of file regex.h.

2.70.2.5 ssub_match `typedef sub_match<string::const_iterator> std::ssub_match`

Standard regex submatch over a standard string.

Definition at line 1013 of file regex.h.

2.70.2.6 wcregex_token_iterator `typedef regex_token_iterator<const wchar_t*> std::wcregex_token_iterator`

Token iterator for C-style NULL-terminated wide strings.

Definition at line 2970 of file regex.h.

2.70.2.7 wcsub_match `typedef sub_match<const wchar_t*> std::wcsub_match`

Regex submatch over a C-style null-terminated wide string.

Definition at line 1017 of file regex.h.

2.70.2.8 wregex `typedef basic_regex<wchar_t> std::wregex`

Standard wide-character regular expressions.

Definition at line 836 of file regex.h.

2.70.2.9 wsregex_token_iterator `typedef regex_token_iterator<wstring::const_iterator> std::wsregex_token_iterator`

Token iterator for standard wide-character strings.

Definition at line 2973 of file regex.h.

2.70.2.10 wssub_match `typedef sub_match<wstring::const_iterator> std::wssub_match`

Regex submatch over a standard wide string.

Definition at line 1020 of file regex.h.

2.70.3 Function Documentation

2.70.3.1 operator"!=() [1/8] `template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >`

```
bool operator!= (
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the inequivalence of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1144 of file regex.h.

2.70.3.2 operator"!=() [2/8] template<typename _Bi_iter , class _Alloc >

```
bool std::operator!= (
            const match_results< _Bi_iter, _Alloc > & __m1,
            const match_results< _Bi_iter, _Alloc > & __m2 )  [inline]
```

Compares two match_results for inequality.

Returns

true if the two objects do not refer to the same match, false otherwise.

Definition at line 2126 of file regex.h.

2.70.3.3 operator"!=() [3/8] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator!= (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the inequivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1237 of file regex.h.

2.70.3.4 operator"!=() [4/8] template<typename _Bi_iter >

```
bool operator!= (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const & __rhs )  [related]
```

Tests the inequivalence of a regular expression submatch and a character.

Parameters

__lhs	A regular expression submatch.
__rhs	A character.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1579 of file regex.h.

2.70.3.5 operator"!=() [5/8] template<typename _Bi_iter >

```
bool operator!= (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const * __rhs )  [related]
```

Tests the inequivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A null-terminated string.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1405 of file regex.h.

2.70.3.6 operator"!=() [6/8] template<typename _BiIter >

```
bool operator!= (
            const sub_match< _BiIter > & __lhs,
            const sub_match< _BiIter > & __rhs )  [related]
```

Tests the inequivalence of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1064 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.7 operator"!=() [7/8] template<typename _Bi_iter >

```
bool operator!= (
            typename iterator_traits< _Bi_iter >::value_type const & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the inequivalence of a character and a regular expression submatch.

Parameters

__lhs	A character.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1479 of file regex.h.

2.70.3.8 operator"!=() [8/8] template<typename _Bi_iter >

```
bool operator!= (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the inequivalence of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is not equivalent to *__rhs*, false otherwise.

Definition at line 1311 of file regex.h.

2.70.3.9 operator<() [1/7]

```
template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >
bool operator< (
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1155 of file regex.h.

2.70.3.10 operator<() [2/7]

```
template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc
>
bool operator< (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1248 of file regex.h.

2.70.3.11 operator<() [3/7]

```
template<typename _Bi_iter >
bool operator< (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a character.

Parameters

__lhs	A regular expression submatch.
__rhs	A character.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1591 of file regex.h.

References std::__addressof().

2.70.3.12 operator<() [4/7] template<typename _Bi_iter >

```
bool operator< (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const * __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a C string.

Parameters

__lhs	A regular expression submatch.
__rhs	A null-terminated string.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1416 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.13 operator<() [5/7] template<typename _BiIter >

```
bool operator< (
            const sub_match< _BiIter > & __lhs,
            const sub_match< _BiIter > & __rhs )  [related]
```

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1074 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.14 operator<() [6/7] template<typename _Bi_iter >

```
bool operator< (
            typename iterator_traits< _Bi_iter >::value_type const & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a character and a regular expression submatch.

Parameters

__lhs	A character.
__rhs	A regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1491 of file regex.h.

References std::__addressof().

2.70.3.15 operator<() [7/7] template<typename _Bi_iter >

```
bool operator< (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* precedes *__rhs*, false otherwise.

Definition at line 1322 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.16 operator<<() template<typename _Ch_type , typename _Ch_traits , typename _Bi_iter > basic_ostream< _Ch_type, _Ch_traits > & operator<< (basic_ostream< _Ch_type, _Ch_traits > & __os, const sub_match< _Bi_iter > & __m) [related]

Inserts a matched string into an output stream.

Parameters

__os	The output stream.
__m	A submatch string.

Returns

the output stream with the submatch string inserted.

Definition at line 1630 of file regex.h.

2.70.3.17 operator<=() [1/7] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc > bool operator<= (const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs, const sub_match< _Bi_iter > & __rhs) [related]

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1191 of file regex.h.

2.70.3.18 operator<=() [2/7] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator<= (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1284 of file regex.h.

2.70.3.19 operator<=() [3/7] template<typename _Bi_iter >

```
bool operator<= (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a character.

Parameters

__lhs	A regular expression submatch.
__rhs	A character.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1630 of file regex.h.

2.70.3.20 operator<=() [4/7] template<typename _Bi_iter >

```
bool operator<= (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const * __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a C string.

Parameters

__lhs	A regular expression submatch.
__rhs	A null-terminated string.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1452 of file regex.h.

2.70.3.21 operator<=() [5/7] template<typename _BiIter >

```
bool operator<= (
            const sub_match< _BiIter > & __lhs,
            const sub_match< _BiIter > & __rhs )  [related]
```

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1085 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.22 operator<=() [6/7] template<typename _Bi_iter >

```
bool operator<= (
            typename iterator_traits< _Bi_iter >::value_type const & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a character and a regular expression submatch.

Parameters

__lhs	A character.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1530 of file regex.h.

2.70.3.23 operator<=() [7/7] template<typename _Bi_iter >

```
bool operator<= (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not succeed *__rhs*, false otherwise.

Definition at line 1358 of file regex.h.

2.70.3.24 operator==() [1/8] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator== (
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the equivalence of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1131 of file regex.h.

2.70.3.25 operator==() [2/8] template<typename _Bi_iter , typename _Alloc >

```
bool std::operator== (
            const match_results< _Bi_iter, _Alloc > & __m1,
            const match_results< _Bi_iter, _Alloc > & __m2 )  [inline]
```

Compares two match_results for equality.

Returns

true if the two objects refer to the same match, false otherwise.

Definition at line 2101 of file regex.h.

References std::match_results< _Bi_iter, _Alloc >::begin(), std::match_results< _Bi_iter, _Alloc >::empty(), std::match_results< _Bi_iter, _Alloc >::end(), std::match_results< _Bi_iter, _Alloc >::prefix(), std::match_results< _Bi_iter, _Alloc >::ready(), std::match_results< _Bi_iter, _Alloc >::size(), and std::match_results< _Bi_iter, _Alloc >::suffix().

2.70.3.26 operator==() [3/8] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator== (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the equivalence of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1206 of file regex.h.

2.70.3.27 operator==() [4/8] template<typename _Bi_iter >

```
bool operator== (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const & __rhs )  [related]
```

Tests the equivalence of a regular expression submatch and a character.

Parameters

__lhs	A regular expression submatch.
__rhs	A character.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1545 of file regex.h.

References std::__addressof().

2.70.3.28 operator==() [5/8] template<typename _Bi_iter >

```
bool operator== (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const * __rhs )  [related]
```

Tests the equivalence of a regular expression submatch and a C string.

Parameters

__lhs	A regular expression submatch.
__rhs	A null-terminated string.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1373 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.29 operator==() [6/8] template<typename _BiIter >

```
bool operator== (
            const sub_match< _BiIter > & __lhs,
            const sub_match< _BiIter > & __rhs )  [related]
```

Tests the equivalence of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1035 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.30 operator==() [7/8] template<typename _Bi_iter >

```
bool operator== (
            typename iterator_traits< _Bi_iter >::value_type const & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the equivalence of a character and a regular expression submatch.

Parameters

__lhs	A character.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1466 of file regex.h.

References std::__addressof().

2.70.3.31 operator==() [8/8] template<typename _Bi_iter >

```
bool operator== (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the equivalence of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* is equivalent to *__rhs*, false otherwise.

Definition at line 1298 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.32 operator>() [1/7] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator> (
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1168 of file regex.h.

2.70.3.33 operator>() [2/7] template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc >

```
bool operator> (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1261 of file regex.h.

2.70.3.34 operator>() [3/7] template<typename _Bi_iter >

```
bool operator> (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a character.

Parameters

__lhs	A regular expression submatch.
__rhs	A character.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1605 of file regex.h.

2.70.3.35 operator>() [4/7] template<typename _Bi_iter >

```
bool operator> (
            const sub_match< _Bi_iter > & __lhs,
            typename iterator_traits< _Bi_iter >::value_type const * __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a C string.

Parameters

__lhs	A regular expression submatch.
__rhs	A null-terminated string.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1429 of file regex.h.

2.70.3.36 operator>() [5/7] template<typename _BiIter >

```
bool operator> (
            const sub_match< _BiIter > & __lhs,
            const sub_match< _BiIter > & __rhs )  [related]
```

Tests the ordering of two regular expression submatches.

Parameters

__lhs	First regular expression submatch.
__rhs	Second regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1108 of file regex.h.

References std::sub_match< _BiIter >::compare().

2.70.3.37 operator>() [6/7]

```
template<typename _Bi_iter >
bool operator> (
            typename iterator_traits< _Bi_iter >::value_type const & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a character and a regular expression submatch.

Parameters

__lhs	A character.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1505 of file regex.h.

2.70.3.38 operator>() [7/7]

```
template<typename _Bi_iter >
bool operator> (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* succeeds *__rhs*, false otherwise.

Definition at line 1335 of file regex.h.

2.70.3.39 operator>=() [1/7]

```
template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc
>
bool operator>= (
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a string and a regular expression submatch.

Parameters

__lhs	A string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not precede *__rhs*, false otherwise.

Definition at line 1180 of file regex.h.

2.70.3.40 operator>=() [2/7]

```
template<typename _Bi_iter , typename _Ch_traits , typename _Ch_alloc
>
bool operator>= (
            const sub_match< _Bi_iter > & __lhs,
            const __sub_match_string< _Bi_iter, _Ch_traits, _Ch_alloc > & __rhs )  [related]
```

Tests the ordering of a regular expression submatch and a string.

Parameters

__lhs	A regular expression submatch.
__rhs	A string.

Returns

true if *__lhs* does not precede *__rhs*, false otherwise.

Definition at line 1273 of file regex.h.

2.70.3.41 operator>=() [3/7] template<typename _Bi_iter >

```

bool operator>= (
            typename iterator_traits< _Bi_iter >::value_type const * __lhs,
            const sub_match< _Bi_iter > & __rhs )  [related]
```

Tests the ordering of a C string and a regular expression submatch.

Parameters

__lhs	A null-terminated string.
__rhs	A regular expression submatch.

Returns

true if *__lhs* does not precede *__rhs*, false otherwise.

Definition at line 1347 of file regex.h.

2.70.3.46 regex_match() [1/7]

```
template<typename _Bi_iter , typename _Ch_type , typename _Rx_traits
>
bool std::regex_match (
            _Bi_iter __first,
            _Bi_iter __last,
            const basic_regex< _Ch_type, _Rx_traits > & __re,
            regex_constants::match_flag_type __flags = regex_constants::match_default )  [inline]
```

Indicates if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

__first	Beginning of the character sequence to match.
__last	One-past-the-end of the character sequence to match.
__re	The regular expression.
__flags	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 2199 of file regex.h.

References std::regex_match().

2.70.3.47 regex_match() [2/7]

```
template<typename _Bi_iter , typename _Alloc , typename _Ch_type ,
typename _Rx_traits >
bool std::regex_match (
            _Bi_iter __s,
            _Bi_iter __e,
            match_results< _Bi_iter, _Alloc > & __m,
```

```
const basic_regex< _Ch_type, _Rx_traits > & __re,
regex_constants::match_flag_type __flags = regex_constants::match_default )  [inline]
```

Determines if there is a match between the regular expression `e` and all of the character sequence [first, last).

Parameters

__s	Start of the character sequence to match.
__e	One-past-the-end of the character sequence to match.
__m	The match results.
__re	The regular expression.
__flags	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 2171 of file regex.h.

Referenced by std::regex_match().

2.70.3.48 regex_match() [3/7]

```

            regex_constants::match_flag_type __f = regex_constants::match_default )  [inline]
```

Indicates if there is a match between the regular expression `e` and a C-style null-terminated string.

Parameters

_↩ _s	The C-style null-terminated string to match.
_↩ _re	The regular expression.
_↩ _f	Controls how the regular expression is matched.

Return values

true	A match exists.
false	Otherwise.

Exceptions

an	exception of type regex_error.

Definition at line 2284 of file regex.h.

            const basic_regex< _Ch_type, _Rx_traits > & __e,
            const _Ch_type * __fmt,
            regex_constants::match_flag_type __flags = regex_constants::match_default )
```

Search for a regular expression within a range for multiple times, and replace the matched parts through filling a format C-string.

Parameters

__out	[OUT] The output iterator.
__first	[IN] The start of the string to search.

Parameters

__last	[IN] One-past-the-end of the string to search.
__e	[IN] The regular expression to search for.
__fmt	[IN] The format C-string.
__flags	[IN] Search and replace policy flags.

Returns

__out

Exceptions

an	exception of type regex_error.

2.70.3.54 regex_replace() [2/6]

Exceptions

an	exception of type regex_error.

Definition at line 2437 of file regex.h.

References std::basic_string< _CharT, _Traits, _Alloc >::begin(), std::basic_string< _CharT, _Traits, _Alloc >::end(), and std::regex_search().

2.70.3.65 regex_search() [7/7]

```
template<typename _Ch_traits , typename _String_allocator , typename
_Ch_type , typename _Rx_traits >
bool std::regex_search (
            const basic_string< _Ch_type, _Ch_traits, _String_allocator > & __s,
            const basic_regex< _Ch_type, _Rx_traits > & __e,
            regex_constants::match_flag_type __flags = regex_constants::match_default )  [inline]
```

Searches for a regular expression within a string.

Parameters

__s	[IN] The string to search.
__e	[IN] The regular expression to search for.
__flags	[IN] Search policy flags.

Return values

true	A match was found within the string.
false	No match was found within the string.

Exceptions

an	exception of type regex_error.

Definition at line 2414 of file regex.h.

References std::regex_search().

2.70.3.66 swap() [1/2] template<typename _Ch_type , typename _Rx_traits >

```
void swap (
            basic_regex< _Ch_type, _Rx_traits > & __lhs,
            basic_regex< _Ch_type, _Rx_traits > & __rhs )  [related]
```

Swaps the contents of two regular expression objects.

Parameters

__lhs	First regular expression.
__rhs	Second regular expression.

Definition at line 849 of file regex.h.

References std::basic_regex< _Ch_type, _Rx_traits >::swap().

2.70.3.67 swap() [2/2] template<typename _Bi_iter , typename _Alloc >

```
void std::swap (
            match_results< _Bi_iter, _Alloc > & __lhs,
            match_results< _Bi_iter, _Alloc > & __rhs )  [inline], [noexcept]
```

Swaps two match results.

Parameters

__lhs	A match result.
__rhs	A match result.

The contents of the two match_results objects are swapped.

Definition at line 2141 of file regex.h.

2.71.1 Detailed Description

Because libstdc++ based its implementation of the STL subsections of the library on the SGI 3.3 implementation, we inherited their extensions as well.

They are additionally documented in the `online documentation`, a copy of which is also shipped with the library source code (in .../docs/html/documentation.html). You can also read the documentation `on SGI's site`, which is still running even though the code is not maintained.

NB that the following notes are pulled from various comments all over the place, so they may seem stilted.

The `identity_element` functions are not part of the C++ standard; SGI provided them as an extension. Its argument is an operation, and its return value is the identity element for that operation. It is overloaded for addition and multiplication, and you can overload it for your own nefarious operations.

As an extension to the binders, SGI provided composition functors and wrapper functions to aid in their creation. The `unary_compose` functor is constructed from two functions/functors, `f` and `g`. Calling `operator()` with a single argument `x` returns `f(g(x))`. The function `compose1` takes the two functions and constructs a `unary_compose` variable for you.

`binary_compose` is constructed from three functors, `f`, `g1`, and `g2`. Its `operator()` returns `f`(g1(x),g2(x)). The function compose2 takes f, g1, and g2, and constructs the `binary_compose` instance for you. For example, if `f` returns an int, then

```
int answer = (compose2(f,g1,g2))(x);
```
is equivalent to
```
int temp1 = g1(x);
int temp2 = g2(x);
int answer = f(temp1,temp2);
```
But the first form is more compact, and can be passed around as a functor to other algorithms.
As an extension, SGI provided a functor called `identity`. When a functor is required but no operations are desired, this can be used as a pass-through. Its `operator()` returns its argument unchanged.
`select1st` and `select2nd` are extensions provided by SGI. Their `operator()s` take a `std::pair` as an argument, and return either the first member or the second member, respectively. They can be used (especially with the composition functors) to *strip* data from a sequence before performing the remainder of an algorithm.
The `operator()` of the `project1st` functor takes two arbitrary arguments and returns the first one, while `project2nd` returns the second one. They are extensions provided by SGI.
These three functors are each constructed from a single arbitrary variable/value. Later, their `operator()s` completely ignore any arguments passed, and return the stored value.

- `constant_void_fun's` `operator()` takes no arguments
- `constant_unary_fun's` `operator()` takes one argument (ignored)
- `constant_binary_fun's` `operator()` takes two arguments (ignored)

The helper creator functions `constant0`, `constant1`, and `constant2` each take a *result* argument and construct variables of the appropriate functor type.

2.71.2 Function Documentation

2.71.2.1 __median() [1/2] template<typename _Tp >

```
const _Tp& __gnu_cxx::__median (
             const _Tp & __a,
             const _Tp & __b,
             const _Tp & __c )
```
Find the median of three values.

Parameters

_↩ _a	A value.
_↩ _b	A value.
_↩ _c	A value.

Returns

One of `a`, `b` or `c`.

If `{l`,m,n} is some convolution of `{a`,b,c} such that `l<=m<=n` then the value returned will be `m`. This is an SGI extension.
Definition at line 539 of file ext/algorithm.

2.71.2.2 __median() [2/2] template<typename _Tp , typename _Compare >

```
const _Tp& __gnu_cxx::__median (
```

```
const _Tp & __a,
const _Tp & __b,
const _Tp & __c,
_Compare __comp )
```

Find the median of three values using a predicate for comparison.

Parameters

__a	A value.
__b	A value.
__c	A value.
__comp	A binary predicate.

Returns

One of a, b or c.

If {l,m,n} is some convolution of {a,b,c} such that comp(l,m) and comp(m,n) are both true then the value returned will be m. This is an SGI extension.
Definition at line 573 of file ext/algorithm.

2.71.2.3 _Find_first() template<size_t _Nb>

```
size_t std::bitset< _Nb >::_Find_first ( ) const  [inline], [noexcept]
```

Finds the index of the first "on" bit.

Returns

The index of the first bit set, or size() if not found.

See also

_Find_next

Definition at line 1373 of file bitset.

2.71.2.4 _Find_next() template<size_t _Nb>

```
size_t std::bitset< _Nb >::_Find_next (
            size_t __prev ) const  [inline], [noexcept]
```

Finds the index of the next "on" bit after prev.

Returns

The index of the next bit set, or size() if not found.

Parameters

__prev	Where to start searching.

See also

_Find_first

Definition at line 1384 of file bitset.

2.71.2.5 _Unchecked_flip() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::_Unchecked_flip (
            size_t __pos )  [inline], [noexcept]
```

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.
Definition at line 1058 of file bitset.

2.71.2.6 _Unchecked_reset() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::_Unchecked_reset (
            size_t __pos )  [inline], [noexcept]
```

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.
Definition at line 1051 of file bitset.

2.71.2.7 _Unchecked_set() [1/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::_Unchecked_set (
            size_t __pos )  [inline], [noexcept]
```

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.
Definition at line 1034 of file bitset.

2.71.2.8 _Unchecked_set() [2/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::_Unchecked_set (
            size_t __pos,
            int __val )  [inline], [noexcept]
```

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.
Definition at line 1041 of file bitset.

2.71.2.9 _Unchecked_test() template<size_t _Nb>

```
constexpr bool std::bitset< _Nb >::_Unchecked_test (
            size_t __pos ) const  [inline], [constexpr], [noexcept]
```

These versions of single-bit set, reset, flip, and test are extensions from the SGI version. They do no range checking.
Definition at line 1065 of file bitset.

2.71.2.10 compose1() template<class _Operation1 , class _Operation2 >

```
unary_compose<_Operation1, _Operation2> __gnu_cxx::compose1 (
            const _Operation1 & __fn1,
            const _Operation2 & __fn2 )  [inline]
```

An SGI extension .
Definition at line 137 of file ext/functional.

2.71.2.11 compose2() template<class _Operation1 , class _Operation2 , class _Operation3 >

```
binary_compose<_Operation1, _Operation2, _Operation3> __gnu_cxx::compose2 (
```

```
            const _Operation1 & __fn1,
            const _Operation2 & __fn2,
            const _Operation3 & __fn3 )  [inline]
```

An SGI extension .
Definition at line 164 of file ext/functional.

2.71.2.12 constant0() template<class _Result >

```
constant_void_fun<_Result> __gnu_cxx::constant0 (
            const _Result & __val )  [inline]
```

An SGI extension .
Definition at line 322 of file ext/functional.

2.71.2.13 constant1() template<class _Result >

```
constant_unary_fun<_Result, _Result> __gnu_cxx::constant1 (
            const _Result & __val )  [inline]
```

An SGI extension .
Definition at line 328 of file ext/functional.

2.71.2.14 constant2() template<class _Result >

```
constant_binary_fun<_Result,_Result,_Result> __gnu_cxx::constant2 (
            const _Result & __val )  [inline]
```

An SGI extension .
Definition at line 334 of file ext/functional.

2.71.2.15 copy_n() template<typename _InputIterator , typename _Size , typename _OutputIterator >

```
std::pair<_InputIterator, _OutputIterator> __gnu_cxx::copy_n (
            _InputIterator __first,
            _Size __count,
            _OutputIterator __result )  [inline]
```

Copies the range [first,first+count) into [result,result+count).

Parameters

__first	An input iterator.
__count	The number of elements to copy.
__result	An output iterator.

Returns

A std::pair composed of first+count and result+count.

This is an SGI extension. This inline function will boil down to a call to `memmove` whenever possible. Failing that, if random access iterators are passed, then the loop count will be known (and therefore a candidate for compiler optimizations such as unrolling).
Definition at line 113 of file ext/algorithm.

2.71.2.16 distance() template<typename _InputIterator , typename _Distance >

```
void __gnu_cxx::distance (
```

```
            _InputIterator __first,
            _InputIterator __last,
            _Distance & __n )  [inline]
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 105 of file ext/iterator.

2.71.2.17 identity_element() [1/2] template<class _Tp >

```
_Tp __gnu_cxx::identity_element (
            std::multiplies< _Tp >  )  [inline]
```

An SGI extension .
Definition at line 85 of file ext/functional.

2.71.2.18 identity_element() [2/2] template<class _Tp >

```
_Tp __gnu_cxx::identity_element (
            std::plus< _Tp >  )  [inline]
```

An SGI extension .
Definition at line 79 of file ext/functional.

2.71.2.19 lexicographical_compare_3way() template<typename _InputIterator1 , typename _Input↩ Iterator2 >

```
int __gnu_cxx::lexicographical_compare_3way (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2 )
```

memcmp on steroids.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

An int, as with memcmp.

The return value will be less than zero if the first range is *lexigraphically less than* the second, greater than zero if the second range is *lexigraphically less than* the first, and zero otherwise. This is an SGI extension.
Definition at line 194 of file ext/algorithm.

2.71.2.20 power() [1/2] template<typename _Tp , typename _Integer >

```
_Tp __gnu_cxx::power (
            _Tp __x,
            _Integer __n )  [inline]
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 123 of file ext/numeric.

2.71.2.21 power() [2/2]

```
template<typename _Tp , typename _Integer , typename _MonoidOperation >
_Tp __gnu_cxx::power (
            _Tp __x,
            _Integer __n,
            _MonoidOperation __monoid_op )  [inline]
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 113 of file ext/numeric.

2.71.2.22 random_sample() [1/2]

```
template<typename _InputIterator , typename _RandomAccessIterator
>
_RandomAccessIterator __gnu_cxx::random_sample (
            _InputIterator __first,
            _InputIterator __last,
            _RandomAccessIterator __out_first,
            _RandomAccessIterator __out_last )  [inline]
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 381 of file ext/algorithm.

2.71.2.23 random_sample() [2/2]

```
template<typename _InputIterator , typename _RandomAccessIterator
, typename _RandomNumberGenerator >
_RandomAccessIterator __gnu_cxx::random_sample (
            _InputIterator __first,
            _InputIterator __last,
            _RandomAccessIterator __out_first,
            _RandomAccessIterator __out_last,
            _RandomNumberGenerator & __rand )  [inline]
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 404 of file ext/algorithm.

2.71.2.24 random_sample_n() [1/2]

```
template<typename _ForwardIterator , typename _OutputIterator ,
typename _Distance >
_OutputIterator __gnu_cxx::random_sample_n (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _OutputIterator __out,
            const _Distance __n )
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 260 of file ext/algorithm.

2.71.2.25 random_sample_n() [2/2]

```
template<typename _ForwardIterator , typename _OutputIterator ,
typename _Distance , typename _RandomNumberGenerator >
_OutputIterator __gnu_cxx::random_sample_n (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _OutputIterator __out,
            const _Distance __n,
            _RandomNumberGenerator & __rand )
```

This is an SGI extension.

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html

Definition at line 294 of file ext/algorithm.

2.71.2.26 uninitialized_copy_n()

```
template<typename _InputIter , typename _Size , typename _Forward_
Iter >
std::pair<_InputIter, _ForwardIter> __gnu_cxx::uninitialized_copy_n (
            _InputIter __first,
            _Size __count,
            _ForwardIter __result )  [inline]
```

Copies the range [first,last) into result.

Parameters

__first	An input iterator.
__count	Length
__result	An output iterator.

Returns

__result + (__first + __count)

Like copy(), but does not require an initialized output range.
Definition at line 121 of file ext/memory.

2.72 Sequences

Collaboration diagram for Sequences:

Classes

- class std::basic_string< _CharT, _Traits, _Alloc >
- class std::experimental::fundamentals_v1::basic_string_view< _CharT, _Traits >

2.72.1 Detailed Description

Sequences arrange a collection of objects into a strictly linear order.
The differences between sequences are usually due to one or both of the following:

- memory management
- algorithmic complexity

As an example of the first case, `vector` is required to use a contiguous memory layout, while other sequences such as `deque` are not.
The prime reason for choosing one sequence over another should be based on the second category of differences, algorithmic complexity. For example, if you need to perform many inserts and removals from the middle of a sequence, `list` would be ideal. But if you need to perform constant-time access to random elements of the sequence, then `list` should not be used.
All sequences must meet certain requirements, summarized in `tables`.

2.73 Set Operations

Collaboration diagram for Set Operations:

Functions

- template<typename _InputIterator1 , typename _InputIterator2 >
  constexpr bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Input↩ Iterator2 __last2)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _Compare >
  constexpr bool std::includes (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _Input↩ Iterator2 __last2, _Compare __comp)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
  constexpr _OutputIterator std::set_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 _↩ _first2, _InputIterator2 __last2, _OutputIterator __result)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
  constexpr _OutputIterator std::set_difference (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 _↩ _first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
  constexpr _OutputIterator std::set_intersection (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
  constexpr _OutputIterator std::set_intersection (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
  constexpr _OutputIterator std::set_symmetric_difference (_InputIterator1 __first1, _InputIterator1 __last1, _↩ InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
  constexpr _OutputIterator std::set_symmetric_difference (_InputIterator1 __first1, _InputIterator1 __last1, _↩ InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)
- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
  constexpr _OutputIterator std::set_union (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result)

- template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
  constexpr _OutputIterator std::set_union (_InputIterator1 __first1, _InputIterator1 __last1, _InputIterator2 __first2, _InputIterator2 __last2, _OutputIterator __result, _Compare __comp)

2.73.1 Detailed Description

These algorithms are common set operations performed on sequences that are already sorted. The number of comparisons will be linear.

2.73.2 Function Documentation

2.73.2.1 includes() [1/2] template<typename _InputIterator1 , typename _InputIterator2 >

```
constexpr bool std::includes (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2 )  [inline], [constexpr]
```

Determines whether all elements of a sequence exists in a range.

Parameters

__first1	Start of search range.
__last1	End of search range.
__first2	Start of sequence
__last2	End of sequence.

Returns

True if each element in [__first2,__last2) is contained in order within [__first1,__last1). False otherwise.

This operation expects both [__first1,__last1) and [__first2,__last2) to be sorted. Searches for the presence of each element in [__first2,__last2) within [__first1,__last1). The iterators over each range only move forward, so this is a linear algorithm. If an element in [__first2,__last2) is not found before the search iterator reaches __last2, false is returned. Definition at line 2845 of file stl_algo.h.

2.73.2.2 includes() [2/2] template<typename _InputIterator1 , typename _InputIterator2 , typename _Compare >

```
constexpr bool std::includes (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _Compare __comp )  [inline], [constexpr]
```

Determines whether all elements of a sequence exists in a range using comparison.

Parameters

__first1	Start of search range.
__last1	End of search range.
__first2	Start of sequence

Parameters

__last2	End of sequence.
__comp	Comparison function to use.

Returns

True if each element in [__first2,__last2) is contained in order within [__first1,__last1) according to comp. False otherwise.

This operation expects both [__first1,__last1) and [__first2,__last2) to be sorted. Searches for the presence of each element in [__first2,__last2) within [__first1,__last1), using comp to decide. The iterators over each range only move forward, so this is a linear algorithm. If an element in [__first2,__last2) is not found before the search iterator reaches __last2, false is returned.
Definition at line 2891 of file stl_algo.h.

2.73.2.3 set_difference() [1/2]

```
template<typename _InputIterator1 , typename _InputIterator2 ,
typename _OutputIterator >
constexpr _OutputIterator std::set_difference (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result )  [inline], [constexpr]
```

Return the difference of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second, that element is copied and the iterator advances. If the current element of the second range is less, the iterator advances, but no element is copied. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5420 of file stl_algo.h.

2.73.2.4 set_difference() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 ,
typename _OutputIterator , typename _Compare >
constexpr _OutputIterator std::set_difference (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
```

```
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )  [inline], [constexpr]
```

Return the difference of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in the first range but not the second in order to the output range. Iterators increment for each range. When the current element of the first range is less than the second according to __comp, that element is copied and the iterator advances. If the current element of the second range is less, no element is copied and the iterator advances. If an element is contained in both ranges according to __comp, no elements are copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5472 of file stl_algo.h.

2.73.2.5 set_intersection() [1/2]

```
template<typename _InputIterator1 , typename _InputIterator2 ,
typename _OutputIterator >
constexpr _OutputIterator std::set_intersection (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result )  [inline], [constexpr]
```

Return the intersection of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that iterator advances. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.

Definition at line 5295 of file stl_algo.h.

2.73.2.6 set_intersection() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 ,
typename _OutputIterator , typename _Compare >
constexpr _OutputIterator std::set_intersection (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )  [inline], [constexpr]
```

Return the intersection of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in both ranges in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to __comp, that iterator advances. If an element is contained in both ranges according to __comp, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5345 of file stl_algo.h.

2.73.2.7 set_symmetric_difference() [1/2]

```
template<typename _InputIterator1 , typename _Input↩
Iterator2 , typename _OutputIterator >
constexpr _OutputIterator std::set_symmetric_difference (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result )  [inline], [constexpr]
```

Return the symmetric difference of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advances. If an element is contained in both ranges, no elements are copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5553 of file stl_algo.h.

2.73.2.8 set_symmetric_difference() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
constexpr _OutputIterator std::set_symmetric_difference (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )  [inline], [constexpr]
```

Return the symmetric difference of two sorted ranges using comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in one range but not the other in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to `comp`, that element is copied and the iterator advances. If an element is contained in both ranges according to `__comp`, no elements are copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5605 of file stl_algo.h.

2.73.2.9 set_union() [1/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
constexpr _OutputIterator std::set_union (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result )  [inline], [constexpr]
```

Return the union of two sorted ranges.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other, that element is copied and the iterator advanced. If an element is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5171 of file stl_algo.h.

2.73.2.10 set_union() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename
_OutputIterator , typename _Compare >
constexpr _OutputIterator std::set_union (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )  [inline], [constexpr]
```

Return the union of two sorted ranges using a comparison functor.

Parameters

__first1	Start of first range.
__last1	End of first range.
__first2	Start of second range.
__last2	End of second range.
__result	Start of output range.
__comp	The comparison functor.

Returns

End of the output range.

This operation iterates over both ranges, copying elements present in each range in order to the output range. Iterators increment for each range. When the current element of one range is less than the other according to __comp, that element is copied and the iterator advanced. If an equivalent element according to __comp is contained in both ranges, the element from the first range is copied and both ranges advance. The output range may not overlap either input range.
Definition at line 5222 of file stl_algo.h.

2.74.1 Detailed Description

2.74.2 Function Documentation

2.74.2.1 inplace_merge() [1/2] template<typename _BidirectionalIterator >

```
void std::inplace_merge (
            _BidirectionalIterator __first,
            _BidirectionalIterator __middle,
            _BidirectionalIterator __last )  [inline]
```

Merges two sorted ranges in place.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.

Returns

Nothing.

Merges two sorted and consecutive ranges, [__first,__middle) and [__middle,__last), and puts the result in [__first,__last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.
If enough additional memory is available, this takes (__last-__first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(__first,__last).
Definition at line 2590 of file stl_algo.h.

2.74.2.2 inplace_merge() [2/2] template<typename _BidirectionalIterator , typename _Compare >

```
void std::inplace_merge (
            _BidirectionalIterator __first,
            _BidirectionalIterator __middle,
            _BidirectionalIterator __last,
            _Compare __comp )  [inline]
```

Merges two sorted ranges in place.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.
__comp	A functor to use for comparisons.

Returns

Nothing.

Merges two sorted and consecutive ranges, [__first,__middle) and [middle,last), and puts the result in [__first,__last). The output will be sorted. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.
If enough additional memory is available, this takes (__last-__first)-1 comparisons. Otherwise an NlogN algorithm is used, where N is distance(__first,__last).
The comparison function should have the same effects on ordering as the function used for the initial sort.
Definition at line 2631 of file stl_algo.h.

2.74.2.3 is_sorted() [1/2] template<typename _ForwardIterator >

```
constexpr bool std::is_sorted (
            _ForwardIterator __first,
            _ForwardIterator __last ) [inline], [constexpr]
```

Determines whether the elements of a sequence are sorted.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3228 of file stl_algo.h.

2.74.2.4 is_sorted() [2/2] template<typename _ForwardIterator , typename _Compare >

```
constexpr bool std::is_sorted (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Compare __comp ) [inline], [constexpr]
```

Determines whether the elements of a sequence are sorted according to a comparison functor.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

True if the elements are sorted, false otherwise.

Definition at line 3243 of file stl_algo.h.

2.74.2.5 is_sorted_until() [1/2] template<typename _ForwardIterator >

```
constexpr _ForwardIterator std::is_sorted_until (
            _ForwardIterator __first,
            _ForwardIterator __last ) [inline], [constexpr]
```

Determines the end of a sorted sequence.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

An iterator pointing to the last iterator i in [__first, __last) for which the range [__first, i) is sorted.

Definition at line 3274 of file stl_algo.h.

2.74.2.6 is_sorted_until() [2/2]

```
template<typename _ForwardIterator , typename _Compare >
constexpr _ForwardIterator std::is_sorted_until (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Compare __comp ) [inline], [constexpr]
```

Determines the end of a sorted sequence using comparison functor.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

An iterator pointing to the last iterator i in [__first, __last) for which the range [__first, i) is sorted.

Definition at line 3299 of file stl_algo.h.

2.74.2.7 lexicographical_compare() [1/2]

```
template<typename _II1 , typename _II2 >
constexpr bool std::lexicographical_compare (
            _II1 __first1,
            _II1 __last1,
            _II2 __first2,
            _II2 __last2 ) [inline], [constexpr]
```

Performs **dictionary** comparison on ranges.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.

Returns

A boolean true or false.

Returns true if the sequence of elements defined by the range [first1,last1) is lexicographically less than the sequence of elements defined by the range [first2,last2). Returns false otherwise. (Quoted from [25.3.8]/1.) If the iterators are all character pointers, then this is an inline call to `memcmp`.
Definition at line 1590 of file stl_algobase.h.

2.74.2.8 lexicographical_compare() [2/2]

```
template<typename _II1 , typename _II2 , typename _Compare
>
```

```
constexpr bool std::lexicographical_compare (
            _II1 __first1,
            _II1 __last1,
            _II2 __first2,
            _II2 __last2,
            _Compare __comp )  [inline], [constexpr]
```

Performs **dictionary** comparison on ranges.

Parameters

__first1	An input iterator.
__last1	An input iterator.
__first2	An input iterator.
__last2	An input iterator.
__comp	A comparison functor.

Returns

A boolean true or false.

The same as the four-parameter `lexicographical_compare`, but uses the comp parameter instead of <.
Definition at line 1627 of file stl_algobase.h.

2.74.2.9 max() [1/2] template<typename _Tp >

```
constexpr const _Tp & std::max (
            const _Tp & __a,
            const _Tp & __b )  [inline], [constexpr]
```

This does what you think it does.

Parameters

_↩ _a	A thing of arbitrary type.
_↩ _b	Another thing of arbitrary type.

Returns

The greater of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.
Definition at line 254 of file stl_algobase.h.
Referenced by __gnu_parallel::__parallel_nth_element(), std::_Deque_base< _Tp, _Alloc >::_M_initialize_map(), std::deque< _Tp, _Alloc >::_M_reallocate_map(), std::discard_block_engine< _RandomNumberEngine, __p, __r >::max(), std::shuffle_order_engine< _RandomNumberEngine, __k >::max(), __gnu_parallel::multiseq_selection(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

2.74.2.10 max() [2/2] template<typename _Tp , typename _Compare >

```
constexpr const _Tp & std::max (
            const _Tp & __a,
```

```
            const _Tp & __b,
            _Compare __comp )  [inline], [constexpr]
```

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor.

Returns

The greater of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.
Definition at line 300 of file stl_algobase.h.

2.74.2.11 max_element() [1/2] template<typename _ForwardIterator >

```
constexpr _ForwardIterator std::max_element (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Return the maximum element in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

Iterator referencing the first instance of the largest value.

Definition at line 5722 of file stl_algo.h.

2.74.2.12 max_element() [2/2] template<typename _ForwardIterator , typename _Compare >

```
constexpr _ForwardIterator std::max_element (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Return the maximum element in a range using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

Iterator referencing the first instance of the largest value according to __comp.

Definition at line 5747 of file stl_algo.h.

2.74.2.13 merge() [1/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator >
constexpr _OutputIterator std::merge (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result )  [inline], [constexpr]
```

Merges two sorted ranges.

Parameters

__first1	An iterator.
__first2	Another iterator.
__last1	Another iterator.
__last2	Another iterator.
__result	An iterator pointing to the end of the merged range.

Returns

An output iterator equal to __result + (__last1 - __first1)

- (__last2 - __first2).

Merges the ranges [__first1,__last1) and [__first2,__last2) into the sorted range [__result, __result + (__last1-__first1) + (__last2-__first2)). Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.
Definition at line 4951 of file stl_algo.h.

2.74.2.14 merge() [2/2]

```
template<typename _InputIterator1 , typename _InputIterator2 , typename _OutputIterator , typename _Compare >
constexpr _OutputIterator std::merge (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )  [inline], [constexpr]
```

Merges two sorted ranges.

Parameters

__first1	An iterator.
__first2	Another iterator.
__last1	Another iterator.

Parameters

__last2	Another iterator.
__result	An iterator pointing to the end of the merged range.
__comp	A functor to use for comparisons.

Returns

An output iterator equal to __result + (__last1 - __first1)

- (__last2 - __first2).

Merges the ranges [__first1,__last1) and [__first2,__last2) into the sorted range [__result, __result + (__last1-__first1) + (__last2-__first2)). Both input ranges must be sorted, and the output range must not overlap with either of the input ranges. The sort is *stable*, that is, for equivalent elements in the two ranges, elements from the first range will always come before elements from the second.
The comparison function should have the same effects on ordering as the function used for the initial sort.
Definition at line 5002 of file stl_algo.h.

2.74.2.15 min() [1/2] template<typename _Tp >

```
constexpr const _Tp & std::min (
            const _Tp & __a,
            const _Tp & __b )  [inline], [constexpr]
```

This does what you think it does.

Parameters

_↩ _a	A thing of arbitrary type.
_↩ _b	Another thing of arbitrary type.

Returns

The lesser of the parameters.

This is the simple classic generic implementation. It will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.
Definition at line 230 of file stl_algobase.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__parallel_sort_qs_divide(), std::__↩ sample(), __gnu_parallel::__search_template(), __gnu_parallel::__sequential_random_shuffle(), __gnu_cxx::__versa↩ _string< _CharT, _Traits, _Alloc, _Base >::compare(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std↩ ::generate_canonical(), std::discard_block_engine< _RandomNumberEngine, __p, __r >::min(), std::shuffle_order↩ _engine< _RandomNumberEngine, __k >::min(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std↩ ::basic_streambuf< _CharT, _Traits >::xsgetn(), std::basic_filebuf< _CharT, _Traits >::xsputn(), and std::basic_↩ streambuf< _CharT, _Traits >::xsputn().

2.74.2.16 min() [2/2] template<typename _Tp , typename _Compare >

```
constexpr const _Tp & std::min (
            const _Tp & __a,
            const _Tp & __b,
            _Compare __comp )  [inline], [constexpr]
```

This does what you think it does.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor.

Returns

The lesser of the parameters.

This will work on temporary expressions, since they are only evaluated once, unlike a preprocessor macro.
Definition at line 278 of file stl_algobase.h.

2.74.2.17 min_element() [1/2]

```
template<typename _ForwardIterator >
constexpr _ForwardIterator std::min_element (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Return the minimum element in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

Iterator referencing the first instance of the smallest value.

Definition at line 5658 of file stl_algo.h.

2.74.2.18 min_element() [2/2]

```
template<typename _ForwardIterator , typename _Compare >
constexpr _ForwardIterator std::min_element (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Return the minimum element in a range using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

Iterator referencing the first instance of the smallest value according to __comp.

Definition at line 5683 of file stl_algo.h.

2.74.2.19 minmax() [1/2] template<typename _Tp >

```
constexpr pair< const _Tp &, const _Tp & > std::minmax (
            const _Tp & __a,
            const _Tp & __b )  [inline], [constexpr]
```

Determines min and max at once as an ordered pair.

Parameters

_↩ _a	A thing of arbitrary type.
_↩ _b	Another thing of arbitrary type.

Returns

A pair(__b, __a) if __b is smaller than __a, pair(__a, __b) otherwise.

Definition at line 3325 of file stl_algo.h.

2.74.2.20 minmax() [2/2] template<typename _Tp , typename _Compare >

```
constexpr pair< const _Tp &, const _Tp & > std::minmax (
            const _Tp & __a,
            const _Tp & __b,
            _Compare __comp )  [inline], [constexpr]
```

Determines min and max at once as an ordered pair.

Parameters

__a	A thing of arbitrary type.
__b	Another thing of arbitrary type.
__comp	A comparison functor .

Returns

A pair(__b, __a) if __b is smaller than __a, pair(__a, __b) otherwise.

Definition at line 3346 of file stl_algo.h.

2.74.2.21 minmax_element() [1/2] template<typename _ForwardIterator >

```
constexpr pair<_ForwardIterator, _ForwardIterator> std::minmax_element (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

__first	Start of range.
__last	End of range.

Returns

make_pair(m, M), where m is the first iterator i in [__first, __last) such that no other element in the range is smaller, and where M is the last iterator i in [__first, __last) such that no other element in the range is larger.

Definition at line 3426 of file stl_algo.h.

2.74.2.22 minmax_element() [2/2]

```
template<typename _ForwardIterator , typename _Compare >
constexpr pair<_ForwardIterator, _ForwardIterator> std::minmax_element (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Return a pair of iterators pointing to the minimum and maximum elements in a range.

Parameters

__first	Start of range.
__last	End of range.
__comp	Comparison functor.

Returns

make_pair(m, M), where m is the first iterator i in [__first, __last) such that no other element in the range is smaller, and where M is the last iterator i in [__first, __last) such that no other element in the range is larger.

Definition at line 3454 of file stl_algo.h.

2.74.2.23 next_permutation() [1/2]

```
template<typename _BidirectionalIterator >
constexpr bool std::next_permutation (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last )  [inline], [constexpr]
```

Permute range into the next *dictionary* ordering.

Parameters

__first	Start of range.
__last	End of range.

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.
Definition at line 2976 of file stl_algo.h.

2.74.2.24 next_permutation() [2/2]

```
template<typename _BidirectionalIterator , typename _Compare >
constexpr bool std::next_permutation (
            _BidirectionalIterator __first,
```

```
            _BidirectionalIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Permute range into the next *dictionary* ordering using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	A comparison functor.

Returns

False if wrapped to first permutation, true otherwise.

Treats all permutations of the range [__first,__last) as a set of *dictionary* sorted sequences ordered by __comp. Permutes the current sequence into the next one of this set. Returns true if there are more sequences to generate. If the sequence is the largest of the set, the smallest is generated and false returned.
Definition at line 3009 of file stl_algo.h.

2.74.2.25 nth_element() [1/2] template<typename _RandomAccessIterator >

```
constexpr void std::nth_element (
            _RandomAccessIterator __first,
            _RandomAccessIterator __nth,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Sort a sequence just enough to find a particular position.

Parameters

__first	An iterator.
__nth	Another iterator.
__last	Another iterator.

Returns

Nothing.

Rearranges the elements in the range [__first,__last) so that *__nth is the same element that would have been in that position had the whole sequence been sorted. The elements either side of *__nth are not completely sorted, but for any iterator *i* in the range [__first,__nth) and any iterator *j* in the range [__nth,__last) it holds that *j < *i is false.
Definition at line 4778 of file stl_algo.h.

2.74.2.26 nth_element() [2/2] template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::nth_element (
            _RandomAccessIterator __first,
            _RandomAccessIterator __nth,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Sort a sequence just enough to find a particular position using a predicate for comparison.

Parameters

__first	An iterator.

Parameters

__nth	Another iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Rearranges the elements in the range [__first,__last) so that *__nth is the same element that would have been in that position had the whole sequence been sorted. The elements either side of *__nth are not completely sorted, but for any iterator *i* in the range [__first,__nth) and any iterator *j* in the range [__nth,__last) it holds that __comp(*j,*i) is false.
Definition at line 4818 of file stl_algo.h.

2.74.2.27 partial_sort() [1/2]

```
template<typename _RandomAccessIterator >
constexpr void std::partial_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __middle,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Sort the smallest elements of a sequence.

Parameters

__first	An iterator.
__middle	Another iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the smallest (__middle-__first) elements in the range [first,last) and moves them to the range [__first,__middle). The order of the remaining elements in the range [__middle,__last) is undefined. After the sort if *i* and *j* are iterators in the range [__first,__middle) such that i precedes j and *k* is an iterator in the range [__middle,__last) then *j<*i and *k<*i are both false.
Definition at line 4702 of file stl_algo.h.

2.74.2.28 partial_sort() [2/2]

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr void std::partial_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __middle,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Sort the smallest elements of a sequence using a predicate for comparison.

Parameters

__first	An iterator.
__middle	Another iterator.

Parameters

__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the smallest (__middle-__first) elements in the range [__first,__last) and moves them to the range [__first,__middle). The order of the remaining elements in the range [__middle,__last) is undefined. After the sort if *i* and *j* are iterators in the range [__first,__middle) such that i precedes j and *k* is an iterator in the range [__middle,__last) then *__comp(j,*i) and __comp(*k,*i) are both false.
Definition at line 4741 of file stl_algo.h.

2.74.2.29 partial_sort_copy() [1/2]

```
template<typename _InputIterator , typename _RandomAccessIterator >
constexpr _RandomAccessIterator std::partial_sort_copy (
            _InputIterator __first,
            _InputIterator __last,
            _RandomAccessIterator __result_first,
            _RandomAccessIterator __result_last )  [inline], [constexpr]
```

Copy the smallest elements of a sequence.

Parameters

__first	An iterator.
__last	Another iterator.
__result_first	A random-access iterator.
__result_last	Another random-access iterator.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range [__first,__last) to the range beginning at __result_first, where the number of elements to be copied, N, is the smaller of (__last-__first) and (__result_last-__result_first). After the sort if *i* and *j* are iterators in the range [__result_first,__result_first+N) such that i precedes j then *j<*i is false. The value returned is __result_first+N.
Definition at line 1738 of file stl_algo.h.

2.74.2.30 partial_sort_copy() [2/2]

```
template<typename _InputIterator , typename _RandomAccessIterator , typename _Compare >
constexpr _RandomAccessIterator std::partial_sort_copy (
            _InputIterator __first,
            _InputIterator __last,
            _RandomAccessIterator __result_first,
            _RandomAccessIterator __result_last,
            _Compare __comp )  [inline], [constexpr]
```

Copy the smallest elements of a sequence using a predicate for comparison.

Parameters

__first	An input iterator.
__last	Another input iterator.
__result_first	A random-access iterator.
__result_last	Another random-access iterator.
__comp	A comparison functor.

Returns

An iterator indicating the end of the resulting sequence.

Copies and sorts the smallest N values from the range [__first,__last) to the range beginning at `result_first`, where the number of elements to be copied, `N`, is the smaller of (__last-__first) and (__result_last-__result_first). After the sort if *i* and *j* are iterators in the range [__result_first,__result_first+N) such that i precedes j then `__comp(*j,*i)` is false. The value returned is `__result_first+N`.
Definition at line 1789 of file stl_algo.h.

2.74.2.31 prev_permutation() [1/2]

```
template<typename _BidirectionalIterator >
constexpr bool std::prev_permutation (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last )  [inline], [constexpr]
```

Permute range into the previous *dictionary* ordering.

Parameters

__first	Start of range.
__last	End of range.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range as a set of *dictionary* sorted sequences. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.
Definition at line 3079 of file stl_algo.h.

2.74.2.32 prev_permutation() [2/2]

```
template<typename _BidirectionalIterator , typename _Compare >
constexpr bool std::prev_permutation (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Permute range into the previous *dictionary* ordering using comparison functor.

Parameters

__first	Start of range.
__last	End of range.
__comp	A comparison functor.

Returns

False if wrapped to last permutation, true otherwise.

Treats all permutations of the range [__first,__last) as a set of *dictionary* sorted sequences ordered by __comp. Permutes the current sequence into the previous one of this set. Returns true if there are more sequences to generate. If the sequence is the smallest of the set, the largest is generated and false returned.
Definition at line 3112 of file stl_algo.h.

2.74.2.33 sort() [1/2] template<typename _RandomAccessIterator >

```
constexpr void std::sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last )  [inline], [constexpr]
```

Sort the elements of a sequence.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator *i* in the range [__first,__last-1),
∗(i+1)<∗i is false.
The relative ordering of equivalent elements is not preserved, use stable_sort() if this is needed.
Definition at line 4856 of file stl_algo.h.

2.74.2.34 sort() [2/2] template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

Sort the elements of a sequence using a predicate for comparison.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that __comp(∗(i+1),∗i) is false for every iterator *i* in the range [__first,__last-1).
The relative ordering of equivalent elements is not preserved, use stable_sort() if this is needed.
Definition at line 4887 of file stl_algo.h.

2.74.2.35 stable_sort() [1/2] template<typename _RandomAccessIterator >

```
void std::stable_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last ) [inline]
```

Sort the elements of a sequence, preserving the relative order of equivalent elements.

Parameters

__first	An iterator.
__last	Another iterator.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator `i` in the range [__first,_↩ _last-1), *(i+1)<*i is false.
The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range [__first,__last) such that `x<y` is false and `y<x` is false will have the same relative ordering after calling `stable_sort()`.
Definition at line 5065 of file stl_algo.h.

2.74.2.36 stable_sort() [2/2] template<typename _RandomAccessIterator , typename _Compare >

```
void std::stable_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp ) [inline]
```

Sort the elements of a sequence using a predicate for comparison, preserving the relative order of equivalent elements.

