Friends

- class **_Safe_local_iterator_base**

4.218.1 Detailed Description

Base class that supports tracking of local iterators that reference an unordered container.
The _Safe_unordered_container_base class provides basic support for tracking iterators into an unordered container. Containers that track iterators must derived from _Safe_unordered_container_base publicly, so that safe iterators (which inherit _Safe_iterator_base) can attach to them. This class contains four linked lists of iterators, one for constant iterators, one for mutable iterators, one for constant local iterators, one for mutable local iterators and a version number that allows very fast invalidation of all iterators that reference the container.
This class must ensure that no operation on it may throw an exception, otherwise *safe* containers may fail to provide the exception-safety guarantees required by the C++ standard.
Definition at line 120 of file safe_unordered_base.h.

4.218.2 Constructor & Destructor Documentation

4.218.2.1 ~_Safe_unordered_container_base() `__gnu_debug::_Safe_unordered_container_base::~_Safe↩_unordered_container_base ( ) [inline], [protected], [noexcept]`

Notify all iterators that reference this container that the container is being destroyed.
Definition at line 151 of file safe_unordered_base.h.

4.218.3 Member Function Documentation

4.218.3.1 _M_detach_all() `void __gnu_debug::_Safe_unordered_container_base::_M_detach_all ( ) [protected]`

Detach all iterators, leaving them singular.

4.218.3.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.218.3.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.218.3.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.218.3.5 _M_revalidate_singular() `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.218.3.6 _M_swap() [1/2] void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.218.3.7 _M_swap() [2/2] void __gnu_debug::_Safe_unordered_container_base::_M_swap (_Safe_unordered_container_base & __x) [protected], [noexcept]

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.218.4 Member Data Documentation

4.218.4.1 _M_const_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.
Definition at line 197 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.218.4.2 _M_const_local_iterators _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_const_local_iterators

The list of constant local iterators that reference this container.
Definition at line 130 of file safe_unordered_base.h.

4.218.4.3 _M_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.
Definition at line 194 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.218.4.4 _M_local_iterators _Safe_iterator_base* __gnu_debug::_Safe_unordered_container_base::_M_local_iterators

The list of mutable local iterators that reference this container.
Definition at line 127 of file safe_unordered_base.h.

4.218.4.5 _M_version unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.
Definition at line 200 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.219.1 Detailed Description

template<typename _SafeSequence, typename _BaseSequence>
class __gnu_debug::_Safe_vector< _SafeSequence, _BaseSequence >

Base class for Debug Mode vector.
Adds information about the guaranteed capacity, which is useful for detecting code which relies on non-portable implementation details of the libstdc++ reallocation policy.
Definition at line 55 of file debug/vector.
The documentation for this class was generated from the following file:

- debug/vector

4.220 __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering > Struct Template Reference

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

4.220.1 Detailed Description

template<bool __stable, class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel::_SamplingSorter< __stable, _RAIter, _StrictWeakOrdering >

Stable sorting functor.
Used to reduce code instanciation in multiway_merge_sampling_splitting.
Definition at line 1007 of file multiway_merge.h.
The documentation for this struct was generated from the following file:

- multiway_merge.h

4.221 __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering > Struct Template Reference

Public Member Functions

- void **operator()** (_RAIter __first, _RAIter __last, _StrictWeakOrdering __comp)

4.221.1 Detailed Description

template<class _RAIter, class _StrictWeakOrdering>
struct __gnu_parallel::_SamplingSorter< false, _RAIter, _StrictWeakOrdering >

Non-__stable sorting functor.
Used to reduce code instantiation in multiway_merge_sampling_splitting.

Definition at line 1020 of file multiway_merge.h.
The documentation for this struct was generated from the following file:

- multiway_merge.h

4.222.1 Detailed Description

template<typename _CharT>
class std::__detail::_Scanner< _CharT >

Scans an input range for regex tokens.
The _Scanner class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.
Definition at line 210 of file regex_scanner.h.

4.222.2 Member Enumeration Documentation

4.222.2.1 _TokenT `enum std::__detail::_ScannerBase::_TokenT : unsigned [inherited]`

Token types returned from the scanner.
Definition at line 46 of file regex_scanner.h.
The documentation for this class was generated from the following files:

- regex_scanner.h
- regex_scanner.tcc

4.224.1 Detailed Description

class _Settings Run-time settings for the parallel mode including all tunable parameters.
Definition at line 122 of file settings.h.

4.224.2 Member Function Documentation

4.224.2.1 get() `static const _Settings& __gnu_parallel::_Settings::get ( ) throw ( )  [static]`

Get the global settings.
Referenced by __gnu_parallel::__find_template(), __gnu_parallel::__for_each_template_random_access_workstealing(), __gnu_parallel::__parallel_nth_element(), __gnu_parallel::__parallel_partial_sum(), __gnu_parallel::__parallel_partial_sum_linear(), __gnu_parallel::__parallel_partition(), __gnu_parallel::__parallel_random_shuffle_drs(), __gnu_parallel::__parallel_sort(), __gnu_parallel::__qsb_local_sort_with_helping(), __gnu_parallel::__sequential_random_shuffle(), __gnu_parallel::multiway_merge_sampling_splitting(), __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.224.2.2 set() `static void __gnu_parallel::_Settings::set ( _Settings & ) throw ( )  [static]`

Set the global settings.

4.224.3 Member Data Documentation

4.224.3.1 accumulate_minimal_n `_SequenceIndex __gnu_parallel::_Settings::accumulate_minimal_n`

Minimal input size for accumulate.
Definition at line 138 of file settings.h.

4.224.3.2 adjacent_difference_minimal_n `unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n`

Minimal input size for adjacent_difference.
Definition at line 141 of file settings.h.

4.224.3.3 cache_line_size `unsigned int __gnu_parallel::_Settings::cache_line_size`

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.
Definition at line 264 of file settings.h.
Referenced by __gnu_parallel::__for_each_template_random_access_workstealing().

4.224.3.4 count_minimal_n

_SequenceIndex __gnu_parallel::_Settings::count_minimal_n

Minimal input size for count and count_if.
Definition at line 144 of file settings.h.

4.224.3.5 fill_minimal_n

_SequenceIndex __gnu_parallel::_Settings::fill_minimal_n

Minimal input size for fill.
Definition at line 147 of file settings.h.

4.224.3.6 find_increasing_factor

double __gnu_parallel::_Settings::find_increasing_factor

Block size increase factor for find.
Definition at line 150 of file settings.h.

4.224.3.7 find_initial_block_size

_SequenceIndex __gnu_parallel::_Settings::find_initial_block_size

Initial block size for find.
Definition at line 153 of file settings.h.
Referenced by __gnu_parallel::__find_template().

4.224.3.8 find_maximum_block_size

_SequenceIndex __gnu_parallel::_Settings::find_maximum_block_size

Maximal block size for find.
Definition at line 156 of file settings.h.

4.224.3.9 find_scale_factor

float __gnu_parallel::_Settings::find_scale_factor

Block size scale-down factor with respect to current position.
Definition at line 275 of file settings.h.
Referenced by __gnu_parallel::__find_template().

4.224.3.10 find_sequential_search_size

_SequenceIndex __gnu_parallel::_Settings::find_sequential_search_size

Start with looking for this many elements sequentially, for find.
Definition at line 159 of file settings.h.
Referenced by __gnu_parallel::__find_template().

4.224.3.11 for_each_minimal_n

_SequenceIndex __gnu_parallel::_Settings::for_each_minimal_n

Minimal input size for for_each.
Definition at line 162 of file settings.h.

4.224.3.12 generate_minimal_n

_SequenceIndex __gnu_parallel::_Settings::generate_minimal_n

Minimal input size for generate.
Definition at line 165 of file settings.h.

4.224.3.13 L1_cache_size

`unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).
Definition at line 253 of file settings.h.

4.224.3.14 L2_cache_size

`unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).
Definition at line 256 of file settings.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__sequential_random_shuffle().

4.224.3.15 max_element_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for max_element.
Definition at line 168 of file settings.h.

4.224.3.16 merge_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for merge.
Definition at line 171 of file settings.h.

4.224.3.17 merge_oversampling

`unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for merge.
Definition at line 174 of file settings.h.
Referenced by __gnu_parallel::multiway_merge_sampling_splitting().

4.224.3.18 min_element_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for min_element.
Definition at line 177 of file settings.h.

4.224.3.19 multiway_merge_minimal_k

`int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for multiway_merge.
Definition at line 183 of file settings.h.

4.224.3.20 multiway_merge_minimal_n

`_SequenceIndex __gnu_parallel::_Settings::multiway_merge_minimal_n`

Minimal input size for multiway_merge.
Definition at line 180 of file settings.h.

4.224.3.21 multiway_merge_oversampling

`unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling`

Oversampling factor for multiway_merge.
Definition at line 186 of file settings.h.

4.224.3.22 nth_element_minimal_n

_SequenceIndex __gnu_parallel::_Settings::nth_element_minimal_n

Minimal input size for nth_element.
Definition at line 189 of file settings.h.
Referenced by __gnu_parallel::__parallel_nth_element().

4.224.3.23 partial_sort_minimal_n

_SequenceIndex __gnu_parallel::_Settings::partial_sort_minimal_n

Minimal input size for partial_sort.
Definition at line 202 of file settings.h.

4.224.3.24 partial_sum_dilation

float __gnu_parallel::_Settings::partial_sum_dilation

Ratio for partial_sum. Assume "sum and write result" to be this factor slower than just "sum".
Definition at line 206 of file settings.h.
Referenced by __gnu_parallel::__parallel_partial_sum_linear().

4.224.3.25 partial_sum_minimal_n

unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n

Minimal input size for partial_sum.
Definition at line 209 of file settings.h.

4.224.3.26 partition_chunk_share

double __gnu_parallel::_Settings::partition_chunk_share

Chunk size for partition, relative to input size. If $>$ 0.0, this value overrides partition_chunk_size.
Definition at line 196 of file settings.h.
Referenced by __gnu_parallel::__parallel_partition().

4.224.3.27 partition_chunk_size

_SequenceIndex __gnu_parallel::_Settings::partition_chunk_size

Chunk size for partition.
Definition at line 192 of file settings.h.
Referenced by __gnu_parallel::__parallel_partition().

4.224.3.28 partition_minimal_n

_SequenceIndex __gnu_parallel::_Settings::partition_minimal_n

Minimal input size for partition.
Definition at line 199 of file settings.h.
Referenced by __gnu_parallel::__parallel_nth_element().

4.224.3.29 qsb_steals

_SequenceIndex __gnu_parallel::_Settings::qsb_steals

The number of stolen ranges in load-balanced quicksort.
Definition at line 269 of file settings.h.

4.224.3.30 random_shuffle_minimal_n

unsigned int __gnu_parallel::_Settings::random_shuffle_↩
minimal_n

Minimal input size for random_shuffle.
Definition at line 212 of file settings.h.

4.224.3.31 replace_minimal_n _SequenceIndex __gnu_parallel::_Settings::replace_minimal_n

Minimal input size for replace and replace_if.
Definition at line 215 of file settings.h.

4.224.3.32 search_minimal_n _SequenceIndex __gnu_parallel::_Settings::search_minimal_n

Minimal input size for search and search_n.
Definition at line 272 of file settings.h.

4.224.3.33 set_difference_minimal_n _SequenceIndex __gnu_parallel::_Settings::set_difference_minimal_n

Minimal input size for set_difference.
Definition at line 218 of file settings.h.

4.224.3.34 set_intersection_minimal_n _SequenceIndex __gnu_parallel::_Settings::set_intersection_minimal_n

Minimal input size for set_intersection.
Definition at line 221 of file settings.h.

4.224.3.35 set_symmetric_difference_minimal_n _SequenceIndex __gnu_parallel::_Settings::set_symmetric_difference_minimal_n

Minimal input size for set_symmetric_difference.
Definition at line 224 of file settings.h.

4.224.3.36 set_union_minimal_n _SequenceIndex __gnu_parallel::_Settings::set_union_minimal_n

Minimal input size for set_union.
Definition at line 227 of file settings.h.

4.224.3.37 sort_minimal_n _SequenceIndex __gnu_parallel::_Settings::sort_minimal_n

Minimal input size for parallel sorting.
Definition at line 230 of file settings.h.

4.224.3.38 sort_mwms_oversampling unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling

Oversampling factor for parallel std::sort (MWMS).
Definition at line 233 of file settings.h.
Referenced by __gnu_parallel::parallel_sort_mwms(), and __gnu_parallel::parallel_sort_mwms_pu().

4.224.3.39 sort_qs_num_samples_preset unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset

Such many samples to take to find a good pivot (quicksort).
Definition at line 236 of file settings.h.

4.224.3.40 sort_qsb_base_case_maximal_n _SequenceIndex __gnu_parallel::_Settings::sort_qsb_↩ base_case_maximal_n

Maximal subsequence __length to switch to unbalanced __base case. Applies to std::sort with dynamically load-balanced quicksort.
Definition at line 240 of file settings.h.
Referenced by __gnu_parallel::__qsb_local_sort_with_helping().

4.224.3.41 TLB_size unsigned int __gnu_parallel::_Settings::TLB_size

size of the Translation Lookaside Buffer (underestimation).
Definition at line 259 of file settings.h.
Referenced by __gnu_parallel::__parallel_random_shuffle_drs(), and __gnu_parallel::__sequential_random_shuffle().

4.224.3.42 transform_minimal_n _SequenceIndex __gnu_parallel::_Settings::transform_minimal_n

Minimal input size for parallel std::transform.
Definition at line 243 of file settings.h.

4.224.3.43 unique_copy_minimal_n _SequenceIndex __gnu_parallel::_Settings::unique_copy_minimal_n

Minimal input size for unique_copy.
Definition at line 246 of file settings.h.

template<bool __exact, typename _RAIter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::_SplitConsistently< __exact, _RAIter, _Compare, _SortingPlacesIterator >

Split consistently.
Definition at line 122 of file multiway_mergesort.h.
The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.228 __gnu_parallel::_SplitConsistently< false, _RAIter, _Compare, _SortingPlacesIterator > Struct Template Reference

Public Member Functions

- void **operator()** (const _ThreadIndex __iam, _PMWMSSortingData< _RAIter > *__sd, _Compare &__comp, const typename std::iterator_traits< _RAIter >::difference_type __num_samples) const

4.228.1 Detailed Description

template<typename _RAIter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::_SplitConsistently< false, _RAIter, _Compare, _SortingPlacesIterator >

Split by sampling.
Definition at line 187 of file multiway_mergesort.h.
The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.229 __gnu_parallel::_SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator > Struct Template Reference

Public Member Functions

- void **operator()** (const _ThreadIndex __iam, _PMWMSSortingData< _RAIter > *__sd, _Compare &__comp, const typename std::iterator_traits< _RAIter >::difference_type __num_samples) const

4.229.1 Detailed Description

template<typename _RAIter, typename _Compare, typename _SortingPlacesIterator>
struct __gnu_parallel::_SplitConsistently< true, _RAIter, _Compare, _SortingPlacesIterator >

Split by exact splitting.
Definition at line 128 of file multiway_mergesort.h.
The documentation for this struct was generated from the following file:

- multiway_mergesort.h

4.230 std::__detail::_StateSeq< _TraitsT > Class Template Reference

Public Types

- typedef _NFA< _TraitsT > **_RegexT**

Public Member Functions

- **_StateSeq** (_RegexT &__nfa, _StateIdT __s)
- **_StateSeq** (_RegexT &__nfa, _StateIdT __s, _StateIdT __end)
- void **_M_append** (_StateIdT __id)
- void **_M_append** (const _StateSeq &__s)
- _StateSeq **_M_clone** ()

Public Attributes

- _StateIdT **_M_end**
- _RegexT & **_M_nfa**
- _StateIdT **_M_start**

4.230.1 Detailed Description

template<typename _TraitsT>
class std::__detail::_StateSeq< _TraitsT >

Describes a sequence of one or more _State, its current start and end(s). This structure contains fragments of an NFA during construction.
Definition at line 355 of file regex_automaton.h.
The documentation for this class was generated from the following files:

- regex_automaton.h
- regex_automaton.tcc

4.231 __gnu_cxx::_Std_pointer_impl< _Tp > Class Template Reference

Public Types

- typedef _Tp **element_type**

Public Member Functions

- _Tp * **get** () const
- bool **operator<** (const _Std_pointer_impl &__rarg) const
- bool **operator==** (const _Std_pointer_impl &__rarg) const
- void **set** (element_type *__arg)

4.231.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::_Std_pointer_impl< _Tp >

A storage policy for use with _Pointer_adapter<> which yields a standard pointer.
A _Storage_policy is required to provide 4 things: 1) A get() API for returning the stored pointer value. 2) An set() API for storing a pointer value. 3) An element_type typedef to define the type this points to. 4) An operator<() to support pointer comparison. 5) An operator==() to support pointer comparison.
Definition at line 69 of file pointer.h.
The documentation for this class was generated from the following file:

- pointer.h

4.232 std::_Temporary_buffer< _ForwardIterator, _Tp > Class Template Reference

Inheritance diagram for std::_Temporary_buffer< _ForwardIterator, _Tp >:

Public Types

- typedef pointer **iterator**
- typedef value_type * **pointer**
- typedef ptrdiff_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- _Temporary_buffer (_ForwardIterator __seed, size_type __original_len)
- iterator begin ()
- iterator end ()
- size_type requested_size () const
- size_type size () const

Protected Attributes

- pointer **_M_buffer**
- size_type **_M_len**
- size_type **_M_original_len**

4.232.1 Detailed Description

template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer< _ForwardIterator, _Tp >

This class is used in two places: stl_algo.h and ext/memory, where it is wrapped as the temporary_buffer class. See temporary_buffer docs for more notes.
Definition at line 136 of file stl_tempbuf.h.

4.232.2 Constructor & Destructor Documentation

4.232.2.1 _Temporary_buffer() template<typename _ForwardIterator , typename _Tp >

```
std::_Temporary_buffer< _ForwardIterator, _Tp >::_Temporary_buffer (
            _ForwardIterator __seed,
            size_type __original_len )
```

Constructs a temporary buffer of a size somewhere between zero and the given length.
Definition at line 257 of file stl_tempbuf.h.
References std::pair< _T1, _T2 >::first.

4.232.3 Member Function Documentation

4.232.3.1 begin() template<typename _ForwardIterator , typename _Tp >

```
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::begin ( )  [inline]
```

As per Table mumble.
Definition at line 165 of file stl_tempbuf.h.

4.232.3.2 end() template<typename _ForwardIterator , typename _Tp >

```
iterator std::_Temporary_buffer< _ForwardIterator, _Tp >::end ( )  [inline]
```

As per Table mumble.
Definition at line 170 of file stl_tempbuf.h.

4.232.3.3 requested_size() template<typename _ForwardIterator , typename _Tp >

```
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::requested_size ( ) const  [inline]
```

Returns the size requested by the constructor; may be >size().
Definition at line 160 of file stl_tempbuf.h.

4.232.3.4 size() template<typename _ForwardIterator , typename _Tp >

```
size_type std::_Temporary_buffer< _ForwardIterator, _Tp >::size ( ) const  [inline]
```

As per Table mumble.
Definition at line 155 of file stl_tempbuf.h.
The documentation for this class was generated from the following file:

- stl_tempbuf.h

4.233 std::_Tuple_impl< _Idx, _Elements > Struct Template Reference

4.233.1 Detailed Description

template<std::size_t _Idx, typename... _Elements>
struct std::_Tuple_impl< _Idx, _Elements >

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time get() operation.
Definition at line 193 of file tuple.
The documentation for this struct was generated from the following file:

- tuple

4.234 std::_Tuple_impl< _Idx, _Head, _Tail... > Struct Template Reference

4.234.1 Detailed Description

template<std::size_t _Idx, typename _Head, typename... _Tail>
struct std::_Tuple_impl< _Idx, _Head, _Tail... >

Recursive tuple implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).
Definition at line 201 of file tuple.
The documentation for this struct was generated from the following file:

- tuple

4.235 __gnu_cxx::_Unqualified_type< _Tp > Struct Template Reference

Public Types

- typedef _Tp **type**

4.235.1 Detailed Description

template<typename _Tp>
struct __gnu_cxx::_Unqualified_type< _Tp >

This structure accommodates the way in which std::iterator_traits<> is normally specialized for const T*, so that value_type is still T.
Definition at line 244 of file pointer.h.
The documentation for this struct was generated from the following file:

- pointer.h

4.236 std::_Vector_base< _Tp, _Alloc > Struct Template Reference

Public Types

add_volatile
Definition at line 1549 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.242 std::adopt_lock_t Struct Reference

4.242.1 Detailed Description

Assume the calling thread has already obtained mutex ownership and manage it.
Definition at line 136 of file std_mutex.h.
The documentation for this struct was generated from the following file:

- std_mutex.h

4.243 std::aligned_storage< _Len, _Align > Struct Template Reference

Inherited by __gnu_cxx::__aligned_buffer< _Res >, and __gnu_cxx::__aligned_buffer< _Value >.

4.243.1 Detailed Description

template<std::size_t _Len, std::size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__type)>
struct std::aligned_storage< _Len, _Align >

Alignment type.
The value of _Align is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than _Len (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most _Len and whose alignment is a divisor of _Align.
Definition at line 2069 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.244 std::aligned_union< _Len, _Types > Struct Template Reference

Public Types

- typedef aligned_storage< _S_len, alignment_value >::type type

Static Public Attributes

- static const size_t alignment_value

4.244.1 Detailed Description

template<size_t _Len, typename... _Types>
struct std::aligned_union< _Len, _Types >

Provide aligned storage for types.
[meta.trans.other]
Provides aligned storage for any of the provided types of at least size _Len.

See also

aligned_storage

Definition at line 2107 of file type_traits.

4.244.2 Member Typedef Documentation

4.244.2.1 type `template<size_t _Len, typename... _Types>`

`typedef aligned_storage<_S_len, alignment_value>::type std::aligned_union< _Len, _Types >::type`

The storage.
Definition at line 2119 of file type_traits.

template<typename _Alloc>
struct std::allocator_traits< _Alloc >

Uniform interface to all allocator types.
Definition at line 86 of file bits/alloc_traits.h.

4.249.2 Member Typedef Documentation

4.249.2.1 allocator_type template<typename _Alloc >

```
typedef _Alloc std::allocator_traits< _Alloc >::allocator_type
```

The allocator type.
Definition at line 89 of file bits/alloc_traits.h.

4.249.2.2 const_pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::const_pointer = typename _Ptr<__c_pointer, const value_type>↩
::type
```

The allocator's const pointer type.
`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`
Definition at line 138 of file bits/alloc_traits.h.

4.249.2.3 const_void_pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const
void>::type
```

The allocator's const void pointer type.
`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`
Definition at line 154 of file bits/alloc_traits.h.

4.249.2.4 difference_type template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::difference_type = typename _Diff<_Alloc, pointer>::type
```

The allocator's difference type.
`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference↩_type`
Definition at line 162 of file bits/alloc_traits.h.

4.249.2.5 is_always_equal template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::is_always_equal = __detected_or_t<typename is_empty<_↩
Alloc>::type, __equal, _Alloc>
```

Whether all instances of the allocator type compare equal.
`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`
Definition at line 205 of file bits/alloc_traits.h.

4.249.2.6 pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::pointer = __detected_or_t<value_type*, __pointer, _Alloc>
```

The allocator's pointer type.
`Alloc::pointer` if that type exists, otherwise `value_type*`
Definition at line 98 of file bits/alloc_traits.h.

4.249.2.7 propagate_on_container_copy_assignment template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment = __detected_or_↩
t<false_type, __pocca, _Alloc>
```

How the allocator is propagated on copy assignment.
`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`
Definition at line 178 of file bits/alloc_traits.h.

4.249.2.8 propagate_on_container_move_assignment template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment = __detected_or_↩
t<false_type, __pocma, _Alloc>
```

How the allocator is propagated on move assignment.
`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`
Definition at line 187 of file bits/alloc_traits.h.

4.249.2.9 propagate_on_container_swap template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::propagate_on_container_swap = __detected_or_t<false_type,
__pocs, _Alloc>
```

How the allocator is propagated on swap.
`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`
Definition at line 196 of file bits/alloc_traits.h.

4.249.2.10 size_type template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::size_type = typename _Size<_Alloc, difference_type>::type
```

The allocator's size type.
`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`
Definition at line 170 of file bits/alloc_traits.h.

4.249.2.11 value_type template<typename _Alloc >

```
typedef _Alloc::value_type std::allocator_traits< _Alloc >::value_type
```

The allocated type.
Definition at line 91 of file bits/alloc_traits.h.

4.249.2.12 void_pointer template<typename _Alloc >

```
using std::allocator_traits< _Alloc >::void_pointer = typename _Ptr<__v_pointer, void>::type
```

The allocator's void pointer type.
`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`
Definition at line 146 of file bits/alloc_traits.h.

4.249.3 Member Function Documentation

4.249.3.1 allocate() [1/2] template<typename _Alloc >

```
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n )  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

_↩ _a	An allocator.
_↩ _n	The number of objects to allocate space for.

Calls a.allocate(n)
Definition at line 313 of file bits/alloc_traits.h.
Referenced by std::__allocate_guarded().

4.249.3.2 allocate() [2/2] template<typename _Alloc >

```
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
            _Alloc & __a,
            size_type __n,
            const_void_pointer __hint )  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type value_type

Returns a.allocate(n, hint) if that expression is well-formed, otherwise returns a.allocate(n)
Definition at line 328 of file bits/alloc_traits.h.

4.249.3.3 construct() template<typename _Alloc >

```
template<typename _Tp , typename... _Args>
static constexpr auto std::allocator_traits< _Alloc >::construct (
            _Alloc & __a,
            _Tp * __p,
            _Args &&... __args ) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__↩
args)...))   [inline], [static], [constexpr], [noexcept]
```

Construct an object of type _Tp

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for Tp
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...)` if that expression is well-formed, otherwise uses placement-new to construct an object of type *_Tp* at location *__p* from the arguments *__args*...
Definition at line 356 of file bits/alloc_traits.h.

4.249.3.4 deallocate()

```
template<typename _Alloc >
static constexpr void std::allocator_traits< _Alloc >::deallocate (
            _Alloc & __a,
            pointer __p,
            size_type __n )  [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

_a	An allocator.
_p	Pointer to the memory to deallocate.
_n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`
Definition at line 340 of file bits/alloc_traits.h.
Referenced by std::__allocated_ptr< _Alloc >::~__allocated_ptr().

4.249.3.5 destroy()

```
template<typename _Alloc >
template<typename _Tp >
static constexpr void std::allocator_traits< _Alloc >::destroy (
            _Alloc & __a,
            _Tp * __p )  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *_Tp*.

Parameters

_a	An allocator.
_p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`
Definition at line 372 of file bits/alloc_traits.h.
Referenced by std::_Destroy().

4.249.3.6 max_size()

```
template<typename _Alloc >
static constexpr size_type std::allocator_traits< _Alloc >::max_size (
            const _Alloc & __a )  [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

_↩ _a	An allocator.

Returns

__a.max_size() or numeric_limits<size_type>::max()

Returns __a.max_size() if that expression is well-formed, otherwise returns numeric_limits<size_↩ type>::max()
Definition at line 385 of file bits/alloc_traits.h.

4.249.3.7 select_on_container_copy_construction() template<typename _Alloc >

```
static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
            const _Alloc & __rhs )  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

__rhs.select_on_container_copy_construction() or *__rhs*

Returns __rhs.select_on_container_copy_construction() if that expression is well-formed, otherwise returns *__rhs*
Definition at line 397 of file bits/alloc_traits.h.
The documentation for this struct was generated from the following file:

- bits/alloc_traits.h

4.250.1 Detailed Description

template<typename _Tp>
struct std::allocator_traits< allocator< _Tp > >

Partial specialization for std::allocator.
Definition at line 407 of file bits/alloc_traits.h.

4.250.2 Member Typedef Documentation

4.250.2.1 allocator_type `template<typename _Tp >`

```
using std::allocator_traits< allocator< _Tp > >::allocator_type = allocator<_Tp>
```

The allocator type.
Definition at line 410 of file bits/alloc_traits.h.

4.250.2.2 const_pointer `template<typename _Tp >`

```
using std::allocator_traits< allocator< _Tp > >::const_pointer = const _Tp*
```

The allocator's const pointer type.
Definition at line 419 of file bits/alloc_traits.h.

4.250.2.3 const_void_pointer `template<typename _Tp >`

```
using std::allocator_traits< allocator< _Tp > >::const_void_pointer = const void*
```

The allocator's const void pointer type.
Definition at line 425 of file bits/alloc_traits.h.

4.250.2.4 difference_type `template<typename _Tp >`

```
using std::allocator_traits< allocator< _Tp > >::difference_type = std::ptrdiff_t
```

The allocator's difference type.
Definition at line 428 of file bits/alloc_traits.h.

4.250.2.5 is_always_equal `template<typename _Tp >`

```
using std::allocator_traits< allocator< _Tp > >::is_always_equal = true_type
```

Whether all instances of the allocator type compare equal.
Definition at line 443 of file bits/alloc_traits.h.

4.250.2.6 pointer template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::pointer = _Tp*
```

The allocator's pointer type.
Definition at line 416 of file bits/alloc_traits.h.

4.250.2.7 propagate_on_container_copy_assignment template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment = false_type
```

How the allocator is propagated on copy assignment.
Definition at line 434 of file bits/alloc_traits.h.

4.250.2.8 propagate_on_container_move_assignment template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment = true_type
```

How the allocator is propagated on move assignment.
Definition at line 437 of file bits/alloc_traits.h.

4.250.2.9 propagate_on_container_swap template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap = false_type
```

How the allocator is propagated on swap.
Definition at line 440 of file bits/alloc_traits.h.

4.250.2.10 size_type template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::size_type = std::size_t
```

The allocator's size type.
Definition at line 431 of file bits/alloc_traits.h.

4.250.2.11 value_type template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::value_type = _Tp
```

The allocated type.
Definition at line 413 of file bits/alloc_traits.h.

4.250.2.12 void_pointer template<typename _Tp >

```
using std::allocator_traits< allocator< _Tp > >::void_pointer = void*
```

The allocator's void pointer type.
Definition at line 422 of file bits/alloc_traits.h.

4.250.3 Member Function Documentation

4.250.3.1 allocate() [1/2] template<typename _Tp >

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
            allocator_type & __a,
            size_type __n )  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

_↩ _*a*	An allocator.
_↩ _*n*	The number of objects to allocate space for.

Calls `a.allocate(n)`
Definition at line 459 of file bits/alloc_traits.h.

4.250.3.2 allocate() [2/2] template<typename _Tp >

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
            allocator_type & __a,
            size_type __n,
            const_void_pointer __hint )  [inline], [static], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)`
Definition at line 473 of file bits/alloc_traits.h.

4.250.3.3 construct() template<typename _Tp >

```
template<typename _Up , typename... _Args>
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
            allocator_type & __a,
            _Up * __p,
            _Args &&... __args )  [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type `_Up`.
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)` in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)` instead.
Definition at line 507 of file bits/alloc_traits.h.

4.250.3.4 deallocate() template<typename _Tp >

```
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
            allocator_type & __a,
            pointer __p,
            size_type __n )  [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the memory to deallocate.
_↩ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`
Definition at line 491 of file bits/alloc_traits.h.

4.250.3.5 destroy() `template<typename _Tp >`

```
template<typename _Up >
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
            allocator_type & __a,
            _Up * __p )  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *_Up*.

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Calls `__a.destroy(__p)`.
Definition at line 527 of file bits/alloc_traits.h.

4.250.3.6 max_size() `template<typename _Tp >`

```
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
            const allocator_type & __a )  [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

_↩ _a	An allocator.

Returns

`__a.max_size()`

Definition at line 543 of file bits/alloc_traits.h.

4.250.3.7 select_on_container_copy_construction()

```
template<typename _Tp >
static constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container↩
_copy_construction (
            const allocator_type & __rhs )  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

__rhs

Definition at line 558 of file bits/alloc_traits.h.
The documentation for this struct was generated from the following file:

- bits/alloc_traits.h

4.251 std::allocator_traits< allocator< void > > Struct Reference

using std::allocator_traits< allocator< void > >::propagate_on_container_
= false_type
```

How the allocator is propagated on swap.
Definition at line 597 of file bits/alloc_traits.h.

4.251.2.10 size_type

```
using std::allocator_traits< allocator< void > >::size_type = std::size_t
```

The allocator's size type.
Definition at line 588 of file bits/alloc_traits.h.

4.251.2.11 value_type

```
using std::allocator_traits< allocator< void > >::value_type = void
```

The allocated type.
Definition at line 570 of file bits/alloc_traits.h.

4.251.2.12 void_pointer

```
using std::allocator_traits< allocator< void > >::void_pointer = void*
```

The allocator's void pointer type.
Definition at line 579 of file bits/alloc_traits.h.

4.251.3 Member Function Documentation

4.251.3.1 allocate()

```
static void* std::allocator_traits< allocator< void > >::allocate (
            allocator_type & ,
            size_type ,
            const void *  = nullptr )  [static], [delete]
```

allocate is ill-formed for allocator<void>

4.251.3.2 construct()

```
template<typename _Up , typename... _Args>
static constexpr void std::allocator_traits< allocator< void > >::construct (
            allocator_type & ,
            _Up * __p,
            _Args &&... __args )  [inline], [static], [constexpr], [noexcept]
```

Construct an object of type _Up

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type _Up.
__args	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...)` in C++11, C++14 and C++17. Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...)` instead.
Definition at line 629 of file bits/alloc_traits.h.

4.251.3.3 deallocate()

```
static void std::allocator_traits< allocator< void > >::deallocate (
```

```
            allocator_type & ,
            void * ,
            size_type  )  [static], [delete]
```

deallocate is ill-formed for allocator<void>

4.251.3.4 destroy() template<typename _Up >

```
static constexpr void std::allocator_traits< allocator< void > >::destroy (
            allocator_type & ,
            _Up * __p )  [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type _Up

Parameters

_↩ _a	An allocator.
_↩ _p	Pointer to the object to destroy

Invokes the destructor for *__p.
Definition at line 648 of file bits/alloc_traits.h.
References std::_Destroy().

4.251.3.5 max_size() static size_type std::allocator_traits< allocator< void > >::max_size (

```
            const allocator_type &  )  [static], [delete]
```

max_size is ill-formed for allocator<void>

4.251.3.6 select_on_container_copy_construction() static constexpr allocator_type std::allocator_traits<

```
allocator< void > >::select_on_container_copy_construction (
            const allocator_type & __rhs )  [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

__rhs	An allocator.

Returns

__rhs

Definition at line 662 of file bits/alloc_traits.h.
The documentation for this struct was generated from the following file:

4.255.1 Detailed Description

A type-safe container of any type.
An `any` object's state is either empty or it stores a contained object of CopyConstructible type.
Definition at line 90 of file experimental/any.

4.255.2 Constructor & Destructor Documentation

4.255.2.1 any() [1/5] std::experimental::fundamentals_v1::any::any ( ) [inline], [noexcept]

Default constructor, creates an empty object.
Definition at line 129 of file experimental/any.

4.255.2.2 any() [2/5] std::experimental::fundamentals_v1::any::any (const any & *__other*) [inline]

Copy constructor, copies the state of `__other`.
Definition at line 132 of file experimental/any.

4.255.2.3 any() [3/5] std::experimental::fundamentals_v1::any::any (any && __other) [inline], [noexcept]

Move constructor, transfer the state from __other.

Postcondition

__other.empty() (this postcondition is a GNU extension)

Definition at line 149 of file experimental/any.

4.255.2.4 any() [4/5] template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>, typename enable_if< is_constructible< _Tp, _ValueType && >::value, bool >::type = true> std::experimental::fundamentals_v1::any::any (_ValueType && __value) [inline]

Construct with a copy of __value as the contained object.
Definition at line 166 of file experimental/any.

4.255.2.5 any() [5/5] template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>, typename enable_if<!is_constructible< _Tp, _ValueType && >::value, bool >::type = false> std::experimental::fundamentals_v1::any::any (_ValueType && __value) [inline]

Construct with a copy of __value as the contained object.
Definition at line 179 of file experimental/any.

4.255.2.6 ~any() std::experimental::fundamentals_v1::any::~any ( ) [inline]

Destructor, calls clear()
Definition at line 188 of file experimental/any.

4.255.3 Member Function Documentation

4.255.3.1 clear() void std::experimental::fundamentals_v1::any::clear ( ) [inline], [noexcept]

If not empty, destroy the contained object.
Definition at line 230 of file experimental/any.

4.255.3.2 empty() bool std::experimental::fundamentals_v1::any::empty ( ) const [inline], [noexcept]

Reports whether there is a contained object or not.
Definition at line 272 of file experimental/any.

4.255.3.3 operator=() [1/3] template<typename _ValueType > enable_if_t<!is_same<any, decay_t<_ValueType> >::value, any&> std::experimental::fundamentals_↩ v1::any::operator= (_ValueType && __rhs) [inline]

Store a copy of __rhs as the contained object.
Definition at line 221 of file experimental/any.

4.255.3.4 operator=() [2/3] any& std::experimental::fundamentals_v1::any::operator= (any && __rhs) [inline], [noexcept]

Move assignment operator.

Postcondition

`__rhs.empty()` (not guaranteed for other implementations)

Definition at line 204 of file experimental/any.

4.255.3.5 operator=() [3/3] any& std::experimental::fundamentals_v1::any::operator= (const any & __rhs) [inline]

Copy the state of another object.
Definition at line 193 of file experimental/any.

4.255.3.6 swap() void std::experimental::fundamentals_v1::any::swap (any & __rhs) [inline], [noexcept]

Exchange state with another object.
Definition at line 240 of file experimental/any.

4.255.3.7 type() const type_info& std::experimental::fundamentals_v1::any::type ( ) const [inline], [noexcept]

The `typeid` of the contained object, or `typeid(void)` if empty.
Definition at line 276 of file experimental/any.
The documentation for this class was generated from the following file:

- experimental/any

4.256.1 Detailed Description

template<typename _Tp, std::size_t _Nm>
struct std::array< _Tp, _Nm >

A standard container for storing a fixed size sequence of elements.
Meets the requirements of a `container`, a `reversible container`, and a `sequence`.
Sets support random access iterators.

Template Parameters

Tp	Type of element. Required to be a complete type.
Nm	Number of elements.

Definition at line 94 of file array.
The documentation for this struct was generated from the following file:

- array

4.257 __gnu_pbds::associative_tag Struct Reference

Inheritance diagram for __gnu_pbds::associative_tag:

4.257.1 Detailed Description

Basic associative-container.

Definition at line 135 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

4.258.1 Detailed Description

template<typename _Tp>
struct std::atomic< _Tp >

Generic atomic type, primary class template.

Template Parameters

_Tp	Type to be made atomic, must be trivially copyable.

Definition at line 180 of file atomic.
The documentation for this struct was generated from the following file:

- atomic

4.259 std::atomic< _Tp * > Struct Template Reference

- auto_ptr & **operator=** (auto_ptr_ref< element_type > __ref) throw ()
- element_type * release () throw ()
- void reset (element_type *__p=0) throw ()

4.276.1 Detailed Description

template<typename _Tp>
class std::auto_ptr< _Tp >

A simple smart pointer providing strict ownership semantics.
The Standard says:

```
An  auto_ptr owns the object it holds a pointer to.  Copying
an  auto_ptr copies the pointer and transfers ownership to the
destination.  If more than one  auto_ptr owns the same object
at the same time the behavior of the program is undefined.

The uses of  auto_ptr include providing temporary
exception-safety for dynamically allocated memory, passing
ownership of dynamically allocated memory to a function, and
returning dynamically allocated memory from a function.   auto_ptr does not meet the CopyConstructibl
requirements for Standard Library  container elements and thus
instantiating a Standard Library container with an  auto_ptr results in undefined behavior.
```

Quoted from [20.4.5]/3.
Good examples of what can and cannot be done with auto_ptr can be found in the libstdc++ testsuite.
_GLIBCXX_RESOLVE_LIB_DEFECTS

1. auto_ptr<> conversion issues These resolutions have all been incorporated.

Definition at line 89 of file auto_ptr.h.

4.276.2 Member Typedef Documentation

4.276.2.1 element_type `template<typename _Tp >`

```
typedef _Tp std::auto_ptr< _Tp >::element_type
```

The pointed-to type.
Definition at line 96 of file auto_ptr.h.

4.276.3 Constructor & Destructor Documentation

4.276.3.1 auto_ptr() [1/4] template<typename _Tp >

```
std::auto_ptr< _Tp >::auto_ptr (
            element_type * __p = 0 ) throw ( )   [inline], [explicit]
```

An auto_ptr is usually constructed from a raw pointer.

Parameters

_↩ _p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by *__p*.
Definition at line 105 of file auto_ptr.h.

4.276.3.2 auto_ptr() [2/4] template<typename _Tp >

```
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr< _Tp > & __a ) throw ( )   [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

_↩ _a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by *__a*, which has given up ownership.
Definition at line 114 of file auto_ptr.h.