Parameters

__first	An iterator.
__last	Another iterator.
__comp	A comparison functor.

Returns

Nothing.

Sorts the elements in the range [__first,__last) in ascending order, such that for each iterator `i` in the range [__first,_↩ _last-1), `__comp`(*(i+1),*i) is false.
The relative ordering of equivalent elements is preserved, so any two elements `x` and `y` in the range [__first,__↩ last) such that `__comp(x,y)` is false and `__comp(y,x)` is false will have the same relative ordering after calling `stable_sort()`.
Definition at line 5099 of file stl_algo.h.

2.75 Strings

Collaboration diagram for Strings:

Classes

- class std::basic_string< _CharT, _Traits, _Alloc >
- class std::experimental::fundamentals_v1::basic_string_view< _CharT, _Traits >
- struct std::char_traits< _CharT >

Typedefs

- typedef basic_string< char > std::string
- typedef basic_string< char16_t > std::u16string
- typedef basic_string< char32_t > std::u32string
- typedef basic_string< wchar_t > std::wstring

2.75.1 Detailed Description

2.75.2 Typedef Documentation

2.75.2.1 string `typedef basic_string<char> std::string`

A string of `char`.
Definition at line 79 of file stringfwd.h.

2.75.2.2 u16string `typedef basic_string<char16_t> std::u16string`

A string of `char16_t`.
Definition at line 93 of file stringfwd.h.

2.75.2.3 u32string `typedef basic_string<char32_t> std::u32string`

A string of `char32_t`.
Definition at line 96 of file stringfwd.h.

2.75.2.4 wstring `typedef basic_string<wchar_t> std::wstring`

A string of `wchar_t`.
Definition at line 83 of file stringfwd.h.

2.76.1 Detailed Description

A collection of advanced mathematical special functions.

2.76.2 Function Documentation

2.76.2.1 assoc_laguerre() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::tr1::assoc_laguerre (
            unsigned int __n,
            unsigned int __m,
            _Tp __x )  [inline]
```

5.2.1.1 Associated Laguerre polynomials.
Definition at line 1275 of file tr1/cmath.

2.76.2.2 assoc_legendre() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::tr1::assoc_legendre (
            unsigned int __l,
            unsigned int __m,
            _Tp __x )  [inline]
```

5.2.1.2 Associated Legendre functions.
Definition at line 1292 of file tr1/cmath.

2.76.2.3 beta()

```
template<typename _Tpx , typename _Tpy >
__gnu_cxx::__promote_2<_Tpx, _Tpy>::__type std::tr1::beta (
            _Tpx __x,
            _Tpy __y )  [inline]
```

5.2.1.3 Beta functions.
Definition at line 1309 of file tr1/cmath.

2.76.2.4 comp_ellint_1()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::comp_ellint_1 (
            _Tp __k )  [inline]
```

5.2.1.4 Complete elliptic integrals of the first kind.
Definition at line 1326 of file tr1/cmath.

2.76.2.5 comp_ellint_2()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::comp_ellint_2 (
            _Tp __k )  [inline]
```

5.2.1.5 Complete elliptic integrals of the second kind.
Definition at line 1343 of file tr1/cmath.

2.76.2.6 comp_ellint_3()

```
template<typename _Tp , typename _Tpn >
__gnu_cxx::__promote_2<_Tp, _Tpn>::__type std::tr1::comp_ellint_3 (
            _Tp __k,
            _Tpn __nu )  [inline]
```

5.2.1.6 Complete elliptic integrals of the third kind.
Definition at line 1360 of file tr1/cmath.

2.76.2.7 conf_hyperg()

```
template<typename _Tpa , typename _Tpc , typename _Tp >
__gnu_cxx::__promote_3<_Tpa, _Tpc, _Tp>::__type std::tr1::conf_hyperg (
            _Tpa __a,
            _Tpc __c,
            _Tp __x )  [inline]
```

5.2.1.7 Confluent hypergeometric functions.
Definition at line 1678 of file tr1/cmath.

2.76.2.8 cyl_bessel_i()

```
template<typename _Tpnu , typename _Tp >
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_i (
            _Tpnu __nu,
            _Tp __x )  [inline]
```

5.2.1.8 Regular modified cylindrical Bessel functions.
Definition at line 1377 of file tr1/cmath.

2.76.2.9 cyl_bessel_j()

```
template<typename _Tpnu , typename _Tp >
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_j (
            _Tpnu __nu,
            _Tp __x )  [inline]
```

5.2.1.9 Cylindrical Bessel functions (of the first kind).
Definition at line 1394 of file tr1/cmath.

2.76.2.10 cyl_bessel_k() template<typename _Tpnu , typename _Tp >

```
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_bessel_k (
            _Tpnu __nu,
            _Tp __x )  [inline]
```

5.2.1.10 Irregular modified cylindrical Bessel functions.
Definition at line 1411 of file tr1/cmath.

2.76.2.11 cyl_neumann() template<typename _Tpnu , typename _Tp >

```
__gnu_cxx::__promote_2<_Tpnu, _Tp>::__type std::tr1::cyl_neumann (
            _Tpnu __nu,
            _Tp __x )  [inline]
```

5.2.1.11 Cylindrical Neumann functions.
Definition at line 1428 of file tr1/cmath.

2.76.2.12 ellint_1() template<typename _Tp , typename _Tpp >

```
__gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::tr1::ellint_1 (
            _Tp __k,
            _Tpp __phi )  [inline]
```

5.2.1.12 Incomplete elliptic integrals of the first kind.
Definition at line 1445 of file tr1/cmath.

2.76.2.13 ellint_2() template<typename _Tp , typename _Tpp >

```
__gnu_cxx::__promote_2<_Tp, _Tpp>::__type std::tr1::ellint_2 (
            _Tp __k,
            _Tpp __phi )  [inline]
```

5.2.1.13 Incomplete elliptic integrals of the second kind.
Definition at line 1462 of file tr1/cmath.

2.76.2.14 ellint_3() template<typename _Tp , typename _Tpn , typename _Tpp >

```
__gnu_cxx::__promote_3<_Tp, _Tpn, _Tpp>::__type std::tr1::ellint_3 (
            _Tp __k,
            _Tpn __nu,
            _Tpp __phi )  [inline]
```

5.2.1.14 Incomplete elliptic integrals of the third kind.
Definition at line 1479 of file tr1/cmath.

2.76.2.15 expint() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::tr1::expint (
            _Tp __x )  [inline]
```

5.2.1.15 Exponential integrals.
Definition at line 1496 of file tr1/cmath.

2.76.2.16 hermite() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::tr1::hermite (
```

```
            unsigned int __n,
            _Tp __x )  [inline]
```

5.2.1.16 Hermite polynomials.
Definition at line 1513 of file tr1/cmath.

2.76.2.17 hyperg()

```
template<typename _Tpa , typename _Tpb , typename _Tpc , typename _Tp >
__gnu_cxx::__promote_4<_Tpa, _Tpb, _Tpc, _Tp>::__type std::tr1::hyperg (
            _Tpa __a,
            _Tpb __b,
            _Tpc __c,
            _Tp __x )  [inline]
```

5.2.1.17 Hypergeometric functions.
Definition at line 1695 of file tr1/cmath.

2.76.2.18 laguerre()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::laguerre (
            unsigned int __n,
            _Tp __x )  [inline]
```

5.2.1.18 Laguerre polynomials.
Definition at line 1530 of file tr1/cmath.

2.76.2.19 legendre()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::legendre (
            unsigned int __n,
            _Tp __x )  [inline]
```

5.2.1.19 Legendre polynomials.
Definition at line 1547 of file tr1/cmath.

2.76.2.20 riemann_zeta()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::riemann_zeta (
            _Tp __x )  [inline]
```

5.2.1.20 Riemann zeta function.
Definition at line 1564 of file tr1/cmath.

2.76.2.21 sph_bessel()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::sph_bessel (
            unsigned int __n,
            _Tp __x )  [inline]
```

5.2.1.21 Spherical Bessel functions.
Definition at line 1581 of file tr1/cmath.

2.76.2.22 sph_legendre()

```
template<typename _Tp >
__gnu_cxx::__promote<_Tp>::__type std::tr1::sph_legendre (
            unsigned int __l,
            unsigned int __m,
            _Tp __theta )  [inline]
```

5.2.1.22 Spherical associated Legendre functions.

Definition at line 1598 of file tr1/cmath.

2.76.2.23 sph_neumann() `template<typename _Tp >`

```
__gnu_cxx::__promote<_Tp>::__type std::tr1::sph_neumann (
            unsigned int __n,
            _Tp __x )  [inline]
```

5.2.1.23 Spherical Neumann functions.
Definition at line 1615 of file tr1/cmath.

2.77 Tags

Collaboration diagram for Tags:

Modules

- Data Structure Type
- Invalidation Guarantees

Classes

- struct __gnu_pbds::trivial_iterator_tag

Typedefs

- typedef void __gnu_pbds::trivial_iterator_difference_type

2.77.1 Detailed Description

2.77.2 Typedef Documentation

2.77.2.1 trivial_iterator_difference_type `typedef void __gnu_pbds::trivial_iterator_difference_type`

Prohibit moving trivial iterators.
Definition at line 79 of file tag_and_trait.hpp.

2.78 Technical Specifications

Collaboration diagram for Technical Specifications:

Modules

- Filesystem TS
- Library Fundamentals TS

2.78.1 Detailed Description

Components specified by various Technical Specifications.
As indicated by the std::experimental namespace and the header paths, the contents of these Technical Specifications are experimental and not part of the C++ standard. As such the interfaces and implementations may change in the future, and there is **no guarantee of compatibility between different GCC releases** for these features.

2.79 Threads

Collaboration diagram for Threads:

Functions

- bool **std::operator!=** (thread::id __x, thread::id __y) noexcept
- bool **std::operator<** (thread::id __x, thread::id __y) noexcept
- template<class _CharT , class _Traits > basic_ostream< _CharT, _Traits > & **std::operator<<** (basic_ostream< _CharT, _Traits > &__out, thread::id __id)
- bool **std::operator<=** (thread::id __x, thread::id __y) noexcept
- bool **std::operator==** (thread::id __x, thread::id __y) noexcept
- bool **std::operator>** (thread::id __x, thread::id __y) noexcept
- bool **std::operator>=** (thread::id __x, thread::id __y) noexcept
- void **std::swap** (thread &__x, thread &__y) noexcept

2.79.1 Detailed Description

Classes for thread support.

2.80.1 Detailed Description

Classes and functions for time.

2.80.2 Typedef Documentation

2.80.2.1 high_resolution_clock `using std::chrono::_V2::high_resolution_clock = typedef system_clock`

Highest-resolution clock.
This is the clock "with the shortest tick period." Alias to std::system_clock until higher-than-nanosecond definitions become feasible.
Definition at line 1100 of file chrono.

2.80.2.2 hours `using std::chrono::hours = typedef duration< int64_t , ratio<3600> >`

hours
Definition at line 792 of file chrono.

2.80.2.3 microseconds

```
using std::chrono::microseconds = typedef duration< int64_t , micro>
```

microseconds
Definition at line 780 of file chrono.

2.80.2.4 milliseconds

```
using std::chrono::milliseconds = typedef duration< int64_t , milli>
```

milliseconds
Definition at line 783 of file chrono.

2.80.2.5 minutes

```
using std::chrono::minutes = typedef duration< int64_t , ratio< 60> >
```

minutes
Definition at line 789 of file chrono.

2.80.2.6 nanoseconds

```
using std::chrono::nanoseconds = typedef duration< int64_t , nano>
```

nanoseconds
Definition at line 777 of file chrono.

2.80.2.7 seconds

```
using std::chrono::seconds = typedef duration< int64_t >
```

seconds
Definition at line 786 of file chrono.

2.80.3 Function Documentation

2.80.3.1 duration_cast()

```
template<typename _ToDur , typename _Rep , typename _Period >
constexpr __enable_if_is_duration<_ToDur> std::chrono::duration_cast (
            const duration< _Rep, _Period > & __d )  [constexpr]
```

duration_cast
Definition at line 254 of file chrono.

2.80.3.2 operator*() [1/2]

```
template<typename _Rep1 , typename _Rep2 , typename _Period >
constexpr duration< __common_rep_t< _Rep2, _Rep1 >, _Period > operator* (
            const _Rep1 & __s,
            const duration< _Rep2, _Period > & __d )  [related]
```

Multiply a duration by a scalar value.
Definition at line 647 of file chrono.

2.80.3.3 operator*() [2/2]

```
template<typename _Rep1 , typename _Period , typename _Rep2 >
constexpr duration< __common_rep_t< _Rep1, _Rep2 >, _Period > operator* (
            const duration< _Rep1, _Period > & __d,
            const _Rep2 & __s )  [related]
```

Multiply a duration by a scalar value.
Definition at line 637 of file chrono.

2.80.3.4 operator+() [1/3]

```
template<typename _Rep1 , typename _Period1 , typename _Rep2 , typename
_Period2 >
constexpr common_type< duration< _Rep1, _Period1 >, duration< _Rep2, _Period2 > >::type operator+
(
            const duration< _Rep1, _Period1 > & __lhs,
            const duration< _Rep2, _Period2 > & __rhs )  [related]
```

The sum of two durations.
Definition at line 594 of file chrono.

2.80.3.5 operator+() [2/3]

```
template<typename _Rep1 , typename _Period1 , typename _Clock , typename
_Dur2 >
constexpr time_point< _Clock, typename common_type< duration< _Rep1, _Period1 >, _Dur2 >::type >
operator+ (
            const duration< _Rep1, _Period1 > & __lhs,
            const time_point< _Clock, _Dur2 > & __rhs )  [related]
```

Adjust a time point forwards by the given duration.
Definition at line 931 of file chrono.

2.80.3.6 operator+() [3/3]

```
template<typename _Clock , typename _Dur1 , typename _Rep2 , typename ↩
_Period2 >
constexpr time_point< _Clock, typename common_type< _Dur1, duration< _Rep2, _Period2 > >::type >
operator+ (
            const time_point< _Clock, _Dur1 > & __lhs,
            const duration< _Rep2, _Period2 > & __rhs )  [related]
```

Adjust a time point forwards by the given duration.
Definition at line 917 of file chrono.

2.80.3.7 operator-() [1/3]

```
template<typename _Rep1 , typename _Period1 , typename _Rep2 , typename
_Period2 >
constexpr common_type< duration< _Rep1, _Period1 >, duration< _Rep2, _Period2 > >::type operator-
(
            const duration< _Rep1, _Period1 > & __lhs,
            const duration< _Rep2, _Period2 > & __rhs )  [related]
```

The difference between two durations.
Definition at line 608 of file chrono.

2.80.3.8 operator-() [2/3]

```
template<typename _Clock , typename _Dur1 , typename _Rep2 , typename ↩
_Period2 >
constexpr time_point< _Clock, typename common_type< _Dur1, duration< _Rep2, _Period2 > >::type >
operator- (
            const time_point< _Clock, _Dur1 > & __lhs,
            const duration< _Rep2, _Period2 > & __rhs )  [related]
```

Adjust a time point backwards by the given duration.
Definition at line 945 of file chrono.

2.80.3.9 operator-() [3/3]

```
template<typename _Clock , typename _Dur1 , typename _Dur2 >
constexpr common_type< _Dur1, _Dur2 >::type operator- (
```

```
            const time_point< _Clock, _Dur1 > & __lhs,
            const time_point< _Clock, _Dur2 > & __rhs )  [related]
```

The difference between two time points (as a duration)
Definition at line 961 of file chrono.

2.80.3.10 time_point_cast()

```
template<typename _ToDur , typename _Clock , typename _Dur >
constexpr enable_if<__is_duration<_ToDur>::value, time_point<_Clock, _ToDur> >::type std::chrono↩
::time_point_cast (
            const time_point< _Clock, _Dur > & __t )  [constexpr]
```

time_point_cast
Definition at line 873 of file chrono.

2.81.1 Detailed Description

2.82 Type-safe container of any type

Collaboration diagram for Type-safe container of any type:

Macros

- #define **__cpp_lib_experimental_any**

Functions

- static void **std::experimental::fundamentals_v1::any::_Manager_internal< _Tp >::_S_manage** (_Op __↩ which, const any *__anyp, _Arg *__arg)
- static void **std::experimental::fundamentals_v1::any::_Manager_external< _Tp >::_S_manage** (_Op __↩ which, const any *__anyp, _Arg *__arg)
- template<typename _ValueType >
  _ValueType std::experimental::any_cast (const any &__any)

- void std::experimental::swap (any &__x, any &__y) noexcept

- template<typename _ValueType >
  _ValueType std::experimental::any_cast (any &__any)
- template<typename _ValueType , typename enable_if<!is_move_constructible< _ValueType >::value||is_lvalue_reference< _ValueType >::value, bool >::type = true>
  _ValueType std::experimental::any_cast (any &&__any)

- template<typename _ValueType >
  const _ValueType * std::experimental::any_cast (const any *__any) noexcept
- template<typename _ValueType >
  _ValueType * std::experimental::any_cast (any *__any) noexcept

2.82.1 Detailed Description

A type-safe container for single values of value types, as described in n3804 "Any Library Proposal (Revision 3)".

2.82.2 Function Documentation

2.82.2.1 any_cast() [1/5]

```
template<typename _ValueType , typename enable_if<!is_move_constructible<
_ValueType >::value||is_lvalue_reference< _ValueType >::value, bool >::type = true>
_ValueType std::experimental::fundamentals_v1::any_cast (
            any && __any )  [inline]
```

Access the contained object.

Template Parameters

_ValueType	A reference or CopyConstructible type.

Parameters

__any	The object to access.

Returns

The contained object.

Exceptions

bad_any_cast	If `__any.type() != typeid(remove_reference_t<_ValueType>)`

Definition at line 392 of file experimental/any.

2.82.2.2 any_cast() [2/5]

```
template<typename _ValueType >
_ValueType std::experimental::fundamentals_v1::any_cast (
            any & __any )  [inline]
```

Access the contained object.

Template Parameters

_ValueType	A reference or CopyConstructible type.

Parameters

__any	The object to access.

Returns

The contained object.

Exceptions

bad_any_cast	If `__any.type() != typeid(remove_reference_t<_ValueType>)`

Definition at line 378 of file experimental/any.

2.82.2.3 any_cast() [3/5] template<typename _ValueType >

```
_ValueType* std::experimental::fundamentals_v1::any_cast (
            any * __any ) [inline], [noexcept]
```

Access the contained object.

Template Parameters

_ValueType	The type of the contained object.

Parameters

__any	A pointer to the object to access.

Returns

The address of the contained object if `__any != nullptr && __any.type() == typeid(_ValueType)` , otherwise a null pointer.

Definition at line 476 of file experimental/any.

2.82.2.4 any_cast() [4/5] template<typename _ValueType >

```
_ValueType std::experimental::fundamentals_v1::any_cast (
            const any & __any ) [inline]
```

Access the contained object.

Template Parameters

_ValueType	A const-reference or CopyConstructible type.

Parameters

__any	The object to access.

Returns

The contained object.

Exceptions

bad_any_cast	If `__any.type() != typeid(remove_reference_t<_ValueType>)`

Definition at line 355 of file experimental/any.

2.82.2.5 any_cast() [5/5]

```
template<typename _ValueType >
const _ValueType* std::experimental::fundamentals_v1::any_cast (
            const any * __any )  [inline], [noexcept]
```

Access the contained object.

Template Parameters

_ValueType	The type of the contained object.

Parameters

__any	A pointer to the object to access.

Returns

The address of the contained object if `__any != nullptr && __any.type() == typeid(_ValueType)` , otherwise a null pointer.

Definition at line 468 of file experimental/any.

2.82.2.6 swap()

```
void std::experimental::fundamentals_v1::swap (
            any & __x,
            any & __y )  [inline], [noexcept]
```

Exchange the states of two `any` objects.
Definition at line 342 of file experimental/any.

2.83 Uniform Distributions

Collaboration diagram for Uniform Distributions:

Functions

- template<typename _IntType >
  bool std::operator!= (const std::uniform_int_distribution< _IntType > &__d1, const std::uniform_int_distribution< _IntType > &__d2)

- template<typename _IntType >
  bool std::operator!= (const std::uniform_real_distribution< _IntType > &__d1, const std::uniform_real_distribution< _IntType > &__d2)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &, const std::uniform_int_distribution< _IntType > &)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_ostream< _CharT, _Traits > & std::operator<< (std::basic_ostream< _CharT, _Traits > &, const std::uniform_real_distribution< _RealType > &)
- template<typename _IntType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &, std::uniform_int_distribution< _IntType > &)
- template<typename _RealType , typename _CharT , typename _Traits >
  std::basic_istream< _CharT, _Traits > & std::operator>> (std::basic_istream< _CharT, _Traits > &, std::uniform_real_distribution< _RealType > &)

2.83.1 Detailed Description

2.83.2 Function Documentation

2.83.2.1 operator"!=() [1/2] template<typename _IntType >

```
bool std::operator!= (
            const std::uniform_int_distribution< _IntType > & __d1,
            const std::uniform_int_distribution< _IntType > & __d2 )  [inline]
```

Return true if two uniform integer distributions have different parameters.
Definition at line 1698 of file random.h.

2.83.2.2 operator"!=() [2/2] template<typename _IntType >

```
bool std::operator!= (
            const std::uniform_real_distribution< _IntType > & __d1,
            const std::uniform_real_distribution< _IntType > & __d2 )  [inline]
```

Return true if two uniform real distributions have different parameters.
Definition at line 1919 of file random.h.

2.83.2.3 operator<<() [1/2] template<typename _IntType , typename _CharT , typename _Traits >

```
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::uniform_int_distribution< _IntType > & __x )
```

Inserts a uniform_int_distribution random number distribution __x into the output stream os.

Parameters

__os	An output stream.
__x	A uniform_int_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 847 of file bits/random.tcc.

References std::dec(), std::ios_base::flags(), and std::skipws().

2.83.2.4 operator<<() [2/2]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits > & std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::uniform_real_distribution< _RealType > & __x )
```

Inserts a uniform_real_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A uniform_real_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

Definition at line 910 of file bits/random.tcc.

2.83.2.5 operator>>() [1/2]

```
template<typename _IntType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::uniform_int_distribution< _IntType > & __x )
```

Extracts a uniform_int_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A uniform_int_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 887 of file bits/random.tcc.
References std::dec(), std::ios_base::flags(), std::uniform_int_distribution< _IntType >::param(), and std::skipws().

2.83.2.6 operator>>() [2/2]

```
template<typename _RealType , typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits > & std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::uniform_real_distribution< _RealType > & __x )
```

Extracts a uniform_real_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A uniform_real_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

Definition at line 948 of file bits/random.tcc.
References std::ios_base::flags(), std::uniform_real_distribution< _RealType >::param(), and std::skipws().

2.84 Unordered Associative

Collaboration diagram for Unordered Associative:

Modules

- Base and Implementation Classes

2.84.1 Detailed Description

Unordered associative containers allow fast retrieval of data based on keys.
Each container type is parameterized on a `Key` type, a `Hash` type providing a hashing functor, and an ordering relation used to sort the elements of the container.
All unordered associative containers must meet certain requirements, summarized in `tables`.

2.85.1 Detailed Description

Components deemed generally useful. Includes pair, tuple, forward/move helpers, ratio, function object, metaprogramming and type traits, time, date, and memory functions.

2.85.2 Function Documentation

2.85.2.1 pair()

```
template<class _T1 , class _T2 >
template<typename...  _Args1, typename...  _Args2>
constexpr std::pair< _T1, _T2 >::pair (
            piecewise_construct_t ,
            tuple< _Args1...  > __first,
            tuple< _Args2...  > __second )  [inline], [constexpr]
```

"piecewise construction" using a tuple of arguments for each member.

Parameters

__first	Arguments for the first member of the pair.
__second	Arguments for the second member of the pair.

The elements of each tuple will be used as the constructor arguments for the data members of the pair.
Definition at line 1690 of file tuple.

2.85.2.2 __addressof()

```
template<typename _Tp >
constexpr _Tp* std::__addressof (
            _Tp & __r )  [inline], [constexpr], [noexcept]
```

Same as C++11 std::addressof.
Definition at line 49 of file move.h.
Referenced by std::_Destroy(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), std::addressof(), std::list< _Tp, _Alloc >::merge(), std::sub_match< _BiIter >::operator<(), std::forward_list< _Tp,

_Alloc >::operator=(), std::list< _Tp, _Alloc >::operator=(), std::sub_match< _BiIter >::operator==(), std::list< _Tp, _Alloc >::remove(), std::rethrow_if_nested(), and std::list< _Tp, _Alloc >::splice().

2.85.2.3 __invoke() template<typename _Callable , typename... _Args>

```
constexpr __invoke_result<_Callable, _Args...>::type std::__invoke (
            _Callable && __fn,
            _Args &&... __args )  [constexpr], [noexcept]
```

Invoke a callable object.
Definition at line 89 of file invoke.h.

2.85.2.4 addressof() template<typename _Tp >

```
constexpr _Tp* std::addressof (
            _Tp & __r )  [inline], [constexpr], [noexcept]
```

Returns the actual address of the object or function referenced by r, even in the presence of an overloaded operator&.

Parameters

↩ _↩ ↩ _↩ *r*	Reference to an object or function.

Returns

The actual address.

Definition at line 140 of file move.h.
References std::__addressof().
Referenced by std::pointer_traits< _Tp * >::pointer_to().

2.85.2.5 forward() [1/2] template<typename _Tp >

```
constexpr _Tp&& std::forward (
            typename std::remove_reference< _Tp >::type && __t )  [constexpr], [noexcept]
```

Forward an rvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".
Definition at line 87 of file move.h.

2.85.2.6 forward() [2/2] template<typename _Tp >

```
constexpr _Tp&& std::forward (
            typename std::remove_reference< _Tp >::type & __t )  [constexpr], [noexcept]
```

Forward an lvalue.

Returns

The parameter cast to the specified type.

This function is used to implement "perfect forwarding".
Definition at line 76 of file move.h.

2.85.2.7 forward_as_tuple()

```
template<typename... _Elements>
constexpr tuple<_Elements&&...> std::forward_as_tuple (
            _Elements &&... __args ) [constexpr], [noexcept]
```

std::forward_as_tuple
Definition at line 1503 of file tuple.

2.85.2.8 get() [1/8]

```
template<std::size_t __i, typename... _Elements>
constexpr const __tuple_element_t<__i, tuple<_Elements...> >&& std::get (
            const tuple< _Elements... > && __t ) [constexpr], [noexcept]
```

Return a const rvalue reference to the ith element of a const tuple rvalue.
Definition at line 1332 of file tuple.

2.85.2.9 get() [2/8]

```
template<std::size_t __i, typename... _Elements>
constexpr const __tuple_element_t<__i, tuple<_Elements...> >& std::get (
            const tuple< _Elements... > & __t ) [constexpr], [noexcept]
```

Return a const reference to the ith element of a const tuple.
Definition at line 1317 of file tuple.

2.85.2.10 get() [3/8]

```
template<typename _Tp , typename... _Types>
constexpr const _Tp&& std::get (
            const tuple< _Types... > && __t ) [constexpr], [noexcept]
```

Return a const reference to the unique element of type _Tp of a const tuple rvalue.
Definition at line 1374 of file tuple.

2.85.2.11 get() [4/8]

```
template<typename _Tp , typename... _Types>
constexpr const _Tp& std::get (
            const tuple< _Types... > & __t ) [constexpr], [noexcept]
```

Return a const reference to the unique element of type _Tp of a tuple.
Definition at line 1367 of file tuple.

2.85.2.12 get() [5/8]

```
template<std::size_t __i, typename... _Elements>
constexpr __tuple_element_t<__i, tuple<_Elements...> >&& std::get (
            tuple< _Elements... > && __t ) [constexpr], [noexcept]
```

Return an rvalue reference to the ith element of a tuple rvalue.
Definition at line 1323 of file tuple.

2.85.2.13 get() [6/8]

```
template<std::size_t __i, typename... _Elements>
constexpr __tuple_element_t<__i, tuple<_Elements...> >& std::get (
            tuple< _Elements... > & __t ) [constexpr], [noexcept]
```

Return a reference to the ith element of a tuple.
Definition at line 1311 of file tuple.

2.85.2.14 get() [7/8] template<typename _Tp , typename... _Types>

```
constexpr _Tp&& std::get (
            tuple< _Types... > && __t ) [constexpr], [noexcept]
```

Return a reference to the unique element of type _Tp of a tuple rvalue.
Definition at line 1361 of file tuple.

2.85.2.15 get() [8/8] template<typename _Tp , typename... _Types>

```
constexpr _Tp& std::get (
            tuple< _Types... > & __t ) [constexpr], [noexcept]
```

Return a reference to the unique element of type _Tp of a tuple.
Definition at line 1355 of file tuple.

2.85.2.16 make_pair() template<typename _T1 , typename _T2 >

```
constexpr pair< typename __decay_and_strip< _T1 >::__type, typename __decay_and_strip< _T2 >::↩
__type > make_pair (
            _T1 && __x,
            _T2 && __y ) [related]
```

A convenience wrapper for creating a pair from two objects.

Parameters

_↩ _x	The first object.
_↩ _y	The second object.

Returns

A newly-constructed pair<> object of the appropriate type.

The C++98 standard says the objects are passed by reference-to-const, but C++03 says they are passed by value (this was LWG issue #181).
Since C++11 they have been passed by forwarding reference and then forwarded to the new members of the pair. To create a pair with a member of reference type, pass a `reference_wrapper` to this function.
Definition at line 567 of file stl_pair.h.

2.85.2.17 move() template<typename _Tp >

```
constexpr std::remove_reference<_Tp>::type&& std::move (
            _Tp && __t ) [constexpr], [noexcept]
```

Convert a value to an rvalue.

Parameters

↩ _↩ ↩ _↩ *t*	A thing of arbitrary type.

Returns

The parameter cast to an rvalue-reference to allow moving it.

Definition at line 101 of file move.h.
Referenced by std::function< _Res(_ArgTypes...)>::function(), std::unique_ptr< _Tp, _Dp >::~unique_ptr(), std↩ ::basic_regex< _Ch_type, _Rx_traits >::assign(), std::shared_ptr< _Tp >::atomic_compare_exchange_strong_↩ explicit(), std::deque< _Tp, _Alloc >::insert(), std::list< _Tp, _Alloc >::insert(), std::vector< _Tp, _Alloc >::insert(), std::map< _Key, _Tp, _Compare, _Alloc >::insert(), std::multimap< _Key, _Tp, _Compare, _Alloc >::insert(), std↩ ::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::insert(), std::unordered_multimap< _Key, _Tp, _Hash, _Pred, _Alloc >::insert(), std::unordered_set< _Value, _Hash, _Pred, _Alloc >::insert(), std::unordered_multiset< _Value, _Hash, _Pred, _Alloc >::insert(), std::forward_list< _Tp, _Alloc >::merge(), std::move_if_noexcept(), std::basic_↩ regex< _Ch_type, _Rx_traits >::operator=(), std::deque< _Tp, _Alloc >::operator=(), std::forward_list< _Tp, _Alloc >::operator=(), std::function< _Res(_ArgTypes...)>::operator=(), std::list< _Tp, _Alloc >::operator=(), std::vector< ↩ _Tp, _Alloc >::operator=(), std::unordered_map< _Key, _Tp, _Hash, _Pred, _Alloc >::operator[](), std::unique_ptr< _Tp[], _Dp >::reset(), std::unique_ptr< _Tp, _Dp >::reset(), and std::list< _Tp, _Alloc >::splice().

2.85.2.18 move_if_noexcept()

```
template<typename _Tp >
constexpr conditional<__move_if_noexcept_cond<_Tp>::value, const _Tp&, _Tp&&>::type std::move_↩
if_noexcept (
            _Tp & __x )  [constexpr], [noexcept]
```

Conditionally convert a value to an rvalue.

Parameters

_↩ *_x*	A thing of arbitrary type.

Returns

The parameter, possibly cast to an rvalue-reference.

Same as std::move unless the type's move constructor could throw and the type is copyable, in which case an lvalue-reference is returned instead.
Definition at line 121 of file move.h.
References std::move().

2.85.2.19 operator"!=()

```
template<typename _T1 , typename _T2 >
constexpr bool operator!= (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Uses `operator==` to find the result.
Definition at line 496 of file stl_pair.h.

2.85.2.20 operator<() template<typename _T1 , typename _T2 >

```
constexpr bool operator< (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Defines a lexicographical order for pairs.
For two pairs of the same type, P is ordered before Q if P.first is less than Q.first, or if P.first and Q.first are equivalent (neither is less than the other) and P.second is less than Q.second.
Definition at line 488 of file stl_pair.h.
References std::pair< _T1, _T2 >::first, and std::pair< _T1, _T2 >::second.

2.85.2.21 operator<=() template<typename _T1 , typename _T2 >

```
constexpr bool operator<= (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Uses operator< to find the result.
Definition at line 507 of file stl_pair.h.

2.85.2.22 operator==() template<typename _T1 , typename _T2 >

```
constexpr bool operator== (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Two pairs of the same type are equal iff their members are equal.
Definition at line 466 of file stl_pair.h.
References std::pair< _T1, _T2 >::first, and std::pair< _T1, _T2 >::second.

2.85.2.23 operator>() template<typename _T1 , typename _T2 >

```
constexpr bool operator> (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Uses operator< to find the result.
Definition at line 502 of file stl_pair.h.

2.85.2.24 operator>=() template<typename _T1 , typename _T2 >

```
constexpr bool operator>= (
            const pair< _T1, _T2 > & __x,
            const pair< _T1, _T2 > & __y )  [related]
```

Uses operator< to find the result.
Definition at line 514 of file stl_pair.h.

2.85.2.25 swap() [1/4] template<typename _Tp >

```
constexpr enable_if<__and_<__not_<__is_tuple_like<_Tp> >, is_move_constructible<_Tp>, is_move_assignable<↩
_Tp> >::value>::type std::swap (
            _Tp & __a,
            _Tp & __b )  [inline], [constexpr], [noexcept]
```

Swaps two values.

Parameters

_↩ _a	A thing of arbitrary type.
_↩ _b	Another thing of arbitrary type.

Returns

Nothing.

Definition at line 189 of file move.h.

2.85.2.26 swap() [2/4] template<typename _Tp , size_t _Nm>

```
constexpr enable_if<__is_swappable<_Tp>::value>::type std::swap (
            _Tp(&) __a[_Nm],
            _Tp(&) __b[_Nm] )  [inline], [constexpr], [noexcept]
```

Swap the contents of two arrays.
Definition at line 213 of file move.h.

2.85.2.27 swap() [3/4] template<typename _T1 , typename _T2 >

```
constexpr enable_if< __and_< __is_swappable< _T1 >, __is_swappable< _T2 > >::value >::type swap
(
            pair< _T1, _T2 > & __x,
            pair< _T1, _T2 > & __y )  [related]
```

Swap overload for pairs. Calls std::pair::swap().

Note

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see https↩://gcc.gnu.org/PR38466

Definition at line 533 of file stl_pair.h.
References std::pair< _T1, _T2 >::swap().

2.85.2.28 swap() [4/4] template<typename... _Elements>

```
constexpr enable_if<__and_<__is_swappable<_Elements>...>::value >::type std::swap (
            tuple< _Elements... > & __x,
            tuple< _Elements... > & __y )  [inline], [constexpr], [delete], [noexcept]
```

swap
Definition at line 1646 of file tuple.

2.85.2.29 tie() template<typename... _Elements>

```
constexpr tuple<_Elements&...> std::tie (
            _Elements &... __args )  [constexpr], [noexcept]
```

tie
Definition at line 1632 of file tuple.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

2.85.2.30 tuple_cat() template<typename... _Tpls, typename = typename enable_if<__and_<__is_↩ tuple_like<_Tpls>...>::value>::type> constexpr auto std::tuple_cat (_Tpls &&... __tpls) -> typename __tuple_cat_result<_Tpls...>::__type [constexpr]

tuple_cat
Definition at line 1618 of file tuple.

2.85.3 Variable Documentation

2.85.3.1 piecewise_construct constexpr piecewise_construct_t std::piecewise_construct [inline], [constexpr]

Tag for piecewise construction of std::pair objects.
Definition at line 83 of file stl_pair.h.

3.1.1 Detailed Description

GNU extensions for public use.

3.1.2 Typedef Documentation

3.1.2.1 __int_traits `template<typename _Tp >`

```
using __gnu_cxx::__int_traits = typedef __numeric_traits_integer<_Tp>
```

Convenience alias for __numeric_traits<integer-type>.
Definition at line 136 of file numeric_traits.h.

3.1.3 Function Documentation

3.1.3.1 __static_pointer_cast() [1/2] `template<typename _ToType , typename _FromType >`

```
_ToType __gnu_cxx::__static_pointer_cast (
            _FromType * __arg )  [inline]
```

Casting operations for cases where _FromType is a standard pointer. _ToType can be a standard or non-standard pointer.
Definition at line 96 of file cast.h.

3.1.3.2 __static_pointer_cast() [2/2]

```
template<typename _ToType , typename _FromType >
_ToType __gnu_cxx::__static_pointer_cast (
            const _FromType & __arg )  [inline]
```

Casting operations for cases where _FromType is not a standard pointer. _ToType can be a standard or non-standard pointer. Given that _FromType is not a pointer, it must have a get() method that returns the standard pointer equivalent of the address it points to, and must have an element_type typedef which names the type it points to.
Definition at line 68 of file cast.h.

3.1.3.3 _Bit_scan_forward()

```
std::size_t __gnu_cxx::_Bit_scan_forward (
            std::size_t __num )  [inline]
```

Generic Version of the bsf instruction.
Definition at line 508 of file bitmap_allocator.h.
Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object().

3.1.3.4 operator"!=() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator!= (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test difference of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2389 of file vstring.h.

3.1.3.5 operator"!=() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator!= (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test difference of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 2415 of file vstring.h.

3.1.3.6 operator"!=() [3/3] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
bool __gnu_cxx::operator!= (
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test difference of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) != 0. False otherwise.

Definition at line 2402 of file vstring.h.

3.1.3.7 operator+() [1/5] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
__versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (
            _CharT __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )
```

Concatenate character and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 211 of file vstring.tcc.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.3.8 operator+() [2/5] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
__versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            _CharT __rhs )
```

Concatenate string and character.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 241 of file vstring.tcc.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.3.9 operator+() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )
```

Concatenate two strings.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 181 of file vstring.tcc.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

3.1.3.10 operator+() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const _CharT * __rhs )
```

Concatenate string and C string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 224 of file vstring.tcc.

3.1.3.11 operator+() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base > __gnu_cxx::operator+ (
```

```
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )
```

Concatenate C string and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 194 of file vstring.tcc.

3.1.3.12 operator<() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator< (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test if string precedes string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2428 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.13 operator<() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator< (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test if string precedes C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2441 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.14 operator<() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator< (
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test if C string precedes string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 2454 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.15 operator<=() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator<= (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test if string doesn't follow string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2508 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.16 operator<=() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator<= (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test if string doesn't follow C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2521 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.17 operator<=() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator<= (
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test if C string doesn't follow string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 2534 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.18 operator==() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator== (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test equivalence of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2338 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.19 operator==() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
bool __gnu_cxx::operator== (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test equivalence of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 2375 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.20 operator==() [3/4] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
bool __gnu_cxx::operator== (
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test equivalence of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) == 0. False otherwise.

Definition at line 2362 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.21 operator==() [4/4] template<typename _Tp >

```
bool __gnu_cxx::operator== (
            const _Pointer_adapter< _Tp > & __lhs,
            const _Pointer_adapter< _Tp > & __rhs )  [inline]
```

Comparison operators for _Pointer_adapter defer to the base class' comparison operators, when possible.
Definition at line 546 of file pointer.h.

3.1.3.22 operator>() [1/3] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

typename, typename, typename > class _Base>
bool __gnu_cxx::operator>= (
            const _CharT * __lhs,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Test if C string doesn't precede string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't precede *__rhs*. False otherwise.

Definition at line 2575 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare().

3.1.3.28 swap() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
void __gnu_cxx::swap (
            __versa_string< _CharT, _Traits, _Alloc, _Base > & __lhs,
            __versa_string< _CharT, _Traits, _Alloc, _Base > & __rhs )  [inline]
```

Swap contents of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Exchanges the contents of *__lhs* and *__rhs* in constant time.
Definition at line 2589 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap().

3.2 __gnu_cxx::__detail Namespace Reference

Classes

- class __mini_vector
- class _Bitmap_counter
- class _Ffit_finder

Enumerations

- enum { **_S_max_rope_depth** }
- enum { **bits_per_byte** , **bits_per_block** }
- enum **_Tag** { **_S_leaf** , **_S_concat** , **_S_substringfn** , **_S_function** }

Functions

- void __bit_allocate (std::size_t *__pbmap, std::size_t __pos) throw ()
- void __bit_free (std::size_t *__pbmap, std::size_t __pos) throw ()
- template<typename _ForwardIterator , typename _Tp , typename _Compare >
  _ForwardIterator **__lower_bound** (_ForwardIterator __first, _ForwardIterator __last, const _Tp &__val, _Compare __comp)
- template<typename _AddrPair >
  std::size_t __num_bitmaps (_AddrPair __ap)
- template<typename _AddrPair >
  std::size_t __num_blocks (_AddrPair __ap)

3.2.1 Detailed Description

Implementation details not part of the namespace __gnu_cxx interface.

3.2.2 Function Documentation

3.2.2.1 __bit_allocate()

```
void __gnu_cxx::__detail::__bit_allocate (
        std::size_t * __pbmap,
        std::size_t __pos ) throw ( )   [inline]
```

Mark a memory address as allocated by re-setting the corresponding bit in the bit-map.
Definition at line 487 of file bitmap_allocator.h.
Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object().

3.2.2.2 __bit_free()

```
void __gnu_cxx::__detail::__bit_free (
        std::size_t * __pbmap,
        std::size_t __pos ) throw ( )   [inline]
```

Mark a memory address as free by setting the corresponding bit in the bit-map.
Definition at line 498 of file bitmap_allocator.h.

3.2.2.3 __num_bitmaps()

```
template<typename _AddrPair >
std::size_t __gnu_cxx::__detail::__num_bitmaps (
        _AddrPair __ap )  [inline]
```

The number of Bit-maps pointed to by the address pair passed to the function.
Definition at line 274 of file bitmap_allocator.h.
References __num_blocks().
Referenced by __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object().

3.2.2.4 __num_blocks()

```
template<typename _AddrPair >
std::size_t __gnu_cxx::__detail::__num_blocks (
        _AddrPair __ap )  [inline]
```

The number of Blocks pointed to by the address pair passed to the function.
Definition at line 266 of file bitmap_allocator.h.
Referenced by __num_bitmaps().

3.3 __gnu_cxx::typelist Namespace Reference

Functions

- template<typename Fn , typename Typelist >
  void **apply** (Fn &, Typelist)
- template<typename Fn , typename Typelist >
  void **apply_generator** (Fn &fn, Typelist)
- template<typename Fn , typename TypelistT , typename TypelistV >
  void **apply_generator** (Fn &fn, TypelistT, TypelistV)
- template<typename Gn , typename Typelist >
  void apply_generator (Gn &, Typelist)
- template<typename Gn , typename TypelistT , typename TypelistV >
  void **apply_generator** (Gn &, TypelistT, TypelistV)

3.3.1 Detailed Description

GNU typelist extensions for public compile-time use.

3.3.2 Function Documentation

3.3.2.1 apply_generator() template<typename Gn , typename Typelist >

```
void __gnu_cxx::typelist::apply_generator (
            Gn & ,
            Typelist  )
```

Apply all typelist types to generator functor.

3.4.1 Detailed Description

GNU debug classes for public use.

3.4.2 Enumeration Type Documentation

3.4.2.1 _Distance_precision enum __gnu_debug::_Distance_precision

The precision to which we can calculate the distance between two iterators.
Definition at line 52 of file helper_functions.h.

3.4.3 Function Documentation

3.4.3.1 __base() template<typename _Iterator >

```
constexpr _Iterator __gnu_debug::__base (
            _Iterator __it )  [inline], [constexpr]
```

Helper function to extract base iterator of random access safe iterator in order to reduce performance impact of debug mode. Limited to random access iterator because it is the only category for which it is possible to check for correct iterators order in the __valid_range function thanks to the < operator.
Definition at line 311 of file helper_functions.h.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable(), std::boolalpha(), std::dec(), std::defaultfloat(), std::fixed(), std::hex(), std::hexfloat(), std::internal(), std::left(), std::noboolalpha(), std::noshowbase(), std::noshowpoint(), std::noshowpos(), std::noskipws(), std::nounitbuf(), std::nouppercase(), std::oct(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::right(), std::scientific(), std::showbase(), std::showpoint(), std::showpos(), std::skipws(), std::unitbuf(), and std::uppercase().

3.4.3.2 __check_singular() template<typename _Tp >

```
bool __gnu_debug::__check_singular (
            _Tp *const & __ptr )  [inline]
```

Non-NULL pointers are nonsingular.
Definition at line 130 of file helper_functions.h.

3.4.3.3 __check_singular_aux() bool __gnu_debug::__check_singular_aux (

```
            const _Safe_iterator_base * __x )  [inline]
```

Iterators that derive from _Safe_iterator_base can be determined singular or non-singular.
Definition at line 168 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_singular().

3.4.3.4 __check_string() [1/2] template<typename _CharT , typename _Integer >

```
const _CharT* __gnu_debug::__check_string (
            const _CharT * __s,
            _Integer __n,
            const char * __file,
            unsigned int __line,
            const char * __function )  [inline]
```

Checks that __s is non-NULL or __n == 0, and then returns __s.
Definition at line 49 of file debug/string.

3.4.3.5 __check_string() [2/2] template<typename _CharT >

```
const _CharT* __gnu_debug::__check_string (
            const _CharT * __s,
            const char * __file,
            unsigned int __line,
            const char * __function )  [inline]
```

Checks that __s is non-NULL and then returns __s.
Definition at line 65 of file debug/string.

3.4.3.6 __foreign_iterator_aux2() [1/2] template<typename _Iterator , typename _Sequence , typename _Category , typename _OtherIterator , typename _OtherSequence , typename _OtherCategory >

```
bool __gnu_debug::__foreign_iterator_aux2 (
            const _Safe_iterator< _Iterator, _Sequence, _Category > & ,
            const _Safe_iterator< _OtherIterator, _OtherSequence, _OtherCategory > & ,
            const _Safe_iterator< _OtherIterator, _OtherSequence, _OtherCategory > &  )  [inline]
```

Handle debug iterators from different types of container.
Definition at line 138 of file functions.h.

3.4.3.7 __foreign_iterator_aux2() [2/2] template<typename _Iterator , typename _Sequence , typename _Category , typename _OtherIterator >

```
bool __gnu_debug::__foreign_iterator_aux2 (
            const _Safe_iterator< _Iterator, _Sequence, _Category > & __it,
            const _Safe_iterator< _OtherIterator, _Sequence, _Category > & __other,
            const _Safe_iterator< _OtherIterator, _Sequence, _Category > &  )  [inline]
```

Handle debug iterators from the same type of container.
Definition at line 127 of file functions.h.

3.4.3.8 __get_distance() template<typename _Iterator >

```
constexpr _Distance_traits<_Iterator>::__type __gnu_debug::__get_distance (
            _Iterator __lhs,
            _Iterator __rhs,
            std::random_access_iterator_tag  )  [inline], [constexpr]
```

Determine the distance between two iterators with some known precision.
Definition at line 94 of file helper_functions.h.

3.4.3.9 __valid_range() [1/3] template<typename _InputIterator >

```
constexpr bool __gnu_debug::__valid_range (
            _InputIterator __first,
            _InputIterator __last,
            typename _Distance_traits< _InputIterator >::__type & __dist )  [inline], [constexpr]
```

Don't know what these iterators are, or if they are even iterators (we may get an integral type for InputIterator), so see if they are integral and pass them on to the next phase otherwise.
Definition at line 225 of file helper_functions.h.
References __valid_range_aux().

3.4.3.10 __valid_range() [2/3] template<typename _Iterator , typename _Sequence , typename _↩ Category >

```
bool __gnu_debug::__valid_range (
```

```
            const _Safe_iterator< _Iterator, _Sequence, _Category > & __first,
            const _Safe_iterator< _Iterator, _Sequence, _Category > & __last,
            typename _Distance_traits< _Iterator >::__type & __dist )  [inline]
```

Safe iterators know how to check if they form a valid range.
Definition at line 940 of file safe_iterator.h.

3.4.3.11 __valid_range() [3/3] template<typename _Iterator , typename _Sequence >

```
bool __gnu_debug::__valid_range (
            const _Safe_local_iterator< _Iterator, _Sequence > & __first,
            const _Safe_local_iterator< _Iterator, _Sequence > & __last,
            typename _Distance_traits< _Iterator >::__type & __dist_info )  [inline]
```

Safe local iterators know how to check if they form a valid range.
Definition at line 407 of file safe_local_iterator.h.

3.4.3.12 __valid_range_aux() [1/2] template<typename _InputIterator >

```
constexpr bool __gnu_debug::__valid_range_aux (
            _InputIterator __first,
            _InputIterator __last,
            std::__false_type  )  [inline], [constexpr]
```

We have iterators, so figure out what kind of iterators they are to see if we can check the range ahead of time.
Definition at line 181 of file helper_functions.h.
References std::__iterator_category(), and __valid_range_aux().

3.4.3.13 __valid_range_aux() [2/2] template<typename _Integral >

```
constexpr bool __gnu_debug::__valid_range_aux (
            _Integral ,
            _Integral ,
            std::__true_type  )  [inline], [constexpr]
```

We say that integral types for a valid range, and defer to other routines to realize what to do with integral types instead of iterators.
Definition at line 140 of file helper_functions.h.
Referenced by __valid_range(), and __valid_range_aux().

3.5 __gnu_internal Namespace Reference

3.5.1 Detailed Description

GNU implemenation details, not for public use or export. Used only when anonymous namespaces cannot be substituted.

Variables

- static const int _CASable_bits
- static const _CASable _CASable_mask

3.6.1 Detailed Description

GNU parallel code for public use.

3.6.2 Typedef Documentation

3.6.2.1 _BinIndex `typedef unsigned short __gnu_parallel::_BinIndex`

Type to hold the index of a bin.
Since many variables of this type are allocated, it should be chosen as small as possible.
Definition at line 47 of file random_shuffle.h.

3.6.2.2 _CASable `typedef int64_t __gnu_parallel::_CASable`

Longest compare-and-swappable integer type on this platform.
Definition at line 127 of file types.h.

3.6.2.3 _SequenceIndex typedef uint64_t __gnu_parallel::_SequenceIndex

Unsigned integer to index __elements. The total number of elements for each algorithm must fit into this type.
Definition at line 117 of file types.h.

3.6.2.4 _ThreadIndex typedef uint16_t __gnu_parallel::_ThreadIndex

Unsigned integer to index a thread number. The maximum thread number (for each processor) must fit into this type.
Definition at line 123 of file types.h.

3.6.3 Enumeration Type Documentation

3.6.3.1 _AlgorithmStrategy enum __gnu_parallel::_AlgorithmStrategy

Strategies for run-time algorithm selection:
Definition at line 67 of file types.h.

3.6.3.2 _FindAlgorithm enum __gnu_parallel::_FindAlgorithm

Find algorithms:
Definition at line 106 of file types.h.

3.6.3.3 _MultiwayMergeAlgorithm enum __gnu_parallel::_MultiwayMergeAlgorithm

Merging algorithms:
Definition at line 85 of file types.h.

3.6.3.4 _Parallelism enum __gnu_parallel::_Parallelism

Run-time equivalents for the compile-time tags.

Enumerator

sequential	Not parallel.
parallel_unbalanced	Parallel unbalanced (equal-sized chunks).
parallel_balanced	Parallel balanced (work-stealing).
parallel_omp_loop	Parallel with OpenMP dynamic load-balancing.
parallel_omp_loop_static	Parallel with OpenMP static load-balancing.
parallel_taskqueue	Parallel with OpenMP taskqueue construct.

Definition at line 44 of file types.h.

3.6.3.5 _PartialSumAlgorithm enum __gnu_parallel::_PartialSumAlgorithm

Partial sum algorithms: recursive, linear.
Definition at line 91 of file types.h.

3.6.3.6 _SortAlgorithm enum __gnu_parallel::_SortAlgorithm

Sorting algorithms:
Definition at line 76 of file types.h.

3.6.3.7 _SplittingAlgorithm enum __gnu_parallel::_SplittingAlgorithm

Sorting/merging algorithms: sampling, __exact.
Definition at line 98 of file types.h.

3.6.4 Function Documentation

3.6.4.1 __calc_borders() template<typename _RAIter , typename _DifferenceTp >

```
void __gnu_parallel::__calc_borders (
             _RAIter __elements,
             _DifferenceTp __length,
             _DifferenceTp * __off )
```

Precalculate __advances for Knuth-Morris-Pratt algorithm.

Parameters

__elements	Begin iterator of sequence to search for.
__length	Length of sequence to search for.
__off	Returned __offsets.

Definition at line 51 of file search.h.
Referenced by __search_template().

3.6.4.2 __compare_and_swap() template<typename _Tp >

```
bool __gnu_parallel::__compare_and_swap (
             volatile _Tp * __ptr,
             _Tp __comparand,
             _Tp __replacement )  [inline]
```

Compare-and-swap.
Compare *__ptr and __comparand. If equal, let *__ptr=__replacement and return true, return false otherwise.

Parameters

__ptr	Pointer to signed integer.
__comparand	Compare value.
__replacement	Replacement value.

Definition at line 108 of file parallel/compatibility.h.
Referenced by __parallel_partition(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front().

3.6.4.3 __decode2() void __gnu_parallel::__decode2 (

```
             _CASable __x,
             int & __a,
             int & __b )  [inline]
```

Decode two integers from one gnu_parallel::_CASable.

Parameters

_↩ _x	__gnu_parallel::_CASable to decode integers from.
_↩ _a	First integer, to be decoded from the most-significant _CASable_bits/2 bits of __x.
_↩ _b	Second integer, to be encoded in the least-significant _CASable_bits/2 bits of __x.

See also

__encode2

Definition at line 133 of file base.h.
References _CASable_bits, and _CASable_mask.
Referenced by __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back(), __gnu_parallel::_↩ RestrictedBoundedConcurrentQueue< _Tp >::pop_front(), and __gnu_parallel::_RestrictedBoundedConcurrent↩ Queue< _Tp >::push_front().

3.6.4.4 __determine_samples()

```
template<typename _RAIter , typename _DifferenceTp >
void __gnu_parallel::__determine_samples (
            _PMWMSSortingData< _RAIter > * __sd,
            _DifferenceTp __num_samples )
```

Select _M_samples from a sequence.

Parameters

__sd	Pointer to algorithm data. _Result will be placed in __sd->_M_samples.
__num_samples	Number of _M_samples to select.

Definition at line 97 of file multiway_mergesort.h.
References __equally_split(), __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_samples, __gnu_parallel::_↩ PMWMSSortingData< _RAIter >::_M_source, and __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_starts.

3.6.4.5 __encode2()

```
_CASable __gnu_parallel::__encode2 (
            int __a,
            int __b )  [inline]
```

Encode two integers into one gnu_parallel::_CASable.

Parameters

_↩ _a	First integer, to be encoded in the most-significant _CASable_bits/2 bits.
_↩ _b	Second integer, to be encoded in the least-significant _CASable_bits/2 bits.

Returns

value encoding __a and __b.

See also

__decode2

Definition at line 119 of file base.h.
References _CASable_bits.
Referenced by __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue(), __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back(), and __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front().

3.6.4.6 __equally_split() template<typename _DifferenceType , typename _OutputIterator >

```
_OutputIterator __gnu_parallel::__equally_split (
            _DifferenceType __n,
            _ThreadIndex __num_threads,
            _OutputIterator __s )
```

function to split a sequence into parts of almost equal size.
The resulting sequence __s of length __num_threads+1 contains the splitting positions when splitting the range [0,__n) into parts of almost equal size (plus minus 1). The first entry is 0, the last one n. There may result empty parts.

Parameters

__n	Number of elements
__num_threads	Number of parts
__s	Splitters

Returns

End of __splitter sequence, i.e. __s+__num_threads+1

Definition at line 48 of file equally_split.h.
Referenced by __determine_samples(), __find_template(), __parallel_partial_sum_linear(), __parallel_unique_copy(), and __search_template().

3.6.4.7 __equally_split_point() template<typename _DifferenceType >

```
_DifferenceType __gnu_parallel::__equally_split_point (
            _DifferenceType __n,
            _ThreadIndex __num_threads,
            _ThreadIndex __thread_no )
```

function to split a sequence into parts of almost equal size.
Returns the position of the splitting point between thread number __thread_no (included) and thread number __thread_no+1 (excluded).

Parameters

__n	Number of elements
__num_threads	Number of parts
__thread_no	Number of threads

Returns

splitting point

Definition at line 75 of file equally_split.h.
Referenced by __for_each_template_random_access_ed().

3.6.4.8 __fetch_and_add() template<typename _Tp >

```
_Tp __gnu_parallel::__fetch_and_add (
            volatile _Tp * __ptr,
            _Tp __addend ) [inline]
```

Add a value to a variable, atomically.

Parameters

__ptr	Pointer to a signed integer.
__addend	Value to add.

Definition at line 74 of file parallel/compatibility.h.
Referenced by __parallel_partition().

3.6.4.9 __find_template() [1/4] template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector >

```
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred,
            _Selector __selector ) [inline]
```

Parallel std::find, switch for different algorithms.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

Definition at line 60 of file find.h.
References __gnu_parallel::_Settings::get().

3.6.4.10 __find_template() [2/4] template<typename _RAIter1 , typename _RAIter2 , typename _Pred , typename _Selector >

```
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (
            _RAIter1 __begin1,
```

```
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred,
            _Selector __selector,
            constant_size_blocks_tag  )
```

Parallel std::find, constant block size variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

See also

__gnu_parallel::_Settings::find_sequential_search_size

__gnu_parallel::_Settings::find_block_size There are two main differences between the growing blocks and the constant-size blocks variants.

1. For GB, the block size grows; for CSB, the block size is fixed.
2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 315 of file find.h.
References _GLIBCXX_CALL, __gnu_parallel::_Settings::find_initial_block_size, __gnu_parallel::_Settings::find_↩ sequential_search_size, std::pair< _T1, _T2 >::first, and __gnu_parallel::_Settings::get().

3.6.4.11 __find_template() [3/4]

```
template<typename _RAIter1 , typename _RAIter2 , typename _Pred ,
typename _Selector >
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred,
            _Selector __selector,
            equal_split_tag  )
```

Parallel std::find, equal splitting variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

Definition at line 97 of file find.h.
References __equally_split(), and _GLIBCXX_CALL.

3.6.4.12 __find_template() [4/4]

```
template<typename _RAIter1 , typename _RAIter2 , typename _Pred ,
typename _Selector >
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_template (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred,
            _Selector __selector,
            growing_blocks_tag  )
```

Parallel std::find, growing block size variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence. Second __sequence must have same length as first sequence.
__pred	Find predicate.
__selector	_Functionality (e. g. std::find_if(), std::equal(),...)

Returns

Place of finding in both sequences.

See also

__gnu_parallel::_Settings::find_sequential_search_size

__gnu_parallel::_Settings::find_scale_factor

There are two main differences between the growing blocks and the constant-size blocks variants.

1. For GB, the block size grows; for CSB, the block size is fixed.
2. For GB, the blocks are allocated dynamically; for CSB, the blocks are allocated in a predetermined manner, namely spacial round-robin.

Definition at line 185 of file find.h.

3.6.4.13 __for_each_template_random_access()

```
template<typename _IIter , typename _UserOp , typename
_Functionality , typename _Red , typename _Result >
_UserOp __gnu_parallel::__for_each_template_random_access (
            _IIter __begin,
            _IIter __end,
            _UserOp __user_op,
            _Functionality & __functionality,
```

```
            _Red __reduction,
            _Result __reduction_start,
            _Result & __output,
            typename std::iterator_traits< _IIter >::difference_type __bound,
            _Parallelism __parallelism_tag )
```

Chose the desired algorithm by evaluating __parallelism_tag.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__user_op	A user-specified functor (comparator, predicate, associative operator,...)
__functionality	functor to *process* an element with __user_op (depends on desired functionality, e. g. accumulate, for_each,...
__reduction	Reduction functor.
__reduction_start	Initial value for reduction.
__output	Output iterator.
__bound	Maximum number of elements processed.
__parallelism_tag	Parallelization method

Definition at line 61 of file for_each.h.
References __for_each_template_random_access_ed(), __for_each_template_random_access_omp_loop(), __for_each_template_random_access_workstealing(), parallel_omp_loop, parallel_omp_loop_static, and parallel_unbalanced.

3.6.4.14 __for_each_template_random_access_ed()

```
template<typename _RAIter , typename _Op , typename _Fu , typename _Red , typename _Result >
_Op __gnu_parallel::__for_each_template_random_access_ed (
            _RAIter __begin,
            _RAIter __end,
            _Op __o,
            _Fu & __f,
            _Red __r,
            _Result __base,
            _Result & __output,
            typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using hand-crafted parallelization by equal splitting the work.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, ...)
__f	Functor to "process" an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to "add" a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file par_loop.h.
References __equally_split_point().
Referenced by __for_each_template_random_access().

3.6.4.15 __for_each_template_random_access_omp_loop()

```
template<typename _RAIter , typename _Op ,
typename _Fu , typename _Red , typename _Result >
_Op __gnu_parallel::__for_each_template_random_access_omp_loop (
            _RAIter __begin,
            _RAIter __end,
            _Op __o,
            _Fu & __f,
            _Red __r,
            _Result __base,
            _Result & __output,
            typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, etc.).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 67 of file omp_loop.h.
Referenced by __for_each_template_random_access().

3.6.4.16 __for_each_template_random_access_omp_loop_static()

```
template<typename _RAIter , typename
_Op , typename _Fu , typename _Red , typename _Result >
_Op __gnu_parallel::__for_each_template_random_access_omp_loop_static (
            _RAIter __begin,
            _RAIter __end,
            _Op __o,
            _Fu & __f,
            _Red __r,
            _Result __base,
            _Result & __output,
            typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Embarrassingly parallel algorithm for random access iterators, using an OpenMP for loop with static scheduling.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__o	User-supplied functor (comparator, predicate, adding functor, ...).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed __elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 66 of file omp_loop_static.h.

3.6.4.17 __for_each_template_random_access_workstealing()

```
template<typename _RAIter , typename _Op
, typename _Fu , typename _Red , typename _Result >
_Op __gnu_parallel::__for_each_template_random_access_workstealing (
            _RAIter __begin,
            _RAIter __end,
            _Op __op,
            _Fu & __f,
            _Red __r,
            _Result __base,
            _Result & __output,
            typename std::iterator_traits< _RAIter >::difference_type __bound )
```

Work stealing algorithm for random access iterators.
Uses O(1) additional memory. Synchronization at job lists is done with atomic operations.

Parameters

__begin	Begin iterator of element sequence.
__end	End iterator of element sequence.
__op	User-supplied functor (comparator, predicate, adding functor, ...).
__f	Functor to *process* an element with __op (depends on desired functionality, e. g. for std::for_each(), ...).
__r	Functor to *add* a single __result to the already processed elements (depends on functionality).
__base	Base value for reduction.
__output	Pointer to position where final result is written to
__bound	Maximum number of elements processed (e. g. for std::count_n()).

Returns

User-supplied functor (that may contain a part of the result).

Definition at line 99 of file workstealing.h.
References __gnu_debug::__base(), __yield(), _GLIBCXX_CALL, __gnu_parallel::_Job< _DifferenceTp >::_M_first, __gnu_parallel::_Job< _DifferenceTp >::_M_last, __gnu_parallel::_Job< _DifferenceTp >::_M_load, __gnu_parallel::_Settings::cache_line_size, __gnu_parallel::_Settings::get(), and min().

Referenced by __for_each_template_random_access().

3.6.4.18 __is_sorted()

```
template<typename _IIter , typename _Compare >
bool __gnu_parallel::__is_sorted (
            _IIter __begin,
            _IIter __end,
            _Compare __comp )
```

Check whether [__begin, __end) is sorted according to __comp.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator.

Returns

true if sorted, false otherwise.

Definition at line 51 of file checkers.h.

3.6.4.19 __median_of_three_iterators()

```
template<typename _RAIter , typename _Compare >
_RAIter __gnu_parallel::__median_of_three_iterators (
            _RAIter __a,
            _RAIter __b,
            _RAIter __c,
            _Compare __comp )
```

Compute the median of three referenced elements, according to __comp.

Parameters

__a	First iterator.
__b	Second iterator.
__c	Third iterator.
__comp	Comparator.

Definition at line 398 of file base.h.

3.6.4.20 __merge_advance()

```
template<typename _RAIter1 , typename _RAIter2 , typename _Output↩
Iterator , typename _DifferenceTp , typename _Compare >
_OutputIterator __gnu_parallel::__merge_advance (
            _RAIter1 & __begin1,
            _RAIter1 __end1,
            _RAIter2 & __begin2,
            _RAIter2 __end2,
            _OutputIterator __target,
            _DifferenceTp __max_length,
            _Compare __comp )  [inline]
```

Merge routine being able to merge only the __max_length smallest elements.

The __begin iterators are advanced accordingly, they might not reach __end, in contrast to the usual variant. Static switch on whether to use the conditional-move variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 171 of file merge.h.
References __merge_advance_movc(), and _GLIBCXX_CALL.
Referenced by __parallel_merge_advance().

3.6.4.21 __merge_advance_movc()

```
template<typename _RAIter1 , typename _RAIter2 , typename _↩
OutputIterator , typename _DifferenceTp , typename _Compare >
_OutputIterator __gnu_parallel::__merge_advance_movc (
             _RAIter1 & __begin1,
             _RAIter1 __end1,
             _RAIter2 & __begin2,
             _RAIter2 __end2,
             _OutputIterator __target,
             _DifferenceTp __max_length,
             _Compare __comp )
```

Merge routine being able to merge only the __max_length smallest elements.
The __begin iterators are advanced accordingly, they might not reach __end, in contrast to the usual variant. Specially designed code should allow the compiler to generate conditional moves instead of branches.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 105 of file merge.h.
Referenced by __merge_advance().

3.6.4.22 __merge_advance_usual()

```
template<typename _RAIter1 , typename _RAIter2 , typename _↩
OutputIterator , typename _DifferenceTp , typename _Compare >
_OutputIterator __gnu_parallel::__merge_advance_usual (
            _RAIter1 & __begin1,
            _RAIter1 __end1,
            _RAIter2 & __begin2,
            _RAIter2 __end2,
            _OutputIterator __target,
            _DifferenceTp __max_length,
            _Compare __comp )
```

Merge routine being able to merge only the __max_length smallest elements.
The __begin iterators are advanced accordingly, they might not reach __end, in contrast to the usual variant.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 57 of file merge.h.

3.6.4.23 __parallel_merge_advance() [1/2]

```
template<typename _RAIter1 , typename _RAIter3 , typename
_Compare >
_RAIter3 __gnu_parallel::__parallel_merge_advance (
            _RAIter1 & __begin1,
            _RAIter1 __end1,
            _RAIter1 & __begin2,
            _RAIter1 __end2,
            _RAIter3 __target,
            typename std::iterator_traits< _RAIter1 >::difference_type __max_length,
            _Compare __comp )  [inline]
```

Parallel merge routine being able to merge only the __max_length smallest elements.
The __begin iterators are advanced accordingly, they might not reach __end, in contrast to the usual variant. The functionality is projected onto parallel_multiway_merge.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.

Parameters

__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 223 of file merge.h.
References multiway_merge_exact_splitting(), and parallel_multiway_merge().

3.6.4.24 __parallel_merge_advance() [2/2]

```
template<typename _RAIter1 , typename _RAIter2 , typename
_RAIter3 , typename _Compare >
_RAIter3 __gnu_parallel::__parallel_merge_advance (
            _RAIter1 & __begin1,
            _RAIter1 __end1,
            _RAIter2 & __begin2,
            _RAIter2 __end2,
            _RAIter3 __target,
            typename std::iterator_traits< _RAIter1 >::difference_type __max_length,
            _Compare __comp ) [inline]
```

Merge routine fallback to sequential in case the iterators of the two input sequences are of different type.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__target	Target begin iterator.
__max_length	Maximum number of elements to merge.
__comp	Comparator.

Returns

Output end iterator.

Definition at line 195 of file merge.h.
References __merge_advance().

3.6.4.25 __parallel_nth_element()

```
template<typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_nth_element (
            _RAIter __begin,
            _RAIter __nth,
            _RAIter __end,
            _Compare __comp )
```

Parallel implementation of std::nth_element().

Parameters

__begin	Begin iterator of input sequence.
__nth	_Iterator of element that must be in position afterwards.
__end	End iterator of input sequence.
__comp	Comparator.

Definition at line 332 of file partition.h.
References __parallel_partition(), _GLIBCXX_CALL, __gnu_parallel::_Settings::get(), std::max(), __gnu_parallel::_Settings::nth_element_minimal_n, and __gnu_parallel::_Settings::partition_minimal_n.

3.6.4.26 __parallel_partial_sort()

```
template<typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_partial_sort (
            _RAIter __begin,
            _RAIter __middle,
            _RAIter __end,
            _Compare __comp )
```

Parallel implementation of std::partial_sort().

Parameters

__begin	Begin iterator of input sequence.
__middle	Sort until this position.
__end	End iterator of input sequence.
__comp	Comparator.

Definition at line 422 of file partition.h.
References __parallel_nth_element().

3.6.4.27 __parallel_partial_sum()

```
template<typename _IIter , typename _OutputIterator , typename _BinaryOperation >
_OutputIterator __gnu_parallel::__parallel_partial_sum (
            _IIter __begin,
            _IIter __end,
            _OutputIterator __result,
            _BinaryOperation __bin_op )
```

Parallel partial sum front-__end.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__result	Begin iterator of output sequence.
__bin_op	Associative binary function.

Returns

End iterator of output sequence.

Definition at line 205 of file partial_sum.h.
References __parallel_partial_sum_linear(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().

3.6.4.28 __parallel_partial_sum_basecase()

```
template<typename _IIter , typename _OutputIterator , typename _BinaryOperation >
_OutputIterator __gnu_parallel::__parallel_partial_sum_basecase (
            _IIter __begin,
            _IIter __end,
            _OutputIterator __result,
            _BinaryOperation __bin_op,
            typename std::iterator_traits< _IIter >::value_type __value )
```

Base case prefix sum routine.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__result	Begin iterator of output sequence.
__bin_op	Associative binary function.
__value	Start value. Must be passed since the neutral element is unknown in general.

Returns

End iterator of output sequence.

Definition at line 58 of file partial_sum.h.
Referenced by __parallel_partial_sum_linear().

3.6.4.29 __parallel_partial_sum_linear()

```
template<typename _IIter , typename _OutputIterator , typename _BinaryOperation >
_OutputIterator __gnu_parallel::__parallel_partial_sum_linear (
            _IIter __begin,
            _IIter __end,
            _OutputIterator __result,
            _BinaryOperation __bin_op,
            typename std::iterator_traits< _IIter >::difference_type __n )
```

Parallel partial sum implementation, two-phase approach, no recursion.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__result	Begin iterator of output sequence.
__bin_op	Associative binary function.
__n	Length of sequence.

Returns

End iterator of output sequence.

Definition at line 89 of file partial_sum.h.

3.6.4.30 __parallel_partition()

```
template<typename _RAIter , typename _Predicate >
std::iterator_traits<_RAIter>::difference_type __gnu_parallel::__parallel_partition (
            _RAIter __begin,
            _RAIter __end,
            _Predicate __pred,
            _ThreadIndex __num_threads )
```

Parallel implementation of std::partition.

Parameters

__begin	Begin iterator of input sequence to split.
__end	End iterator of input sequence to split.
__pred	Partition predicate, possibly including some kind of pivot.
__num_threads	Maximum number of threads to use for this task.

Returns

Number of elements not fulfilling the predicate.

Definition at line 56 of file partition.h.
References __compare_and_swap(), __fetch_and_add(), _GLIBCXX_CALL, _GLIBCXX_VOLATILE, __gnu_parallel::_Settings::get(), __gnu_parallel::_Settings::partition_chunk_share, and __gnu_parallel::_Settings::partition_chunk_size.

3.6.4.33 __parallel_random_shuffle_drs_pu()

```
template<typename _RAIter , typename _RandomNumberGenerator >
void __gnu_parallel::__parallel_random_shuffle_drs_pu (
            _DRSSorterPU< _RAIter, _RandomNumberGenerator > * __pus )
```

Random shuffle code executed by each thread.

Parameters

__pus	Array of thread-local data records.

Definition at line 122 of file random_shuffle.h.
References __random_number_pow2(), __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist, __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins, __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits, __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads, __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_sd, __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed, __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts, and std::partial_sum().
Referenced by __parallel_random_shuffle_drs().

3.6.4.34 __parallel_sort() [1/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            balanced_quicksort_tag __parallelism )  [inline]
```

Choose balanced quicksort for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 161 of file sort.h.
References _GLIBCXX_CALL.

3.6.4.35 __parallel_sort() [2/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            default_parallel_tag __parallelism )  [inline]
```

Choose multiway mergesort with exact splitting, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 183 of file sort.h.
References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.
Here is the call graph for this function:

3.6.4.36 __parallel_sort() [3/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            multiway_mergesort_exact_tag __parallelism )  [inline]
```

Choose multiway mergesort with exact splitting, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 99 of file sort.h.
References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.
Here is the call graph for this function:

3.6.4.37 __parallel_sort() [4/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            multiway_mergesort_sampling_tag __parallelism )  [inline]
```

Choose multiway mergesort with splitting by sampling, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 120 of file sort.h.
References __gnu_parallel::parallel_tag::__get_num_threads(), and _GLIBCXX_CALL.
Here is the call graph for this function:

3.6.4.38 __parallel_sort() [5/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            multiway_mergesort_tag __parallelism )  [inline]
```

Choose multiway mergesort, splitting variant at run-time, for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.

Parameters

__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 75 of file sort.h.
References __gnu_parallel::parallel_tag::__get_num_threads(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().
Here is the call graph for this function:

3.6.4.39 __parallel_sort() [6/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            parallel_tag __parallelism ) [inline]
```

Choose a parallel sorting algorithm.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 203 of file sort.h.
References __gnu_parallel::parallel_tag::__get_num_threads(), __parallel_sort_qs(), __parallel_sort_qsb(), _GLIBCXX_CALL, and __gnu_parallel::_Settings::get().
Here is the call graph for this function:

3.6.4.40 __parallel_sort() [7/7]

```
template<bool __stable, typename _RAIter , typename _Compare >
void __gnu_parallel::__parallel_sort (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            quicksort_tag __parallelism ) [inline]
```

Choose quicksort for parallel sorting.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__comp	Comparator.

Template Parameters

__stable	Sort stable.

Definition at line 140 of file sort.h.
References _GLIBCXX_CALL.

3.6.4.41 __parallel_sort_qs() template<typename _RAIter , typename _Compare >

```
void __gnu_parallel::__parallel_sort_qs (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            _ThreadIndex __num_threads )
```

Unbalanced quicksort main call.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator input sequence, ignored.
__comp	Comparator.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 154 of file quicksort.h.

            _RAIter __end,
            _Compare __comp,
            _ThreadIndex __num_threads )
```

Unbalanced quicksort conquer step.

Parameters

__begin	Begin iterator of subsequence.
__end	End iterator of subsequence.
__comp	Comparator.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 101 of file quicksort.h.
Referenced by __parallel_sort_qs().

3.6.4.43 __parallel_sort_qs_divide() template<typename _RAIter , typename _Compare >

```
std::iterator_traits<_RAIter>::difference_type __gnu_parallel::__parallel_sort_qs_divide (
            _RAIter __begin,
            _RAIter __end,
```

```
            _Compare __comp,
            typename std::iterator_traits< _RAIter >::difference_type __pivot_rank,
            typename std::iterator_traits< _RAIter >::difference_type __num_samples,
            _ThreadIndex __num_threads )
```

Unbalanced quicksort divide step.

Parameters

__begin	Begin iterator of subsequence.
__end	End iterator of subsequence.
__comp	Comparator.
__pivot_rank	Desired __rank of the pivot.
__num_samples	Choose pivot from that many samples.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 51 of file quicksort.h.
References std::min().

3.6.4.44 __parallel_sort_qsb() template<typename _RAIter , typename _Compare >

```
void __gnu_parallel::__parallel_sort_qsb (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            _ThreadIndex __num_threads )
```

Top-level quicksort routine.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 433 of file balanced_quicksort.h.

3.6.4.45 __parallel_unique_copy() [1/2] template<typename _IIter , class _OutputIterator >

```
_OutputIterator __gnu_parallel::__parallel_unique_copy (
            _IIter __first,
            _IIter __last,
            _OutputIterator __result )  [inline]
```

Parallel std::unique_copy(), without explicit equality predicate.

Parameters

__first	Begin iterator of input sequence.
__last	End iterator of input sequence.

Parameters

__result	Begin iterator of result __sequence.

Returns

End iterator of result __sequence.

Definition at line 186 of file unique_copy.h.
References __parallel_unique_copy().

3.6.4.46 __parallel_unique_copy() [2/2]

```
template<typename _IIter , class _OutputIterator , class _BinaryPredicate >
_OutputIterator __gnu_parallel::__parallel_unique_copy (
            _IIter __first,
            _IIter __last,
            _OutputIterator __result,
            _BinaryPredicate __binary_pred )
```

Parallel std::unique_copy(), w/__o explicit equality predicate.

Parameters

__first	Begin iterator of input sequence.
__last	End iterator of input sequence.
__result	Begin iterator of result __sequence.
__binary_pred	Equality predicate.

Returns

End iterator of result __sequence.

Definition at line 50 of file unique_copy.h.
References __equally_split(), and _GLIBCXX_CALL.
Referenced by __parallel_unique_copy().

3.6.4.47 __qsb_conquer()

```
template<typename _RAIter , typename _Compare >
void __gnu_parallel::__qsb_conquer (
            _QSBThreadLocal< _RAIter > ** __tls,
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            _ThreadIndex __iam,
            _ThreadIndex __num_threads,
            bool __parent_wait )
```

Quicksort conquer step.

Parameters

__tls	Array of thread-local storages.
__begin	Begin iterator of subsequence.
__end	End iterator of subsequence.

Parameters

__comp	Comparator.
__iam	Number of the thread processing this function.
__num_threads	Number of threads that are allowed to work on this part.

Definition at line 174 of file balanced_quicksort.h.
References __qsb_divide(), __qsb_local_sort_with_helping(), and __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial.
Referenced by __parallel_sort_qsb().

3.6.4.48 __qsb_divide()

```
template<typename _RAIter , typename _Compare >
std::iterator_traits<_RAIter>::difference_type __gnu_parallel::__qsb_divide (
            _RAIter __begin,
            _RAIter __end,
            _Compare __comp,
            _ThreadIndex __num_threads )
```

Balanced quicksort divide step.

Parameters

__begin	Begin iterator of subsequence.
__end	End iterator of subsequence.
__comp	Comparator.
__num_threads	Number of threads that are allowed to work on this part.

Precondition

(__end-__begin)>=1

Definition at line 103 of file balanced_quicksort.h.
Referenced by __qsb_conquer().

3.6.4.49 __qsb_local_sort_with_helping()

```
template<typename _RAIter , typename _Compare >

3.6.4.50 __random_number_pow2() template<typename _RandomNumberGenerator >

```
int __gnu_parallel::__random_number_pow2 (
            int __logp,
            _RandomNumberGenerator & __rng )  [inline]
```

Generate a random number in [0,2^__logp).

Parameters

__logp	Logarithm (basis 2) of the upper range __bound.
__rng	Random number generator to use.

Definition at line 115 of file random_shuffle.h.
Referenced by __parallel_random_shuffle_drs_pu(), and __sequential_random_shuffle().

3.6.4.51 __rd_log2() template<typename _Size >

```
_Size __gnu_parallel::__rd_log2 (
            _Size __n )  [inline]
```

Calculates the rounded-down logarithm of __n for base 2.

Parameters

_↩ _n	Argument.

Returns

Returns 0 for any argument <1.

Definition at line 102 of file base.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), __parallel_random_shuffle↩
_drs(), __parallel_sort_qsb(), __round_up_to_pow2(), __sequential_random_shuffle(), and multiseq_selection().

3.6.4.52 __round_up_to_pow2() template<typename _Tp >

```
_Tp __gnu_parallel::__round_up_to_pow2 (
            _Tp __x )
```

Round up to the next greater power of 2.

Parameters

_↩ _x	_Integer to round up

Definition at line 248 of file random_shuffle.h.
References __rd_log2().
Referenced by __parallel_random_shuffle_drs(), __sequential_random_shuffle(), and multiseq_selection().

3.6.4.53 __search_template()

```
template<typename __RAIter1 , typename __RAIter2 , typename _Pred >
__RAIter1 __gnu_parallel::__search_template (
            __RAIter1 __begin1,
            __RAIter1 __end1,
            __RAIter2 __begin2,
            __RAIter2 __end2,
            _Pred __pred )
```

Parallel std::search.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__end2	End iterator of second sequence.
__pred	Find predicate.

Returns

Place of finding in first sequences.

Definition at line 81 of file search.h.
References __calc_borders(), __equally_split(), _GLIBCXX_CALL, and std::min().

3.6.4.54 __sequential_multiway_merge()

```
template<bool __stable, bool __sentinels, typename _↩
RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare >
_RAIter3 __gnu_parallel::__sequential_multiway_merge (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator
>::value_type::first_type >::value_type & __sentinel,
            _DifferenceTp __length,
            _Compare __comp )
```

Sequential multi-way merging switch.
The _GLIBCXX_PARALLEL_DECISION is based on the branching factor and runtime settings.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, possibly larger than the number of elements available.
__sentinel	The sequences have __a __sentinel element.

Returns

End iterator of output sequence.

Definition at line 920 of file multiway_merge.h.

References _GLIBCXX_CALL.
Referenced by multiway_merge(), and multiway_merge_sentinels().

3.6.4.55 __sequential_random_shuffle() template<typename _RAIter , typename _RandomNumberGenerator >

```
void __gnu_parallel::__sequential_random_shuffle (
             _RAIter __begin,
             _RAIter __end,
             _RandomNumberGenerator & __rng )
```

Sequential cache-efficient random shuffle.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__rng	Random number generator to use.

Definition at line 410 of file random_shuffle.h.
References __random_number_pow2(), __rd_log2(), __round_up_to_pow2(), __gnu_parallel::_Settings::get(), __gnu_parallel::_Settings::L2_cache_size, std::min(), std::partial_sum(), and __gnu_parallel::_Settings::TLB_size.
Referenced by __parallel_random_shuffle_drs().

3.6.4.56 __shrink() template<typename _IIter >

```
void __gnu_parallel::__shrink (
             std::vector< _IIter > & __os_starts,
             size_t & __count_to_two,
             size_t & __range_length )
```

Combines two ranges into one and thus halves the number of ranges.

Parameters

__os_starts	Start positions worked on (oversampled).
__count_to_two	Counts up to 2.
__range_length	Current length of a chunk.

Definition at line 70 of file list_partition.h.
References std::vector< _Tp, _Alloc >::size().
Referenced by __shrink_and_double().

3.6.4.57 __shrink_and_double() template<typename _IIter >

```
void __gnu_parallel::__shrink_and_double (
             std::vector< _IIter > & __os_starts,
             size_t & __count_to_two,
             size_t & __range_length,
             const bool __make_twice )
```

Shrinks and doubles the ranges.

Parameters

Parameters

__os_starts	Start positions worked on (oversampled).
__count_to_two	Counts up to 2.
__range_length	Current length of a chunk.
__make_twice	Whether the __os_starts is allowed to be grown or not

Definition at line 50 of file list_partition.h.
References __shrink(), std::vector< _Tp, _Alloc >::resize(), and std::vector< _Tp, _Alloc >::size().
Referenced by list_partition().

3.6.4.58 __yield() `void __gnu_parallel::__yield ( ) [inline]`

Yield control to another thread, without waiting for the end of the time slice.
Definition at line 121 of file parallel/compatibility.h.
Referenced by __for_each_template_random_access_workstealing().

3.6.4.59 list_partition()

```
template<typename _IIter , typename _FunctorType >
size_t __gnu_parallel::list_partition (
            const _IIter __begin,
            const _IIter __end,
            _IIter * __starts,
            size_t * __lengths,
            const int __num_parts,
            _FunctorType & __f,
            int __oversampling = 0 )
```

Splits a sequence given by input iterators into parts of almost equal size.
The function needs only one pass over the sequence.

Parameters

__begin	Begin iterator of input sequence.
__end	End iterator of input sequence.
__starts	Start iterators for the resulting parts, dimension __num_parts+1. For convenience, __starts [__num_parts] contains the end iterator of the sequence.
__lengths	Length of the resulting parts.
__num_parts	Number of parts to split the sequence into.
__f	Functor to be applied to each element by traversing __it
__oversampling	Oversampling factor. If 0, then the partitions will differ in at most $\sqrt{\text{end} - \text{begin}}$ elements. Otherwise, the ratio between the longest and the shortest part is bounded by $1/(\text{oversampling} \cdot \text{num\_parts})$

Returns

Length of the whole sequence.

Definition at line 101 of file list_partition.h.
References __shrink_and_double(), and std::vector< _Tp, _Alloc >::size().

3.6.4.60 max() template<typename _Tp >

```
const _Tp& __gnu_parallel::max (
            const _Tp & __a,
            const _Tp & __b )  [inline]
```

Equivalent to std::max.
Definition at line 150 of file base.h.

3.6.4.61 min() template<typename _Tp >

```
const _Tp& __gnu_parallel::min (
            const _Tp & __a,
            const _Tp & __b )  [inline]
```

Equivalent to std::min.
Definition at line 144 of file base.h.
Referenced by __for_each_template_random_access_workstealing().

3.6.4.62 multiseq_partition() template<typename _RanSeqs , typename _RankType , typename _Rank↩ Iterator , typename _Compare >

```
void __gnu_parallel::multiseq_partition (
            _RanSeqs __begin_seqs,
            _RanSeqs __end_seqs,
            _RankType __rank,
            _RankIterator __begin_offsets,
            _Compare __comp = std::less< typename std::iterator_traits<typename std::iterator_traits<↩
_RanSeqs>::value_type:: first_type>::value_type>() )
```

Splits several sorted sequences at a certain global __rank, resulting in a splitting point for each sequence. The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty. If there are several equal elements across the split, the ones on the __left side will be chosen from sequences with smaller number.

Parameters

__begin_seqs	Begin of the sequence of iterator pairs.
__end_seqs	End of the sequence of iterator pairs.
__rank	The global rank to partition at.
__begin_offsets	A random-access __sequence __begin where the __result will be stored in. Each element of the sequence is an iterator that points to the first element on the greater part of the respective __sequence.
__comp	The ordering functor, defaults to std::less<_Tp>.

Definition at line 122 of file multiseq_selection.h.
References _GLIBCXX_CALL, and std::distance().

3.6.4.63 multiseq_selection() template<typename _Tp , typename _RanSeqs , typename _RankType , typename _Compare >

```
_Tp __gnu_parallel::multiseq_selection (
            _RanSeqs __begin_seqs,
            _RanSeqs __end_seqs,
            _RankType __rank,
```

```
            _RankType & __offset,
            _Compare __comp = std::less<_Tp>() )
```

Selects the element at a certain global __rank from several sorted sequences.
The sequences are passed via a sequence of random-access iterator pairs, none of the sequences may be empty.

Parameters

__begin_seqs	Begin of the sequence of iterator pairs.
__end_seqs	End of the sequence of iterator pairs.
__rank	The global rank to partition at.
__offset	The rank of the selected element in the global subsequence of elements equal to the selected element. If the selected element is unique, this number is 0.
__comp	The ordering functor, defaults to std::less.

Definition at line 388 of file multiseq_selection.h.

3.6.4.64 multiway_merge()

```
template<typename _RAIterPairIterator , typename _RAIterOut , typename
_DifferenceTp , typename _Compare >
_RAIterOut __gnu_parallel::multiway_merge (
            _RAIterPairIterator __seqs_begin,
            _RAIterPairIterator __seqs_end,
            _RAIterOut __target,
            _DifferenceTp __length,
            _Compare __comp,
            __gnu_parallel::sequential_tag  )
```

Multiway Merge Frontend.
Merge the sequences specified by seqs_begin and __seqs_end into __target. __seqs_begin and __seqs_end must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the _M_end of the same sequence in their second entry.
Ties are broken arbitrarily. See stable_multiway_merge for a variant that breaks ties by sequence number but is slower.
The first entries of the pairs (i.e. the begin iterators) will be moved forward.
The output sequence has to provide enough space for all elements that are written to it.
This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- not using sentinels

Example:

```
int sequences[10][10];
for (int __i = 0; __i < 10; ++__i)
  for (int __j = 0; __i < 10; ++__j)
    sequences[__i][__j] = __j;

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
  { seqs.push(std::make_pair<int*>(sequences[__i],
```

```
                                    sequences[__i] + 10)) }

  multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

See also

stable_multiway_merge

Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

Postcondition

[__target, return __value) contains merged __elements from the input sequences.

return __value - __target = min(__length, number of elements in all sequences).

Template Parameters

_RAIterPairIterator	iterator over sequence of pairs of iterators
_RAIterOut	iterator over target sequence
_DifferenceTp	difference type for the sequence
_Compare	strict weak ordering type to compare elements in sequences

Parameters

__seqs_begin	__begin of sequence __sequence
__seqs_end	_M_end of sequence __sequence
__target	target sequence to merge to.
__comp	strict weak ordering to use for element comparison.
__length	Maximum length to merge, possibly larger than the number of elements available.

Returns

_M_end iterator of output sequence

Definition at line 1418 of file multiway_merge.h.
References __sequential_multiway_merge(), and _GLIBCXX_CALL.

3.6.4.65 multiway_merge_3_variant()

```
template<template< typename _RAI, typename _Cp > class iterator,
typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare >
_RAIter3 __gnu_parallel::multiway_merge_3_variant (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            _DifferenceTp __length,
            _Compare __comp )
```

Highly efficient 3-way merging procedure.
Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into labels in C++).
This works well for merging up to 4 sequences.
Note that making the merging stable does *not* come at a performance hit.
Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 241 of file multiway_merge.h.
References _GLIBCXX_CALL.

3.6.4.66 multiway_merge_4_variant()

```
template<template< typename _RAI, typename _Cp > class iterator,
typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare >
_RAIter3 __gnu_parallel::multiway_merge_4_variant (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            _DifferenceTp __length,
            _Compare __comp )
```

Highly efficient 4-way merging procedure.
Merging is done with the algorithm implementation described by Peter Sanders. Basically, the idea is to minimize the number of necessary comparison after merging an element. The implementation trick that makes this fast is that the order of the sequences is stored in the instruction pointer (translated into goto labels in C++).
This works well for merging up to 4 sequences.
Note that making the merging stable does *not* come at a performance hit.
Whether the merging is done guarded or unguarded is selected by the used iterator class.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 360 of file multiway_merge.h.
References _GLIBCXX_CALL.

3.6.4.67 multiway_merge_exact_splitting()

```
template<bool __stable, typename _RAIterIterator , typename _Compare , typename _DifferenceType >
void __gnu_parallel::multiway_merge_exact_splitting (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _DifferenceType __length,
            _DifferenceType __total_length,
            _Compare __comp,
            std::vector< std::pair< _DifferenceType, _DifferenceType > > * __pieces )
```

Exact splitting for parallel multiway-merge routine.
None of the passed sequences may be empty.
Definition at line 1120 of file multiway_merge.h.
Referenced by __parallel_merge_advance().

3.6.4.68 multiway_merge_loser_tree()

```
template<typename _LT , typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare >
_RAIter3 __gnu_parallel::multiway_merge_loser_tree (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            _DifferenceTp __length,
            _Compare __comp )
```

Multi-way merging procedure for a high branching factor, guarded case.
This merging variant uses a LoserTree class as selected by _LT.
Stability is selected through the used LoserTree class _LT.
At least one non-empty sequence is required.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 491 of file multiway_merge.h.
References _GLIBCXX_CALL, and _GLIBCXX_PARALLEL_LENGTH.

3.6.4.69 multiway_merge_loser_tree_sentinel()

```
template<typename _UnguardedLoserTree , typename _RAIterIterator , typename _RAIter3 , typename _DifferenceTp , typename _Compare >
```

```
_RAIter3 __gnu_parallel::multiway_merge_loser_tree_sentinel (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator
>::value_type::first_type >::value_type & __sentinel,
            _DifferenceTp __length,
            _Compare __comp )
```

Multi-way merging procedure for a high branching factor, requiring sentinels to exist.

Template Parameters

_UnguardedLoserTree	Loser Tree variant to use for the unguarded merging.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 662 of file multiway_merge.h.
References _GLIBCXX_CALL.

3.6.4.70 multiway_merge_loser_tree_unguarded()

```
template<typename _LT , typename _RAIterIterator ,
typename _RAIter3 , typename _DifferenceTp , typename _Compare >
_RAIter3 __gnu_parallel::multiway_merge_loser_tree_unguarded (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            const typename std::iterator_traits< typename std::iterator_traits< _RAIterIterator
>::value_type::first_type >::value_type & __sentinel,
            _DifferenceTp __length,
            _Compare __comp )
```

Multi-way merging procedure for a high branching factor, unguarded case.
Merging is done using the LoserTree class `_LT`.
Stability is selected by the used LoserTrees.

Precondition

No input will run out of elements during the merge.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.

Parameters

__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, less equal than the total number of elements available.

Returns

End iterator of output sequence.

Definition at line 574 of file multiway_merge.h.
References _GLIBCXX_CALL.

3.6.4.71 multiway_merge_sampling_splitting()

```
template<bool __stable, typename _RAIterIterator , typename _Compare , typename _DifferenceType >
void __gnu_parallel::multiway_merge_sampling_splitting (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _DifferenceType __length,
            _DifferenceType __total_length,
            _Compare __comp,
            std::vector< std::pair< _DifferenceType, _DifferenceType > > * __pieces )
```

Sampling based splitting for parallel multiway-merge routine.

References _GLIBCXX_PARALLEL_LENGTH, __gnu_parallel::_Settings::get(), and __gnu_parallel::_Settings::merge_oversampling.

3.6.4.72 multiway_merge_sentinels()

```
template<typename _RAIterPairIterator , typename _RAIterOut , typename _DifferenceTp , typename _Compare >
_RAIterOut __gnu_parallel::multiway_merge_sentinels (
            _RAIterPairIterator __seqs_begin,
            _RAIterPairIterator __seqs_end,
            _RAIterOut __target,
            _DifferenceTp __length,
            _Compare __comp,
            __gnu_parallel::sequential_tag  )
```

Multiway Merge Frontend.
Merge the sequences specified by seqs_begin and __seqs_end into __target. __seqs_begin and __seqs_end must point to a sequence of pairs. These pairs must contain an iterator to the beginning of a sequence in their first entry and an iterator the _M_end of the same sequence in their second entry.
Ties are broken arbitrarily. See stable_multiway_merge for a variant that breaks ties by sequence number but is slower.
The first entries of the pairs (i.e. the begin iterators) will be moved forward accordingly.
The output sequence has to provide enough space for all elements that are written to it.
This function will merge the input sequences:

- not stable
- parallel, depending on the input size and Settings
- using sampling for splitting
- using sentinels

You have to take care that the element the _M_end iterator points to is readable and contains a value that is greater than any other non-sentinel value in all sequences.
Example:

```
int sequences[10][11];
for (int __i = 0; __i < 10; ++__i)
  for (int __j = 0; __i < 11; ++__j)
    sequences[__i][__j] = __j; // __last one is sentinel!

int __out[33];
std::vector<std::pair<int*> > seqs;
for (int __i = 0; __i < 10; ++__i)
  { seqs.push(std::make_pair<int*>(sequences[__i],
                                   sequences[__i] + 10)) }

multiway_merge(seqs.begin(), seqs.end(), __target, std::less<int>(), 33);
```

Precondition

All input sequences must be sorted.

Target must provide enough space to merge out length elements or the number of elements in all sequences, whichever is smaller.

For each __i, __seqs_begin[__i].second must be the end marker of the sequence, but also reference the one more __sentinel element.

Postcondition

[__target, return __value) contains merged __elements from the input sequences.

return __value - __target = min(__length, number of elements in all sequences).

See also

stable_multiway_merge_sentinels

Template Parameters

_RAIterPairIterator	iterator over sequence of pairs of iterators
_RAIterOut	iterator over target sequence
_DifferenceTp	difference type for the sequence
_Compare	strict weak ordering type to compare elements in sequences

Parameters

__seqs_begin	__begin of sequence __sequence
__seqs_end	_M_end of sequence __sequence
__target	target sequence to merge to.
__comp	strict weak ordering to use for element comparison.
__length	Maximum length to merge, possibly larger than the number of elements available.

Returns

_M_end iterator of output sequence

Definition at line 1782 of file multiway_merge.h.

3.6.4.73 parallel_multiway_merge()

```
template<bool __stable, bool __sentinels, typename _RAIter↩
Iterator , typename _RAIter3 , typename _DifferenceTp , typename _Splitter , typename _Compare >
_RAIter3 __gnu_parallel::parallel_multiway_merge (
            _RAIterIterator __seqs_begin,
            _RAIterIterator __seqs_end,
            _RAIter3 __target,
            _Splitter __splitter,
            _DifferenceTp __length,
            _Compare __comp,
            _ThreadIndex __num_threads )
```

Parallel multi-way merge routine.
The _GLIBCXX_PARALLEL_DECISION is based on the branching factor and runtime settings.
Must not be called if the number of sequences is 1.

Template Parameters

_Splitter	functor to split input (either __exact or sampling based)
__stable	Stable merging incurs a performance penalty.
__sentinel	Ignored.

Parameters

__seqs_begin	Begin iterator of iterator pair input sequence.
__seqs_end	End iterator of iterator pair input sequence.
__target	Begin iterator of output sequence.
__comp	Comparator.
__length	Maximum length to merge, possibly larger than the number of elements available.

Returns

End iterator of output sequence.

Definition at line 1225 of file multiway_merge.h.
Referenced by __parallel_merge_advance().

3.7.1 Detailed Description

GNU extensions for policy-based data structures for public use.

3.8 __gnu_sequential Namespace Reference

3.8.1 Detailed Description

GNU sequential classes for public use.

3.9 abi Namespace Reference

3.9.1 Detailed Description

The cross-vendor C++ Application Binary Interface. A namespace alias to __cxxabiv1, but user programs should use the alias 'abi'.
A brief overview of an ABI is given in the libstdc++ FAQ, question 5.8 (you may have a copy of the FAQ locally, or you can view the online version at http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#5_8).
GCC subscribes to a cross-vendor ABI for C++, sometimes called the IA64 ABI because it happens to be the native ABI for that platform. It is summarized at http://www.codesourcery.com/cxx-abi/ along with the current specification.
For users of GCC greater than or equal to 3.x, entry points are available in <cxxabi.h>, which notes, *'It is not normally necessary for user programs to include this header, or use the entry points directly. However, this header is available should that be needed.'*

Standard Stream Objects

The <iostream> header declares the eight standard stream objects. For other declarations, see `http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html` *and the I/O forward declarations*

They are required by default to cooperate with the global C library's `FILE` *streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.*

- istream cin
- ostream cout
- ostream cerr
- ostream clog
- wistream wcin
- wostream wcout
- wostream wcerr
- wostream wclog

3.10.1 Detailed Description

ISO C++ entities toplevel namespace is std.
ISO C++ inline namespace for literal suffixes.

3.10.2 Typedef Documentation

3.10.2.1 __ptr_rebind `template<typename _Ptr , typename _Tp >`

```
using std::__ptr_rebind = typedef typename pointer_traits<_Ptr>::template rebind<_Tp>
```

Convenience alias for rebinding pointers.
Definition at line 152 of file ptr_traits.h.

3.10.2.2 __umap_traits `template<bool _Cache>`

```
using std::__umap_traits = typedef __detail::_Hashtable_traits<_Cache, false, true>
```

Base types for unordered_map.
Definition at line 40 of file unordered_map.h.

3.10.2.3 __ummap_traits `template<bool _Cache>`

```
using std::__ummap_traits = typedef __detail::_Hashtable_traits<_Cache, false, false>
```

Base types for unordered_multimap.
Definition at line 57 of file unordered_map.h.

3.10.2.4 __umset_traits template<bool _Cache>

```
using std::__umset_traits = typedef __detail::_Hashtable_traits<_Cache, true, false>
```

Base types for unordered_multiset.
Definition at line 55 of file unordered_set.h.

3.10.2.5 __uset_traits template<bool _Cache>

```
using std::__uset_traits = typedef __detail::_Hashtable_traits<_Cache, true, true>
```

Base types for unordered_set.
Definition at line 40 of file unordered_set.h.

3.10.2.6 index_sequence template<size_t... _Idx>

```
using std::index_sequence = typedef integer_sequence<size_t, _Idx...>
```

Alias template index_sequence.
Definition at line 345 of file utility.

3.10.2.7 index_sequence_for template<typename... _Types>

```
using std::index_sequence_for = typedef make_index_sequence<sizeof...(_Types)>
```

Alias template index_sequence_for.
Definition at line 353 of file utility.

3.10.2.8 make_index_sequence template<size_t _Num>

```
using std::make_index_sequence = typedef make_integer_sequence<size_t, _Num>
```

Alias template make_index_sequence.
Definition at line 349 of file utility.

3.10.2.9 make_integer_sequence template<typename _Tp , _Tp _Num>

```
using std::make_integer_sequence = typedef integer_sequence<_Tp, __integer_pack(_Num)...>
```

Alias template make_integer_sequence.
Definition at line 334 of file utility.

3.10.2.10 new_handler typedef void(* std::new_handler) ()

If you write your own error handler to be called by `new`, it must be of this type.

Definition at line 103 of file new.

3.10.2.11 streamoff typedef long long std::streamoff

Type used by fpos, char_traits<char>, and char_traits<wchar_t>.
In clauses 21.1.3.1 and 27.4.1 streamoff is described as an implementation defined type. Note: In versions of GCC up to and including GCC 3.3, streamoff was typedef long.
Definition at line 94 of file postypes.h.

3.10.2.12 streampos typedef fpos<mbstate_t> std::streampos

File position for char streams.
Definition at line 234 of file postypes.h.

3.10.2.13 streamsize `typedef ptrdiff_t std::streamsize`

Integral type for I/O operation counts and buffer sizes.
Definition at line 98 of file postypes.h.

3.10.2.14 u16streampos `typedef fpos<mbstate_t> std::u16streampos`

File position for char16_t streams.
Definition at line 245 of file postypes.h.

3.10.2.15 u32streampos `typedef fpos<mbstate_t> std::u32streampos`

File position for char32_t streams.
Definition at line 247 of file postypes.h.

3.10.2.16 wstreampos `typedef fpos<mbstate_t> std::wstreampos`

File position for wchar_t streams.
Definition at line 236 of file postypes.h.

3.10.3 Enumeration Type Documentation

3.10.3.1 anonymous enum `anonymous enum`

Todo Needs documentation! See http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html This controls some aspect of the sort routines.

Definition at line 1880 of file stl_algo.h.

3.10.3.2 chars_format `enum std::chars_format [strong]`

floating-point format for primitive numerical conversion
Definition at line 655 of file charconv.

3.10.3.3 float_denorm_style `enum std::float_denorm_style`

Describes the denormalization for floating-point types.
These values represent the presence or absence of a variable number of exponent bits. This type is used in the std::numeric_limits class.

Enumerator

denorm_indeterminate	Indeterminate at compile time whether denormalized values are allowed.
denorm_absent	The type does not allow denormalized values.
denorm_present	The type allows denormalized values.

Definition at line 182 of file limits.

3.10.3.4 float_round_style enum std::float_round_style

Describes the rounding style for floating-point types.
This is used in the std::numeric_limits class.

Enumerator

round_toward_zero	Intermediate.
round_to_nearest	To zero.
round_toward_infinity	To the nearest representable value.
round_toward_neg_infinity	To infinity.

Definition at line 167 of file limits.

3.10.3.5 io_errc enum std::io_errc [strong]

I/O error code.
Definition at line 203 of file ios_base.h.

3.10.4 Function Documentation

3.10.4.1 __allocate_guarded() template<typename _Alloc >

```
__allocated_ptr<_Alloc> std::__allocate_guarded (
            _Alloc & __a )
```

Allocate space for a single object using __a.
Definition at line 95 of file allocated_ptr.h.
References std::allocator_traits< _Alloc >::allocate().