4.276.3.3 auto_ptr() [3/4] template<typename _Tp >

```
template<typename _Tp1 >
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr< _Tp1 > & __a ) throw ( )   [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

_↩ _a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.
This object now *owns* the object previously owned by *__a*, which has given up ownership.
Definition at line 127 of file auto_ptr.h.

4.276.3.4 ~auto_ptr() template<typename _Tp >

```
std::auto_ptr< _Tp >::~auto_ptr ( )  [inline]
```

When the auto_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get()` is `NULL`), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if _Tp::~_Tp() throws, but this is prohibited. [17.4.3.6]/2
Definition at line 172 of file auto_ptr.h.

4.276.3.5 auto_ptr() [4/4] template<typename _Tp >

```
std::auto_ptr< _Tp >::auto_ptr (
            auto_ptr_ref< element_type > __ref ) throw ( )   [inline]
```

Automatic conversions.
These operations are supposed to convert an auto_ptr into and from an auto_ptr_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived>  func_returning_auto_ptr(.....);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
```

But it doesn't work, and won't be fixed. For further details see http://cplusplus.github.io/LWG/lwg-closed.html#463
Definition at line 266 of file auto_ptr.h.

4.276.4 Member Function Documentation

4.276.4.1 get() template<typename _Tp >

```
element_type* std::auto_ptr< _Tp >::get (
            void  ) const throw ( )   [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr still owns the memory.

Definition at line 213 of file auto_ptr.h.

4.276.4.2 operator*() template<typename _Tp >

```
element_type& std::auto_ptr< _Tp >::operator* ( ) const throw ( )   [inline]
```

Smart pointer dereferencing.
If this auto_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)
Definition at line 183 of file auto_ptr.h.

4.276.4.3 operator->() template<typename _Tp >

```
element_type* std::auto_ptr< _Tp >::operator-> ( ) const throw ( )   [inline]
```

Smart pointer dereferencing.
This returns the pointer itself, which the language then will automatically cause to be dereferenced.
Definition at line 196 of file auto_ptr.h.

4.276.4.4 operator=() [1/2] template<typename _Tp >

```
auto_ptr& std::auto_ptr< _Tp >::operator= (
            auto_ptr< _Tp > & __a ) throw ( )   [inline]
```

auto_ptr assignment operator.

Parameters

_↩ _a	Another auto_ptr of the same type.

This object now *owns* the object previously owned by __a, which has given up ownership. The object that this one *used* to own and track has been deleted.
Definition at line 138 of file auto_ptr.h.
References std::auto_ptr< _Tp >::reset().

4.276.4.5 operator=() [2/2] template<typename _Tp >

```
template<typename _Tp1 >
auto_ptr& std::auto_ptr< _Tp >::operator= (
            auto_ptr< _Tp1 > & __a ) throw ( )   [inline]
```

auto_ptr assignment operator.

Parameters

_↩ _a	Another auto_ptr of a different but related type.

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.
This object now *owns* the object previously owned by __a, which has given up ownership. The object that this one *used* to own and track has been deleted.
Definition at line 156 of file auto_ptr.h.
References std::auto_ptr< _Tp >::reset().

4.276.4.6 release() template<typename _Tp >

```
element_type* std::auto_ptr< _Tp >::release ( ) throw ( )   [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This auto_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

Definition at line 227 of file auto_ptr.h.

4.276.4.7 reset() template<typename _Tp >

```
void std::auto_ptr< _Tp >::reset (
            element_type * __p = 0 ) throw ( )   [inline]
```

Forcibly deletes the managed object.

Parameters

_↩ _p	A pointer (defaults to NULL).

This object now *owns* the object pointed to by __p. The previous object has been deleted.
Definition at line 242 of file auto_ptr.h.
Referenced by std::auto_ptr< _Tp >::operator=().
The documentation for this class was generated from the following file:

- auto_ptr.h

4.277 std::auto_ptr_ref< _Tp1 > Struct Template Reference

Public Member Functions

- **auto_ptr_ref** (_Tp1 *__p)

Public Attributes

- _Tp1 * **_M_ptr**

4.277.1 Detailed Description

template<typename _Tp1>
struct std::auto_ptr_ref< _Tp1 >

A wrapper class to provide auto_ptr with reference semantics. For example, an auto_ptr can be assigned (or constructed from) the result of a function which returns an auto_ptr by value.
All the auto_ptr_ref stuff should happen behind the scenes.
Definition at line 48 of file auto_ptr.h.
The documentation for this struct was generated from the following file:

- auto_ptr.h

4.278 std::back_insert_iterator< _Container > Class Template Reference

Inheritance diagram for std::back_insert_iterator< _Container >:

Public Types

- typedef _Container container_type
- typedef void difference_type
- typedef output_iterator_tag iterator_category
- typedef void pointer
- typedef void reference
- typedef void value_type

Public Member Functions

- constexpr back_insert_iterator (_Container &__x)
- constexpr back_insert_iterator & operator* ()
- constexpr back_insert_iterator & operator++ ()
- constexpr back_insert_iterator operator++ (int)
- constexpr back_insert_iterator & operator= (const typename _Container::value_type &__value)
- constexpr back_insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container * **container**

4.278.1 Detailed Description

template<typename _Container>
class std::back_insert_iterator< _Container >

Turns assignment into insertion.
These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using push_back.
Tip: Using the back_inserter function to create these iterators can save typing.
Definition at line 616 of file bits/stl_iterator.h.

4.278.2 Member Typedef Documentation

4.278.2.1 container_type

`template<typename _Container >`
`typedef _Container std::back_insert_iterator< _Container >::container_type`
A nested typedef for the type of whatever container you used.
Definition at line 624 of file bits/stl_iterator.h.

4.278.2.2 difference_type

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`
Distance between iterators is represented as this type.
Definition at line 134 of file stl_iterator_base_types.h.

4.278.2.3 iterator_category

`typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`
One of the tag types.
Definition at line 130 of file stl_iterator_base_types.h.

4.278.2.4 pointer

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`
This type represents a pointer-to-value_type.
Definition at line 136 of file stl_iterator_base_types.h.

4.278.2.5 reference

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`
This type represents a reference-to-value_type.
Definition at line 138 of file stl_iterator_base_types.h.

4.278.2.6 value_type

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`
The type "pointed to" by the iterator.
Definition at line 132 of file stl_iterator_base_types.h.

4.278.3 Constructor & Destructor Documentation

4.278.3.1 back_insert_iterator() template<typename _Container >

```
constexpr std::back_insert_iterator< _Container >::back_insert_iterator (
            _Container & __x )  [inline], [explicit], [constexpr]
```

The only way to create this iterator is with a container.
Definition at line 633 of file bits/stl_iterator.h.

4.278.4 Member Function Documentation

4.278.4.1 operator∗() template<typename _Container >

```
constexpr back_insert_iterator& std::back_insert_iterator< _Container >::operator* ( )  [inline],
[constexpr]
```

Simply returns ∗this.
Definition at line 675 of file bits/stl_iterator.h.

4.278.4.2 operator++() [1/2] template<typename _Container >

```
constexpr back_insert_iterator& std::back_insert_iterator< _Container >::operator++ ( )  [inline],
[constexpr]
```

Simply returns ∗this. (This iterator does not *move*.)
Definition at line 681 of file bits/stl_iterator.h.

4.278.4.3 operator++() [2/2] template<typename _Container >

```
constexpr back_insert_iterator std::back_insert_iterator< _Container >::operator++ (
            int  )  [inline], [constexpr]
```

Simply returns ∗this. (This iterator does not *move*.)
Definition at line 687 of file bits/stl_iterator.h.

4.278.4.4 operator=() template<typename _Container >

```
constexpr back_insert_iterator& std::back_insert_iterator< _Container >::operator= (
            const typename _Container::value_type & __value )  [inline], [constexpr]
```

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.
Definition at line 657 of file bits/stl_iterator.h.
The documentation for this class was generated from the following file:

- bits/stl_iterator.h

4.279 std::bad_alloc Class Reference

Inheritance diagram for std::bad_alloc:

Public Member Functions

- **bad_alloc** (const bad_alloc &)=default
- bad_alloc & **operator=** (const bad_alloc &)=default
- virtual const char * what () const throw ()

4.279.1 Detailed Description

Exception possibly thrown by `new`.
`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

Definition at line 55 of file new.

4.279.2 Member Function Documentation

4.279.2.1 what() `virtual const char* std::bad_alloc::what ( ) const throw ( )  [virtual]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- new

4.280 std::experimental::fundamentals_v1::bad_any_cast Class Reference

Inheritance diagram for std::experimental::fundamentals_v1::bad_any_cast:

Public Member Functions

- virtual const char * what () const noexcept

4.280.1 Detailed Description

Exception class thrown by a failed `any_cast`.
Definition at line 67 of file experimental/any.

4.280.2 Member Function Documentation

4.280.2.1 what() `virtual const char* std::experimental::fundamentals_v1::bad_any_cast::what ( ) const  [inline], [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::bad_cast.
Definition at line 70 of file experimental/any.
The documentation for this class was generated from the following file:

- experimental/any

4.281 std::bad_cast Class Reference

Inheritance diagram for std::bad_cast:

Public Member Functions

- virtual const char ∗ what () const noexcept

4.281.1 Detailed Description

Thrown during incorrect typecasting.
If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

Definition at line 190 of file typeinfo.

4.281.2 Member Function Documentation

4.281.2.1 what() `virtual const char* std::bad_cast::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
Reimplemented in std::experimental::fundamentals_v1::bad_any_cast.
The documentation for this class was generated from the following file:

- typeinfo

4.282 std::bad_exception Class Reference

Inheritance diagram for std::bad_exception:

Public Member Functions

- virtual const char ∗ what () const noexcept

4.282.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

Definition at line 50 of file exception.

4.282.2 Member Function Documentation

4.282.2.1 what() `virtual const char* std::bad_exception::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- exception

4.283 std::bad_function_call Class Reference

Inheritance diagram for std::bad_function_call:

Public Member Functions

- const char * what () const noexcept

4.283.1 Detailed Description

Exception class thrown when class template function's operator() is called with an empty target.
Definition at line 56 of file std_function.h.

4.283.2 Member Function Documentation

4.283.2.1 what() `const char* std::bad_function_call::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- std_function.h

Inheritance diagram for std::experimental::fundamentals_v1::bad_optional_access:

Public Member Functions

- **bad_optional_access** (const char *__arg)
- virtual const char * what () const noexcept

4.284.1 Detailed Description

Exception class thrown when a disengaged optional object is dereferenced.
Definition at line 104 of file experimental/optional.

4.284.2 Member Function Documentation

4.284.2.1 what() `virtual const char* std::logic_error::what ( ) const [virtual], [noexcept], [inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.
Reimplemented in std::future_error.
The documentation for this class was generated from the following file:

- experimental/optional

4.285 std::bad_typeid Class Reference

Inheritance diagram for std::bad_typeid:

Public Member Functions

- virtual const char ∗ what () const noexcept

4.285.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.
Definition at line 207 of file typeinfo.

4.285.2 Member Function Documentation

4.285.2.1 what() `virtual const char* std::bad_typeid::what ( ) const [virtual], [noexcept]`
Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- typeinfo

4.286 std::bad_weak_ptr Class Reference

Inheritance diagram for std::bad_weak_ptr:

Public Member Functions

- virtual char const ∗ what () const noexcept

4.286.1 Detailed Description

Exception possibly thrown by `shared_ptr`.
Definition at line 76 of file shared_ptr_base.h.

4.286.2 Member Function Documentation

4.286.2.1 what() `virtual char const* std::bad_weak_ptr::what ( ) const [virtual], [noexcept]`
Returns a C-style character string describing the general cause of the current error.

Reimplemented from std::exception.
The documentation for this class was generated from the following file:

- shared_ptr_base.h

4.287 __gnu_parallel::balanced_quicksort_tag Struct Reference

- void set_num_threads (_ThreadIndex __num_threads)

4.287.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.
Definition at line 164 of file tags.h.

4.287.2 Member Function Documentation

4.287.2.1 __get_num_threads() _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.
Referenced by __gnu_parallel::__parallel_sort().

4.287.2.2 set_num_threads() void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.
The documentation for this struct was generated from the following file:

- tags.h

4.288 __gnu_parallel::balanced_tag Struct Reference

Inheritance diagram for __gnu_parallel::balanced_tag:

Public Member Functions

- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.288.1 Detailed Description

Recommends parallel execution using dynamic load-balancing at compile time.
Definition at line 88 of file tags.h.

4.288.2 Member Function Documentation

4.288.2.1 __get_num_threads() _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.
Referenced by __gnu_parallel::__parallel_sort().

4.288.2.2 set_num_threads()

```
void __gnu_parallel::parallel_tag::set_num_threads (
        _ThreadIndex __num_threads ) [inline], [inherited]
```

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.
The documentation for this struct was generated from the following file:

  basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

4.290.1 Detailed Description

template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >

A branched, tree-like (tree, trie) container abstraction.

Template Parameters

Key	Key type.
Mapped	Map type.
Tag	Instantiating data structure type, see container_tag.
Node_Update	Updates nodes, restores invariants.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: tree_tag, trie_tag, and their descendants.
Base choices are: detail::ov_tree_map, detail::rb_tree_map, detail::splay_tree_map, and detail::pat_trie_map.
Definition at line 555 of file assoc_container.hpp.

4.292.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_filebuf< _CharT, _Traits >

The actual work of input and output (for files).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.
Requirements on traits_type, specific to this class:

- traits_type::pos_type must be fpos<traits_type::state_type>
- traits_type::off_type must be streamoff
- traits_type::state_type must be Assignable and DefaultConstructible,
- traits_type::state_type() must be the initial state for codecvt.

Definition at line 80 of file fstream.

4.292.2 Constructor & Destructor Documentation

4.292.2.1 basic_filebuf() `template<typename _CharT , typename _Traits >`
`std::basic_filebuf< _CharT, _Traits >::basic_filebuf`

Does not open any files.
The default constructor initializes the parent class using its own default ctor.
Definition at line 80 of file fstream.tcc.
References std::basic_streambuf< _CharT, _Traits >::_M_buf_locale.

4.292.2.2 ~basic_filebuf() template<typename _CharT , typename _Traits >

virtual std::basic_filebuf< _CharT, _Traits >::~basic_filebuf ( ) [inline], [virtual]

The destructor closes the file first.
Definition at line 246 of file fstream.

4.292.3 Member Function Documentation

4.292.3.1 _M_create_pback() template<typename _CharT , typename _Traits >

void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( ) [inline], [protected]

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back
Definition at line 199 of file fstream.

4.292.3.2 _M_destroy_pback() template<typename _CharT , typename _Traits >

void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( ) throw ( ) [inline], [protected]

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.
Definition at line 216 of file fstream.

4.292.3.3 _M_set_buffer() template<typename _CharT , typename _Traits >

void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
streamsize __off) [inline], [protected]

This function sets the pointers of the internal buffer, both get and put areas. Typically:
__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).
NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.
Definition at line 459 of file fstream.
Referenced by std::basic_filebuf< _CharT, _Traits >::close().

4.292.3.4 close() template<typename _CharT , typename _Traits >

basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close

Closes the currently associated file.

Returns

this on success, NULL on failure

If no file is currently open, this function immediately fails.
If a *put buffer area* exists, overflow(eof) is called to flush all the characters. The file is then closed.
If any operations fail, this function also fails.
Definition at line 249 of file fstream.tcc.
References std::basic_filebuf< _CharT, _Traits >::_M_mode, std::basic_filebuf< _CharT, _Traits >::_M_pback_init, std::basic_filebuf< _CharT, _Traits >::_M_reading, and std::basic_filebuf< _CharT, _Traits >::_M_set_buffer().

4.292.3.5 eback() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence

- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

4.292.3.6 egptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

4.292.3.7 epptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

4.292.3.8 gbump() template<typename _CharT , typename _Traits >

void std::basic_streambuf< _CharT, _Traits >::gbump (
int __*n*) [inline], [protected], [inherited]

Moving the read position.

Parameters

_↩ _*n*	The delta by which to move.

This just advances the read position without returning any data.
Definition at line 505 of file streambuf.

4.292.3.9 getloc() template<typename _CharT , typename _Traits >

locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Definition at line 233 of file streambuf.

4.292.3.10 gptr() `template<typename _CharT , typename _Traits >`

`char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]`

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

4.292.3.11 imbue() `template<typename _CharT , typename _Traits >`

```
void std::basic_filebuf< _CharT, _Traits >::imbue (
             const locale & __loc ) [protected], [virtual]
```

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 1029 of file fstream.tcc.
References std::ios_base::cur.

4.292.3.12 in_avail() `template<typename _CharT , typename _Traits >`

`streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.
Definition at line 291 of file streambuf.

4.292.3.13 is_open() template<typename _CharT , typename _Traits >

bool std::basic_filebuf< _CharT, _Traits >::is_open ( ) const throw ( ) [inline]

Returns true if the external file is open.

Definition at line 265 of file fstream.

4.292.3.14 open() [1/2] template<typename _CharT , typename _Traits >

basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
const char * __s,
ios_base::openmode __mode)

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

this on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent fopen() flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596)

ios_base Flag combination				stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r
	+	+			r+
	+	+	+		w+
	+	+		+	a+
	+			+	a+
	+		+		wb
	+		+	+	ab
	+			+	ab
	+		+	+	wb
	+	+			rb
	+	+	+		r+b
	+	+	+	+	w+b
	+	+		+	a+b
	+	+		+	a+b

Definition at line 179 of file fstream.tcc.

References std::ios_base::ate, std::ios_base::end, and std::basic_filebuf< _CharT, _Traits >::open().

Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.292.3.15 open() [2/2] template<typename _CharT , typename _Traits >

__filebuf_type* std::basic_filebuf< _CharT, _Traits >::open (

```
            const std::string & __s,
            ios_base::openmode __mode )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 331 of file fstream.

4.292.3.16 overflow()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::overflow (
            int_type __c = _Traits::eof() )  [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually *__c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if *__c* is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 541 of file fstream.tcc.
References std::ios_base::app, std::ios_base::cur, and std::ios_base::out.

4.292.3.17 pbackfail()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (
            int_type __c = _Traits::eof() )  [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

_c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 482 of file fstream.tcc.
References std::ios_base::cur, and std::ios_base::in.

4.292.3.18 pbase() `template<typename _CharT , typename _Traits >`

`char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected], [inherited]`

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

4.292.3.19 pbump() `template<typename _CharT , typename _Traits >`

```
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n ) [inline], [protected], [inherited]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Definition at line 552 of file streambuf.

4.292.3.20 pptr() `template<typename _CharT , typename _Traits >`

`char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

4.292.3.21 pubimbue() template<typename _CharT , typename _Traits >

```
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc )  [inline], [inherited]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).
Definition at line 216 of file streambuf.

4.292.3.22 pubseekoff() template<typename _CharT , typename _Traits >

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.
Definition at line 258 of file streambuf.

4.292.3.23 pubseekpos() template<typename _CharT , typename _Traits >

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.
Definition at line 270 of file streambuf.

4.292.3.24 pubsetbuf() template<typename _CharT , typename _Traits >

```
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
```

streamsize __n) [inline], [inherited]

Entry points for derived buffer functions.

The public versions of pubfoo dispatch to the protected derived foo member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 246 of file streambuf.

4.292.3.25 pubsync() template<typename _CharT , typename _Traits >

int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]

Calls virtual sync function.

Definition at line 278 of file streambuf.

Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync().

4.292.3.26 sbumpc() template<typename _CharT , typename _Traits >

int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns uflow().

Definition at line 323 of file streambuf.

Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::seekg().

4.292.3.27 seekoff() template<typename _CharT , typename _Traits >

basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (
off_type ,
ios_base::seekdir ,
ios_base::openmode = *ios_base::in* | *ios_base::out*) [protected], [virtual]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a pos_type that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 832 of file fstream.tcc.

References std::ios_base::cur.

4.292.3.28 seekpos() template<typename _CharT , typename _Traits >

basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (
pos_type ,
ios_base::openmode = *ios_base::in* | *ios_base::out*) [protected], [virtual]

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 892 of file fstream.tcc.
References std::ios_base::beg.

4.292.3.29 setbuf()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >::setbuf (
            char_type * __s,
            streamsize __n )  [protected], [virtual]
```

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 803 of file fstream.tcc.

4.292.3.30 setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend )  [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

4.292.3.31 setp() template<typename _CharT , typename _Traits >

```
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend )  [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

4.292.3.32 sgetc() template<typename _CharT , typename _Traits >

```
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Definition at line 345 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::tellg().

4.292.3.33 sgetn() template<typename _CharT , typename _Traits >

```
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry point for xsgetn.

Parameters

__s	A buffer area.
__n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.
Definition at line 364 of file streambuf.

4.292.3.34 showmanyc() template<typename _CharT , typename _Traits >

```
streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc  [protected], [virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 297 of file fstream.tcc.
References std::ios_base::in.

4.292.3.35 snextc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Definition at line 305 of file streambuf.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::putback(), and std::basic_istream< char >::tellg().

4.292.3.36 sputbackc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
            char_type __c )  [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.
Definition at line 379 of file streambuf.

4.292.3.37 sputc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c )  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Definition at line 431 of file streambuf.
Referenced by std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.292.3.38 sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n ) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __s[0] through __s[__n-1] to the output sequence, if possible.
Definition at line 457 of file streambuf.

4.292.3.39 sungetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Definition at line 404 of file streambuf.

4.292.3.40 sync()

```
template<typename _CharT , typename _Traits >
int std::basic_filebuf< _CharT, _Traits >::sync [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 1012 of file fstream.tcc.

4.292.3.41 uflow() `template<typename _CharT , typename _Traits >`

`virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Definition at line 707 of file streambuf.

4.292.3.42 underflow() `template<typename _CharT , typename _Traits >`

`basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow [protected], [virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 323 of file fstream.tcc.
References std::ios_base::in.

4.292.3.43 xsgetn() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (
            char_type * __s,
            streamsize __n ) [protected], [virtual]
```

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 669 of file fstream.tcc.
References std::ios_base::in.

4.292.3.44 xsputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n )  [protected], [virtual]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 755 of file fstream.tcc.
References std::ios_base::app, std::min(), and std::ios_base::out.

4.292.4 Member Data Documentation

4.292.4.1 _M_buf

```
template<typename _CharT , typename _Traits >
char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf  [protected]
```

Pointer to the beginning of internal buffer.
Definition at line 136 of file fstream.

4.292.4.2 _M_buf_locale

`template<typename _CharT , typename _Traits >`
`locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]`

Current locale setting.
Definition at line 199 of file streambuf.
Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf().

4.292.4.3 _M_buf_size

`template<typename _CharT , typename _Traits >`
`size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.
Definition at line 143 of file fstream.

4.292.4.4 _M_ext_buf

`template<typename _CharT , typename _Traits >`
`char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected]`

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().
Definition at line 178 of file fstream.

4.292.4.5 _M_ext_buf_size

`template<typename _CharT , typename _Traits >`
`streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected]`

Size of buffer held by _M_ext_buf.
Definition at line 183 of file fstream.

4.292.4.6 _M_ext_next

`template<typename _CharT , typename _Traits >`
`const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected]`

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().
Definition at line 190 of file fstream.

4.292.4.7 _M_in_beg

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]`

Start of get area.
Definition at line 191 of file streambuf.

4.292.4.8 _M_in_cur

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]`

Current read area.
Definition at line 192 of file streambuf.

4.292.4.9 _M_in_end

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]`

End of get area.
Definition at line 193 of file streambuf.

4.292.4.10 _M_mode

`template<typename _CharT , typename _Traits >`
`ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected]`

Place to stash in || out || in | out settings for current filebuf.
Definition at line 121 of file fstream.
Referenced by std::basic_filebuf< _CharT, _Traits >::close().

4.292.4.11 _M_out_beg

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]`

Start of put area.
Definition at line 194 of file streambuf.

4.292.4.12 _M_out_cur

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]`

Current put area.
Definition at line 195 of file streambuf.

4.292.4.13 _M_out_end

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]`

End of put area.
Definition at line 196 of file streambuf.

4.292.4.14 _M_pback

`template<typename _CharT , typename _Traits >`
`char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

4.292.4.15 _M_pback_cur_save

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 165 of file fstream.

4.292.4.16 _M_pback_end_save

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_end_save [protected]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 166 of file fstream.

4.292.4.17 _M_pback_init

`template<typename _CharT , typename _Traits >`
`bool std::basic_filebuf< _CharT, _Traits >::_M_pback_init [protected]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 167 of file fstream.
Referenced by std::basic_filebuf< _CharT, _Traits >::close().

4.292.4.18 _M_reading

`template<typename _CharT , typename _Traits >`
`bool std::basic_filebuf< _CharT, _Traits >::_M_reading [protected]`

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;
NB: _M_reading == true && _M_writing == true is unused.
Definition at line 155 of file fstream.
Referenced by std::basic_filebuf< _CharT, _Traits >::close().
The documentation for this class was generated from the following files:

- fstream
- fstream.tcc

Extractors

All the `operator>>` *functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.*

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)

- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

4.293.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_fstream< _CharT, _Traits >

Controlling input and output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from and writing to named files, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.
Definition at line 1016 of file fstream.

4.293.2 Member Typedef Documentation

4.293.2.1 __num_put_type

`template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.293.2.2 event_callback

`typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.293.2.3 fmtflags

`typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.293.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.293.2.5 openmode typedef _Ios_Openmode std::ios_base::openmode [inherited]

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.293.2.6 seekdir typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.293.3 Member Enumeration Documentation

4.293.3.1 event enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.293.4 Constructor & Destructor Documentation

4.293.4.1 basic_fstream() [1/3] template<typename _CharT , typename _Traits >

std::basic_fstream< _CharT, _Traits >::basic_fstream ( ) [inline]

Default constructor.
Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).
Definition at line 1043 of file fstream.

4.293.4.2 basic_fstream() [2/3] template<typename _CharT , typename _Traits >

```
std::basic_fstream< _CharT, _Traits >::basic_fstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [explicit]
```

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

Definition at line 1053 of file fstream.

4.293.4.3 basic_fstream() [3/3]

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [explicit]
```

Create an input/output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

Definition at line 1083 of file fstream.

4.293.4.4 ~basic_fstream()

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::~basic_fstream ( )  [inline]
```

The destructor does nothing.
The file is closed by the filebuf object, not the formatting stream.
Definition at line 1118 of file fstream.

4.293.5 Member Function Documentation

4.293.5.1 _M_getloc()

```
const locale& std::ios_base::_M_getloc ( ) const  [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.293.5.2 _M_write()

```
template<typename _CharT , typename _Traits >
void std::basic_ostream< _CharT, _Traits >::_M_write (
            const char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Core write functionality, without sentry.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.293.5.3 bad() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.293.5.4 clear() template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::clear (
iostate __state = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _↩ CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >↩ ::unget().

4.293.5.5 close() template<typename _CharT , typename _Traits >

void std::basic_fstream< _CharT, _Traits >::close ( ) [inline]

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 1253 of file fstream.

4.293.5.6 copyfmt() template<typename _CharT , typename _Traits >

basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.293.5.7 eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.293.5.8 exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.293.5.9 exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
```

```
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.293.5.10 fail() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.293.5.11 fill() [1/2] template<typename _CharT , typename _Traits >

char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.293.5.12 fill() [2/2] template<typename _CharT , typename _Traits >

char_type std::basic_ios< _CharT, _Traits >::fill (
char_type __*ch*) [inline], [inherited]

Sets a new *empty* character.

Parameters

__*ch*	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.293.5.13 flags() [1/2] fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.293.5.14 flags() [2/2] fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.293.5.15 flush() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.293.5.16 gcount() template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.293.5.17 get() [1/6] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.18 get() [2/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb )  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).
Definition at line 387 of file istream.

4.293.5.19 get() [3/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim )  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.20 get() [4/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c ) [inherited]
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.21 get() [5/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).
Definition at line 354 of file istream.

4.293.5.22 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.

Parameters

__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.23 getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.
Definition at line 427 of file istream.

4.293.5.24 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.25 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

4.293.5.26 getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.293.5.27 good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.293.5.28 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.293.5.29 ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.293.5.30 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim ) [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file

- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.31 imbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.293.5.32 init() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.293.5.33 is_open() `template<typename _CharT , typename _Traits >`

```
bool std::basic_fstream< _CharT, _Traits >::is_open ( )  [inline]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 1159 of file fstream.

4.293.5.34 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.293.5.35 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩html
Definition at line 430 of file basic_ios.h.

4.293.5.36 open() [1/2]

```
template<typename _CharT , typename _Traits >
void std::basic_fstream< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 1177 of file fstream.

4.293.5.37 open() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_fstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 1218 of file fstream.

4.293.5.38 operator bool() template<typename _CharT , typename _Traits >

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.293.5.39 operator"!() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.293.5.40 operator<<() [1/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(*)(__ios_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.293.5.41 operator<<() [2/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(*)(__ostream_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.293.5.42 operator<<() [3/17] template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
__streambuf_type * __sb) [inherited]

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.293.5.43 operator<<() [4/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
bool __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.293.5.44 operator<<() [5/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
const void * __p) [inline], [inherited]

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.293.5.45 operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 219 of file ostream.

4.293.5.46 operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 223 of file ostream.

4.293.5.47 operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n )  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.

4.293.5.48 operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(*)(ios_base &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 126 of file ostream.

4.293.5.49 operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 165 of file ostream.

4.293.5.50 operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 231 of file ostream.

4.293.5.51 operator<<() [12/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 200 of file ostream.

4.293.5.52 operator<<() [13/17] template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (short __n) [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.
References std::ios_base::goodbit.

4.293.5.53 operator<<() [14/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 191 of file ostream.

4.293.5.54 operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 169 of file ostream.

4.293.5.55 operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned long long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 204 of file ostream.

4.293.5.56 operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned short __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 180 of file ostream.

4.293.5.57 operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws.
For more information, see the iomanip header.
Definition at line 124 of file istream.

4.293.5.58 operator>>() [2/17]

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            __istream_type &(*)(__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.
Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws.
For more information, see the iomanip header.
Definition at line 120 of file istream.

4.293.5.59 operator>>() [3/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
Definition at line 211 of file istream.tcc.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 175 of file istream.

4.293.5.73 operator>>() [17/17] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.293.5.74 peek() template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.75 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.293.5.76 precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.293.5.77 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c ) [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.293.5.78 putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
            char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.293.5.79 pword() `void*& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.293.5.80 rdbuf() [1/2] `template<typename _CharT , typename _Traits > __filebuf_type* std::basic_fstream< _CharT, _Traits >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 1151 of file fstream.

4.293.5.81 rdbuf() [2/2] `template<typename _CharT , typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.293.5.82 rdstate()

`template<typename _CharT , typename _Traits >`
`iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.293.5.83 read()

`template<typename _CharT , typename _Traits >`
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (`
`char_type * __s,`
`streamsize __n ) [inherited]`

Extraction without delimiters.

Parameters

__s	A character array.
__n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.84 readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.293.5.85 register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index ) [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.293.5.86 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
```

```
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.293.5.87 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos )  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.293.5.88 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.293.5.89 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos )  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.
References std::ios_base::goodbit.

4.293.5.90 setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.293.5.91 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.293.5.92 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.293.5.93 sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
            void  )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.293.5.94 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true )  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.293.5.95 tellg() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg ( void ) [inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.293.5.96 tellp() `template<typename _CharT , typename _Traits >`

`basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
Definition at line 236 of file ostream.tcc.

4.293.5.97 tie() [1/2] `template<typename _CharT , typename _Traits >`

`basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.293.5.98 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.293.5.99 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void ) [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_↩base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.293.5.100 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.293.5.101 widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.293.5.102 width() [1/2]

```
streamsize std::ios_base::width ( ) const  [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.293.5.103 width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.293.5.104 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n )  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.293.5.105 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.293.6 Member Data Documentation

4.293.6.1 _M_gcount template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.293.6.2 adjustfield const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of setf.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.293.6.3 app const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.293.6.4 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.293.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.293.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.293.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.293.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.293.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.293.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.293.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.293.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.293.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.293.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.293.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.293.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.293.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(),

std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.293.6.18 hex `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.293.6.19 in `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.293.6.20 internal `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.293.6.21 left `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.293.6.22 oct `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.293.6.23 out `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.293.6.24 right `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.

Referenced by std::right().

4.293.6.25 scientific `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.293.6.26 showbase `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.293.6.27 showpoint `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.293.6.28 showpos `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.293.6.29 skipws `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.293.6.30 trunc `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.293.6.31 unitbuf `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.293.6.32 uppercase `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- fstream

4.294.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, typename Tag, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >

A hashed container abstraction.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key.
Tag	Instantiating data structure type, see container_tag.
Policy_TL	Policy typelist.
_Alloc	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: cc_hash_tag, gp_hash_tag, and descendants of basic_hash_tag.
Base choices are: detail::cc_ht_map, detail::gp_ht_map
Definition at line 104 of file assoc_container.hpp.

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

4.296.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ifstream< _CharT, _Traits >

Controlling input for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.
Definition at line 492 of file fstream.

4.296.2 Member Typedef Documentation

4.296.2.1 __num_put_type `template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.296.2.2 event_callback `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.296.2.3 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.296.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.296.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.296.2.6 seekdir typedef _Ios_Seekdir std::ios_base::seekdir [inherited]

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.296.3 Member Enumeration Documentation

4.296.3.1 event enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.296.4 Constructor & Destructor Documentation

4.296.4.1 basic_ifstream() [1/3] template<typename _CharT , typename _Traits >

std::basic_ifstream< _CharT, _Traits >::basic_ifstream ( ) [inline]

Default constructor.
Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).
Definition at line 518 of file fstream.

4.296.4.2 basic_ifstream() [2/3] template<typename _CharT , typename _Traits >

```
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

ios_base::in is automatically included in *__mode*.
Definition at line 529 of file fstream.

4.296.4.3 basic_ifstream() [3/3] template<typename _CharT , typename _Traits >

```
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

`ios_base::in` is automatically included in *__mode*.
Definition at line 562 of file fstream.

4.296.4.4 ~basic_ifstream() `template<typename _CharT , typename _Traits >`

`std::basic_ifstream< _CharT, _Traits >::~basic_ifstream ( ) [inline]`

The destructor does nothing.
The file is closed by the filebuf object, not the formatting stream.
Definition at line 599 of file fstream.

4.296.5 Member Function Documentation

4.296.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.296.5.2 bad() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.296.5.3 clear() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.296.5.4 close() `template<typename _CharT , typename _Traits >`

`void std::basic_ifstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 730 of file fstream.

4.296.5.5 copyfmt() `template<typename _CharT , typename _Traits >`

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.296.5.6 eof() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.296.5.7 exceptions() [1/2] `template<typename _CharT , typename _Traits >`

`iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.296.5.8 exceptions() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.296.5.9 fail() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.296.5.10 fill() [1/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.296.5.11 fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.296.5.12 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.296.5.13 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.296.5.14 gcount() template<typename _CharT , typename _Traits >

streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.296.5.15 get() [1/6] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.16 get() [2/6] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) [inline], [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).
Definition at line 387 of file istream.

4.296.5.17 get() [3/6] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*, char_type *__delim*) [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.18 get() [4/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c )  [inherited]
```

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.19 get() [5/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *s*.

Returns

*this

Returns `get(__s,__n,widen('\n'))`.
Definition at line 354 of file istream.

4.296.5.20 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.21 getline() [1/3] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.

Returns

*this

Returns getline(__s,__n,widen('\n')).
Definition at line 427 of file istream.

4.296.5.22 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals __delim, in which case the character is extracted (and therefore counted in gcount()) but not stored
3. __n-1 characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.23 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

4.296.5.24 getloc()

```
locale std::ios_base::getloc ( ) const  [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.296.5.25 good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.296.5.26 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void  )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.296.5.27 ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.296.5.28 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim )  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.29 imbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.296.5.30 init() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.296.5.31 is_open() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ifstream< _CharT, _Traits >::is_open ( )  [inline]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 640 of file fstream.

4.296.5.32 iword() `long& std::ios_base::iword ( int __ix ) [inline], [inherited]`

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.296.5.33 narrow() `template<typename _CharT , typename _Traits > char std::basic_ios< _CharT, _Traits >::narrow ( char_type __c, char __dfault ) const [inline], [inherited]`

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.296.5.34 open() [1/2] `template<typename _CharT , typename _Traits > void std::basic_ifstream< _CharT, _Traits >::open (`

```
            const char * __s,
            ios_base::openmode __mode = ios_base::in )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 658 of file fstream.

4.296.5.35 open() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ifstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::in )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 697 of file fstream.

4.296.5.36 operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.296.5.37 operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.296.5.38 operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(*)(__ios_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.

Definition at line 124 of file istream.

4.296.5.39 operator>>() [2/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline], [inherited]

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.
Definition at line 120 of file istream.

4.296.5.40 operator>>() [3/17] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb) [inherited]

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
Definition at line 211 of file istream.tcc.
References std::ios_base::goodbit.

4.296.5.41 operator>>() [4/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (bool & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 168 of file istream.

4.296.5.42 operator>>() [5/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (double & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 218 of file istream.

4.296.5.43 operator>>() [6/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (float & __f) [inline], [inherited]

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 214 of file istream.

4.296.5.44 operator>>() [7/17] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (int & __n) [inherited]

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 166 of file istream.tcc.

4.296.5.45 operator>>() [8/17]

```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.296.5.55 peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void  )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.56 precision() [1/2]

```
streamsize std::ios_base::precision ( ) const  [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.296.5.57 precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec )  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.296.5.58 putback() template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (char_type __c) [inherited]

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If rdbuf() is not null, calls rdbuf()->sputbackc(c).
If rdbuf() is null or if sputbackc() fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.296.5.59 pword() void*& std::ios_base::pword (int __ix) [inline], [inherited]

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.296.5.60 rdbuf() [1/2] template<typename _CharT , typename _Traits > __filebuf_type* std::basic_ifstream< _CharT, _Traits >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 632 of file fstream.

4.296.5.61 rdbuf() [2/2] template<typename _CharT , typename _Traits >

```
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.296.5.62 rdstate() template<typename _CharT , typename _Traits >

```
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.296.5.63 read() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.64 readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_s	A character array.
_n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.296.5.65 register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.296.5.66 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.296.5.67 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos )  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.296.5.68 setf() [1/2] fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.296.5.69 setf() [2/2] fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is ios_base::adjustfield.
Definition at line 693 of file ios_base.h.

4.296.5.70 setstate() template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline], [inherited]

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.296.5.71 sync() template<typename _CharT , typename _Traits > int std::basic_istream< _CharT, _Traits >::sync (

```
            void  )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.296.5.72 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true )  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.296.5.73 tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void  )  [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.296.5.74 tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const  [inline], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.296.5.75 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr )  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.296.5.76 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void  )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.296.5.77 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask )  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.296.5.78 widen() `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.296.5.79 width() [1/2] `streamsize std::ios_base::width ( ) const  [inline], [inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.296.5.80 width() [2/2] `streamsize std::ios_base::width (`

```
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.296.5.81 xalloc() `static int std::ios_base::xalloc ( ) throw ( )  [static], [inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.296.6 Member Data Documentation

4.296.6.1 _M_gcount `template<typename _CharT , typename _Traits >`

`streamsize std::basic_istream< _CharT, _Traits >::_M_gcount  [protected], [inherited]`

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.296.6.2 adjustfield `const fmtflags std::ios_base::adjustfield  [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.296.6.3 app `const openmode std::ios_base::app  [static], [inherited]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.296.6.4 ate `const openmode std::ios_base::ate  [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.296.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.296.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.296.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.296.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.296.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.296.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.296.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.296.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >↩ ::seekoff().

4.296.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _↩ InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_↩ get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std↩ ::ws().

4.296.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std↩ ::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.296.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.296.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.296.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_↩ istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _Char↩ T, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_↩ istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< ↩ _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >↩ ::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std↩ ::basic_istream< _CharT, _Traits >::unget().

4.296.6.18 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.296.6.19 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.296.6.20 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.296.6.21 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.296.6.22 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.296.6.23 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.296.6.24 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.296.6.25 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.

Referenced by std::hexfloat(), and std::scientific().

4.296.6.26 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.296.6.27 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.296.6.28 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.296.6.29 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.296.6.30 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.296.6.31 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.296.6.32 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- fstream

4.297 __gnu_pbds::basic_invalidation_guarantee Struct Reference

Inheritance diagram for __gnu_pbds::basic_invalidation_guarantee:

4.297.1 Detailed Description

Signifies a basic invalidation guarantee that any iterator, pointer, or reference to a container object's mapped value type is valid as long as the container is not modified.
Definition at line 93 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.298 std::basic_ios< _CharT, _Traits > Class Template Reference

4.298.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ios< _CharT, _Traits >

Template class basic_ios, virtual base class for all stream classes.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.
Definition at line 67 of file basic_ios.h.

4.298.2 Member Typedef Documentation

4.298.2.1 __ctype_type `template<typename _CharT , typename _Traits >`

`typedef ctype<_CharT> std::basic_ios< _CharT, _Traits >::__ctype_type`

These are non-standard types.
Definition at line 87 of file basic_ios.h.

4.298.2.2 __num_get_type `template<typename _CharT , typename _Traits >`

`typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type`

These are non-standard types.
Definition at line 91 of file basic_ios.h.

4.298.2.3 __num_put_type `template<typename _CharT , typename _Traits >`

`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.298.2.4 char_type `template<typename _CharT , typename _Traits >`

`typedef _CharT std::basic_ios< _CharT, _Traits >::char_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 76 of file basic_ios.h.

4.298.2.5 event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,
int __i)  [inherited]
```

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.298.2.6 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags  [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield

- floatfield

Definition at line 341 of file ios_base.h.

4.298.2.7 int_type `template<typename _CharT , typename _Traits >`

`typedef _Traits::int_type std::basic_ios< _CharT, _Traits >::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 77 of file basic_ios.h.

4.298.2.8 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.298.2.9 off_type `template<typename _CharT , typename _Traits >`

`typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 79 of file basic_ios.h.

4.298.2.10 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.298.2.11 pos_type `template<typename _CharT , typename _Traits >`

`typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 78 of file basic_ios.h.

4.298.2.12 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.298.2.13 traits_type `template<typename _CharT , typename _Traits >`

`typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 80 of file basic_ios.h.

4.298.3 Member Enumeration Documentation

4.298.3.1 event `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.298.4 Constructor & Destructor Documentation

4.298.4.1 basic_ios() [1/2] `template<typename _CharT , typename _Traits >`

`std::basic_ios< _CharT, _Traits >::basic_ios ( basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]`

Constructor performs initialization.
The parameter is passed by derived streams.
Definition at line 270 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::init().

4.298.4.2 ~basic_ios() `template<typename _CharT , typename _Traits >`

`virtual std::basic_ios< _CharT, _Traits >::~basic_ios ( ) [inline], [virtual]`

Empty.
The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().
Definition at line 282 of file basic_ios.h.

4.298.4.3 basic_ios() [2/2] template<typename _CharT , typename _Traits >

std::basic_ios< _CharT, _Traits >::basic_ios ( ) [inline], [protected]

Empty.

The default constructor does nothing and is not normally accessible to users.

Definition at line 460 of file basic_ios.h.

4.298.5 Member Function Documentation

4.298.5.1 _M_getloc() const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Definition at line 804 of file ios_base.h.

Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.298.5.2 bad() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

Definition at line 211 of file basic_ios.h.

References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.298.5.3 clear() template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::clear (
iostate __state = goodbit)

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.

Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.298.5.4 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs )
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.298.5.5 eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.298.5.6 exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.298.5.7 exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.298.5.8 fail() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.298.5.9 fill() [1/2] `template<typename _CharT , typename _Traits >`

`char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.298.5.10 fill() [2/2] `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch ) [inline]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.298.5.11 flags() [1/2] fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.298.5.12 flags() [2/2] fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.298.5.13 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.298.5.14 good() template<typename _CharT , typename _Traits > bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.298.5.15 imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.298.5.16 init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.298.5.17 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.298.5.18 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.298.5.19 operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.298.5.20 operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.298.5.21 precision() [1/2]

```
streamsize std::ios_base::precision ( ) const  [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.298.5.22 precision() [2/2]

`streamsize std::ios_base::precision ( streamsize __prec ) [inline], [inherited]`

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.298.5.23 pword()

`void*& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.298.5.24 rdbuf() [1/2]

`template<typename _CharT , typename _Traits > basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Definition at line 321 of file basic_ios.h.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::tellg(), and std::ws().

4.298.5.25 rdbuf() [2/2] template<typename _CharT , typename _Traits >

```
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.298.5.26 rdstate() template<typename _CharT , typename _Traits >

```
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.298.5.27 register_callback() void std::ios_base::register_callback (

```
            event_callback __fn,
            int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.298.5.28 setf() [1/2] fmtflags std::ios_base::setf (

```
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.298.5.29 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.298.5.30 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.298.5.31 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true )  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.298.5.32 tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.298.5.33 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr ) [inline]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.298.5.34 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.298.5.35 widen() template<typename _CharT , typename _Traits > char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline]

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.298.5.36 width() [1/2] streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.298.5.37 width() [2/2] streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.298.5.38 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.298.6 Member Data Documentation

4.298.6.1 adjustfield

`const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.298.6.2 app

`const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.298.6.3 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.298.6.4 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.298.6.5 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.298.6.6 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.298.6.7 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.

Definition at line 458 of file ios_base.h.

4.298.6.8 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.298.6.9 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.298.6.10 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.298.6.11 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.298.6.12 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios_base.h.

Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.298.6.13 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::

::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.298.6.14 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.298.6.15 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.298.6.16 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.298.6.17 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.298.6.18 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.298.6.19 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.298.6.20 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.298.6.21 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.298.6.22 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.298.6.23 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.298.6.24 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.298.6.25 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.298.6.26 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.298.6.27 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.298.6.28 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.298.6.29 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.298.6.30 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.298.6.31 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd
- basic_ios.h
- basic_ios.tcc

4.299 std::basic_iostream< _CharT, _Traits > Class Template Reference

Inheritance diagram for std::basic_iostream< _CharT, _Traits >:

Public Types

- typedef ctype< _CharT > **__ctype_type**
- typedef ctype< _CharT > **__ctype_type**

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.299.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_iostream< _CharT, _Traits >

Template class basic_iostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class multiply inherits from the input and output stream classes simply to provide a single interface.
Definition at line 824 of file istream.

4.299.2 Member Typedef Documentation

4.299.2.1 __num_put_type `template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.299.2.2 event_callback `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.299.2.3 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.299.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.299.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.299.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.299.3 Member Enumeration Documentation

4.299.3.1 event `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.299.4 Constructor & Destructor Documentation

4.299.4.1 basic_iostream() `template<typename _CharT , typename _Traits > std::basic_iostream< _CharT, _Traits >::basic_iostream ( basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]`

Constructor does nothing.
Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.
Definition at line 849 of file istream.

4.299.4.2 ~basic_iostream() `template<typename _CharT , typename _Traits > virtual std::basic_iostream< _CharT, _Traits >::~basic_iostream ( ) [inline], [virtual]`

Destructor does nothing.
Definition at line 856 of file istream.

4.299.5 Member Function Documentation

4.299.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.299.5.2 _M_write() template<typename _CharT , typename _Traits >

```
void std::basic_ostream< _CharT, _Traits >::_M_write (
             const char_type * __s,
             streamsize __n )  [inline], [inherited]
```

Core write functionality, without sentry.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.299.5.3 bad() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.299.5.4 clear() template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit )  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _↩ CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >↩ ::unget().

4.299.5.5 copyfmt() template<typename _CharT , typename _Traits >

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs )  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.299.5.6 eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.299.5.7 exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.299.5.8 exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
```

```
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.299.5.9 fail() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.299.5.10 fill() [1/2] template<typename _CharT , typename _Traits >

char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.299.5.11 fill() [2/2] template<typename _CharT , typename _Traits >

char_type std::basic_ios< _CharT, _Traits >::fill (
char_type __ch) [inline], [inherited]

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.299.5.12 flags() [1/2] fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.299.5.13 flags() [2/2] fmtflags std::ios_base::flags (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.299.5.14 flush() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.299.5.15 gcount() template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.299.5.16 get() [1/6] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.17 get() [2/6] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb) [inline], [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).
Definition at line 387 of file istream.

4.299.5.18 get() [3/6] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (__streambuf_type & __sb, char_type __delim) [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.19 get() [4/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c ) [inherited]
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.20 get() [5/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).
Definition at line 354 of file istream.

4.299.5.21 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.

Parameters

__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.22 getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.
Definition at line 427 of file istream.

4.299.5.23 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.24 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

4.299.5.25 getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.299.5.26 good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.299.5.27 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.299.5.28 ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.299.5.29 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim ) [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file

- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.30 imbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.299.5.31 init() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.299.5.32 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.299.5.33 narrow() `template<typename _CharT , typename _Traits >`

```
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.299.5.34 operator bool() `template<typename _CharT , typename _Traits >`

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.299.5.35 operator"!() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.299.5.36 operator<<() [1/17] `template<typename _CharT , typename _Traits >`

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(*)(__ios_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.299.5.37 operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(*)(__ostream_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.299.5.38 operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb )  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.299.5.39 operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

__↩ n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.299.5.40 operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p )  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _*p*	A variable of pointer type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.299.5.41 operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 219 of file ostream.

4.299.5.42 operator<<() [7/17]

template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 186 of file istream.

4.299.5.62 operator>>() [10/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long double & __f )  [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 222 of file istream.

4.299.5.63 operator>>() [11/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long long & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 195 of file istream.

4.299.5.64 operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            short & __n )  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 121 of file istream.tcc.
References std::ios_base::goodbit.

4.299.5.65 operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned int & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 182 of file istream.

4.299.5.66 operator>>() [14/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 190 of file istream.

4.299.5.67 operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned long long & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 199 of file istream.

4.299.5.68 operator>>() [16/17] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned short & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 175 of file istream.

4.299.5.69 operator>>() [17/17] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p )  [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.299.5.70 peek() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void  )  [inherited]
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.71 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.299.5.72 precision() [2/2] streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.299.5.73 put() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

∗this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.299.5.74 putback() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback ( char_type __c ) [inherited]`

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

∗this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.299.5.75 pword() `void*& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void∗ associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.299.5.76 rdbuf() [1/2] `template<typename _CharT , typename _Traits >`

`basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]`

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Definition at line 321 of file basic_ios.h.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::tellg(), and std::ws().

4.299.5.77 rdbuf() [2/2] template<typename _CharT , typename _Traits >

```
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.299.5.78 rdstate() template<typename _CharT , typename _Traits >

```
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.299.5.79 read() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.80 readsome() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.299.5.81 register_callback()

```
void std::ios_base::register_callback (
        event_callback __fn,
        int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.299.5.82 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        off_type __off,
        ios_base::seekdir __dir )  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.299.5.83 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        pos_type __pos )  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.299.5.84 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.299.5.85 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos )  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.
References std::ios_base::goodbit.

4.299.5.86 setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.299.5.87 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.299.5.88 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.299.5.89 sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
            void )  [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.299.5.90 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.299.5.91 tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg ( void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.299.5.92 tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
Definition at line 236 of file ostream.tcc.

4.299.5.93 tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const  [inline], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.299.5.94 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr )  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.299.5.95 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void  )  [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.299.5.96 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask )  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.299.5.97 widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const  [inline], [inherited]
```

Widens characters.

Parameters

__c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.299.5.98 width() [1/2]

```
streamsize std::ios_base::width ( ) const  [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.299.5.99 width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.299.5.100 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n )  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.299.5.101 xalloc()

```
static int std::ios_base::xalloc ( ) throw ( )  [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.299.6 Member Data Documentation

4.299.6.1 _M_gcount

`template<typename _CharT , typename _Traits >`
`streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]`

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.299.6.2 adjustfield

`const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.299.6.3 app

`const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.299.6.4 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.299.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.299.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.299.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.299.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.299.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.299.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.299.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.299.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.299.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.299.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.299.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.299.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.299.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.299.6.18 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.299.6.19 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.299.6.20 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.299.6.21 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.299.6.22 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.299.6.23 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.299.6.24 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.299.6.25 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.299.6.26 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.299.6.27 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.299.6.28 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.299.6.29 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.299.6.30 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.299.6.31 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.299.6.32 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

4.300.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_istream< _CharT, _Traits >

Template class basic_istream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual input.
Definition at line 58 of file istream.

4.300.2 Member Typedef Documentation

4.300.2.1 __num_put_type `template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.300.2.2 event_callback `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.300.2.3 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.300.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.300.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.300.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.300.3 Member Enumeration Documentation

4.300.3.1 event `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.300.4 Constructor & Destructor Documentation

4.300.4.1 basic_istream() `template<typename _CharT , typename _Traits >`

```
std::basic_istream< _CharT, _Traits >::basic_istream (
            __streambuf_type * __sb ) [inline], [explicit]
```

Base constructor.
This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.
Definition at line 93 of file istream.

4.300.4.2 ~basic_istream() `template<typename _CharT , typename _Traits >`

```
virtual std::basic_istream< _CharT, _Traits >::~basic_istream ( ) [inline], [virtual]
```

Base destructor.
This does very little apart from providing a virtual base dtor.
Definition at line 103 of file istream.

4.300.5 Member Function Documentation

4.300.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num↩_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter

>::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get↩
_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get<
_CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.300.5.2 bad() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.300.5.3 clear() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::clear (
             iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _↩
CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >↩
::unget().

4.300.5.4 copyfmt() `template<typename _CharT , typename _Traits >`

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
             const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base↩
::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std↩
::ios_base::width().

4.300.5.5 eof() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.300.5.6 exceptions() [1/2] template<typename _CharT , typename _Traits >

iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.300.5.7 exceptions() [2/2] template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::exceptions (
iostate __except) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.300.5.8 fail() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.300.5.9 fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.300.5.10 fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch )  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.300.5.11 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const  [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_↩ put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.300.5.12 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.300.5.13 gcount() `template<typename _CharT , typename _Traits >`

`streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline]`

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.300.5.14 get() [1/6] `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get ( void )`

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.15 get() [2/6] `template<typename _CharT , typename _Traits >`

`__istream_type& std::basic_istream< _CharT, _Traits >::get ( __streambuf_type & __sb ) [inline]`

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns `get`(__sb,widen('\n')).
Definition at line 387 of file istream.

4.300.5.16 get() [3/6] `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (`

```
__streambuf_type & __sb,
char_type __delim )
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.17 get() [4/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c )
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.18 get() [5/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n ) [inline]
```

Simple multiple-character extraction.

Parameters

_↩ _*s*	Pointer to an array.
_↩ _*n*	Maximum number of characters to store in *s*.

Returns

∗this

Returns `get(__s,__n,widen('\n'))`.
Definition at line 354 of file istream.

4.300.5.19 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim )
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.20 getline() [1/3] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n ) [inline]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.
Definition at line 427 of file istream.

4.300.5.21 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.22 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )
```

Explicit specialization declarations, defined in src/istream.cc.

4.300.5.23 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.300.5.24 good() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.300.5.25 ignore() [1/3] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (void)

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.300.5.26 ignore() [2/3] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n)

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.300.5.27 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim )
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.28 imbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.300.5.29 init() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.300.5.30 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.300.5.31 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩html
Definition at line 430 of file basic_ios.h.

4.300.5.32 operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.300.5.33 operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.

References std::basic_ios< _CharT, _Traits >::fail().

4.300.5.34 operator>>() [1/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__ios_type &(*)(__ios_type &) __pf) [inline]

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.
Definition at line 124 of file istream.

4.300.5.35 operator>>() [2/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (__istream_type &(*)(__istream_type &) __pf) [inline]

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.
Definition at line 120 of file istream.

4.300.5.36 operator>>() [3/17] template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (__streambuf_type * __sb)

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
Definition at line 211 of file istream.tcc.
References std::ios_base::goodbit.

4.300.5.37 operator>>() [4/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (bool & __n) [inline]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 168 of file istream.

4.300.5.38 operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            double & __f )  [inline]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 218 of file istream.

4.300.5.39 operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            float & __f )  [inline]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 214 of file istream.

4.300.5.40 operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            int & __n )
```

Integer arithmetic extractors.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 166 of file istream.tcc.

4.300.5.41 operator>>() [8/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            ios_base &(*)(ios_base &) __pf )  [inline]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the iomanip header.
Definition at line 131 of file istream.

4.300.5.42 operator>>() [9/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long & __n )  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 186 of file istream.

4.300.5.43 operator>>() [10/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long double & __f )  [inline]
```

Floating point arithmetic extractors.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 222 of file istream.

4.300.5.44 operator>>() [11/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            long long & __n )  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 195 of file istream.

4.300.5.45 operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            short & __n )
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 121 of file istream.tcc.
References std::ios_base::goodbit.

4.300.5.46 operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned int & __n )  [inline]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 182 of file istream.

4.300.5.47 operator>>() [14/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long & __n) [inline]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 190 of file istream.

4.300.5.48 operator>>() [15/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned long long & __n) [inline]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 199 of file istream.

4.300.5.49 operator>>() [16/17] template<typename _CharT , typename _Traits > __istream_type& std::basic_istream< _CharT, _Traits >::operator>> (unsigned short & __n) [inline]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 175 of file istream.

4.300.5.50 operator>>() [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            void *& __p )  [inline]
```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.300.5.51 peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
            void  )
```

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.52 precision() [1/2]

```
streamsize std::ios_base::precision ( ) const  [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.300.5.53 precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec )  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.300.5.54 putback() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback ( char_type __c )`

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.300.5.55 pword() `void*& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.300.5.56 rdbuf() [1/2] template<typename _CharT , typename _Traits >

basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Definition at line 321 of file basic_ios.h.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::tellg(), and std::ws().

4.300.5.57 rdbuf() [2/2] template<typename _CharT , typename _Traits >

```
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.300.5.58 rdstate() template<typename _CharT , typename _Traits >

iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.300.5.59 read() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n )
```

Extraction without delimiters.

Parameters

_↩ _*s*	A character array.
_↩ _*n*	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.60 readsome() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n )
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _*s*	A character array.
_↩ _*n*	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.300.5.61 register_callback()

```
void std::ios_base::register_callback (
        event_callback __fn,
        int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.300.5.62 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        off_type __off,
        ios_base::seekdir __dir )
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.300.5.63 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        pos_type __pos )
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.300.5.64 setf() [1/2]

```
fmtflags std::ios_base::setf (
        fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.300.5.65 setf() [2/2]

```
fmtflags std::ios_base::setf (
        fmtflags __fmtfl,
        fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.300.5.66 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
        iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.300.5.67 sync() `template<typename _CharT , typename _Traits >`

```
int std::basic_istream< _CharT, _Traits >::sync (
            void  )
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.300.5.68 sync_with_stdio() `static bool std::ios_base::sync_with_stdio (`

```
            bool __sync = true )  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.300.5.69 tellg() `template<typename _CharT , typename _Traits >`

```
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
            void  )
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.300.5.70 tie() [1/2] template<typename _CharT , typename _Traits >

basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.300.5.71 tie() [2/2] template<typename _CharT , typename _Traits >

basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
basic_ostream< _CharT, _Traits > * *__tiestr*) [inline], [inherited]

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.300.5.72 unget() template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
void)

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.300.5.73 unsetf()

```
void std::ios_base::unsetf ( fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.300.5.74 widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen ( char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.300.5.75 width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.300.5.76 width() [2/2] streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.300.5.77 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.300.6 Member Data Documentation

4.300.6.1 _M_gcount template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected]

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.300.6.2 adjustfield const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.300.6.3 app const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.300.6.4 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.300.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.300.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.300.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.300.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.300.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.300.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.300.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.300.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.300.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.300.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.300.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.300.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.300.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(),

std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.300.6.18 hex `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.300.6.19 in `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.300.6.20 internal `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.300.6.21 left `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.300.6.22 oct `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.300.6.23 out `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.300.6.24 right `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.

Referenced by std::right().

4.300.6.25 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.300.6.26 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.300.6.27 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.300.6.28 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.300.6.29 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.300.6.30 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.300.6.31 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.300.6.32 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd
- istream
- istream.tcc

4.301 std::basic_istringstream< _CharT, _Traits, _Alloc > Class Template Reference

Inheritance diagram for std::basic_istringstream< _CharT, _Traits, _Alloc >:

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

4.301.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istringstream< _CharT, _Traits, _Alloc >

Controlling input for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from objects of type std::basic_string, using the inherited functions from std::basic_istream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.
Definition at line 392 of file sstream.

4.301.2 Member Typedef Documentation

4.301.2.1 __num_put_type

`template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.301.2.2 event_callback

`typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.301.2.3 fmtflags

`typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase

- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.301.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.301.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.301.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.301.3 Member Enumeration Documentation

4.301.3.1 event enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.301.4 Constructor & Destructor Documentation

4.301.4.1 basic_istringstream() [1/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream ( ) [inline]

Default constructor starts with an empty string buffer.
Initializes sb using in, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 425 of file sstream.

4.301.4.2 basic_istringstream() [2/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (
ios_base::openmode __mode) [inline], [explicit]

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

ios_base::in is automatically included in *__mode*.
Initializes sb using __mode|in, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 442 of file sstream.

4.301.4.3 basic_istringstream() [3/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_istringstream< _CharT, _Traits, _Alloc >::basic_istringstream (
const __string_type & *__str*,
ios_base::openmode *__mode* = *ios_base::in*) [inline], [explicit]

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

ios_base::in is automatically included in *mode*.
Initializes sb using *str* and mode|in, and passes &sb to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 460 of file sstream.

4.301.4.4 ~basic_istringstream() `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_istringstream< _CharT, _Traits, _Alloc >::~basic_istringstream ( ) [inline]`

The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.
Definition at line 471 of file sstream.

4.301.5 Member Function Documentation

4.301.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.301.5.2 bad() `template<typename _CharT , typename _Traits > bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.301.5.3 clear() `template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::clear ( iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.301.5.4 copyfmt() template<typename _CharT , typename _Traits >

basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (const basic_ios< _CharT, _Traits > & __rhs) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.301.5.5 eof() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.301.5.6 exceptions() [1/2] template<typename _CharT , typename _Traits >

iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.301.5.7 exceptions() [2/2] template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::exceptions (iostate __except) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.301.5.8 fail() template<typename _CharT , typename _Traits >

`bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.301.5.9 fill() [1/2] template<typename _CharT , typename _Traits >

`char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]`

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.301.5.10 fill() [2/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.301.5.11 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const  [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.301.5.12 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.301.5.13 gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const  [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.301.5.14 get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
            void  )  [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.15 get() [2/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb )  [inline], [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).
Definition at line 387 of file istream.

4.301.5.16 get() [3/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim )  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

*this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.17 get() [4/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c )  [inherited]
```

Simple extraction.

Parameters

_↩ _c	The character in which to store data.

Returns

*this

Tries to extract a character and store it in __c. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.18 get() [5/6] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _s	Pointer to an array.
_↩ _n	Maximum number of characters to store in *s*.

Returns

*this

Returns get(__s,__n,widen('\n')).
Definition at line 354 of file istream.

4.301.5.19 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.

Parameters

__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.20 getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.
Definition at line 427 of file istream.

4.301.5.21 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim ) [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.22 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim )  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

4.301.5.23 getloc()

```
locale std::ios_base::getloc ( ) const  [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.301.5.24 good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.301.5.25 ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.301.5.26 ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.301.5.27 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim ) [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file

- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.28 imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.301.5.29 init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.301.5.30 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.301.5.31 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.301.5.32 operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.301.5.33 operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.301.5.34 operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            __ios_type &(*)(__ios_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the iomanip header.
Definition at line 124 of file istream.

4.301.5.35 operator>>() [2/17] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (

4.301.5.36 operator>>() [3/17] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            __streambuf_type * __sb )  [inherited]
```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.
Definition at line 211 of file istream.tcc.
References std::ios_base::goodbit.

4.301.5.37 operator>>() [4/17] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            bool & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

__↩ n	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.
Definition at line 168 of file istream.

4.301.5.38 operator>>() [5/17] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
            short & __n )  [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 121 of file istream.tcc.
References std::ios_base::goodbit.

4.301.5.46 operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
            unsigned int & __n )  [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 182 of file istream.

4.301.5.47 operator>>() [14/17]

```
template<typename _CharT , typename _Traits >
```

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
unsigned long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 190 of file istream.

4.301.5.48 operator>>() [15/17] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
unsigned long long & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 199 of file istream.

4.301.5.49 operator>>() [16/17] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
unsigned short & __n) [inline], [inherited]

Integer arithmetic extractors.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 175 of file istream.

4.301.5.50 operator>>() [17/17] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::operator>> (
void *& __p) [inline], [inherited]

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.301.5.51 peek() template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.52 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.301.5.53 precision() [2/2] streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.301.5.54 putback() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback ( char_type __c ) [inherited]`

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.
If `rdbuf()` is null or if `sputbackc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.301.5.55 pword() `void*& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.301.5.56 rdbuf() [1/2] `template<typename _CharT , typename _Traits , typename _Alloc >`

`__stringbuf_type* std::basic_istringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 511 of file sstream.

4.301.5.57 rdbuf() [2/2] template<typename _CharT , typename _Traits >

```
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.301.5.58 rdstate() template<typename _CharT , typename _Traits >

```
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.301.5.59 read() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.60 readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_s	A character array.
_n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A,n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.301.5.61 register_callback()

```
void std::ios_base::register_callback (
            event_callback __fn,
            int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.301.5.62 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off,__dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.301.5.63 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
            pos_type __pos )  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.301.5.64 setf() [1/2] fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.301.5.65 setf() [2/2] fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is ios_base::adjustfield.
Definition at line 693 of file ios_base.h.

4.301.5.66 setstate() template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline], [inherited]

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.301.5.67 str() [1/2] template<typename _CharT , typename _Traits , typename _Alloc > __string_type std::basic_istringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

`rdbuf()->str()`

Definition at line 519 of file sstream.

4.301.5.68 str() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_istringstream< _CharT, _Traits, _Alloc >::str (
            const __string_type & __s ) [inline]
```

Setting a new buffer.

Parameters

_s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.
Definition at line 529 of file sstream.

4.301.5.69 sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
            void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.301.5.70 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.301.5.71 tellg() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg ( void ) [inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.301.5.72 tie() [1/2] `template<typename _CharT , typename _Traits >`

`basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.301.5.73 tie() [2/2] `template<typename _CharT , typename _Traits >`

`basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.301.5.74 unget() template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (void) [inherited]

Unextracting the previous character.

Returns

*this

If rdbuf() is not null, calls rdbuf()->sungetc(c).
If rdbuf() is null or if sungetc() fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.301.5.75 unsetf() void std::ios_base::unsetf (fmtflags __mask) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.301.5.76 widen() template<typename _CharT , typename _Traits >

char_type std::basic_ios< _CharT, _Traits >::widen (char __c) const [inline], [inherited]

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of char to a character of char_type.
Returns the result of
std::use_facet<ctype<char_type> >(getloc()).widen(c)
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.301.5.77 width() [1/2] streamsize std::ios_base::width ( ) const [inline], [inherited]

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.301.5.78 width() [2/2] streamsize std::ios_base::width (streamsize __wide) [inline], [inherited]

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.301.5.79 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.301.6 Member Data Documentation

4.301.6.1 _M_gcount template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.301.6.2 adjustfield

`const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.301.6.3 app

`const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.301.6.4 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.301.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.301.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.301.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.301.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.301.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.301.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.301.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.301.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.301.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.301.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.301.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.301.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.301.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Definition at line 431 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.301.6.18 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.301.6.19 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.

Definition at line 461 of file ios_base.h.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.301.6.20 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Definition at line 358 of file ios_base.h.

Referenced by std::internal().

4.301.6.21 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Definition at line 362 of file ios_base.h.

Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.301.6.22 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Definition at line 365 of file ios_base.h.

Referenced by std::oct().

4.301.6.23 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.

Definition at line 464 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.301.6.24 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.301.6.25 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.301.6.26 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.301.6.27 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.301.6.28 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.301.6.29 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.301.6.30 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.301.6.31 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.301.6.32 uppercase `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd
- sstream

- __ostream_type & operator<< (ios_base &(*__pf)(ios_base &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (long __n)
- __ostream_type & operator<< (unsigned long __n)
- __ostream_type & operator<< (bool __n)
- __ostream_type & operator<< (short __n)
- __ostream_type & operator<< (unsigned short __n)

- __ostream_type & operator<< (unsigned long long __n)

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.302.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ofstream< _CharT, _Traits >

Controlling output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This class supports reading from named files, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_filebuf is used, which this page refers to as `sb`.
Definition at line 753 of file fstream.

4.302.2 Member Typedef Documentation

4.302.2.1 __num_get_type

```
template<typename _CharT , typename _Traits >
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type  [inherited]
```

These are non-standard types.
Definition at line 91 of file basic_ios.h.

4.302.2.2 event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,
int __i)  [inherited]
```

The type of an event callback function.

Parameters

_↩ _e	One of the members of the event enum.
_↩ _b	Reference to the ios_base object.
_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().
Definition at line 529 of file ios_base.h.

4.302.2.3 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.302.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.302.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.302.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.302.3 Member Enumeration Documentation

4.302.3.1 event `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.302.4 Constructor & Destructor Documentation

4.302.4.1 basic_ofstream() [1/3] template<typename _CharT , typename _Traits >

std::basic_ofstream< _CharT, _Traits >::basic_ofstream ( ) [inline]

Default constructor.

Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

Definition at line 779 of file fstream.

4.302.4.2 basic_ofstream() [2/3] template<typename _CharT , typename _Traits >

```
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
            const char * __s,
            ios_base::openmode __mode = ios_base::out )  [inline], [explicit]
```

Create an output file stream.

Parameters

__s	Null terminated string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

ios_base::out is automatically included in *__mode*.

Definition at line 790 of file fstream.

4.302.4.3 basic_ofstream() [3/3] template<typename _CharT , typename _Traits >

```
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::out )  [inline], [explicit]
```

Create an output file stream.

Parameters

__s	std::string specifying the filename.
__mode	Open file in specified mode (see std::ios_base).

ios_base::out is automatically included in *__mode*.

Definition at line 825 of file fstream.

4.302.4.4 ~basic_ofstream() template<typename _CharT , typename _Traits >

std::basic_ofstream< _CharT, _Traits >::~basic_ofstream ( ) [inline]

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

Definition at line 862 of file fstream.

4.302.5 Member Function Documentation

4.302.5.1 _M_getloc() const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.302.5.2 _M_write() template<typename _CharT , typename _Traits >

```
void std::basic_ostream< _CharT, _Traits >::_M_write (
            const char_type * __s,
            streamsize __n ) [inline], [inherited]
```

Core write functionality, without sentry.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.302.5.3 bad() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.302.5.4 clear() template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.

Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.302.5.5 close()

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::close ( )  [inline]
```

Close the file.
Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 993 of file fstream.

4.302.5.6 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs )  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.302.5.7 eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.302.5.8 exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.302.5.9 exceptions() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.302.5.10 fail() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.302.5.11 fill() [1/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.302.5.12 fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.302.5.13 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.302.5.14 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.302.5.15 flush() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]

Synchronizing the stream buffer.

Returns

*this

If rdbuf() is a null pointer, changes nothing.
Otherwise, calls rdbuf()->pubsync(), and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.302.5.16 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If imbue(loc) has previously been called, then this function returns loc. Otherwise, it returns a copy of std::locale(), the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.302.5.17 good() template<typename _CharT , typename _Traits > bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.302.5.18 imbue() template<typename _CharT , typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue (const locale & __loc) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.302.5.19 init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.302.5.20 is_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_ofstream< _CharT, _Traits >::is_open ( )  [inline]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

Definition at line 903 of file fstream.

4.302.5.21 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.302.5.22 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.302.5.23 open() [1/2] template<typename _CharT , typename _Traits >

```
void std::basic_ofstream< _CharT, _Traits >::open (
            const char * __s,
            ios_base::openmode __mode = ios_base::out )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 921 of file fstream.

4.302.5.24 open() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_ofstream< _CharT, _Traits >::open (
            const std::string & __s,
            ios_base::openmode __mode = ios_base::out )  [inline]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.
Definition at line 960 of file fstream.

4.302.5.25 operator bool() template<typename _CharT , typename _Traits >

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.302.5.26 operator"!() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]`

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.302.5.27 operator<<() [1/17] `template<typename _CharT , typename _Traits >`

`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< ( __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.302.5.28 operator<<() [2/17] `template<typename _CharT , typename _Traits >`

`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< ( __ostream_type &(*)(__ostream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.302.5.29 operator<<() [3/17] `template<typename _CharT , typename _Traits >`

`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< ( __streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.302.5.30 operator<<() [4/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.302.5.31 operator<<() [5/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p )  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.302.5.32 operator<<() [6/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

Definition at line 219 of file ostream.

4.302.5.33 operator<<() [7/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (float __f) [inline], [inherited]

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 223 of file ostream.

4.302.5.34 operator<<() [8/17] template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (int __n) [inherited]

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.

4.302.5.35 operator<<() [9/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (ios_base &(*)(ios_base &) __pf) [inline], [inherited]

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 126 of file ostream.

4.302.5.36 operator<<() [10/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 165 of file ostream.

4.302.5.37 operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 231 of file ostream.

4.302.5.38 operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 200 of file ostream.

4.302.5.39 operator<<() [13/17] template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (short __n) [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.
References std::ios_base::goodbit.

4.302.5.40 operator<<() [14/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 191 of file ostream.

4.302.5.41 operator<<() [15/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 169 of file ostream.

4.302.5.42 operator<<() [16/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 204 of file ostream.

4.302.5.43 operator<<() [17/17] template<typename _CharT , typename _Traits > __ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned short __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 180 of file ostream.

4.302.5.44 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.302.5.45 precision() [2/2] streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.302.5.46 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c )  [inherited]
```

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.302.5.47 pword()

```
void*& std::ios_base::pword (
            int __ix )  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.302.5.48 rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
__filebuf_type* std::basic_ofstream< _CharT, _Traits >::rdbuf ( ) const  [inline]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 895 of file fstream.

4.302.5.49 rdbuf() [2/2] template<typename _CharT , typename _Traits >

basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
basic_streambuf< _CharT, _Traits > * __sb) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.302.5.50 rdstate() template<typename _CharT , typename _Traits >

iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.302.5.51 register_callback() void std::ios_base::register_callback (

event_callback __fn,
int __index) [inherited]

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.302.5.52 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.302.5.53 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos )  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.
References std::ios_base::goodbit.

4.302.5.54 setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.302.5.55 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.302.5.56 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.302.5.57 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true )  [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.302.5.58 tellp() template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]

Getting the current write position.

Returns

A file position object.

If fail() is not false, returns pos_type(-1) to indicate failure. Otherwise returns rdbuf()->pubseekoff(0,cur,out).
Definition at line 236 of file ostream.tcc.

4.302.5.59 tie() [1/2] template<typename _CharT , typename _Traits >

basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, std::cin is tied to std::cout.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.302.5.60 tie() [2/2] template<typename _CharT , typename _Traits >

basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
basic_ostream< _CharT, _Traits > * *__tiestr*) [inline], [inherited]

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.302.5.61 unsetf() void std::ios_base::unsetf (

fmtflags *__mask*) [inline], [inherited]

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.302.5.62 widen() `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const  [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.302.5.63 width() [1/2] `streamsize std::ios_base::width ( ) const  [inline], [inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.302.5.64 width() [2/2] `streamsize std::ios_base::width (`

```
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.302.5.65 write() `template<typename _CharT , typename _Traits >`

`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write ( const char_type * __s, streamsize __n ) [inherited]`

Character string insertion.

Parameters

__s	The array to insert.
__n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.302.5.66 xalloc() `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.302.6 Member Data Documentation

4.302.6.1 adjustfield `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of setf.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.302.6.2 app

`const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.302.6.3 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.302.6.4 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.302.6.5 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.302.6.6 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.302.6.7 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.302.6.8 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.302.6.9 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.302.6.10 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.302.6.11 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.302.6.12 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.302.6.13 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.302.6.14 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.302.6.15 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.302.6.16 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.302.6.17 hex `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.302.6.18 in `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.302.6.19 internal `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.302.6.20 left `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.302.6.21 oct `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.302.6.22 out `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc

>::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >↩
::xsputn().

4.302.6.23 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.302.6.24 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.302.6.25 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.302.6.26 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.302.6.27 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.302.6.28 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.302.6.29 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.302.6.30 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.302.6.31 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- fstream

- __ostream_type & operator<< (ios_base &(*__pf)(ios_base &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

- __ostream_type & operator<< (double __f)
- __ostream_type & operator<< (float __f)
- __ostream_type & operator<< (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.303.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ostream< _CharT, _Traits >

Template class basic_ostream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual output.
Definition at line 58 of file ostream.

4.303.2 Member Typedef Documentation

4.303.2.1 __num_get_type `template<typename _CharT , typename _Traits >`

`typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_get_type [inherited]`

These are non-standard types.
Definition at line 91 of file basic_ios.h.

4.303.2.2 event_callback `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.

Parameters

_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ∼ios().
Definition at line 529 of file ios_base.h.

4.303.2.3 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.303.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.303.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.303.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.303.3 Member Enumeration Documentation

4.303.3.1 event `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.303.4 Constructor & Destructor Documentation

4.303.4.1 basic_ostream() `template<typename _CharT , typename _Traits >`

```
std::basic_ostream< _CharT, _Traits >::basic_ostream (
            __streambuf_type * __sb )  [inline], [explicit]
```

Base constructor.
This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.
Definition at line 84 of file ostream.

4.303.4.2 ~basic_ostream() `template<typename _CharT , typename _Traits >`

```
virtual std::basic_ostream< _CharT, _Traits >::~basic_ostream ( )  [inline], [virtual]
```

Base destructor.
This does very little apart from providing a virtual base dtor.
Definition at line 93 of file ostream.

4.303.5 Member Function Documentation

4.303.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const  [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num↩_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get↩_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.303.5.2 _M_write() `template<typename _CharT , typename _Traits >`

```
void std::basic_ostream< _CharT, _Traits >::_M_write (
            const char_type * __s,
            streamsize __n )  [inline]
```

Core write functionality, without sentry.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.303.5.3 bad() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.303.5.4 clear() template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::clear (
iostate __state = goodbit) [inherited]

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.303.5.5 copyfmt() template<typename _CharT , typename _Traits >

basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
const basic_ios< _CharT, _Traits > & __rhs) [inherited]

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.303.5.6 eof() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.303.5.7 exceptions() [1/2] template<typename _CharT , typename _Traits >

iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.303.5.8 exceptions() [2/2] template<typename _CharT , typename _Traits >

void std::basic_ios< _CharT, _Traits >::exceptions (
iostate *__except*) [inline], [inherited]

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.303.5.9 fail() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.303.5.10 fill() [1/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.303.5.11 fill() [2/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch )  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.303.5.12 flags() [1/2] fmtflags std::ios_base::flags ( ) const [inline], [inherited]

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_↩ put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.303.5.13 flags() [2/2] fmtflags std::ios_base::flags (

```
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.303.5.14 flush() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.303.5.15 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.303.5.16 good() template<typename _CharT , typename _Traits > bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.303.5.17 imbue() template<typename _CharT , typename _Traits > locale std::basic_ios< _CharT, _Traits >::imbue (const locale & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.303.5.18 init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.303.5.19 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.303.5.20 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.303.5.21 operator bool()

`template<typename _CharT , typename _Traits >`
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]`
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.303.5.22 operator"!()

`template<typename _CharT , typename _Traits >`
`bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]`
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.303.5.23 operator<<() [1/17]

`template<typename _CharT , typename _Traits >`
`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (`
`__ios_type &(*)(__ios_type &) __pf ) [inline]`
Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.303.5.24 operator<<() [2/17]

`template<typename _CharT , typename _Traits >`
`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (`
`__ostream_type &(*)(__ostream_type &) __pf ) [inline]`
Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.303.5.25 operator<<() [3/17]

`template<typename _CharT , typename _Traits >`
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`
`__streambuf_type * __sb )`
Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.303.5.26 operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n )  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.303.5.27 operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p )  [inline]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.303.5.28 operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 219 of file ostream.