3.10.4.2 __final_insertion_sort() template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::__final_insertion_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [constexpr]
```

This is a helper function for the sort routine.
Definition at line 1886 of file stl_algo.h.
References __insertion_sort(), and __unguarded_insertion_sort().

3.10.4.3 __find_if() [1/2] template<typename _InputIterator , typename _Predicate >

```
constexpr _InputIterator std::__find_if (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred,
            input_iterator_tag  )  [inline], [constexpr]
```

This is an overload used by find algos for the Input Iterator case.
Definition at line 1909 of file stl_algobase.h.
Referenced by __find_if_not(), and __search_n_aux().

3.10.4.4 __find_if() [2/2] template<typename _RandomAccessIterator , typename _Predicate >

```
constexpr _RandomAccessIterator std::__find_if (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Predicate __pred,
            random_access_iterator_tag ) [constexpr]
```

This is an overload used by find algos for the RAI case.
Definition at line 1921 of file stl_algobase.h.

3.10.4.5 __find_if_not() template<typename _InputIterator , typename _Predicate >

```
constexpr _InputIterator std::__find_if_not (
            _InputIterator __first,
            _InputIterator __last,
            _Predicate __pred ) [inline], [constexpr]
```

Provided for stable_partition to use.
Definition at line 103 of file stl_algo.h.
References __find_if().

3.10.4.6 __find_if_not_n() template<typename _InputIterator , typename _Predicate , typename _↩ Distance >

```
constexpr _InputIterator std::__find_if_not_n (
            _InputIterator __first,
            _Distance & __len,
            _Predicate __pred ) [constexpr]
```

Like find_if_not(), but uses and updates a count of the remaining range length instead of comparing against an end iterator.
Definition at line 117 of file stl_algo.h.

3.10.4.7 __gcd() template<typename _EuclideanRingElement >

```
constexpr _EuclideanRingElement std::__gcd (
            _EuclideanRingElement __m,
            _EuclideanRingElement __n ) [constexpr]
```

This is a helper function for the rotate algorithm specialized on RAIs. It returns the greatest common divisor of two integer values.
Definition at line 1224 of file stl_algo.h.

3.10.4.8 __gen_two_uniform_ints() template<typename _IntType , typename _UniformRandomBitGenerator >

```
pair<_IntType, _IntType> std::__gen_two_uniform_ints (
            _IntType __b0,
            _IntType __b1,
            _UniformRandomBitGenerator && __g )
```

Generate two uniformly distributed integers using a single distribution invocation.

Parameters

__b0	The upper bound for the first integer.
__b1	The upper bound for the second integer.
__g	A UniformRandomBitGenerator.

Returns

A pair (i, j) with i and j uniformly distributed over [0, __b0) and [0, __b1), respectively.

Requires: __b0 * __b1 <= __g.max() - __g.min().
Using uniform_int_distribution with a range that is very small relative to the range of the generator ends up wasting potentially expensively generated randomness, since uniform_int_distribution does not store leftover randomness between invocations.
If we know we want two integers in ranges that are sufficiently small, we can compose the ranges, use a single distribution invocation, and significantly reduce the waste.
Definition at line 3730 of file stl_algo.h.
Referenced by __sample().

3.10.4.9 __heap_select() template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::__heap_select (
            _RandomAccessIterator __first,
            _RandomAccessIterator __middle,
            _RandomAccessIterator __last,
            _Compare __comp )  [constexpr]
```

This is a helper function for the sort routines.
Definition at line 1667 of file stl_algo.h.

3.10.4.10 __inplace_stable_sort() template<typename _RandomAccessIterator , typename _Compare >

```
void std::__inplace_stable_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )
```

This is a helper function for the stable sorting routines.
Definition at line 2778 of file stl_algo.h.
References __insertion_sort(), and __merge_without_buffer().

3.10.4.11 __insertion_sort() template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::__insertion_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [constexpr]
```

This is a helper function for the sort routine.
Definition at line 1844 of file stl_algo.h.
Referenced by __final_insertion_sort(), and __inplace_stable_sort().

3.10.4.12 __introsort_loop() template<typename _RandomAccessIterator , typename _Size , typename _Compare >

```
constexpr void std::__introsort_loop (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Size __depth_limit,
            _Compare __comp )  [constexpr]
```

This is a helper function for the sort routine.
Definition at line 1950 of file stl_algo.h.
References __unguarded_partition_pivot().

3.10.4.13 __lg()

```
constexpr int std::__lg (
            int __n )  [inline], [constexpr]
```

This is a helper function for the sort routines and for random.tcc.
Definition at line 1364 of file stl_algobase.h.
Referenced by std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::operator()(), and std::linear_congruential_engine< _UIntType, __a, __c, __m >::seed().

3.10.4.14 __merge_adaptive()

```
template<typename _BidirectionalIterator , typename _Distance ,
typename _Pointer , typename _Compare >
void std::__merge_adaptive (
            _BidirectionalIterator __first,
            _BidirectionalIterator __middle,
            _BidirectionalIterator __last,
            _Distance __len1,
            _Distance __len2,
            _Pointer __buffer,
            _Distance __buffer_size,
            _Compare __comp )
```

This is a helper function for the merge routines.
Definition at line 2432 of file stl_algo.h.

3.10.4.15 __merge_without_buffer()

```
template<typename _BidirectionalIterator , typename _Distance ,
typename _Compare >
void std::__merge_without_buffer (
            _BidirectionalIterator __first,
            _BidirectionalIterator __middle,
            _BidirectionalIterator __last,
            _Distance __len1,
            _Distance __len2,
            _Compare __comp )
```

This is a helper function for the merge routines.
Definition at line 2493 of file stl_algo.h.
References advance().
Referenced by __inplace_stable_sort().

3.10.4.16 __move_median_to_first()

```
template<typename _Iterator , typename _Compare >
constexpr void std::__move_median_to_first (
            _Iterator __result,
            _Iterator __a,
            _Iterator __b,
            _Iterator __c,
            _Compare __comp )  [constexpr]
```

Swaps the median value of *__a, *__b and *__c under __comp to *__result.
Definition at line 79 of file stl_algo.h.
Referenced by __unguarded_partition_pivot().

3.10.4.17 __move_merge()

```
template<typename _InputIterator , typename _OutputIterator , typename
_Compare >
_OutputIterator std::__move_merge (
```

```
            _InputIterator __first1,
            _InputIterator __last1,
            _InputIterator __first2,
            _InputIterator __last2,
            _OutputIterator __result,
            _Compare __comp )
```

This is a helper function for the __merge_sort_loop routines.
Definition at line 2655 of file stl_algo.h.

3.10.4.18 __move_merge_adaptive()

```
template<typename _InputIterator1 , typename _InputIterator2 ,
typename _OutputIterator , typename _Compare >
void std::__move_merge_adaptive (
            _InputIterator1 __first1,
            _InputIterator1 __last1,
            _InputIterator2 __first2,
            _InputIterator2 __last2,
            _OutputIterator __result,
            _Compare __comp )
```

This is a helper function for the __merge_adaptive routines.
Definition at line 2325 of file stl_algo.h.

3.10.4.19 __move_merge_adaptive_backward()

```
template<typename _BidirectionalIterator1 , typename
_BidirectionalIterator2 , typename _BidirectionalIterator3 , typename _Compare >
void std::__move_merge_adaptive_backward (
            _BidirectionalIterator1 __first1,
            _BidirectionalIterator1 __last1,
            _BidirectionalIterator2 __first2,
            _BidirectionalIterator2 __last2,
            _BidirectionalIterator3 __result,
            _Compare __comp )
```

This is a helper function for the __merge_adaptive routines.
Definition at line 2351 of file stl_algo.h.

3.10.4.20 __partition() [1/2]

```
template<typename _BidirectionalIterator , typename _Predicate >
constexpr _BidirectionalIterator std::__partition (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last,
            _Predicate __pred,
            bidirectional_iterator_tag ) [constexpr]
```

This is a helper function...
Definition at line 1512 of file stl_algo.h.

3.10.4.21 __partition() [2/2]

```
template<typename _ForwardIterator , typename _Predicate >
constexpr _ForwardIterator std::__partition (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred,
            forward_iterator_tag ) [constexpr]
```

This is a helper function...

Definition at line 1486 of file stl_algo.h.

3.10.4.22 __reverse() [1/2] template<typename _BidirectionalIterator >

```
constexpr void std::__reverse (
            _BidirectionalIterator __first,
            _BidirectionalIterator __last,
            bidirectional_iterator_tag ) [constexpr]
```

This is an uglified reverse(_BidirectionalIterator, _BidirectionalIterator) overloaded for bidirectional iterators.
Definition at line 1120 of file stl_algo.h.

3.10.4.23 __reverse() [2/2] template<typename _RandomAccessIterator >

```
constexpr void std::__reverse (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            random_access_iterator_tag ) [constexpr]
```

This is an uglified reverse(_BidirectionalIterator, _BidirectionalIterator) overloaded for random access iterators.
Definition at line 1141 of file stl_algo.h.

3.10.4.24 __rotate() [1/3] template<typename _BidirectionalIterator >

```
constexpr _BidirectionalIterator std::_V2::__rotate (
            _BidirectionalIterator __first,
            _BidirectionalIterator __middle,
            _BidirectionalIterator __last,
            bidirectional_iterator_tag ) [constexpr]
```

This is a helper function for the rotate algorithm.
Definition at line 1284 of file stl_algo.h.
References __rotate().

3.10.4.25 __rotate() [2/3] template<typename _ForwardIterator >

```
constexpr _ForwardIterator std::_V2::__rotate (
            _ForwardIterator __first,
            _ForwardIterator __middle,
            _ForwardIterator __last,
            forward_iterator_tag ) [constexpr]
```

This is a helper function for the rotate algorithm.
Definition at line 1242 of file stl_algo.h.
References __rotate().
Referenced by __rotate().

3.10.4.26 __rotate() [3/3] template<typename _RandomAccessIterator >

```
constexpr _RandomAccessIterator std::_V2::__rotate (
            _RandomAccessIterator __first,
            _RandomAccessIterator __middle,
            _RandomAccessIterator __last,
            random_access_iterator_tag ) [constexpr]
```

This is a helper function for the rotate algorithm.
Definition at line 1323 of file stl_algo.h.
References __rotate().

3.10.4.27 __rotate_adaptive()

```
template<typename _BidirectionalIterator1 , typename _Bidirectional↩
Iterator2 , typename _Distance >
_BidirectionalIterator1 std::__rotate_adaptive (
            _BidirectionalIterator1 __first,
            _BidirectionalIterator1 __middle,
            _BidirectionalIterator1 __last,
            _Distance __len1,
            _Distance __len2,
            _BidirectionalIterator2 __buffer,
            _Distance __buffer_size )
```

This is a helper function for the merge routines.
Definition at line 2394 of file stl_algo.h.

3.10.4.28 __sample() [1/2]

```
template<typename _ForwardIterator , typename _OutputIterator , typename
_Cat , typename _Size , typename _UniformRandomBitGenerator >
_OutputIterator std::__sample (
            _ForwardIterator __first,
            _ForwardIterator __last,
            forward_iterator_tag ,
            _OutputIterator __out,
            _Cat ,
            _Size __n,
            _UniformRandomBitGenerator && __g )
```

Selection sampling algorithm.
Definition at line 5794 of file stl_algo.h.
References __gen_two_uniform_ints(), distance(), std::pair< _T1, _T2 >::first, min(), and std::pair< _T1, _T2 >↩
::second.

3.10.4.29 __sample() [2/2]

```
template<typename _InputIterator , typename _RandomAccessIterator ,
typename _Size , typename _UniformRandomBitGenerator >
_RandomAccessIterator std::__sample (
            _InputIterator __first,
            _InputIterator __last,
            input_iterator_tag ,
            _RandomAccessIterator __out,
            random_access_iterator_tag ,
            _Size __n,
            _UniformRandomBitGenerator && __g )
```

Reservoir sampling algorithm.
Definition at line 5767 of file stl_algo.h.
Referenced by __gnu_parallel::multiseq_selection().

3.10.4.30 __search_n_aux() [1/2]

```
template<typename _ForwardIterator , typename _Integer , typename
_UnaryPredicate >
constexpr _ForwardIterator std::__search_n_aux (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Integer __count,
```

```
            _UnaryPredicate __unary_pred,
            std::forward_iterator_tag  )  [constexpr]
```

This is an helper function for search_n overloaded for forward iterators.
Definition at line 194 of file stl_algo.h.
References __find_if().

3.10.4.31 __search_n_aux() [2/2] template<typename _RandomAccessIter , typename _Integer , typename _UnaryPredicate >

```
constexpr _RandomAccessIter std::__search_n_aux (
            _RandomAccessIter __first,
            _RandomAccessIter __last,
            _Integer __count,
            _UnaryPredicate __unary_pred,
            std::random_access_iterator_tag  )  [constexpr]
```

This is an helper function for search_n overloaded for random access iterators.
Definition at line 227 of file stl_algo.h.

3.10.4.32 __stable_partition_adaptive() template<typename _ForwardIterator , typename _Pointer , typename _Predicate , typename _Distance >

```
_ForwardIterator std::__stable_partition_adaptive (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Predicate __pred,
            _Distance __len,
            _Pointer __buffer,
            _Distance __buffer_size )
```

This is a helper function... Requires __first != __last and !__pred(__first) and __len == distance(__first, __last).
!__pred(__first) allows us to guarantee that we don't move-assign an element onto itself.
Definition at line 1548 of file stl_algo.h.

3.10.4.33 __unguarded_insertion_sort() template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::__unguarded_insertion_sort (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

This is a helper function for the sort routine.
Definition at line 1868 of file stl_algo.h.
References __unguarded_linear_insert().
Referenced by __final_insertion_sort().

3.10.4.34 __unguarded_linear_insert() template<typename _RandomAccessIterator , typename _Compare >

```
constexpr void std::__unguarded_linear_insert (
            _RandomAccessIterator __last,
            _Compare __comp )  [constexpr]
```

This is a helper function for the sort routine.
Definition at line 1824 of file stl_algo.h.
Referenced by __unguarded_insertion_sort().

3.10.4.35 __unguarded_partition()

```
template<typename _RandomAccessIterator , typename _Compare >
constexpr _RandomAccessIterator std::__unguarded_partition (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _RandomAccessIterator __pivot,
            _Compare __comp )  [constexpr]
```

This is a helper function...
Definition at line 1903 of file stl_algo.h.
Referenced by __unguarded_partition_pivot().

3.10.4.36 __unguarded_partition_pivot()

```
template<typename _RandomAccessIterator , typename _Compare
>
constexpr _RandomAccessIterator std::__unguarded_partition_pivot (
            _RandomAccessIterator __first,
            _RandomAccessIterator __last,
            _Compare __comp )  [inline], [constexpr]
```

This is a helper function...
Definition at line 1925 of file stl_algo.h.
References __move_median_to_first(), and __unguarded_partition().
Referenced by __introsort_loop().

3.10.4.37 __unique_copy() [1/3]

```
template<typename _ForwardIterator , typename _OutputIterator ,
typename _BinaryPredicate >
constexpr _OutputIterator std::__unique_copy (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _OutputIterator __result,
            _BinaryPredicate __binary_pred,
            forward_iterator_tag ,
            output_iterator_tag  )  [constexpr]
```

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for forward iterators and output iterator as result.
Definition at line 1034 of file stl_algo.h.

3.10.4.38 __unique_copy() [2/3]

```
template<typename _InputIterator , typename _ForwardIterator ,
typename _BinaryPredicate >
constexpr _ForwardIterator std::__unique_copy (
            _InputIterator __first,
            _InputIterator __last,
            _ForwardIterator __result,
            _BinaryPredicate __binary_pred,
            input_iterator_tag ,
            forward_iterator_tag  )  [constexpr]
```

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for input iterators and forward iterator as result.
Definition at line 1097 of file stl_algo.h.

3.10.4.39 __unique_copy() [3/3]

```
template<typename _InputIterator , typename _OutputIterator ,
typename _BinaryPredicate >
```

```
constexpr _OutputIterator std::__unique_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            _BinaryPredicate __binary_pred,
            input_iterator_tag ,
            output_iterator_tag  )  [constexpr]
```

This is an uglified unique_copy(_InputIterator, _InputIterator, _OutputIterator, _BinaryPredicate) overloaded for input iterators and output iterator as result.
Definition at line 1064 of file stl_algo.h.

3.10.4.40 _Construct() template<typename _Tp , typename... _Args>

```
void std::_Construct (
            _Tp * __p,
            _Args &&... __args )  [inline]
```

Constructs an object in existing memory by invoking an allocated object's constructor with an initializer.
Definition at line 108 of file stl_construct.h.

3.10.4.41 _Destroy() [1/3] template<typename _ForwardIterator >

```
constexpr void std::_Destroy (
            _ForwardIterator __first,
            _ForwardIterator __last )  [inline], [constexpr]
```

Destroy a range of objects. If the value_type of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.
Definition at line 171 of file stl_construct.h.

3.10.4.42 _Destroy() [2/3] template<typename _ForwardIterator , typename _Allocator >

```
void std::_Destroy (
            _ForwardIterator __first,
            _ForwardIterator __last,
            _Allocator & __alloc )
```

Destroy a range of objects using the supplied allocator. For non-default allocators we do not optimize away invocation of destroy() even if _Tp has a trivial destructor.
Definition at line 825 of file bits/alloc_traits.h.
References __addressof(), and std::allocator_traits< _Alloc >::destroy().
Referenced by std::vector< _Tp, _Alloc >::~vector(), and std::allocator_traits< allocator< void > >::destroy().

3.10.4.43 _Destroy() [3/3] template<typename _Tp >

```
constexpr void std::_Destroy (
            _Tp * __pointer )  [inline], [constexpr]
```

Destroy the object pointed to by a pointer type.
Definition at line 135 of file stl_construct.h.

3.10.4.44 _Destroy_n() template<typename _ForwardIterator , typename _Size >

```
constexpr _ForwardIterator std::_Destroy_n (
            _ForwardIterator __first,
            _Size __count )  [inline], [constexpr]
```

Destroy a range of objects. If the value_type of the object has a trivial destructor, the compiler should optimize all of this away, otherwise the objects' destructors must be invoked.
Definition at line 220 of file stl_construct.h.

3.10.4.45 acos() template<typename _Tp >

```
std::complex< _Tp > std::acos (
            const std::complex< _Tp > & __z )  [inline]
```

acos(__z) [8.1.2].
Definition at line 1634 of file complex.

3.10.4.46 acosh() template<typename _Tp >

```
std::complex< _Tp > std::acosh (
            const std::complex< _Tp > & __z )  [inline]
```

acosh(__z) [8.1.5].
Definition at line 1750 of file complex.

3.10.4.47 advance() template<typename _InputIterator , typename _Distance >

```
constexpr void std::advance (
            _InputIterator & __i,
            _Distance __n )  [inline], [constexpr]
```

A generalization of pointer arithmetic.

Parameters

__i	An input iterator.
__n	The *delta* by which to change __i.

Returns

Nothing.

This increments i by n. For bidirectional and random access iterators, __n may be negative, in which case __i is decremented.
For random access iterators, this uses their + and - operations and are constant time. For other iterator classes they are linear time.
Definition at line 202 of file stl_iterator_base_funcs.h.
References __iterator_category().
Referenced by __merge_without_buffer().

3.10.4.48 arg() template<typename _Tp >

```
__gnu_cxx::__promote<_Tp>::__type std::arg (
            _Tp __x )  [inline]
```

Additional overloads [8.1.9].
Definition at line 1848 of file complex.

3.10.4.49 asin() template<typename _Tp >

```
std::complex< _Tp > std::asin (
            const std::complex< _Tp > & __z )  [inline]
```

asin(__z) [8.1.3].
Definition at line 1670 of file complex.

3.10.4.50 asinh() template<typename _Tp >

```
std::complex< _Tp > std::asinh (
            const std::complex< _Tp > & __z )  [inline]
```

asinh(__z) [8.1.6].
Definition at line 1789 of file complex.

3.10.4.51 atan() template<typename _Tp >

```
std::complex< _Tp > std::atan (
            const std::complex< _Tp > & __z )  [inline]
```

atan(__z) [8.1.4].
Definition at line 1714 of file complex.

3.10.4.52 atanh() template<typename _Tp >

```
std::complex< _Tp > std::atanh (
            const std::complex< _Tp > & __z )  [inline]
```

atanh(__z) [8.1.7].
Definition at line 1833 of file complex.

3.10.4.53 begin() [1/3] template<typename _Container >

```
constexpr auto std::begin (
            _Container & __cont ) -> decltype(__cont.begin())   [inline], [constexpr]
```

Return an iterator pointing to the first element of the container.

Parameters

__cont	Container.

Definition at line 51 of file range_access.h.

3.10.4.54 begin() [2/3] template<typename _Tp , size_t _Nm>

```
constexpr _Tp* std::begin (
            _Tp(&) __arr[_Nm] )  [inline], [constexpr], [noexcept]
```

Return an iterator pointing to the first element of the array.

Parameters

__arr	Array.

Definition at line 90 of file range_access.h.

3.10.4.55 begin() [3/3] template<typename _Container >

```
constexpr auto std::begin (
            const _Container & __cont ) -> decltype(__cont.begin())   [inline], [constexpr]
```

Return an iterator pointing to the first element of the const container.

Parameters

__cont	Container.

Definition at line 61 of file range_access.h.

3.10.4.56 boolalpha()

```
ios_base& std::boolalpha (
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::boolalpha).
Definition at line 908 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::boolalpha.

3.10.4.57 cbegin()

```
template<typename _Container >
constexpr auto std::cbegin (
            const _Container & __cont ) -> decltype(std::begin(__cont))   [inline], [constexpr],
[noexcept]
```

Return an iterator pointing to the first element of the const container.

Parameters

__cont	Container.

Definition at line 119 of file range_access.h.
References begin().

3.10.4.58 cend()

```
template<typename _Container >
constexpr auto std::cend (
            const _Container & __cont ) -> decltype(std::end(__cont))   [inline], [constexpr],
[noexcept]
```

Return an iterator pointing to one past the last element of the const container.

Parameters

__cont	Container.

Definition at line 130 of file range_access.h.
References end().

3.10.4.59 const_pointer_cast()

```
template<typename _Tp , typename _Tp1 , _Lock_policy _Lp>
__shared_ptr<_Tp, _Lp> std::const_pointer_cast (
            const __shared_ptr< _Tp1, _Lp > & __r )  [inline], [noexcept]
```

const_pointer_cast
Definition at line 1593 of file shared_ptr_base.h.

3.10.4.60 crbegin() template<typename _Container >

```
constexpr auto std::crbegin (
            const _Container & __cont ) -> decltype(std::rbegin(__cont))   [inline], [constexpr]
```

Return a reverse iterator pointing to the last element of the const container.

Parameters

__cont	Container.

Definition at line 221 of file range_access.h.
References rbegin().

3.10.4.61 crend() template<typename _Container >

```
constexpr auto std::crend (
            const _Container & __cont ) -> decltype(std::rend(__cont))   [inline], [constexpr]
```

Return a reverse iterator pointing one past the first element of the const container.

Parameters

__cont	Container.

Definition at line 231 of file range_access.h.
References rend().

3.10.4.62 dec() ios_base& std::dec (

```
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::dec, ios_base::basefield).
Definition at line 1046 of file ios_base.h.
References __gnu_debug::__base(), std::ios_base::basefield, and std::ios_base::dec.
Referenced by operator<<(), and operator>>().

3.10.4.63 defaultfloat() ios_base& std::defaultfloat (

```
            ios_base & __base )  [inline]
```

Calls `base.unsetf(ios_base::floatfield)`
Definition at line 1099 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::floatfield.

3.10.4.64 distance() template<typename _InputIterator >

```
constexpr iterator_traits<_InputIterator>::difference_type std::distance (
            _InputIterator __first,
            _InputIterator __last )  [inline], [constexpr]
```

A generalization of pointer arithmetic.

Parameters

__first	An input iterator.
__last	An input iterator.

Returns

The distance between them.

Returns n such that __first + n == __last. This requires that __last must be reachable from __first. Note that n may be negative.
For random access iterators, this uses their + and − operations and are constant time. For other iterator classes they are linear time.
Definition at line 138 of file stl_iterator_base_funcs.h.
References __iterator_category().
Referenced by __sample(), std::deque< _Tp, _Alloc >::_M_range_initialize(), std::sub_match< _BiIter >::length(), _gnu_parallel::multiseq_partition(), __gnu_parallel::multiseq_selection(), and std::match_results< _Bi_iter, _Alloc >::position().

3.10.4.65 dynamic_pointer_cast()

```
template<typename _Tp , typename _Tp1 , _Lock_policy _Lp>
__shared_ptr<_Tp, _Lp> std::dynamic_pointer_cast (
            const __shared_ptr< _Tp1, _Lp > & __r )  [inline], [noexcept]
```

dynamic_pointer_cast
Definition at line 1606 of file shared_ptr_base.h.

3.10.4.66 end() [1/3]

```
template<typename _Container >
constexpr auto std::end (
            _Container & __cont ) -> decltype(__cont.end())   [inline], [constexpr]
```

Return an iterator pointing to one past the last element of the container.

Parameters

__cont	Container.

Definition at line 71 of file range_access.h.

3.10.4.67 end() [2/3]

```
template<typename _Tp , size_t _Nm>
constexpr _Tp* std::end (
            _Tp(&) __arr[_Nm] )  [inline], [constexpr], [noexcept]
```

Return an iterator pointing to one past the last element of the array.

Parameters

__arr	Array.

Definition at line 100 of file range_access.h.

3.10.4.68 end() [3/3]

```
template<typename _Container >
constexpr auto std::end (
            const _Container & __cont ) -> decltype(__cont.end())   [inline], [constexpr]
```

Return an iterator pointing to one past the last element of the const container.

Parameters

__cont	Container.

Definition at line 81 of file range_access.h.

3.10.4.69 endl() template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::endl (basic_ostream< _CharT, _Traits > & __os) [inline]

Write a newline and flush the stream.
This manipulator is often mistakenly used when a simple newline is desired, leading to poor buffering performance. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more on this subject.
Definition at line 681 of file ostream.

3.10.4.70 ends() template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::ends (basic_ostream< _CharT, _Traits > & __os) [inline]

Write a null character into the output sequence.
Null character is CharT() by definition. For CharT of char, this correctly writes the ASCII NUL character string terminator.
Definition at line 693 of file ostream.

3.10.4.71 exchange() template<typename _Tp , typename _Up = _Tp> constexpr _Tp std::exchange (_Tp & __obj, _Up && __new_val) [inline], [constexpr]

Assign __new_val to __obj and return its previous value.
Definition at line 291 of file utility.

3.10.4.72 fabs() template<typename _Tp > _Tp std::fabs (const std::complex< _Tp > & __z) [inline]

fabs(__z) [8.1.8].
Definition at line 1842 of file complex.

3.10.4.73 fixed() ios_base& std::fixed (ios_base & __base) [inline]

Calls base.setf(ios_base::fixed, ios_base::floatfield).
Definition at line 1071 of file ios_base.h.
References __gnu_debug::__base(), std::ios_base::fixed, and std::ios_base::floatfield.

3.10.4.74 flush() template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits>& std::flush (basic_ostream< _CharT, _Traits > & __os) [inline]

Flushes the output stream.
This manipulator simply calls the stream's flush() member function.
Definition at line 703 of file ostream.

3.10.4.75 from_chars() template<typename _Tp >

```
__detail::__integer_from_chars_result_type<_Tp> std::from_chars (
            const char * __first,
            const char * __last,
            _Tp & __value,
            int __base = 10 )
```

std::from_chars for integral types.
Definition at line 592 of file charconv.

3.10.4.76 get_money() template<typename _MoneyT >

```
_Get_money<_MoneyT> std::get_money (
            _MoneyT & __mon,
            bool __intl = false )  [inline]
```

Extended manipulator for extracting money.

Parameters

__mon	Either long double or a specialization of basic_string.
__intl	A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator extracts *__mon*.
Definition at line 259 of file iomanip.

3.10.4.77 get_new_handler() new_handler std::get_new_handler ( ) [noexcept]

Return the current new handler.

3.10.4.78 get_temporary_buffer() template<typename _Tp >

```
pair<_Tp*, ptrdiff_t> std::get_temporary_buffer (
            ptrdiff_t __len )  [noexcept]
```

Allocates a temporary buffer.

Parameters

__len	The number of objects of type Tp.

Returns

See full description.

Reinventing the wheel, but this time with prettier spokes!
This function tries to obtain storage for __len adjacent Tp objects. The objects themselves are not constructed, of course. A pair<> is returned containing *the buffer s address and capacity (in the units of sizeof(_Tp)), or a pair of 0 values if no storage can be obtained.* Note that the capacity obtained may be less than that requested if the memory is unavailable; you should compare len with the .second return value.
Provides the nothrow exception guarantee.
Definition at line 100 of file stl_tempbuf.h.

3.10.4.79 get_time() template<typename _CharT >

```
_Get_time<_CharT> std::get_time (
```

```
            std::tm * __tmb,
            const _CharT * __fmt )  [inline]
```

Extended manipulator for extracting time.
This manipulator uses time_get::get to extract time. [ext.manip]

Parameters

__tmb	struct to extract the time data to.
__fmt	format string.

Definition at line 413 of file iomanip.

3.10.4.80 getline() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_istream<_CharT, _Traits>& std::getline (
            basic_istream< _CharT, _Traits > && __is,
            basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Read a line from an rvalue stream into a string.
Definition at line 6535 of file basic_string.h.
References getline().

3.10.4.81 getline() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_istream<_CharT, _Traits>& std::getline (
            basic_istream< _CharT, _Traits > && __is,
            basic_string< _CharT, _Traits, _Alloc > & __str,
            _CharT __delim )  [inline]
```

Read a line from an rvalue stream into a string.
Definition at line 6528 of file basic_string.h.
References getline().

3.10.4.82 getline() [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
basic_istream<_CharT, _Traits>& std::getline (
            basic_istream< _CharT, _Traits > & __is,
            __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from is into *__str* until '
' is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If end of line was encountered, it is extracted but not stored into *__str*.
Definition at line 2677 of file vstring.h.

References getline(), and std::basic_ios< _CharT, _Traits >::widen().

3.10.4.83 getline() [4/6] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
basic_istream< _CharT, _Traits > & std::getline (
            basic_istream< _CharT, _Traits > & __is,
            __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            _CharT __delim )
```

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.
__delim	Character marking end of line.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until *__delim* is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased. If *delim* was encountered, it is extracted but not stored into *__str*.
Definition at line 627 of file vstring.tcc.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size().

3.10.4.84 getline() [5/6] template<typename _CharT , typename _Traits , typename _Alloc >

```
basic_istream<_CharT, _Traits>& std::getline (
            basic_istream< _CharT, _Traits > & __is,
            basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Read a line from stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from is into *__str* until '
' is found, the end of the stream is encountered, or str.max_size() is reached. Any previous contents of *__str* are erased. If end of line is encountered, it is extracted but not stored into *__str*.

ios_base& std::nouppercase (
            ios_base & __base )  [inline]
```

Calls base.unsetf(ios_base::uppercase).
Definition at line 996 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::uppercase.

3.10.4.109 oct()

```
ios_base& std::oct (
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::oct, ios_base::basefield).
Definition at line 1062 of file ios_base.h.
References __gnu_debug::__base(), std::ios_base::basefield, and std::ios_base::oct.

3.10.4.110 operator"!=() [1/15]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator!= (
            const _CharT * __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline]
```

Test difference of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) != 0. False otherwise.

Definition at line 6264 of file basic_string.h.

3.10.4.111 operator"!=() [2/15]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator!= (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test difference of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 6276 of file basic_string.h.

3.10.4.112 operator"!=() [3/15]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator!= (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline], [noexcept]
```

Test difference of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) != 0. False otherwise.

Definition at line 6251 of file basic_string.h.

3.10.4.113 operator"!=() [4/15]

```
template<typename _Tp , typename _Alloc >
bool std::operator!= (
            const deque< _Tp, _Alloc > & __x,
            const deque< _Tp, _Alloc > & __y )  [inline]
```

Based on operator==.
Definition at line 2286 of file stl_deque.h.

3.10.4.114 operator"!=() [5/15]

```
template<typename _Tp , typename _Alloc >
bool std::operator!= (
```

```
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )  [inline]
```

Based on operator==.
Definition at line 1476 of file forward_list.h.

3.10.4.115 operator"!=() [6/15] template<typename _Res , typename... _Args>

```
bool std::operator!= (
            const function< _Res(_Args...)> & __f,
            nullptr_t  )  [inline], [noexcept]
```

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`false` if the wrapper has no target, `true` otherwise

This function will not throw an exception.
Definition at line 699 of file std_function.h.

3.10.4.116 operator"!=() [7/15] template<typename _Tp , typename _Alloc >

```
bool std::operator!= (
            const list< _Tp, _Alloc > & __x,
            const list< _Tp, _Alloc > & __y )  [inline]
```

Based on operator==.
Definition at line 2057 of file stl_list.h.

3.10.4.117 operator"!=() [8/15] template<typename _Key , typename _Tp , typename _Compare , typename _Alloc >

```
bool std::operator!= (

```

Based on operator==.
Definition at line 1937 of file stl_vector.h.

3.10.4.124 operator"!=() [15/15] template<typename _Res , typename... _Args>

```
bool std::operator!= (
            nullptr_t ,
            const function< _Res(_Args...)> & __f )  [inline], [noexcept]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.
Definition at line 705 of file std_function.h.

3.10.4.125 operator&() template<size_t _Nb>

```
bitset<_Nb> std::operator& (
            const bitset< _Nb > & __x,
            const bitset< _Nb > & __y )  [inline], [noexcept]
```

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.
Definition at line 1435 of file bitset.

3.10.4.126 operator+() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > std::operator+ (
            _CharT __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )
```

Concatenate character and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 1172 of file basic_string.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

3.10.4.127 operator+() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > std::operator+ (
            const _CharT * __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )
```

Concatenate C string and string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 1152 of file basic_string.tcc.

3.10.4.128 operator+() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> std::operator+ (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            _CharT __rhs )  [inline]
```

Concatenate string and character.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 6097 of file basic_string.h.

3.10.4.129 operator+() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> std::operator+ (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const _CharT * __rhs )  [inline]
```

Concatenate string and C string.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with *__lhs* followed by *__rhs*.

Definition at line 6081 of file basic_string.h.

3.10.4.130 operator+() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> std::operator+ (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )
```

Concatenate two strings.

Parameters

__lhs	First string.
__rhs	Last string.

Returns

New string with value of *__lhs* followed by *__rhs*.

Definition at line 6044 of file basic_string.h.

3.10.4.131 operator<() [1/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator< (
            const _CharT * __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline]
```

Test if C string precedes string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 6313 of file basic_string.h.

3.10.4.132 operator<() [2/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator< (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test if string precedes C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 6301 of file basic_string.h.

3.10.4.133 operator<() [3/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator< (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline], [noexcept]
```

Test if string precedes string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* precedes *__rhs*. False otherwise.

Definition at line 6288 of file basic_string.h.

3.10.4.134 operator<() [4/13]

```
template<typename _Tp , typename _Alloc >
bool std::operator< (
            const deque< _Tp, _Alloc > & __x,
            const deque< _Tp, _Alloc > & __y )  [inline]
```

Deque ordering relation.

Parameters

_↩ _x	A deque.
_↩ _y	A deque of the same type as __x.

Returns

True iff *x* is lexicographically less than __y.

This is a total ordering relation. It is linear in the size of the deques. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 2278 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::end().

3.10.4.135 operator<() [5/13] template<typename _Tp , typename _Alloc >

```
bool std::operator< (
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )  [inline]
```

Forward list ordering relation.

Parameters

_↩ _lx	A forward_list.
_↩ _ly	A forward_list of the same type as __lx.

Returns

True iff __lx is lexicographically less than __ly.

This is a total ordering relation. It is linear in the number of elements of the forward lists. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1467 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::cbegin(), and std::forward_list< _Tp, _Alloc >::cend().

3.10.4.136 operator<() [6/13] template<typename _Tp , typename _Alloc >

```
bool std::operator< (
            const list< _Tp, _Alloc > & __x,
            const list< _Tp, _Alloc > & __y )  [inline]
```

List ordering relation.

Parameters

_↩ _x	A list.
_↩ _y	A list of the same type as __x.

Returns

True iff __x is lexicographically less than __y.

This is a total ordering relation. It is linear in the size of the lists. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 2049 of file stl_list.h.
References std::list< _Tp, _Alloc >::begin(), and std::list< _Tp, _Alloc >::end().

3.10.4.137 operator<() [7/13]

```
template<typename _Key , typename _Tp , typename _Compare , typename
_Alloc >
bool std::operator< (
            const map< _Key, _Tp, _Compare, _Alloc > & __x,
            const map< _Key, _Tp, _Compare, _Alloc > & __y )  [inline]
```

Map ordering relation.

Parameters

_↩ _x	A map.
_↩ _y	A map of the same type as *x*.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the maps. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1500 of file stl_map.h.

3.10.4.138 operator<() [8/13]

```
template<typename _Key , typename _Tp , typename _Compare , typename
_Alloc >
bool std::operator< (
            const multimap< _Key, _Tp, _Compare, _Alloc > & __x,
            const multimap< _Key, _Tp, _Compare, _Alloc > & __y )  [inline]
```

Multimap ordering relation.

Parameters

_↩ _x	A multimap.
_↩ _y	A multimap of the same type as __x.

Returns

True iff *x* is lexicographically less than *y*.

This is a total ordering relation. It is linear in the size of the multimaps. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1165 of file stl_multimap.h.

3.10.4.139 operator<() [9/13] template<typename _Key , typename _Compare , typename _Alloc >

```
bool std::operator< (
            const multiset< _Key, _Compare, _Alloc > & __x,
            const multiset< _Key, _Compare, _Alloc > & __y )  [inline]
```

Multiset ordering relation.

Parameters

_↩ _x	A multiset.
_↩ _y	A multiset of the same type as __x.

Returns

True iff __x is lexicographically less than __y.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1008 of file stl_multiset.h.

3.10.4.140 operator<() [10/13] template<typename _Tp , typename _Seq >

```
bool std::operator< (
            const queue< _Tp, _Seq > & __x,
            const queue< _Tp, _Seq > & __y )  [inline]
```

Queue ordering relation.

Parameters

_↩ _x	A queue.
_↩ _y	A queue of the same type as x.

Returns

True iff __x is lexicographically less than __y.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and std↩ ::lexicographical_compare() is usually used to make the determination.
Definition at line 361 of file stl_queue.h.
References std::queue< _Tp, _Sequence >::c.

3.10.4.141 operator<() [11/13] template<typename _Key , typename _Compare , typename _Alloc >

```
bool std::operator< (
            const set< _Key, _Compare, _Alloc > & __x,
            const set< _Key, _Compare, _Alloc > & __y )  [inline]
```

Set ordering relation.

Parameters

_↩ _x	A set.
_↩ _y	A set of the same type as *x*.

Returns

True iff __x is lexicographically less than __y.

This is a total ordering relation. It is linear in the size of the sets. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1022 of file stl_set.h.

3.10.4.142 operator<() [12/13] template<typename _Tp , typename _Seq >

```
bool std::operator< (
            const stack< _Tp, _Seq > & __x,
            const stack< _Tp, _Seq > & __y )  [inline]
```

Stack ordering relation.

Parameters

_↩ _x	A stack.
_↩ _y	A stack of the same type as *x*.

Returns

True iff *x* is lexicographically less than __y.

This is an total ordering relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, the elements must be comparable with <, and std↩ ::lexicographical_compare() is usually used to make the determination.
Definition at line 336 of file stl_stack.h.

3.10.4.143 operator<() [13/13] template<typename _Tp , typename _Alloc >

```
bool std::operator< (
            const vector< _Tp, _Alloc > & __x,
            const vector< _Tp, _Alloc > & __y )  [inline]
```

Vector ordering relation.

Parameters

_↩ _x	A vector.
_↩ _y	A vector of the same type as __x.

Returns

True iff __x is lexicographically less than __y.

This is a total ordering relation. It is linear in the size of the vectors. The elements must be comparable with <.
See std::lexicographical_compare() for how the determination is made.
Definition at line 1929 of file stl_vector.h.
References std::vector< _Tp, _Alloc >::begin(), and std::vector< _Tp, _Alloc >::end().

3.10.4.144 operator<<() [1/14]

```
template<typename _Ostream , typename _Tp >
enable_if<__and_<__not_<is_lvalue_reference<_Ostream> >, __is_convertible_to_basic_ostream<_Ostream>, __is_insertable< __rvalue_ostream_type<_Ostream>, const _Tp&> >::value, __rvalue_ostream_type<_Ostream> >::type std::operator<< (
            _Ostream && __os,
            const _Tp & __x )  [inline]
```

Generic inserter for rvalue stream.

Parameters

__os	An input stream.
__x	A reference to the object being inserted.

Returns

os

This is just a forwarding function to allow insertion to rvalue streams since they won't bind to the inserter functions that take an lvalue reference.
Definition at line 772 of file ostream.

3.10.4.145 operator<<() [2/14]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
basic_ostream<_CharT, _Traits>& std::operator<< (
            basic_ostream< _CharT, _Traits > & __os,
            const __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Write string to a stream.

Parameters

__os	Output stream.
__str	String to write out.

Returns

Reference to the output stream.

Output characters of __str into os following the same rules as for writing a C string.
Definition at line 2615 of file vstring.h.

3.10.4.146 operator<<() [3/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_ostream<_CharT, _Traits>& std::operator<< (
```

```
            basic_ostream< _CharT, _Traits > & __os,
            const basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Write string to a stream.

Parameters

__os	Output stream.
__str	String to write out.

Returns

Reference to the output stream.

Output characters of *__str* into os following the same rules as for writing a C string.
Definition at line 6467 of file basic_string.h.

3.10.4.147 operator<<() [4/14]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>& std::operator<< (
            basic_ostream< _CharT, _Traits > & __out,
            _CharT __c )  [inline]
```

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.
If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.
Definition at line 1 of file ostream.

3.10.4.148 operator<<() [5/14]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>& std::operator<< (
            basic_ostream< _CharT, _Traits > & __out,
            char __c )  [inline]
```

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.
If `__c` is of type `char` and the character type of the stream is not `char`, the character is widened before insertion.
Definition at line 1 of file ostream.

3.10.4.149 operator<<() [6/14]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>& std::operator<< (
            basic_ostream< _CharT, _Traits > & __out,
            const _CharT * __s )  [inline]
```

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

`__s` must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at `__s`, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.
Definition at line 1 of file ostream.

3.10.4.150 operator<<() [7/14]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::operator<< (
            basic_ostream< _CharT, _Traits > & __out,
            const char * __s )
```

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

__s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts traits::length(__s) characters starting at __s, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). __out.width(0) is then called.
Definition at line 289 of file ostream.tcc.

3.10.4.151 operator<<() [8/14] template<typename _Traits >

```
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            char __c )  [inline]
```

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). _↩
_out.width(0) is then called.
If __c is of type char and the character type of the stream is not char, the character is widened before insertion.
Definition at line 1 of file ostream.

3.10.4.152 operator<<() [9/14] template<typename _Traits >

```
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            const char * __s )  [inline]
```

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

__s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts traits::length(__s) characters starting at __s, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). __out.width(0) is then called.
Definition at line 1 of file ostream.

3.10.4.153 operator<<() [10/14] template<typename _Traits >

```
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            const signed char * __s )  [inline]
```

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

__s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at __s, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.
Definition at line 1 of file ostream.

3.10.4.154 operator<<() [11/14] template<typename _Traits >

```
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            const unsigned char * __s )  [inline]
```

String inserters.

Parameters

__out	An output stream.
__s	A character string.

Returns

out

Precondition

__s must be a non-NULL pointer

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts `traits::length(__s)` characters starting at __s, widened if necessary, followed by any required padding (as determined by [22.2.2.2.2]). `__out.width(0)` is then called.
Definition at line 1 of file ostream.

3.10.4.155 operator<<() [12/14] template<typename _Traits >

```
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            signed char __c )  [inline]
```

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). _↩ _out.width(0) is then called.
If __c is of type char and the character type of the stream is not char, the character is widened before insertion.
Definition at line 1 of file ostream.

3.10.4.156 operator<<() [13/14]

```
template<typename _Traits >
basic_ostream<char, _Traits>& std::operator<< (
            basic_ostream< char, _Traits > & __out,
            unsigned char __c ) [inline]
```

Character inserters.

Parameters

__out	An output stream.
__c	A character.

Returns

out

Behaves like one of the formatted arithmetic inserters described in std::basic_ostream. After constructing a sentry object with good status, this function inserts a single character and any required padding (as determined by [22.2.2.2.2]). _↩ _out.width(0) is then called.
If __c is of type char and the character type of the stream is not char, the character is widened before insertion.
Definition at line 1 of file ostream.

3.10.4.157 operator<<() [14/14]

```
template<class _CharT , class _Traits , size_t _Nb>
std::basic_ostream<_CharT, _Traits>& std::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const bitset< _Nb > & __x )
```

Global I/O operators for bitsets.
Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.
Definition at line 1472 of file bitset.

3.10.4.158 operator<=() [1/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator<= (
            const _CharT * __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs ) [inline]
```

Test if C string doesn't follow string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 6389 of file basic_string.h.

3.10.4.159 operator<=() [2/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator<= (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test if string doesn't follow C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 6377 of file basic_string.h.

3.10.4.160 operator<=() [3/13]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator<= (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline], [noexcept]
```

Test if string doesn't follow string.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs* doesn't follow *__rhs*. False otherwise.

Definition at line 6364 of file basic_string.h.

3.10.4.161 operator<=() [4/13]

```
template<typename _Tp , typename _Alloc >

3.10.4.170 operator<=() [13/13] template<typename _Tp , typename _Alloc >

```
bool std::operator<= (
            const vector< _Tp, _Alloc > & __x,
            const vector< _Tp, _Alloc > & __y )  [inline]
```

Based on operator<.
Definition at line 1948 of file stl_vector.h.

3.10.4.171 operator==() [1/16] template<typename _CharT , typename _Traits , typename _Alloc >

```
bool std::operator== (
            const _CharT * __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline]
```

Test equivalence of C string and string.

Parameters

__lhs	C string.
__rhs	String.

Returns

True if *__rhs.compare*(*__lhs*) == 0. False otherwise.

Definition at line 6238 of file basic_string.h.

3.10.4.172 operator==() [2/16] template<typename _CharT , typename _Traits , typename _Alloc >

```
bool std::operator== (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const _CharT * __rhs )  [inline]
```

Test equivalence of string and C string.

Parameters

__lhs	String.
__rhs	C string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 6197 of file basic_string.h.

3.10.4.173 operator==() [3/16]

```
template<typename _CharT , typename _Traits , typename _Alloc >
bool std::operator== (
            const basic_string< _CharT, _Traits, _Alloc > & __lhs,
            const basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline], [noexcept]
```

Test equivalence of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Returns

True if *__lhs.compare*(*__rhs*) == 0. False otherwise.

Definition at line 6175 of file basic_string.h.

3.10.4.174 operator==() [4/16]

```
template<typename _Tp , typename _Alloc >
bool std::operator== (
            const deque< _Tp, _Alloc > & __x,
            const deque< _Tp, _Alloc > & __y )  [inline]
```

Deque equality comparison.

Parameters

_x	A deque.
_y	A deque of the same type as *__x*.

Returns

True iff the size and elements of the deques are equal.

This is an equivalence relation. It is linear in the size of the deques. Deques are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 2241 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), std::deque< _Tp, _Alloc >::end(), and std::deque< _Tp, _Alloc >::size().

3.10.4.175 operator==() [5/16]

```
template<typename _Tp , typename _Alloc >
bool std::operator== (
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )
```

Forward list equality comparison.

Parameters

_↩ _lx	A forward_list
_↩ _ly	A forward_list of the same type as __lx.

Returns

True iff the elements of the forward lists are equal.

This is an equivalence relation. It is linear in the number of elements of the forward lists. Deques are considered equivalent if corresponding elements compare equal.
Definition at line 398 of file forward_list.tcc.
References std::forward_list< _Tp, _Alloc >::cbegin(), and std::forward_list< _Tp, _Alloc >::cend().

3.10.4.176 operator==() [6/16] template<typename _StateT >

```
bool std::operator== (
            const fpos< _StateT > & __lhs,
            const fpos< _StateT > & __rhs )  [inline]
```

Test if equivalent to another position.
Definition at line 222 of file postypes.h.

3.10.4.177 operator==() [7/16] template<typename _Res , typename... _Args>

```
bool std::operator== (
            const function< _Res(_Args...)> & __f,
            nullptr_t  )  [inline], [noexcept]
```

Compares a polymorphic function object wrapper against 0 (the NULL pointer).

Returns

`true` if the wrapper has no target, `false` otherwise

This function will not throw an exception.
Definition at line 680 of file std_function.h.

3.10.4.178 operator==() [8/16] template<typename _Tp , typename _Alloc >

```
bool std::operator== (
            const list< _Tp, _Alloc > & __x,
            const list< _Tp, _Alloc > & __y )  [inline]
```

List equality comparison.

Parameters

_↩ _x	A list.
_↩ _y	A list of the same type as __x.

Returns

True iff the size and elements of the lists are equal.

This is an equivalence relation. It is linear in the size of the lists. Lists are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 1995 of file stl_list.h.
References std::list< _Tp, _Alloc >::begin(), std::list< _Tp, _Alloc >::end(), and std::list< _Tp, _Alloc >::size().

3.10.4.179 operator==() [9/16]

```
template<typename _Key , typename _Tp , typename _Compare , typename
_Alloc >
bool std::operator== (
            const map< _Key, _Tp, _Compare, _Alloc > & __x,
            const map< _Key, _Tp, _Compare, _Alloc > & __y )  [inline]
```

Map equality comparison.

Parameters

_↩ _x	A map.
_↩ _y	A map of the same type as *x*.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the maps. Maps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 1463 of file stl_map.h.

3.10.4.180 operator==() [10/16]

```
template<typename _Key , typename _Tp , typename _Compare , typename
_Alloc >
bool std::operator== (
            const multimap< _Key, _Tp, _Compare, _Alloc > & __x,
            const multimap< _Key, _Tp, _Compare, _Alloc > & __y )  [inline]
```

Multimap equality comparison.

Parameters

_↩ _x	A multimap.
_↩ _y	A multimap of the same type as __x.

Returns

True iff the size and elements of the maps are equal.

This is an equivalence relation. It is linear in the size of the multimaps. Multimaps are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 1128 of file stl_multimap.h.

3.10.4.181 operator==() [11/16] template<typename _Key , typename _Compare , typename _Alloc >

```
bool std::operator== (
            const multiset< _Key, _Compare, _Alloc > & __x,
            const multiset< _Key, _Compare, _Alloc > & __y )  [inline]
```

Multiset equality comparison.

Parameters

_↩ _x	A multiset.
_↩ _y	A multiset of the same type as __x.

Returns

True iff the size and elements of the multisets are equal.

This is an equivalence relation. It is linear in the size of the multisets. Multisets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 971 of file stl_multiset.h.

3.10.4.182 operator==() [12/16] template<typename _Tp , typename _Seq >

```
bool std::operator== (
            const queue< _Tp, _Seq > & __x,
            const queue< _Tp, _Seq > & __y )  [inline]
```

Queue equality comparison.

Parameters

_↩ _x	A queue.
_↩ _y	A queue of the same type as __x.

Returns

True iff the size and elements of the queues are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and queues are considered equivalent if their sequences compare equal.
Definition at line 344 of file stl_queue.h.
References std::queue< _Tp, _Sequence >::c.

3.10.4.183 operator==() [13/16] template<typename _Key , typename _Compare , typename _Alloc >

```
bool std::operator== (
            const set< _Key, _Compare, _Alloc > & __x,
            const set< _Key, _Compare, _Alloc > & __y )  [inline]
```

Set equality comparison.

Parameters

_↩ _x	A set.
_↩ _y	A set of the same type as *x*.

Returns

True iff the size and elements of the sets are equal.

This is an equivalence relation. It is linear in the size of the sets. Sets are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 985 of file stl_set.h.

3.10.4.184 operator==() [14/16] template<typename _Tp , typename _Seq >

```
bool std::operator== (
            const stack< _Tp, _Seq > & __x,
            const stack< _Tp, _Seq > & __y )  [inline]
```

Stack equality comparison.

Parameters

_↩ _x	A stack.
_↩ _y	A stack of the same type as *__x*.

Returns

True iff the size and elements of the stacks are equal.

This is an equivalence relation. Complexity and semantics depend on the underlying sequence type, but the expected rules are: this relation is linear in the size of the sequences, and stacks are considered equivalent if their sequences compare equal.
Definition at line 319 of file stl_stack.h.

3.10.4.185 operator==() [15/16] template<typename _Tp , typename _Alloc >

```
bool std::operator== (
            const vector< _Tp, _Alloc > & __x,
            const vector< _Tp, _Alloc > & __y )  [inline]
```

Vector equality comparison.

Parameters

_↩ _x	A vector.
_↩ _y	A vector of the same type as *__x*.

Returns

True iff the size and elements of the vectors are equal.

This is an equivalence relation. It is linear in the size of the vectors. Vectors are considered equivalent if their sizes are equal, and if corresponding elements compare equal.
Definition at line 1892 of file stl_vector.h.
References std::vector< _Tp, _Alloc >::begin(), std::vector< _Tp, _Alloc >::end(), and std::vector< _Tp, _Alloc >::size().

3.10.4.186 operator==() [16/16] template<typename _Res , typename... _Args>

```
bool std::operator== (
            nullptr_t ,
            const function< _Res(_Args...)> & __f )  [inline], [noexcept]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.
Definition at line 687 of file std_function.h.

3.10.4.187 operator>() [1/13] template<typename _CharT , typename _Traits , typename _Alloc >

enable_if<__and_<__not_<is_lvalue_reference<_Istream> >, __is_convertible_to_basic_istream<_↩
Istream>, __is_extractable< __rvalue_istream_type<_Istream>, _Tp&&> >::value, __rvalue_istream↩
_type<_Istream> >::type std::operator>> (
            _Istream && __is,
            _Tp && __x )  [inline]
```

Generic extractor for rvalue stream.

Parameters

_↩ _is	An input stream.
_↩ _x	A reference to the extraction target.

Returns

is

This is just a forwarding function to allow extraction from rvalue streams since they won't bind to the extractor functions that take an lvalue reference.
Definition at line 980 of file istream.

3.10.4.214 operator>>() [2/11]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::operator>> (
```

```
            basic_istream< _CharT, _Traits > & __in,
            _CharT & __c )
```

Character extractors.

Parameters

_↩ _*in*	An input stream.
_↩ _*c*	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in __*c*. Otherwise, sets failbit in the input stream.
Definition at line 931 of file istream.tcc.
References std::ios_base::goodbit.

3.10.4.215 operator>>() [3/11]

template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::operator>> (
            basic_istream< _CharT, _Traits > & __in,
            _CharT * __s )
```

Character string extractors.

Parameters

_↩ _*in*	An input stream.
_↩ _*s*	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at __*s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* `*`
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached

- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.
If no characters are extracted, sets failbit.
Definition at line 963 of file istream.tcc.
References std::ios_base::goodbit.

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
basic_istream< _CharT, _Traits > & std::operator>> (
            basic_istream< _CharT, _Traits > & __is,
            __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > & __str )
```

Read stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until whitespace is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased.
Definition at line 552 of file vstring.tcc.

3.10.4.217 operator>>() [5/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_istream< _CharT, _Traits > & std::operator>> (
            basic_istream< _CharT, _Traits > & __is,
            basic_string< _CharT, _Traits, _Alloc > & __str )
```

Read stream into a string.

Parameters

__is	Input stream.
__str	Buffer to store into.

Returns

Reference to the input stream.

Stores characters from *__is* into *__str* until whitespace is found, the end of the stream is encountered, or str.max_size() is reached. If is.width() is non-zero, that is the limit on the number of characters stored into *__str*. Any previous contents of *__str* are erased.
Definition at line 1468 of file basic_string.tcc.

3.10.4.218 operator>>() [6/11]

```
template<>
basic_istream<char>& std::operator>> (
```

```
basic_istream< char > & __in,
char * __s )
```

Character string extractors.

Parameters

_↩ _in	An input stream.
_↩ _s	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at *__s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* `*`
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.
If no characters are extracted, sets failbit.

3.10.4.219 operator>>() [7/11]

```
template<class _Traits >
basic_istream<char, _Traits>& std::operator>> (
basic_istream< char, _Traits > & __in,
signed char & __c ) [inline]
```

Character extractors.

Parameters

_↩ _in	An input stream.
_↩ _c	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in __*c*. Otherwise, sets failbit in the input stream.
Definition at line 761 of file istream.

3.10.4.220 operator>>() [8/11] template<class _Traits >

```
basic_istream<char, _Traits>& std::operator>> (
            basic_istream< char, _Traits > & __in,
            signed char * __s )  [inline]
```

Character string extractors.

Parameters

_↩ _*in*	An input stream.
_↩ _*s*	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at __*s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* `*`
- `char_type` *that can store a terminating* `eos`.
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.
If no characters are extracted, sets failbit.
Definition at line 808 of file istream.

3.10.4.221 operator>>() [9/11] template<class _Traits >

```
basic_istream<char, _Traits>& std::operator>> (
            basic_istream< char, _Traits > & __in,
            unsigned char & __c )  [inline]
```

Character extractors.

Parameters

_↩ _*in*	An input stream.
_↩ _*c*	A character reference.

Returns

in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts a character (if one is available) and stores it in __*c*. Otherwise, sets failbit in the input stream.
Definition at line 756 of file istream.

3.10.4.222 operator>>() [10/11] template<class _Traits >

```
basic_istream<char, _Traits>& std::operator>> (
            basic_istream< char, _Traits > & __in,
            unsigned char * __s )  [inline]
```

Character string extractors.

Parameters

_↩ _*in*	An input stream.
_↩ _*s*	A pointer to a character array.

Returns

__in

Behaves like one of the formatted arithmetic extractors described in std::basic_istream. After constructing a sentry object with good status, this function extracts up to `n` characters and stores them into the array starting at __*s*. `n` is defined as:

- if `width()` is greater than zero, `n` is width() otherwise
- `n` is *the number of elements of the largest array of* `*`
- *`char_type` that can store a terminating `eos`.*
- [27.6.1.2.3]/6

Characters are extracted and stored until one of the following happens:

- `n-1` characters are stored
- EOF is reached
- the next character is whitespace according to the current locale
- the next character is a null byte (i.e., `charT()`)

`width(0)` is then called for the input stream.
If no characters are extracted, sets failbit.
Definition at line 803 of file istream.

3.10.4.223 operator>>() [11/11]

```
template<class _CharT , class _Traits , size_t _Nb>
std::basic_istream<_CharT, _Traits>& std::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            bitset< _Nb > & __x )
```

Global I/O operators for bitsets.
Direct I/O between streams and bitsets is supported. Output is straightforward. Input will skip whitespace, only accept *0* and *1* characters, and will only extract as many digits as the bitset will hold.
Definition at line 1472 of file bitset.

3.10.4.224 operator^()

```
template<size_t _Nb>
bitset<_Nb> std::operator^ (
            const bitset< _Nb > & __x,
            const bitset< _Nb > & __y )  [inline], [noexcept]
```

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.
Definition at line 1453 of file bitset.

3.10.4.225 operator"|()

```
template<size_t _Nb>
bitset<_Nb> std::operator| (
            const bitset< _Nb > & __x,
            const bitset< _Nb > & __y )  [inline], [noexcept]
```

Global bitwise operations on bitsets.

Parameters

_↩ _x	A bitset.
_↩ _y	A bitset of the same size as __x.

Returns

A new bitset.

These should be self-explanatory.
Definition at line 1444 of file bitset.

3.10.4.226 put_money()

```
template<typename _MoneyT >
_Put_money<_MoneyT> std::put_money (
```

```
            const _MoneyT & __mon,
            bool __intl = false )  [inline]
```

Extended manipulator for inserting money.

Parameters

__mon	Either long double or a specialization of `basic_string`.
__intl	A bool indicating whether international format is to be used.

Sent to a stream object, this manipulator inserts *__mon*.
Definition at line 306 of file iomanip.

3.10.4.227 put_time() `template<typename _CharT >`

```
_Put_time<_CharT> std::put_time (
            const std::tm * __tmb,
            const _CharT * __fmt )  [inline]
```

Extended manipulator for formatting time.
This manipulator uses time_put::put to format time. [ext.manip]

Parameters

__tmb	struct tm time data to format.
__fmt	format string.

Definition at line 358 of file iomanip.

3.10.4.228 quoted() `template<typename _CharT >`

```
auto std::quoted (
            const _CharT * __string,
            _CharT __delim = _CharT('"'),
            _CharT __escape = _CharT('\\') )  [inline]
```

Manipulator for quoted strings.

Parameters

__string	String to quote.
__delim	Character to quote string with.
__escape	Escape character to escape itself or quote character.

Definition at line 461 of file iomanip.

3.10.4.229 rbegin() [1/4] `template<typename _Container >`

```
constexpr auto std::rbegin (
            _Container & __cont ) -> decltype(__cont.rbegin())   [inline], [constexpr]
```

Return a reverse iterator pointing to the last element of the container.

Parameters

__cont	Container.

Definition at line 141 of file range_access.h.
Referenced by crbegin().

3.10.4.230 rbegin() [2/4] template<typename _Tp , size_t _Nm>

```
constexpr reverse_iterator<_Tp*> std::rbegin (
            _Tp(&) __arr[_Nm] )  [inline], [constexpr], [noexcept]
```

Return a reverse iterator pointing to the last element of the array.

Parameters

__arr	Array.

Definition at line 181 of file range_access.h.

3.10.4.231 rbegin() [3/4] template<typename _Container >

```
constexpr auto std::rbegin (
            const _Container & __cont ) -> decltype(__cont.rbegin())   [inline], [constexpr]
```

Return a reverse iterator pointing to the last element of the const container.

Parameters

__cont	Container.

Definition at line 151 of file range_access.h.

3.10.4.232 rbegin() [4/4] template<typename _Tp >

```
constexpr reverse_iterator<const _Tp*> std::rbegin (
            initializer_list< _Tp > __il )  [inline], [constexpr], [noexcept]
```

Return a reverse iterator pointing to the last element of the initializer_list.

Parameters

_↩ _il	initializer_list.

Definition at line 201 of file range_access.h.

3.10.4.233 rend() [1/4] template<typename _Container >

```
constexpr auto std::rend (
            _Container & __cont ) -> decltype(__cont.rend())   [inline], [constexpr]
```

Return a reverse iterator pointing one past the first element of the container.

Parameters

__cont	Container.

Definition at line 161 of file range_access.h.
Referenced by crend().

3.10.4.234 rend() [2/4] template<typename _Tp , size_t _Nm>

```
constexpr reverse_iterator<_Tp*> std::rend (
            _Tp(&) __arr[_Nm] )  [inline], [constexpr], [noexcept]
```

Return a reverse iterator pointing one past the first element of the array.

Parameters

__arr	Array.

Definition at line 191 of file range_access.h.

3.10.4.235 rend() [3/4] template<typename _Container >

```
constexpr auto std::rend (
            const _Container & __cont ) -> decltype(__cont.rend())   [inline], [constexpr]
```

Return a reverse iterator pointing one past the first element of the const container.

Parameters

__cont	Container.

Definition at line 171 of file range_access.h.

3.10.4.236 rend() [4/4] template<typename _Tp >

```
constexpr reverse_iterator<const _Tp*> std::rend (
            initializer_list< _Tp > __il )  [inline], [constexpr], [noexcept]
```

Return a reverse iterator pointing one past the first element of the initializer_list.

Parameters

_↩ _il	initializer_list.

Definition at line 211 of file range_access.h.

3.10.4.237 replace_copy() template<typename _InputIterator , typename _OutputIterator , typename _Tp >

```
constexpr _OutputIterator std::replace_copy (
            _InputIterator __first,
            _InputIterator __last,
            _OutputIterator __result,
            const _Tp & __old_value,
            const _Tp & __new_value )  [inline], [constexpr]
```

Copy a sequence, replacing each element of one value with another value.

Parameters

__first	An input iterator.

Parameters

__last	An input iterator.
__result	An output iterator.
__old_value	The value to be replaced.
__new_value	The replacement value.

Returns

The end of the output sequence, `result+`(last-first).

Copies each element in the input range [__first,__last) to the output range [__result,__result+(__last-__first)) replacing elements equal to `__old_value` with `__new_value`.
Definition at line 3164 of file stl_algo.h.

3.10.4.238 resetiosflags() `_Resetiosflags std::resetiosflags ( ios_base::fmtflags __mask ) [inline]`

Manipulator for `setf`.

Parameters

__mask	A format flags mask.

Sent to a stream object, this manipulator resets the specified flags, via *stream.setf(0,__mask)*.
Definition at line 66 of file iomanip.

3.10.4.239 return_temporary_buffer() `template<typename _Tp > void std::return_temporary_buffer ( _Tp * __p ) [inline]`

The companion to get_temporary_buffer().

Parameters

__p	A buffer previously allocated by get_temporary_buffer.

Returns

None.

Frees the memory pointed to by __p.
Definition at line 127 of file stl_tempbuf.h.

3.10.4.240 right() `ios_base& std::right ( ios_base & __base ) [inline]`

Calls base.setf(ios_base::right, ios_base::adjustfield).
Definition at line 1037 of file ios_base.h.
References __gnu_debug::__base(), std::ios_base::adjustfield, and std::ios_base::right.

3.10.4.241 scientific()

```
ios_base& std::scientific (
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::scientific, ios_base::floatfield).
Definition at line 1079 of file ios_base.h.
References __gnu_debug::__base(), std::ios_base::floatfield, and std::ios_base::scientific.

3.10.4.242 set_new_handler()

```
new_handler std::set_new_handler (
            new_handler  ) throw ( )
```

Takes a replacement handler as the argument, returns the previous handler.

3.10.4.243 setbase()

```
_Setbase std::setbase (
            int __base )  [inline]
```

Manipulator for `setf`.

Parameters

__base	A numeric base.

Sent to a stream object, this manipulator changes the `ios_base::basefield` flags to `oct`, `dec`, or `hex` when *base* is 8, 10, or 16, accordingly, and to 0 if *__base* is any other value.
Definition at line 127 of file iomanip.

3.10.4.244 setfill()

```
template<typename _CharT >
_Setfill<_CharT> std::setfill (
            _CharT __c )  [inline]
```

Manipulator for `fill`.

Parameters

_↩ _c	The new fill character.

Sent to a stream object, this manipulator calls `fill(__c)` for that object.
Definition at line 165 of file iomanip.

3.10.4.245 setiosflags()

```
_Setiosflags std::setiosflags (
            ios_base::fmtflags __mask )  [inline]
```

Manipulator for `setf`.

Parameters

__mask	A format flags mask.

Sent to a stream object, this manipulator sets the format flags to *__mask*.
Definition at line 96 of file iomanip.

3.10.4.246 setprecision()

```
_Setprecision std::setprecision (
```

int __n) [inline]

Manipulator for precision.

Parameters

_↩ _n	The new precision.

Sent to a stream object, this manipulator calls precision(__n) for that object.
Definition at line 195 of file iomanip.

3.10.4.247 setw() _Setw std::setw (

int __n) [inline]

Manipulator for width.

Parameters

_↩ _n	The new width.

Sent to a stream object, this manipulator calls width(__n) for that object.
Definition at line 225 of file iomanip.

3.10.4.248 showbase() ios_base& std::showbase (

ios_base & __base) [inline]

Calls base.setf(ios_base::showbase).
Definition at line 924 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::showbase.

3.10.4.249 showpoint() ios_base& std::showpoint (

ios_base & __base) [inline]

Calls base.setf(ios_base::showpoint).
Definition at line 940 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::showpoint.

3.10.4.250 showpos() ios_base& std::showpos (

ios_base & __base) [inline]

Calls base.setf(ios_base::showpos).
Definition at line 956 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::showpos.

3.10.4.251 skipws() ios_base& std::skipws (

ios_base & __base) [inline]

Calls base.setf(ios_base::skipws).
Definition at line 972 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::skipws.
Referenced by operator<<(), and operator>>().

3.10.4.252 static_pointer_cast() template<typename _Tp , typename _Tp1 , _Lock_policy _Lp>

```
__shared_ptr<_Tp, _Lp> std::static_pointer_cast (
            const __shared_ptr< _Tp1, _Lp > & __r )  [inline], [noexcept]
```

static_pointer_cast
Definition at line 1580 of file shared_ptr_base.h.

3.10.4.253 swap() [1/18] template<class _CharT , class _Traits >

```
void std::swap (
            basic_filebuf< _CharT, _Traits > & __x,
            basic_filebuf< _CharT, _Traits > & __y )  [inline]
```

Swap specialization for filebufs.
Definition at line 1264 of file fstream.

3.10.4.254 swap() [2/18] template<class _CharT , class _Traits >

```
void std::swap (
            basic_fstream< _CharT, _Traits > & __x,
            basic_fstream< _CharT, _Traits > & __y )  [inline]
```

Swap specialization for fstreams.
Definition at line 1285 of file fstream.

3.10.4.255 swap() [3/18] template<class _CharT , class _Traits >

```
void std::swap (
            basic_ifstream< _CharT, _Traits > & __x,
            basic_ifstream< _CharT, _Traits > & __y )  [inline]
```

Swap specialization for ifstreams.
Definition at line 1271 of file fstream.

3.10.4.256 swap() [4/18] template<class _CharT , class _Traits , class _Allocator >

```
void std::swap (
            basic_istringstream< _CharT, _Traits, _Allocator > & __x,
            basic_istringstream< _CharT, _Traits, _Allocator > & __y )  [inline]
```

Swap specialization for istringstreams.
Definition at line 856 of file sstream.

3.10.4.257 swap() [5/18] template<class _CharT , class _Traits >

```

            basic_ofstream< _CharT, _Traits > & __y )  [inline]
```

Swap specialization for ofstreams.
Definition at line 1278 of file fstream.

3.10.4.258 swap() [6/18] template<class _CharT , class _Traits , class _Allocator >

```
void std::swap (
            basic_ostringstream< _CharT, _Traits, _Allocator > & __x,
            basic_ostringstream< _CharT, _Traits, _Allocator > & __y )  [inline]
```

Swap specialization for ostringstreams.
Definition at line 863 of file sstream.

3.10.4.259 swap() [7/18] template<typename _CharT , typename _Traits , typename _Alloc >

```
void std::swap (
            basic_string< _CharT, _Traits, _Alloc > & __lhs,
            basic_string< _CharT, _Traits, _Alloc > & __rhs )  [inline], [noexcept]
```

Swap contents of two strings.

Parameters

__lhs	First string.
__rhs	Second string.

Exchanges the contents of *__lhs* and *__rhs* in constant time.
Definition at line 6442 of file basic_string.h.

3.10.4.260 swap() [8/18] template<class _CharT , class _Traits , class _Allocator >

```
void std::swap (
            basic_stringbuf< _CharT, _Traits, _Allocator > & __x,
            basic_stringbuf< _CharT, _Traits, _Allocator > & __y )  [inline]
```

Swap specialization for stringbufs.
Definition at line 849 of file sstream.

3.10.4.261 swap() [9/18] template<class _CharT , class _Traits , class _Allocator >

See std::deque::swap().
Definition at line 2311 of file stl_deque.h.

3.10.4.263 swap() [11/18] template<typename _Tp , typename _Alloc >

```
void std::swap (
            forward_list< _Tp, _Alloc > & __lx,
            forward_list< _Tp, _Alloc > & __ly )  [inline], [noexcept]
```

See std::forward_list::swap().
Definition at line 1505 of file forward_list.h.

3.10.4.264 swap() [12/18] template<typename _Res , typename... _Args>

```
void std::swap (
```

```
            function< _Res(_Args...)> & __x,
            function< _Res(_Args...)> & __y )  [inline], [noexcept]
```

Swap the targets of two polymorphic function object wrappers.
This function will not throw an exception.
Definition at line 720 of file std_function.h.

3.10.4.265 swap() [13/18]

```
template<typename _Tp , typename _Alloc >
void std::swap (
            list< _Tp, _Alloc > & __x,
            list< _Tp, _Alloc > & __y )  [inline], [noexcept]
```

See std::list::swap().
Definition at line 2082 of file stl_list.h.

3.10.4.266 swap() [14/18]

```
template<typename _Key , typename _Tp , typename _Compare , typename _↩
Alloc >
void std::swap (
            map< _Key, _Tp, _Compare, _Alloc > & __x,
            map< _Key, _Tp, _Compare, _Alloc > & __y )  [inline], [noexcept]
```

See std::map::swap().
Definition at line 1537 of file stl_map.h.

3.10.4.267 swap() [15/18]

```
template<typename _Key , typename _Tp , typename _Compare , typename _↩
Alloc >
void std::swap (
            multimap< _Key, _Tp, _Compare, _Alloc > & __x,
            multimap< _Key, _Tp, _Compare, _Alloc > & __y )  [inline], [noexcept]
```

See std::multimap::swap().
Definition at line 1202 of file stl_multimap.h.

3.10.4.268 swap() [16/18]

```
template<typename _Key , typename _Compare , typename _Alloc >
void std::swap (
            multiset< _Key, _Compare, _Alloc > & __x,
            multiset< _Key, _Compare, _Alloc > & __y )  [inline], [noexcept]
```

See std::multiset::swap().
Definition at line 1045 of file stl_multiset.h.

3.10.4.269 swap() [17/18]

```
template<typename _Key , typename _Compare , typename _Alloc >
void std::swap (
            set< _Key, _Compare, _Alloc > & __x,
            set< _Key, _Compare, _Alloc > & __y )  [inline], [noexcept]
```

See std::set::swap().
Definition at line 1059 of file stl_set.h.

3.10.4.270 swap() [18/18]

```
template<typename _Tp , typename _Alloc >
void std::swap (
            vector< _Tp, _Alloc > & __x,
            vector< _Tp, _Alloc > & __y )  [inline], [noexcept]
```

See std::vector::swap().
Definition at line 1962 of file stl_vector.h.

3.10.4.271 tolower() template<typename _CharT >

```
_CharT std::tolower (
            _CharT __c,
            const locale & __loc )  [inline]
```

Convenience interface to ctype.tolower(__c).
Definition at line 2649 of file locale_facets.h.

3.10.4.272 toupper() template<typename _CharT >

```
_CharT std::toupper (
            _CharT __c,
            const locale & __loc )  [inline]
```

Convenience interface to ctype.toupper(__c).
Definition at line 2643 of file locale_facets.h.

3.10.4.273 unitbuf() ios_base& std::unitbuf (

```
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::unitbuf).
Definition at line 1004 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::unitbuf.

3.10.4.274 uppercase() ios_base& std::uppercase (

```
            ios_base & __base )  [inline]
```

Calls base.setf(ios_base::uppercase).
Definition at line 988 of file ios_base.h.
References __gnu_debug::__base(), and std::ios_base::uppercase.

3.10.4.275 ws() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::ws (
            basic_istream< _CharT, _Traits > & __is )
```

Quick and easy way to eat whitespace.
This manipulator extracts whitespace characters, stopping when the next character is non-whitespace, or when the input sequence is empty. If the sequence is empty, `eofbit` is set in the stream, but not `failbit`.
The current locale is used to distinguish whitespace characters.
Example:

```
MyClass  mc;
std::cin » std::ws » mc;
```

will skip leading whitespace before calling operator>> on cin and your object. Note that the same effect can be achieved by creating a std::basic_istream::sentry inside your definition of operator>>.
Definition at line 1024 of file istream.tcc.
References std::ios_base::eofbit, std::ios_base::getloc(), std::basic_ios< _CharT, _Traits >::rdbuf(), and std::basic_↩ios< _CharT, _Traits >::setstate().

3.11.1 Detailed Description

GNU debug code, replaces standard behavior with debug behavior.
Macros and namespaces used by the implementation outside of debug wrappers to verify certain properties. The _↩ _glibcxx_requires_xxx macros are merely wrappers around the __glibcxx_check_xxx wrappers when we are compiling with debug mode, but disappear when we are in release mode so that there is no checking performed in, e.g., the standard library algorithms.

3.11.2 Function Documentation

3.11.2.1 operator<=() `template<typename _Tp , typename _Alloc >`

```
bool std::__debug::operator<= (
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )  [inline]
```

Based on operator<.
Definition at line 876 of file debug/forward_list.

3.11.2.2 operator>() template<typename _Tp , typename _Alloc >

```
bool std::__debug::operator> (
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )  [inline]
```

Based on operator<.
Definition at line 863 of file debug/forward_list.

3.11.2.3 operator>=() template<typename _Tp , typename _Alloc >

```
bool std::__debug::operator>= (
            const forward_list< _Tp, _Alloc > & __lx,
            const forward_list< _Tp, _Alloc > & __ly )  [inline]
```

Based on operator<.
Definition at line 870 of file debug/forward_list.

3.11.2.4 swap() template<typename _Tp , typename _Alloc >

```
void std::__debug::swap (
            forward_list< _Tp, _Alloc > & __lx,
            forward_list< _Tp, _Alloc > & __ly )  [inline], [noexcept]
```

See std::forward_list::swap().
Definition at line 885 of file debug/forward_list.

3.12.1 Detailed Description

Implementation details not part of the namespace std interface.

3.12.2 Function Documentation

3.12.2.1 __from_chars_alnum() template<typename _Tp >

```
bool std::__detail::__from_chars_alnum (
            const char *& __first,
            const char * __last,
            _Tp & __val,
            int __base )
```

std::from_chars implementation for integers in bases 11 to 36.
Definition at line 557 of file charconv.

3.12.2.2 __from_chars_binary() template<typename _Tp >

```
bool std::__detail::__from_chars_binary (
            const char *& __first,
            const char * __last,
            _Tp & __val )
```

std::from_chars implementation for integers in base 2.
Definition at line 411 of file charconv.

3.12.2.3 __from_chars_digit() template<typename _Tp >

```
bool std::__detail::__from_chars_digit (
            const char *& __first,
            const char * __last,
            _Tp & __val,
            int __base )
```

std::from_chars implementation for integers in bases 3 to 10.
Definition at line 438 of file charconv.

3.12.2.4 operator<<() [1/2] template<typename _CharT , typename _Traits , typename _String >

```
std::basic_ostream<_CharT, _Traits>& std::__detail::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const _Quoted_string< _String, _CharT > & __str )
```

Inserter for quoted strings.
_GLIBCXX_RESOLVE_LIB_DEFECTS DR 2344 quoted()'s interaction with padding is unclear
Definition at line 1 of file quoted_string.h.

3.12.2.5 operator<<() [2/2] template<typename _CharT , typename _Traits >

```
std::basic_ostream<_CharT, _Traits>& std::__detail::operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const _Quoted_string< const _CharT *, _CharT > & __str )
```

Inserter for quoted strings.
_GLIBCXX_RESOLVE_LIB_DEFECTS DR 2344 quoted()'s interaction with padding is unclear
Definition at line 1 of file quoted_string.h.

3.12.2.6 operator>>() template<typename _CharT , typename _Traits , typename _Alloc >

```
std::basic_istream<_CharT, _Traits>& std::__detail::operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            const _Quoted_string< basic_string< _CharT, _Traits, _Alloc > &, _CharT > & __str )
```

Extractor for delimited strings. The left and right delimiters can be different.
Definition at line 139 of file quoted_string.h.

References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::flags(), std::basic_ios< _CharT, _Traits >::good(), std::ios_base::setf(), std::ios_base::skipws, and std::basic_istream< _CharT, _Traits >::unget().

3.13.1 Detailed Description

GNU parallel code, replaces standard behavior with parallel behavior.

3.14 std::chrono Namespace Reference

Classes

- struct duration
- struct duration_values
- struct steady_clock
- struct system_clock
- struct time_point
- struct treat_as_floating_point

Typedefs

- using high_resolution_clock = system_clock
- using hours = duration< int64_t, ratio< 3600 > >
- using microseconds = duration< int64_t, micro >
- using milliseconds = duration< int64_t, milli >
- using minutes = duration< int64_t, ratio< 60 > >
- using nanoseconds = duration< int64_t, nano >
- using seconds = duration< int64_t >

Functions

- template<typename _ToDur , typename _Rep , typename _Period >
  constexpr __enable_if_is_duration< _ToDur > duration_cast (const duration< _Rep, _Period > &__d)
- template<typename _ToDur , typename _Clock , typename _Dur >
  constexpr enable_if< __is_duration< _ToDur >::value, time_point< _Clock, _ToDur > >::type time_point_cast (const time_point< _Clock, _Dur > &__t)

3.14.1 Detailed Description

ISO C++ 2011 namespace for date and time utilities.

3.15 std::decimal Namespace Reference

Classes

- class decimal128
- class decimal32
- class decimal64

Functions

- double **decimal128_to_double** (decimal128 __d)
- float **decimal128_to_float** (decimal128 __d)
- long double **decimal128_to_long_double** (decimal128 __d)

3.15.1 Detailed Description

ISO/IEC TR 24733 Decimal floating-point arithmetic.

3.15.2 Function Documentation

3.15.2.1 decimal32_to_long_long() `long long std::decimal::decimal32_to_long_long ( decimal32 __d )`

Non-conforming extension: Conversion to integral type.

3.16 std::experimental Namespace Reference

3.16.1 Detailed Description

Namespace for features defined in ISO Technical Specifications.

3.16.2 Function Documentation

3.16.2.1 gcd() template<typename _Mn , typename _Nn >

```
constexpr common_type_t<_Mn, _Nn> std::experimental::fundamentals_v2::gcd (
            _Mn __m,
            _Nn __n )  [constexpr], [noexcept]
```

Greatest common divisor.
Definition at line 57 of file experimental/numeric.

3.16.2.2 get_deleter() template<typename _Del , typename _Tp >

```
_Del* std::experimental::fundamentals_v2::get_deleter (
            const shared_ptr< _Tp > & __p )  [inline], [noexcept]
```

C++14 20.8.2.2.10.
Definition at line 492 of file experimental/bits/shared_ptr.h.

3.16.2.3 lcm() template<typename _Mn , typename _Nn >

```
constexpr common_type_t<_Mn, _Nn> std::experimental::fundamentals_v2::lcm (
            _Mn __m,
            _Nn __n )  [constexpr]
```

Least common multiple.
Definition at line 75 of file experimental/numeric.

3.16.2.4 make_boyer_moore_horspool_searcher() template<typename _RAIter , typename _Hash = std↩ ::hash<typename std::iterator_traits<_RAIter>::value_type>, typename _BinaryPredicate = equal_↩ to<>>

```
boyer_moore_horspool_searcher<_RAIter, _Hash, _BinaryPredicate> std::experimental::fundamentals↩
_v1::make_boyer_moore_horspool_searcher (
            _RAIter __pat_first,
            _RAIter __pat_last,
            _Hash __hf = _Hash(),
            _BinaryPredicate __pred = _BinaryPredicate() )  [inline]
```

Generator function for boyer_moore_horspool_searcher.
Definition at line 303 of file experimental/functional.

3.16.2.5 make_boyer_moore_searcher() template<typename _RAIter , typename _Hash = std::hash<typename std::iterator_traits<_RAIter>::value_type>, typename _BinaryPredicate = equal_to<>>

```
boyer_moore_searcher<_RAIter, _Hash, _BinaryPredicate> std::experimental::fundamentals_v1::make↩
_boyer_moore_searcher (
            _RAIter __pat_first,
            _RAIter __pat_last,
            _Hash __hf = _Hash(),
            _BinaryPredicate __pred = _BinaryPredicate() )  [inline]
```

Generator function for boyer_moore_searcher.

Definition at line 293 of file experimental/functional.

3.16.2.6 make_default_searcher()

```
template<typename _ForwardIterator , typename _BinaryPredicate =
std::equal_to<>>
default_searcher<_ForwardIterator, _BinaryPredicate> std::experimental::fundamentals_v1::make_↩
default_searcher (
            _ForwardIterator __pat_first,
            _ForwardIterator __pat_last,
            _BinaryPredicate __pred = _BinaryPredicate() )  [inline]
```

Generator function for default_searcher.
Definition at line 283 of file experimental/functional.

3.16.2.7 make_ostream_joiner()

```
template<typename _CharT , typename _Traits , typename _DelimT >
ostream_joiner<decay_t<_DelimT>, _CharT, _Traits> std::experimental::fundamentals_v2::make_↩
ostream_joiner (
            basic_ostream< _CharT, _Traits > & __os,
            _DelimT && __delimiter )  [inline]
```

Object generator for ostream_joiner.
Definition at line 104 of file experimental/iterator.

3.16.2.8 not_fn()

```
template<typename _Fn >
auto std::experimental::fundamentals_v2::not_fn (
            _Fn && __fn )  [inline], [noexcept]
```

[func.not_fn] Function template not_fn
Definition at line 372 of file experimental/functional.

3.16.2.9 sample()

```
template<typename _PopulationIterator , typename _SampleIterator , typename _↩
Distance , typename _UniformRandomNumberGenerator >
_SampleIterator std::experimental::fundamentals_v2::sample (
            _PopulationIterator __first,
            _PopulationIterator __last,
            _SampleIterator __out,
            _Distance __n,
            _UniformRandomNumberGenerator && __g )
```

Take a random sample from a population.
Definition at line 61 of file experimental/algorithm.

3.16.3 Variable Documentation

3.16.3.1 is_bind_expression_v

```
template<typename _Tp >
constexpr bool std::experimental::fundamentals_v1::is_bind_expression_v  [constexpr]
```

Variable template for std::is_bind_expression.
Definition at line 61 of file experimental/functional.

3.16.3.2 is_placeholder_v `template<typename _Tp >`

`constexpr int std::experimental::fundamentals_v1::is_placeholder_v [constexpr]`

Variable template for std::is_placeholder.

Definition at line 65 of file experimental/functional.

3.17.1 Detailed Description

ISO C++ 2014 namespace for suffixes for duration literals.

These suffixes can be used to create `chrono::duration` values with tick periods of hours, minutes, seconds, milliseconds, microseconds or nanoseconds. For example, `std::chrono::seconds(5)` can be written as `5s` after making the suffix visible in the current scope. The suffixes can be made visible by a using-directive or using-declaration such as:

- `using namespace std::chrono_literals;`
- `using namespace std::literals;`
- `using namespace std::chrono;`
- `using namespace std;`
- `using std::chrono_literals::operator""s;`

The result of these suffixes on an integer literal is one of the standard typedefs such as `std::chrono::hours`. The result on a floating-point literal is a duration type with the specified tick period and an unspecified floating-point representation, for example `1.5e2ms` might be equivalent to `chrono::duration<long double, chrono::milli>(1.5e2)`.

3.17.2 Function Documentation

3.17.2.1 operator""h() [1/2] template<char... _Digits>

```
constexpr chrono::hours std::literals::chrono_literals::operator""h ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::hours`
Definition at line 1186 of file chrono.

3.17.2.2 operator""h() [2/2] constexpr chrono::duration<long double, ratio<3600,1> > std::literals::chrono_literals::operator""h (

```
            long double __hours )  [constexpr]
```

Literal suffix for durations representing non-integer hours.
Definition at line 1180 of file chrono.

3.17.2.3 operator""min() [1/2] template<char... _Digits>

```
constexpr chrono::minutes std::literals::chrono_literals::operator""min ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::minutes`
Definition at line 1197 of file chrono.

3.17.2.4 operator""min() [2/2] constexpr chrono::duration<long double, ratio<60,1> > std::literals::chrono_literals::operator""min (

```
            long double __mins )  [constexpr]
```

Literal suffix for durations representing non-integer minutes.
Definition at line 1191 of file chrono.

3.17.2.5 operator""ms() [1/2] template<char... _Digits>

```
constexpr chrono::milliseconds std::literals::chrono_literals::operator""ms ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::milliseconds`
Definition at line 1219 of file chrono.

3.17.2.6 operator""ms() [2/2] constexpr chrono::duration<long double, milli> std::literals::chrono_literals::operator""ms (

```
            long double __msecs )  [constexpr]
```

Literal suffix for durations representing non-integer milliseconds.
Definition at line 1213 of file chrono.

3.17.2.7 operator""ns() [1/2] template<char... _Digits>

```
constexpr chrono::nanoseconds std::literals::chrono_literals::operator""ns ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::nanoseconds`
Definition at line 1241 of file chrono.

3.17.2.8 operator""ns() [2/2] constexpr chrono::duration<long double, nano> std::literals::chrono_literals::operator""ns (

```
            long double __nsecs )  [constexpr]
```

Literal suffix for durations representing non-integer nanoseconds.
Definition at line 1235 of file chrono.

3.17.2.9 operator""s() [1/2] template<char... _Digits>

```
constexpr chrono::seconds std::literals::chrono_literals::operator""s ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::seconds`
Definition at line 1208 of file chrono.

3.17.2.10 operator""s() [2/2] constexpr chrono::duration<long double> std::literals::chrono_literals::operator""s (

```
            long double __secs )  [constexpr]
```

Literal suffix for durations representing non-integer seconds.
Definition at line 1202 of file chrono.

3.17.2.11 operator""us() [1/2] template<char... _Digits>

```
constexpr chrono::microseconds std::literals::chrono_literals::operator""us ( )  [constexpr]
```

Literal suffix for durations of type `std::chrono::microseconds`
Definition at line 1230 of file chrono.

3.17.2.12 operator""us() [2/2] constexpr chrono::duration<long double, micro> std::literals::chrono_literals::operator""us (

```
            long double __usecs )  [constexpr]
```

Literal suffix for durations representing non-integer microseconds.
Definition at line 1224 of file chrono.

3.18.1 Detailed Description

ISO C++ 2011 namespace for std::bind placeholders.

3.19 std::regex_constants Namespace Reference

5.1 Regular Expression Syntax Options

- enum __syntax_option {
  _S_icase , **_S_nosubs** , **_S_optimize** , **_S_collate** ,
  _S_ECMAScript , **_S_basic** , **_S_extended** , **_S_awk** ,
  _S_grep , **_S_egrep** , **_S_polynomial** , **_S_syntax_last** }
- enum syntax_option_type : unsigned int
- constexpr syntax_option_type icase
- constexpr syntax_option_type nosubs
- constexpr syntax_option_type optimize
- constexpr syntax_option_type collate
- constexpr syntax_option_type ECMAScript
- constexpr syntax_option_type basic
- constexpr syntax_option_type extended
- constexpr syntax_option_type awk
- constexpr syntax_option_type grep
- constexpr syntax_option_type egrep
- constexpr syntax_option_type __polynomial
- constexpr syntax_option_type operator& (syntax_option_type __a, syntax_option_type __b)
- constexpr syntax_option_type operator| (syntax_option_type __a, syntax_option_type __b)
- constexpr syntax_option_type operator^ (syntax_option_type __a, syntax_option_type __b)
- constexpr syntax_option_type operator~ (syntax_option_type __a)
- syntax_option_type & operator&= (syntax_option_type &__a, syntax_option_type __b)
- syntax_option_type & operator|= (syntax_option_type &__a, syntax_option_type __b)
- syntax_option_type & operator^= (syntax_option_type &__a, syntax_option_type __b)

5.2 Matching Rules

Matching a regular expression against a sequence of characters [first, last) proceeds according to the rules of the grammar specified for the regular expression object, modified according to the effects listed below for any bitmask elements set.

- enum __match_flag {
  _S_not_bol , **_S_not_eol** , **_S_not_bow** , **_S_not_eow** ,
  _S_any , **_S_not_null** , **_S_continuous** , **_S_prev_avail** ,
  _S_sed , **_S_no_copy** , **_S_first_only** , **_S_match_flag_last** }
- enum match_flag_type : unsigned int
- constexpr match_flag_type match_default
- constexpr match_flag_type match_not_bol
- constexpr match_flag_type match_not_eol

- constexpr match_flag_type match_not_bow
- constexpr match_flag_type match_not_eow
- constexpr match_flag_type match_any
- constexpr match_flag_type match_not_null
- constexpr match_flag_type match_continuous
- constexpr match_flag_type match_prev_avail
- constexpr match_flag_type format_default
- constexpr match_flag_type format_sed
- constexpr match_flag_type format_no_copy
- constexpr match_flag_type format_first_only
- constexpr match_flag_type operator& (match_flag_type __a, match_flag_type __b)
- constexpr match_flag_type operator| (match_flag_type __a, match_flag_type __b)
- constexpr match_flag_type operator^ (match_flag_type __a, match_flag_type __b)
- constexpr match_flag_type operator~ (match_flag_type __a)
- match_flag_type & operator&= (match_flag_type &__a, match_flag_type __b)
- match_flag_type & operator|= (match_flag_type &__a, match_flag_type __b)
- match_flag_type & operator^= (match_flag_type &__a, match_flag_type __b)

5.3 Error Types

- enum error_type {
  _S_error_collate , **_S_error_ctype** , **_S_error_escape** , **_S_error_backref** ,
  _S_error_brack , **_S_error_paren** , **_S_error_brace** , **_S_error_badbrace** ,
  _S_error_range , **_S_error_space** , **_S_error_badrepeat** , **_S_error_complexity** ,
  _S_error_stack }
- constexpr error_type error_collate (_S_error_collate)
- constexpr error_type error_ctype (_S_error_ctype)
- constexpr error_type error_escape (_S_error_escape)
- constexpr error_type error_backref (_S_error_backref)
- constexpr error_type error_brack (_S_error_brack)
- constexpr error_type error_paren (_S_error_paren)
- constexpr error_type error_brace (_S_error_brace)
- constexpr error_type error_badbrace (_S_error_badbrace)
- constexpr error_type error_range (_S_error_range)
- constexpr error_type error_space (_S_error_space)
- constexpr error_type error_badrepeat (_S_error_badrepeat)
- constexpr error_type error_complexity (_S_error_complexity)
- constexpr error_type error_stack (_S_error_stack)

3.19.1 Detailed Description

ISO C++ 2011 namespace for options and flags used with std::regex.

3.19.2 Enumeration Type Documentation

3.19.2.1 __match_flag `enum std::regex_constants::__match_flag`

This is a bitmask type indicating regex matching rules.
The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 232 of file regex_constants.h.

3.19.2.2 __syntax_option enum std::regex_constants::__syntax_option

This is a bitmask type indicating how to interpret the regex.
The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.
Definition at line 54 of file regex_constants.h.

3.19.2.3 error_type enum std::regex_constants::error_type

The expression contained an invalid collating element name.
Definition at line 49 of file regex_error.h.

3.19.2.4 match_flag_type enum std::regex_constants::match_flag_type : unsigned int

This is a bitmask type indicating regex matching rules.
The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 255 of file regex_constants.h.

3.19.2.5 syntax_option_type enum std::regex_constants::syntax_option_type : unsigned int

This is a bitmask type indicating how to interpret the regex.
The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.
Definition at line 81 of file regex_constants.h.

3.19.3 Function Documentation

3.19.3.1 error_backref() constexpr error_type std::regex_constants::error_backref (_S_error_backref) [constexpr]

The expression contained an invalid back reference.

3.19.3.2 error_badbrace() constexpr error_type std::regex_constants::error_badbrace (_S_error_badbrace) [constexpr]

The expression contained an invalid range in a {} expression.

3.19.3.3 error_badrepeat() constexpr error_type std::regex_constants::error_badrepeat (_S_error_badrepeat) [constexpr]

One of *?+{ was not preceded by a valid regular expression.

3.19.3.4 error_brace() constexpr error_type std::regex_constants::error_brace (_S_error_brace) [constexpr]

The expression contained mismatched { and }

3.19.3.5 error_brack() constexpr error_type std::regex_constants::error_brack (_S_error_brack) [constexpr]

The expression contained mismatched [and].

3.19.3.6 error_collate() constexpr error_type std::regex_constants::error_collate (_S_error_collate) [constexpr]

The expression contained an invalid collating element name.

3.19.3.7 error_complexity() constexpr error_type std::regex_constants::error_complexity (_S_error_complexity) [constexpr]

The complexity of an attempted match against a regular expression exceeded a pre-set level.

3.19.3.8 error_ctype() constexpr error_type std::regex_constants::error_ctype (_S_error_ctype) [constexpr]

The expression contained an invalid character class name.

3.19.3.9 error_escape() constexpr error_type std::regex_constants::error_escape (_S_error_escape) [constexpr]

The expression contained an invalid escaped character, or a trailing escape.

3.19.3.10 error_paren() constexpr error_type std::regex_constants::error_paren (_S_error_paren) [constexpr]

The expression contained mismatched (and).

3.19.3.11 error_range() constexpr error_type std::regex_constants::error_range (_S_error_range) [constexpr]

The expression contained an invalid character range, such as [b-a] in most encodings.

3.19.3.12 error_space() constexpr error_type std::regex_constants::error_space (_S_error_space) [constexpr]

There was insufficient memory to convert the expression into a finite state machine.

3.19.3.13 error_stack() constexpr error_type std::regex_constants::error_stack (_S_error_stack) [constexpr]

There was insufficient memory to determine whether the regular expression could match the specified character sequence.

3.19.3.14 operator&() [1/2] constexpr match_flag_type std::regex_constants::operator& (match_flag_type __a, match_flag_type __b) [inline], [constexpr]

This is a bitmask type indicating regex matching rules.
The `match_flag_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 374 of file regex_constants.h.

3.19.3.15 operator&() [2/2] constexpr syntax_option_type std::regex_constants::operator& (syntax_option_type __a, syntax_option_type __b) [inline], [constexpr]

This is a bitmask type indicating how to interpret the regex.
The `syntax_option_type` is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements `ECMAScript`, `basic`, `extended`, `awk`, `grep`, `egrep` set.
Definition at line 183 of file regex_constants.h.

3.19.3.16 operator&=() [1/2]

```
match_flag_type& std::regex_constants::operator&= (
        match_flag_type & __a,
        match_flag_type __b ) [inline]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 399 of file regex_constants.h.

3.19.3.17 operator&=() [2/2]

```
syntax_option_type& std::regex_constants::operator&= (
        syntax_option_type & __a,
        syntax_option_type __b ) [inline]
```

This is a bitmask type indicating how to interpret the regex.
The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 208 of file regex_constants.h.

3.19.3.18 operator^() [1/2]

```
constexpr match_flag_type std::regex_constants::operator^ (
        match_flag_type __a,
        match_flag_type __b ) [inline], [constexpr]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 388 of file regex_constants.h.

3.19.3.19 operator^() [2/2]

```
constexpr syntax_option_type std::regex_constants::operator^ (
        syntax_option_type __a,
        syntax_option_type __b ) [inline], [constexpr]
```

This is a bitmask type indicating how to interpret the regex.
The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 197 of file regex_constants.h.

3.19.3.20 operator^=() [1/2]

```
match_flag_type& std::regex_constants::operator^= (
        match_flag_type & __a,
        match_flag_type __b ) [inline]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 407 of file regex_constants.h.

3.19.3.21 operator^=() [2/2]

```
syntax_option_type& std::regex_constants::operator^= (
        syntax_option_type & __a,
        syntax_option_type __b ) [inline]
```

This is a bitmask type indicating how to interpret the regex.

The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 216 of file regex_constants.h.

3.19.3.22 operator"|() [1/2]

```
constexpr match_flag_type std::regex_constants::operator| (
        match_flag_type __a,
        match_flag_type __b )  [inline], [constexpr]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 381 of file regex_constants.h.

3.19.3.23 operator"|() [2/2]

```
constexpr syntax_option_type std::regex_constants::operator| (
        syntax_option_type __a,
        syntax_option_type __b )  [inline], [constexpr]
```

This is a bitmask type indicating how to interpret the regex.
The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 190 of file regex_constants.h.

3.19.3.24 operator"|=() [1/2]

```
match_flag_type& std::regex_constants::operator|= (
        match_flag_type & __a,
        match_flag_type __b )  [inline]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 403 of file regex_constants.h.

3.19.3.25 operator"|=() [2/2]

```
syntax_option_type& std::regex_constants::operator|= (
        syntax_option_type & __a,
        syntax_option_type __b )  [inline]
```

This is a bitmask type indicating how to interpret the regex.
The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 212 of file regex_constants.h.

3.19.3.26 operator~() [1/2]

```
constexpr match_flag_type std::regex_constants::operator~ (
        match_flag_type __a )  [inline], [constexpr]
```

This is a bitmask type indicating regex matching rules.
The match_flag_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
Definition at line 395 of file regex_constants.h.

3.19.3.27 operator~() [2/2] constexpr syntax_option_type std::regex_constants::operator~ (syntax_option_type __a) [inline], [constexpr]

This is a bitmask type indicating how to interpret the regex.
The syntax_option_type is implementation defined but it is valid to perform bitwise operations on these values and expect the right thing to happen.
A valid value of type syntax_option_type shall have exactly one of the elements ECMAScript, basic, extended, awk, grep, egrep set.
Definition at line 204 of file regex_constants.h.

3.19.4 Variable Documentation

3.19.4.1 __polynomial constexpr syntax_option_type std::regex_constants::__polynomial [inline], [constexpr]

Extension: Ensure both space complexity of compiled regex and time complexity execution are not exponential. If specified in a regex with back-references, the exception regex_constants::error_complexity will be thrown.
Definition at line 179 of file regex_constants.h.

3.19.4.2 awk constexpr syntax_option_type std::regex_constants::awk [inline], [constexpr]

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility awk in IEEE Std 1003.1-2001. This option is identical to syntax_option_type extended, except that C-style escape sequences are supported. These sequences are: \\, \a, \b, \f, \n, \r, \t , \v, \&apos„ &apos„ and \ddd (where ddd is one, two, or three octal digits).
Definition at line 152 of file regex_constants.h.

3.19.4.3 basic constexpr syntax_option_type std::regex_constants::basic [inline], [constexpr]

Specifies that the grammar recognized by the regular expression engine is that used by POSIX basic regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].
Definition at line 132 of file regex_constants.h.

3.19.4.4 collate constexpr syntax_option_type std::regex_constants::collate [inline], [constexpr]

Specifies that character ranges of the form [a-b] should be locale sensitive.
Definition at line 111 of file regex_constants.h.

3.19.4.5 ECMAScript constexpr syntax_option_type std::regex_constants::ECMAScript [inline], [constexpr]

Specifies that the grammar recognized by the regular expression engine is that used by ECMAScript in ECMA-262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], as modified in section [28.13]. This grammar is similar to that defined in the PERL scripting language but extended with elements found in the POSIX regular expression grammar.
Definition at line 122 of file regex_constants.h.

3.19.4.6 egrep

`constexpr syntax_option_type std::regex_constants::egrep [inline], [constexpr]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep when given the -E option in IEEE Std 1003.1-2001. This option is identical to syntax_option_type extended, except that newlines are treated as whitespace.
Definition at line 170 of file regex_constants.h.

3.19.4.7 extended

`constexpr syntax_option_type std::regex_constants::extended [inline], [constexpr]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX extended regular expressions in IEEE Std 1003.1-2001, Portable Operating System Interface (POSIX), Base Definitions and Headers, Section 9, Regular Expressions.
Definition at line 141 of file regex_constants.h.

3.19.4.8 format_default

`constexpr match_flag_type std::regex_constants::format_default [inline], [constexpr]`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the ECMAScript replace function in ECMA- 262 [Ecma International, ECMAScript Language Specification, Standard Ecma-262, third edition, 1999], part 15.5.4.11 String.prototype.replace. In addition, during search and replace operations all non-overlapping occurrences of the regular expression are located and replaced, and sections of the input that did not match the expression are copied unchanged to the output string.
Format strings (from ECMA-262 [15.5.4.11]):

- $$ The dollar-sign itself ($)
- $& The matched substring.
- $` The portion of *string* that precedes the matched substring. This would be match_results::prefix().
- $' The portion of *string* that follows the matched substring. This would be match_results::suffix().
- $n The nth capture, where n is in [1,9] and $n is not followed by a decimal digit. If n <= match_results::size() and the nth capture is undefined, use the empty string instead. If n > match_results::size(), the result is implementation-defined.
- $nn The nnth capture, where nn is a two-digit decimal number on [01, 99]. If nn <= match_results::size() and the nth capture is undefined, use the empty string instead. If nn > match_results::size(), the result is implementation-defined.

Definition at line 346 of file regex_constants.h.

3.19.4.9 format_first_only

`constexpr match_flag_type std::regex_constants::format_first_only [inline], [constexpr]`

When specified during a search and replace operation, only the first occurrence of the regular expression shall be replaced.
Definition at line 370 of file regex_constants.h.

3.19.4.10 format_no_copy

`constexpr match_flag_type std::regex_constants::format_no_copy [inline], [constexpr]`

During a search and replace operation, sections of the character container sequence being searched that do not match the regular expression shall not be copied to the output string.
Definition at line 363 of file regex_constants.h.

3.19.4.11 format_sed

`constexpr match_flag_type std::regex_constants::format_sed [inline], [constexpr]`

When a regular expression match is to be replaced by a new string, the new string is constructed using the rules used by the POSIX sed utility in IEEE Std 1003.1- 2001 [IEEE, Information Technology – Portable Operating System Interface (POSIX), IEEE Standard 1003.1-2001].
Definition at line 355 of file regex_constants.h.

3.19.4.12 grep

`constexpr syntax_option_type std::regex_constants::grep [inline], [constexpr]`

Specifies that the grammar recognized by the regular expression engine is that used by POSIX utility grep in IEEE Std 1003.1-2001. This option is identical to syntax_option_type basic, except that newlines are treated as whitespace.
Definition at line 161 of file regex_constants.h.

3.19.4.13 icase

`constexpr syntax_option_type std::regex_constants::icase [inline], [constexpr]`

Specifies that the matching of regular expressions against a character sequence shall be performed without regard to case.
Definition at line 87 of file regex_constants.h.

3.19.4.14 match_any

`constexpr match_flag_type std::regex_constants::match_any [inline], [constexpr]`

If more than one match is possible then any match is an acceptable result.
Definition at line 297 of file regex_constants.h.

3.19.4.15 match_continuous

`constexpr match_flag_type std::regex_constants::match_continuous [inline], [constexpr]`

The expression only matches a sub-sequence that begins at first .
Definition at line 309 of file regex_constants.h.