4.303.5.29 operator<<() [7/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f )  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 223 of file ostream.

4.303.5.30 operator<<() [8/17] template<typename _CharT , typename _Traits >

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n )
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

Definition at line 63 of file ostream.tcc.

4.303.5.31 operator<<() [9/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(*)(ios_base &) __pf )  [inline]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 126 of file ostream.

4.303.5.32 operator<<() [10/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n )  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 165 of file ostream.

4.303.5.33 operator<<() [11/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f )  [inline]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 231 of file ostream.

4.303.5.34 operator<<() [12/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n )  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 200 of file ostream.

4.303.5.35 operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            short __n )
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.
References std::ios_base::goodbit.

4.303.5.36 operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            unsigned int __n )  [inline]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 191 of file ostream.

4.303.5.37 operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
```

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned long __n) [inline]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 169 of file ostream.

4.303.5.38 operator<<() [16/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned long long __n) [inline]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 204 of file ostream.

4.303.5.39 operator<<() [17/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned short __n) [inline]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 180 of file ostream.

4.303.5.40 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.303.5.41 precision() [2/2]

```
streamsize std::ios_base::precision (
        streamsize __prec )  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.303.5.42 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
        char_type __c )
```

Simple insertion.

Parameters

__c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.303.5.43 pword()

```
void*& std::ios_base::pword (
        int __ix )  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _*ix*	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.303.5.44 rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::rdbuf ( ) const  [inline],
[inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.
Definition at line 321 of file basic_ios.h.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::tellg(), and std::ws().

4.303.5.45 rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.303.5.46 rdstate()

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.303.5.47 register_callback()

```
void std::ios_base::register_callback (
        event_callback __fn,
        int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.303.5.48 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
        off_type __off,
        ios_base::seekdir __dir )
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.303.5.49 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
        pos_type __pos )
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.
References std::ios_base::goodbit.

4.303.5.50 setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.303.5.51 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.303.5.52 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.303.5.53 sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
            bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.303.5.54 tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
Definition at line 236 of file ostream.tcc.

4.303.5.55 tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.303.5.56 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.303.5.57 unsetf() `void std::ios_base::unsetf ( fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.303.5.58 widen() `template<typename _CharT , typename _Traits > char_type std::basic_ios< _CharT, _Traits >::widen ( char __c ) const [inline], [inherited]`

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩ html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.303.5.59 width() [1/2] `streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.303.5.60 width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.303.5.61 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n )
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.303.5.62 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.303.6 Member Data Documentation

4.303.6.1 adjustfield const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.303.6.2 app const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.303.6.3 ate const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.303.6.4 badbit const iostate std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.303.6.5 basefield const fmtflags std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.303.6.6 beg const seekdir std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.303.6.7 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.

Definition at line 458 of file ios_base.h.

4.303.6.8 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Definition at line 344 of file ios_base.h.

Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.303.6.9 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Definition at line 485 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.303.6.10 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.303.6.11 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Definition at line 488 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.303.6.12 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Definition at line 423 of file ios_base.h.

Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.303.6.13 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::

::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.303.6.14 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.303.6.15 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.303.6.16 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.303.6.17 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.303.6.18 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.303.6.19 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.303.6.20 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.303.6.21 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.303.6.22 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.303.6.23 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.303.6.24 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.303.6.25 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.303.6.26 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.303.6.27 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.303.6.28 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.303.6.29 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.303.6.30 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.303.6.31 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd
- ostream
- ostream.tcc

4.304 std::basic_ostringstream< _CharT, _Traits, _Alloc > Class Template Reference

Inheritance diagram for std::basic_ostringstream< _CharT, _Traits, _Alloc >:

Public Types

- typedef ctype< _CharT > **__ctype_type**
- typedef basic_ios< _CharT, _Traits > **__ios_type**

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state without causing an ios_base::failure to be thrown. The original exception will then be rethrown.

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type std::basic_ostream::sentry. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, ios_base::badbit will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

4.304.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_ostringstream< _CharT, _Traits, _Alloc >

Controlling output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports writing to objects of type std::basic_string, using the inherited functions from std::basic_ostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.
Definition at line 550 of file sstream.

4.304.2 Member Typedef Documentation

4.304.2.1 __num_get_type

```
template<typename _CharT , typename _Traits >
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type [inherited]
```

These are non-standard types.
Definition at line 91 of file basic_ios.h.

4.304.2.2 event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,
int __i) [inherited]
```

The type of an event callback function.

Parameters

_e	One of the members of the event enum.
_b	Reference to the ios_base object.
_i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.304.2.3 fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase

- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.304.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.304.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.304.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.304.3 Member Enumeration Documentation

4.304.3.1 event enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.304.4 Constructor & Destructor Documentation

4.304.4.1 basic_ostringstream() [1/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream ( ) [inline]

Default constructor starts with an empty string buffer.
Initializes sb using mode|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 583 of file sstream.

4.304.4.2 basic_ostringstream() [2/3] template<typename _CharT , typename _Traits , typename _Alloc >

```
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
            ios_base::openmode __mode ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

ios_base::out is automatically included in *mode*.
Initializes sb using mode|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 600 of file sstream.

4.304.4.3 basic_ostringstream() [3/3] template<typename _CharT , typename _Traits , typename _Alloc >

```
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
            const __string_type & __str,
            ios_base::openmode __mode = ios_base::out ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

ios_base::out is automatically included in *mode*.
Initializes sb using *str* and mode|out, and passes &sb to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 618 of file sstream.

4.304.4.4 ~basic_ostringstream() template<typename _CharT , typename _Traits , typename _Alloc > std::basic_ostringstream< _CharT, _Traits, _Alloc >::~basic_ostringstream ( ) [inline]

The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.
Definition at line 629 of file sstream.

4.304.5 Member Function Documentation

4.304.5.1 _M_getloc() const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.304.5.2 _M_write() template<typename _CharT , typename _Traits >

```
void std::basic_ostream< _CharT, _Traits >::_M_write (
             const char_type * __s,
             streamsize __n ) [inline], [inherited]
```

Core write functionality, without sentry.

Parameters

_s	The array to insert.
_n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.304.5.3 bad() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.304.5.4 clear() template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit )  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.304.5.5 copyfmt() template<typename _CharT , typename _Traits >

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs )  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.304.5.6 eof() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.304.5.7 exceptions() [1/2] template<typename _CharT , typename _Traits >

```
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.304.5.8 exceptions() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.304.5.9 fail() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.304.5.10 fill() [1/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.304.5.11 fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.304.5.12 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.304.5.13 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.304.5.14 flush() template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]

Synchronizing the stream buffer.

Returns

*this

If rdbuf() is a null pointer, changes nothing.
Otherwise, calls rdbuf()->pubsync(), and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.304.5.15 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If imbue(loc) has previously been called, then this function returns loc. Otherwise, it returns a copy of std::locale(), the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.304.5.16 good() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.304.5.17 imbue() template<typename _CharT , typename _Traits >

locale std::basic_ios< _CharT, _Traits >::imbue (
const locale & *__loc*) [inherited]

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.304.5.18 init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.304.5.19 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

__ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.304.5.20 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 430 of file basic_ios.h.

4.304.5.21 operator bool()

`template<typename _CharT , typename _Traits >`
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]`
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.304.5.22 operator"!()

`template<typename _CharT , typename _Traits >`
`bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]`
The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.304.5.23 operator<<() [1/17]

`template<typename _CharT , typename _Traits >`
`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (`
`__ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]`
Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.304.5.24 operator<<() [2/17]

`template<typename _CharT , typename _Traits >`
`__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (`
`__ostream_type &(*)(__ostream_type &) __pf ) [inline], [inherited]`
Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.304.5.25 operator<<() [3/17]

`template<typename _CharT , typename _Traits >`
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`
`__streambuf_type * __sb ) [inherited]`
Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from __sb and inserted into *this until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from __sb, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.304.5.26 operator<<() [4/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.304.5.27 operator<<() [5/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p )  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.304.5.28 operator<<() [6/17] template<typename _CharT , typename _Traits >

```
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 219 of file ostream.

4.304.5.29 operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 223 of file ostream.

4.304.5.30 operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n )  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

Definition at line 63 of file ostream.tcc.

4.304.5.31 operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(*)(ios_base &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 126 of file ostream.

4.304.5.32 operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _*n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 165 of file ostream.

4.304.5.33 operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 231 of file ostream.

4.304.5.34 operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 200 of file ostream.

4.304.5.35 operator<<() [13/17] template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (short __n) [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.
References std::ios_base::goodbit.

4.304.5.36 operator<<() [14/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (unsigned int __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 191 of file ostream.

4.304.5.37 operator<<() [15/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 169 of file ostream.

4.304.5.38 operator<<() [16/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned long long __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 204 of file ostream.

4.304.5.39 operator<<() [17/17] template<typename _CharT , typename _Traits >

__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
unsigned short __n) [inline], [inherited]

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 180 of file ostream.

4.304.5.40 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.304.5.41 precision() [2/2]

```
streamsize std::ios_base::precision (
            streamsize __prec )  [inline], [inherited]
```

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.304.5.42 put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
            char_type __c )  [inherited]
```

Simple insertion.

Parameters

__c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.304.5.43 pword()

```
void*& std::ios_base::pword (
            int __ix )  [inline], [inherited]
```

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.304.5.44 rdbuf() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__stringbuf_type* std::basic_ostringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const  [inline]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 669 of file sstream.

4.304.5.45 rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
            basic_streambuf< _CharT, _Traits > * __sb )  [inherited]
```

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.304.5.46 rdstate()

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const  [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< ↩ _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.304.5.47 register_callback()

```
void std::ios_base::register_callback (
        event_callback __fn,
        int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.304.5.48 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
        off_type __off,
        ios_base::seekdir __dir )  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.304.5.49 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
        pos_type __pos )  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.
References std::ios_base::goodbit.

4.304.5.50 setf() [1/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.304.5.51 setf() [2/2]

```
fmtflags std::ios_base::setf (
            fmtflags __fmtfl,
            fmtflags __mask )  [inline], [inherited]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.304.5.52 setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
            iostate __state )  [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.304.5.53 str() [1/2] template<typename _CharT , typename _Traits , typename _Alloc >

__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

rdbuf()->str()

Definition at line 677 of file sstream.

4.304.5.54 str() [2/2] template<typename _CharT , typename _Traits , typename _Alloc >

void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (
const __string_type & __s) [inline]

Setting a new buffer.

Parameters

_↩ _s	The string to use as a new sequence.

Calls rdbuf()->str(s).
Definition at line 687 of file sstream.

4.304.5.55 sync_with_stdio() static bool std::ios_base::sync_with_stdio (

bool __sync = true) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.↩ org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.304.5.56 tellp() template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
Definition at line 236 of file ostream.tcc.

4.304.5.57 tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const  [inline], [inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.304.5.58 tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie (
            basic_ostream< _CharT, _Traits > * __tiestr )  [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.304.5.59 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask )  [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.304.5.60 widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const  [inline], [inherited]
```

Widens characters.

Parameters

_↩ _c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.304.5.61 width() [1/2]

```
streamsize std::ios_base::width ( ) const  [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.304.5.62 width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.304.5.63 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n )  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.304.5.64 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.304.6 Member Data Documentation

4.304.6.1 adjustfield const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of setf.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.304.6.2 app const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.304.6.3 ate const openmode std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.304.6.4 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.304.6.5 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.304.6.6 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.304.6.7 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.304.6.8 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.304.6.9 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.304.6.10 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.304.6.11 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.

Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.304.6.12 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.304.6.13 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.304.6.14 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.304.6.15 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.304.6.16 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.304.6.17 hex

`const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.304.6.18 in

`const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.304.6.19 internal

`const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.304.6.20 left

`const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.304.6.21 oct

`const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.304.6.22 out

`const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.304.6.23 right

`const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.304.6.24 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.

Referenced by std::hexfloat(), and std::scientific().

4.304.6.25 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.304.6.26 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.304.6.27 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.304.6.28 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.304.6.29 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.304.6.30 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.304.6.31 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().

4.305.1 Detailed Description

template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex< _Ch_type, _Rx_traits >

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.
Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.
Definition at line 388 of file regex.h.

4.305.2 Constructor & Destructor Documentation

4.305.2.1 basic_regex() [1/8] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex ( )  [inline]
```

Constructs a basic regular expression that does not match any character sequence.
Definition at line 423 of file regex.h.
Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.2.2 basic_regex() [2/8] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const _Ch_type * __p,
            flag_type __f = ECMAScript )  [inline], [explicit]
```

Constructs a basic regular expression from the sequence [__p, __p + char_traits<_Ch_type>::length(__p)) interpreted according to the flags in __f.

Parameters

_↩ _p	A pointer to the start of a C-style null-terminated string containing a regular expression.
_↩ _f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __p is not a valid regular expression.

Definition at line 439 of file regex.h.

4.305.2.3 basic_regex() [3/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const _Ch_type * __p,
            std::size_t __len,
            flag_type __f = ECMAScript )  [inline]
```

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in `f`.

Parameters

__p	A pointer to the start of a string containing a regular expression.
__len	The length of the string containing the regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __p is not a valid regular expression.

Definition at line 455 of file regex.h.

4.305.2.4 basic_regex() [4/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const basic_regex< _Ch_type, _Rx_traits > & __rhs )  [default]
```

Copy-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

4.305.2.5 basic_regex() [5/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            basic_regex< _Ch_type, _Rx_traits > && __rhs )  [default], [noexcept]
```

Move-constructs a basic regular expression.

Parameters

__rhs	A `regex` object.

4.305.2.6 basic_regex() [6/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Ch_alloc >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s,
            flag_type __f = ECMAScript ) [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

Parameters

__s	A string containing a regular expression.
__f	Flags indicating the syntax rules and options.

Exceptions

regex_error	if __s is not a valid regular expression.

Definition at line 485 of file regex.h.

4.305.2.7 basic_regex() [7/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _FwdIter >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
            _FwdIter __first,
            _FwdIter __last,
            flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from the range [first, last) interpreted according to the flags in `f`.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__f	The format flags of the regular expression.

Exceptions

regex_error	if [__first, __last) is not a valid regular expression.

Definition at line 505 of file regex.h.

4.305.2.8 basic_regex() [8/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
```

```
            initializer_list< _Ch_type > __l,
            flag_type __f = ECMAScript )  [inline]
```

Constructs a basic regular expression from an initializer list.

Parameters

__l	The initializer list.
__f	The format flags of the regular expression.

Exceptions

regex_error	if __l is not a valid regular expression.

Definition at line 518 of file regex.h.

4.305.2.9 ~basic_regex()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::~basic_regex ( )  [inline]
```

Destroys a basic regular expression.
Definition at line 525 of file regex.h.

4.305.3 Member Function Documentation

4.305.3.1 assign() [1/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _InputIterator >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            _InputIterator __first,
            _InputIterator __last,
            flag_type __flags = ECMAScript )  [inline]
```

Assigns a new regular expression to a regex object.

Parameters

__first	The start of a range containing a valid regular expression.
__last	The end of a range containing a valid regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, the object remains unchanged.

Definition at line 674 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.2 assign() [2/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            basic_regex< _Ch_type, _Rx_traits > && __rhs )  [inline], [noexcept]
```

The move-assignment operator.

Parameters

__rhs	Another regular expression object.

Definition at line 596 of file regex.h.
References std::move(), and std::basic_regex< _Ch_type, _Rx_traits >::swap().

4.305.3.3 assign() [3/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const _Ch_type * __p,
            flag_type __flags = ECMAScript )  [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style null-terminated string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __p does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, ∗this remains unchanged.

Definition at line 617 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.4 assign() [4/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const _Ch_type * __p,
            size_t __len,
            flag_type __flags = ECMAScript )  [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

Parameters

__p	A pointer to a C-style string containing a regular expression pattern.
__len	The length of the regular expression pattern string.
__flags	Syntax option flags.

Exceptions

regex_error	if p does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, *this remains unchanged.

Definition at line 636 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.5 assign() [5/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const basic_regex< _Ch_type, _Rx_traits > & __rhs )  [inline]
```

the real assignment operator.

Parameters

__rhs	Another regular expression object.

Definition at line 583 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::swap().
Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::basic_regex< _Ch_type, _Rx_traits >::operator=().

4.305.3.6 assign() [6/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Alloc >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s,
            flag_type __flags = ECMAScript )  [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

Parameters

__s	A string containing a regular expression pattern.
__flags	Syntax option flags.

Exceptions

regex_error	if __s does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, *this remains unchanged.

Definition at line 652 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::basic_regex(), std::basic_regex< _Ch_type, _Rx_traits >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.305.3.7 assign() [7/7] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::assign (
            initializer_list< _Ch_type > __l,
            flag_type __flags = ECMAScript )  [inline]
```

Assigns a new regular expression to a regex object.

Parameters

__l	An initializer list representing a regular expression.
__flags	Syntax option flags.

Exceptions

regex_error	if __l does not contain a valid regular expression pattern interpreted according to __flags. If regex_error is thrown, the object remains unchanged.

Definition at line 690 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.8 flags() template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
flag_type std::basic_regex< _Ch_type, _Rx_traits >::flags ( ) const  [inline]
```

Gets the flags used to construct the regular expression or in the last call to assign().
Definition at line 711 of file regex.h.

4.305.3.9 getloc() template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
locale_type std::basic_regex< _Ch_type, _Rx_traits >::getloc ( ) const  [inline]
```

Gets the locale currently imbued in the regular expression object.
Definition at line 733 of file regex.h.

4.305.3.10 imbue() template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>

```
locale_type std::basic_regex< _Ch_type, _Rx_traits >::imbue (
            locale_type __loc )  [inline]
```

Imbues the regular expression object with the given locale.

Parameters

__loc	A locale.

Definition at line 721 of file regex.h.

4.305.3.11 mark_count() template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_

type>>
unsigned int std::basic_regex< _Ch_type, _Rx_traits >::mark_count ( ) const [inline]
Gets the number of marked subexpressions within the regular expression.
Definition at line 699 of file regex.h.

4.305.3.12 operator=() [1/5] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↩ _type>>

basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
basic_regex< _Ch_type, _Rx_traits > && *__rhs*) [inline], [noexcept]
Move-assigns one regular expression to another.
Definition at line 539 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::move().

4.305.3.13 operator=() [2/5] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↩ _type>>

basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
const _Ch_type * *__p*) [inline]
Replaces a regular expression with a new one constructed from a C-style null-terminated string.

Parameters

_↩ *_p*	A pointer to the start of a null-terminated C-style string containing a regular expression.

Definition at line 550 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.14 operator=() [3/5] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↩ _type>>

basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
const basic_regex< _Ch_type, _Rx_traits > & *__rhs*) [inline]
Assigns one regular expression to another.
Definition at line 532 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.15 operator=() [4/5] template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↩ _type>>

template<typename _Ch_traits , typename _Alloc >
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
const basic_string< _Ch_type, _Ch_traits, _Alloc > & *__s*) [inline]
Replaces a regular expression with a new one constructed from a string.

Parameters

_↩ *_s*	A pointer to a string containing a regular expression.

Definition at line 573 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.16 operator=() [5/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex& std::basic_regex< _Ch_type, _Rx_traits >::operator= (
            initializer_list< _Ch_type > __l ) [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

Parameters

__l	The initializer list.

Exceptions

regex_error	if __l is not a valid regular expression.

Definition at line 562 of file regex.h.
References std::basic_regex< _Ch_type, _Rx_traits >::assign().

4.305.3.17 swap()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
void std::basic_regex< _Ch_type, _Rx_traits >::swap (
            basic_regex< _Ch_type, _Rx_traits > & __rhs ) [inline]
```

Swaps the contents of two regular expression objects.

Parameters

__rhs	Another regular expression object.

Definition at line 743 of file regex.h.
Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign(), and std::basic_regex< _Ch_type, _Rx_traits >::swap().

4.306.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_streambuf< _CharT, _Traits >

The actual work of input and output (interface).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.
Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:
   - The controlled input sequence can be not readable.
   - The controlled output sequence can be not writable.
   - The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
   - The controlled sequences can support operations *directly* to or from associated sequences.
   - The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

1. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:
   - the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
   - the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
   - the *end pointer*, or first element address beyond the end of the array (called *xend* here).

1. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:
   - If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
   - If *xnext* is not a null pointer and *xnext* $<$ *xend* for an output sequence, then a *write position* is available. In this case, $*$*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
   - If *xnext* is not a null pointer and *xbeg* $<$ *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
   - If *xnext* is not a null pointer and *xnext*$<$ *xend* for an input sequence, then a *read position* is available. In this case, $*$*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

Definition at line 122 of file streambuf.

4.306.2 Member Typedef Documentation

4.306.2.1 __streambuf_type

```
template<typename _CharT , typename _Traits >
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _CharT, _Traits >::__streambuf_type
```

This is a non-standard type.
Definition at line 140 of file streambuf.

4.306.2.2 char_type

```
template<typename _CharT , typename _Traits >
typedef _CharT std::basic_streambuf< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 131 of file streambuf.

4.306.2.3 int_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::int_type std::basic_streambuf< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 133 of file streambuf.

4.306.2.4 off_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::off_type std::basic_streambuf< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 135 of file streambuf.

4.306.2.5 pos_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 134 of file streambuf.

4.306.2.6 traits_type

```
template<typename _CharT , typename _Traits >
typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.
Definition at line 132 of file streambuf.

4.306.3 Constructor & Destructor Documentation

4.306.3.1 ~basic_streambuf()

```
template<typename _CharT , typename _Traits >
virtual std::basic_streambuf< _CharT, _Traits >::~basic_streambuf ( )  [inline], [virtual]
```

Destructor deallocates no buffer space.
Definition at line 204 of file streambuf.

4.306.3.2 basic_streambuf() template<typename _CharT , typename _Traits >

std::basic_streambuf< _CharT, _Traits >::basic_streambuf ( ) [inline], [protected]

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the basic_streambuf class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

Definition at line 470 of file streambuf.

4.306.4 Member Function Documentation

4.306.4.1 eback() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

4.306.4.2 egptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected]

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

4.306.4.3 epptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected]

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

4.306.4.4 gbump() template<typename _CharT , typename _Traits >

```
void std::basic_streambuf< _CharT, _Traits >::gbump (
            int __n )  [inline], [protected]
```

Moving the read position.

Parameters

_↩ _n	The delta by which to move.

This just advances the read position without returning any data.
Definition at line 505 of file streambuf.

4.306.4.5 getloc() `template<typename _CharT , typename _Traits >`

`locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline]`

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Definition at line 233 of file streambuf.

4.306.4.6 gptr() `template<typename _CharT , typename _Traits >`

`char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected]`

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

4.306.4.7 imbue() `template<typename _CharT , typename _Traits >`

```
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
            const locale & __loc ) [inline], [protected], [virtual]
```

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 583 of file streambuf.

4.306.4.8 in_avail()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( )  [inline]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.
Definition at line 291 of file streambuf.

4.306.4.9 overflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::overflow (
            int_type __c = traits_type::eof() )  [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_↩ _c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in std::wbuffer_convert< _Codecvt, _Elem, _Tr >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type
Definition at line 775 of file streambuf.

4.306.4.10 pbackfail()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::pbackfail (
            int_type __c = traits_type::eof() )  [inline], [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

_↩ _c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented in std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, enc
and std::basic_filebuf< char_type, traits_type >.
Definition at line 731 of file streambuf.

4.306.4.11 pbase() `template<typename _CharT , typename _Traits >`

```
char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const  [inline], [protected]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

4.306.4.12 pbump() `template<typename _CharT , typename _Traits >`

```
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n )  [inline], [protected]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Definition at line 552 of file streambuf.

4.306.4.13 pptr() `template<typename _CharT , typename _Traits >`

```
char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const  [inline], [protected]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

4.306.4.14 pubimbue() template<typename _CharT , typename _Traits >

```
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc )  [inline]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).
Definition at line 216 of file streambuf.

4.306.4.15 pubseekoff() template<typename _CharT , typename _Traits >

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.
Definition at line 258 of file streambuf.

4.306.4.16 pubseekpos() template<typename _CharT , typename _Traits >

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.
Definition at line 270 of file streambuf.

4.306.4.17 pubsetbuf() template<typename _CharT , typename _Traits >

```
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
```

```
            streamsize __n )  [inline]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.
Definition at line 246 of file streambuf.

4.306.4.18 pubsync() `template<typename _CharT , typename _Traits >`

```
int std::basic_streambuf< _CharT, _Traits >::pubsync ( )  [inline]
```

Calls virtual sync function.
Definition at line 278 of file streambuf.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync().

4.306.4.19 sbumpc() `template<typename _CharT , typename _Traits >`

```
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( )  [inline]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Definition at line 323 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::seekg().

4.306.4.20 seekoff() `template<typename _CharT , typename _Traits >`

```
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
            off_type ,
            ios_base::seekdir ,
            ios_base::openmode  = ios_base::in | ios_base::out )  [inline], [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, enc and std::basic_filebuf< char_type, traits_type >.
Definition at line 609 of file streambuf.

4.306.4.21 seekpos() `template<typename _CharT , typename _Traits >`

```
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
            pos_type ,
            ios_base::openmode  = ios_base::in | ios_base::out )  [inline], [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >, std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type
Definition at line 621 of file streambuf.

4.306.4.22 setbuf() template<typename _CharT , typename _Traits >

```
virtual basic_streambuf<char_type,_Traits>* std::basic_streambuf< _CharT, _Traits >::setbuf (
            char_type * ,
            streamsize  )  [inline], [protected], [virtual]
```

Manipulates the buffer.
Each derived class provides its own appropriate behavior. See the next-to-last paragraph of https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std:
std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 598 of file streambuf.

4.306.4.23 setg() template<typename _CharT , typename _Traits >

```
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend )  [inline], [protected]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

4.306.4.24 setp() template<typename _CharT , typename _Traits >

```
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend )  [inline], [protected]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.

Parameters

__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

4.306.4.25 sgetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( )  [inline]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Definition at line 345 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::tellg().

4.306.4.26 sgetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
             char_type * __s,
             streamsize __n )  [inline]
```

Entry point for xsgetn.

Parameters

_s	A buffer area.
_n	A count.

Returns xsgetn(__s,__n). The effect is to fill *__s*[0] through *__s*[__n-1] with characters from the input sequence, if possible.
Definition at line 364 of file streambuf.

4.306.4.27 showmanyc()

```
template<typename _CharT , typename _Traits >
virtual streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ( )  [inline], [protected],
[virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented in std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std:
std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 656 of file streambuf.

4.306.4.28 snextc() `template<typename _CharT , typename _Traits >`

`int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Definition at line 305 of file streambuf.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::putback(), and std::basic_istream< char >::tellg().

4.306.4.29 sputbackc() `template<typename _CharT , typename _Traits >`

`int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (`
`char_type __c ) [inline]`

Pushing characters back into the input stream.

Parameters

__c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but *__c* is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be *__c*.
Definition at line 379 of file streambuf.

4.306.4.30 sputc() `template<typename _CharT , typename _Traits >`

`int_type std::basic_streambuf< _CharT, _Traits >::sputc (`
`char_type __c ) [inline]`

Entry point for all single-character output functions.

Parameters

__c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores *__c* in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Definition at line 431 of file streambuf.
Referenced by std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.306.4.31 sputn() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n )  [inline]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write *__s*[0] through *__s*[__n-1] to the output sequence, if possible.
Definition at line 457 of file streambuf.

4.306.4.32 sungetc() `template<typename _CharT , typename _Traits >`

```
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( )  [inline]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Definition at line 404 of file streambuf.

4.306.4.33 sync() `template<typename _CharT , typename _Traits >`

```
virtual int std::basic_streambuf< _CharT, _Traits >::sync (
            void  )  [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, __gnu_cxx::stdio_sync_file and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Definition at line 634 of file streambuf.

4.306.4.34 uflow() template<typename _CharT , typename _Traits >

```
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( )  [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Definition at line 707 of file streambuf.

4.306.4.35 underflow() template<typename _CharT , typename _Traits >

```
virtual int_type std::basic_streambuf< _CharT, _Traits >::underflow ( )  [inline], [protected],
[virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented in std::basic_stringbuf< _CharT, _Traits, _Alloc >, std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std:: std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, __gnu_cxx::stdio_sync_file and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.
Definition at line 694 of file streambuf.

4.306.4.36 xsgetn() template<typename _CharT , typename _Traits >

```
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
            char_type * __s,
            streamsize __n )  [protected], [virtual]
```

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 45 of file streambuf.tcc.
References std::min().

4.306.4.37 xsputn() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n )  [protected], [virtual]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 79 of file streambuf.tcc.
References std::min().

4.307.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>
class __gnu_debug::basic_string< _CharT, _Traits, _Allocator >

Class std::basic_string with safety/checking/debug instrumentation.
Definition at line 86 of file debug/string.

4.307.2 Member Function Documentation

4.307.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.307.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.307.2.3 _M_get_mutex() __gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.307.2.4 _M_invalidate_all() void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.307.2.5 _M_invalidate_if() template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
_Predicate __pred) [inherited]

Invalidates all iterators x that reference this sequence, are not singular, and for which __pred(x) returns true. __pred will be invoked with the normal iterators nested in the safe ones.
Definition at line 37 of file safe_sequence.tcc.

4.307.2.6 _M_revalidate_singular() void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.307.2.7 _M_swap() void __gnu_debug::_Safe_sequence_base::_M_swap (
_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.307.2.8 _M_transfer_from_if() template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
_Safe_sequence< _Sequence > & __from,
_Predicate __pred) [inherited]

Transfers all iterators x that reference from sequence, are not singular, and for which __pred(x) returns true. __pred will be invoked with the normal iterators nested in the safe ones.
Definition at line 68 of file safe_sequence.tcc.
References std::__addressof(), __gnu_debug::_Safe_sequence_base::_M_const_iterators, __gnu_debug::_Safe_iterator_base::_M_detach_single(), __gnu_debug::_Safe_sequence_base::_M_get_mutex(), __gnu_debug::_Safe_sequence_base::_M_iterators, __gnu_debug::_Safe_iterator_base::_M_next, __gnu_debug::_Safe_iterator_base::_M_prior, __gnu_debug::_Safe_iterator_base::_M_sequence, and __gnu_debug::_Safe_iterator_base::_M_version.

4.307.2.9 append() [1/3] basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > > & std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::append (
const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > > & __str) [inherited]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 4232 of file basic_string.tcc.

4.307.2.10 append() [2/3]

```
basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > > & std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::append (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > > & __str,
            size_type __pos,
            size_type __n = npos )  [inherited]
```

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.
Definition at line 4248 of file basic_string.tcc.

4.307.2.11 append() [3/3]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::append (
            initializer_list< _CharT > __l )  [inline], [inherited]
```

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 4289 of file basic_string.h.

4.307.2.12 assign() [1/3]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::assign (
            basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > > && _↩
_str )  [inline], [noexcept], [inherited]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.
Definition at line 4371 of file basic_string.h.

4.307.2.13 assign() [2/3]

```
basic_string< _CharT, std::char_traits< _CharT > , std::allocator< ↩
_CharT > > & std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT >
>::assign (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str )  [inherited]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Definition at line 4359 of file basic_string.tcc.

4.307.2.14 assign() [3/3]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::assign (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos,
            size_type __n = npos )  [inline], [inherited]
```

Set value to a substring of a string.

Parameters

__str	The string to use.

Parameters

__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.
Definition at line 4393 of file basic_string.h.

4.307.2.15 at() [1/4]

```
reference std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::at (
            size_type __n ) [inline], [inherited]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.
Definition at line 4115 of file basic_string.h.

4.307.2.16 at() [2/4]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Alloc >::at [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.
Definition at line 4115 of file basic_string.h.

4.307.2.17 at() [3/4]

```
const_reference std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::at (
            size_type __n ) const  [inline], [inherited]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.
Definition at line 4093 of file basic_string.h.

4.307.2.18 at() [4/4]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.
Definition at line 4093 of file basic_string.h.

4.307.2.19 back() [1/3]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Alloc >::back  [inline]
```

Returns a read/write reference to the data at the last element of the string.
Definition at line 4154 of file basic_string.h.

4.307.2.20 back() [2/3]

```
const_reference std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::back ( ) const  [inline], [noexcept], [inherited]
```

Returns a read-only (constant) reference to the data at the last element of the string.
Definition at line 4165 of file basic_string.h.

4.307.2.21 back() [3/3]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.
Definition at line 4165 of file basic_string.h.

4.307.2.22 capacity() [1/2]

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::capacity ( ) const  [inline], [noexcept], [inherited]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.
Definition at line 3989 of file basic_string.h.

4.307.2.23 capacity() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_Char↩
T>, typename _Allocator = std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Alloc >::capacity  [inline], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.
Definition at line 3989 of file basic_string.h.

4.307.2.24 compare() [1/3]

```
int std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::compare (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str ) const  [inline], [inherited]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 5775 of file basic_string.h.

4.307.2.25 compare() [2/3]

```
int std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str ) const  [inherited]
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 5868 of file basic_string.tcc.

4.307.2.26 compare() [3/3]

```
int std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos2,
            size_type __n2 = npos ) const  [inherited]
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 5894 of file basic_string.tcc.

4.307.2.27 empty() [1/2]

```
bool std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::empty ( ) const  [inline], [noexcept], [inherited]
```

Returns true if the string is empty. Equivalent to `*this == ""`.
Definition at line 4039 of file basic_string.h.

4.307.2.28 empty() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty  [inline], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.
Definition at line 4039 of file basic_string.h.

4.307.2.29 erase() [1/2]

```
basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _↩
CharT > >::iterator std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _↩
CharT > >::erase (
            iterator __first,
            iterator __last )  [inherited]
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.
Definition at line 4758 of file basic_string.tcc.

4.307.2.30 erase() [2/2]

```
iterator std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::erase (
            iterator __position )  [inline], [inherited]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.
Definition at line 4738 of file basic_string.h.

4.307.2.31 find()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::find (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos = 0 ) const  [inline], [noexcept], [inherited]
```

Find position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 5283 of file basic_string.h.

4.307.2.32 find_first_not_of()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::find_first_not_of (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos = 0 ) const  [inline], [noexcept], [inherited]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5591 of file basic_string.h.

4.307.2.33 find_first_of()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::find_first_of (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos = 0 ) const  [inline], [noexcept], [inherited]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5424 of file basic_string.h.

4.307.2.34 find_last_not_of()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::find_last_not_of (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos = npos ) const  [inline], [noexcept], [inherited]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5673 of file basic_string.h.

4.307.2.35 find_last_of()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::find_last_of (
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos = npos ) const  [inline], [noexcept], [inherited]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5508 of file basic_string.h.

4.307.2.36 front() [1/3]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Alloc >::front  [inline]
```

Returns a read/write reference to the data at the first element of the string.
Definition at line 4132 of file basic_string.h.

4.307.2.37 front() [2/3]

```
const_reference std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::front ( ) const  [inline], [noexcept], [inherited]
```

Returns a read-only (constant) reference to the data at the first element of the string.
Definition at line 4143 of file basic_string.h.

4.307.2.38 front() [3/3]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::front  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.
Definition at line 4143 of file basic_string.h.

4.307.2.39 get_allocator() [1/2]

```
allocator_type std::basic_string< _CharT, std::char_traits< _CharT
> , std::allocator< _CharT > >::get_allocator ( ) const  [inline], [noexcept], [inherited]
```

Return copy of allocator used to construct this string.
Definition at line 5253 of file basic_string.h.

4.307.2.40 get_allocator() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_↩
CharT>, typename _Allocator = std::allocator<_CharT>>
allocator_type std::basic_string< _CharT, _Traits, _Alloc >::get_allocator  [inline], [noexcept]
```

Return copy of allocator used to construct this string.
Definition at line 5253 of file basic_string.h.

4.307.2.41 insert() [1/6]

```
iterator std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::insert (
            iterator __p,
            _CharT __c )  [inline], [inherited]
```

Insert one character.

Parameters

_↩ _p	Iterator referencing position in string to insert at.
_↩ _c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4662 of file basic_string.h.

4.307.2.42 insert() [2/6]

```
void std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::insert (
            iterator __p,
            _InputIterator __beg,
            _InputIterator __end )  [inline], [inherited]
```

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4527 of file basic_string.h.

4.307.2.43 insert() [3/6]

```
void std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::insert (
            iterator __p,
            initializer_list< _CharT > __l )  [inline], [inherited]
```

Insert an initializer_list of characters.

Parameters

__↩ _p	Iterator referencing location in string to insert at.
__↩ _l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 4538 of file basic_string.h.

4.307.2.44 insert() [4/6]

```
void std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::insert (
            iterator __p,
            size_type __n,
            _CharT __c )  [inline], [inherited]
```

Insert multiple characters.

Parameters

__p	Iterator referencing location in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts *__n* copies of character *__c* starting at the position referenced by iterator *__p*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4510 of file basic_string.h.

4.307.2.45 insert() [5/6]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::insert (
            size_type __pos1,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str )  [inline], [inherited]
```

Insert value of a string.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4558 of file basic_string.h.

4.307.2.46 insert() [6/6]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::insert (
            size_type __pos1,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos2,
            size_type __n = npos )  [inline], [inherited]
```

Insert a substring.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4580 of file basic_string.h.

4.307.2.47 length() [1/2]

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::length ( ) const  [inline], [noexcept], [inherited]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3932 of file basic_string.h.

4.307.2.48 length() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Alloc >::length  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3932 of file basic_string.h.

4.307.2.49 max_size() [1/2]

size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::max_size ( ) const [inline], [noexcept], [inherited]

Returns the size() of the largest possible string.

Definition at line 3937 of file basic_string.h.

4.307.2.50 max_size() [2/2]

template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size [inline], [noexcept]

Returns the size() of the largest possible string.

Definition at line 3937 of file basic_string.h.

4.307.2.51 operator+=()

basic_string& std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::operator+= (
const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > > & *__str*) [inline], [inherited]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 4179 of file basic_string.h.

4.307.2.52 replace() [1/8]

basic_string& std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator< _CharT > >::replace (
iterator *__i1*,
iterator *__i2*,
_InputIterator *__k1*,
_InputIterator *__k2*) [inline], [inherited]

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4986 of file basic_string.h.

4.307.2.53 replace() [2/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s )  [inline], [inherited]
```

Replace range of characters with C string.

Parameters

_i1	Iterator referencing start of range to replace.
_i2	Iterator referencing end of range to replace.
_s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4941 of file basic_string.h.

4.307.2.54 replace() [3/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s,
            size_type __n )  [inline], [inherited]
```

Replace range of characters with C substring.

Parameters

_i1	Iterator referencing start of range to replace.
_i2	Iterator referencing end of range to replace.

Parameters

_s	C string value to insert.
_n	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first *__n* characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4920 of file basic_string.h.

4.307.2.55 replace() [4/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            iterator __i1,
            iterator __i2,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str )  [inline], [inherited]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of *__str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4901 of file basic_string.h.

4.307.2.56 replace() [5/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            iterator __i1,
```

```
            iterator __i2,
            initializer_list< _CharT > __l )  [inline], [inherited]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown. Definition at line 5055 of file basic_string.h.

4.307.2.57 replace() [6/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            iterator __i1,
            iterator __i2,
            size_type __n,
            _CharT __c )  [inline], [inherited]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.
_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, __*n* copies of __*c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4962 of file basic_string.h.

4.307.2.58 replace() [7/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str )  [inline], [inherited]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of __*str* is inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4792 of file basic_string.h.

4.307.2.59 replace() [8/8]

```
basic_string& std::basic_string< _CharT, std::char_traits< _CharT > ,
std::allocator< _CharT > >::replace (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
            size_type __pos2,
            size_type __n2 = npos )  [inline], [inherited]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.

Parameters

__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4814 of file basic_string.h.

4.307.2.60 reserve() [1/2]

```
void std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::reserve (
            size_type __res_arg = 0 )  [inherited]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
Definition at line 4010 of file basic_string.tcc.