3.19.4.16 match_default

`constexpr match_flag_type std::regex_constants::match_default [inline], [constexpr]`

The default matching rules.
Definition at line 260 of file regex_constants.h.

3.19.4.17 match_not_bol

`constexpr match_flag_type std::regex_constants::match_not_bol [inline], [constexpr]`

The first character in the sequence [first, last) is treated as though it is not at the beginning of a line, so the character (^) in the regular expression shall not match [first, first).
Definition at line 268 of file regex_constants.h.

3.19.4.18 match_not_bow

`constexpr match_flag_type std::regex_constants::match_not_bow [inline], [constexpr]`

The expression \b is not matched against the sub-sequence [first,first).
Definition at line 283 of file regex_constants.h.

3.19.4.19 match_not_eol

`constexpr match_flag_type std::regex_constants::match_not_eol [inline], [constexpr]`

The last character in the sequence [first, last) is treated as though it is not at the end of a line, so the character ($) in the regular expression shall not match [last, last).
Definition at line 276 of file regex_constants.h.

3.19.4.20 match_not_eow

`constexpr match_flag_type std::regex_constants::match_not_eow [inline], [constexpr]`

The expression \b should not be matched against the sub-sequence [last,last).
Definition at line 290 of file regex_constants.h.

3.19.4.21 match_not_null

`constexpr match_flag_type std::regex_constants::match_not_null [inline], [constexpr]`

The expression does not match an empty sequence.
Definition at line 303 of file regex_constants.h.

3.19.4.22 match_prev_avail

`constexpr match_flag_type std::regex_constants::match_prev_avail [inline], [constexpr]`

–first is a valid iterator position. When this flag is set then the flags match_not_bol and match_not_bow are ignored by the regular expression algorithms 28.11 and iterators 28.12.
Definition at line 317 of file regex_constants.h.

3.19.4.23 nosubs

`constexpr syntax_option_type std::regex_constants::nosubs [inline], [constexpr]`

Specifies that when a regular expression is matched against a character container sequence, no sub-expression matches are to be stored in the supplied match_results structure.
Definition at line 95 of file regex_constants.h.

3.19.4.24 optimize

`constexpr syntax_option_type std::regex_constants::optimize [inline], [constexpr]`

Specifies that the regular expression engine should pay more attention to the speed with which regular expressions are matched, and less to the speed with which regular expression objects are constructed. Otherwise it has no detectable effect on the program output.
Definition at line 104 of file regex_constants.h.

3.20 std::rel_ops Namespace Reference

Functions

- template<class _Tp >
  bool operator!= (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator<= (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator> (const _Tp &__x, const _Tp &__y)
- template<class _Tp >
  bool operator>= (const _Tp &__x, const _Tp &__y)

3.20.1 Detailed Description

The generated relational operators are sequestered here.

3.20.2 Function Documentation

3.20.2.1 operator"!=() template<class _Tp >

```
bool std::rel_ops::operator!= (
            const _Tp & __x,
            const _Tp & __y )  [inline]
```

Defines != for arbitrary types, in terms of ==.

Parameters

_↩ _x	A thing.
_↩ _y	Another thing.

Returns

__x != __y

This function uses == to determine its result.
Definition at line 87 of file stl_relops.h.

3.20.2.2 operator<=() template<class _Tp >

```
bool std::rel_ops::operator<= (
            const _Tp & __x,
            const _Tp & __y )  [inline]
```

Defines <= for arbitrary types, in terms of <.

Parameters

_↩ _x	A thing.
_↩ _y	Another thing.

Returns

__x <= __y

This function uses < to determine its result.
Definition at line 112 of file stl_relops.h.

3.20.2.3 operator>() template<class _Tp >

```
bool std::rel_ops::operator> (
            const _Tp & __x,
            const _Tp & __y )  [inline]
```

Defines > for arbitrary types, in terms of <.

Parameters

_↩ _x	A thing.
_↩ _y	Another thing.

Returns

__x > __y

This function uses < to determine its result.
Definition at line 100 of file stl_relops.h.

3.20.2.4 operator>=() template<class _Tp >

```
bool std::rel_ops::operator>= (
            const _Tp & __x,
            const _Tp & __y )  [inline]
```

Defines >= for arbitrary types, in terms of <.

Parameters

_↩ _x	A thing.
_↩ _y	Another thing.

Returns

__x >= __y

This function uses < to determine its result.
Definition at line 126 of file stl_relops.h.

3.21 std::this_thread Namespace Reference

Functions

- void **__sleep_for** (chrono::seconds, chrono::nanoseconds)
- thread::id get_id () noexcept
- template<typename _Rep , typename _Period >
  void sleep_for (const chrono::duration< _Rep, _Period > &__rtime)
- template<typename _Clock , typename _Duration >
  void sleep_until (const chrono::time_point< _Clock, _Duration > &__atime)
- void yield () noexcept

3.21.1 Detailed Description

ISO C++ 2011 namespace for interacting with the current thread.
C++11 30.3.2 [thread.thread.this] Namespace this_thread.

3.21.2 Function Documentation

3.21.2.1 get_id() thread::id std::this_thread::get_id ( ) [inline], [noexcept]

get_id
Definition at line 365 of file thread.

3.21.2.2 sleep_for() template<typename _Rep , typename _Period >

```
void std::this_thread::sleep_for (
            const chrono::duration< _Rep, _Period > & __rtime ) [inline]
```

sleep_for
Definition at line 389 of file thread.

3.21.2.3 sleep_until() template<typename _Clock , typename _Duration >

```
void std::this_thread::sleep_until (
            const chrono::time_point< _Clock, _Duration > & __atime ) [inline]
```

sleep_until
Definition at line 411 of file thread.

3.21.2.4 yield() void std::this_thread::yield ( ) [inline], [noexcept]

yield
Definition at line 376 of file thread.

3.24.1 Detailed Description

Namespace for non-standard "TR2" extensions.

3.25 std::tr2::__detail Namespace Reference

3.25.1 Detailed Description

Implementation details not part of the namespace std::tr2 interface.

4 Class Documentation

4.1 __gnu_parallel::__accumulate_binop_reduct< _BinOp > Struct Template Reference

Public Member Functions

- **__accumulate_binop_reduct** (_BinOp &__b)
- template<typename _Result , typename _Addend >
  _Result **operator()** (const _Result &__x, const _Addend &__y)

Public Attributes

- _BinOp & **__binop**

4.1.1 Detailed Description

template<typename _BinOp>
struct __gnu_parallel::__accumulate_binop_reduct< _BinOp >

General reduction, using a binary operator.
Definition at line 335 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.2 __gnu_parallel::__accumulate_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__accumulate_selector< _It >:

Public Member Functions

- template<typename _Op >
  std::iterator_traits< _It >::value_type operator() (_Op __o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.2.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__accumulate_selector< _It >

std::accumulate() selector.
Definition at line 208 of file for_each_selectors.h.

4.2.2 Member Function Documentation

4.2.2.1 operator()() `template<typename _It >`

```
template<typename _Op >
std::iterator_traits<_It>::value_type __gnu_parallel::__accumulate_selector< _It >::operator() (
            _Op __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_o	Operator (unused).
_i	iterator referencing object.

Returns

The current value.

Definition at line 216 of file for_each_selectors.h.

4.2.3 Member Data Documentation

4.2.3.1 _M_finish_iterator `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]`

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.3 std::__add_pointer_helper< _Tp, bool > Struct Template Reference

Inherited by std::add_pointer< _Tp >.

Public Types

- typedef _Tp **type**

4.3.1 Detailed Description

template<typename _Tp, bool = __or_<__is_referenceable<_Tp>, is_void<_Tp>>::value>
struct std::__add_pointer_helper< _Tp, bool >

add_pointer
Definition at line 2025 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.4 __gnu_parallel::__adjacent_difference_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__adjacent_difference_selector< _It >:

Public Member Functions

- template<typename _Op >
  bool **operator()** (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.4.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__adjacent_difference_selector< _It >

Selector that returns the difference between two adjacent __elements.
Definition at line 269 of file for_each_selectors.h.

4.4.2 Member Data Documentation

4.4.2.1 _M_finish_iterator `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]`

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.5 __gnu_parallel::__adjacent_find_selector Struct Reference

Inheritance diagram for __gnu_parallel::__adjacent_find_selector:

Public Member Functions

- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)
- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)

4.5.1 Detailed Description

Test predicate on two adjacent elements.
Definition at line 80 of file find_selectors.h.

4.5.2 Member Function Documentation

4.5.2.1 _M_sequential_algorithm() `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`

```
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred )  [inline]
```

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 105 of file find_selectors.h.

4.5.2.2 operator()() `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`

`bool __gnu_parallel::__adjacent_find_selector::operator() (`

```
        _RAIter1 __i1,
        _RAIter2 __i2,
        _Pred __pred )  [inline]
```

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).
__pred	Find predicate.

Definition at line 90 of file find_selectors.h.
The documentation for this struct was generated from the following file:

- find_selectors.h

4.6.1 Detailed Description

template<typename _Alloc, typename = typename _Alloc::value_type>
struct __gnu_cxx::__alloc_traits< _Alloc, typename >

Uniform interface to C++98 and C++11 allocators.
Definition at line 48 of file ext/alloc_traits.h.

4.6.2 Member Typedef Documentation

4.6.2.1 const_void_pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const
void>::type [inherited]
```

The allocator's const void pointer type.
`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`
Definition at line 154 of file bits/alloc_traits.h.

4.6.2.2 is_always_equal template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::is_always_equal = __detected_or_t<typename is_empty<_↩
Alloc>::type, __equal, _Alloc> [inherited]
```

Whether all instances of the allocator type compare equal.
`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`
Definition at line 205 of file bits/alloc_traits.h.

4.6.2.3 propagate_on_container_copy_assignment template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment = __detected_or_↩
t<false_type, __pocca, _Alloc> [inherited]
```

How the allocator is propagated on copy assignment.
`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`
Definition at line 178 of file bits/alloc_traits.h.

4.6.2.4 propagate_on_container_move_assignment template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment = __detected_or_↩
t<false_type, __pocma, _Alloc> [inherited]
```

How the allocator is propagated on move assignment.
`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`
Definition at line 187 of file bits/alloc_traits.h.

4.6.2.5 propagate_on_container_swap template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_swap = __detected_or_t<false_type,
__pocs, _Alloc> [inherited]
```

How the allocator is propagated on swap.
`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`
Definition at line 196 of file bits/alloc_traits.h.

4.6.2.6 void_pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::void_pointer = typename _Ptr<__v_pointer, void>::type
[inherited]
```

The allocator's void pointer type.
`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`
Definition at line 146 of file bits/alloc_traits.h.

4.6.3 Member Function Documentation

4.6.3.1 allocate() [1/4] template<typename _Alloc >

```
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n )  [inline], [static], [constexpr], [inherited]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`
Definition at line 313 of file bits/alloc_traits.h.
Referenced by std::__allocate_guarded().

4.6.3.2 allocate() [2/4] template<typename _Alloc , typename = typename _Alloc::value_type>

```
static constexpr pointer std::allocator_traits< _Alloc >::allocate  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`
Definition at line 313 of file bits/alloc_traits.h.

4.6.3.3 allocate() [3/4] template<typename _Alloc >

```
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n,
            const_void_pointer __hint )  [inline], [static], [constexpr], [inherited]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`
Definition at line 328 of file bits/alloc_traits.h.

4.6.3.4 allocate() [4/4]

```
template<typename _Alloc , typename = typename _Alloc::value_type>
static constexpr pointer std::allocator_traits< _Alloc >::allocate [inline], [static], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`
Definition at line 328 of file bits/alloc_traits.h.

4.6.3.5 construct() [1/2]

```
template<typename _Alloc >
template<typename _Tp , typename... _Args>
static constexpr auto std::allocator_traits< _Alloc >::construct (
            _Alloc & __a,
            _Tp * __p,
            _Args &&... __args ) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__↩
args)...)) [inline], [static], [constexpr], [noexcept], [inherited]
```

Construct an object of type _Tp

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...
Definition at line 356 of file bits/alloc_traits.h.

4.6.3.6 construct() [2/2]

```
template<typename _Alloc , typename = typename _Alloc::value_type>
template<typename _Tp , typename... _Args>
static constexpr auto std::allocator_traits< _Alloc >::construct (
            typename _Tp ,
            typename... _Args ) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type _Tp

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...
Definition at line 356 of file bits/alloc_traits.h.

4.6.3.7 deallocate() [1/2] template<typename _Alloc >

```
static constexpr void std::allocator_traits< _Alloc >::deallocate (
            _Alloc & __a,
            pointer __p,
            size_type __n )  [inline], [static], [constexpr], [inherited]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`
Definition at line 340 of file bits/alloc_traits.h.
Referenced by std::__allocated_ptr< _Alloc >::~__allocated_ptr().

4.6.3.8 deallocate() [2/2] template<typename _Alloc , typename = typename _Alloc::value_type>

```
static constexpr void std::allocator_traits< _Alloc >::deallocate  [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`
Definition at line 340 of file bits/alloc_traits.h.

4.6.3.9 destroy() [1/2] template<typename _Alloc >

```
template<typename _Tp >
static constexpr void std::allocator_traits< _Alloc >::destroy (
```

```
            _Alloc & __a,
            _Tp * __p )  [inline], [static], [constexpr], [noexcept], [inherited]
```

Destroy an object of type *_Tp*.

Parameters

_a	An allocator.
_p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`
Definition at line 372 of file bits/alloc_traits.h.
Referenced by std::_Destroy().

4.6.3.10 destroy() [2/2]

```
template<typename _Alloc , typename = typename _Alloc::value_type>
template<typename _Tp >
static constexpr void std::allocator_traits< _Alloc >::destroy (
            typename _Tp  )  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *_Tp*.

Parameters

_a	An allocator.
_p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`
Definition at line 372 of file bits/alloc_traits.h.

4.6.3.11 max_size() [1/2]

```
template<typename _Alloc >
static constexpr size_type std::allocator_traits< _Alloc >::max_size (
            const _Alloc & __a )  [inline], [static], [constexpr], [noexcept], [inherited]
```

The maximum supported allocation size.

Parameters

_a	An allocator.

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`
Definition at line 385 of file bits/alloc_traits.h.

4.6.3.12 max_size() [2/2]

```
template<typename _Alloc , typename = typename _Alloc::value_type>
```

`static constexpr size_type std::allocator_traits< _Alloc >::max_size [inline], [static], [constexpr], [noexcept]`
The maximum supported allocation size.

Parameters

_↩ _a	An allocator.

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_↩ type>::max()`
Definition at line 385 of file bits/alloc_traits.h.
Referenced by std::forward_list< _Tp, _Alloc >::max_size(), and std::list< _Tp, _Alloc >::max_size().

4.6.3.13 select_on_container_copy_construction() `template<typename _Alloc >`

`static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction ( const _Alloc & __rhs ) [inline], [static], [constexpr], [inherited]`
Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

`__rhs.select_on_container_copy_construction()` or *__rhs*

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns *__rhs*
Definition at line 397 of file bits/alloc_traits.h.
The documentation for this struct was generated from the following file:

- ext/alloc_traits.h

4.7 std::__allocated_ptr< _Alloc > Struct Template Reference

Public Types

- using **pointer** = typename allocator_traits< _Alloc >::pointer
- using **value_type** = typename allocator_traits< _Alloc >::value_type

Public Member Functions

- __allocated_ptr (__allocated_ptr &&__gd) noexcept
- template<typename _Ptr , typename _Req = _Require<is_same<_Ptr, value_type*>>> __allocated_ptr (_Alloc &__a, _Ptr __ptr)
- __allocated_ptr (_Alloc &__a, pointer __ptr) noexcept
- ~__allocated_ptr ()
- value_type * get ()
- __allocated_ptr & operator= (std::nullptr_t) noexcept

4.7.1 Detailed Description

template<typename _Alloc>
struct std::__allocated_ptr< _Alloc >

Non-standard RAII type for managing pointers obtained from allocators.
Definition at line 46 of file allocated_ptr.h.

4.7.2 Constructor & Destructor Documentation

4.7.2.1 __allocated_ptr() [1/3] template<typename _Alloc >

```
std::__allocated_ptr< _Alloc >::__allocated_ptr (
            _Alloc & __a,
            pointer __ptr ) [inline], [noexcept]
```

Take ownership of __ptr.
Definition at line 52 of file allocated_ptr.h.

4.7.2.2 __allocated_ptr() [2/3] template<typename _Alloc >

```
template<typename _Ptr , typename _Req = _Require<is_same<_Ptr, value_type*>>>
std::__allocated_ptr< _Alloc >::__allocated_ptr (
            _Alloc & __a,
            _Ptr __ptr ) [inline]
```

Convert __ptr to allocator's pointer type and take ownership of it.
Definition at line 59 of file allocated_ptr.h.

4.7.2.3 __allocated_ptr() [3/3] template<typename _Alloc >

```
std::__allocated_ptr< _Alloc >::__allocated_ptr (
            __allocated_ptr< _Alloc > && __gd ) [inline], [noexcept]
```

Transfer ownership of the owned pointer.
Definition at line 65 of file allocated_ptr.h.

4.7.2.4 ~__allocated_ptr() template<typename _Alloc >

```
std::__allocated_ptr< _Alloc >::~__allocated_ptr ( ) [inline]
```

Deallocate the owned pointer.
Definition at line 70 of file allocated_ptr.h.
References std::allocator_traits< _Alloc >::deallocate().

4.7.3 Member Function Documentation

4.7.3.1 get() template<typename _Alloc >

```
value_type* std::__allocated_ptr< _Alloc >::get (
            void ) [inline]
```

Get the address that the owned pointer refers to.
Definition at line 85 of file allocated_ptr.h.

4.7.3.2 operator=() template<typename _Alloc >

__allocated_ptr& std::__allocated_ptr< _Alloc >::operator= (
std::nullptr_t) [inline], [noexcept]

Release ownership of the owned pointer.
Definition at line 78 of file allocated_ptr.h.
The documentation for this struct was generated from the following file:

- allocated_ptr.h

4.9.1 Detailed Description

template<**typename _PTp**>
struct std::__atomic_base< **_PTp** * >

Partial specialization for pointer types.
Definition at line 599 of file atomic_base.h.
The documentation for this struct was generated from the following file:

- atomic_base.h

4.10 std::__atomic_flag_base Struct Reference

Inheritance diagram for std::__atomic_flag_base:

Public Attributes

- __atomic_flag_data_type **_M_i**

4.10.1 Detailed Description

Base type for atomic_flag.
Base type is POD with data, allowing atomic_flag to derive from it and meet the standard layout type requirement. In addition to compatibility with a C interface, this allows different implementations of atomic_flag to use the same atomic operation functions, via a standard conversion to the __atomic_flag_base argument.
Definition at line 176 of file atomic_base.h.
The documentation for this struct was generated from the following file:

- atomic_base.h

4.11.1 Detailed Description

template<typename _Res>
class std::__basic_future< _Res >

Common implementation for future and shared_future.
Definition at line 682 of file future.

4.11.2 Member Typedef Documentation

4.11.2.1 _Ptr template<typename _Res >

```
using std::__future_base::_Ptr = unique_ptr<_Res, _Result_base::_Deleter>  [inherited]
```

A unique_ptr for result objects.
Definition at line 223 of file future.

4.11.3 Member Function Documentation

4.11.3.1 _M_get_result() template<typename _Res >

```
__result_type std::__basic_future< _Res >::_M_get_result ( ) const  [inline], [protected]
```

Wait for the state to be ready and rethrow any stored exception.
Definition at line 725 of file future.

4.14.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>
class std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >

Common base for codecvt functions.
This template class provides implementations of the public functions that forward to the protected virtual functions.
This template also provides abstract stubs for the protected virtual functions.
Definition at line 68 of file codecvt.h.

4.14.2 Member Function Documentation

4.14.2.1 do_out() template<typename _InternT , typename _ExternT , typename _StateT >

```
virtual result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next ) const  [protected], [pure virtual]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implemented in std::codecvt< _InternT, _ExternT, encoding_state >, std::codecvt< char32_t, char, mbstate_t >, std::codecvt< char16_t, char, mbstate_t >, std::codecvt< wchar_t, char, mbstate_t >, std::codecvt< char, char, mbstate_t >, std::codecvt< _InternT, _ExternT, _StateT >, and std::codecvt< _Elem, char, mbstate_t >.
Referenced by std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out().

4.14.2.2 in() template<typename _InternT , typename _ExternT , typename _StateT >

```
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next ) const  [inline]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.14.2.3 out()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next ) const  [inline]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.
References std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out().

4.14.2.4 unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next ) const  [inline]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

Public Attributes

- _It _M_finish_iterator

4.16.1 Detailed Description

template<typename _It, typename _Diff>
struct __gnu_parallel::__count_if_selector< _It, _Diff >

std::count_if () selector.
Definition at line 194 of file for_each_selectors.h.

4.16.2 Member Function Documentation

4.16.2.1 operator()() `template<typename _It , typename _Diff >`

```
template<typename _Op >
_Diff __gnu_parallel::__count_if_selector< _It, _Diff >::operator() (
            _Op & __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_↩ _o	Operator.
_↩ _i	iterator referencing object.

Returns

1 if count, 0 if does not count.

Definition at line 202 of file for_each_selectors.h.

4.16.3 Member Data Documentation

4.16.3.1 _M_finish_iterator `template<typename _It >`

```
_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator  [inherited]
```

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

4.18.1 Detailed Description

template<typename _CharT>
class std::__ctype_abstract_base< _CharT >

Common base for ctype facet.
This template class provides implementations of the public functions that forward to the protected virtual functions.
This template also provides abstract stubs for the protected virtual functions.
Definition at line 150 of file locale_facets.h.

4.18.2 Member Typedef Documentation

4.18.2.1 char_type `template<typename _CharT >`

```
typedef _CharT std::__ctype_abstract_base< _CharT >::char_type
```

Typedef for the template parameter.
Definition at line 155 of file locale_facets.h.

4.18.3 Member Function Documentation

4.18.3.1 do_is() [1/2] `template<typename _CharT >`

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [protected], [pure virtual]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.18.3.2 do_is() [2/2] template<typename _CharT >

```
virtual bool std::__ctype_abstract_base< _CharT >::do_is (
            mask __m,
            char_type __c ) const  [protected], [pure virtual]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

_c	The char_type to find the mask of.
_m	The mask to compare against.

Returns

(M & __m) != 0.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::is().

4.18.3.3 do_narrow() [1/2] template<typename _CharT >

```
virtual char std::__ctype_abstract_base< _CharT >::do_narrow (
            char_type __c,
            char __dfault ) const  [protected], [pure virtual]
```

Narrow char_type to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implemented in std::ctype< _CharT >, and std::ctype< wchar_t >.
Referenced by std::__ctype_abstract_base< _CharT >::narrow().

4.18.3.4 do_narrow() [2/2] template<typename _CharT >

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [protected], [pure virtual]
```

Narrow char_type array to char.
This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is used instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.18.3.5 do_scan_is() template<typename _CharT >

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [pure virtual]
```

Find char_type matching mask.
This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::scan_is().

4.18.3.6 do_scan_not() template<typename _CharT >

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [pure virtual]
```

Find char_type not matching mask.
This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else __hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::scan_not().

4.18.3.7 do_tolower() [1/2] template<typename _CharT >

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_tolower (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [pure virtual]
```

Convert array to lowercase.
This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.18.3.8 do_tolower() [2/2] template<typename _CharT >

```
virtual char_type std::__ctype_abstract_base< _CharT >::do_tolower (
            char_type __c ) const  [protected], [pure virtual]
```

Convert to lowercase.
This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::tolower().

4.18.3.9 do_toupper() [1/2] template<typename _CharT >

```
virtual const char_type* std::__ctype_abstract_base< _CharT >::do_toupper (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [pure virtual]
```

Convert array to uppercase.
This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.18.3.10 do_toupper() [2/2] template<typename _CharT >

```
virtual char_type std::__ctype_abstract_base< _CharT >::do_toupper (
            char_type __c ) const  [protected], [pure virtual]
```

Convert to uppercase.
This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The char_type to convert.

Returns

The uppercase char_type if convertible, else __c.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::toupper().

4.18.3.11 do_widen() [1/2] template<typename _CharT >

```
virtual char_type std::__ctype_abstract_base< _CharT >::do_widen (
            char __c ) const  [protected], [pure virtual]
```

Widen char.
This virtual function converts the char to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.
Referenced by std::__ctype_abstract_base< _CharT >::widen().

4.18.3.12 do_widen() [2/2] template<typename _CharT >

```
virtual const char* std::__ctype_abstract_base< _CharT >::do_widen (
            const char * __lo,
            const char * __hi,
            char_type * __to ) const  [protected], [pure virtual]
```

Widen char array.
This function converts each char in the input to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Implemented in std::ctype< wchar_t >, and std::ctype< _CharT >.

4.18.3.13 is() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [inline]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 186 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().

4.18.3.14 is() [2/2] template<typename _CharT >

```
bool std::__ctype_abstract_base< _CharT >::is (
            mask __m,
            char_type __c ) const  [inline]
```

Test char_type classification.
This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_↩type>::do_is().

Parameters

_↩_c	The char_type to compare the mask of.
_↩_m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 169 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().
Referenced by std::time_get< _CharT, _InIter >::get().

4.18.3.15 narrow() [1/2] template<typename _CharT >

```
char std::__ctype_abstract_base< _CharT >::narrow (
            char_type __c,
            char __dfault ) const  [inline]
```

Narrow char_type to char.
This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 331 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().
Referenced by std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.18.3.16 narrow() [2/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [inline]
```

Narrow array to char array.
This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 353 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().

4.18.3.17 scan_is() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_is (
            mask __m,
```

```
            const char_type * __lo,
            const char_type * __hi ) const  [inline]
```

Find char_type matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else *__hi*.

Definition at line 202 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_is().

4.18.3.18 scan_not() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [inline]
```

Find char_type not matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else *__hi*.

Definition at line 218 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_not().

4.18.3.19 tolower() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::tolower (
            char_type * __lo,
            const char_type * __hi ) const  [inline]
```

Convert array to lowercase.
This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 276 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_tolower().

4.18.3.20 tolower() [2/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::tolower (
            char_type __c ) const  [inline]
```

Convert to lowercase.
This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Definition at line 261 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_tolower().
Referenced by std::time_get< _CharT, _InIter >::get().

4.18.3.21 toupper() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::toupper (
            char_type * __lo,
            const char_type * __hi ) const  [inline]
```

Convert array to uppercase.
This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 247 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_toupper().

4.18.3.22 toupper() [2/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::toupper (
            char_type __c ) const  [inline]
```

Convert to uppercase.
This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

_↩ _c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Definition at line 232 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_toupper().
Referenced by std::time_get< _CharT, _InIter >::get().

4.18.3.23 widen() [1/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::widen (
            char __c ) const  [inline]
```

Widen char to char_type.
This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type.

Definition at line 293 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_widen().
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::money↩ _put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::do_put().

4.18.3.24 widen() [2/2] template<typename _CharT >

```
const char* std::__ctype_abstract_base< _CharT >::widen (
            const char * __lo,
```

```
        const char * __hi,
        char_type * __to ) const  [inline]
```

Widen array to char_type.
This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 312 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_widen().

4.23.1 Detailed Description

template<typename _FIterator>
struct __gnu_parallel::__find_first_of_selector< _FIterator >

Test predicate on several elements.
Definition at line 153 of file find_selectors.h.

4.23.2 Member Function Documentation

4.23.2.1 _M_sequential_algorithm()

```
template<typename _FIterator >
template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_first_of_selector< _FIterator >::_M_↩
sequential_algorithm (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred )  [inline]
```

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 186 of file find_selectors.h.

4.23.2.2 operator()()

```
template<typename _FIterator >
template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
bool __gnu_parallel::__find_first_of_selector< _FIterator >::operator() (
            _RAIter1 __i1,
            _RAIter2 __i2,
            _Pred __pred )  [inline]
```

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).
__pred	Find predicate.

Definition at line 169 of file find_selectors.h.
The documentation for this struct was generated from the following file:

- find_selectors.h

            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred )  [inline]
```

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 72 of file find_selectors.h.

4.24.2.2 operator()() template<typename _RAIter1 , typename _RAIter2 , typename _Pred >

```
bool __gnu_parallel::__find_if_selector::operator() (
            _RAIter1 __i1,
            _RAIter2 __i2,
            _Pred __pred )  [inline]
```

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).

Parameters

__pred	Find predicate.

Definition at line 60 of file find_selectors.h.
The documentation for this struct was generated from the following file:

- find_selectors.h

4.25 __gnu_parallel::__for_each_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__for_each_selector< _It >:

Public Member Functions

- template<typename _Op >
  bool operator() (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.25.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__for_each_selector< _It >

std::for_each() selector.
Definition at line 52 of file for_each_selectors.h.

4.25.2 Member Function Documentation

4.25.2.1 operator()() `template<typename _It >`

```
template<typename _Op >
bool __gnu_parallel::__for_each_selector< _It >::operator() (
            _Op & __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_o	Operator.
_i	iterator referencing object.

Definition at line 59 of file for_each_selectors.h.

4.25.3 Member Data Documentation

4.25.3.1 _M_finish_iterator template<typename _It >

_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.26 __cxxabiv1::__forced_unwind Class Reference

4.26.1 Detailed Description

Thrown as part of forced unwinding.
A magic placeholder class that can be caught by reference to recognize forced unwinding.
Definition at line 48 of file cxxabi_forced.h.
The documentation for this class was generated from the following file:

- cxxabi_forced.h

4.27 std::__future_base Struct Reference

Inheritance diagram for std::__future_base:

Classes

- struct _Result
- struct _Result< _Res & >
- struct _Result< void >
- struct _Result_alloc
- struct _Result_base

Public Types

- template<typename _Res >
  using _Ptr = unique_ptr< _Res, _Result_base::_Deleter >
- using **_State_base** = _State_baseV2

Static Public Member Functions

- template<typename _Res , typename _Allocator >
  static _Ptr< _Result_alloc< _Res, _Allocator > > **_S_allocate_result** (const _Allocator &__a)
- template<typename _Res , typename _Tp >
  static _Ptr< _Result< _Res > > **_S_allocate_result** (const std::allocator< _Tp > &__a)
- template<typename _BoundFn >
  static std::shared_ptr< _State_base > **_S_make_async_state** (_BoundFn &&__fn)
- template<typename _BoundFn >
  static std::shared_ptr< _State_base > **_S_make_deferred_state** (_BoundFn &&__fn)
- template<typename _Res_ptr , typename _BoundFn >
  static _Task_setter< _Res_ptr, _BoundFn > **_S_task_setter** (_Res_ptr &__ptr, _BoundFn &__call)

4.27.1 Detailed Description

Base class and enclosing scope.
Definition at line 198 of file future.

4.27.2 Member Typedef Documentation

4.27.2.1 _Ptr template<typename _Res >

```
using std::__future_base::_Ptr = unique_ptr<_Res, _Result_base::_Deleter>
```

A unique_ptr for result objects.
Definition at line 223 of file future.
The documentation for this struct was generated from the following file:

- future

4.28 __gnu_parallel::__generate_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__generate_selector< _It >:

Public Member Functions

- template<typename _Op >
  bool operator() (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.28.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__generate_selector< _It >

std::generate() selector.
Definition at line 68 of file for_each_selectors.h.

4.28.2 Member Function Documentation

4.28.2.1 operator()() template<typename _It > template<typename _Op > bool __gnu_parallel::__generate_selector< _It >::operator() (_Op & __o, _It __i) [inline]

Functor execution.

Parameters

_↩ _o	Operator.
_↩ _i	iterator referencing object.

Definition at line 75 of file for_each_selectors.h.

4.28.3 Member Data Documentation

4.28.3.1 _M_finish_iterator template<typename _It >

_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.29 __gnu_parallel::__generic_find_selector Struct Reference

Inheritance diagram for __gnu_parallel::__generic_find_selector:

4.29.1 Detailed Description

Base class of all __gnu_parallel::__find_template selectors.
Definition at line 43 of file find_selectors.h.
The documentation for this struct was generated from the following file:

- find_selectors.h

4.30 __gnu_parallel::__generic_for_each_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__generic_for_each_selector< _It >:

Public Attributes

- _It _M_finish_iterator

4.30.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__generic_for_each_selector< _It >

Generic __selector for embarrassingly parallel functions.
Definition at line 42 of file for_each_selectors.h.

4.30.2 Member Data Documentation

4.30.2.1 _M_finish_iterator template<typename _It >

_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.31 __gnu_parallel::__identity_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__identity_selector< _It >:

Public Member Functions

- template<typename _Op >
  _It operator() (_Op __o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.31.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__identity_selector< _It >

Selector that just returns the passed iterator.
Definition at line 253 of file for_each_selectors.h.

4.31.2 Member Function Documentation

4.31.2.1 operator()() `template<typename _It >`

```
template<typename _Op >
_It __gnu_parallel::__identity_selector< _It >::operator() (
            _Op __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_↩ _o	Operator (unused).
_↩ _i	iterator referencing object.

Returns

Passed iterator.

Definition at line 261 of file for_each_selectors.h.

4.31.3 Member Data Documentation

4.31.3.1 _M_finish_iterator `template<typename _It >`

```
_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator  [inherited]
```

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.32 __gnu_parallel::__inner_product_selector< _It, _It2, _Tp > Struct Template Reference

Inheritance diagram for __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >:

Public Member Functions

- __inner_product_selector (_It __b1, _It2 __b2)
- template<typename _Op >
  _Tp operator() (_Op __mult, _It __current)

Public Attributes

- _It __begin1_iterator
- _It2 __begin2_iterator
- _It _M_finish_iterator

4.32.1 Detailed Description

template<typename _It, typename _It2, typename _Tp>
struct __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >

std::inner_product() selector.
Definition at line 222 of file for_each_selectors.h.

4.32.2 Constructor & Destructor Documentation

4.32.2.1 __inner_product_selector() template<typename _It , typename _It2 , typename _Tp > __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__inner_product_selector (_It __b1, _It2 __b2) [inline], [explicit]

Constructor.

Parameters

__b1	Begin iterator of first sequence.
__b2	Begin iterator of second sequence.

Definition at line 234 of file for_each_selectors.h.

4.32.3 Member Function Documentation

4.32.3.1 operator()() template<typename _It , typename _It2 , typename _Tp > template<typename _Op > _Tp __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::operator() (_Op __mult, _It __current) [inline]

Functor execution.

Parameters

__mult	Multiplication functor.
__current	iterator referencing object.

Returns

Inner product elemental __result.

Definition at line 243 of file for_each_selectors.h.
References __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin1_iterator, and __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin2_iterator.

4.32.4 Member Data Documentation

4.32.4.1 __begin1_iterator `template<typename _It , typename _It2 , typename _Tp >`

`_It __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin1_iterator`

Begin iterator of first sequence.
Definition at line 225 of file for_each_selectors.h.
Referenced by __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::operator()().

4.32.4.2 __begin2_iterator `template<typename _It , typename _It2 , typename _Tp >`

`_It2 __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::__begin2_iterator`

Begin iterator of second sequence.
Definition at line 228 of file for_each_selectors.h.
Referenced by __gnu_parallel::__inner_product_selector< _It, _It2, _Tp >::operator()().

4.32.4.3 _M_finish_iterator `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]`

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.33 std::__is_location_invariant< _Tp > Struct Template Reference

Inherits is_trivially_copyable::type.

4.33.1 Detailed Description

template<typename _Tp>
struct std::__is_location_invariant< _Tp >

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape.
Trivially copyable types are location-invariant and users can specialize this trait for other types.
Definition at line 71 of file std_function.h.
The documentation for this struct was generated from the following file:

- std_function.h

4.34 std::__is_nullptr_t< _Tp > Struct Template Reference

Inheritance diagram for std::__is_nullptr_t< _Tp >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.34.1 Detailed Description

template<typename _Tp>
struct std::__is_nullptr_t< _Tp >

__is_nullptr_t (deprecated extension).
Definition at line 519 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.35 std::__is_tuple_like_impl< std::pair< _T1, _T2 > > Struct Template Reference

Inheritance diagram for std::__is_tuple_like_impl< std::pair< _T1, _T2 > >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.35.1 Detailed Description

template<typename _T1, typename _T2>
struct std::__is_tuple_like_impl< std::pair< _T1, _T2 > >

Partial specialization for std::pair.
Definition at line 152 of file utility.
The documentation for this struct was generated from the following file:

- utility

4.36 __gnu_parallel::__max_element_reduct< _Compare, _It > Struct Template Reference

Public Member Functions

- **__max_element_reduct** (_Compare &__c)
- _It **operator()** (_It __x, _It __y)

Public Attributes

- _Compare & **__comp**

4.36.1 Detailed Description

template<typename _Compare, typename _It>
struct __gnu_parallel::__max_element_reduct< _Compare, _It >

Reduction for finding the maximum element, using a comparator.
Definition at line 321 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.37 __gnu_parallel::__min_element_reduct< _Compare, _It > Struct Template Reference

Public Member Functions

- **__min_element_reduct** (_Compare &__c)
- _It **operator()** (_It __x, _It __y)

Public Attributes

- _Compare & **__comp**

4.37.1 Detailed Description

template<typename _Compare, typename _It>
struct __gnu_parallel::__min_element_reduct< _Compare, _It >

Reduction for finding the maximum element, using a comparator.
Definition at line 307 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.38 __gnu_cxx::__detail::__mini_vector< _Tp > Class Template Reference

Public Types

- typedef const _Tp & **const_reference**
- typedef std::ptrdiff_t **difference_type**
- typedef pointer **iterator**
- typedef _Tp * **pointer**
- typedef _Tp & **reference**
- typedef std::size_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- reference **back** () const throw ()
- iterator **begin** () const throw ()
- void **clear** () throw ()
- iterator **end** () const throw ()
- void **erase** (iterator __pos) throw ()
- void **insert** (iterator __pos, const_reference __x)
- reference **operator[ ]** (const size_type __pos) const throw ()
- void **pop_back** () throw ()
- void **push_back** (const_reference __x)
- size_type **size** () const throw ()

4.38.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::__detail::__mini_vector< _Tp >

__mini_vector<> is a stripped down version of the full-fledged std::vector<>.
It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present.
2. Used ONLY for PODs.
3. No Allocator template argument. Uses operator new() to get memory, and operator delete() to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

Definition at line 67 of file bitmap_allocator.h.
The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.39 __gnu_parallel::__mismatch_selector Struct Reference

Inheritance diagram for __gnu_parallel::__mismatch_selector:

Public Member Functions

- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __↩
  begin2, _Pred __pred)
- template<typename _RAIter1 , typename _RAIter2 , typename _Pred >
  bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)

4.39.1 Detailed Description

Test inverted predicate on a single element.
Definition at line 119 of file find_selectors.h.

4.39.2 Member Function Documentation

4.39.2.1 _M_sequential_algorithm() template<typename _RAIter1 , typename _RAIter2 , typename _Pred >

```
std::pair<_RAIter1, _RAIter2> __gnu_parallel::__mismatch_selector::_M_sequential_algorithm (
            _RAIter1 __begin1,
            _RAIter1 __end1,
            _RAIter2 __begin2,
            _Pred __pred )  [inline]
```

Corresponding sequential algorithm on a sequence.

Parameters

__begin1	Begin iterator of first sequence.
__end1	End iterator of first sequence.
__begin2	Begin iterator of second sequence.
__pred	Find predicate.

Definition at line 143 of file find_selectors.h.

4.39.2.2 operator()() template<typename _RAIter1 , typename _RAIter2 , typename _Pred >

```
bool __gnu_parallel::__mismatch_selector::operator() (
            _RAIter1 __i1,
            _RAIter2 __i2,
            _Pred __pred )  [inline]
```

Test on one position.

Parameters

__i1	_Iterator on first sequence.
__i2	_Iterator on second sequence (unused).
__pred	Find predicate.

Definition at line 130 of file find_selectors.h.
The documentation for this struct was generated from the following file:

- find_selectors.h

4.40 __gnu_cxx::__mt_alloc< _Tp, _Poolp > Class Template Reference

Inheritance diagram for __gnu_cxx::__mt_alloc< _Tp, _Poolp >:

Public Types

- typedef _Poolp **__policy_type**
- typedef _Poolp::pool_type **__pool_type**
- typedef const _Tp * **const_pointer**
- typedef const _Tp & **const_reference**
- typedef std::ptrdiff_t **difference_type**
- typedef _Tp * **pointer**
- typedef std::true_type **propagate_on_container_move_assignment**
- typedef _Tp & **reference**
- typedef std::size_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- **__mt_alloc** (const __mt_alloc &) noexcept
- template<typename _Tp1 , typename _Poolp1 >
  __mt_alloc (const __mt_alloc< _Tp1, _Poolp1 > &) noexcept
- const __pool_base::_Tune **_M_get_options** ()
- void **_M_set_options** (__pool_base::_Tune __t)
- const_pointer **address** (const_reference __x) const noexcept

- pointer **allocate** (size_type __n, const void *=0)
- template<typename _Up , typename... _Args>
  void **construct** (_Up *__p, _Args &&... __args)
- void **deallocate** (pointer __p, size_type __n)
- template<typename _Up >
  void **destroy** (_Up *__p)
- size_type **max_size** () const noexcept

4.40.1 Detailed Description

template<typename _Tp, typename _Poolp = __common_pool_policy<__pool, true >>
class __gnu_cxx::__mt_alloc< _Tp, _Poolp >

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).
Further details: https://gcc.gnu.org/onlinedocs/libstdc++/manual/mt_allocator.html
Definition at line 639 of file mt_allocator.h.
The documentation for this class was generated from the following file:

- mt_allocator.h

4.41 __gnu_cxx::__mt_alloc_base< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::__mt_alloc_base< _Tp >:

Public Types

- typedef const _Tp * **const_pointer**
- typedef const _Tp & **const_reference**

4.48.1 Detailed Description

Part of std::numeric_limits.
The `static const` members are usable as integral constant expressions.

Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the std::numeric_limits class.

Definition at line 202 of file limits.

4.48.2 Member Data Documentation

4.48.2.1 digits `constexpr int std::__numeric_limits_base::digits [static], [constexpr]`

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

Definition at line 211 of file limits.

4.48.2.2 digits10 `constexpr int std::__numeric_limits_base::digits10 [static], [constexpr]`

The number of base 10 digits that can be represented without change.
Definition at line 214 of file limits.

4.48.2.3 has_denorm `constexpr float_denorm_style std::__numeric_limits_base::has_denorm [static], [constexpr]`

See std::float_denorm_style for more information.

Definition at line 266 of file limits.

4.48.2.4 has_denorm_loss `constexpr bool std::__numeric_limits_base::has_denorm_loss [static], [constexpr]`

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.
Definition at line 270 of file limits.

4.48.2.5 has_infinity `constexpr bool std::__numeric_limits_base::has_infinity [static], [constexpr]`

True if the type has a representation for positive infinity.

Definition at line 255 of file limits.

4.48.2.6 has_quiet_NaN `constexpr bool std::__numeric_limits_base::has_quiet_NaN [static], [constexpr]`

True if the type has a representation for a quiet (non-signaling) Not a Number.

Definition at line 259 of file limits.

4.48.2.7 has_signaling_NaN

`constexpr bool std::__numeric_limits_base::has_signaling_NaN [static], [constexpr]`

True if the type has a representation for a signaling Not a Number.

Definition at line 263 of file limits.

4.48.2.8 is_bounded

`constexpr bool std::__numeric_limits_base::is_bounded [static], [constexpr]`

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.
Definition at line 279 of file limits.

4.48.2.9 is_exact

`constexpr bool std::__numeric_limits_base::is_exact [static], [constexpr]`

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.
Definition at line 231 of file limits.

4.48.2.10 is_iec559

`constexpr bool std::__numeric_limits_base::is_iec559 [static], [constexpr]`

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

Definition at line 274 of file limits.

4.48.2.11 is_integer

`constexpr bool std::__numeric_limits_base::is_integer [static], [constexpr]`

True if the type is integer.

Definition at line 226 of file limits.

4.48.2.12 is_modulo

`constexpr bool std::__numeric_limits_base::is_modulo [static], [constexpr]`

True if the type is *modulo*. A type is modulo if, for any operation involving +, -, or $*$ on values of that type whose result would fall outside the range [min(),max()], the value returned differs from the true value by an integer multiple of max() - min() + 1. On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

Definition at line 288 of file limits.

4.48.2.13 is_signed

`constexpr bool std::__numeric_limits_base::is_signed [static], [constexpr]`

True if the type is signed.

Definition at line 223 of file limits.

4.48.2.14 is_specialized

`constexpr bool std::__numeric_limits_base::is_specialized [static], [constexpr]`

This will be true for all fundamental types (which have specializations), and false for everything else.

Definition at line 206 of file limits.

4.48.2.15 max_digits10 constexpr int std::__numeric_limits_base::max_digits10 [static], [constexpr]

The number of base 10 digits required to ensure that values which differ are always differentiated.

Definition at line 219 of file limits.

4.48.2.16 max_exponent constexpr int std::__numeric_limits_base::max_exponent [static], [constexpr]

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

Definition at line 248 of file limits.

4.48.2.17 max_exponent10 constexpr int std::__numeric_limits_base::max_exponent10 [static], [constexpr]

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

Definition at line 252 of file limits.

4.48.2.18 min_exponent constexpr int std::__numeric_limits_base::min_exponent [static], [constexpr]

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

Definition at line 239 of file limits.

4.48.2.19 min_exponent10 constexpr int std::__numeric_limits_base::min_exponent10 [static], [constexpr]

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

Definition at line 243 of file limits.

4.48.2.20 radix constexpr int std::__numeric_limits_base::radix [static], [constexpr]

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

Definition at line 235 of file limits.

4.48.2.21 round_style constexpr float_round_style std::__numeric_limits_base::round_style [static], [constexpr]

See std::float_round_style for more information. This is only meaningful for floating types; integer types will all be round_toward_zero.

Definition at line 299 of file limits.

4.48.2.22 tinyness_before constexpr bool std::__numeric_limits_base::tinyness_before [static], [constexpr]

True if tininess is detected before rounding. (see IEC 559)

Definition at line 294 of file limits.

4.48.2.23 traps `constexpr bool std::__numeric_limits_base::traps [static], [constexpr]`

True if trapping is implemented for this type.

Definition at line 291 of file limits.

4.54.1 Detailed Description

Base class for __pool_alloc.
Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).
Important implementation properties: 0. If globally mandated, then allocate objects from new

1. If the clients request an object of size > _S_max_bytes, the resulting object will be obtained directly from new
2. In all other cases, we allocate an object of size exactly _S_round_up(requested_size). Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

Definition at line 75 of file pool_allocator.h.

4.56.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class __gnu_cxx::__rc_string_base< _CharT, _Traits, _Alloc >

Documentation? What's that? Nathan Myers ncm@cantrip.org.
A string looks like this:

```
                                     [_Rep]
                                     _M_length
[__rc_string_base<char_type>]        _M_capacity
_M_dataplus                          _M_refcount
_M_p ---------------->               unnamed array of char_type
```

Where the _M_p points to the first character in the string, and you cast it to a pointer-to-_Rep and subtract 1 to get a pointer to the header.
This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: _Rep::_M_refdata(), and __rc_↩ string_base::_M_rep(); and the allocation function which gets a block of raw bytes and with room enough and constructs a _Rep object at the front.
The reason you want _M_data pointing to the character array and not the _Rep is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the _Rep for the debugger to use, so users can check the actual string length.)
Note that the _Rep object is a POD so that you can have a static *empty string* _Rep object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string _Rep object.
All but the last paragraph is considered pretty conventional for a C++ string implementation.

4.63 __gnu_parallel::__transform1_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__transform1_selector< _It >:

Public Member Functions

- template<typename _Op >
  bool operator() (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.63.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__transform1_selector< _It >

std::transform() __selector, one input sequence variant.
Definition at line 100 of file for_each_selectors.h.

4.63.2 Member Function Documentation

4.63.2.1 operator()() `template<typename _It >`

```
template<typename _Op >
bool __gnu_parallel::__transform1_selector< _It >::operator() (
            _Op & __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_↩ _o	Operator.
_↩ _i	iterator referencing object.

Definition at line 107 of file for_each_selectors.h.

4.63.3 Member Data Documentation

4.63.3.1 _M_finish_iterator template<typename _It >

_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.64 __gnu_parallel::__transform2_selector< _It > Struct Template Reference

Inheritance diagram for __gnu_parallel::__transform2_selector< _It >:

Public Member Functions

- template<typename _Op >
  bool operator() (_Op &__o, _It __i)

Public Attributes

- _It _M_finish_iterator

4.64.1 Detailed Description

template<typename _It>
struct __gnu_parallel::__transform2_selector< _It >

std::transform() __selector, two input sequences variant.
Definition at line 116 of file for_each_selectors.h.

4.64.2 Member Function Documentation

4.64.2.1 operator()() template<typename _It >

```
template<typename _Op >
bool __gnu_parallel::__transform2_selector< _It >::operator() (
            _Op & __o,
            _It __i )  [inline]
```

Functor execution.

Parameters

_↩ _o	Operator.
_↩ _i	iterator referencing object.

Definition at line 123 of file for_each_selectors.h.

4.64.3 Member Data Documentation

4.64.3.1 _M_finish_iterator template<typename _It >

_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]

_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).
Definition at line 47 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.65 __gnu_parallel::__unary_negate< _Predicate, argument_type > Class Template Reference

Inheritance diagram for __gnu_parallel::__unary_negate< _Predicate, argument_type >:

Public Types

- typedef argument_type argument_type
- typedef bool result_type

Public Member Functions

- **__unary_negate** (const _Predicate &__x)
- bool **operator()** (const argument_type &__x)

Protected Attributes

- _Predicate **_M_pred**

4.65.1 Detailed Description

template<typename _Predicate, typename argument_type>
class __gnu_parallel::__unary_negate< _Predicate, argument_type >

Similar to std::unary_negate, but giving the argument types explicitly.
Definition at line 173 of file base.h.

4.65.2 Member Typedef Documentation

4.65.2.1 argument_type `typedef argument_type std::unary_function< argument_type , bool >::argument_type [inherited]`

`argument_type` is the type of the argument
Definition at line 108 of file stl_function.h.

4.65.2.2 result_type `typedef bool std::unary_function< argument_type , bool >::result_type [inherited]`

`result_type` is the return type
Definition at line 111 of file stl_function.h.
The documentation for this class was generated from the following file:

- base.h

4.66 __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base > Class Template Reference

Inherits _Base< _CharT, _Traits, _Alloc >.

Public Types

4.66.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base> class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >

Template class __versa_string.
Data structure managing sequences of characters and character-like objects.
Definition at line 56 of file vstring.h.

4.66.2 Constructor & Destructor Documentation

4.66.2.1 __versa_string() [1/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const _Alloc & __a = _Alloc() )  [inline], [explicit], [noexcept]
```

Construct an empty string using allocator *a*.
Definition at line 138 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr().

4.66.2.2 __versa_string() [2/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Construct string with copy of value of *__str*.

Parameters

__str	Source string.

Definition at line 146 of file vstring.h.

4.66.2.3 __versa_string() [3/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            __versa_string< _CharT, _Traits, _Alloc, _Base > && __str )  [inline], [noexcept]
```

String move constructor.

Parameters

__str	Source string.

The newly-constructed string contains the exact contents of *__str*. The contents of *__str* are a valid, but unspecified string.
Definition at line 158 of file vstring.h.

4.66.2.4 __versa_string() [4/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            std::initializer_list< _CharT > __l,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string from an initializer list.

Parameters

__l	std::initializer_list of characters.
__a	Allocator to use (default is default allocator).

Definition at line 166 of file vstring.h.

4.66.2.5 __versa_string() [5/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos,
            size_type __n = npos )  [inline]
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy (default remainder).

Definition at line 177 of file vstring.h.

4.66.2.6 __versa_string() [6/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos,
            size_type __n,
            const _Alloc & __a )  [inline]
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.

Parameters

__n	Number of characters to copy.
__a	Allocator to use.

Definition at line 192 of file vstring.h.

4.66.2.7 __versa_string() [7/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const _CharT * __s,
            size_type __n,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string initialized by a character array.

Parameters

__↩ _s	Source character array.
__↩ _n	Number of characters to copy.
__↩ _a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.
Definition at line 209 of file vstring.h.

4.66.2.8 __versa_string() [8/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            const _CharT * __s,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string as copy of a C string.

Parameters

__↩ _s	Source C string.
__↩ _a	Allocator to use (default is default allocator).

Definition at line 218 of file vstring.h.

4.66.2.9 __versa_string() [9/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            size_type __n,
            _CharT __c,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string as multiple characters.

Parameters

_↩ _n	Number of characters.
_↩ _c	Character to use.
_↩ _a	Allocator to use (default is default allocator).

Definition at line 228 of file vstring.h.

4.66.2.10 __versa_string() [10/10]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
            _InputIterator __beg,
            _InputIterator __end,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

Definition at line 243 of file vstring.h.

4.66.2.11 ~__versa_string()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::~__versa_string ( )  [inline], [noexcept]
```

Destroy the string instance.
Definition at line 250 of file vstring.h.

4.66.3 Member Function Documentation

4.66.3.1 append() [1/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            _InputIterator __first,
            _InputIterator __last )  [inline]
```

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.

Parameters

__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [first,last) to this string.
Definition at line 781 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.66.3.2 append() [2/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 693 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::operator+(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=().

4.66.3.3 append() [3/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos,
            size_type __n )  [inline]
```

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.
Definition at line 710 of file vstring.h.

4.66.3.4 append() [4/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            const _CharT * __s )  [inline]
```

Append a C string.

Parameters

__s	The C string to append.

Returns

Reference to this string.

Definition at line 735 of file vstring.h.

4.66.3.5 append() [5/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            const _CharT * __s,
            size_type __n )  [inline]
```

Append a C substring.

Parameters

__s	The C string to append.
__n	The number of characters to append.

Returns

Reference to this string.

Definition at line 722 of file vstring.h.

4.66.3.6 append() [6/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            size_type __n,
            _CharT __c )  [inline]
```

Append multiple characters.

Parameters

_↩ _n	The number of characters to append.
_↩ _c	The character to use.

Returns

Reference to this string.

Appends n copies of c to this string.
Definition at line 752 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.7 append() [7/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
            std::initializer_list< _CharT > __l )  [inline]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 762 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

4.66.3.8 assign() [1/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
            __versa_string< _CharT, _Traits, _Alloc, _Base > && __str )  [inline], [noexcept]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.
Definition at line 820 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap().

4.66.3.9 assign() [2/8] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (_InputIterator __first, _InputIterator __last) [inline]

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [first,last).
Definition at line 910 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.66.3.10 assign() [3/8] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str) [inline]

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Definition at line 804 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign(), and __gnu_cxx::__versa_↩ string< _CharT, _Traits, _Alloc, _Base >::operator=().

4.66.3.11 assign() [4/8] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> __versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str, size_type __pos, size_type __n) [inline]

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.
Definition at line 841 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.12 assign() [5/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
            const _CharT * __s )  [inline]
```

Set value to contents of a C string.

Parameters

_↩ _s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of *__s*. The data is copied, so there is no dependence on *__s* once the function returns.
Definition at line 874 of file vstring.h.

4.66.3.13 assign() [6/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
            const _CharT * __s,
            size_type __n )  [inline]
```

Set value to a C substring.

Parameters

_↩ _s	The C string to use.
_↩ _n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first __n characters of __s. If __n is is larger than the number of available characters in __s, the remainder of __s is used.
Definition at line 858 of file vstring.h.

4.66.3.14 assign() [7/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
            size_type __n,
            _CharT __c )  [inline]
```

Set value to multiple characters.

Parameters

_↩ _n	Length of the resulting string.
_↩ _c	The character to use.

Returns

Reference to this string.

This function sets the value of this string to __n copies of character __c.
Definition at line 891 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.15 assign() [8/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
            std::initializer_list< _CharT > __l )  [inline]
```

Set value to an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ l	The initializer_list of characters to assign.

Returns

Reference to this string.

Definition at line 920 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.66.3.16 at() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
```

typename, typename, typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (
size_type __n) [inline]

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If __n is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.
Definition at line 600 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.17 at() [2/2] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (
size_type __n) const [inline]

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If __n is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.
Definition at line 578 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cbegin ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.
Definition at line 391 of file vstring.h.

4.66.3.25 cend()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename,
typename, typename > class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cend ( ) const  [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.
Definition at line 399 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.26 clear()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename,
typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::clear ( )  [inline], [noexcept]
```

Erases the string, making it empty.
Definition at line 515 of file vstring.h.

4.66.3.27 compare() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) const  [inline]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 2074 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), std::min(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().
Referenced by __gnu_cxx::operator<(), __gnu_cxx::operator<=(), __gnu_cxx::operator==(), __gnu_cxx::operator>(), and __gnu_cxx::operator>=().

4.66.3.28 compare() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            const _CharT * __s ) const
```

Compare to a C string.

Parameters

_↩ _s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before __s, 0 if their values are equivalent, or > 0 if this string is ordered after __s. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from __s. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 495 of file vstring.tcc.

4.66.3.29 compare() [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            size_type __pos,
            size_type __n,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) const
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the __n characters starting at __pos. Returns an integer < 0 if the substring is ordered before __str, 0 if their values are equivalent, or > 0 if the substring is ordered after __str. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and __str.size(). The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 459 of file vstring.tcc.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), std::min(), and __gnu_cxx::__↩ versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.30 compare() [4/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s ) const
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 511 of file vstring.tcc.

4.66.3.31 compare() [5/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2 ) const
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits↩ ::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: __s must have at least n2 characters, *\0* has no special meaning.
Definition at line 528 of file vstring.tcc.

4.66.3.32 compare() [6/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
            size_type __pos1,
            size_type __n1,
```

```
const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
size_type __pos2,
size_type __n2 ) const
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 476 of file vstring.tcc.

4.66.3.33 copy()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::copy (
            _CharT * __s,
            size_type __n,
            size_type __pos = 0 ) const
```

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *s*. If *__pos* is greater than size(), out_of_range is thrown.

Definition at line 254 of file vstring.tcc.

4.66.3.34 crbegin() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

Definition at line 408 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end().

4.66.3.35 crend() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

Definition at line 417 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin().

4.66.3.36 data() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

const _CharT* __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data ( ) const [inline], [noexcept]

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Definition at line 1658 of file vstring.h.

Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not↩ _of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of().

4.66.3.37 empty() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

bool __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::empty ( ) const [inline], [noexcept]

Returns true if the string is empty. Equivalent to `*this == ""`.

Definition at line 523 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.38 end() [1/2] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last character in the string.

Definition at line 346 of file vstring.h.

References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.39 end() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end ( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.
Definition at line 335 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.40 erase() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
            const_iterator __first,
            const_iterator __last ) [inline]
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.
Definition at line 1216 of file vstring.h.

4.66.3.41 erase() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
            const_iterator __position ) [inline]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.
Definition at line 1191 of file vstring.h.

4.66.3.42 erase() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
            size_type __pos = 0,
            size_type __n = npos ) [inline]
```

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1174 of file vstring.h.

4.66.3.43 find() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::find (
            _CharT __c,
            size_type __pos = 0 ) const  [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 293 of file vstring.tcc.

4.66.3.44 find() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1694 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.45 find() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *__s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 269 of file vstring.tcc.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of().

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (
            const _CharT * __s,
            size_type __pos = 0 ) const  [inline]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1709 of file vstring.h.

4.66.3.47 find_first_not_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc ,

_Traits, _Alloc, _Base >::find_first_not_of (
            _CharT __c,
            size_type __pos = 0 ) const  [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 404 of file vstring.tcc.

4.66.3.48 find_first_not_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc ,
template< typename, typename, typename > class _Base>

            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1926 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

            const _CharT * __s,
            size_type __pos,
            size_type __n ) const
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 391 of file vstring.tcc.

            _CharT __c,
            size_type __pos = npos ) const  [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 438 of file vstring.tcc.

size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos ) const  [inline]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1893 of file vstring.h.

4.66.3.63 front() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.
Definition at line 625 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[ ]().

4.66.3.64 front() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( )  [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.
Definition at line 617 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[ ]().

4.66.3.65 get_allocator()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ( )
const  [inline], [noexcept]
```

Return copy of allocator used to construct this string.
Definition at line 1665 of file vstring.h.

4.66.3.66 insert() [1/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            const_iterator __p,
            _CharT __c )  [inline]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1146 of file vstring.h.

4.66.3.67 insert() [2/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            const_iterator __p,
            _InputIterator __beg,
            _InputIterator __end )  [inline]
```

Insert a range of characters.

Parameters

__p	Const_iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [beg,end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 985 of file vstring.h.

4.66.3.68 insert() [3/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            const_iterator __p,
            size_type __n,
            _CharT __c )  [inline]
```

Insert multiple characters.

Parameters

_↩ _p	Const_iterator referencing location in string to insert at.
_↩ _n	Number of characters to insert
_↩ _c	The character to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 941 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert().

4.66.3.69 insert() [4/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            const_iterator __p,
            std::initializer_list< _CharT > __l )  [inline]
```

Insert an initializer_list of characters.

Parameters

__p	Const_iterator referencing location in string to insert at.
__l	The initializer_list of characters to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 1021 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert().

4.66.3.70 insert() [5/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            size_type __pos,
            const _CharT * __s )  [inline]
```

Insert a C string.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 1103 of file vstring.h.

4.66.3.71 insert() [6/9] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            size_type __pos,
            const _CharT * __s,
            size_type __n )  [inline]
```

Insert a C substring.

Parameters

__pos	Iterator referencing location in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1084 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.66.3.72 insert() [7/9] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            size_type __pos,
            size_type __n,
            _CharT __c )  [inline]
```

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1127 of file vstring.h.

4.66.3.73 insert() [8/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            size_type __pos1,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Insert value of a string.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1038 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.74 insert() [9/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
            size_type __pos1,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos2,
            size_type __n )  [inline]
```

Insert a substring.

Parameters

__pos1	Iterator referencing location in string to insert at.
__str	The string to insert.

Parameters

__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos1* > size() or *__pos2* > *__str.size()*.

Starting at *__pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1061 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.66.3.75 length()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length ( ) const  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 432 of file vstring.h.

4.66.3.76 max_size()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::max_size ( ) const  [inline], [noexcept]
```

Returns the size() of the largest possible string.
Definition at line 437 of file vstring.h.
Referenced by std::getline().

4.66.3.77 operator+=() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
            const _CharT * __s )  [inline]
```

Append a C string.

Parameters

__s	The C string to append.

Returns

Reference to this string.

Definition at line 661 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

4.66.3.80 operator+=() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
            std::initializer_list< _CharT > __l )  [inline]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to be appended.

Returns

Reference to this string.

Definition at line 683 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append().

4.66.3.81 operator=() [1/5]

```

__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
            std::initializer_list< _CharT > __l )  [inline]
```

Set value to string constructed from initializer list.

Parameters

↩ _↩ ↩ _↩ l	std::initializer_list.

Definition at line 281 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign().

4.66.3.86 operator[]() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
            size_type __pos ) const  [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Definition at line 538 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front().

4.66.3.87 operator[]() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
            size_type __pos ) [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().) Unshares the string.
Definition at line 555 of file vstring.h.

4.66.3.88 pop_back()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::pop_back ( ) [inline]
```

Remove the last character.
The string must be non-empty.
Definition at line 1236 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.89 push_back()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back (
            _CharT __c ) [inline]
```

Append a single character.

Parameters

__c	Character to append.

Definition at line 789 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::capacity(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend ( )
const  [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.
Definition at line 382 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin().

4.66.3.93 rend() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend ( )  [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.
Definition at line 373 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin().

4.66.3.94 replace() [1/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
            const_iterator __i1,
            const_iterator __i2,
            _InputIterator __k1,
            _InputIterator __k2 )  [inline]
```

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1479 of file vstring.h.

4.66.3.95 replace() [2/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (

            const_iterator __i2,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1376 of file vstring.h.

            const_iterator __i2,
            const _CharT * __s )  [inline]
```

Replace range of characters with C string.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1425 of file vstring.h.

4.66.3.97 replace() [4/11] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

            const _CharT * __s,
            size_type __n )  [inline]
```

Replace range of characters with C substring.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _s	C string value to insert.
_↩ _n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, the first *n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1399 of file vstring.h.

4.66.3.98 replace() [5/11]

            const_iterator __i2,
            size_type __n,
            _CharT __c )  [inline]
```

Replace range of characters with multiple characters.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__n	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, *__n* copies of *__c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

            const_iterator __i2,
```

```
            std::initializer_list< _CharT > __l )  [inline]
```

Replace range of characters with initializer_list.

Parameters

_i1	Iterator referencing start of range to replace.
_i2	Iterator referencing end of range to replace.
_l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [i1,i2). In place, characters in the range [k1,k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

            size_type __n,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str )  [inline]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos+n) from this string. In place, the value of *__str* is inserted. If *__pos* is

beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

            const _CharT * __s,
            size_type __n2 )  [inline]
```

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.

Parameters

__s	C string to insert.
__n2	Number of characters from *__s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1309 of file vstring.h.

4.66.3.103 replace() [10/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
            size_type __pos,
            size_type __n1,
            size_type __n2,
            _CharT __c )  [inline]
```

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1357 of file vstring.h.

4.66.3.104 replace() [11/11] template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
__versa_string& __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
            size_type __pos1,
            size_type __n1,
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos2,
            size_type __n2 )  [inline]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos1,pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 1281 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace().

4.66.3.105 reserve() template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>

```
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve (
            size_type __res_arg = 0 )  [inline]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
Definition at line 508 of file vstring.h.
Referenced by __gnu_cxx::operator+().

4.66.3.106 resize() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
            size_type __n )  [inline]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.
Definition at line 464 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize().

4.66.3.107 resize() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize (
            size_type __n,
            _CharT __c )
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.
_↩ _c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __c.
Definition at line 49 of file vstring.tcc.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::resize().

4.66.3.108 rfind() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::rfind (
            _CharT __c,
            size_type __pos = npos ) const  [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 334 of file vstring.tcc.

4.66.3.109 rfind() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
            const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1739 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of().

4.66.3.110 rfind() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↩
_Traits, _Alloc, _Base >::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 312 of file vstring.tcc.

4.66.3.111 rfind() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
            const _CharT * __s,
            size_type __pos = npos ) const  [inline]
```

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1769 of file vstring.h.

4.66.3.112 shrink_to_fit()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit ( )  [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().
Definition at line 470 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::capacity(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size().

4.66.3.113 size()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename,
typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size ( ) const  [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 426 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cend(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::empty(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert(), __gnu_cxx::operator+(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc,

_Base >::pop_back(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back(), __gnu_cxx::__↩ versa_string< _CharT, _Traits, _Alloc, _Base >::replace(), and __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit().

4.66.3.114 substr()

```
template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__versa_string __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::substr (
            size_type __pos = 0,
            size_type __n = npos ) const  [inline]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.
Definition at line 2053 of file vstring.h.
References __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string().

4.66.3.115 swap()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename,
typename, typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap (
            __versa_string< _CharT, _Traits, _Alloc, _Base > & __s )  [inline], [noexcept]
```

Swap contents with another string.

Parameters

_↩ _s	String to swap with.

Exchanges the contents of this string with that of *__s* in constant time.
Definition at line 1637 of file vstring.h.
Referenced by __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign(), __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator=(), and __gnu_cxx::swap().

4.66.4 Member Data Documentation

4.66.4.1 npos

`template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`
`const __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::npos [static]`

Value returned by various member functions when they fail.

- bool **operator()** (_CharT __ch) const

4.75.1 Detailed Description

template<typename _TraitsT, bool __icase, bool __collate>
struct std::__detail::_BracketMatcher< _TraitsT, __icase, __collate >

Matches a character range (bracket expression)
Definition at line 413 of file regex_compiler.h.
The documentation for this struct was generated from the following files:

- regex_compiler.h
- regex_compiler.tcc

4.76 __gnu_cxx::_Caster< _ToType > Struct Template Reference

Public Types

- typedef _ToType::element_type * **type**

4.76.1 Detailed Description

template<typename _ToType>
struct __gnu_cxx::_Caster< _ToType >

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef element_type which names tehe type it points to. 2) has a get() const method which returns element_type*. 3) has a constructor which can take one element_type* argument. This type supports the semantics of the pointer cast operators (below.)
Definition at line 52 of file cast.h.
The documentation for this struct was generated from the following file:

- cast.h

4.77 __gnu_cxx::_Char_types< _CharT > Struct Template Reference

Public Types

- typedef unsigned long **int_type**
- typedef std::streamoff **off_type**
- typedef std::streampos **pos_type**
- typedef std::mbstate_t **state_type**

4.77.1 Detailed Description

template<typename _CharT>
struct __gnu_cxx::_Char_types< _CharT >

Mapping from character type to associated types.

Note

This is an implementation class for the generic version of char_traits. It defines int_type, off_type, pos_type, and state_type. By default these are unsigned long, streamoff, streampos, and mbstate_t. Users who need a different set of types, but who don't need to change the definitions of any function defined in char_traits, can specialize __gnu_cxx::_Char_types while leaving __gnu_cxx::char_traits alone.

Definition at line 65 of file char_traits.h.
The documentation for this struct was generated from the following file:

- char_traits.h

4.78 __gnu_pbds::detail::pat_trie_base::_CIter< Node, Leaf, Head, Inode, Is_Forward_Iterator > Class Template Reference

Inheritance diagram for __gnu_pbds::detail::pat_trie_base::_CIter< Node, Leaf, Head, Inode, Is_Forward_Iterator >:

- shared_ptr< const _RegexT > **_M_get_nfa** ()

4.79.1 Detailed Description

template<typename _TraitsT>
class std::__detail::_Compiler< _TraitsT >

Builds an NFA from an input iterator range.
The _TraitsT type should fulfill requirements [28.3].
Definition at line 57 of file regex_compiler.h.
The documentation for this class was generated from the following files:

- regex_compiler.h
- regex_compiler.tcc

4.80 std::__parallel::_CRandNumber< _MustBeInt > Struct Template Reference

Public Member Functions

- int **operator()** (int __limit)

4.80.1 Detailed Description

template<typename _MustBeInt = int>
struct std::__parallel::_CRandNumber< _MustBeInt >

Functor wrapper for std::rand().
Definition at line 1529 of file algo.h.
The documentation for this struct was generated from the following file:

- algo.h

4.81 std::__detail::_Default_ranged_hash Struct Reference

4.81.1 Detailed Description

Default ranged hash function H. In principle it should be a function object composed from objects of type H1 and H2 such that h(k, N) = h2(h1(k), N), but that would mean making extra copies of h1 and h2. So instead we'll just use a tag to tell class template hashtable to do that composition.
Definition at line 441 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.82 std::_Deque_base< _Tp, _Alloc > Class Template Reference

Protected Types

4.82.1 Detailed Description

template<typename _Tp, typename _Alloc>
class std::_Deque_base< _Tp, _Alloc >

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.
Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.
Definition at line 406 of file stl_deque.h.

4.82.2 Member Function Documentation

4.82.2.1 _M_initialize_map() `template<typename _Tp , typename _Alloc >`

```
void std::_Deque_base< _Tp, _Alloc >::_M_initialize_map (
            size_t __num_elements )  [protected]
```

Layout storage.

Parameters

__num_elements	The count of T's for which to allocate space at first.

Returns

Nothing.

The initial underlying memory layout is a bit complicated...
Definition at line 614 of file stl_deque.h.
References std::max().
The documentation for this class was generated from the following file:

- stl_deque.h

4.83.1 Detailed Description

template<typename _Tp, typename _Ref, typename _Ptr>
struct std::_Deque_iterator< _Tp, _Ref, _Ptr >

A deque::iterator.
Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.
All the functions are op overloads except for _M_set_node.
Definition at line 113 of file stl_deque.h.

4.83.2 Member Function Documentation

4.83.2.1 _M_set_node() `template<typename _Tp , typename _Ref , typename _Ptr >`

```
void std::_Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (
            _Map_pointer __new_node )  [inline], [noexcept]
```

Prepares to traverse new_node. Sets everything except _M_cur, which should therefore be set by the caller immediately afterwards, based on _M_first and _M_last.
Definition at line 260 of file stl_deque.h.
The documentation for this struct was generated from the following files:

- stl_algobase.h
- stl_deque.h

4.84 __gnu_parallel::_DRandomShufflingGlobalData< _RAIter > Struct Template Reference

Public Types

- typedef _TraitsType::difference_type **_DifferenceType**
- typedef std::iterator_traits< _RAIter > **_TraitsType**
- typedef _TraitsType::value_type **_ValueType**

Public Member Functions

- _DRandomShufflingGlobalData (_RAIter &__source)

Public Attributes

- _DifferenceType ** _M_dist
- int _M_num_bins
- int _M_num_bits
- _RAIter & _M_source
- _DifferenceType * _M_starts
- _ValueType ** _M_temporaries

4.84.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >

Data known to every thread participating in __gnu_parallel::__parallel_random_shuffle().
Definition at line 52 of file random_shuffle.h.

4.84.2 Constructor & Destructor Documentation

4.84.2.1 _DRandomShufflingGlobalData() template<typename _RAIter >

__gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_DRandomShufflingGlobalData (_RAIter & __source) [inline]

Constructor.
Definition at line 83 of file random_shuffle.h.

4.84.3 Member Data Documentation

4.84.3.1 _M_bin_proc template<typename _RAIter >

_ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_bin_proc

Number of the thread that will further process the corresponding bin.
Definition at line 74 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.84.3.2 _M_dist template<typename _RAIter >

_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist

Two-dimensional array to hold the thread-bin distribution.
Dimensions (_M_num_threads + 1) __x (_M_num_bins + 1).
Definition at line 67 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs↩_pu().

4.84.3.3 _M_num_bins template<typename _RAIter >

int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins

Number of bins to distribute to.
Definition at line 77 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs↩_pu().

4.84.3.4 _M_num_bits template<typename _RAIter >

int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits

Number of bits needed to address the bins.
Definition at line 80 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs↩_pu().

4.84.3.5 _M_source template<typename _RAIter >

_RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source

Begin iterator of the __source.
Definition at line 59 of file random_shuffle.h.

4.84.3.6 _M_starts template<typename _RAIter >

_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts

Start indexes of the threads' __chunks.
Definition at line 70 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs↩_pu().

4.84.3.7 _M_temporaries template<typename _RAIter >

_ValueType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries

Temporary arrays for each thread.
Definition at line 62 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs().
The documentation for this struct was generated from the following file:

- random_shuffle.h

4.85 __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator > Struct Template Reference

Public Attributes

- _BinIndex __bins_end
- _BinIndex _M_bins_begin
- int _M_num_threads
- _DRandomShufflingGlobalData< _RAIter > * _M_sd
- uint32_t _M_seed

4.85.1 Detailed Description

template<typename _RAIter, typename _RandomNumberGenerator>
struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >

Local data for a thread participating in __gnu_parallel::__parallel_random_shuffle().
Definition at line 91 of file random_shuffle.h.

4.85.2 Member Data Documentation

4.85.2.1 __bins_end

`template<typename _RAIter , typename _RandomNumberGenerator > _BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end`

End index for bins taken care of by this thread.
Definition at line 100 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.85.2.2 _M_bins_begin

`template<typename _RAIter , typename _RandomNumberGenerator > _BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin`

Begin index for bins taken care of by this thread.
Definition at line 97 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs().

4.85.2.3 _M_num_threads

`template<typename _RAIter , typename _RandomNumberGenerator > int __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads`

Number of threads participating in total.
Definition at line 94 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.85.2.4 _M_sd

`template<typename _RAIter , typename _RandomNumberGenerator > _DRandomShufflingGlobalData<_RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_sd`

Pointer to global data.
Definition at line 106 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().

4.85.2.5 _M_seed

`template<typename _RAIter , typename _RandomNumberGenerator > uint32_t __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed`

Random _M_seed for this thread.
Definition at line 103 of file random_shuffle.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__parallel_random_shuffle_drs_pu().
The documentation for this struct was generated from the following file:

- random_shuffle.h

4.86 __gnu_parallel::_DummyReduct Struct Reference

Public Member Functions

- bool **operator()** (bool, bool) const

4.86.1 Detailed Description

Reduction function doing nothing.
Definition at line 298 of file for_each_selectors.h.
The documentation for this struct was generated from the following file:

- for_each_selectors.h

4.87 std::_Enable_copy_move< _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag > Struct Template Reference

4.87.1 Detailed Description

template<bool _Copy, bool _CopyAssignment, bool _Move, bool _MoveAssignment, typename _Tag = void>
struct std::_Enable_copy_move< _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >

A mixin helper to conditionally enable or disable the copy/move special members.

See also

_Enable_special_members

Definition at line 84 of file enable_special_members.h.
The documentation for this struct was generated from the following file:

- enable_special_members.h

4.88 std::_Enable_default_constructor< _Switch, _Tag > Struct Template Reference

Inheritance diagram for std::_Enable_default_constructor< _Switch, _Tag >:

Public Member Functions

- constexpr **_Enable_default_constructor** (_Enable_default_constructor const &) noexcept=default
- constexpr **_Enable_default_constructor** (_Enable_default_constructor_tag)
- _Enable_default_constructor & **operator=** (_Enable_default_constructor &&) noexcept=default
- _Enable_default_constructor & **operator=** (_Enable_default_constructor const &) noexcept=default

4.88.1 Detailed Description

template<bool _Switch, typename _Tag = void>
struct std::_Enable_default_constructor< _Switch, _Tag >

A mixin helper to conditionally enable or disable the default constructor.

See also

_Enable_special_members

Definition at line 50 of file enable_special_members.h.
The documentation for this struct was generated from the following file:

- enable_special_members.h

4.89 std::_Enable_destructor< _Switch, _Tag > Struct Template Reference

4.89.1 Detailed Description

template<bool _Switch, typename _Tag = void>
struct std::_Enable_destructor< _Switch, _Tag >

A mixin helper to conditionally enable or disable the default destructor.

See also

_Enable_special_members

Definition at line 74 of file enable_special_members.h.
The documentation for this struct was generated from the following file:

- enable_special_members.h

4.90 std::_Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag > Struct Template Reference

Inheritance diagram for std::_Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _↩ MoveAssignment, _Tag >:

4.90.1 Detailed Description

template<bool _Default, bool _Destructor, bool _Copy, bool _CopyAssignment, bool _Move, bool _MoveAssignment, typename _Tag = void>
struct std::_Enable_special_members< _Default, _Destructor, _Copy, _CopyAssignment, _Move, _MoveAssignment, _Tag >

A mixin helper to conditionally enable or disable the special members.
The `_Tag` type parameter is to make mixin bases unique and thus avoid ambiguities.
Definition at line 97 of file enable_special_members.h.
The documentation for this struct was generated from the following file:

- enable_special_members.h

4.91 __gnu_debug::_Equal_to< _Type > Class Template Reference

Public Member Functions

- **_Equal_to** (const _Type &__v)
- bool **operator()** (const _Type &__x) const

4.91.1 Detailed Description

template<typename _Type>
class __gnu_debug::_Equal_to< _Type >

A simple function object that returns true if the passed-in value is equal to the stored value.
Definition at line 59 of file safe_sequence.h.
The documentation for this class was generated from the following file:

- safe_sequence.h

4.92 __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_EqualFromLess** (_Compare &__comp)
- bool **operator()** (const _T1 &__a, const _T2 &__b)

4.92.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >

Constructs predicate for equality from strict weak ordering predicate.
Definition at line 157 of file base.h.

4.92.2 Member Typedef Documentation

4.92.2.1 first_argument_type `typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument
Definition at line 121 of file stl_function.h.

4.92.2.2 result_type `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]`

`result_type` is the return type
Definition at line 127 of file stl_function.h.

4.92.2.3 second_argument_type `typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this class was generated from the following file:

- base.h

4.93 std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys > Struct Template Reference

Inheritance diagram for std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _↩ RehashPolicy, _Traits, _Unique_keys >:

4.93.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>
struct std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >

Primary class template _Equality.
This is for implementing equality comparison for unordered containers, per N3068, by John Lakos and Pablo Halpern. Algorithmically, we follow closely the reference implementations therein.
Definition at line 1832 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.94 std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false > Struct Template Reference

Public Types

- using **__hashtable** = _Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Public Member Functions

- bool **_M_equal** (const __hashtable &) const

4.94.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false >

unordered_multiset and unordered_multimap specializations.
Definition at line 1891 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.95 std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true > Struct Template Reference

Public Types

- using **__hashtable** = _Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Public Member Functions

- bool **_M_equal** (const __hashtable &) const

4.95.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::_Equality< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true >

unordered_map and unordered_set specializations.
Definition at line 1839 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.96 __gnu_parallel::_EqualTo< _T1, _T2 > Struct Template Reference

Inheritance diagram for __gnu_parallel::_EqualTo< _T1, _T2 >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const

4.96.1 Detailed Description

template<typename _T1, typename _T2>
struct __gnu_parallel::_EqualTo< _T1, _T2 >

Similar to std::equal_to, but allows two different types.
Definition at line 244 of file base.h.

4.96.2 Member Typedef Documentation

4.96.2.1 first_argument_type `typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument
Definition at line 121 of file stl_function.h.

4.96.2.2 result_type `typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]`

`result_type` is the return type
Definition at line 127 of file stl_function.h.

4.96.2.3 second_argument_type `typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this struct was generated from the following file:

- base.h

4.97 std::__detail::_Executor< _BiIter, _Alloc, _TraitsT, __dfs_mode > Class Template Reference

Public Types

- typedef iterator_traits< _BiIter >::value_type **_CharT**
- typedef _TraitsT::char_class_type **_ClassT**
- typedef regex_constants::match_flag_type **_FlagT**
- typedef _NFA< _TraitsT > **_NFAT**
- typedef basic_regex< _CharT, _TraitsT > **_RegexT**
- typedef std::vector< sub_match< _BiIter >, _Alloc > **_ResultsVec**

Public Member Functions

- **_Executor** (_BiIter __begin, _BiIter __end, _ResultsVec &__results, const _RegexT &__re, _FlagT __flags)
- bool **_M_match** ()
- bool **_M_search** ()
- bool **_M_search_from_first** ()

Public Attributes

- _Bilter **_M_begin**
- _ResultsVec **_M_cur_results**
- _Bilter **_M_current**
- const _Bilter **_M_end**
- _FlagT **_M_flags**
- bool **_M_has_sol**
- const _NFAT & **_M_nfa**
- const _RegexT & **_M_re**
- vector< pair< _Bilter, int > > **_M_rep_count**
- _ResultsVec & **_M_results**
- _State_info< __search_mode, _ResultsVec > **_M_states**

4.97.1 Detailed Description

template<typename _Bilter, typename _Alloc, typename _TraitsT, bool __dfs_mode>
class std::__detail::_Executor< _Bilter, _Alloc, _TraitsT, __dfs_mode >

Takes a regex and an input string and does the matching.
The _Executor class has two modes: DFS mode and BFS mode, controlled by the template parameter __dfs_mode.
Definition at line 52 of file regex_executor.h.
The documentation for this class was generated from the following files:

- regex.h
- regex_executor.h
- regex_executor.tcc

4.98 __gnu_cxx::_ExtPtr_allocator< _Tp > Class Template Reference

Public Types

Friends

- template<typename _Up >
  void **swap** (_ExtPtr_allocator< _Up > &, _ExtPtr_allocator< _Up > &)

4.98.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::_ExtPtr_allocator< _Tp >

An example allocator which uses a non-standard pointer type.
This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See ext/pointer.h) Memory allocation in this example is still performed using std::allocator.
Definition at line 56 of file extptr_allocator.h.
The documentation for this class was generated from the following file:

- extptr_allocator.h

4.99 __gnu_cxx::__detail::_Ffit_finder< _Tp > Class Template Reference

Inheritance diagram for __gnu_cxx::__detail::_Ffit_finder< _Tp >:

4.100 std::_Function_base Class Reference

Inheritance diagram for std::_Function_base:

Public Types

- typedef bool(* **_Manager_type**) (_Any_data &, const _Any_data &, _Manager_operation)

Public Member Functions

Public Attributes

- _Fwd_list_node_base * **_M_next**
- __gnu_cxx::__aligned_buffer< _Tp > **_M_storage**

4.104.1 Detailed Description

template<typename _Tp>
struct std::_Fwd_list_node< _Tp >

A helper node class for forward_list. This is just a linked list with uninitialized storage for a data value in each node. There is a sorting utility method.
Definition at line 113 of file forward_list.h.
The documentation for this struct was generated from the following file:

- forward_list.h

4.105 std::_Fwd_list_node_base Struct Reference

Inheritance diagram for std::_Fwd_list_node_base:

Public Member Functions

- **_Fwd_list_node_base** (_Fwd_list_node_base &&__x) noexcept
- **_Fwd_list_node_base** (const _Fwd_list_node_base &)=delete

- void **_M_reverse_after** () noexcept
- _Fwd_list_node_base * **_M_transfer_after** (_Fwd_list_node_base *__begin, _Fwd_list_node_base *__end) noexcept
- _Fwd_list_node_base & **operator=** (_Fwd_list_node_base &&__x) noexcept
- _Fwd_list_node_base & **operator=** (const _Fwd_list_node_base &)=delete

Public Attributes

- _Fwd_list_node_base * **_M_next**

4.105.1 Detailed Description

A helper basic node class for forward_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.
Definition at line 54 of file forward_list.h.
The documentation for this struct was generated from the following file:

- forward_list.h

4.106 __gnu_parallel::_GuardedIterator< _RAIter, _Compare > Class Template Reference

Public Member Functions

- _GuardedIterator (_RAIter __begin, _RAIter __end, _Compare &__comp)
- operator _RAIter ()
- std::iterator_traits< _RAIter >::value_type & operator* ()
- _GuardedIterator< _RAIter, _Compare > & operator++ ()

Friends

- bool operator< (_GuardedIterator< _RAIter, _Compare > &__bi1, _GuardedIterator< _RAIter, _Compare > &__bi2)
- bool operator<= (_GuardedIterator< _RAIter, _Compare > &__bi1, _GuardedIterator< _RAIter, _Compare > &__bi2)

4.106.1 Detailed Description

template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >

_Iterator wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.
The implicit supremum comes with a performance cost.
Deriving from _RAIter is not possible since _RAIter need not be a class.
Definition at line 73 of file multiway_merge.h.

4.106.2 Constructor & Destructor Documentation

4.106.2.1 _GuardedIterator() template<typename _RAIter , typename _Compare >

```
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator (
            _RAIter __begin,
            _RAIter __end,
            _Compare & __comp ) [inline]
```

Constructor. Sets iterator to beginning of sequence.

Parameters

__begin	Begin iterator of sequence.
__end	End iterator of sequence.
__comp	Comparator provided for associated overloaded compare operators.

Definition at line 91 of file multiway_merge.h.

4.106.3 Member Function Documentation

4.106.3.1 operator _RAIter() `template<typename _RAIter , typename _Compare >`

`__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter ( ) [inline]`

Convert to wrapped iterator.

Returns

Wrapped iterator.

Definition at line 112 of file multiway_merge.h.

4.106.3.2 operator*() `template<typename _RAIter , typename _Compare >`

`std::iterator_traits<_RAIter>::value_type& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator* ( ) [inline]`

Dereference operator.

Returns

Referenced element.

Definition at line 107 of file multiway_merge.h.

4.106.3.3 operator++() `template<typename _RAIter , typename _Compare >`

`_GuardedIterator<_RAIter, _Compare>& __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator++ ( ) [inline]`

Pre-increment operator.

Returns

This.

Definition at line 98 of file multiway_merge.h.

4.106.4 Friends And Related Function Documentation

4.106.4.1 operator< `template<typename _RAIter , typename _Compare >`

```
bool operator< (
            _GuardedIterator< _RAIter, _Compare > & __bi1,
            _GuardedIterator< _RAIter, _Compare > & __bi2 ) [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`true` if less.

Definition at line 119 of file multiway_merge.h.

4.106.4.2 operator<= `template<typename _RAIter , typename _Compare >`

```
bool operator<= (
            _GuardedIterator< _RAIter, _Compare > & __bi1,
            _GuardedIterator< _RAIter, _Compare > & __bi2 )  [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

__bi1	First iterator.
__bi2	Second iterator.

Returns

`True` if less equal.

Definition at line 134 of file multiway_merge.h.
The documentation for this class was generated from the following file:

- multiway_merge.h

4.107 std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code > Struct Template Reference

4.107.1 Detailed Description

template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash, bool __cache_hash_code>
struct std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, __cache_hash_code >

Primary class template _Hash_code_base.
Encapsulates two policy issues that aren't quite orthogonal. (1) the difference between using a ranged hash function and using the combination of a hash function and a range-hashing function. In the former case we don't have such things as hash codes, so we have a dummy type as placeholder. (2) Whether or not we cache hash codes. Caching hash codes is meaningless if we have a ranged hash function.
We also put the key extraction objects here, for convenience. Each specialization derives from one or more of the template parameters to benefit from Ebo. This is important as this type is inherited in some cases by the _Local_iterator_base type used to implement local_iterator and const_local_iterator. As with any iterator type we prefer to make it as small as possible.
Primary template is unused except as a hook for specializations.
Definition at line 1175 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.108 std::__detail::_Hash_code_base< _Key, _Value, _ExtractKey, _H1, _H2, _Default_ranged_hash, false > Struct Template Reference

4.116.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>
class std::_Hashtable< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits >

Primary class template _Hashtable.

Template Parameters

_Value	CopyConstructible type.
_Key	CopyConstructible type.
_Alloc	An allocator type ([lib.allocator.requirements]) whose _Alloc::value_type is _Value. As a conforming extension, we allow for _Alloc::value_type != _Value.

Template Parameters

_ExtractKey	Function object that takes an object of type _Value and returns a value of type _Key.
_Equal	Function object that takes two objects of type k and returns a bool-like value that is true if the two objects are considered equal.
_H1	The hash function. A unary function object with argument type _Key and result type size_t. Return values should be distributed over the entire range [0, numeric_limits<size_t>:::max()].
_H2	The range-hashing function (in the terminology of Tavori and Dreizin). A binary function object whose argument types and result type are all size_t. Given arguments r and N, the return value is in the range [0, N).
_Hash	The ranged hash function (Tavori and Dreizin). A binary function whose argument types are _Key and size_t and whose result type is size_t. Given arguments k and N, the return value is in the range [0, N). Default: hash(k, N) = h2(h1(k), N). If _Hash is anything other than the default, _H1 and _H2 are ignored.
_RehashPolicy	Policy class with three members, all of which govern the bucket count. _M_next_bkt(n) returns a bucket count no smaller than n. _M_bkt_for_elements(n) returns a bucket count appropriate for an element count of n. _M_need_rehash(n_bkt, n_elt, n_ins) determines whether, if the current bucket count is n_bkt and the current element count is n_elt, we need to increase the bucket count. If so, returns make_pair(true, n), where n is the new bucket count. If not, returns make_pair(false, <anything>)
_Traits	Compile-time class with three boolean std::integral_constant members: __cache_hash_code, __constant_iterators, __unique_keys.

Each _Hashtable data structure has:

- _Bucket[] _M_buckets
- _Hash_node_base _M_before_begin
- size_type _M_bucket_count
- size_type _M_element_count

with _Bucket being _Hash_node* and _Hash_node containing:

- _Hash_node* _M_next
- Tp _M_value
- size_t _M_hash_code if cache_hash_code is true

In terms of Standard containers the hashtable is like the aggregation of:

- std::forward_list<_Node> containing the elements
- std::vector<std::forward_list<_Node>::iterator> representing the buckets

The non-empty buckets contain the node before the first node in the bucket. This design makes it possible to implement something like a std::forward_list::insert_after on container insertion and std::forward_list::erase_after on container erase calls. _M_before_begin is equivalent to std::forward_list::before_begin. Empty buckets contain nullptr. Note that one of the non-empty buckets contains &_M_before_begin which is not a dereferenceable node so the node pointer in a bucket shall never be dereferenced, only its next node can be.
Walking through a bucket's nodes requires a check on the hash code to see if each node is still in the bucket. Such a design assumes a quite efficient hash functor and is one of the reasons it is highly advisable to set __cache_hash_code to true.

The container iterators are simply built from nodes. This way incrementing the iterator is perfectly efficient independent of how many empty buckets there are in the container.
On insert we compute the element's hash code and use it to find the bucket index. If the element must be inserted in an empty bucket we add it at the beginning of the singly linked list and make the bucket point to _M_before_begin. The bucket that used to point to _M_before_begin, if any, is updated to point to its new before begin node.
On erase, the simple iterator design requires using the hash functor to get the index of the bucket to update. For this reason, when __cache_hash_code is set to false the hash functor must not throw and this is enforced by a static assertion.
Functionality is implemented by decomposition into base classes, where the derived _Hashtable class is used in _↩ Map_base, _Insert, _Rehash_base, and _Equality base classes to access the "this" pointer. _Hashtable_base is used in the base classes as a non-recursive, fully-completed-type so that detailed nested type information, such as iterator type and node type, can be used. This is similar to the "Curiously Recurring Template Pattern" (CRTP) technique, but uses a reconstructed, not explicitly passed, template pattern.
Base class templates are:

- __detail::_Hashtable_base
- __detail::_Map_base
- __detail::_Insert
- __detail::_Rehash_base
- __detail::_Equality

Definition at line 184 of file bits/hashtable.h.

- using **__hash_cached** = __bool_constant< _Cache_hash_code >
- using **__unique_keys** = __bool_constant< _Unique_keys >

4.122.1 Detailed Description

template<bool _Cache_hash_code, bool _Constant_iterators, bool _Unique_keys>
struct std::__detail::_Hashtable_traits< _Cache_hash_code, _Constant_iterators, _Unique_keys >

struct _Hashtable_traits
Important traits for hash tables.

Template Parameters

_Cache_hash_code	Boolean value. True if the value of the hash function is stored along with the value. This is a time-space tradeoff. Storing it may improve lookup speed by reducing the number of times we need to call the _Hash or _Equal functors.

Template Parameters

_Constant_iterators	Boolean value. True if iterator and const_iterator are both constant iterator types. This is true for unordered_set and unordered_multiset, false for unordered_map and unordered_multimap.
_Unique_keys	Boolean value. True if the return value of _Hashtable::count(k) is always at most one, false if it may be an arbitrary number. This is true for unordered_set and unordered_map, false for unordered_multiset and unordered_multimap.

Definition at line 199 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

- constexpr bool operator>= (const pair< _Iterator1, _Iterator2 > &__x, const pair< _Iterator1, _Iterator2 > &__y)

4.131.1 Detailed Description

template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::_IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >

A pair of iterators. The usual iterator operations are applied to both child iterators.
Definition at line 45 of file iterator.h.

4.131.2 Member Typedef Documentation

4.131.2.1 first_type `typedef _Iterator1 std::pair< _Iterator1 , _Iterator2 >::first_type [inherited]`

The type of the `first` member.
Definition at line 214 of file stl_pair.h.

4.131.2.2 second_type `typedef _Iterator2 std::pair< _Iterator1 , _Iterator2 >::second_type [inherited]`

The type of the `second` member.
Definition at line 215 of file stl_pair.h.

4.131.3 Member Function Documentation

4.131.3.1 swap() constexpr void std::pair< _Iterator1 , _Iterator2 >::swap (pair< _Iterator1, _Iterator2 > & __p) [inline], [constexpr], [noexcept], [inherited]

Swap the first members and then the second members.
Definition at line 439 of file stl_pair.h.

4.131.4 Friends And Related Function Documentation

4.131.4.1 make_pair() constexpr pair< typename __decay_and_strip< _Iterator1 >::__type, typename __decay_and_strip< _Iterator2 >::__type > make_pair (_Iterator1 && __x, _Iterator2 && __y) [related]

A convenience wrapper for creating a pair from two objects.

Parameters

_↩ _x	The first object.
_↩ _y	The second object.

Returns

A newly-constructed pair<> object of the appropriate type.

The C++98 standard says the objects are passed by reference-to-const, but C++03 says they are passed by value (this was LWG issue #181).
Since C++11 they have been passed by forwarding reference and then forwarded to the new members of the pair. To create a pair with a member of reference type, pass a `reference_wrapper` to this function.
Definition at line 567 of file stl_pair.h.

4.131.4.2 operator"!=() constexpr bool operator!= (const pair< _Iterator1 , _Iterator2 > & __x, const pair< _Iterator1 , _Iterator2 > & __y) [related]

Uses `operator==` to find the result.
Definition at line 496 of file stl_pair.h.

4.131.4.3 operator<() constexpr bool operator< (const pair< _Iterator1 , _Iterator2 > & __x, const pair< _Iterator1 , _Iterator2 > & __y) [related]

Defines a lexicographical order for pairs.
For two pairs of the same type, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.
Definition at line 488 of file stl_pair.h.

4.131.4.4 operator<=() constexpr bool operator<= (const pair< _Iterator1 , _Iterator2 > & __x, const pair< _Iterator1 , _Iterator2 > & __y) [related]

Uses `operator<` to find the result.

Definition at line 507 of file stl_pair.h.

4.131.4.5 operator==()

```
constexpr bool operator== (
        const pair< _Iterator1 , _Iterator2 > & __x,
        const pair< _Iterator1 , _Iterator2 > & __y )  [related]
```

Two pairs of the same type are equal iff their members are equal.
Definition at line 466 of file stl_pair.h.

4.131.4.6 operator>()

```
constexpr bool operator> (
        const pair< _Iterator1 , _Iterator2 > & __x,
        const pair< _Iterator1 , _Iterator2 > & __y )  [related]
```

Uses operator< to find the result.
Definition at line 502 of file stl_pair.h.

4.131.4.7 operator>=()

```
constexpr bool operator>= (
        const pair< _Iterator1 , _Iterator2 > & __x,
        const pair< _Iterator1 , _Iterator2 > & __y )  [related]
```

Uses operator< to find the result.
Definition at line 514 of file stl_pair.h.

4.131.4.8 swap()

```
constexpr enable_if< __and_< __is_swappable< _Iterator1 >, __is_swappable< _↩
Iterator2 > >::value >::type swap (
        pair< _Iterator1 , _Iterator2 > & __x,
        pair< _Iterator1 , _Iterator2 > & __y )  [related]
```

Swap overload for pairs. Calls std::pair::swap().

Note

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see https↩://gcc.gnu.org/PR38466

Definition at line 533 of file stl_pair.h.

4.131.5 Member Data Documentation

4.131.5.1 first

```
_Iterator1 std::pair< _Iterator1 , _Iterator2 >::first  [inherited]
```

The first member.
Definition at line 217 of file stl_pair.h.

4.131.5.2 second

```
_Iterator2 std::pair< _Iterator1 , _Iterator2 >::second  [inherited]
```

The second member.
Definition at line 218 of file stl_pair.h.

4.132.1 Detailed Description

template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>
class __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >

A triple of iterators. The usual iterator operations are applied to all three child iterators.
Definition at line 120 of file iterator.h.
The documentation for this class was generated from the following file:

- iterator.h

4.133 __gnu_parallel::_Job< _DifferenceTp > Struct Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Attributes

- volatile _DifferenceType _M_first
- volatile _DifferenceType _M_last
- volatile _DifferenceType _M_load

4.133.1 Detailed Description

template<typename _DifferenceTp>
struct __gnu_parallel::_Job< _DifferenceTp >

One __job for a certain thread.
Definition at line 54 of file workstealing.h.

4.133.2 Member Data Documentation

4.133.2.1 _M_first template<typename _DifferenceTp >

volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first

First element.
Changed by owning and stealing thread. By stealing thread, always incremented.
Definition at line 62 of file workstealing.h.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.133.2.2 _M_last template<typename _DifferenceTp >

volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last

Last element.
Changed by owning thread only.
Definition at line 67 of file workstealing.h.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.133.2.3 _M_load template<typename _DifferenceTp >

volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load

Number of elements, i.e. _M_last-_M_first+1.
Changed by owning thread only.
Definition at line 72 of file workstealing.h.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().
The documentation for this struct was generated from the following file:

- workstealing.h

4.134 __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata > Struct Template Reference

Inheritance diagram for __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >:

Public Types

- typedef _ATraits::const_iterator **a_const_iterator**
- typedef detail::rebind_traits< _Alloc, _ATraits >::const_pointer **a_const_pointer**
- typedef _ATraits **access_traits**
- typedef _Alloc **allocator_type**
- typedef _Node_base< _ATraits, Metadata > **base_type**
- typedef type_traits::const_reference **const_reference**
- typedef detail::rebind_traits< _Alloc, _Node_base >::pointer **node_pointer**
- typedef type_traits::reference **reference**
- typedef base_type::type_traits **type_traits**
- typedef type_traits::value_type **value_type**

Public Member Functions

- **_Leaf** (const_reference other)
- reference **value** ()
- const_reference **value** () const

Public Attributes

- node_pointer **m_p_parent**
- const node_type **m_type**

4.134.1 Detailed Description

template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >

Leaf node for PATRICIA tree.
Definition at line 162 of file pat_trie_base.hpp.
The documentation for this struct was generated from the following file:

- pat_trie_base.hpp

4.135 __gnu_parallel::_Less< _T1, _T2 > Struct Template Reference

Inheritance diagram for __gnu_parallel::_Less< _T1, _T2 >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- bool **operator()** (const _T1 &__t1, const _T2 &__t2) const
- bool **operator()** (const _T2 &__t2, const _T1 &__t1) const

4.135.1 Detailed Description

template<typename _T1, typename _T2>
struct __gnu_parallel::_Less< _T1, _T2 >

Similar to std::less, but allows two different types.
Definition at line 252 of file base.h.

4.135.2 Member Typedef Documentation

4.135.2.1 first_argument_type `typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument
Definition at line 121 of file stl_function.h.

4.135.2.2 result_type typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]

result_type is the return type
Definition at line 127 of file stl_function.h.

4.135.2.3 second_argument_type typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]

second_argument_type is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this struct was generated from the following file:

- base.h

4.136 __gnu_parallel::_Lexicographic< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >:

Public Types

- typedef std::pair< _T1, _T2 > first_argument_type
- typedef bool result_type
- typedef std::pair< _T1, _T2 > second_argument_type

Public Member Functions

- **_Lexicographic** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

4.136.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, ascending.
Definition at line 53 of file multiseq_selection.h.

4.136.2 Member Typedef Documentation

4.136.2.1 first_argument_type typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::first_argument_type [inherited]

first_argument_type is the type of the first argument
Definition at line 121 of file stl_function.h.

4.136.2.2 result_type typedef bool std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::result_type [inherited]

result_type is the return type
Definition at line 127 of file stl_function.h.

4.136.2.3 second_argument_type

`typedef std::pair< _T1, _T2 > std::binary_function< std::pair< _T1, _T2 > , std::pair< _T1, _T2 > , bool >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this class was generated from the following file:

- multiseq_selection.h

4.137 __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >:

Public Types

- typedef _T1 first_argument_type
- typedef bool result_type
- typedef _T2 second_argument_type

Public Member Functions

- **_LexicographicReverse** (_Compare &__comp)
- bool **operator()** (const std::pair< _T1, _T2 > &__p1, const std::pair< _T1, _T2 > &__p2) const

4.137.1 Detailed Description

template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_LexicographicReverse< _T1, _T2, _Compare >

Compare __a pair of types lexicographically, descending.
Definition at line 80 of file multiseq_selection.h.

4.137.2 Member Typedef Documentation

4.137.2.1 first_argument_type

`typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument
Definition at line 121 of file stl_function.h.

4.137.2.2 result_type

`typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]`

`result_type` is the return type
Definition at line 127 of file stl_function.h.

4.137.2.3 second_argument_type

`typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this class was generated from the following file:

- multiseq_selection.h

4.138 std::_List_base< _Tp, _Alloc > Class Template Reference

Inheritance diagram for std::_List_base< _Tp, _Alloc >:

Public Types

- typedef _Alloc **allocator_type**

Public Member Functions

- _Hash_node< _Value, true > * **_M_cur**

4.147.1 Detailed Description

template<typename _Key, typename _Value, typename _ExtractKey, typename _H1, typename _H2, typename _Hash>
struct std::__detail::_Local_iterator_base< _Key, _Value, _ExtractKey, _H1, _H2, _Hash, true >

Partial specialization used when nodes contain a cached hash code.
Definition at line 1423 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.148 __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser Struct Reference

Public Attributes

- _Tp _M_key
- int _M_source
- bool _M_sup

4.148.1 Detailed Description

template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser

Internal representation of a _LoserTree element.
Definition at line 59 of file losertree.h.

4.148.2 Member Data Documentation

4.148.2.1 _M_key `template<typename _Tp , typename _Compare >`

`_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`

_M_key of the element in the _LoserTree.
Definition at line 66 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.148.2.2 _M_source `template<typename _Tp , typename _Compare >`

`int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`

__index of the __source __sequence.
Definition at line 64 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.148.2.3 _M_sup `template<typename _Tp , typename _Compare >`

`bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`

flag, true iff this is a "maximum" __sentinel.
Definition at line 62 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().
The documentation for this struct was generated from the following file:

- losertree.h

4.149 __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser Struct Reference

Public Attributes

- const _Tp * **_M_keyp**
- int **_M_source**
- bool **_M_sup**

4.149.1 Detailed Description

template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser

Internal representation of _LoserTree __elements.
Definition at line 361 of file losertree.h.
The documentation for this struct was generated from the following file:

- losertree.h

4.150 __gnu_parallel::_LoserTree< __stable, _Tp, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >:

Public Member Functions

- **_LoserTree** (unsigned int __k, _Compare __comp)
- void __delete_min_insert (_Tp __key, bool __sup)
- int __get_min_source ()
- void **__init** ()
- unsigned int **__init_winner** (unsigned int __root)
- void __insert_start (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- unsigned int **_M_ik**
- unsigned int _M_log_k
- unsigned int **_M_offset**

4.150.1 Detailed Description

template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >

Stable _LoserTree variant.
Provides the stable implementations of insert_start, __init_winner, __init and __delete_min_insert.
Unstable variant is done using partial specialisation below.
Definition at line 169 of file losertree.h.

4.150.2 Member Function Documentation

4.150.2.1 __delete_min_insert() template<bool __stable, typename _Tp , typename _Compare >

```
void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
            _Tp __key,
            bool __sup )  [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence.
This implementation is stable.
Definition at line 222 of file losertree.h.