4.307.2.61 reserve() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
void std::basic_string< _CharT, _Traits, _Alloc >::reserve
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
Definition at line 4010 of file basic_string.tcc.

4.307.2.62 rfind()

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::rfind (
        const basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > >
& __str,
        size_type __pos = npos ) const  [inline], [noexcept], [inherited]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 5345 of file basic_string.h.

4.307.2.63 size() [1/2]

```
size_type std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::size ( ) const  [inline], [noexcept], [inherited]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3926 of file basic_string.h.

4.307.2.64 size() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
size_type std::basic_string< _CharT, _Traits, _Alloc >::size  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3926 of file basic_string.h.

4.307.2.65 swap()

```
void std::basic_string< _CharT, std::char_traits< _CharT > , std::allocator<
_CharT > >::swap (
```

basic_string< _CharT, std::char_traits< _CharT >, std::allocator< _CharT > > & __s) [noexcept], [inherited]

Swap contents with another string.

Parameters

_↩ _s	String to swap with.

Exchanges the contents of this string with that of __s in constant time.
Definition at line 5208 of file basic_string.tcc.

4.307.3 Member Data Documentation

4.307.3.1 _M_const_iterators

_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_↩ iterators [inherited]

The list of constant iterators that reference this container.
Definition at line 197 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.307.3.2 _M_iterators

_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.
Definition at line 194 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.307.3.3 _M_version

unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.
Definition at line 200 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.307.3.4 npos

template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>
const basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _↩ Alloc >::npos [static]

Value returned by various member functions when they fail.
Definition at line 3366 of file basic_string.h.
The documentation for this class was generated from the following file:

4.308.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >

Managing sequences of characters and character-like objects.

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

Meets the requirements of a `container`, a `reversible container`, and a `sequence`. Of the `optional sequence requirements`, only `push_back`, `at`, and `array` access are supported.

Todo Needs documentation! See `http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_style.html`

Documentation? What's that? Nathan Myers `ncm@cantrip.org`.
A string looks like this:

```
                                    [_Rep]
                                    _M_length
[basic_string<char_type>]           _M_capacity
_M_dataplus                         _M_refcount
_M_p ----------------->             unnamed array of char_type
```

Where the _M_p points to the first character in the string, and you cast it to a pointer-to-_Rep and subtract 1 to get a pointer to the header.
This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: _Rep::_M_data(), and string::_M_rep(); and the allocation function which gets a block of raw bytes and with room enough and constructs a _Rep object at the front.
The reason you want _M_data pointing to the character array and not the _Rep is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the _Rep for the debugger to use, so users can check the actual string length.)
Note that the _Rep object is a POD so that you can have a static *empty string* _Rep object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string _Rep object.
All but the last paragraph is considered pretty conventional for a C++ string implementation.
Definition at line 3152 of file basic_string.h.

4.308.2 Constructor & Destructor Documentation

4.308.2.1 basic_string() [1/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( ) [inline], [noexcept]
```

Default constructor creates an empty string.
Definition at line 3559 of file basic_string.h.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::substr().

4.308.2.2 basic_string() [2/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _Alloc & __a ) [explicit]
```

Construct an empty string using allocator *a*.
Definition at line 619 of file basic_string.tcc.

4.308.2.3 basic_string() [3/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str )
```

Construct string with copy of value of *str*.

Parameters

__str	Source string.

Definition at line 611 of file basic_string.tcc.

4.308.2.4 basic_string() [4/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            const _Alloc & __a = _Alloc() )
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__a	Allocator to use.

Definition at line 625 of file basic_string.tcc.

4.308.2.5 basic_string() [5/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n )
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.

Definition at line 635 of file basic_string.tcc.

4.308.2.6 basic_string() [6/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n,
            const _Alloc & __a )
```

Construct string as copy of a substring.

Parameters

__str	Source string.
__pos	Index of first character to copy from.
__n	Number of characters to copy.
__a	Allocator to use.

Definition at line 645 of file basic_string.tcc.

4.308.2.7 basic_string() [7/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            size_type __n,
            const _Alloc & __a = _Alloc() )
```

Construct string initialized by a character array.

Parameters

_↩ _s	Source character array.
_↩ _n	Number of characters to copy.
_↩ _a	Allocator to use (default is default allocator).

NB: *__s* must have at least *__n* characters, '\0' has no special meaning.
Definition at line 657 of file basic_string.tcc.

4.308.2.8 basic_string() [8/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            const _CharT * __s,
            const _Alloc & __a = _Alloc() )  [inline]
```

Construct string as copy of a C string.

Parameters

_↩ _s	Source C string.
_↩ _a	Allocator to use (default is default allocator).

Definition at line 3632 of file basic_string.h.

4.308.2.9 basic_string() [9/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            size_type __n,
            _CharT __c,
            const _Alloc & __a = _Alloc() )
```

Construct string as multiple characters.

Parameters

_↩ _n	Number of characters.
_↩ _c	Character to use.
_↩ _a	Allocator to use (default is default allocator).

Definition at line 663 of file basic_string.tcc.

4.308.2.10 basic_string() [10/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            basic_string< _CharT, _Traits, _Alloc > && __str )  [inline], [noexcept]
```

Move construct string.

Parameters

__str	Source string.

The newly-created string contains the exact contents of __str. __str is a valid, but unspecified string.
Definition at line 3653 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

4.308.2.11 basic_string() [11/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            initializer_list< _CharT > __l,
            const _Alloc & __a = _Alloc() )
```

Construct string from an initializer list.

Parameters

_↩ _*l*	std::initializer_list of characters.
_↩ _*a*	Allocator to use (default is default allocator).

Definition at line 678 of file basic_string.tcc.

4.308.2.12 basic_string() [12/12]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _InputIterator >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
            _InputIterator __beg,
            _InputIterator __end,
            const _Alloc & __a = _Alloc() )
```

Construct string as copy of a range.

Parameters

__beg	Start of range.
__end	End of range.
__a	Allocator to use (default is default allocator).

Definition at line 671 of file basic_string.tcc.

4.308.2.13 ~basic_string()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::~basic_string ( ) [inline], [noexcept]
```

Destroy the string instance.
Definition at line 3730 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

4.308.3 Member Function Documentation

4.308.3.1 append() [1/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (
            _InputIterator __first,
            _InputIterator __last ) [inline]
```

Append a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [__first,__last) to this string.
Definition at line 4303 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.2 append() [2/7] template<typename _CharT , typename _Traits , typename _Alloc >

```
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s )  [inline]
```

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

Definition at line 4265 of file basic_string.h.

4.308.3.3 append() [3/7] template<typename _CharT , typename _Traits , typename _Alloc >

```
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const _CharT * __s,
            size_type __n )
```

Append a C substring.

Parameters

_↩ _s	The C string to append.
_↩ _n	The number of characters to append.

Returns

Reference to this string.

Definition at line 741 of file basic_string.tcc.

4.308.3.4 append() [4/7] template<typename _CharT , typename _Traits , typename _Alloc >

```
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str )
```

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 768 of file basic_string.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::size().
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::append(), and std::basic_string< _CharT, _Traits, _Alloc >::operator+=().

4.308.3.5 append() [5/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos )
```

Append a substring.

Parameters

__str	The string to append.
__pos	Index of the first character of str to append.
__n	The number of characters to append.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *__pos* is not a valid index.

This function appends *__n* characters from *__str* starting at *__pos* to this string. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is appended.
Definition at line 785 of file basic_string.tcc.

4.308.3.6 append() [6/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::append (
            initializer_list< _CharT > __l ) [inline]
```

Append an initializer_list of characters.

Parameters

__l	The initializer_list of characters to append.

Returns

Reference to this string.

Definition at line 4289 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::append().

4.308.3.7 append() [7/7]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
            size_type __n,
            _CharT __c )
```

Append multiple characters.

Parameters

_↩ _n	The number of characters to append.
_↩ _c	The character to use.

Returns

Reference to this string.

Appends __n copies of __c to this string.
Definition at line 724 of file basic_string.tcc.

4.308.3.8 assign() [1/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            _InputIterator __first,
            _InputIterator __last )  [inline]
```

Set value to a range of characters.

Parameters

__first	Iterator referencing the first character to append.
__last	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [__first,__last).
Definition at line 4450 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.9 assign() [2/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            basic_string< _CharT, _Traits, _Alloc > && __str )  [inline], [noexcept]
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

This function sets this string to the exact contents of *__str*. *__str* is a valid, but unspecified string.
Definition at line 4371 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::swap().

4.308.3.10 assign() [3/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s )  [inline]
```

Set value to contents of a C string.

Parameters

_↩ _s	The C string to use.

Returns

Reference to this string.

This function sets the value of this string to the value of *__s*. The data is copied, so there is no dependence on *__s* once the function returns.
Definition at line 4421 of file basic_string.h.

4.308.3.11 assign() [4/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const _CharT * __s,
            size_type __n )
```

Set value to a C substring.

Parameters

_↩ _s	The C string to use.
_↩ _n	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first *__n* characters of *__s*. If *__n* is is larger than the number of available characters in *__s*, the remainder of *__s* is used.
Definition at line 702 of file basic_string.tcc.

4.308.3.12 assign() [5/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str )
```

Set value to contents of another string.

Parameters

__str	Source string to use.

Returns

Reference to this string.

Definition at line 686 of file basic_string.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::operator=(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow().

4.308.3.13 assign() [6/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos,
            size_type __n = npos )  [inline]
```

Set value to a substring of a string.

Parameters

__str	The string to use.
__pos	Index of the first character of str.
__n	Number of characters to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	if *pos* is not a valid index.

This function sets this string to the substring of *__str* consisting of *__n* characters at *__pos*. If *__n* is is larger than the number of available characters in *__str*, the remainder of *__str* is used.
Definition at line 4393 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.14 assign() [7/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            initializer_list< _CharT > __l )  [inline]
```

Set value to an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to assign.

Returns

Reference to this string.

Definition at line 4460 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.15 assign() [8/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::assign (
            size_type __n,
            _CharT __c )  [inline]
```

Set value to multiple characters.

Parameters

_↩ _*n*	Length of the resulting string.
_↩ _*c*	The character to use.

Returns

Reference to this string.

This function sets the value of this string to *__n* copies of character *__c*.
Definition at line 4437 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.16 at() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n )  [inline]
```

Provides access to the data contained in the string.

Parameters

_↩ _*n*	The index of the character to access.

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails. Success results in unsharing the string.
Definition at line 4115 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.17 at() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (
            size_type __n ) const  [inline]
```

Provides access to the data contained in the string.

Parameters

_n	The index of the character to access.

Returns

Read-only (const) reference to the character.

Exceptions

std::out_of_range	If *n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws out_of_range if the check fails.
Definition at line 4093 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.18 back() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string< _CharT, _Traits, _Alloc >::back ( )  [inline]
```

Returns a read/write reference to the data at the last element of the string.
Definition at line 4154 of file basic_string.h.

4.308.3.19 back() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.
Definition at line 4165 of file basic_string.h.

4.308.3.20 begin() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::begin ( )  [inline]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.
Definition at line 3816 of file basic_string.h.

Referenced by std::basic_string< _CharT, _Traits, _Alloc >::crend(), std::regex_match(), std::regex_replace(), std::regex_search(), and std::basic_string< _CharT, _Traits, _Alloc >::rend().

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cbegin ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.
Definition at line 3891 of file basic_string.h.

4.308.3.25 cend()

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::cend ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.
Definition at line 3899 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.26 clear()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::clear ( )  [inline], [noexcept]
```

Erases the string, making it empty.
Definition at line 4017 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

4.308.3.27 compare() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const _CharT * __s ) const  [noexcept]
```

Compare to a C string.

Parameters

__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__s*, 0 if their values are equivalent, or > 0 if this string is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of size() and the length of a string constructed from *__s*. The function then compares the two strings by calling traits::compare(data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 1420 of file basic_string.tcc.

4.308.3.28 compare() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            const basic_string< _CharT, _Traits, _Alloc > & __str ) const  [inline]
```

Compare to a string.

Parameters

__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before *__str*, 0 if their values are equivalent, or > 0 if this string is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of size() and str.size(). The function then compares the two strings by calling traits::compare(data(), str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 5775 of file basic_string.h.
References std::min(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.29 compare() [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str ) const
```

Compare substring to a string.

Parameters

__pos	Index of first character of substring.
__n	Number of characters in substring.
__str	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n* characters starting at *__pos*. Returns an integer < 0 if the substring is ordered before *__str*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__str*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__str.size()*. The function then compares the two strings by calling traits::compare(substring.data(),str.data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 1387 of file basic_string.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::data(), std::min(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.30 compare() [4/6] template<typename _CharT , typename _Traits , typename _Alloc >

```
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s ) const
```

Compare substring to a C string.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *pos*. Returns an integer < 0 if the substring is ordered before *__s*, 0 if their values are equivalent, or > 0 if the substring is ordered after *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and the length of a string constructed from *__s*. The function then compares the two string by calling traits::compare(substring.data(),__s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 1435 of file basic_string.tcc.

4.308.3.31 compare() [5/6] template<typename _CharT , typename _Traits , typename _Alloc >

```
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2 ) const
```

Compare substring against a character array.

Parameters

__pos	Index of first character of substring.
__n1	Number of characters in substring.
__s	character array to compare against.
__n2	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos*. Form a string from the first *__n2* characters of *__s*. Returns an integer < 0 if this substring is ordered before the string from *__s*, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from *__s*. Determines the effective length rlen of the strings to compare as the smallest of the length of the substring and *__n2*. The function then compares the two strings by calling traits::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
NB: s must have at least n2 characters, '\0' has no special meaning.
Definition at line 1451 of file basic_string.tcc.

4.308.3.32 compare() [6/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos ) const
```

Compare substring to a substring.

Parameters

__pos1	Index of first character of substring.
__n1	Number of characters in substring.
__str	String to compare against.
__pos2	Index of first character of substring of str.
__n2	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the *__n1* characters starting at *__pos1*. Form the substring of *__str* from the *__n2* characters starting at *__pos2*. Returns an integer < 0 if this substring is ordered before the substring of *__str*, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of *__str*. Determines the effective length rlen of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.
Definition at line 1402 of file basic_string.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::min().

4.308.3.33 copy()

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
            _CharT * __s,
            size_type __n,
            size_type __pos = 0 ) const
```

Copy substring into C string.

Parameters

__s	C string to copy value into.
__n	Number of characters to copy.
__pos	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

std::out_of_range	If __pos > size().

Copies up to *__n* characters starting at *__pos* into the C string *__s*. If *__pos* is greater than size(), out_of_range is thrown.
Definition at line 1137 of file basic_string.tcc.

4.308.3.34 crbegin()

`template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.
Definition at line 3908 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::end().

4.308.3.35 crend()

`template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crend ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.
Definition at line 3917 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::begin().

4.308.3.36 data()

`template<typename _CharT , typename _Traits , typename _Alloc > const _CharT* std::basic_string< _CharT, _Traits, _Alloc >::data ( ) const [inline], [noexcept]`

Return const pointer to contents.
This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).
Definition at line 5231 of file basic_string.h.
Referenced by std::basic_regex< _Ch_type, _Rx_traits >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std::collate< _CharT >::do_compare(), std::collate< _CharT >::do_transform(), std::match_results< _Bi_iter, _Alloc >::format(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes(), and std::regex_traits< _Ch_type >::transform().

4.308.3.37 empty()

`template<typename _CharT , typename _Traits , typename _Alloc > bool std::basic_string< _CharT, _Traits, _Alloc >::empty ( ) const [inline], [noexcept]`

Returns true if the string is empty. Equivalent to `*this == ""`.
Definition at line 4039 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.38 end() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) [inline]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.
Definition at line 3835 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::crbegin(), std::basic_string< _CharT, _Traits, _Alloc >::rbegin(), std::regex_match(), std::regex_replace(), and std::regex_search().

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.
Definition at line 3846 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.40 erase() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            iterator __first,
            iterator __last )
```

Remove a range of characters.

Parameters

__first	Iterator referencing the first character to remove.
__last	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.
Definition at line 834 of file basic_string.tcc.

4.308.3.41 erase() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
            iterator __position ) [inline]
```

Remove one character.

Parameters

__position	Iterator referencing the character to remove.

Returns

iterator referencing same location after removal.

Removes the character at *__position* from this string. The value of the string doesn't change if an error is thrown.
Definition at line 4738 of file basic_string.h.

4.308.3.42 erase() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::erase (
            size_type __pos = 0,
            size_type __n = npos )  [inline]
```

Remove characters.

Parameters

__pos	Index of first character to remove (default 0).
__n	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are < *__n* characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4722 of file basic_string.h.

4.308.3.43 find() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            _CharT __c,
            size_type __pos = 0 ) const  [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1226 of file basic_string.tcc.

4.308.3.44 find() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search from.
__n	Number of characters from *s* to search for.

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1190 of file basic_string.tcc.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::find(), and std::basic_string< _CharT, _Traits, _Alloc >↩ ::find_first_of().

4.308.3.45 find() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const _CharT * __s,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 5298 of file basic_string.h.

4.308.3.46 find() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a string.

Parameters

__str	String to locate.

Parameters

__pos	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from *__pos*, searches forward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 5283 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::find().

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            _CharT __c,
            size_type __pos = 0 ) const  [noexcept]
```

Find position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1334 of file basic_string.tcc.

4.308.3.48 find_first_not_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from.
__n	Number of characters from __s to consider.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1321 of file basic_string.tcc.

4.308.3.49 find_first_not_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >

            const _CharT * __s,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5622 of file basic_string.h.

4.308.3.50 find_first_not_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5591 of file basic_string.h.

4.308.3.51 find_first_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            _CharT __c,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for the character *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to find(__c, __pos).
Definition at line 5475 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::find().

4.308.3.52 find_first_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_of (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find position of a character of C substring.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from.
__n	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1283 of file basic_string.tcc.

4.308.3.53 find_first_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const _CharT * __s,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character of C string.

Parameters

__s	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5455 of file basic_string.h.

4.308.3.54 find_first_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = 0 ) const  [inline], [noexcept]
```

Find position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5424 of file basic_string.h.

4.308.3.55 find_last_not_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
            _CharT __c,
            size_type __pos = npos ) const  [noexcept]
```

Find last position of a different character.

Parameters

__c	Character to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character other than *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1367 of file basic_string.tcc.

4.308.3.56 find_last_not_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_not_of (
            const _CharT * __s,
```

```
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find last position of a character not in C substring.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from.
__n	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1345 of file basic_string.tcc.

4.308.3.57 find_last_not_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const _CharT * __s,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a character not in C string.

Parameters

__s	C string containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5704 of file basic_string.h.

4.308.3.58 find_last_not_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a character not in string.

Parameters

__str	String containing characters to avoid.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for a character not contained in *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5673 of file basic_string.h.

4.308.3.59 find_last_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            _CharT __c,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for *__c* within this string. If found, returns the index where it was found. If not found, returns npos.
Note: equivalent to rfind(__c, __pos).
Definition at line 5559 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::rfind().

4.308.3.60 find_last_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc

            const _CharT * __s,
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find last position of a character of C substring.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the first *__n* characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1299 of file basic_string.tcc.

4.308.3.61 find_last_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const _CharT * __s,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a character of C string.

Parameters

__s	C string containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__s* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5539 of file basic_string.h.

4.308.3.62 find_last_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a character of string.

Parameters

__str	String containing characters to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from *__pos*, searches backward for one of the characters of *__str* within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 5508 of file basic_string.h.

4.308.3.63 front() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string< _CharT, _Traits, _Alloc >::front ( )  [inline]
```

Returns a read/write reference to the data at the first element of the string.
Definition at line 4132 of file basic_string.h.

4.308.3.64 front() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::front ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.
Definition at line 4143 of file basic_string.h.

4.308.3.65 get_allocator()

```
template<typename _CharT , typename _Traits , typename _Alloc >
allocator_type std::basic_string< _CharT, _Traits, _Alloc >::get_allocator ( ) const  [inline],
[noexcept]
```

Return copy of allocator used to construct this string.
Definition at line 5253 of file basic_string.h.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::basic_string(), std::basic_string< _CharT, _Traits, _Alloc >::~basic_string(), std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::clear(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes(), std::operator+(), and std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes().

4.308.3.66 insert() [1/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            _CharT __c )  [inline]
```

Insert one character.

Parameters

__p	Iterator referencing position in string to insert at.
__c	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts character *__c* at position referenced by *__p*. If adding character causes the length to exceed max_size(), length_error is thrown. If *__p* is beyond end of string, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4662 of file basic_string.h.

4.308.3.67 insert() [2/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            _InputIterator __beg,
            _InputIterator __end )  [inline]
```

Insert a range of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__beg	Start of range.
__end	End of range.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts characters in range [__beg,__end). If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4527 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.68 insert() [3/9] template<typename _CharT , typename _Traits , typename _Alloc >

```
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            initializer_list< _CharT > __l )  [inline]
```

Insert an initializer_list of characters.

Parameters

__p	Iterator referencing location in string to insert at.
__l	The initializer_list of characters to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Definition at line 4538 of file basic_string.h.

4.308.3.69 insert() [4/9] template<typename _CharT , typename _Traits , typename _Alloc >

```
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
            iterator __p,
            size_type __n,
            _CharT __c )  [inline]
```

Insert multiple characters.

Parameters

__p	Iterator referencing location in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts __n copies of character __c starting at the position referenced by iterator __p. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4510 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::insert().

4.308.3.70 insert() [5/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s )  [inline]
```

Insert a C string.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos* is beyond the end of this string.

Inserts the first *n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4621 of file basic_string.h.

4.308.3.71 insert() [6/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            const _CharT * __s,
            size_type __n )
```

Insert a C substring.

Parameters

__pos	Position in string to insert at.
__s	The C string to insert.
__n	The number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts the first *__n* characters of *__s* starting at *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* is beyond end(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 803 of file basic_string.tcc.

4.308.3.72 insert() [7/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos,
            size_type __n,
            _CharT __c )  [inline]
```

Insert multiple characters.

Parameters

__pos	Index in string to insert at.
__n	Number of characters to insert
__c	The character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *__pos* is beyond the end of this string.

Inserts *__n* copies of character *__c* starting at index *__pos*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos* > length(), out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4644 of file basic_string.h.

4.308.3.73 insert() [8/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Insert value of a string.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Inserts value of *__str* starting at *__pos1*. If adding characters causes the length to exceed max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4558 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::insert().

4.308.3.74 insert() [9/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::insert (
            size_type __pos1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n = npos )  [inline]
```

Insert a substring.

Parameters

__pos1	Position in string to insert at.
__str	The string to insert.
__pos2	Start of characters in str to insert.
__n	Number of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.
std::out_of_range	If *pos1* > size() or *__pos2* > *str.size()*.

Starting at *pos1*, insert *__n* character of *__str* beginning with *__pos2*. If adding characters causes the length to exceed max_size(), length_error is thrown. If *__pos1* is beyond the end of this string or *__pos2* is beyond the end of *__str*, out_of_range is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4580 of file basic_string.h.

4.308.3.75 length()

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::length ( ) const  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3932 of file basic_string.h.
Referenced by std::collate< _CharT >::do_compare(), and std::collate< _CharT >::do_transform().

4.308.3.76 max_size() template<typename _CharT , typename _Traits , typename _Alloc > size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size ( ) const [inline], [noexcept]

Returns the size() of the largest possible string.
Definition at line 3937 of file basic_string.h.
Referenced by std::getline().

4.308.3.77 operator+=() [1/4] template<typename _CharT , typename _Traits , typename _Alloc > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (_CharT __c) [inline]

Append a character.

Parameters

_↩ _c	The character to append.

Returns

Reference to this string.

Definition at line 4197 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::push_back().

4.308.3.78 operator+=() [2/4] template<typename _CharT , typename _Traits , typename _Alloc > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (const _CharT * __s) [inline]

Append a C string.

Parameters

_↩ _s	The C string to append.

Returns

Reference to this string.

Definition at line 4188 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::append().

4.308.3.79 operator+=() [3/4] template<typename _CharT , typename _Traits , typename _Alloc > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (const basic_string< _CharT, _Traits, _Alloc > & __str) [inline]

Append a string to this string.

Parameters

__str	The string to append.

Returns

Reference to this string.

Definition at line 4179 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::append().

4.308.3.80 operator+=() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
            initializer_list< _CharT > __l ) [inline]
```

Append an initializer_list of characters.

Parameters

↩ _↩ ↩ _↩ *l*	The initializer_list of characters to be appended.

Returns

Reference to this string.

Definition at line 4210 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::append().

4.308.3.81 operator=() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            _CharT __c ) [inline]
```

Set value to string of length 1.

Parameters

_↩ *_c*	Source character.

Assigning to a character makes this string length 1 and (*this)[0] == *c*.
Definition at line 3757 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.82 operator=() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]
```

Move assign the value of *str* to this string.

Parameters

__str	Source string.

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

Definition at line 3772 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::swap().

4.308.3.83 operator=() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const _CharT * __s )  [inline]
```

Copy contents of *s* into this string.

Parameters

_↩ _*s*	Source null-terminated string.

Definition at line 3746 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.84 operator=() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            const basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Assign the value of *str* to this string.

Parameters

__str	Source string.

Definition at line 3738 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.85 operator=() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::operator= (
            initializer_list< _CharT > __l )  [inline]
```

Set value to string constructed from initializer list.

Parameters

↩ _↩ ↩ _↩ *l*	std::initializer_list.

Definition at line 3785 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::assign().

4.308.3.86 operator[]() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos )  [inline]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().) Unshares the string.
Definition at line 4071 of file basic_string.h.

4.308.3.87 operator[]() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
            size_type __pos ) const  [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

__pos	The index of the character to access.

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Definition at line 4054 of file basic_string.h.

4.308.3.88 pop_back()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ( )  [inline]
```

Remove the last character.
The string must be non-empty.
Definition at line 4767 of file basic_string.h.

4.308.3.89 push_back()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
            _CharT __c )  [inline]
```

Append a single character.

Parameters

__c	Character to append.

Definition at line 4344 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::capacity(), std::basic_string< _CharT, _Traits, _Alloc >::reserve(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.90 rbegin() [1/2] template<typename _CharT , typename _Traits , typename _Alloc > reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) [inline]

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.
Definition at line 3855 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::end().

4.308.3.91 rbegin() [2/2] template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.
Definition at line 3864 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::end().

4.308.3.92 rend() [1/2] template<typename _CharT , typename _Traits , typename _Alloc > reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) [inline]

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.
Definition at line 3873 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::begin().

4.308.3.93 rend() [2/2] template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.
Definition at line 3882 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::begin().

4.308.3.94 replace() [1/11] template<typename _CharT , typename _Traits , typename _Alloc > template<class _InputIterator > basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (iterator __i1, iterator __i2, _InputIterator __k1, _InputIterator __k2) [inline]

Replace range of characters with range.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__k1	Iterator referencing start of range to insert.
__k2	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4986 of file basic_string.h.

4.308.3.95 replace() [2/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s )  [inline]
```

Replace range of characters with C string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__s	C string value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the characters of *__s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4941 of file basic_string.h.

4.308.3.96 replace() [3/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const _CharT * __s,
            size_type __n )  [inline]
```

Replace range of characters with C substring.

Parameters

_↩ _*i1*	Iterator referencing start of range to replace.
_↩ _*i2*	Iterator referencing end of range to replace.
_↩ _*s*	C string value to insert.
_↩ _*n*	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the first __*n* characters of __*s* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4920 of file basic_string.h.

4.308.3.97 replace() [4/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            const basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Replace range of characters with string.

Parameters

__i1	Iterator referencing start of range to replace.
__i2	Iterator referencing end of range to replace.
__str	String value to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, the value of __*str* is inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4901 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.98 replace() [5/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            initializer_list< _CharT > __l ) [inline]
```

Replace range of characters with initializer_list.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _l	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, characters in the range [__k1,__k2) are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 5055 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.99 replace() [6/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            iterator __i1,
            iterator __i2,
            size_type __n,
            _CharT __c ) [inline]
```

Replace range of characters with multiple characters.

Parameters

_↩ _i1	Iterator referencing start of range to replace.
_↩ _i2	Iterator referencing end of range to replace.
_↩ _n	Number of characters to insert.
_↩ _c	Character to insert.

Returns

Reference to this string.

Exceptions

std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__i1,__i2). In place, __*n* copies of __*c* are inserted. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4962 of file basic_string.h.

4.308.3.100 replace() [7/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n,
            const basic_string< _CharT, _Traits, _Alloc > & __str )  [inline]
```

Replace characters with value from another string.

Parameters

__pos	Index of first character to replace.
__n	Number of characters to be replaced.
__str	String to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* is beyond the end of this string.
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos+__n) from this string. In place, the value of __*str* is inserted. If __*pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4792 of file basic_string.h.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::insert(), and std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.101 replace() [8/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            const _CharT * __s )  [inline]
```

Replace characters with value of a C string.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the characters of *__s* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4859 of file basic_string.h.

4.308.3.102 replace() [9/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::replace
(
            size_type __pos,
            size_type __n1,
            const _CharT * __s,
            size_type __n2 )
```

Replace characters with value of a C substring.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__s	C string to insert.
__n2	Number of characters from *s* to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *pos1* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos,__pos + __n1) from this string. In place, the first *__n2* characters of *__s* are inserted, or all of *__s* if *__n2* is too large. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.

Definition at line 857 of file basic_string.tcc.

4.308.3.103 replace() [10/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos,
            size_type __n1,
            size_type __n2,
            _CharT __c )  [inline]
```

Replace characters with multiple characters.

Parameters

__pos	Index of first character to replace.
__n1	Number of characters to be replaced.
__n2	Number of characters to insert.
__c	Character to insert.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos* > size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [pos,pos + n1) from this string. In place, *__n2* copies of *__c* are inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4883 of file basic_string.h.

4.308.3.104 replace() [11/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string& std::basic_string< _CharT, _Traits, _Alloc >::replace (
            size_type __pos1,
            size_type __n1,
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos2,
            size_type __n2 = npos )  [inline]
```

Replace characters with value from another string.

Parameters

__pos1	Index of first character to replace.
__n1	Number of characters to be replaced.
__str	String to insert.
__pos2	Index of first character of str to use.
__n2	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

std::out_of_range	If *__pos1* > size() or *__pos2* > __str.size().
std::length_error	If new length exceeds `max_size()`.

Removes the characters in the range [__pos1,__pos1 + n) from this string. In place, the value of *__str* is inserted. If *__pos* is beyond end of string, out_of_range is thrown. If the length of the result exceeds max_size(), length_error is thrown. The value of the string doesn't change if an error is thrown.
Definition at line 4814 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::replace().

4.308.3.105 reserve()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
            size_type __res_arg = 0 )
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

__res_arg	Number of characters required.

Exceptions

std::length_error	If *__res_arg* exceeds `max_size()`.

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than max_size(), length_error is thrown.
The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.
Definition at line 945 of file basic_string.tcc.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::tr2::operator>>(), std::basic_stringbuf< _CharT, _↩ Traits, _Alloc >::overflow(), std::basic_string< _CharT, _Traits, _Alloc >::push_back(), and std::basic_string< _CharT, _Traits, _Alloc >::shrink_to_fit().

4.308.3.106 resize() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n ) [inline]
```

Resizes the string to the specified number of characters.

Parameters

_↩ _n	Number of characters the string should contain.

This function will resize the string to the specified length. If the new size is smaller than the string's current size the

string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.
Definition at line 3964 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::resize().

4.308.3.107 resize() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
            size_type __n,
            _CharT __c )
```

Resizes the string to the specified number of characters.

Parameters

__n	Number of characters the string should contain.
__c	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to __c.
Definition at line 1084 of file basic_string.tcc.
Referenced by std::money_get< _CharT, _InIter >::do_get(), and std::basic_string< _CharT, _Traits, _Alloc >::resize().

4.308.3.108 rfind() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
            _CharT __c,
            size_type __pos = npos ) const  [noexcept]
```

Find last position of a character.

Parameters

__c	Character to locate.
__pos	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from __pos, searches backward for __c within this string. If found, returns the index where it was found. If not found, returns npos.
Definition at line 1266 of file basic_string.tcc.

4.308.3.109 rfind() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
            const _CharT * __s,
            size_type __pos,
            size_type __n ) const  [noexcept]
```

Find last position of a C substring.

Parameters

__s	C string to locate.
__pos	Index of character to search back from.
__n	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the first *__n* characters in *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 1244 of file basic_string.tcc.

4.308.3.110 rfind() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const _CharT * __s,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a C string.

Parameters

__s	C string to locate.
__pos	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for the value of *__s* within this string. If found, returns the index where it begins. If not found, returns npos.
Definition at line 5376 of file basic_string.h.

4.308.3.111 rfind() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
            const basic_string< _CharT, _Traits, _Alloc > & __str,
            size_type __pos = npos ) const  [inline], [noexcept]
```

Find last position of a string.

Parameters

__str	String to locate.
__pos	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from *__pos*, searches backward for value of *__str* within this string. If found, returns the index where it begins. If not found, returns npos.

Referenced by std::basic_string< _CharT, _Traits, _Alloc >::find_last_of().

4.308.3.112 shrink_to_fit()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::shrink_to_fit ( )  [inline], [noexcept]
```

A non-binding request to reduce capacity() to size().
Definition at line 3970 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::capacity(), std::basic_string< _CharT, _Traits, _Alloc >::reserve(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

4.308.3.113 size()

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::size ( ) const  [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.
Definition at line 3926 of file basic_string.h.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::append(), std::basic_regex< _Ch_type, _Rx_traits >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::basic_string< _CharT, _Traits, _Alloc >::at(), std::basic_string< _CharT, _Traits, _Alloc >::cend(), std::basic_string< _CharT, _Traits, _Alloc >::compare(), std::basic_string< _CharT, _Traits, _Alloc >::empty(), std::basic_string< _CharT, _Traits, _Alloc >::end(), std::match_results< _Bi_iter, _Alloc >::format(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes(), std::operator+(), std::basic_string< _CharT, _Traits, _Alloc >::push_back(), std::basic_string< _CharT, _Traits, _Alloc >::shrink_to_fit(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes(), and std::regex_traits< _Ch_type >::transform().

4.308.3.114 substr()

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string std::basic_string< _CharT, _Traits, _Alloc >::substr (
            size_type __pos = 0,
            size_type __n = npos ) const  [inline]
```

Get a substring.

Parameters

__pos	Index of first character (default 0).
__n	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

std::out_of_range	If __pos > size().

Construct and return a new string using the *__n* characters starting at *__pos*. If the string is too short, use the remainder of the characters. If *__pos* is beyond the end of the string, out_of_range is thrown.
Definition at line 5756 of file basic_string.h.
References std::basic_string< _CharT, _Traits, _Alloc >::basic_string().

4.308.3.115 swap()

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
            basic_string< _CharT, _Traits, _Alloc > & __s )  [noexcept]
```

Swap contents with another string.

Parameters

_↩ _s	String to swap with.

Exchanges the contents of this string with that of *__s* in constant time.
Definition at line 962 of file basic_string.tcc.
Referenced by std::basic_string< _CharT, _Traits, _Alloc >::assign(), and std::basic_string< _CharT, _Traits, _Alloc >::operator=().

4.309.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::experimental::fundamentals_v1::basic_string_view< _CharT, _Traits >

A non-owning reference to a string.

Template Parameters

_CharT	Type of character
_Traits	Traits for character type, defaults to char_traits<_CharT>.

A basic_string_view looks like this:

```
_CharT*     _M_str
size_t      _M_len
```

Definition at line 75 of file experimental/string_view.
The documentation for this class was generated from the following files:

- experimental/string_view
- experimental/bits/string_view.tcc

4.310.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >

The actual work of input and output (for std::string).

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)
For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.
Definition at line 65 of file sstream.

4.310.2 Constructor & Destructor Documentation

4.310.2.1 basic_stringbuf() [1/3] template<typename _CharT , typename _Traits , typename _Alloc > std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ( ) [inline]

Starts with an empty string buffer.
The default constructor initializes the parent class using its own default ctor.
Definition at line 99 of file sstream.

4.310.2.2 basic_stringbuf() [2/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
ios_base::openmode __mode) [inline], [explicit]

Starts with an empty string buffer.

Parameters

__mode	Whether the buffer can read, or write, or both.

The default constructor initializes the parent class using its own default ctor.
Definition at line 111 of file sstream.

4.310.2.3 basic_stringbuf() [3/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
const __string_type & *__str*,
ios_base::openmode *__mode* = *ios_base::in* | *ios_base::out*) [inline], [explicit]

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__mode	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.
Definition at line 124 of file sstream.

4.310.3 Member Function Documentation

4.310.3.1 eback() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

4.310.3.2 egptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

4.310.3.3 epptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

4.310.3.4 gbump() template<typename _CharT , typename _Traits >

void std::basic_streambuf< _CharT, _Traits >::gbump (
int __*n*) [inline], [protected], [inherited]

Moving the read position.

Parameters

_↩ _*n*	The delta by which to move.

This just advances the read position without returning any data.
Definition at line 505 of file streambuf.

4.310.3.5 getloc() template<typename _CharT , typename _Traits >

locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Definition at line 233 of file streambuf.

4.310.3.6 gptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

4.310.3.7 imbue() template<typename _CharT , typename _Traits >

virtual void std::basic_streambuf< _CharT, _Traits >::imbue (const locale & __loc) [inline], [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 583 of file streambuf.

4.310.3.8 in_avail() template<typename _CharT , typename _Traits >

streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.
Definition at line 291 of file streambuf.

4.310.3.9 overflow() template<class _CharT , class _Traits , class _Alloc >

basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow (int_type __c = *traits_type::eof()*) [protected], [virtual]

Consumes data from the buffer; writes to the controlled sequence.

Parameters

__c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __c, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __c is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 79 of file sstream.tcc.
References __gnu_debug::__base(), std::basic_string< _CharT, _Traits, _Alloc >::assign(), std::ios_base::in, std::max(), std::min(), std::ios_base::out, std::basic_string< _CharT, _Traits, _Alloc >::push_back(), and std::basic_string< _CharT, _Traits, _Alloc >::reserve().

4.310.3.10 pbackfail()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail (
            int_type __c = traits_type::eof() )  [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

__c	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 45 of file sstream.tcc.
References std::ios_base::out.

4.310.3.11 pbase()

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

4.310.3.12 pbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n )  [inline], [protected], [inherited]
```

Moving the write position.

Parameters

_↩ _*n*	The delta by which to move.

This just advances the write position without returning any data.
Definition at line 552 of file streambuf.

4.310.3.13 pptr() `template<typename _CharT , typename _Traits >`

`char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

4.310.3.14 pubimbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc )  [inline], [inherited]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).
Definition at line 216 of file streambuf.

4.310.3.15 pubseekoff() `template<typename _CharT , typename _Traits >`

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__off	Offset.
__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.
Definition at line 258 of file streambuf.

4.310.3.16 pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.
Definition at line 270 of file streambuf.

4.310.3.17 pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.
Definition at line 246 of file streambuf.

4.310.3.18 pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( )  [inline], [inherited]
```

Calls virtual sync function.
Definition at line 278 of file streambuf.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync().

4.310.3.19 sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Definition at line 323 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::seekg().

4.310.3.20 seekoff()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::seekoff (
            off_type ,
```

```
            ios_base::seekdir ,
            ios_base::openmode  = ios_base::in | ios_base::out )  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 167 of file sstream.tcc.
References std::ios_base::cur, std::ios_base::end, std::ios_base::in, and std::ios_base::out.

4.310.3.21 seekpos()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↩
Alloc >::seekpos (
            pos_type ,
            ios_base::openmode  = ios_base::in | ios_base::out )  [protected], [virtual]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 215 of file sstream.tcc.
References std::ios_base::in, and std::ios_base::out.

4.310.3.22 setbuf()

```
template<typename _CharT , typename _Traits , typename _Alloc >
virtual __streambuf_type* std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (
            char_type * __s,
            streamsize __n )  [inline], [protected], [virtual]
```

Manipulates the buffer.

Parameters

_↩ _s	Pointer to a buffer area.
_↩ _n	Size of __s.

Returns

`this`

If no buffer has already been created, and both __s and __n are non-zero, then __s is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.↩ buffering for more.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 255 of file sstream.

4.310.3.23 setg()

```
template<typename _CharT , typename _Traits >
```

```
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend )  [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

4.310.3.24 setp() `template<typename _CharT , typename _Traits >`

```
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend )  [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

4.310.3.25 sgetc() `template<typename _CharT , typename _Traits >`

```
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Definition at line 345 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::tellg().