4.150.2.2 __get_min_source() template<typename _Tp , typename _Compare >

```
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( )  [inline], [inherited]
```

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.150.2.3 __insert_start() template<typename _Tp , typename _Compare >

```
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
            const _Tp & __key,
            int __source,
            bool __sup )  [inline], [inherited]
```

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.

4.150.3 Member Data Documentation

4.150.3.1 _M_log_k template<typename _Tp , typename _Compare >

```
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k  [protected], [inherited]
```

log_2{_M_k}
Definition at line 72 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().
The documentation for this class was generated from the following file:

- losertree.h

4.151 __gnu_parallel::_LoserTree< false, _Tp, _Compare > Class Template Reference

Inheritance diagram for __gnu_parallel::_LoserTree< false, _Tp, _Compare >:

Public Member Functions

- **_LoserTree** (unsigned int __k, _Compare __comp)
- void __delete_min_insert (_Tp __key, bool __sup)
- int __get_min_source ()
- void **__init** ()
- unsigned int __init_winner (unsigned int __root)
- void __insert_start (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- unsigned int **_M_ik**
- unsigned int **_M_offset**

4.151.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< false, _Tp, _Compare >

Unstable _LoserTree variant.
Stability (non-stable here) is selected with partial specialization.
Definition at line 261 of file losertree.h.

4.151.2 Member Function Documentation

4.151.2.1 __delete_min_insert() template<typename _Tp , typename _Compare >

```
void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__delete_min_insert (
            _Tp __key,
            bool __sup )  [inline]
```

Delete the _M_key smallest element and insert the element __key instead.

Parameters

__key	the _M_key to insert
__sup	true iff __key is an explicitly marked supremum

Definition at line 324 of file losertree.h.

4.151.2.2 __get_min_source() template<typename _Tp , typename _Compare >

```
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( )  [inline], [inherited]
```

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.151.2.3 __init_winner() template<typename _Tp , typename _Compare >

```
unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (
            unsigned int __root )  [inline]
```

Computes the winner of the competition at position "__root".
Called recursively (starting at 0) to build the initial tree.

Parameters

__root	__index of the "game" to start.

Definition at line 284 of file losertree.h.

4.151.2.4 __insert_start() template<typename _Tp , typename _Compare >

```
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
```

```
const _Tp & __key,
int __source,
bool __sup )  [inline], [inherited]
```

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.
The documentation for this class was generated from the following file:

- losertree.h

4.152 __gnu_parallel::_LoserTreeBase< _Tp, _Compare > Class Template Reference

4.152.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >

Guarded loser/tournament tree.
The smallest element is at the top.
Guarding is done explicitly through one flag _M_sup per element, inf is not needed due to a better initialization routine.
This is a well-performing variant.

Parameters

_Tp	the element type
_Compare	the comparator to use, defaults to std::less<_Tp>

Definition at line 55 of file losertree.h.

4.152.2 Constructor & Destructor Documentation

4.152.2.1 _LoserTreeBase()

```
template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (
            unsigned int __k,
            _Compare __comp )  [inline]
```

The constructor.

Parameters

__k	The number of sequences to merge.
__comp	The comparator to use.

Definition at line 94 of file losertree.h.
References __gnu_parallel::__rd_log2(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers.

4.152.2.2 ~_LoserTreeBase()

```
template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~_LoserTreeBase ( )  [inline]
```

The destructor.
Definition at line 118 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers.

4.152.3 Member Function Documentation

4.152.3.1 __get_min_source()

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( )  [inline]
```

Returns

the index of the sequence with the smallest element.

Definition at line 155 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source.

4.152.3.2 __insert_start()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
            const _Tp & __key,
```

```
        int __source,
        bool __sup )  [inline]
```

Initializes the sequence "_M_source" with the element "__key".

Parameters

__key	the element to insert
__source	__index of the __source __sequence
__sup	flag that determines whether the value to insert is an explicit __supremum.

Definition at line 134 of file losertree.h.
References __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers, __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source, and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup.

4.152.4 Member Data Documentation

4.152.4.1 _M_comp

```
template<typename _Tp , typename _Compare >
_Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp  [protected]
```

_Compare to use.
Definition at line 78 of file losertree.h.

4.152.4.2 _M_first_insert

```
template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert  [protected]
```

State flag that determines whether the _LoserTree is empty.
Only used for building the _LoserTree.
Definition at line 85 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.152.4.3 _M_log_k

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k  [protected]
```

log_2{_M_k}
Definition at line 72 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase().

4.152.4.4 _M_losers

```
template<typename _Tp , typename _Compare >
_Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers  [protected]
```

_LoserTree __elements.
Definition at line 75 of file losertree.h.
Referenced by __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~_LoserTreeBase(), __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source(), and __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start().

4.158.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >

Unguarded loser tree, keeping only pointers to the elements in the tree structure.
No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.
Definition at line 828 of file losertree.h.
The documentation for this class was generated from the following file:

- losertree.h

4.159 __gnu_parallel::_LoserTreeTraits< _Tp > Struct Template Reference

Static Public Attributes

- static const bool _M_use_pointer

4.159.1 Detailed Description

template<typename _Tp>
struct __gnu_parallel::_LoserTreeTraits< _Tp >

Traits for determining whether the loser tree should use pointers or copies.
The field "_M_use_pointer" is used to determine whether to use pointers in he loser trees or whether to copy the values into the loser tree.
The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.
Specialize for your data type to customize the behavior.
Example:
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };

Parameters

_Tp	type to give the loser tree traits for.

Definition at line 731 of file multiway_merge.h.

4.159.2 Member Data Documentation

4.159.2.1 _M_use_pointer template<typename _Tp >

const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer [static]

True iff to use pointers instead of values in loser trees.
The default behavior is to use pointers if the data type is four times as big as the pointer to it.
Definition at line 739 of file multiway_merge.h.
The documentation for this struct was generated from the following file:

- multiway_merge.h

4.162.1 Detailed Description

template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >

Base class for unguarded _LoserTree implementation.
The whole element is copied into the tree structure.
No guarding is done, therefore not a single input sequence must run empty. Unused __sequence heads are marked with a sentinel which is > all elements that are to be merged.
This is a very fast variant.
Definition at line 574 of file losertree.h.
The documentation for this class was generated from the following file:

- losertree.h

4.163 std::__detail::_Map_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys > Struct Template Reference

Inheritance diagram for std::__detail::_Map_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _↩ RehashPolicy, _Traits, _Unique_keys >:

4.163.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits, bool _Unique_keys = _Traits::__unique_keys::value>
struct std::__detail::_Map_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, _Unique_keys >

Primary class template _Map_base.
If the hashtable has a value type of the form pair<T1, T2> and a key extraction policy (_ExtractKey) that returns the first part of the pair, the hashtable gets a mapped_type typedef. If it satisfies those criteria and also has unique keys, then it also gets an operator[].
Definition at line 645 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.170 std::_Mu< _Arg, _IsBindExp, _IsPlaceholder > Class Template Reference

4.170.1 Detailed Description

template<typename _Arg, bool _IsBindExp = is_bind_expression<_Arg>::value, bool _IsPlaceholder = (is_placeholder<_Arg>::value > 0)>
class std::_Mu< _Arg, _IsBindExp, _IsPlaceholder >

Maps an argument to bind() into an actual argument to the bound function object [func.bind.bind]/10. Only the first parameter should be specified: the rest are used to determine among the various implementations. Note that, although this class is a function object, it isn't entirely normal because it takes only two parameters regardless of the number of parameters passed to the bind expression. The first parameter is the bound argument and the second parameter is a tuple containing references to the rest of the arguments.
Definition at line 288 of file functional.
The documentation for this class was generated from the following file:

template<typename _Arg>
class std::_Mu< _Arg, true, false >

If the argument is a bind expression, we invoke the underlying function object with the same cv-qualifiers as we are given and pass along all of our arguments (unwrapped). C++11 [func.bind.bind] p10 bullet 2.
Definition at line 317 of file functional.
The documentation for this class was generated from the following file:

- functional

4.174 std::_Mu< reference_wrapper< _Tp >, false, false > Class Template Reference

Public Member Functions

- template<typename _CVRef , typename _Tuple >
  constexpr _Tp & **operator()** (_CVRef &__arg, _Tuple &) const volatile

4.174.1 Detailed Description

template<typename _Tp>
class std::_Mu< reference_wrapper< _Tp >, false, false >

If the argument is reference_wrapper<_Tp>, returns the underlying reference. C++11 [func.bind.bind] p10 bullet 1.
Definition at line 296 of file functional.
The documentation for this class was generated from the following file:

- functional

4.175 __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result > Struct Template Reference

Inheritance diagram for __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >:

Public Types

- typedef _Tp1 first_argument_type
- typedef __typeof__(*< * >0_Tp1 **static_cast< _Tp2 * >(0) result_type
- typedef _Tp2 second_argument_type

Public Member Functions

- _Result **operator()** (const _Tp1 &__x, const _Tp2 &__y) const

4.175.1 Detailed Description

template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0))>
struct __gnu_parallel::_Multiplies< _Tp1, _Tp2, _Result >

Similar to std::multiplies, but allows two different types.
Definition at line 288 of file base.h.

4.175.2 Member Typedef Documentation

4.175.2.1 first_argument_type `typedef _Tp1 std::binary_function< _Tp1 , _Tp2 , __typeof__(*< * >0_Tp1 **static_cast< _Tp2 * >(0) >::first_argument_type [inherited]`

`first_argument_type` is the type of the first argument
Definition at line 121 of file stl_function.h.

4.175.2.2 result_type `typedef __typeof__(*< * >0_Tp1 **static_cast< _Tp2 * >(0) std::binary_function< _Tp1 , _Tp2 , __typeof__(*< * >0_Tp1 **static_cast< _Tp2 * >(0) >::result_type [inherited]`

`result_type` is the return type
Definition at line 127 of file stl_function.h.

4.175.2.3 second_argument_type `typedef _Tp2 std::binary_function< _Tp1 , _Tp2 , __typeof__(*< * >0_Tp1 **static_cast< _Tp2 * >(0) >::second_argument_type [inherited]`

`second_argument_type` is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this struct was generated from the following file:

- base.h

4.177.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename Iterator, typename _Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >

Node const iterator.
Definition at line 810 of file pat_trie_base.hpp.

4.177.2 Member Typedef Documentation

4.177.2.1 metadata_const_reference

```
template<typename Node , typename Leaf , typename Head , typename
Inode , typename _CIterator , typename Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.
Definition at line 862 of file pat_trie_base.hpp.

4.177.2.2 metadata_type

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type
```

Metadata type.
Definition at line 859 of file pat_trie_base.hpp.

4.177.3 Member Function Documentation

4.177.3.1 get_child()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
_Node_citer __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
            size_type i ) const  [inline]
```

Returns a __const node __iterator to the corresponding node's i-th child.
Definition at line 902 of file pat_trie_base.hpp.

4.177.3.2 get_metadata()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata ( ) const  [inline]
```

Metadata access.
Definition at line 885 of file pat_trie_base.hpp.

4.177.3.3 num_children()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children ( ) const  [inline]
```

Returns the number of children in the corresponding node.
Definition at line 890 of file pat_trie_base.hpp.

4.177.3.4 operator"!=()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )
const  [inline]
```

Compares content (negatively) to a different iterator object.
Definition at line 918 of file pat_trie_base.hpp.

4.177.3.5 operator*()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _↩
CIterator, Iterator, _Alloc >::operator* ( ) const  [inline]
```

Const access; returns the __const iterator* associated with the current leaf.
Definition at line 877 of file pat_trie_base.hpp.

4.177.3.6 operator==()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )
const  [inline]
```

Compares content to a different iterator object.
Definition at line 913 of file pat_trie_base.hpp.

4.177.3.7 valid_prefix()

```
template<typename Node , typename Leaf , typename Head , typename Inode ,
typename _CIterator , typename Iterator , typename _Alloc >
std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix ( ) const  [inline]
```

Subtree valid prefix.
Definition at line 871 of file pat_trie_base.hpp.
The documentation for this class was generated from the following file:

- pat_trie_base.hpp

4.178 std::__detail::_Node_const_iterator< _Value, __constant_iterators, __cache > Struct Template Reference

```

Metadata type.
Definition at line 859 of file pat_trie_base.hpp.

4.179.3 Member Function Documentation

4.179.3.1 get_child()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc >
_Node_iter __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_child (
            size_type i ) const [inline]
```

Returns a node __iterator to the corresponding node's i-th child.
Definition at line 966 of file pat_trie_base.hpp.

4.179.3.2 get_metadata()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc >
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::get_metadata ( ) const [inline], [inherited]
```

Metadata access.
Definition at line 885 of file pat_trie_base.hpp.

4.179.3.3 num_children()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc >
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children ( ) const [inline], [inherited]
```

Returns the number of children in the corresponding node.
Definition at line 890 of file pat_trie_base.hpp.

4.179.3.4 operator"!=()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator!= (
            const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other ) const [inline], [inherited]
```

Compares content (negatively) to a different iterator object.
Definition at line 918 of file pat_trie_base.hpp.

4.179.3.5 operator*() template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > reference __gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator* ( ) const [inline]

Access; returns the iterator* associated with the current leaf.
Definition at line 958 of file pat_trie_base.hpp.

4.179.3.6 operator==() template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator== (const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & *other*) const [inline], [inherited]

Compares content to a different iterator object.
Definition at line 913 of file pat_trie_base.hpp.

4.179.3.7 valid_prefix() template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator , typename Iterator , typename _Alloc > std::pair<a_const_iterator, a_const_iterator> __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix ( ) const [inline], [inherited]

Subtree valid prefix.
Definition at line 871 of file pat_trie_base.hpp.
The documentation for this class was generated from the following file:

4.188.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_PMWMSSortingData< _RAIter >

Data accessed by all threads.
PMWMS = parallel multiway mergesort
Definition at line 61 of file multiway_mergesort.h.

4.188.2 Member Data Documentation

4.188.2.1 _M_num_threads `template<typename _RAIter >`

`_ThreadIndex __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_num_threads`

Number of threads involved.
Definition at line 68 of file multiway_mergesort.h.
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.188.2.2 _M_offsets `template<typename _RAIter >`

`_DifferenceType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_offsets`

Offsets to add to the found positions.
Definition at line 83 of file multiway_mergesort.h.
Referenced by __gnu_parallel::parallel_sort_mwms().

4.188.2.3 _M_pieces `template<typename _RAIter >`

`std::vector<_Piece<_DifferenceType> >* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_pieces`

Pieces of data to merge [thread][__sequence].
Definition at line 86 of file multiway_mergesort.h.
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.188.2.4 _M_samples template<typename _RAIter >

_ValueType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_samples

Samples.

Definition at line 80 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), and __gnu_parallel::parallel_sort_mwms().

4.188.2.5 _M_source template<typename _RAIter >

_RAIter __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_source

Input __begin.

Definition at line 71 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.188.2.6 _M_starts template<typename _RAIter >

_DifferenceType* __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_starts

Start indices, per thread.

Definition at line 74 of file multiway_mergesort.h.

Referenced by __gnu_parallel::__determine_samples(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.188.2.7 _M_temporary template<typename _RAIter >

_ValueType** __gnu_parallel::_PMWMSSortingData< _RAIter >::_M_temporary

Storage in which to sort.

Definition at line 77 of file multiway_mergesort.h.

Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.189.1 Detailed Description

template<typename _Storage_policy>
class __gnu_cxx::_Pointer_adapter< _Storage_policy >

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.
The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.
A key point of this class is also that it allows container writers to 'assume' Allocator::pointer is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the Allocator::pointer typedef appropriately for pointer types. 2) if you need pointer casting, use the __pointer_cast<> functions from ext/cast.h. This allows pointer cast operations to be overloaded as necessary by custom pointers.
Note: The const qualifier works with this pointer adapter as follows:
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const _Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_adapter<_Std_pointer_impl<const _Tp> >;
Definition at line 284 of file pointer.h.
The documentation for this class was generated from the following file:

- pointer.h

4.191.1 Detailed Description

Default value for rehash policy. Bucket size is (usually) the smallest prime that keeps the load factor small enough.
Definition at line 445 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.192 __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp > Class Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**
- typedef _PseudoSequenceIterator< _Tp, uint64_t > **iterator**

Public Member Functions

- _PseudoSequence (const _Tp &__val, _DifferenceType __count)
- iterator begin () const
- iterator end () const

4.192.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

Definition at line 359 of file base.h.

4.192.2 Constructor & Destructor Documentation

4.192.2.1 _PseudoSequence() template<typename _Tp , typename _DifferenceTp >

```
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (
            const _Tp & __val,
            _DifferenceType __count )  [inline]
```

Constructor.

Parameters

__val	Element of the sequence.
__count	Number of (virtual) copies.

Definition at line 371 of file base.h.

4.192.3 Member Function Documentation

4.192.3.1 begin() template<typename _Tp , typename _DifferenceTp >

```
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin ( ) const  [inline]
```

Begin iterator.
Definition at line 376 of file base.h.

4.192.3.2 end() template<typename _Tp , typename _DifferenceTp > iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end ( ) const [inline]

End iterator.
Definition at line 381 of file base.h.
The documentation for this class was generated from the following file:

- base.h

4.193 __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp > Class Template Reference

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Member Functions

- **_PseudoSequenceIterator** (const _Tp &__val, _DifferenceType __pos)
- bool **operator!=** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator*** () const
- _PseudoSequenceIterator & **operator++** ()
- _PseudoSequenceIterator **operator++** (int)
- _DifferenceType **operator-** (const _PseudoSequenceIterator &__i2)
- bool **operator==** (const _PseudoSequenceIterator &__i2)
- const _Tp & **operator[ ]** (_DifferenceType) const

4.193.1 Detailed Description

template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >

_Iterator associated with __gnu_parallel::_PseudoSequence. If features the usual random-access iterator functionality.

Parameters

_Tp	Sequence _M_value type.
_DifferenceTp	Sequence difference type.

Definition at line 306 of file base.h.
The documentation for this class was generated from the following file:

- base.h

4.194 __gnu_parallel::_QSBThreadLocal< _RAIter > Struct Template Reference

Public Types

- typedef _TraitsType::difference_type **_DifferenceType**
- typedef std::pair< _RAIter, _RAIter > _Piece
- typedef std::iterator_traits< _RAIter > **_TraitsType**

Public Member Functions

- _QSBThreadLocal (int __queue_size)

- _Piece _M_global
- _Piece _M_initial
- _RestrictedBoundedConcurrentQueue< _Piece > _M_leftover_parts
- _ThreadIndex _M_num_threads

4.194.1 Detailed Description

template<typename _RAIter>
struct __gnu_parallel::_QSBThreadLocal< _RAIter >

Information local to one thread in the parallel quicksort run.
Definition at line 65 of file balanced_quicksort.h.

4.194.2 Member Typedef Documentation

4.194.2.1 _Piece `template<typename _RAIter >`

`typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal< _RAIter >::_Piece`

Continuous part of the sequence, described by an iterator pair.
Definition at line 72 of file balanced_quicksort.h.

4.194.3 Constructor & Destructor Documentation

4.194.3.1 _QSBThreadLocal() `template<typename _RAIter >`

`__gnu_parallel::_QSBThreadLocal< _RAIter >::_QSBThreadLocal (`
`int __queue_size ) [inline]`

Constructor.

Parameters

__queue_size	size of the work-stealing queue.

Definition at line 91 of file balanced_quicksort.h.

4.194.4 Member Data Documentation

4.194.4.1 _M_elements_leftover `template<typename _RAIter >`

`volatile _DifferenceType* __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_elements_leftover`

Pointer to a counter of elements left over to sort.
Definition at line 84 of file balanced_quicksort.h.
Referenced by __gnu_parallel::__parallel_sort_qsb().

4.194.4.2 _M_global `template<typename _RAIter >`

`_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_global`

The complete sequence to sort.

Definition at line 87 of file balanced_quicksort.h.

4.194.4.3 _M_initial template<typename _RAIter >

_Piece __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_initial

Initial piece to work on.
Definition at line 75 of file balanced_quicksort.h.
Referenced by __gnu_parallel::__qsb_conquer(), and __gnu_parallel::__qsb_local_sort_with_helping().

4.194.4.4 _M_leftover_parts template<typename _RAIter >

_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_leftover_parts

Work-stealing queue.
Definition at line 78 of file balanced_quicksort.h.

4.194.4.5 _M_num_threads template<typename _RAIter >

_ThreadIndex __gnu_parallel::_QSBThreadLocal< _RAIter >::_M_num_threads

Number of threads involved in this algorithm.
Definition at line 81 of file balanced_quicksort.h.
Referenced by __gnu_parallel::__qsb_local_sort_with_helping().
The documentation for this struct was generated from the following file:

- balanced_quicksort.h

4.195 std::__detail::_Quoted_string< _String, _CharT > Struct Template Reference

Public Member Functions

- **_Quoted_string** (_String __str, _CharT __del, _CharT __esc)
- _Quoted_string & **operator=** (_Quoted_string &)=delete

Public Attributes

- _CharT **_M_delim**
- _CharT **_M_escape**
- _String **_M_string**

4.195.1 Detailed Description

template<typename _String, typename _CharT>
struct std::__detail::_Quoted_string< _String, _CharT >

Struct for delimited strings.
Definition at line 49 of file quoted_string.h.
The documentation for this struct was generated from the following file:

- quoted_string.h

4.196 __gnu_parallel::_RandomNumber Class Reference

Public Member Functions

- _RandomNumber ()

- _RandomNumber (uint32_t __seed, uint64_t _M_supremum=0x100000000ULL)
- unsigned long __genrand_bits (int __bits)
- uint32_t operator() ()
- uint32_t operator() (uint64_t local_supremum)

4.196.1 Detailed Description

Random number generator, based on the Mersenne twister.
Definition at line 42 of file random_number.h.

4.196.2 Constructor & Destructor Documentation

4.196.2.1 _RandomNumber() [1/2] __gnu_parallel::_RandomNumber::_RandomNumber ( ) [inline]

Default constructor. Seed with 0.
Definition at line 74 of file random_number.h.

4.196.2.2 _RandomNumber() [2/2] __gnu_parallel::_RandomNumber::_RandomNumber (uint32_t *__seed*, uint64_t *_M_supremum = 0x100000000ULL*) [inline]

Constructor.

Parameters

__seed	Random __seed.
_M_supremum	Generate integer random numbers in the interval [0,_M_supremum).

Definition at line 85 of file random_number.h.

4.196.3 Member Function Documentation

4.196.3.1 __genrand_bits() unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (int *__bits*) [inline]

Generate a number of random bits, run-time parameter.

Parameters

__bits	Number of bits to generate.

Definition at line 109 of file random_number.h.

4.196.3.2 operator()() [1/2] uint32_t __gnu_parallel::_RandomNumber::operator() ( ) [inline]

Generate unsigned random 32-bit integer.
Definition at line 94 of file random_number.h.

4.196.3.3 operator()() [2/2] uint32_t __gnu_parallel::_RandomNumber::operator() (uint64_t *local_supremum*) [inline]

Generate unsigned random 32-bit integer in the interval [0,local_supremum).
Definition at line 100 of file random_number.h.
The documentation for this class was generated from the following file:

- random_number.h

4.197 std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename > Struct Template Reference

Inheritance diagram for std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename >:

4.197.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits, typename = __detected_or_t<false_type, __has_load_factor, _Rehash↩ Policy>>
struct std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, typename >

Primary class template _Rehash_base.
Give hashtable the max_load_factor functions and reserve iff the rehash policy supports it.
Definition at line 1049 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.198 std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false_type > Struct Template Reference

4.198.1 Detailed Description

template<typename _Key, typename _Value, typename _Alloc, typename _ExtractKey, typename _Equal, typename _H1, typename _H2, typename _Hash, typename _RehashPolicy, typename _Traits>
struct std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, false_type >

Specialization when rehash policy doesn't provide load factor management.
Definition at line 1056 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.199 std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true_type > Struct Template Reference

struct std::__detail::_Rehash_base< _Key, _Value, _Alloc, _ExtractKey, _Equal, _H1, _H2, _Hash, _RehashPolicy, _Traits, true_type >

Specialization when rehash policy provide load factor management.
Definition at line 1067 of file hashtable_policy.h.
The documentation for this struct was generated from the following file:

- hashtable_policy.h

4.200 __gnu_cxx::_Relative_pointer_impl< _Tp > Class Template Reference

Public Types

- typedef _Tp **element_type**

Public Member Functions

- _Tp * **get** () const
- bool **operator<** (const _Relative_pointer_impl &__rarg) const
- bool **operator==** (const _Relative_pointer_impl &__rarg) const
- void **set** (_Tp *__arg)

4.200.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which stores the pointer's address as an offset value which is relative to its own address.
This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.
Definition at line 112 of file pointer.h.
The documentation for this class was generated from the following file:

- pointer.h

4.201 __gnu_cxx::_Relative_pointer_impl< const _Tp > Class Template Reference

Public Types

- typedef const _Tp **element_type**

Public Member Functions

- const _Tp * **get** () const
- bool **operator<** (const _Relative_pointer_impl &__rarg) const
- bool **operator==** (const _Relative_pointer_impl &__rarg) const
- void **set** (const _Tp *__arg)

4.201.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< const _Tp >

Relative_pointer_impl needs a specialization for const T because of the casting done during pointer arithmetic.
Definition at line 164 of file pointer.h.
The documentation for this class was generated from the following file:

- pointer.h

4.202 __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp > Class Template Reference

Public Member Functions

- _RestrictedBoundedConcurrentQueue (_SequenceIndex __max_size)
- ~_RestrictedBoundedConcurrentQueue ()
- bool pop_back (_Tp &__t)
- bool pop_front (_Tp &__t)
- void push_front (const _Tp &__t)

4.202.1 Detailed Description

template<typename _Tp>
class __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >

Double-ended queue of bounded size, allowing lock-free atomic access. push_front() and pop_front() must not be called concurrently to each other, while pop_back() can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Parameters

_Tp	Contained element type.

Definition at line 52 of file queue.h.

4.202.2 Constructor & Destructor Documentation

4.202.2.1 _RestrictedBoundedConcurrentQueue() template<typename _Tp >

__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (_SequenceIndex *__max_size*) [inline]

Constructor. Not to be called concurrent, of course.

Parameters

__max_size	Maximal number of elements to be contained.

Definition at line 68 of file queue.h.
References __gnu_parallel::__encode2().

4.202.2.2 ~_RestrictedBoundedConcurrentQueue() template<typename _Tp >

__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~_RestrictedBoundedConcurrentQueue ( ) [inline]
Destructor. Not to be called concurrent, of course.
Definition at line 77 of file queue.h.

4.202.3 Member Function Documentation

4.202.3.1 pop_back() template<typename _Tp >

bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (_Tp & __t) [inline]
Pops one element from the queue at the front end. Must not be called concurrently with pop_front().
Definition at line 127 of file queue.h.
References __gnu_parallel::__compare_and_swap(), __gnu_parallel::__decode2(), and __gnu_parallel::__encode2().

4.202.3.2 pop_front() template<typename _Tp >

bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (_Tp & __t) [inline]
Pops one element from the queue at the front end. Must not be called concurrently with pop_front().
Definition at line 100 of file queue.h.
References __gnu_parallel::__compare_and_swap(), __gnu_parallel::__decode2(), and __gnu_parallel::__encode2().

4.202.3.3 push_front() template<typename _Tp >

void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front (const _Tp & __t) [inline]
Pushes one element into the queue at the front end. Must not be called concurrently with pop_front().
Definition at line 83 of file queue.h.
References __gnu_parallel::__decode2().

4.205.1 Detailed Description

Explicit specialization for void.
Definition at line 658 of file future.
The documentation for this struct was generated from the following file:

- future

4.206 std::__future_base::_Result_alloc< _Res, _Alloc > Struct Template Reference

Inheritance diagram for std::__future_base::_Result_alloc< _Res, _Alloc >:

Public Types

- using **__allocator_type** = __alloc_rebind< _Alloc, _Result_alloc >
- typedef _Res **result_type**

Public Member Functions

- **_Result_alloc** (const _Alloc &__a)
- void **_M_set** (_Res &&__res)
- void **_M_set** (const _Res &__res)
- _Res & **_M_value** () noexcept

Public Attributes

- exception_ptr **_M_error**

4.206.1 Detailed Description

template<typename _Res, typename _Alloc>
struct std::__future_base::_Result_alloc< _Res, _Alloc >

A result object that uses an allocator.
Definition at line 268 of file future.
The documentation for this struct was generated from the following file:

- future

4.207 std::__future_base::_Result_base Struct Reference

Inheritance diagram for std::__future_base::_Result_base:

Public Member Functions

- **_Result_base** (const _Result_base &)=delete
- virtual void **_M_destroy** ()=0
- _Result_base & **operator=** (const _Result_base &)=delete

Public Attributes

- exception_ptr **_M_error**

4.207.1 Detailed Description

Base class for results.
Definition at line 201 of file future.
The documentation for this struct was generated from the following file:

- future

4.208 __gnu_debug::_Safe_container< _SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware > Class Template Reference

Inherits _SafeBase< _SafeContainer >.

Public Member Functions

- void **_M_swap** (_Safe_container &__x) noexcept
- _Safe_container & **operator=** (_Safe_container &&__x) noexcept
- _Safe_container & **operator=** (const _Safe_container &) noexcept

Protected Member Functions

- **_Safe_container** (_Safe_container &&)=default
- **_Safe_container** (_Safe_container &&__x, const _Alloc &__a)
- **_Safe_container** (const _Safe_container &)=default
- _Safe_container & **_M_safe** () noexcept

4.208.1 Detailed Description

template<typename _SafeContainer, typename _Alloc, template< typename > class _SafeBase, bool _IsCxx11AllocatorAware = true>
class __gnu_debug::_Safe_container< _SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >

Safe class dealing with some allocator dependent operations.
Definition at line 41 of file safe_container.h.
The documentation for this class was generated from the following file:

- safe_container.h

4.209 __gnu_debug::_Safe_forward_list< _SafeSequence > Class Template Reference

Inheritance diagram for __gnu_debug::_Safe_forward_list< _SafeSequence >:

Public Member Functions

- void _M_invalidate_if (_Predicate __pred)
- void _M_transfer_from_if (_Safe_sequence &__from, _Predicate __pred)

Public Attributes

- _Safe_iterator_base * _M_const_iterators
- _Safe_iterator_base * _M_iterators
- unsigned int _M_version

Protected Member Functions

- void _M_detach_all ()
- void _M_detach_singular ()
- __gnu_cxx::__mutex & _M_get_mutex () throw ()
- void **_M_invalidate_all** ()
- void _M_invalidate_all () const
- void _M_revalidate_singular ()
- void **_M_swap** (_Safe_sequence_base &) noexcept

4.209.1 Detailed Description

template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list< _SafeSequence >

Special iterators swap and invalidation for forward_list because of the before_begin iterator.
Definition at line 56 of file debug/forward_list.

4.209.2 Member Function Documentation

4.209.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.209.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.209.2.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.209.2.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.209.2.5 _M_invalidate_if() `void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if ( _Predicate __pred ) [inherited]`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
Definition at line 117 of file safe_sequence.tcc.

4.209.2.6 _M_revalidate_singular() `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.209.2.7 _M_transfer_from_if() `void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_transfer_from_if ( _Safe_sequence< _SafeSequence > & __from, _Predicate __pred ) [inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
Definition at line 125 of file safe_sequence.tcc.

4.209.3 Member Data Documentation

4.209.3.1 _M_const_iterators

`_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]`

The list of constant iterators that reference this container.
Definition at line 197 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.209.3.2 _M_iterators

`_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]`

The list of mutable iterators that reference this container.
Definition at line 194 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.209.3.3 _M_version

`unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]`

The container version number. This number may never be 0.
Definition at line 200 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().
The documentation for this class was generated from the following file:

- debug/forward_list

4.210.1 Detailed Description

template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
class __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >

Safe iterator wrapper.
The class template _Safe_iterator is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_iterator has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.
Note that _Iterator must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before _Iterator get destroyed. Otherwise it would result in a data race.
Definition at line 112 of file safe_iterator.h.

4.210.2 Constructor & Destructor Documentation

4.210.2.1 _Safe_iterator() [1/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator ( ) [inline], [noexcept]
```

Postcondition

the iterator is singular and unattached

Definition at line 151 of file safe_iterator.h.

4.210.2.2 _Safe_iterator() [2/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            _Iterator __i,
            const _Safe_sequence_base * __seq ) [inline], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

Definition at line 160 of file safe_iterator.h.

4.210.2.3 _Safe_iterator() [3/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            const _Safe_iterator< _Iterator, _Sequence, _Category > & __x )  [inline], [noexcept]
```

Copy construction.
Definition at line 172 of file safe_iterator.h.

4.210.2.4 _Safe_iterator() [4/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            _Safe_iterator< _Iterator, _Sequence, _Category > && __x )  [inline], [noexcept]
```

Move construction.

Postcondition

__x is singular and unattached

Definition at line 190 of file safe_iterator.h.

4.210.2.5 _Safe_iterator() [5/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
template<typename _MutableIterator >
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
            const _Safe_iterator< _MutableIterator, _Sequence, typename __gnu_cxx::__enable_if<
_IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Category
>::__type > & __x )  [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.
Definition at line 210 of file safe_iterator.h.

4.210.3 Member Function Documentation

4.210.3.1 _M_attach() [1/2]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach (
            _Safe_sequence_base * __seq )  [inline]
```

Attach iterator to the given sequence.
Definition at line 374 of file safe_iterator.h.
References __gnu_debug::_Safe_iterator_base::_M_attach(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_S_constant().

4.210.3.2 _M_attach() [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
            _Safe_sequence_base * __seq,
            bool __constant ) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by __gnu_debug::_Safe_iterator_base::_Safe_iterator_base(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach().

4.210.3.3 _M_attach_single() [1/2]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single (
            _Safe_sequence_base * __seq ) [inline]
```

Likewise, but not thread-safe.

Definition at line 379 of file safe_iterator.h.

References __gnu_debug::_Safe_iterator_base::_M_attach_single(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_S_constant().

4.210.3.4 _M_attach_single() [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
            _Safe_sequence_base * __seq,
            bool __constant ) throw ( ) [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single().

4.210.3.5 _M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq ) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

Definition at line 131 of file safe_base.h.

References __gnu_debug::_Safe_iterator_base::_M_sequence.

4.210.3.6 _M_before_dereferenceable()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable (
) const [inline]
```

Is the iterator before a dereferenceable one?

Definition at line 389 of file safe_iterator.h.

References __gnu_debug::__base(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::base().

4.210.3.7 _M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x ) const throw ( ) [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.

4.210.3.8 _M_dereferenceable()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable ( ) const
[inline]
```

Is the iterator dereferenceable?

Definition at line 384 of file safe_iterator.h.
References __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_before_begin(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end(), and __gnu_debug::_Safe_iterator_base::_M_singular().

4.210.3.9 _M_detach()

`void __gnu_debug::_Safe_iterator_base::_M_detach ( ) [protected], [inherited]`

Detach the iterator for whatever sequence it is attached to, if any.

4.210.3.10 _M_detach_single()

`void __gnu_debug::_Safe_iterator_base::_M_detach_single ( ) throw ( ) [inherited]`

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.210.3.11 _M_get_mutex()

`__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_iterator.

4.210.3.12 _M_incrementable()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable ( ) const [inline]
```

Is the iterator incrementable?
Definition at line 401 of file safe_iterator.h.
References __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end(), and __gnu_debug::_Safe_iterator_base::_M_singular().
Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable().

4.210.3.13 _M_invalidate()

`void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline], [inherited]`

Invalidate the iterator, making it singular.
Definition at line 146 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_version.

4.210.3.14 _M_is_before_begin()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_before_begin ( ) const [inline]
```

Is this iterator equal to the sequence's before_begin() iterator if any?
Definition at line 451 of file safe_iterator.h.
Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable().

4.210.3.15 _M_is_begin()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_begin ( ) const [inline]
```

Is this iterator equal to the sequence's begin() iterator?
Definition at line 440 of file safe_iterator.h.
References __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::base().

4.210.3.16 _M_is_beginnest()

```
template<typename _Iterator , typename _Sequence , typename _Category
= typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_beginnest ( ) const
[inline]
```

Is this iterator equal to the sequence's before_begin() iterator if any or begin() otherwise?
Definition at line 457 of file safe_iterator.h.

4.210.3.17 _M_is_end()

```
template<typename _Iterator , typename _Sequence , typename _Category =
typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end ( ) const  [inline]
```

Is this iterator equal to the sequence's end() iterator?
Definition at line 445 of file safe_iterator.h.
References __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::base().
Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable().

4.210.3.18 _M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( )  [inherited]
```

Reset all member variables

4.210.3.19 _M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( )
[inherited]
```

Is this iterator singular?
Referenced by __gnu_debug::__check_singular_aux(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable(), __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable().

4.210.3.20 _M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw ( )  [inline],
[inherited]
```

Unlink itself
Definition at line 155 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_next, and __gnu_debug::_Safe_iterator_base::_M_prior.

4.210.3.21 _S_constant()

```
template<typename _Iterator , typename _Sequence , typename _Category =
typename std::iterator_traits<_Iterator>::iterator_category>
static constexpr bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_S_constant
( )  [inline], [static], [constexpr]
```

Determine if this is a constant iterator.
Definition at line 354 of file safe_iterator.h.

4.211.1 Detailed Description

Basic functionality for a *safe* iterator.
The _Safe_iterator_base base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.
This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.
Definition at line 50 of file safe_base.h.

4.211.2 Constructor & Destructor Documentation

4.211.2.1 _Safe_iterator_base() [1/3] __gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( ) [inline], [protected]

Initializes the iterator and makes it singular.
Definition at line 78 of file safe_base.h.

4.211.2.2 _Safe_iterator_base() [2/3] __gnu_debug::_Safe_iterator_base::_Safe_iterator_base (

```
const _Safe_sequence_base * __seq,
bool __constant )  [inline], [protected]
```

Initialize the iterator to reference the sequence pointed to by __seq. __constant is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that __seq may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference __seq and be nonsingular.
Definition at line 89 of file safe_base.h.
References _M_attach().

4.211.2.3 _Safe_iterator_base() [3/3] __gnu_debug::_Safe_iterator_base::_Safe_iterator_base (

```
const _Safe_iterator_base & __x,
bool __constant )  [inline], [protected]
```

Initializes the iterator to reference the same sequence that __x does. __constant is true if this is a constant iterator, and false if it is mutable.
Definition at line 96 of file safe_base.h.
References _M_attach(), and _M_sequence.

4.211.3 Member Function Documentation

4.211.3.1 _M_attach() void __gnu_debug::_Safe_iterator_base::_M_attach (

```
_Safe_sequence_base * __seq,
bool __constant )  [protected]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.
Referenced by _Safe_iterator_base(), and __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_↩ attach().

4.211.3.2 _M_attach_single() void __gnu_debug::_Safe_iterator_base::_M_attach_single (

```
_Safe_sequence_base * __seq,
bool __constant ) throw ( )  [protected]
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single().

4.211.3.3 _M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq ) const  [inline]
```

Determines if we are attached to the given sequence.
Definition at line 131 of file safe_base.h.
References _M_sequence.

4.211.3.4 _M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x ) const throw ( )
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.

4.211.3.5 _M_detach()

```
void __gnu_debug::_Safe_iterator_base::_M_detach ( )  [protected]
```

Detach the iterator for whatever sequence it is attached to, if any.

4.211.3.6 _M_detach_single()

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single ( ) throw (
)
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.211.3.7 _M_get_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( )
throw ( )  [protected]
```

For use in _Safe_iterator.

4.211.3.8 _M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ( )  [inline]
```

Invalidate the iterator, making it singular.
Definition at line 146 of file safe_base.h.
References _M_version.

4.211.3.9 _M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( )
```

Reset all member variables

4.211.3.10 _M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( )
```

Is this iterator singular?
Referenced by __gnu_debug::__check_singular_aux(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable(), __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable().

4.211.3.11 _M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw ( )  [inline]
```

Unlink itself
Definition at line 155 of file safe_base.h.
References _M_next, and _M_prior.

4.211.4 Member Data Documentation

4.211.4.1 _M_next _Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next

Pointer to the next iterator in the sequence's list of iterators. Only valid when _M_sequence != NULL.
Definition at line 74 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if(), __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if(), and _M_unlink().

4.212.1 Detailed Description

template<typename _Iterator, typename _Sequence>
class __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >

Safe iterator wrapper.
The class template _Safe_local_iterator is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In additional to the basic iterator operations (which are validated, and then passed to the underlying iterator), _Safe_local_iterator has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.
Definition at line 62 of file safe_local_iterator.h.

4.212.2 Constructor & Destructor Documentation

4.212.2.1 _Safe_local_iterator() [1/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator ( )  [inline],
[noexcept]
```

Postcondition

the iterator is singular and unattached

Definition at line 102 of file safe_local_iterator.h.

4.212.2.2 _Safe_local_iterator() [2/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
            _Iterator __i,
            const _Safe_sequence_base * __cont )  [inline]
```

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

Definition at line 111 of file safe_local_iterator.h.

4.212.2.3 _Safe_local_iterator() [3/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
            const _Safe_local_iterator< _Iterator, _Sequence > & __x )  [inline], [noexcept]
```

Copy construction.
Definition at line 122 of file safe_local_iterator.h.

4.212.2.4 _Safe_local_iterator() [4/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
            _Safe_local_iterator< _Iterator, _Sequence > && __x )  [inline], [noexcept]
```

Move construction.

Postcondition

__x is singular and unattached

Definition at line 139 of file safe_local_iterator.h.

4.212.2.5 _Safe_local_iterator() [5/5]

```
template<typename _Iterator , typename _Sequence >
template<typename _MutableIterator >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
            const _Safe_local_iterator< _MutableIterator, typename __gnu_cxx::__enable_if< _Is↩
Constant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Sequence >::↩
__type > & __x )  [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.
Definition at line 158 of file safe_local_iterator.h.

4.212.3 Member Function Documentation

4.212.3.1 _M_attach() [1/2]

```
template<typename _Iterator , typename _Sequence >
void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach (
            _Safe_sequence_base * __seq )  [inline]
```

Attach iterator to the given sequence.
Definition at line 326 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator_base::_M_attach(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_S_constant().

4.212.3.2 _M_attach() [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
            _Safe_sequence_base * __seq,
            bool __constant )  [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.
Referenced by __gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base(), and __gnu_debug::_Safe_↩local_iterator< _Iterator, _Sequence >::_M_attach().

4.212.3.3 _M_attach_single() [1/2]

```
template<typename _Iterator , typename _Sequence >
void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single (
            _Safe_sequence_base * __seq )  [inline]
```

Likewise, but not thread-safe.
Definition at line 331 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator_base::_M_attach_single(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_S_constant().

4.212.3.4 _M_attach_single() [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
            _Safe_sequence_base * __seq,
            bool __constant ) throw ( )  [protected], [inherited]
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single().

4.212.3.5 _M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
            const _Safe_sequence_base * __seq ) const  [inline], [inherited]
```

Determines if we are attached to the given sequence.
Definition at line 131 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_sequence.

4.212.3.6 _M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
            const _Safe_iterator_base & __x ) const throw ( )  [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.

4.212.3.7 _M_dereferenceable()

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable ( ) const
[inline]
```

Is the iterator dereferenceable?
Definition at line 336 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_end(), and __gnu_debug::_Safe_↩ iterator_base::_M_singular().

4.212.3.8 _M_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ( )  [protected],
[inherited]
```

Detach the iterator for whatever container it is attached to, if any.

4.212.3.9 _M_detach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( )
throw ( )  [protected], [inherited]
```

Likewise, but not thread-safe.

4.212.3.10 _M_get_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( )
throw ( )  [protected], [inherited]
```

For use in _Safe_iterator.

4.212.3.11 _M_in_same_bucket()

```
template<typename _Iterator , typename _Sequence >
template<typename _Other >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_in_same_bucket (
            const _Safe_local_iterator< _Other, _Sequence > & __other ) const  [inline]
```

Is this iterator part of the same bucket as the other one?
Definition at line 371 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket().

4.212.3.12 _M_incrementable()

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable ( ) const  [inline]
```

Is the iterator incrementable?
Definition at line 341 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_end(), and __gnu_debug::_Safe_↩ iterator_base::_M_singular().

4.212.3.13 _M_invalidate() `void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline], [inherited]`

Invalidate the iterator, making it singular.
Definition at line 146 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_version.

4.212.3.14 _M_is_begin() `template<typename _Iterator , typename _Sequence > bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_begin ( ) const [inline]`

Is this iterator equal to the sequence's begin(bucket) iterator?
Definition at line 361 of file safe_local_iterator.h.
References __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::bucket().

4.212.3.15 _M_is_end() `template<typename _Iterator , typename _Sequence > bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_end ( ) const [inline]`

Is this iterator equal to the sequence's end(bucket) iterator?

4.213.1 Detailed Description

Basic functionality for a *safe* iterator.
The _Safe_local_iterator_base base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.
This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.
Definition at line 50 of file safe_unordered_base.h.

4.213.2 Constructor & Destructor Documentation

4.213.2.1 _Safe_local_iterator_base() [1/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( ) [inline], [protected]
```

Initializes the iterator and makes it singular.
Definition at line 54 of file safe_unordered_base.h.

4.213.2.2 _Safe_local_iterator_base() [2/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
            const _Safe_sequence_base * __seq,
            bool __constant ) [inline], [protected]
```

Initialize the iterator to reference the container pointed to by __seq. __constant is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that __seq may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference __seq and be nonsingular.
Definition at line 64 of file safe_unordered_base.h.
References _M_attach().

4.213.2.3 _Safe_local_iterator_base() [3/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
            const _Safe_local_iterator_base & __x,
            bool __constant ) [inline], [protected]
```

Initializes the iterator to reference the same container that __x does. __constant is true if this is a constant iterator, and false if it is mutable.
Definition at line 70 of file safe_unordered_base.h.
References _M_attach(), and __gnu_debug::_Safe_iterator_base::_M_sequence.

4.213.3 Member Function Documentation

4.213.3.1 _M_attach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
            _Safe_sequence_base * __seq,
            bool __constant ) [protected]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.
Referenced by _Safe_local_iterator_base(), and __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach().

4.213.3.2 _M_attach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
    _Safe_sequence_base * __seq,
    bool __constant ) throw ( )   [protected]
```

Likewise, but not thread-safe.
Referenced by __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single().

4.213.3.3 _M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq ) const  [inline], [inherited]
```

Determines if we are attached to the given sequence.
Definition at line 131 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_sequence.

4.213.3.4 _M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x ) const throw ( )   [inherited]
```

Can we compare this iterator to the given iterator __x? Returns true if both iterators are nonsingular and reference the same sequence.

4.213.3.5 _M_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ( )  [protected]
```

Detach the iterator for whatever container it is attached to, if any.

4.213.3.6 _M_detach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( )
throw ( )   [protected]
```

Likewise, but not thread-safe.

4.213.3.7 _M_get_mutex()

```
__gnu_cxx::__mutex& __gnu_debug::_Safe_iterator_base::_M_get_mutex ( )
throw ( )   [protected], [inherited]
```

For use in _Safe_iterator.

4.213.3.8 _M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ( )  [inline], [inherited]
```

Invalidate the iterator, making it singular.
Definition at line 146 of file safe_base.h.
References __gnu_debug::_Safe_iterator_base::_M_version.

4.213.3.9 _M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( )   [inherited]
```

Reset all member variables

4.213.3.10 _M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( )
[inherited]
```

Is this iterator singular?
Referenced by __gnu_debug::__check_singular_aux(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _↩ Category >::_M_dereferenceable(), __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable(), __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable(), and __gnu_debug::_Safe_↩ local_iterator< _Iterator, _Sequence >::_M_incrementable().

4.214.1 Detailed Description

template<typename _Sequence>
class __gnu_debug::_Safe_node_sequence< _Sequence >

Like _Safe_sequence but with a special _M_invalidate_all implementation not invalidating past-the-end iterators. Used by node based sequence.
Definition at line 131 of file safe_sequence.h.

4.214.2 Member Function Documentation

4.214.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.214.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.214.2.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.214.2.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.214.2.5 _M_invalidate_if() template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
_Predicate __pred) [inherited]

Invalidates all iterators x that reference this sequence, are not singular, and for which __pred(x) returns true. __pred will be invoked with the normal iterators nested in the safe ones.
Definition at line 37 of file safe_sequence.tcc.

4.214.2.6 _M_revalidate_singular() void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.214.2.7 _M_swap() void __gnu_debug::_Safe_sequence_base::_M_swap (
_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.214.2.8 _M_transfer_from_if() template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (

4.215.1 Detailed Description

template<typename _Sequence>
class __gnu_debug::_Safe_sequence< _Sequence >

Base class for constructing a *safe* sequence type that tracks iterators that reference it.
The class template _Safe_sequence simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template _Safe_iterator for this sequence. Iterators will then be tracked automatically.
Definition at line 108 of file safe_sequence.h.

4.215.2 Member Function Documentation

4.215.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.215.2.2 _M_detach_singular()

`void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.215.2.3 _M_get_mutex()

`__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.215.2.4 _M_invalidate_all()

`void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.

Definition at line 256 of file safe_base.h.

References __gnu_debug::_Safe_sequence_base::_M_version.

4.215.2.5 _M_invalidate_if()

```
template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
            _Predicate __pred )
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 37 of file safe_sequence.tcc.

4.215.2.6 _M_revalidate_singular()

`void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.215.2.7 _M_swap()

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
            _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.215.2.8 _M_transfer_from_if()

```
template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
            _Safe_sequence< _Sequence > & __from,
            _Predicate __pred )
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 68 of file safe_sequence.tcc.

4.216.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.
The _Safe_sequence_base class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from _Safe_sequence_base publicly, so that safe iterators (which inherit _Safe_iterator_base) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.
This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.
Definition at line 188 of file safe_base.h.

4.216.2 Constructor & Destructor Documentation

4.216.2.1 ~_Safe_sequence_base() `__gnu_debug::_Safe_sequence_base::~_Safe_sequence_base ( ) [inline], [protected]`

Notify all iterators that reference this sequence that the sequence is being destroyed.
Definition at line 220 of file safe_base.h.
References _M_detach_all().

4.216.3 Member Function Documentation

4.216.3.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected]`

Detach all iterators, leaving them singular.
Referenced by ~_Safe_sequence_base().

4.216.3.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.216.3.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.216.3.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References _M_version.

4.216.3.5 _M_revalidate_singular() `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.216.3.6 _M_swap() void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.217.1 Detailed Description

template<typename _Container>
class __gnu_debug::_Safe_unordered_container< _Container >

Base class for constructing a *safe* unordered container type that tracks iterators that reference it.
The class template _Safe_unordered_container simplifies the construction of *safe* unordered containers that track the iterators that reference the container, so that the iterators are notified of changes in the container that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template _↩ Safe_iterator for this container and `local_iterator` and `const_local_iterator` types that are instantiations of class template _Safe_local_iterator for this container. Iterators will then be tracked automatically.
Definition at line 58 of file safe_unordered_container.h.

4.217.2 Member Function Documentation

4.217.2.1 _M_detach_all() `void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.

4.217.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.217.2.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.217.2.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.217.2.5 _M_invalidate_if() template<typename _Container > template<typename _Predicate > void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_if (_Predicate __pred) [protected]

Invalidates all iterators x that reference this container, are not singular, and for which __pred(x) returns true. __pred will be invoked with the normal iterators nested in the safe ones.
Definition at line 37 of file safe_unordered_container.tcc.

4.217.2.6 _M_invalidate_local_if() template<typename _Container > template<typename _Predicate > void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_local_if (_Predicate __pred) [protected]

Invalidates all local iterators x that reference this container, are not singular, and for which __pred(x) returns true. __pred will be invoked with the normal local iterators nested in the safe ones.
Definition at line 69 of file safe_unordered_container.tcc.

4.217.2.7 _M_revalidate_singular() void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.217.2.8 _M_swap() [1/2] void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.217.2.9 _M_swap() [2/2] void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept], [inherited]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.