4.310.3.26 sgetn() `template<typename _CharT , typename _Traits >`

```
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
```

```
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry point for xsgetn.

Parameters

_↩ _s	A buffer area.
_↩ _n	A count.

Returns xsgetn(__s,__n). The effect is to fill __s[0] through __s[__n-1] with characters from the input sequence, if possible.
Definition at line 364 of file streambuf.

4.310.3.27 showmanyc()

`template<typename _CharT , typename _Traits , typename _Alloc >`
`virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc ( )  [inline], [protected], [virtual]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 223 of file sstream.

4.310.3.28 snextc()

`template<typename _CharT , typename _Traits >`
`int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )  [inline], [inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Definition at line 305 of file streambuf.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::putback(), and std::basic_istream< char >::tellg().

4.310.3.29 sputbackc()

`template<typename _CharT , typename _Traits >`
`int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (`
`            char_type __c )  [inline], [inherited]`

Pushing characters back into the input stream.

Parameters

_↩ _c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __c is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __c.
Definition at line 379 of file streambuf.

4.310.3.30 sputc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c )  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Definition at line 431 of file streambuf.
Referenced by std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.310.3.31 sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __s[0] through __s[__n-1] to the output sequence, if possible.
Definition at line 457 of file streambuf.

4.310.3.32 str() [1/2] template<typename _CharT , typename _Traits , typename _Alloc >

__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

Definition at line 178 of file sstream.

4.310.3.33 str() [2/2] template<typename _CharT , typename _Traits , typename _Alloc >

void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
const __string_type & __s) [inline]

Setting a new buffer.

Parameters

_↩ _s	The string to use as a new sequence.

Deallocates any previous stored sequence, then copies *s* to use as a new one.

Definition at line 202 of file sstream.

4.310.3.34 sungetc() template<typename _CharT , typename _Traits >

int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.

Definition at line 404 of file streambuf.

4.310.3.35 sync() template<typename _CharT , typename _Traits >

virtual int std::basic_streambuf< _CharT, _Traits >::sync (
void) [inline], [protected], [virtual], [inherited]

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, std::basic_filebuf< char_type, traits_type >, __gnu_cxx::stdio_sync_file and std::wbuffer_convert< _Codecvt, _Elem, _Tr >.

Definition at line 634 of file streambuf.

4.310.3.36 uflow() template<typename _CharT , typename _Traits >

virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.

Definition at line 707 of file streambuf.

4.310.3.37 underflow() template<class _CharT , class _Traits , class _Alloc >

basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow [protected], [virtual]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.

Definition at line 149 of file sstream.tcc.

References std::ios_base::in.

4.310.3.38 xsgetn() template<typename _CharT , typename _Traits >

streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (
char_type * __s,
streamsize __n) [protected], [virtual], [inherited]

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 45 of file streambuf.tcc.
References std::min().

4.310.3.39 xsputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
            const char_type * __s,
            streamsize __n )  [protected], [virtual], [inherited]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented in std::basic_filebuf< _CharT, _Traits >, std::basic_filebuf< _CharT, std::char_traits< _CharT > >, std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >, and std::basic_filebuf< char_type, traits_type >.
Definition at line 79 of file streambuf.tcc.
References std::min().

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

- __istream_type & operator>> (float &__f)
- __istream_type & operator>> (double &__f)
- __istream_type & operator>> (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type std::basic_istream::sentry with the second argument (noskipws) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by gcount().

If an exception is thrown during extraction, ios_base::badbit will be turned on in the stream's error state (without causing an ios_base::failure to be thrown) and the original exception will be rethrown if badbit is set in the exceptions mask.

4.311.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringstream< _CharT, _Traits, _Alloc >

Controlling input and output for std::string.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT>.
_Alloc	Allocator type, defaults to allocator<_CharT>.

This class supports reading from and writing to objects of type std::basic_string, using the inherited functions from std::basic_iostream. To control the associated sequence, an instance of std::basic_stringbuf is used, which this page refers to as `sb`.
Definition at line 708 of file sstream.

4.311.2 Member Typedef Documentation

4.311.2.1 __num_put_type

`template<typename _CharT , typename _Traits > typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits >::__num_put_type [inherited]`

These are non-standard types.
Definition at line 89 of file basic_ios.h.

4.311.2.2 event_callback

`typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.311.2.3 fmtflags

`typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase

- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.311.2.4 iostate `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.311.2.5 openmode `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.311.2.6 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.311.3 Member Enumeration Documentation

4.311.3.1 event enum std::ios_base::event [inherited]

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.311.4 Constructor & Destructor Documentation

4.311.4.1 basic_stringstream() [1/3] template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream ( ) [inline]

Default constructor starts with an empty string buffer.
Initializes sb using the mode in|out, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 741 of file sstream.

4.311.4.2 basic_stringstream() [2/3] template<typename _CharT , typename _Traits , typename _Alloc >

```
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
            ios_base::openmode __m ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

_↩ _m	Whether the buffer can read, or write, or both.

Initializes sb using the mode from __m, and passes &sb to the base class initializer. Does not allocate any buffer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 756 of file sstream.

4.311.4.3 basic_stringstream() [3/3] template<typename _CharT , typename _Traits , typename _Alloc >

```
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
            const __string_type & __str,
            ios_base::openmode __m = ios_base::out | ios_base::in ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

__str	A string to copy as a starting buffer.
__m	Whether the buffer can read, or write, or both.

Initializes sb using *__str* and __m, and passes &sb to the base class initializer.
That's a lie. We initialize the base class with NULL, because the string class does its own memory management.
Definition at line 772 of file sstream.

4.311.4.4 ~basic_stringstream() template<typename _CharT , typename _Traits , typename _Alloc >

std::basic_stringstream< _CharT, _Traits, _Alloc >::~basic_stringstream ( ) [inline]
The destructor does nothing.
The buffer is deallocated by the stringbuf object, not the formatting stream.
Definition at line 783 of file sstream.

4.311.5 Member Function Documentation

4.311.5.1 _M_getloc() const locale& std::ios_base::_M_getloc ( ) const [inline], [inherited]
Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.311.5.2 _M_write() template<typename _CharT , typename _Traits >
void std::basic_ostream< _CharT, _Traits >::_M_write (
const char_type * __s,
streamsize __n) [inline], [inherited]
Core write functionality, without sentry.

Parameters

_s	The array to insert.
_n	Maximum number of characters to insert.

Definition at line 317 of file ostream.

4.311.5.3 bad() template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.
Definition at line 211 of file basic_ios.h.
References std::ios_base::badbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.311.5.4 clear() template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::clear (
            iostate __state = goodbit )  [inherited]
```

[Re]sets the error state.

Parameters

__state	The new state flag(s) to set.

See std::ios_base::iostate for the possible bit values. Most users will not need to pass an argument.
Definition at line 41 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::exceptions(), std::__detail::operator>>(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.311.5.5 copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
            const basic_ios< _CharT, _Traits > & __rhs )  [inherited]
```

Copies fields of __rhs into this.

Parameters

__rhs	The source values for the copies.

Returns

Reference to this object.

All fields of __rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase_event. After copying, each (new) callback is invoked with copyfmt_event. The final step is to copy exceptions().
Definition at line 63 of file basic_ios.tcc.
References std::basic_ios< _CharT, _Traits >::exceptions(), std::basic_ios< _CharT, _Traits >::fill(), std::ios_base::flags(), std::ios_base::getloc(), std::ios_base::precision(), std::basic_ios< _CharT, _Traits >::tie(), std::tie(), and std::ios_base::width().

4.311.5.6 eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.
Definition at line 190 of file basic_ios.h.
References std::ios_base::eofbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.311.5.7 exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const  [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.
Definition at line 222 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.311.5.8 exceptions() [2/2] template<typename _CharT , typename _Traits >

```
void std::basic_ios< _CharT, _Traits >::exceptions (
            iostate __except )  [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

__except	The new exceptions mask.

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type std::ios_base::failure is thrown.
If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr « "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr « "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

Definition at line 257 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear().

4.311.5.9 fail() template<typename _CharT , typename _Traits >

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const  [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.
Definition at line 201 of file basic_ios.h.
References std::ios_base::badbit, std::ios_base::failbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ios< _CharT, _Traits >::operator bool(), and std::basic_ios< _CharT, _Traits >::operator!().

4.311.5.10 fill() [1/2] template<typename _CharT , typename _Traits >

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const  [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.
Definition at line 370 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::widen().
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::basic_ios< _CharT, _Traits >::fill().

4.311.5.11 fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
            char_type __ch )  [inline], [inherited]
```

Sets a new *empty* character.

Parameters

__ch	The new character.

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.
Definition at line 390 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fill().

4.311.5.12 flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const  [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.311.5.13 flags() [2/2]

```
fmtflags std::ios_base::flags (
            fmtflags __fmtfl )  [inline], [inherited]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.311.5.14 flush() template<typename _CharT , typename _Traits >

basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]

Synchronizing the stream buffer.

Returns

*this

If rdbuf() is a null pointer, changes nothing.
Otherwise, calls rdbuf()->pubsync(), and if that returns -1, sets badbit.
Definition at line 210 of file ostream.tcc.
References std::ios_base::goodbit.

4.311.5.15 gcount() template<typename _CharT , typename _Traits >

streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

Definition at line 269 of file istream.

4.311.5.16 get() [1/6] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 243 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.17 get() [2/6] template<typename _CharT , typename _Traits >

__istream_type& std::basic_istream< _CharT, _Traits >::get (__streambuf_type & *__sb*) [inline], [inherited]

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.

Returns

*this

Returns get(__sb,widen('\n')).
Definition at line 387 of file istream.

4.311.5.18 get() [3/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            __streambuf_type & __sb,
            char_type __delim )  [inherited]
```

Extraction into another streambuf.

Parameters

__sb	A streambuf in which to store data.
__delim	A "stop" character.

Returns

∗this

Characters are extracted and inserted into *__sb* until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals *__delim* (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.
Definition at line 363 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.19 get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type & __c )  [inherited]
```

Simple extraction.

Parameters

__c	The character in which to store data.

Returns

∗this

Tries to extract a character and store it in *__c*. If none are available, sets failbit and returns traits::eof().

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 279 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.20 get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type& std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

_↩ _*s*	Pointer to an array.
_↩ _*n*	Maximum number of characters to store in *s*.

Returns

*this

Returns `get(__s,__n,widen('\n'))`.
Definition at line 354 of file istream.

4.311.5.21 get() [6/6] template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

Simple multiple-character extraction.

Parameters

__s	Pointer to an array.
__n	Maximum number of characters to store in *__s*.
__delim	A "stop" character.

Returns

*this

Characters are extracted and stored into *__s* until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals *__delim*, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.
In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 316 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.22 getline() [1/3] template<typename _CharT , typename _Traits >

```
__istream_type& std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

String extraction.

Parameters

_↩ _s	A character array in which to store the data.
_↩ _n	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen('\n'))`.
Definition at line 427 of file istream.

4.311.5.23 getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

String extraction.

Parameters

__s	A character array in which to store the data.
__n	Maximum number of characters to extract.
__delim	A "stop" character.

Returns

*this

Extracts and stores characters into *__s* until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the *__s* array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)
In any case, a null character is stored in the next location in the array.
Definition at line 407 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.24 getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
            char_type * __s,
            streamsize __n,
            char_type __delim )  [inherited]
```

Explicit specialization declarations, defined in src/istream.cc.

4.311.5.25 getloc() locale std::ios_base::getloc ( ) const [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.311.5.26 good() template<typename _CharT , typename _Traits >

bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around rdstate.
Definition at line 180 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::__detail::operator>>().

4.311.5.27 ignore() [1/3] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (void) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 467 of file istream.tcc.

4.311.5.28 ignore() [2/3] template<typename _CharT , typename _Traits >

basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (streamsize __n) [inherited]

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().
Definition at line 500 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount.

4.311.5.29 ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
            streamsize __n,
            int_type __delim )  [inherited]
```

Discarding characters.

Parameters

__n	Number of characters to discard.
__delim	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if *__n* != `std::numeric_limits<int>::max()`, *__n* characters are extracted
- the input sequence reaches end-of-file
- the next character equals *__delim* (in this case, the character is extracted); note that this condition will never occur if *__delim* equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.
Definition at line 562 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.30 imbue() `template<typename _CharT , typename _Traits >`

```
locale std::basic_ios< _CharT, _Traits >::imbue (
            const locale & __loc )  [inherited]
```

Moves to a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 114 of file basic_ios.tcc.
References std::ios_base::imbue().

4.311.5.31 init() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::init (
            basic_streambuf< _CharT, _Traits > * __sb )  [protected], [inherited]
```

All setup is performed here.
This is called from the public constructor. It is not virtual and cannot be redefined.
Definition at line 126 of file basic_ios.tcc.
Referenced by std::basic_ios< _CharT, _Traits >::basic_ios().

4.311.5.32 iword()

```
long& std::ios_base::iword (
            int __ix )  [inline], [inherited]
```

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.311.5.33 narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Squeezes characters.

Parameters

__c	The character to narrow.
__dfault	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).narrow(c,dfault)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.↩html
Definition at line 430 of file basic_ios.h.

4.311.5.34 operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const  [inline], [explicit], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 117 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::fail().

4.311.5.35 operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator!  ( ) const  [inline], [inherited]
```

The quick-and-easy status check.
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`
Definition at line 125 of file basic_ios.h.

References std::basic_ios< _CharT, _Traits >::fail().

4.311.5.36 operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ios_type &(*)(__ios_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 116 of file ostream.

4.311.5.37 operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            __ostream_type &(*)(__ostream_type &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 107 of file ostream.

4.311.5.38 operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            __streambuf_type * __sb )  [inherited]
```

Extracting from another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If `__sb` is NULL, the stream will set failbit in its error state.
Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.
Definition at line 63 of file ostream.tcc.

4.311.5.39 operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            bool __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ _n	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 173 of file ostream.

4.311.5.40 operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            const void * __p )  [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 244 of file ostream.

4.311.5.41 operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ f	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 219 of file ostream.

4.311.5.42 operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            float __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 223 of file ostream.

4.311.5.43 operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
            int __n )  [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.
Definition at line 63 of file ostream.tcc.

4.311.5.44 operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            ios_base &(*)(ios_base &) __pf )  [inline], [inherited]
```

Interface for manipulators.
Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.
Definition at line 126 of file ostream.

4.311.5.45 operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 165 of file ostream.

4.311.5.46 operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long double __f )  [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩ _↩ ↩ _↩ *f*	A variable of builtin floating point type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 231 of file ostream.

4.311.5.47 operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type& std::basic_ostream< _CharT, _Traits >::operator<< (
            long long __n )  [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

_↩ *_n*	A variable of builtin integral type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.
Definition at line 200 of file ostream.

4.311.5.48 operator<<() [13/17]

```

Extracting into another streambuf.

Parameters

__sb	A pointer to a streambuf

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.
If __sb is NULL, the stream will set failbit in its error state.
Characters are extracted from this stream and inserted into the __sb streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

```

Basic arithmetic extractors.

Parameters

_↩ _p	A variable of pointer type.

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.
Definition at line 235 of file istream.

4.311.5.70 peek() template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (void) [inherited]

Looking ahead in the stream.

Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.
Definition at line 627 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.71 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline], [inherited]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.311.5.72 precision() [2/2] streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.311.5.73 put() template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (char_type __c) [inherited]

Simple insertion.

Parameters

_↩ _c	The character to insert.

Returns

*this

Tries to insert __c.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 148 of file ostream.tcc.
References std::ios_base::goodbit.

4.311.5.74 putback() template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (char_type __c) [inherited]

Unextracting a single character.

Parameters

_↩ _c	The character to push back into the input stream.

Returns

*this

If rdbuf() is not null, calls rdbuf()->sputbackc(c).
If rdbuf() is null or if sputbackc() fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

Definition at line 718 of file istream.tcc.

4.311.5.75 pword() void*& std::ios_base::pword (int __ix) [inline], [inherited]

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.311.5.76 rdbuf() [1/2] template<typename _CharT , typename _Traits , typename _Alloc > __stringbuf_type* std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().
Definition at line 823 of file sstream.

4.311.5.77 rdbuf() [2/2] template<typename _CharT , typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]

Changing the underlying buffer.

Parameters

__sb	The new stream buffer.

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.
Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream     foo;         // or some other derived type
std::streambuf*  p = .....;
foo.ios::rdbuf(p);            // ios == basic_ios<char>
```

Definition at line 53 of file basic_ios.tcc.

4.311.5.78 rdstate() template<typename _CharT , typename _Traits > iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().
Definition at line 137 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::eof(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_ios< _CharT, _Traits >::good(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ios< _CharT, _Traits >::setstate(), and std::basic_istream< _CharT, _Traits >::unget().

4.311.5.79 read() template<typename _CharT , typename _Traits >

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction without delimiters.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into *__s* until one of the following happens:

- *__n* characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 657 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.80 readsome() template<typename _CharT , typename _Traits >

```
streamsize std::basic_istream< _CharT, _Traits >::readsome (
            char_type * __s,
            streamsize __n )  [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

_↩ _s	A character array.
_↩ _n	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into *__s* depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters

- if A > 0, extracts min(A,n)

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.
Definition at line 686 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, and std::ios_base::goodbit.

4.311.5.81 register_callback()

```
void std::ios_base::register_callback (
        event_callback __fn,
        int __index )  [inherited]
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.311.5.82 seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        off_type __off,
        ios_base::seekdir __dir )  [inherited]
```

Changing the current read position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If fail() is not true, calls rdbuf()->pubseekoff(__off,__dir). If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount().

Definition at line 891 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.311.5.83 seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
        pos_type __pos )  [inherited]
```

Changing the current read position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 852 of file istream.tcc.
References std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().

4.311.5.84 seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            off_type __off,
            ios_base::seekdir __dir )  [inherited]
```

Changing the current write position.

Parameters

__off	A file offset object.
__dir	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off,dir)`. If that function fails, sets failbit.
Definition at line 289 of file ostream.tcc.
References std::ios_base::goodbit.

4.311.5.85 seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
            pos_type __pos )  [inherited]
```

Changing the current write position.

Parameters

__pos	A file position object.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.
Definition at line 257 of file ostream.tcc.

References std::ios_base::goodbit.

4.311.5.86 setf() [1/2] fmtflags std::ios_base::setf (fmtflags __fmtfl) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.311.5.87 setf() [2/2] fmtflags std::ios_base::setf (fmtflags __fmtfl, fmtflags __mask) [inline], [inherited]

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is ios_base::adjustfield.
Definition at line 693 of file ios_base.h.

4.311.5.88 setstate() template<typename _CharT , typename _Traits > void std::basic_ios< _CharT, _Traits >::setstate (iostate __state) [inline], [inherited]

Sets additional flags in the error state.

Parameters

__state	The additional state flag(s) to set.

See std::ios_base::iostate for the possible bit values.
Definition at line 157 of file basic_ios.h.
References std::basic_ios< _CharT, _Traits >::clear(), and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::ws().

4.311.5.89 str() [1/2] template<typename _CharT , typename _Traits , typename _Alloc > __string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]

Copying out the string buffer.

Returns

`rdbuf()->str()`

Definition at line 831 of file sstream.

4.311.5.90 str() [2/2] template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (const __string_type & __s) [inline]

Setting a new buffer.

Parameters

__s	The string to use as a new sequence.

Calls `rdbuf()->str(s)`.
Definition at line 841 of file sstream.

4.311.5.91 sync() template<typename _CharT , typename _Traits > int std::basic_istream< _CharT, _Traits >::sync (void) [inherited]

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.
Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit and returns -1.
Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

Definition at line 788 of file istream.tcc.
References std::ios_base::goodbit.

4.311.5.92 sync_with_stdio() static bool std::ios_base::sync_with_stdio (bool __sync = true) [static], [inherited]

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.311.5.93 tellg() `template<typename _CharT , typename _Traits >`

`basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg ( void ) [inherited]`

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with putback, unget and seekg, eofbit is not cleared first.

Definition at line 824 of file istream.tcc.

4.311.5.94 tellp() `template<typename _CharT , typename _Traits >`

`basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]`

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type`(-1) to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0,cur,out)`.
Definition at line 236 of file ostream.tcc.

4.311.5.95 tie() [1/2] `template<typename _CharT , typename _Traits >`

`basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.
Definition at line 295 of file basic_ios.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), and std::basic_ios< _CharT, _Traits >::copyfmt().

4.311.5.96 tie() [2/2] `template<typename _CharT , typename _Traits >`

`basic_ostream<_CharT, _Traits>* std::basic_ios< _CharT, _Traits >::tie ( basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

Parameters

__tiestr	The output stream.

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.
Definition at line 307 of file basic_ios.h.

4.311.5.97 unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
            void ) [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.
If `rdbuf()` is null or if `sungetc()` fails, sets badbit in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

Definition at line 753 of file istream.tcc.
References std::basic_istream< _CharT, _Traits >::_M_gcount, std::basic_ios< _CharT, _Traits >::clear(), std::ios_base::eofbit, std::ios_base::goodbit, and std::basic_ios< _CharT, _Traits >::rdstate().
Referenced by std::__detail::operator>>().

4.311.5.98 unsetf()

```
void std::ios_base::unsetf (
            fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.311.5.99 widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
            char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

_c	The character to widen.

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.
Returns the result of
`std::use_facet<ctype<char_type> >(getloc()).widen(c)`
Additional I10n notes are at http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html
Definition at line 449 of file basic_ios.h.
Referenced by std::basic_ios< _CharT, _Traits >::fill(), std::getline(), and std::tr2::operator>>().

4.311.5.100 width() [1/2]

```
streamsize std::ios_base::width ( ) const  [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.311.5.101 width() [2/2]

```
streamsize std::ios_base::width (
            streamsize __wide )  [inline], [inherited]
```

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.311.5.102 write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
            const char_type * __s,
            streamsize __n )  [inherited]
```

Character string insertion.

Parameters

_↩ _s	The array to insert.
_↩ _n	Maximum number of characters to insert.

Returns

*this

Characters are copied from __s and inserted into the stream until one of the following happens:

- __n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

Definition at line 182 of file ostream.tcc.

4.311.5.103 xalloc() static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.311.6 Member Data Documentation

4.311.6.1 _M_gcount template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]

The number of characters extracted in the previous unformatted function; see gcount().
Definition at line 82 of file istream.
Referenced by std::basic_istream< _CharT, _Traits >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_istream< char >::putback(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::seekg(), std::basic_istream< char >::tellg(), and std::basic_istream< _CharT, _Traits >::unget().

4.311.6.2 adjustfield const fmtflags std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of setf.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.311.6.3 app const openmode std::ios_base::app [static], [inherited]

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.311.6.4 ate

`const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.311.6.5 badbit

`const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.311.6.6 basefield

`const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.311.6.7 beg

`const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.311.6.8 binary

`const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.311.6.9 boolalpha

`const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.311.6.10 cur

`const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.311.6.11 dec

`const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.

Referenced by std::dec().

4.311.6.12 end

`const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.311.6.13 eofbit

`const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.311.6.14 failbit

`const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.
Definition at line 428 of file ios_base.h.
Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.311.6.15 fixed

`const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.
Definition at line 350 of file ios_base.h.
Referenced by std::fixed(), and std::hexfloat().

4.311.6.16 floatfield

`const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.
Definition at line 402 of file ios_base.h.
Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.311.6.17 goodbit

`const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.
Definition at line 431 of file ios_base.h.
Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(),

std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.311.6.18 hex `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.
Definition at line 353 of file ios_base.h.
Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.311.6.19 in `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and fstream.
Definition at line 461 of file ios_base.h.
Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.311.6.20 internal `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.311.6.21 left `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.311.6.22 oct `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.311.6.23 out `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.311.6.24 right `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.

Referenced by std::right().

4.311.6.25 scientific

`const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.311.6.26 showbase

`const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.311.6.27 showpoint

`const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.311.6.28 showpos

`const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.311.6.29 skipws

`const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.311.6.30 trunc

`const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.311.6.31 unitbuf

`const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.311.6.32 uppercase

`const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following files:

- iosfwd
- sstream

4.312 std::bernoulli_distribution Class Reference

Classes

- void reset ()

Friends

- bool operator== (const bernoulli_distribution &__d1, const bernoulli_distribution &__d2)

4.312.1 Detailed Description

A Bernoulli random number distribution.
Generates a sequence of true and false values with likelihood p that true will come up and $(1-p)$ that false will appear.
Definition at line 3521 of file random.h.

4.312.2 Member Typedef Documentation

4.312.2.1 result_type `typedef bool std::bernoulli_distribution::result_type`

The type of the range of the distribution.
Definition at line 3525 of file random.h.

4.312.3 Constructor & Destructor Documentation

4.312.3.1 bernoulli_distribution() [1/2] std::bernoulli_distribution::bernoulli_distribution ( ) [inline]

Constructs a Bernoulli distribution with likelihood 0.5.
Definition at line 3561 of file random.h.

4.312.3.2 bernoulli_distribution() [2/2] std::bernoulli_distribution::bernoulli_distribution (double __p) [inline], [explicit]

Constructs a Bernoulli distribution with likelihood p.

Parameters

_↩ _p	[IN] The likelihood of a true result being returned. Must be in the interval $[0, 1]$.

Definition at line 3570 of file random.h.

4.312.4 Member Function Documentation

4.312.4.1 max() result_type std::bernoulli_distribution::max ( ) const [inline]

Returns the least upper bound value of the distribution.
Definition at line 3620 of file random.h.
References std::numeric_limits< _Tp >::max().

4.312.4.2 min() result_type std::bernoulli_distribution::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.
Definition at line 3613 of file random.h.
References std::numeric_limits< _Tp >::min().

4.312.4.3 operator()() template<typename _UniformRandomNumberGenerator > result_type std::bernoulli_distribution::operator() (_UniformRandomNumberGenerator & __urng) [inline]

Generating functions.
Definition at line 3628 of file random.h.

4.312.4.4 p() double std::bernoulli_distribution::p ( ) const [inline]

Returns the p parameter of the distribution.
Definition at line 3591 of file random.h.

4.312.4.5 param() [1/2] param_type std::bernoulli_distribution::param ( ) const [inline]

Returns the parameter set of the distribution.
Definition at line 3598 of file random.h.
Referenced by std::operator>>().

4.312.4.6 param() [2/2] void std::bernoulli_distribution::param (const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3606 of file random.h.

4.312.4.7 reset() void std::bernoulli_distribution::reset ( ) [inline]

Resets the distribution state.
Does nothing for a Bernoulli distribution.
Definition at line 3585 of file random.h.

4.312.5 Friends And Related Function Documentation

4.312.5.1 operator== bool operator== (const bernoulli_distribution & __d1, const bernoulli_distribution & __d2) [friend]

Return true if two Bernoulli distributions have the same parameters.
Definition at line 3670 of file random.h.
The documentation for this class was generated from the following files:

- random.h
- bits/random.tcc

4.313 std::bidirectional_iterator_tag Struct Reference

Inheritance diagram for std::bidirectional_iterator_tag:

4.313.1 Detailed Description

Bidirectional iterators support a superset of forward iterator operations.
Definition at line 103 of file stl_iterator_base_types.h.
The documentation for this struct was generated from the following file:

- stl_iterator_base_types.h

4.315.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Const node iterator.
Definition at line 58 of file bin_search_tree_/node_iterators.hpp.

4.315.2 Member Typedef Documentation

4.315.2.1 const_reference `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::const_reference`

Iterator's __const reference type.
Definition at line 77 of file bin_search_tree_/node_iterators.hpp.

4.315.2.2 difference_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::difference_type
```

Difference type.
Definition at line 68 of file bin_search_tree_/node_iterators.hpp.

4.315.2.3 iterator_category

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩ Iterator, Iterator, _Alloc >::iterator_category
```

Category.
Definition at line 65 of file bin_search_tree_/node_iterators.hpp.

4.315.2.4 metadata_const_reference

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference
```

Const metadata reference type.
Definition at line 84 of file bin_search_tree_/node_iterators.hpp.

4.315.2.5 metadata_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩ Iterator, Iterator, _Alloc >::metadata_type
```

Metadata type.
Definition at line 80 of file bin_search_tree_/node_iterators.hpp.

4.315.2.6 reference

```
template<typename Node , class Const_Iterator , class Iterator , typename _↩ Alloc >
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference
```

Iterator's reference type.
Definition at line 74 of file bin_search_tree_/node_iterators.hpp.

4.315.2.7 value_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _↩ Alloc >
typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type
```

Iterator's value type.
Definition at line 71 of file bin_search_tree_/node_iterators.hpp.

4.315.3 Member Function Documentation

4.315.3.1 get_l_child() template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >

bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const [inline]

Returns the __const node iterator associated with the left node.

Definition at line 103 of file bin_search_tree_/node_iterators.hpp.

4.315.3.2 get_metadata() template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >

metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata ( ) const [inline]

Metadata access.

Definition at line 98 of file bin_search_tree_/node_iterators.hpp.

4.315.3.3 get_r_child() template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >

bin_search_tree_const_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_const_Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const [inline]

Returns the __const node iterator associated with the right node.

Definition at line 108 of file bin_search_tree_/node_iterators.hpp.

4.315.3.4 operator"!=() template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >

bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!= (
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const [inline]

Compares (negatively) to a different iterator object.

Definition at line 118 of file bin_search_tree_/node_iterators.hpp.

4.315.3.5 operator*() template<typename Node , class Const_Iterator , class Iterator , typename ↩ _Alloc >

const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator* ( ) const [inline]

Access.

Definition at line 93 of file bin_search_tree_/node_iterators.hpp.

4.315.3.6 operator==() template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >

bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator== (
const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & *other*) const [inline]

Compares to a different iterator object.

Definition at line 113 of file bin_search_tree_/node_iterators.hpp.

The documentation for this class was generated from the following file:

- bin_search_tree_/node_iterators.hpp

4.316 __gnu_pbds::detail::bin_search_tree_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc > Class Template Reference

4.317.1 Detailed Description

template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >

Node iterator.
Definition at line 132 of file bin_search_tree_/node_iterators.hpp.

4.317.2 Member Typedef Documentation

4.317.2.1 const_reference

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::const_reference
```

Iterator's __const reference type.
Definition at line 146 of file bin_search_tree_/node_iterators.hpp.

4.317.2.2 difference_type

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type  [inherited]
```

Difference type.
Definition at line 68 of file bin_search_tree_/node_iterators.hpp.

4.317.2.3 iterator_category

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::iterator_category  [inherited]
```

Category.
Definition at line 65 of file bin_search_tree_/node_iterators.hpp.

4.317.2.4 metadata_const_reference

```
template<typename Node , class Const_Iterator , class Iterator
, typename _Alloc >
typedef rebind_traits<_Alloc, metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference  [inherited]
```

Const metadata reference type.
Definition at line 84 of file bin_search_tree_/node_iterators.hpp.

4.317.2.5 metadata_type

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↩
Iterator, Iterator, _Alloc >::metadata_type  [inherited]
```

Metadata type.
Definition at line 80 of file bin_search_tree_/node_iterators.hpp.

4.317.2.6 reference

```
template<typename Node , class Const_Iterator , class Iterator , typename _↩
Alloc >
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::reference
```

Iterator's reference type.
Definition at line 143 of file bin_search_tree_/node_iterators.hpp.

4.317.2.7 value_type

```
template<typename Node , class Const_Iterator , class Iterator , typename _↩
Alloc >
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _↩
Alloc >::value_type
```

Iterator's value type.
Definition at line 140 of file bin_search_tree_/node_iterators.hpp.

4.317.3 Member Function Documentation

4.317.3.1 get_l_child()

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const  [inline]
```

Returns the node iterator associated with the left node.
Definition at line 160 of file bin_search_tree_/node_iterators.hpp.

4.317.3.2 get_metadata()

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,
Iterator, _Alloc >::get_metadata ( ) const  [inline], [inherited]
```

Metadata access.
Definition at line 98 of file bin_search_tree_/node_iterators.hpp.

4.317.3.3 get_r_child()

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
bin_search_tree_node_it_<Node, Const_Iterator, Iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const  [inline]
```

Returns the node iterator associated with the right node.
Definition at line 168 of file bin_search_tree_/node_iterators.hpp.

4.317.3.4 operator"!=()

```
template<typename Node , class Const_Iterator , class Iterator , typename
_Alloc >
bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc
>::operator!= (
            const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &
other ) const  [inline], [inherited]
```

Compares (negatively) to a different iterator object.
Definition at line 118 of file bin_search_tree_/node_iterators.hpp.

4.318.1 Detailed Description

template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >

Binary search tree traits, primary template.
Definition at line 63 of file bin_search_tree_/traits.hpp.

4.318.2 Member Typedef Documentation

4.318.2.1 node_const_iterator

```
template<typename Key , typename Mapped , class Cmp_Fn , template<
typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class
Node , typename _Alloc >
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::b
Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.
Definition at line 128 of file bin_search_tree_/traits.hpp.
The documentation for this struct was generated from the following file:

- bin_search_tree_/traits.hpp

4.319 __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc > Struct Template Reference

Public Types

- typedef bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc > **const_reverse_iterator**

4.323.1 Detailed Description

template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>
class __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >

Const point-type iterator.
Definition at line 60 of file binary_heap_/const_iterator.hpp.

4.323.2 Member Typedef Documentation

4.323.2.1 const_pointer

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::const_pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_pointer
```

Iterator's const pointer type.
Definition at line 80 of file binary_heap_/const_iterator.hpp.

4.323.2.2 const_reference

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::const_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::const_reference
```

Iterator's const reference type.
Definition at line 86 of file binary_heap_/const_iterator.hpp.

4.323.2.3 difference_type

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef _Alloc::difference_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::difference_type
```

Difference type.
Definition at line 71 of file binary_heap_/const_iterator.hpp.

4.323.2.4 iterator_category

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef std::forward_iterator_tag __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::iterator_category
```

Category.
Definition at line 68 of file binary_heap_/const_iterator.hpp.

4.323.2.5 pointer

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::pointer
```

Iterator's pointer type.
Definition at line 77 of file binary_heap_/const_iterator.hpp.

4.323.2.6 reference

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::reference
```

Iterator's reference type.
Definition at line 83 of file binary_heap_/const_iterator.hpp.

4.323.2.7 value_type

```
template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >
typedef base_type::value_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::value_type
```

Iterator's value type.
Definition at line 74 of file binary_heap_/const_iterator.hpp.

4.323.3 Constructor & Destructor Documentation

4.323.3.1 binary_heap_const_iterator_() [1/2]

```

  std::basic_istream< _CharT, _Traits > & operator>> (std::basic_istream< _CharT, _Traits > &__is, std::binomial_distribution< _IntType1 > &__x)

4.329.1 Detailed Description

template<typename _IntType = int>
class std::binomial_distribution< _IntType >

A discrete binomial random number distribution.
The formula for the binomial probability density function is $p(i|t,p) = \binom{t}{i} p^i (1-p)^{t-i}$ where t and p are the parameters of the distribution.
Definition at line 3738 of file random.h.

4.329.2 Member Typedef Documentation

4.329.2.1 result_type `template<typename _IntType = int>`

```
typedef _IntType std::binomial_distribution< _IntType >::result_type
```

The type of the range of the distribution.
Definition at line 3745 of file random.h.

4.329.3 Member Function Documentation

4.329.3.1 max() `template<typename _IntType = int>`

```
result_type std::binomial_distribution< _IntType >::max ( ) const  [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 3857 of file random.h.

4.329.3.2 min() `template<typename _IntType = int>`

```
result_type std::binomial_distribution< _IntType >::min ( ) const  [inline]
```

Returns the greatest lower bound value of the distribution.
Definition at line 3850 of file random.h.

4.329.3.3 operator()() [1/2] template<typename _IntType = int>

```
template<typename _UniformRandomNumberGenerator >
result_type std::binomial_distribution< _IntType >::operator() (
            _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.
Definition at line 3865 of file random.h.

4.329.3.4 operator()() [2/2] template<typename _IntType >

```
template<typename _UniformRandomNumberGenerator >
binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator()
(
            _UniformRandomNumberGenerator & __urng,
            const param_type & __param )
```

A rejection algorithm when t * p >= 8 and a simple waiting time method - the second in the referenced book - otherwise.
NB: The former is available only if _GLIBCXX_USE_C99_MATH_TR1 is defined.
Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).
Definition at line 1523 of file bits/random.tcc.
References std::abs(), std::numeric_limits< _Tp >::epsilon(), std::log(), and std::numeric_limits< _Tp >::max().

4.329.3.5 p() template<typename _IntType = int>

```
double std::binomial_distribution< _IntType >::p ( ) const [inline]
```

Returns the distribution p parameter.
Definition at line 3828 of file random.h.

4.329.3.6 param() [1/2] template<typename _IntType = int>

```
param_type std::binomial_distribution< _IntType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.
Definition at line 3835 of file random.h.

4.329.3.7 param() [2/2] template<typename _IntType = int>

```
void std::binomial_distribution< _IntType >::param (
            const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3843 of file random.h.

4.329.3.8 reset() template<typename _IntType = int>

```
void std::binomial_distribution< _IntType >::reset ( ) [inline]
```

Resets the distribution state.
Definition at line 3814 of file random.h.
References std::normal_distribution< _RealType >::reset().

4.329.3.9 t() template<typename _IntType = int>

```
_IntType std::binomial_distribution< _IntType >::t ( ) const  [inline]
```

Returns the distribution t parameter.
Definition at line 3821 of file random.h.

4.329.4 Friends And Related Function Documentation

4.329.4.1 operator<< template<typename _IntType = int>

```
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::binomial_distribution< _IntType1 > & __x )  [friend]
```

Inserts a binomial_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A binomial_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.329.4.2 operator== template<typename _IntType = int>

```
bool operator== (
            const binomial_distribution< _IntType > & __d1,
            const binomial_distribution< _IntType > & __d2 )  [friend]
```

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.
Definition at line 3901 of file random.h.

4.329.4.3 operator>> template<typename _IntType = int>

```
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::binomial_distribution< _IntType1 > & __x )  [friend]
```

Extracts a binomial_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A binomial_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.333.1 Detailed Description

template<typename _Tp>
class __gnu_cxx::bitmap_allocator< _Tp >

Bitmap Allocator, primary template.
Definition at line 682 of file bitmap_allocator.h.

4.333.2 Member Function Documentation

4.333.2.1 _M_allocate_single_object() `template<typename _Tp >`

`pointer __gnu_cxx::bitmap_allocator< _Tp >::_M_allocate_single_object ( ) [inline]`

Allocates memory for a single object of size sizeof(_Tp).

Exceptions

std::bad_alloc.	If memory cannot be allocated.

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

Definition at line 823 of file bitmap_allocator.h.
References __gnu_cxx::__detail::__bit_allocate(), __gnu_cxx::__detail::__num_bitmaps(), and __gnu_cxx::_Bit_scan↩
_forward().

4.333.2.2 _M_deallocate_single_object() template<typename _Tp >

```
void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (
            pointer __p ) throw ( )   [inline]
```

Deallocates memory that belongs to a single object of size sizeof(_Tp).
Complexity: O(lg(N)), but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in O(1) time by the deallocate function.
Definition at line 914 of file bitmap_allocator.h.
The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.335.1 Detailed Description

template<**size_t _Nb**>
class std::bitset< _Nb >

The bitset class represents a *fixed-size* sequence of bits.
(Note that bitset does *not* meet the formal requirements of a container. Mainly, it lacks iterators.)
The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024*1024").
In the general unoptimized case, storage is allocated in word-sized blocks. Let B be the number of bits in a word, then (Nb+(B-1))/B words will be used for storage. B - NbB bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.
If you think of bitset as *a simple array of bits*, be aware that your mental picture is reversed: a bitset behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index Nb-1 in the *most significant / left-hand* position. Thus, unlike other containers, a bitset's index *counts from right to left*, to put it very loosely.
This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>
using namespace std;
```

```
int main()
{
    long         a = 'a';
    bitset<10>   b(a);
    cout « "b('a') is " « b « endl;
    ostringstream s;
    s « b;
    string  str = s.str();
    cout « "index 3 in the string is " « str[3] « " but\n"
         « "index 3 in the bitset is " « b[3] « endl;
}
```

Also see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html for a description of extensions.

Most of the actual code isn't contained in bitset<> itself, but in the base class _Base_bitset. The base class works with whole words, not with individual bits. This allows us to specialize _Base_bitset for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for _Base_bitset *is* a regular array, and is indexed as such. This is carefully encapsulated.

Definition at line 751 of file bitset.

4.335.2 Constructor & Destructor Documentation

4.335.2.1 bitset() [1/5] template<size_t _Nb>

```
constexpr std::bitset< _Nb >::bitset ( )  [inline], [constexpr], [noexcept]
```

All bits set to zero.

Definition at line 869 of file bitset.

4.335.2.2 bitset() [2/5] template<size_t _Nb>

```
constexpr std::bitset< _Nb >::bitset (
            unsigned long long __val )  [inline], [constexpr], [noexcept]
```

Initial bits bitwise-copied from a single word (others set to zero).

Definition at line 874 of file bitset.

4.335.2.3 bitset() [3/5] template<size_t _Nb>

```
template<class _CharT , class _Traits , class _Alloc >
std::bitset< _Nb >::bitset (
            const std::basic_string< _CharT, _Traits, _Alloc > & __s,
            size_t __position = 0 )  [inline], [explicit]
```

Use a subset of a string.

Parameters

__s	A string of *0* and *1* characters.
__position	Index of the first character in *__s* to use; defaults to zero.

Exceptions

std::out_of_range	If *pos* is bigger the size of *__s*.
std::invalid_argument	If a character appears in the string which is neither *0* nor *1*.

Definition at line 893 of file bitset.

4.335.2.4 bitset() [4/5] template<size_t _Nb>

```
template<class _CharT , class _Traits , class _Alloc >
std::bitset< _Nb >::bitset (
            const std::basic_string< _CharT, _Traits, _Alloc > & __s,
            size_t __position,
            size_t __n )  [inline]
```

Use a subset of a string.

Parameters

__s	A string of *0* and *1* characters.
__position	Index of the first character in *__s* to use.
__n	The number of characters to copy.

Exceptions

std::out_of_range	If *__position* is bigger the size of *__s*.
std::invalid_argument	If a character appears in the string which is neither *0* nor *1*.

Definition at line 914 of file bitset.

4.335.2.5 bitset() [5/5] template<size_t _Nb>

```
template<typename _CharT >
std::bitset< _Nb >::bitset (
            const _CharT * __str,
            typename std::basic_string< _CharT >::size_type __n = std::basic_string<_CharT>:↩
:npos,
            _CharT __zero = _CharT('0'),
            _CharT __one = _CharT('1') )  [inline], [explicit]
```

Construct from a character array.

Parameters

__str	An array of characters *zero* and *one*.
__n	The number of characters to use.
__zero	The character corresponding to the value 0.
__one	The character corresponding to the value 1.

Exceptions

std::invalid_argument	If a character appears in the string which is neither *__zero* nor *__one*.

Definition at line 946 of file bitset.

4.335.3 Member Function Documentation

4.335.3.1 all() template<size_t _Nb>

bool std::bitset< _Nb >::all ( ) const [inline], [noexcept]

Tests whether all the bits are on.

Returns

True if all the bits are set.

Definition at line 1336 of file bitset.

4.335.3.2 any() template<size_t _Nb>

bool std::bitset< _Nb >::any ( ) const [inline], [noexcept]

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

Definition at line 1344 of file bitset.

4.335.3.3 count() template<size_t _Nb>

size_t std::bitset< _Nb >::count ( ) const [inline], [noexcept]

Returns the number of bits which are set.

Definition at line 1295 of file bitset.

4.335.3.4 flip() [1/2] template<size_t _Nb>

bitset<_Nb>& std::bitset< _Nb >::flip ( ) [inline], [noexcept]

Toggles every bit to its opposite value.

Definition at line 1123 of file bitset.

4.335.3.5 flip() [2/2] template<size_t _Nb>

bitset<_Nb>& std::bitset< _Nb >::flip (
size_t *__position*) [inline]

Toggles a given bit to its opposite value.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1136 of file bitset.

4.335.3.6 none() template<size_t _Nb>

```
bool std::bitset< _Nb >::none ( ) const  [inline], [noexcept]
```

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

Definition at line 1352 of file bitset.

4.335.3.7 operator"!=() template<size_t _Nb>

```
bool std::bitset< _Nb >::operator!= (
            const bitset< _Nb > & __rhs ) const  [inline], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.
Definition at line 1311 of file bitset.

4.335.3.8 operator&=() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::operator&= (
            const bitset< _Nb > & __rhs )  [inline], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
Definition at line 972 of file bitset.

4.335.3.9 operator<<() template<size_t _Nb>

```
bitset<_Nb> std::bitset< _Nb >::operator<< (
            size_t __position ) const  [inline], [noexcept]
```

Self-explanatory.
Definition at line 1352 of file bitset.

4.335.3.10 operator<<=() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::operator<<= (
            size_t __position )  [inline], [noexcept]
```

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.
Definition at line 986 of file bitset.

4.335.3.11 operator==() template<size_t _Nb>

```
bool std::bitset< _Nb >::operator== (
```

```
            const bitset< _Nb > & __rhs ) const  [inline], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.
Definition at line 1306 of file bitset.

4.335.3.12 operator>>() template<size_t _Nb>

```
bitset<_Nb> std::bitset< _Nb >::operator>> (
            size_t __position ) const  [inline], [noexcept]
```

Self-explanatory.
Definition at line 1362 of file bitset.

4.335.3.13 operator>>=() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::operator>>= (
            size_t __position )  [inline], [noexcept]
```

Operations on bitsets.

Parameters

__position	The number of places to shift.

These should be self-explanatory.
Definition at line 1014 of file bitset.

4.335.3.14 operator[]() [1/2] template<size_t _Nb>

```
reference std::bitset< _Nb >::operator[] (
            size_t __position )  [inline]
```

Array-indexing support.

Parameters

__position	Index into the bitset.

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme
Definition at line 1163 of file bitset.

4.335.3.15 operator[]() [2/2] template<size_t _Nb>

```
constexpr bool std::bitset< _Nb >::operator[] (
            size_t __position ) const  [inline], [constexpr]
```

Array-indexing support.

Parameters

__position	Index into the bitset.

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme
Definition at line 1167 of file bitset.

4.335.3.16 operator^=() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::operator^= (
            const bitset< _Nb > & __rhs )  [inline], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
Definition at line 986 of file bitset.

4.335.3.17 operator"|=() template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::operator|= (
            const bitset< _Nb > & __rhs )  [inline], [noexcept]
```

Operations on bitsets.

Parameters

__rhs	A same-sized bitset.

These should be self-explanatory.
Definition at line 979 of file bitset.

4.335.3.18 operator~() template<size_t _Nb>

```
bitset<_Nb> std::bitset< _Nb >::operator~ ( ) const  [inline], [noexcept]
```

See the no-argument flip().
Definition at line 1144 of file bitset.

4.335.3.19 reset() [1/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::reset ( )  [inline], [noexcept]
```

Sets every bit to false.

Definition at line 1099 of file bitset.

4.335.3.20 reset() [2/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::reset (
            size_t __position )  [inline]
```

Sets a given bit to false.

Parameters

__position	The index of the bit.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Same as writing `set(pos,false)`.
Definition at line 1113 of file bitset.

4.335.3.21 set() [1/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::set ( )  [inline], [noexcept]
```

Sets every bit to true.
Definition at line 1075 of file bitset.

4.335.3.22 set() [2/2] template<size_t _Nb>

```
bitset<_Nb>& std::bitset< _Nb >::set (
            size_t __position,
            bool __val = true )  [inline]
```

Sets a given bit to a particular value.

Parameters

__position	The index of the bit.
__val	Either true or false, defaults to true.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1089 of file bitset.

4.335.3.23 size() template<size_t _Nb>

```
constexpr size_t std::bitset< _Nb >::size ( ) const  [inline], [constexpr], [noexcept]
```

Returns the total number of bits.
Definition at line 1300 of file bitset.

4.335.3.24 test() template<size_t _Nb>

```
bool std::bitset< _Nb >::test (
            size_t __position ) const  [inline]
```

Tests the value of a bit.

Parameters

__position	The index of a bit.

Returns

The value at *pos*.

Exceptions

std::out_of_range	If *pos* is bigger the size of the set.

Definition at line 1323 of file bitset.

4.335.3.25 to_string() template<size_t _Nb>

```
template<class _CharT , class _Traits , class _Alloc >
std::basic_string<_CharT, _Traits, _Alloc> std::bitset< _Nb >::to_string ( ) const  [inline]
```

Returns a character interpretation of the bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).
Definition at line 1197 of file bitset.

4.335.3.26 to_ulong() template<size_t _Nb>

```
unsigned long std::bitset< _Nb >::to_ulong ( ) const  [inline]
```

Returns a numerical interpretation of the bitset.

Returns

The integral equivalent of the bits.

Exceptions

std::overflow_error	If there are too many bits to be represented in an `unsigned long`.

Definition at line 1178 of file bitset.

4.336.1 Detailed Description

bool_set
See N2136, Bool_set: multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.
The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.
Definition at line 54 of file bool_set.

4.336.2 Constructor & Destructor Documentation

4.336.2.1 bool_set() [1/2] constexpr std::tr2::bool_set::bool_set ( ) [inline], [constexpr]

Default constructor.
Definition at line 59 of file bool_set.

4.336.2.2 bool_set() [2/2] constexpr std::tr2::bool_set::bool_set (bool __t) [inline], [constexpr]

Constructor from bool.
Definition at line 62 of file bool_set.

4.336.3 Member Function Documentation

4.336.3.1 equals()

```
bool std::tr2::bool_set::equals (
        bool_set __b ) const  [inline]
```

Return true if states are equal.
Definition at line 69 of file bool_set.

4.336.3.2 is_emptyset()

```
bool std::tr2::bool_set::is_emptyset ( ) const  [inline]
```

Return true if this is empty.
Definition at line 73 of file bool_set.

4.336.3.3 is_indeterminate()

```
bool std::tr2::bool_set::is_indeterminate ( ) const  [inline]
```

Return true if this is indeterminate.
Definition at line 77 of file bool_set.

4.336.3.4 is_singleton()

```
bool std::tr2::bool_set::is_singleton ( ) const  [inline]
```

Return true if this is false or true (normal boolean).
Definition at line 81 of file bool_set.

4.336.3.5 operator bool()

```
std::tr2::bool_set::operator bool ( ) const  [inline]
```

Conversion to bool.
Definition at line 86 of file bool_set.

Friends

- bool operator== (const cauchy_distribution &__d1, const cauchy_distribution &__d2)

4.339.1 Detailed Description

template<typename _RealType = double>
class std::cauchy_distribution< _RealType >

A cauchy_distribution random number distribution.
The formula for the normal probability mass function is $p(x|a,b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$
Definition at line 2854 of file random.h.

4.339.2 Member Typedef Documentation

4.339.2.1 result_type `template<typename _RealType = double>`

`typedef _RealType std::cauchy_distribution< _RealType >::result_type`

The type of the range of the distribution.
Definition at line 2861 of file random.h.

4.339.3 Member Function Documentation

4.339.3.1 max() template<typename _RealType = double>

result_type std::cauchy_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 2952 of file random.h.

References std::numeric_limits< _Tp >::max().

4.339.3.2 min() template<typename _RealType = double>

result_type std::cauchy_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 2945 of file random.h.

References std::numeric_limits< _Tp >::lowest().

4.339.3.3 operator()() template<typename _RealType = double>

template<typename _UniformRandomNumberGenerator >
result_type std::cauchy_distribution< _RealType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]

Generating functions.

Definition at line 2960 of file random.h.

4.339.3.4 param() [1/2] template<typename _RealType = double>

param_type std::cauchy_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 2930 of file random.h.

Referenced by std::operator>>().

4.339.3.5 param() [2/2] template<typename _RealType = double>

void std::cauchy_distribution< _RealType >::param (
const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2938 of file random.h.

4.339.3.6 reset() template<typename _RealType = double>

void std::cauchy_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 2912 of file random.h.

4.339.4 Friends And Related Function Documentation

4.339.4.1 operator== template<typename _RealType = double>

bool operator== (

```
const cauchy_distribution< _RealType > & __d1,
const cauchy_distribution< _RealType > & __d2 )  [friend]
```

Return true if two Cauchy distributions have the same parameters.
Definition at line 2995 of file random.h.
The documentation for this class was generated from the following files:

- random.h
- bits/random.tcc

4.340 __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type > Class Template Reference

Public Types

4.340.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.
Definition at line 293 of file hash_policy.hpp.

4.340.2 Member Enumeration Documentation

4.340.2.1 anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

Enumerator

external_load_access	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 298 of file hash_policy.hpp.

4.340.3 Constructor & Destructor Documentation

4.340.3.1 cc_hash_max_collision_check_resize_trigger()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_hash_max_collision_
(
            float load = 0.5 )
```

Default constructor, or constructor taking load, a __load factor which it will attempt to maintain.

4.340.4 Member Function Documentation

4.340.4.1 get_load()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::get_load ( ) const  [inline]
```

Returns the current load.

4.340.4.2 is_grow_needed()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_grow_needed (
            size_type size,
            size_type num_entries ) const  [inline], [protected]
```

Queries whether a grow is needed. This method is called only if this object indicated is needed.

4.340.4.3 is_resize_needed()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::is_resize_needed ( ) const  [inline], [protected]
```

Queries whether a resize is needed.

4.340.4.4 notify_cleared()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( )  [protected]
```

Notifies the table was cleared.

4.340.4.5 notify_erase_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_erase_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

4.340.4.6 notify_erase_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_erase_search_end ( ) [inline], [protected]
```

Notifies a search ended.

4.340.4.7 notify_erase_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_erase_search_start ( ) [inline], [protected]
```

Notifies an erase search started.

4.340.4.8 notify_erased()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_erased (
            size_type num_entries ) [inline], [protected]
```

Notifies an element was erased.

4.340.4.9 notify_externally_resized()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_externally_resized (
            size_type new_size ) [protected]
```

Notifies the table was resized externally.

4.340.4.10 notify_find_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_find_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

4.340.4.11 notify_find_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
::notify_find_search_end ( ) [inline], [protected]
```

Notifies a search ended.

4.340.4.12 notify_find_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_start ( ) [inline], [protected]
```

Notifies a find search started.

4.340.4.13 notify_insert_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

4.340.4.14 notify_insert_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_end ( ) [inline], [protected]
```

Notifies a search ended.

4.340.4.15 notify_insert_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_start ( ) [inline], [protected]
```

Notifies an insert search started.

4.340.4.16 notify_inserted()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted (
            size_type num_entries ) [inline], [protected]
```

Notifies an element was inserted.

4.340.4.17 notify_resized()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized (
            size_type new_size ) [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.

4.340.4.18 set_load()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::set_load (
            float load )
```

Sets the load; does not resize the container.

The documentation for this class was generated from the following file:

- hash_policy.hpp

4.341 __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc > Class Template Reference

4.341.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >

A collision-chaining hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.

Template Parameters

Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: cc_hash_tag.
Base is basic_hash_table.
Definition at line 204 of file assoc_container.hpp.

4.341.2 Constructor & Destructor Documentation

4.341.2.1 cc_hash_table() [1/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table ( )  [inline]
```

Default constructor.
Definition at line 217 of file assoc_container.hpp.

4.341.2.2 cc_hash_table() [2/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the Hash_Fn object of the container object.
Definition at line 221 of file assoc_container.hpp.

4.341.2.3 cc_hash_table() [3/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.
Definition at line 228 of file assoc_container.hpp.

4.341.2.4 cc_hash_table() [4/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_hash_fn & ch ) [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_hash_fn will be copied by the comb_hash_fn object of the container object.
Definition at line 236 of file assoc_container.hpp.

4.341.2.5 cc_hash_table() [5/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =

store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_hash_fn & ch,
            const resize_policy & rp ) [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_hash_fn will be copied by the comb_hash_fn object of the container object, and r_resize_policy will be copied by the resize_policy object of the container object.
Definition at line 245 of file assoc_container.hpp.

4.341.2.6 cc_hash_table() [6/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            It first,
            It last ) [inline]
```

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.
Definition at line 253 of file assoc_container.hpp.

4.341.2.7 cc_hash_table() [7/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
```

```
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            It first,
            It last,
            const hash_fn & h )  [inline]
```

Constructor taking __iterators to a range of value_types and some policy objects. The value_types between first_it and last_it will be inserted into the container object.
Definition at line 260 of file assoc_container.hpp.

4.341.2.8 cc_hash_table() [8/10]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<↩
Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy =
typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_↩
store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
            It first,
            It last,
            const hash_fn & h,
            const eq_fn & e )  [inline]
```

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.
Definition at line 271 of file assoc_container.hpp.

4.341.2.9 cc_hash_table() [9/10]

4.343.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >

A collision-chaining hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.
Comb_Hash_Fn	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default direct_mask_range_hashing.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_hash_fn, detail::types_traits. (Optional: detail::debug_↩ map_base.)
Definition at line 140 of file cc_ht_map_.hpp.

4.343.2 Member Enumeration Documentation

4.343.2.1 anonymous enum `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > anonymous enum`

Value stores hash, true or false.
Definition at line 203 of file cc_ht_map_.hpp.

4.343.3 Member Function Documentation

4.343.3.1 empty() template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::empty ( ) const [inline]

True if size() == 0.

4.343.3.2 get_comb_hash_fn() [1/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Comb_Hash_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( )

Return current comb_hash_fn.

4.343.3.3 get_comb_hash_fn() [2/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Comb_Hash_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( ) const

Return current const comb_hash_fn.

4.343.3.4 get_eq_fn() [1/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Eq_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( )

Return current eq_fn.

4.343.3.5 get_eq_fn() [2/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Eq_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( ) const

Return current const eq_fn.

4.343.3.6 get_hash_fn() [1/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Hash_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( )

Return current hash_fn.

4.343.3.7 get_hash_fn() [2/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Hash_Fn& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( ) const

Return current const hash_fn.

4.343.3.8 get_resize_policy() [1/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >

```
Resize_Policy& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( )
```

Return current resize_policy.

4.343.3.9 get_resize_policy() [2/2] template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >

```
const Resize_Policy& __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↩
Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( ) const
```

Return current const resize_policy.

- static constexpr int_type **to_int_type** (const char_type &__c)

4.344.1 Detailed Description

template<typename _CharT>
struct __gnu_cxx::char_traits< _CharT >

Base class used to implement std::char_traits.

Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int_type and state_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace __gnu_cxx may be.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

Definition at line 90 of file char_traits.h.
The documentation for this struct was generated from the following file:

- char_traits.h

4.345 std::char_traits< _CharT > Struct Template Reference

- static constexpr char_type **to_char_type** (const int_type &__c)
- static constexpr int_type **to_int_type** (const char_type &__c)

4.345.1 Detailed Description

template<class _CharT>
struct std::char_traits< _CharT >

Basis for explicit traits specializations.

Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around __gnu_cxx::char_traits, it is possible to achieve a more appropriate definition by specializing __gnu_cxx::char_traits.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

template<typename _RealType = double>
class std::chi_squared_distribution< _RealType >

A chi_squared_distribution random number distribution.
The formula for the normal probability mass function is $p(x|n) = \frac{x^{(n/2)-1}e^{-x/2}}{\Gamma(n/2)2^{n/2}}$
Definition at line 2630 of file random.h.

4.350.2 Member Typedef Documentation

4.350.2.1 result_type `template<typename _RealType = double>`

```
typedef _RealType std::chi_squared_distribution< _RealType >::result_type
```

The type of the range of the distribution.
Definition at line 2637 of file random.h.

4.350.3 Member Function Documentation

4.350.3.1 max() template<typename _RealType = double>

```
result_type std::chi_squared_distribution< _RealType >::max ( ) const  [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 2724 of file random.h.
References std::numeric_limits< _Tp >::max().

4.350.3.2 min() template<typename _RealType = double>

```
result_type std::chi_squared_distribution< _RealType >::min ( ) const  [inline]
```

Returns the greatest lower bound value of the distribution.
Definition at line 2717 of file random.h.

4.350.3.3 operator()() template<typename _RealType = double>

```
template<typename _UniformRandomNumberGenerator >
result_type std::chi_squared_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng )  [inline]
```

Generating functions.
Definition at line 2732 of file random.h.

4.350.3.4 param() [1/2] template<typename _RealType = double>

```
param_type std::chi_squared_distribution< _RealType >::param ( ) const  [inline]
```

Returns the parameter set of the distribution.
Definition at line 2697 of file random.h.

4.350.3.5 param() [2/2] template<typename _RealType = double>

```
void std::chi_squared_distribution< _RealType >::param (
            const param_type & __param )  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2705 of file random.h.
References std::gamma_distribution< _RealType >::param().

4.350.3.6 reset() template<typename _RealType = double>

```
void std::chi_squared_distribution< _RealType >::reset ( )  [inline]
```

Resets the distribution state.
Definition at line 2683 of file random.h.
References std::gamma_distribution< _RealType >::reset().

4.350.4 Friends And Related Function Documentation

4.350.4.1 operator<< template<typename _RealType = double>

```
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::chi_squared_distribution< _RealType1 > & __x )  [friend]
```

Inserts a chi_squared_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A chi_squared_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.350.4.2 operator== template<typename _RealType = double>

```
bool operator== (
            const chi_squared_distribution< _RealType > & __d1,
            const chi_squared_distribution< _RealType > & __d2 )  [friend]
```

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.
Definition at line 2783 of file random.h.

4.350.4.3 operator>> template<typename _RealType = double>

```
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::chi_squared_distribution< _RealType1 > & __x )  [friend]
```

Extracts a chi_squared_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A chi_squared_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.351.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt< _InternT, _ExternT, _StateT >

Primary class template codecvt.
NB: Generic, mostly useless implementation.
Definition at line 274 of file codecvt.h.

4.351.2 Member Function Documentation

4.351.2.1 do_out() template<typename _InternT , typename _ExternT , typename _StateT >

```
virtual result std::codecvt< _InternT, _ExternT, _StateT >::do_out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next ) const  [protected], [virtual]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

4.351.2.2 in() template<typename _InternT , typename _ExternT , typename _StateT >

```
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next ) const  [inline], [inherited]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.351.2.3 out()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next ) const  [inline], [inherited]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.
References std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out().

4.351.2.4 unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next ) const  [inline], [inherited]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

4.353.2.1 do_out()

```
virtual result std::codecvt< char, char, mbstate_t >::do_out (
        state_type & __state,
        const intern_type * __from,
        const intern_type * __from_end,
        const intern_type *& __from_next,
        extern_type * __to,
        extern_type * __to_end,
        extern_type *& __to_next ) const  [protected], [virtual]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements std::__codecvt_abstract_base< char, char, mbstate_t >.

4.353.2.2 in()

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const  [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.353.2.3 out()

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

4.353.2.4 unshift()

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::unshift (
        state_type & __state,
        extern_type * __to,
        extern_type * __to_end,
        extern_type *& __to_next ) const  [inline], [inherited]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 155 of file codecvt.h.

out for more information.

Implements std::__codecvt_abstract_base< wchar_t, char, mbstate_t >.

4.356.2.2 in()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::in (
        state_type & __state,
        const extern_type * __from,
        const extern_type * __from_end,
        const extern_type *& __from_next,
        intern_type * __to,
        intern_type * __to_end,
        intern_type *& __to_next ) const  [inline], [inherited]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.356.2.3 out()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::out (
        state_type & __state,
        const intern_type * __from,
        const intern_type * __from_end,
        const intern_type *& __from_next,
        extern_type * __to,
        extern_type * __to_end,
        extern_type *& __to_next ) const  [inline], [inherited]
```

Convert from internal to external character set.
Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.

4.356.2.4 unshift()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next ) const  [inline], [inherited]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Implements std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >.

4.358.2.2 in() template<typename _InternT , typename _ExternT , typename _StateT >

```
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
             state_type & __state,
             const extern_type * __from,
             const extern_type * __from_end,
             const extern_type *& __from_next,
             intern_type * __to,
             intern_type * __to_end,
             intern_type *& __to_next ) const  [inline], [inherited]
```

Convert from external to internal character set.
Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.
The source and destination character sets are determined by the facet's locale, internal and external types.
The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.
The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.
The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.

Parameters

__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 196 of file codecvt.h.

4.358.2.3 out()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
             state_type & __state,
             const intern_type * __from,
             const intern_type * __from_end,
             const intern_type *& __from_next,
             extern_type * __to,
             extern_type * __to_end,
             extern_type *& __to_next ) const  [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

Definition at line 116 of file codecvt.h.
References std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out().

4.358.2.4 unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
            state_type & __state,
            extern_type * __to,
            extern_type * __to_end,
            extern_type *& __to_next ) const  [inline], [inherited]
```

Reset conversion state.
Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().
For example, if 4 external characters always converted to 1 internal character, and input to in() had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.
The source and destination character sets are determined by the facet's locale, internal and external types.
The result returned is a member of codecvt_base::result. If the state could be reset and data written, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the output has insufficient space, returns codecvt_base::partial. Otherwise the reset failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

4.359.1 Detailed Description

template<typename _CharT>
class std::collate< _CharT >

Facet for localized string comparison.
This facet encapsulates the code to compare strings in a localized manner.
The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.
Definition at line 644 of file locale_classes.h.

4.359.2 Member Typedef Documentation

4.359.2.1 char_type template<typename _CharT >

```
typedef _CharT std::collate< _CharT >::char_type
```

Public typedefs.
Definition at line 650 of file locale_classes.h.

4.359.2.2 string_type template<typename _CharT >

```
typedef basic_string<_CharT> std::collate< _CharT >::string_type
```

Public typedefs.
Definition at line 651 of file locale_classes.h.

4.359.3 Constructor & Destructor Documentation

4.359.3.1 collate() [1/2] template<typename _CharT >

```
std::collate< _CharT >::collate (
            size_t __refs = 0 ) [inline], [explicit]
```

Constructor performs initialization.
This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

Definition at line 671 of file locale_classes.h.

4.359.3.2 collate() [2/2] template<typename _CharT >

```
std::collate< _CharT >::collate (
            __c_locale __cloc,
            size_t __refs = 0 ) [inline], [explicit]
```

Internal constructor. Not for general use.
This is a constructor for use by the library itself to set up new locales.

Parameters

__cloc	The C locale.
__refs	Passed to the base facet class.

Definition at line 685 of file locale_classes.h.

4.359.3.3 ~collate() template<typename _CharT >

```
virtual std::collate< _CharT >::~collate ( ) [inline], [protected], [virtual]
```

Destructor.
Definition at line 748 of file locale_classes.h.

4.359.4 Member Function Documentation

4.359.4.1 compare() template<typename _CharT >

```
int std::collate< _CharT >::compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2 ) const  [inline]
```

Compare two strings.
This function compares two strings and returns the result by calling collate::do_compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 702 of file locale_classes.h.

4.359.4.2 do_compare() template<typename _CharT >

```
int std::collate< _CharT >::do_compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2 ) const  [protected], [virtual]
```

Compare two strings.
This function is a hook for derived classes to change the value returned.

See also

compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 160 of file locale_classes.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.359.4.3 do_hash() template<typename _CharT >

```
long std::collate< _CharT >::do_hash (
            const _CharT * __lo,
            const _CharT * __hi ) const  [protected], [virtual]
```

Return hash of a string.
This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Hash value.

Definition at line 255 of file locale_classes.tcc.

4.359.4.4 do_transform() template<typename _CharT >

```
collate< _CharT >::string_type std::collate< _CharT >::do_transform (
            const _CharT * __lo,
            const _CharT * __hi ) const  [protected], [virtual]
```

Transform string to comparable form.
This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start.
_↩ _hi	End.

Returns

transformed string.

Definition at line 199 of file locale_classes.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.359.4.5 hash() template<typename _CharT >

```
long std::collate< _CharT >::hash (
            const _CharT * __lo,
            const _CharT * __hi ) const  [inline]
```

Return hash of a string.
This function computes and returns a hash on the input string. It does so by returning collate::do_hash().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Hash value.

Definition at line 735 of file locale_classes.h.

4.359.4.6 transform() template<typename _CharT >

```
string_type std::collate< _CharT >::transform (
            const _CharT * __lo,
            const _CharT * __hi ) const  [inline]
```

Transform string to comparable form.
This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning collate::do_transform().

Parameters

__lo	Start of string.
__hi	End of string.

Returns

Transformed string_type.

Definition at line 721 of file locale_classes.h.

4.359.5 Member Data Documentation

4.359.5.1 id template<typename _CharT >

```
locale::id std::collate< _CharT >::id  [static]
```

Numpunct facet id.
Definition at line 661 of file locale_classes.h.

4.360.1 Detailed Description

template<typename _CharT>
class std::collate_byname< _CharT >

class collate_byname [22.2.4.2].
Definition at line 818 of file locale_classes.h.

4.360.2 Member Typedef Documentation

4.360.2.1 char_type template<typename _CharT >

```
typedef _CharT std::collate_byname< _CharT >::char_type
```

Public typedefs.
Definition at line 823 of file locale_classes.h.

4.360.2.2 string_type template<typename _CharT >

```
typedef basic_string<_CharT> std::collate_byname< _CharT >::string_type
```

Public typedefs.
Definition at line 824 of file locale_classes.h.

4.360.3 Member Function Documentation

4.360.3.1 compare() template<typename _CharT >

```
int std::collate< _CharT >::compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2 ) const  [inline], [inherited]
```

Compare two strings.
This function compares two strings and returns the result by calling collate::do_compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 702 of file locale_classes.h.

4.360.3.2 do_compare() template<typename _CharT >

```
int std::collate< _CharT >::do_compare (
            const _CharT * __lo1,
            const _CharT * __hi1,
            const _CharT * __lo2,
            const _CharT * __hi2 ) const  [protected], [virtual], [inherited]
```

Compare two strings.
This function is a hook for derived classes to change the value returned.

See also

compare().

Parameters

__lo1	Start of string 1.
__hi1	End of string 1.
__lo2	Start of string 2.
__hi2	End of string 2.

Returns

1 if string1 > string2, -1 if string1 < string2, else 0.

Definition at line 160 of file locale_classes.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.360.3.3 do_hash() template<typename _CharT >

```
long std::collate< _CharT >::do_hash (
             const _CharT * __lo,
             const _CharT * __hi ) const  [protected], [virtual], [inherited]
```

Return hash of a string.
This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Hash value.

Definition at line 255 of file locale_classes.tcc.

4.360.3.4 do_transform() template<typename _CharT >

```
collate< _CharT >::string_type std::collate< _CharT >::do_transform (
             const _CharT * __lo,
             const _CharT * __hi ) const  [protected], [virtual], [inherited]
```

Transform string to comparable form.
This function is a hook for derived classes to change the value returned.

Parameters

_↩ _lo	Start.
_↩ _hi	End.

Returns

transformed string.

Definition at line 199 of file locale_classes.tcc.
References std::basic_string< _CharT, _Traits, _Alloc >::c_str(), std::basic_string< _CharT, _Traits, _Alloc >::data(), and std::basic_string< _CharT, _Traits, _Alloc >::length().

4.360.3.5 hash() template<typename _CharT >

```
long std::collate< _CharT >::hash (
            const _CharT * __lo,
            const _CharT * __hi ) const  [inline], [inherited]
```

Return hash of a string.
This function computes and returns a hash on the input string. It does so by returning collate::do_hash().

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Hash value.

Definition at line 735 of file locale_classes.h.

4.360.3.6 transform() template<typename _CharT >

```
string_type std::collate< _CharT >::transform (
            const _CharT * __lo,
            const _CharT * __hi ) const  [inline], [inherited]
```

Transform string to comparable form.
This function is a wrapper for strxfrm functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning collate::do_transform().

Parameters

_↩ _lo	Start of string.
_↩ _hi	End of string.

Returns

Transformed string_type.

Definition at line 721 of file locale_classes.h.

4.360.4 Member Data Documentation

4.360.4.1 id `template<typename _CharT >`

`locale::id std::collate< _CharT >::id [static], [inherited]`

Numpunct facet id.
Definition at line 661 of file locale_classes.h.
The documentation for this class was generated from the following file:

- locale_classes.h

4.361 std::common_type< _Tp > Struct Template Reference

Inherited by std::common_type< _Tp1, _Tp2 >.

4.361.1 Detailed Description

template<typename... _Tp>
struct std::common_type< _Tp >

common_type
Definition at line 2215 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.362 std::common_type< chrono::duration< _Rep, _Period > > Struct Template Reference

Public Types

- using **type** = chrono::duration< typename common_type< _Rep >::type, typename _Period::type >

4.362.1 Detailed Description

template<typename _Rep, typename _Period>
struct std::common_type< chrono::duration< _Rep, _Period > >

Specialization of common_type for one chrono::duration type.
Definition at line 125 of file chrono.
The documentation for this struct was generated from the following file:

- chrono

4.363 std::common_type< chrono::duration< _Rep, _Period >, chrono::duration< _Rep, _Period > > Struct Template Reference

Public Types

- using **type** = chrono::duration< typename common_type< _Rep >::type, typename _Period::type >

4.363.1 Detailed Description

template<typename _Rep, typename _Period>
struct std::common_type< chrono::duration< _Rep, _Period >, chrono::duration< _Rep, _Period > >

Specialization of common_type for two identical chrono::duration types.
Definition at line 115 of file chrono.
The documentation for this struct was generated from the following file:

- chrono

4.364 std::common_type< chrono::duration< _Rep1, _Period1 >, chrono::duration< _Rep2, _Period2 > > Struct Template Reference

Inherits __duration_common_type< common_type< _Rep1, _Rep2 >, _Period1::type, _Period2::type >.

4.364.1 Detailed Description

template<typename _Rep1, typename _Period1, typename _Rep2, typename _Period2>
struct std::common_type< chrono::duration< _Rep1, _Period1 >, chrono::duration< _Rep2, _Period2 > >

Specialization of common_type for chrono::duration types.
Definition at line 105 of file chrono.
The documentation for this struct was generated from the following file:

- chrono

4.365 std::common_type< chrono::time_point< _Clock, _Duration > > Struct Template Reference

Public Types

- using **type** = chrono::time_point< _Clock, _Duration >

4.365.1 Detailed Description

template<typename _Clock, typename _Duration>
struct std::common_type< chrono::time_point< _Clock, _Duration > >

Specialization of common_type for one chrono::time_point type.
Definition at line 165 of file chrono.
The documentation for this struct was generated from the following file:

- chrono

4.366 std::common_type< chrono::time_point< _Clock, _Duration >, chrono::time_point< _Clock, _Duration > > Struct Template Reference

Public Types

- constexpr void **real** (_Tp __val)

4.368.1 Detailed Description

template<typename _Tp>
struct std::complex< _Tp >

Template to represent complex numbers.
Specializations for float, double, and long double are part of the library. Results with any other type are not guaranteed.

Parameters

Tp	Type of real and imaginary values.

Definition at line 127 of file complex.

4.368.2 Member Typedef Documentation

4.368.2.1 value_type `template<typename _Tp >`

```
typedef _Tp std::complex< _Tp >::value_type
```

Value typedef.
Definition at line 130 of file complex.

4.368.3 Constructor & Destructor Documentation

4.368.3.1 complex() [1/2] `template<typename _Tp >`

```
constexpr std::complex< _Tp >::complex (
            const _Tp & __r = _Tp(),
            const _Tp & __i = _Tp() )  [inline], [constexpr]
```

Default constructor. First parameter is x, second parameter is y. Unspecified parameters default to 0.
Definition at line 134 of file complex.

4.368.3.2 complex() [2/2] `template<typename _Tp >`

```
template<typename _Up >
constexpr std::complex< _Tp >::complex (
            const complex< _Up > & __z )  [inline], [constexpr]
```

Converting constructor.
Definition at line 144 of file complex.

4.368.4 Member Function Documentation

4.368.4.1 operator+=() `template<typename _Tp >`

```
constexpr complex<_Tp>& std::complex< _Tp >::operator+= (
            const _Tp & __t )  [inline], [constexpr]
```

Add a scalar to this complex number.
Definition at line 189 of file complex.

4.368.4.2 operator-=() template<typename _Tp >

```
constexpr complex<_Tp>& std::complex< _Tp >::operator-= (
            const _Tp & __t )  [inline], [constexpr]
```

Subtract a scalar from this complex number.
Definition at line 198 of file complex.
The documentation for this struct was generated from the following file:

4.379.1 Detailed Description

template<typename _Ret, typename _Tp, typename _Arg>
class std::const_mem_fun1_ref_t< _Ret, _Tp, _Arg >

One of the adaptors for member pointers.
Definition at line 1329 of file stl_function.h.

4.379.2 Member Typedef Documentation

4.379.2.1 first_argument_type typedef _Tp std::binary_function< _Tp , _Arg , _Ret >::first_argument_type [inherited]

first_argument_type is the type of the first argument
Definition at line 121 of file stl_function.h.

4.379.2.2 result_type typedef _Ret std::binary_function< _Tp , _Arg , _Ret >::result_type [inherited]

result_type is the return type
Definition at line 127 of file stl_function.h.

4.379.2.3 second_argument_type typedef _Arg std::binary_function< _Tp , _Arg , _Ret >::second_argument_type [inherited]

second_argument_type is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this class was generated from the following file:

- stl_function.h

4.380 std::const_mem_fun1_t< _Ret, _Tp, _Arg > Class Template Reference

Inheritance diagram for std::const_mem_fun1_t< _Ret, _Tp, _Arg >:

Public Types

- typedef const _Tp * first_argument_type
- typedef _Ret result_type
- typedef _Arg second_argument_type

Public Member Functions

- **const_mem_fun1_t** (_Ret(_Tp::*__pf)(_Arg) const)
- _Ret **operator()** (const _Tp *__p, _Arg __x) const

4.380.1 Detailed Description

template<typename _Ret, typename _Tp, typename _Arg>
class std::const_mem_fun1_t< _Ret, _Tp, _Arg >

One of the adaptors for member pointers.
Definition at line 1293 of file stl_function.h.

4.380.2 Member Typedef Documentation

4.380.2.1 first_argument_type typedef const _Tp * std::binary_function< const _Tp * , _Arg , _Ret >::first_argument_type [inherited]

first_argument_type is the type of the first argument
Definition at line 121 of file stl_function.h.

4.380.2.2 result_type typedef _Ret std::binary_function< const _Tp * , _Arg , _Ret >::result_type [inherited]

result_type is the return type
Definition at line 127 of file stl_function.h.

4.380.2.3 second_argument_type typedef _Arg std::binary_function< const _Tp * , _Arg , _Ret >::second_argument_type [inherited]

second_argument_type is the type of the second argument
Definition at line 124 of file stl_function.h.
The documentation for this class was generated from the following file:

- stl_function.h

4.381 std::const_mem_fun_ref_t< _Ret, _Tp > Class Template Reference

Inheritance diagram for std::const_mem_fun_ref_t< _Ret, _Tp >:

Public Types

- typedef _Tp argument_type
- typedef _Ret result_type

Public Member Functions

- **const_mem_fun_ref_t** (_Ret(_Tp::*__pf)() const)
- _Ret **operator()** (const _Tp &__r) const

4.381.1 Detailed Description

template<typename _Ret, typename _Tp>
class std::const_mem_fun_ref_t< _Ret, _Tp >

One of the adaptors for member pointers.
Definition at line 1257 of file stl_function.h.

4.381.2 Member Typedef Documentation

4.381.2.1 argument_type typedef _Tp std::unary_function< _Tp , _Ret >::argument_type [inherited]

argument_type is the type of the argument
Definition at line 108 of file stl_function.h.

4.381.2.2 result_type typedef _Ret std::unary_function< _Tp , _Ret >::result_type [inherited]

result_type is the return type
Definition at line 111 of file stl_function.h.
The documentation for this class was generated from the following file:

- stl_function.h

4.382 std::const_mem_fun_t< _Ret, _Tp > Class Template Reference

Inheritance diagram for std::const_mem_fun_t< _Ret, _Tp >:

Public Types

- typedef const _Tp * argument_type
- typedef _Ret result_type

Public Member Functions

- **const_mem_fun_t** (_Ret(_Tp::*__pf)() const)
- _Ret **operator()** (const _Tp *__p) const

4.382.1 Detailed Description

template<typename _Ret, typename _Tp>
class std::const_mem_fun_t< _Ret, _Tp >

One of the adaptors for member pointers.
Definition at line 1221 of file stl_function.h.

4.382.2 Member Typedef Documentation

4.382.2.1 argument_type `typedef const _Tp * std::unary_function< const _Tp * , _Ret >::argument_type [inherited]`

`argument_type` is the type of the argument
Definition at line 108 of file stl_function.h.

4.382.2.2 result_type `typedef _Ret std::unary_function< const _Tp * , _Ret >::result_type [inherited]`

`result_type` is the return type
Definition at line 111 of file stl_function.h.
The documentation for this class was generated from the following file:

4.406.2 Member Typedef Documentation

4.406.2.1 type `template<typename Key , typename _Alloc , typename Policy_Tl >`

`typedef splay_tree_set<Key, null_type, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, splay_tree_tag, Policy_Tl >::type`

Dispatched type.
Definition at line 222 of file container_base_dispatch.hpp.
The documentation for this struct was generated from the following file:

- container_base_dispatch.hpp

4.407 __gnu_pbds::container_error Struct Reference

Inheritance diagram for __gnu_pbds::container_error:

Public Member Functions

- virtual const char * what () const noexcept

4.407.1 Detailed Description

Base class for exceptions.
Definition at line 57 of file exception.hpp.

4.407.2 Member Function Documentation

4.407.2.1 what() `virtual const char* std::logic_error::what ( ) const [virtual], [noexcept], [inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from std::exception.
Reimplemented in std::future_error.
The documentation for this struct was generated from the following file:

- exception.hpp

4.408 __gnu_pbds::container_tag Struct Reference

Inheritance diagram for __gnu_pbds::container_tag:

4.408.1 Detailed Description

Base data structure tag.
Definition at line 125 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.409 __gnu_pbds::container_traits< Cntnr > Struct Template Reference

Inheritance diagram for __gnu_pbds::container_traits< Cntnr >:

Public Types

- enum { order_preserving , erase_can_throw , split_join_can_throw , reverse_iteration }
- typedef container_traits_base< container_category > **base_type**
- typedef Cntnr::container_category **container_category**
- typedef Cntnr **container_type**
- typedef base_type::invalidation_guarantee **invalidation_guarantee**

4.409.1 Detailed Description

template<typename Cntnr>
struct __gnu_pbds::container_traits< Cntnr >

Container traits.
Definition at line 418 of file tag_and_trait.hpp.

4.409.2 Member Enumeration Documentation

4.409.2.1 anonymous enum `template<typename Cntnr >` `anonymous enum`

Enumerator

order_preserving	True only if Cntnr objects guarantee storing keys by order.

Enumerator

erase_can_throw	True only if erasing a key can throw.
split_join_can_throw	True only if split or join operations can throw.
reverse_iteration	True only reverse iterators are supported.

Definition at line 426 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.410 __gnu_pbds::container_traits_base< _Tag > Struct Template Reference

4.410.1 Detailed Description

template<typename _Tag>
struct __gnu_pbds::container_traits_base< _Tag >

Primary template, container traits base.
Definition at line 220 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.411 __gnu_pbds::container_traits_base< binary_heap_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef binary_heap_tag **container_category**
- typedef basic_invalidation_guarantee **invalidation_guarantee**

4.411.1 Detailed Description

Specialization, binary heap.
Definition at line 400 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.412 __gnu_pbds::container_traits_base< binomial_heap_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef binomial_heap_tag **container_category**
- typedef point_invalidation_guarantee **invalidation_guarantee**

4.412.1 Detailed Description

Specialization, binomial heap.
Definition at line 368 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.413 __gnu_pbds::container_traits_base< cc_hash_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef cc_hash_tag **container_category**
- typedef point_invalidation_guarantee **invalidation_guarantee**

4.413.1 Detailed Description

Specialization, cc hash.
Definition at line 224 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.414 __gnu_pbds::container_traits_base< gp_hash_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef gp_hash_tag **container_category**
- typedef basic_invalidation_guarantee **invalidation_guarantee**

4.414.1 Detailed Description

Specialization, gp hash.
Definition at line 240 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.415 __gnu_pbds::container_traits_base< list_update_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef list_update_tag **container_category**
- typedef point_invalidation_guarantee **invalidation_guarantee**

4.415.1 Detailed Description

Specialization, list update.
Definition at line 320 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.416 __gnu_pbds::container_traits_base< ov_tree_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef ov_tree_tag **container_category**
- typedef basic_invalidation_guarantee **invalidation_guarantee**

4.416.1 Detailed Description

Specialization, ov tree.
Definition at line 288 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.417 __gnu_pbds::container_traits_base< pairing_heap_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef pairing_heap_tag **container_category**
- typedef point_invalidation_guarantee **invalidation_guarantee**

4.417.1 Detailed Description

Specialization, pairing heap.
Definition at line 336 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.418 __gnu_pbds::container_traits_base< pat_trie_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef pat_trie_tag **container_category**
- typedef range_invalidation_guarantee **invalidation_guarantee**

4.418.1 Detailed Description

Specialization, pat trie.
Definition at line 304 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.419 __gnu_pbds::container_traits_base< rb_tree_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef rb_tree_tag **container_category**
- typedef range_invalidation_guarantee **invalidation_guarantee**

4.419.1 Detailed Description

Specialization, rb tree.
Definition at line 256 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.420 __gnu_pbds::container_traits_base< rc_binomial_heap_tag > Struct Reference

Public Types

- enum { **order_preserving** , **erase_can_throw** , **split_join_can_throw** , **reverse_iteration** }
- typedef rc_binomial_heap_tag **container_category**
- typedef point_invalidation_guarantee **invalidation_guarantee**

4.420.1 Detailed Description

Specialization, rc binomial heap.
Definition at line 384 of file tag_and_trait.hpp.
The documentation for this struct was generated from the following file:

- tag_and_trait.hpp

4.421 __gnu_pbds::container_traits_base< splay_tree_tag > Struct Reference

4.423.1 Detailed Description

template<typename _CharT>
class std::ctype< _CharT >

Primary class template ctype facet.
This template class defines classification and conversion functions for character sets. It wraps cctype functionality. Ctype gets used by streams for many I/O operations.
This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in __ctype_abstract_base, to allow for implementation flexibility. See ctype<wchar_t> for an example. The functions are documented in __ctype_abstract_↩ base.
Note: implementations are provided for all the protected virtual functions, but will likely not be useful.
Definition at line 612 of file locale_facets.h.

4.423.2 Member Function Documentation

4.423.2.1 do_is() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [protected], [virtual]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.2 do_is() [2/2] template<typename _CharT >

```
virtual bool std::ctype< _CharT >::do_is (
```

```
            mask __m,
            char_type __c ) const  [protected], [virtual]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

_↩ _*c*	The char_type to find the mask of.
_↩ _*m*	The mask to compare against.

Returns

(M & __m) != 0.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.3 do_narrow() [1/2] template<typename _CharT >

```
virtual char std::ctype< _CharT >::do_narrow (
            char_type __c,
            char __dfault ) const  [protected], [virtual]
```

Narrow char_type to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::narrow().

4.423.2.4 do_narrow() [2/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [protected], [virtual]
```

Narrow char_type array to char.
This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is

used instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.5 do_scan_is() template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Find char_type matching mask.
This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.6 do_scan_not() template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Find char_type not matching mask.
This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else __hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.7 do_tolower() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_tolower (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Convert array to lowercase.

This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.8 do_tolower() [2/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_tolower (
            char_type __c ) const  [protected], [virtual]
```

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else __c.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::tolower().

4.423.2.9 do_toupper() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_toupper (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Convert array to uppercase.
This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.10 do_toupper() [2/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_toupper (
            char_type __c ) const  [protected], [virtual]
```

Convert to uppercase.
This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else __c.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::toupper().

4.423.2.11 do_widen() [1/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_widen (
            char __c ) const  [protected], [virtual]
```

Widen char.
This virtual function converts the char to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::widen().

4.423.2.12 do_widen() [2/2] template<typename _CharT >

```
virtual const char* std::ctype< _CharT >::do_widen (
            const char * __lo,
            const char * __hi,
            char_type * __to ) const  [protected], [virtual]
```

Widen char array.
This function converts each char in the input to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.423.2.13 is() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [inline], [inherited]
```

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 186 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().

4.423.2.14 is() [2/2] template<typename _CharT >

```
bool std::__ctype_abstract_base< _CharT >::is (
            mask __m,
            char_type __c ) const  [inline], [inherited]
```

Test char_type classification.
This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_↩ type>::do_is().

Parameters

_↩ _c	The char_type to compare the mask of.
_↩ _m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 169 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().
Referenced by std::time_get< _CharT, _InIter >::get().

4.423.2.15 narrow() [1/2] template<typename _CharT >

```
char std::__ctype_abstract_base< _CharT >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Narrow char_type to char.
This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 331 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().
Referenced by std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.423.2.16 narrow() [2/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [inline], [inherited]
```

Narrow array to char array.
This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 353 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().

4.423.2.17 scan_is() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Find char_type matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else *__hi*.

Definition at line 202 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_is().

4.423.2.18 scan_not() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Find char_type not matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

__m	The mask to compare against.
__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else *__hi*.

Definition at line 218 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_not().

4.423.2.19 tolower() [1/2] template<typename _CharT >

```

            char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Convert array to lowercase.
This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 276 of file locale_facets.h.

References std::__ctype_abstract_base< _CharT >::do_tolower().

4.423.2.20 tolower() [2/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::tolower (
            char_type __c ) const  [inline], [inherited]
```

Convert to lowercase.
This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else __c.

```
char_type std::__ctype_abstract_base< _CharT >::widen (
            char __c ) const  [inline], [inherited]
```

Widen char to char_type.
This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type.

Definition at line 293 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_widen().
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::money↩ _put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::do_put().

4.423.2.24 widen() [2/2] template<typename _CharT >

```
const char* std::__ctype_abstract_base< _CharT >::widen (
            const char * __lo,
            const char * __hi,
            char_type * __to ) const  [inline], [inherited]
```

Widen array to char_type.
This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Definition at line 312 of file locale_facets.h.

4.424.1 Detailed Description

The ctype<char> specialization.
This class defines classification and conversion functions for the char type. It gets used by char streams for many I/O operations. The char specialization provides a number of optimizations as well.
Definition at line 681 of file locale_facets.h.

4.424.2 Member Typedef Documentation

4.424.2.1 char_type `typedef char std::ctype< char >::char_type`

Typedef for the template parameter char.
Definition at line 686 of file locale_facets.h.

4.424.3 Constructor & Destructor Documentation

4.424.3.1 ctype() [1/2]

```
std::ctype< char >::ctype (
        const mask * __table = 0,
        bool __del = false,
        size_t __refs = 0 )  [explicit]
```

Constructor performs initialization.
This is the constructor provided by the standard.

Parameters

__table	If non-zero, table is used as the per-char mask. Else classic_table() is used.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

4.424.3.2 ctype() [2/2]

```
std::ctype< char >::ctype (
        __c_locale __cloc,
        const mask * __table = 0,
        bool __del = false,
        size_t __refs = 0 )  [explicit]
```

Constructor performs static initialization.
This constructor is used to construct the initial C locale facet.

Parameters

__cloc	Handle to C locale data.
__table	If non-zero, table is used as the per-char mask.
__del	If true, passes ownership of table to this facet.
__refs	Passed to the base facet class.

4.424.3.3 ~ctype() `virtual std::ctype< char >::~ctype ( )  [protected], [virtual]`

Destructor.

This function deletes table() if *del* was true in the constructor.

4.424.4 Member Function Documentation

4.424.4.1 classic_table() `static const mask* std::ctype< char >::classic_table ( ) throw ( ) [static]`

Returns a pointer to the C locale mask table.

4.424.4.2 do_narrow() `[1/2]` `virtual char std::ctype< char >::do_narrow ( char_type __c, char __dfault ) const [inline], [protected], [virtual]`

Narrow char.
This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, *c* will be returned unchanged.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 1134 of file locale_facets.h.

4.424.4.3 do_narrow() `[2/2]` `virtual const char_type* std::ctype< char >::do_narrow ( const char_type * __lo, const char_type * __hi, char __dfault, char * __to ) const [inline], [protected], [virtual]`

Narrow char array to char array.
This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 1160 of file locale_facets.h.

4.424.4.4 do_tolower() [1/2]

```
virtual const char_type* std::ctype< char >::do_tolower (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Convert array to lowercase.
This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

__hi.

4.424.4.5 do_tolower() [2/2]

```
virtual char_type std::ctype< char >::do_tolower (
            char_type __c ) const  [protected], [virtual]
```

Convert to lowercase.
This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

__c	The char to convert.

Returns

The lowercase char if convertible, else *__c*.

4.424.4.6 do_toupper() [1/2]

```
virtual const char_type* std::ctype< char >::do_toupper (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Convert array to uppercase.
This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

4.424.4.7 do_toupper() [2/2] virtual char_type std::ctype< char >::do_toupper (char_type __c) const [protected], [virtual]

Convert to uppercase.
This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The char to convert.

Returns

The uppercase char if convertible, else *__c*.

4.424.4.8 do_widen() [1/2] virtual char_type std::ctype< char >::do_widen (char __c) const [inline], [protected], [virtual]

Widen char.
This virtual function converts the char to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted character.

Definition at line 1084 of file locale_facets.h.

4.424.4.9 do_widen() [2/2] virtual const char* std::ctype< char >::do_widen (

```
            const char * __lo,
            const char * __hi,
            char_type * __to ) const  [inline], [protected], [virtual]
```

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be copied unchanged.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 1107 of file locale_facets.h.

4.424.4.10 is() [1/2]

```
const char * std::ctype< char >::is (
            const char * __lo,
            const char * __hi,
            mask * __vec ) const  [inline]
```

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 47 of file ctype_inline.h.

4.424.4.11 is() [2/2]

```
bool std::ctype< char >::is (
            mask __m,
            char __c ) const  [inline]
```

Test char classification.

This function compares the mask table[c] to *__m*.

Parameters

_↩ _c	The char to compare the mask of.
_↩ _m	The mask to compare against.

Returns

True if __m & table[__c] is true, false otherwise.

Definition at line 42 of file ctype_inline.h.

4.424.4.12 narrow() [1/2]

```
char std::ctype< char >::narrow (
        char_type __c,
        char __dfault ) const  [inline]
```

Narrow char.
This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, *c* will be returned unchanged.
This function works as if it returns ctype<char>::do_narrow(c). do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.
__dfault	Char to return if conversion fails.

Returns

The converted character.

Definition at line 931 of file locale_facets.h.
References std::ctype< _CharT >::do_narrow().

4.424.4.13 narrow() [2/2]

```
const char_type* std::ctype< char >::narrow (
        const char_type * __lo,
        const char_type * __hi,
        char __dfault,
        char * __to ) const  [inline]
```

Narrow char array.
This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.
This function works as if it returns ctype<char>::do_narrow(lo, hi, dfault, to). do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Parameters

__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 964 of file locale_facets.h.
References std::ctype< _CharT >::do_narrow().

4.424.4.14 scan_is()

```
const char * std::ctype< char >::scan_is (
        mask __m,
        const char * __lo,
        const char * __hi ) const  [inline]
```

Find char matching a mask.
This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a matching char if found, else *__hi*.

Definition at line 56 of file ctype_inline.h.

4.424.4.15 scan_not()

```
const char * std::ctype< char >::scan_not (
        mask __m,
        const char * __lo,
        const char * __hi ) const  [inline]
```

Find char not matching a mask.
This function searches for and returns a pointer to the first char in [__lo,__hi) for which is(m,char) is false.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching char if found, else *__hi*.

Definition at line 66 of file ctype_inline.h.

4.424.4.16 table() `const mask* std::ctype< char >::table ( ) const throw ( ) [inline]`

Returns a pointer to the mask table provided to the constructor, or the default from classic_table() if none was provided.
Definition at line 983 of file locale_facets.h.

4.424.4.17 tolower() [1/2]

```
const char_type* std::ctype< char >::tolower (
    char_type * __lo,
    const char_type * __hi ) const [inline]
```

Convert array to lowercase.
This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.
tolower() acts as if it returns ctype<char>:: do_tolower(__lo, __hi). do_tolower() must always return the same result for the same input.

Parameters

__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 852 of file locale_facets.h.
References std::ctype< _CharT >::do_tolower().

4.424.4.18 tolower() [2/2]

```
char_type std::ctype< char >::tolower (
    char_type __c ) const [inline]
```

Convert to lowercase.
This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument. tolower() acts as if it returns ctype<char>::do_tolower(__c). do_tolower() must always return the same result for the same input.

Parameters

__c	The char to convert.

Returns

The lowercase char if convertible, else *__c*.

Definition at line 835 of file locale_facets.h.
References std::ctype< _CharT >::do_tolower().

4.424.4.19 toupper() [1/2]

```
const char_type* std::ctype< char >::toupper (
    char_type * __lo,
    const char_type * __hi ) const  [inline]
```

Convert array to uppercase.
This function converts each char in the range [__lo,__hi) to uppercase if possible. Other chars remain untouched. toupper() acts as if it returns ctype<char>:: do_toupper(__lo, __hi). do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 819 of file locale_facets.h.
References std::ctype< _CharT >::do_toupper().

4.424.4.20 toupper() [2/2]

```
char_type std::ctype< char >::toupper (
    char_type __c ) const  [inline]
```

Convert to uppercase.
This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument. toupper() acts as if it returns ctype<char>::do_toupper(c). do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The char to convert.

Returns

The uppercase char if convertible, else *__c*.

Definition at line 802 of file locale_facets.h.
References std::ctype< _CharT >::do_toupper().

4.424.4.21 widen() [1/2]

```
char_type std::ctype< char >::widen (
    char __c ) const  [inline]
```

Widen char.
This function converts the char to char_type using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.
This function works as if it returns ctype<char>::do_widen(c). do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted character.

Definition at line 872 of file locale_facets.h.
References std::ctype< _CharT >::do_widen().

4.424.4.22 widen() [2/2]

```
const char* std::ctype< char >::widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const  [inline]
```

Widen char array.
This function converts each char in the input to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be copied unchanged.
This function works as if it returns ctype<char>::do_widen(c). do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Definition at line 899 of file locale_facets.h.

4.425.1 Detailed Description

The ctype<wchar_t> specialization.
This class defines classification and conversion functions for the wchar_t type. It gets used by wchar_t streams for many I/O operations. The wchar_t specialization provides a number of optimizations as well.
ctype<wchar_t> inherits its public methods from __ctype_abstract_base<wchar_t>.
Definition at line 1186 of file locale_facets.h.

4.425.2 Member Typedef Documentation

4.425.2.1 char_type `typedef wchar_t std::ctype< wchar_t >::char_type`

Typedef for the template parameter wchar_t.
Definition at line 1191 of file locale_facets.h.

4.425.3 Constructor & Destructor Documentation

4.425.3.1 ctype() [1/2] std::ctype< wchar_t >::ctype (size_t __refs = 0) [explicit]

Constructor performs initialization.
This is the constructor provided by the standard.

Parameters

__refs	Passed to the base facet class.

4.425.3.2 ctype() [2/2] std::ctype< wchar_t >::ctype (__c_locale __cloc, size_t __refs = 0) [explicit]

Constructor performs static initialization.
This constructor is used to construct the initial C locale facet.

Parameters

__cloc	Handle to C locale data.
__refs	Passed to the base facet class.

4.425.3.3 ~ctype() virtual std::ctype< wchar_t >::~ctype ( ) [protected], [virtual]

Destructor.

4.425.4 Member Function Documentation

4.425.4.1 do_is() [1/2] virtual const char_type* std::ctype< wchar_t >::do_is (const char_type * __lo, const char_type * __hi, mask * __vec) const [protected], [virtual]

Return a mask array.
This function finds the mask for each wchar_t in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.2 do_is() [2/2]

```
virtual bool std::ctype< wchar_t >::do_is (
    mask __m,
    char_type __c ) const  [protected], [virtual]
```

Test wchar_t classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The wchar_t to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.3 do_narrow() [1/2]

```
virtual char std::ctype< wchar_t >::do_narrow (
    char_type __c,
    char __dfault ) const  [protected], [virtual]
```

Narrow wchar_t to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<wchar_t> facet, *c* will be cast to char and returned.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The wchar_t to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.4 do_narrow() [2/2]

```
virtual const char_type* std::ctype< wchar_t >::do_narrow (
    const char_type * __lo,
    const char_type * __hi,
```

```
            char __dfault,
            char * __to ) const  [protected], [virtual]
```

Narrow wchar_t array to char array.
This virtual function converts each wchar_t in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any wchar_t in the input that cannot be converted, *dfault* is used instead. For an underived ctype<wchar_t> facet, the argument will be copied, casting each element to char.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.5 do_scan_is()

```
virtual const char_type* std::ctype< wchar_t >::do_scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Find wchar_t matching mask.
This function searches for and returns the first wchar_t c in [__lo,__hi) for which is(__m,c) is true.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to a matching wchar_t if found, else *__hi*.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.6 do_scan_not()

```
virtual const char_type* std::ctype< wchar_t >::do_scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual]
```

Find wchar_t not matching mask.
This function searches for and returns a pointer to the first wchar_t c of [__lo,__hi) for which is(__m,c) is false.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching wchar_t if found, else *__hi*.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.7 do_tolower() [1/2]

```
virtual const char_type* std::ctype< wchar_t >::do_tolower (
    char_type * __lo,
    const char_type * __hi ) const  [protected], [virtual]
```

Convert array to lowercase.
This virtual function converts each wchar_t in the range [lo,hi) to lowercase if possible. Other elements remain untouched.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.8 do_tolower() [2/2]

```
virtual char_type std::ctype< wchar_t >::do_tolower (
    char_type __c ) const  [protected], [virtual]
```

Convert to lowercase.
This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _c	The wchar_t to convert.

Returns

The lowercase wchar_t if convertible, else __c.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.9 do_toupper() [1/2]

```
virtual const char_type* std::ctype< wchar_t >::do_toupper (
    char_type * __lo,
    const char_type * __hi ) const  [protected], [virtual]
```

Convert array to uppercase.
This virtual function converts each wchar_t in the range [lo,hi) to uppercase if possible. Other elements remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.10 do_toupper() [2/2]

```
virtual char_type std::ctype< wchar_t >::do_toupper (
    char_type __c ) const  [protected], [virtual]
```

Convert to uppercase.
This virtual function converts the wchar_t argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The wchar_t to convert.

Returns

The uppercase wchar_t if convertible, else __c.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.11 do_widen() [1/2]

```
virtual char_type std::ctype< wchar_t >::do_widen (
    char __c ) const  [protected], [virtual]
```

Widen char to wchar_t.

This virtual function converts the char to wchar_t using the simplest reasonable transformation. For an underived ctype<wchar_t> facet, the argument will be cast to wchar_t.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted wchar_t.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.12 do_widen() [2/2]

```
virtual const char* std::ctype< wchar_t >::do_widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const  [protected], [virtual]
```

Widen char array to wchar_t array.

This function converts each char in the input to wchar_t using the simplest reasonable transformation. For an underived ctype<wchar_t> facet, the argument will be copied, casting each element to wchar_t.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< wchar_t >.

4.425.4.13 is() [1/2]

```
const char_type* std::__ctype_abstract_base< wchar_t >::is (
    const char_type * __lo,
    const char_type * __hi,
    mask * __vec ) const  [inline], [inherited]
```

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 186 of file locale_facets.h.

4.425.4.14 is() [2/2]

```
bool std::__ctype_abstract_base< wchar_t >::is (
    mask __m,
    char_type __c ) const  [inline], [inherited]
```

Test char_type classification.
This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_↩type>::do_is().

Parameters

_↩_c	The char_type to compare the mask of.
_↩_m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 169 of file locale_facets.h.

4.425.4.15 narrow() [1/2]

```
char std::__ctype_abstract_base< wchar_t >::narrow (
    char_type __c,
    char __dfault ) const  [inline], [inherited]
```

Narrow char_type to char.
This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 331 of file locale_facets.h.

4.425.4.16 narrow() [2/2]

```
const char_type* std::__ctype_abstract_base< wchar_t >::narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __dfault,
    char * __to ) const  [inline], [inherited]
```

Narrow array to char array.
This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 353 of file locale_facets.h.

4.425.4.17 scan_is()

```
const char_type* std::__ctype_abstract_base< wchar_t >::scan_is (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const  [inline], [inherited]
```

Find char_type matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else *__hi*.

Definition at line 202 of file locale_facets.h.

4.425.4.18 scan_not()

```
const char_type* std::__ctype_abstract_base< wchar_t >::scan_not (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const  [inline], [inherited]
```

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

__m	The mask to compare against.
__lo	Pointer to first char in range.
__hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else *__hi*.

Definition at line 218 of file locale_facets.h.

4.425.4.19 tolower() [1/2]

```
const char_type* std::__ctype_abstract_base< wchar_t >::tolower (
    char_type * __lo,
    const char_type * __hi ) const  [inline], [inherited]
```

Convert array to lowercase.

This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 276 of file locale_facets.h.

4.425.4.20 tolower() [2/2]

```
char_type std::__ctype_abstract_base< wchar_t >::tolower (
    char_type __c ) const  [inline], [inherited]
```

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else __c.

Definition at line 261 of file locale_facets.h.

4.425.4.21 toupper() [1/2]

```
const char_type* std::__ctype_abstract_base< wchar_t >::toupper (
    char_type * __lo,
    const char_type * __hi ) const  [inline], [inherited]
```

Convert array to uppercase.
This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 247 of file locale_facets.h.

4.425.4.22 toupper() [2/2]

```
char_type std::__ctype_abstract_base< wchar_t >::toupper (
    char_type __c ) const  [inline], [inherited]
```

Convert to uppercase.
This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

_↩ _c	The char_type to convert.

Returns

The uppercase char_type if convertible, else __c.

Definition at line 232 of file locale_facets.h.

4.425.4.23 widen() [1/2]

```
char_type std::__ctype_abstract_base< wchar_t >::widen (
    char __c ) const  [inline], [inherited]
```

Widen char to char_type.
This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type.

Definition at line 293 of file locale_facets.h.

4.425.4.24 widen() [2/2]

```
const char* std::__ctype_abstract_base< wchar_t >::widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const  [inline], [inherited]
```

Widen array to char_type.
This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Definition at line 312 of file locale_facets.h.

4.427.1 Detailed Description

template<typename _CharT>
class std::ctype_byname< _CharT >

class ctype_byname [22.2.1.2].
Definition at line 1478 of file locale_facets.h.

4.427.2 Member Function Documentation

4.427.2.1 do_is() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [protected], [virtual], [inherited]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.2 do_is() [2/2] template<typename _CharT >

```
virtual bool std::ctype< _CharT >::do_is (
            mask __m,
            char_type __c ) const  [protected], [virtual], [inherited]
```

Test char_type classification.
This function finds a mask M for *c* and compares it to mask *m*.
do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

__c	The char_type to find the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.3 do_narrow() [1/2] template<typename _CharT >

```
virtual char std::ctype< _CharT >::do_narrow (
            char_type __c,
            char __dfault ) const  [protected], [virtual], [inherited]
```

Narrow char_type to char.
This virtual function converts the argument to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::narrow().

4.427.2.4 do_narrow() [2/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [protected], [virtual], [inherited]
```

Narrow char_type array to char.
This virtual function converts each char_type in the range [__lo,__hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, *__dfault* is used instead.
do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.5 do_scan_is() template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Find char_type matching mask.
This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.6 do_scan_not() template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Find char_type not matching mask.
This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.
do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

_↩ _m	The mask to compare against.
_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else *__hi*.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.7 do_tolower() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_tolower (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Convert array to lowercase.
This virtual function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.8 do_tolower() [2/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_tolower (
            char_type __c ) const  [protected], [virtual], [inherited]
```

Convert to lowercase.
This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::tolower().

4.427.2.9 do_toupper() [1/2] template<typename _CharT >

```
virtual const char_type* std::ctype< _CharT >::do_toupper (
            char_type * __lo,
            const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Convert array to uppercase.
This virtual function converts each char_type in the range [__lo,__hi) to uppercase if possible. Other elements remain untouched.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.10 do_toupper() [2/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_toupper (
            char_type __c ) const  [protected], [virtual], [inherited]
```

Convert to uppercase.
This virtual function converts the char_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::toupper().

4.427.2.11 do_widen() [1/2] template<typename _CharT >

```
virtual char_type std::ctype< _CharT >::do_widen (
            char __c ) const  [protected], [virtual], [inherited]
```

Widen char.
This virtual function converts the char to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.

Returns

The converted char_type

Implements std::__ctype_abstract_base< _CharT >.
Referenced by std::ctype< char >::widen().

4.427.2.12 do_widen() [2/2] template<typename _CharT >

```
virtual const char* std::ctype< _CharT >::do_widen (
            const char * __lo,
```

```
            const char * __hi,
            char_type * __to ) const  [protected], [virtual], [inherited]
```

Widen char array.
This function converts each char in the input to char_type using the simplest reasonable transformation.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Implements std::__ctype_abstract_base< _CharT >.

4.427.2.13 is() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::is (
            const char_type * __lo,
            const char_type * __hi,
            mask * __vec ) const  [inline], [inherited]
```

Return a mask array.
This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the char array. It does so by returning the value of ctype<char_type>::do_is().

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 186 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().

4.427.2.14 is() [2/2] template<typename _CharT >

```
bool std::__ctype_abstract_base< _CharT >::is (
            mask __m,
            char_type __c ) const  [inline], [inherited]
```

Test char_type classification.
This function finds a mask M for *__c* and compares it to mask *__m*. It does so by returning the value of ctype<char_↩ type>::do_is().

Parameters

__c	The char_type to compare the mask of.
__m	The mask to compare against.

Returns

(M & __m) != 0.

Definition at line 169 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_is().
Referenced by std::time_get< _CharT, _InIter >::get().

4.427.2.15 narrow() [1/2]

```
template<typename _CharT >
char std::__ctype_abstract_base< _CharT >::narrow (
            char_type __c,
            char __dfault ) const  [inline], [inherited]
```

Narrow char_type to char.
This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning ctype<char_type>::do_narrow(__c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char_type to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 331 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().
Referenced by std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.427.2.16 narrow() [2/2]

```
template<typename _CharT >
const char_type* std::__ctype_abstract_base< _CharT >::narrow (
            const char_type * __lo,
            const char_type * __hi,
            char __dfault,
            char * __to ) const  [inline], [inherited]
```

Narrow array to char array.
This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *dfault* is used instead. It does so by returning ctype<char_type>::do_narrow(__lo, __hi, __dfault, __to).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.

Parameters

__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 353 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_narrow().

4.427.2.17 scan_is() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_is (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Find char_type matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is true. It does so by returning ctype<char_type>::do_scan_is().

Parameters

__m	The mask to compare against.
__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

Pointer to matching char_type if found, else *__hi*.

Definition at line 202 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_is().

4.427.2.18 scan_not() template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::scan_not (
            mask __m,
            const char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Find char_type not matching a mask.
This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

__m	The mask to compare against.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else __hi.

Definition at line 218 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_scan_not().

4.427.2.19 tolower() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::tolower (
            char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Convert array to lowercase.
This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_tolower(__lo, __hi).

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 276 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_tolower().

4.427.2.20 tolower() [2/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::tolower (
            char_type __c ) const  [inline], [inherited]
```

Convert to lowercase.
This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

_↩ _c	The char_type to convert.

Returns

The lowercase char_type if convertible, else *__c*.

Definition at line 261 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_tolower().
Referenced by std::time_get< _CharT, _InIter >::get().

4.427.2.21 toupper() [1/2] template<typename _CharT >

```
const char_type* std::__ctype_abstract_base< _CharT >::toupper (
            char_type * __lo,
            const char_type * __hi ) const  [inline], [inherited]
```

Convert array to uppercase.
This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>:: do_toupper(lo, hi).

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.

Returns

__hi.

Definition at line 247 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_toupper().

4.427.2.22 toupper() [2/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::toupper (
            char_type __c ) const  [inline], [inherited]
```

Convert to uppercase.
This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper().

Parameters

__c	The char_type to convert.

Returns

The uppercase char_type if convertible, else *__c*.

Definition at line 232 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_toupper().
Referenced by std::time_get< _CharT, _InIter >::get().

4.427.2.23 widen() [1/2] template<typename _CharT >

```
char_type std::__ctype_abstract_base< _CharT >::widen (
            char __c ) const  [inline], [inherited]
```

Widen char to char_type.
This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted char_type.

Definition at line 293 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_widen().
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::money↩ _put< _CharT, _OutIter >::do_put(), and std::time_put< _CharT, _OutIter >::do_put().

4.427.2.24 widen() [2/2] template<typename _CharT >

```
const char* std::__ctype_abstract_base< _CharT >::widen (
            const char * __lo,
            const char * __hi,
            char_type * __to ) const  [inline], [inherited]
```

Widen array to char_type.
This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning ctype<char_type>::do_widen(c).
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Definition at line 312 of file locale_facets.h.
References std::__ctype_abstract_base< _CharT >::do_widen().

4.427.3 Member Data Documentation

4.427.3.1 id template<typename _CharT >

4.428.1 Detailed Description

22.2.1.4 Class ctype_byname specializations.
Definition at line 1499 of file locale_facets.h.

4.428.2 Member Typedef Documentation

4.428.2.1 char_type `typedef char std::ctype< char >::char_type [inherited]`

Typedef for the template parameter char.
Definition at line 686 of file locale_facets.h.

4.428.3 Member Function Documentation

4.428.3.1 classic_table() `static const mask* std::ctype< char >::classic_table ( ) throw ( ) [static], [inherited]`

Returns a pointer to the C locale mask table.

4.428.3.2 do_narrow() [1/2]

```
virtual char std::ctype< char >::do_narrow (
    char_type __c,
    char __dfault ) const  [inline], [protected], [virtual], [inherited]
```

Narrow char.

This virtual function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, *c* will be returned unchanged.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.
__dfault	Char to return if conversion fails.

Returns

The converted char.

Definition at line 1134 of file locale_facets.h.

4.428.3.3 do_narrow() [2/2]

```
virtual const char_type* std::ctype< char >::do_narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __dfault,
    char * __to ) const  [inline], [protected], [virtual], [inherited]
```

Narrow char array to char array.

This virtual function converts each char in the range [lo,hi) to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.

do_narrow() is a hook for a derived facet to change the behavior of narrowing. do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 1160 of file locale_facets.h.

4.428.3.4 do_tolower() [1/2]

```
virtual const char_type* std::ctype< char >::do_tolower (
    char_type * __lo,
    const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Convert array to lowercase.

This virtual function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched. do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

4.428.3.5 do_tolower() [2/2]

```
virtual char_type std::ctype< char >::do_tolower (
        char_type __c ) const  [protected], [virtual], [inherited]
```

Convert to lowercase.
This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
do_tolower() is a hook for a derived facet to change the behavior of lowercasing. do_tolower() must always return the same result for the same input.

Parameters

_↩ _c	The char to convert.

Returns

The lowercase char if convertible, else *__c*.

4.428.3.6 do_toupper() [1/2]

```
virtual const char_type* std::ctype< char >::do_toupper (
        char_type * __lo,
        const char_type * __hi ) const  [protected], [virtual], [inherited]
```

Convert array to uppercase.
This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched. do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

4.428.3.7 do_toupper() [2/2]

```
virtual char_type std::ctype< char >::do_toupper (
    char_type __c ) const  [protected], [virtual], [inherited]
```

Convert to uppercase.
This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.
do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

_↩ _*c*	The char to convert.

Returns

The uppercase char if convertible, else *__c*.

4.428.3.8 do_widen() [1/2]

```
virtual char_type std::ctype< char >::do_widen (
    char __c ) const  [inline], [protected], [virtual], [inherited]
```

Widen char.
This virtual function converts the char to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _*c*	The char to convert.

Returns

The converted character.

Definition at line 1084 of file locale_facets.h.

4.428.3.9 do_widen() [2/2]

```
virtual const char* std::ctype< char >::do_widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const  [inline], [protected], [virtual], [inherited]
```

Widen char array.
This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be copied unchanged.
do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _lo	Pointer to start of range.
_↩ _hi	Pointer to end of range.
_↩ _to	Pointer to the destination array.

Returns

__hi.

Definition at line 1107 of file locale_facets.h.

4.428.3.10 is() [1/2]

```
const char * std::ctype< char >::is (
    const char * __lo,
    const char * __hi,
    mask * __vec ) const  [inline], [inherited]
```

Return a mask array.
This function finds the mask for each char in the range [lo, hi) and successively writes it to vec. vec must have as many elements as the char array.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

__hi.

Definition at line 47 of file ctype_inline.h.

4.428.3.11 is() [2/2]

```
bool std::ctype< char >::is (
    mask __m,
    char __c ) const  [inline], [inherited]
```

Test char classification.
This function compares the mask table[c] to *__m*.

Parameters

_↩ _c	The char to compare the mask of.
_↩ _m	The mask to compare against.

Returns

True if __m & table[__c] is true, false otherwise.

Definition at line 42 of file ctype_inline.h.

4.428.3.12 narrow() [1/2]

```
char std::ctype< char >::narrow (
    char_type __c,
    char __dfault ) const  [inline], [inherited]
```

Narrow char.
This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, *c* will be returned unchanged.
This function works as if it returns ctype<char>::do_narrow(c). do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__c	The char to convert.
__dfault	Char to return if conversion fails.

Returns

The converted character.

Definition at line 931 of file locale_facets.h.
References std::ctype< _CharT >::do_narrow().

4.428.3.13 narrow() [2/2]

```
const char_type* std::ctype< char >::narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __dfault,
    char * __to ) const  [inline], [inherited]
```

Narrow char array.
This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.
This function works as if it returns ctype<char>::do_narrow(lo, hi, dfault, to). do_narrow() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__dfault	Char to use if conversion fails.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 964 of file locale_facets.h.
References std::ctype< _CharT >::do_narrow().

4.428.3.14 scan_is()

```
const char * std::ctype< char >::scan_is (
        mask __m,
        const char * __lo,
        const char * __hi ) const  [inline], [inherited]
```

Find char matching a mask.
This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

Parameters

_m	The mask to compare against.
_lo	Pointer to start of range.
_hi	Pointer to end of range.

Returns

Pointer to a matching char if found, else *__hi*.

Definition at line 56 of file ctype_inline.h.

4.428.3.15 scan_not()

```
const char * std::ctype< char >::scan_not (
        mask __m,
        const char * __lo,
        const char * __hi ) const  [inline], [inherited]
```

Find char not matching a mask.
This function searches for and returns a pointer to the first char in [__lo,__hi) for which is(m,char) is false.

Parameters

_m	The mask to compare against.
_lo	Pointer to start of range.
_hi	Pointer to end of range.

Returns

Pointer to a non-matching char if found, else *__hi*.

Definition at line 66 of file ctype_inline.h.

4.428.3.16 table() const mask* std::ctype< char >::table ( ) const throw ( ) [inline], [inherited]

Returns a pointer to the mask table provided to the constructor, or the default from classic_table() if none was provided.
Definition at line 983 of file locale_facets.h.

4.428.3.17 tolower() [1/2] const char_type* std::ctype< char >::tolower (char_type * __lo, const char_type * __hi) const [inline], [inherited]

Convert array to lowercase.
This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.
tolower() acts as if it returns ctype<char>:: do_tolower(__lo, __hi). do_tolower() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 852 of file locale_facets.h.
References std::ctype< _CharT >::do_tolower().

4.428.3.18 tolower() [2/2] char_type std::ctype< char >::tolower (char_type __c) const [inline], [inherited]

Convert to lowercase.
This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.
tolower() acts as if it returns ctype<char>::do_tolower(__c). do_tolower() must always return the same result for the same input.

Parameters

_↩ _c	The char to convert.

Returns

The lowercase char if convertible, else *__c*.

Definition at line 835 of file locale_facets.h.
References std::ctype< _CharT >::do_tolower().

4.428.3.19 toupper() [1/2] const char_type* std::ctype< char >::toupper (char_type * __lo, const char_type * __hi) const [inline], [inherited]

Convert array to uppercase.
This function converts each char in the range [__lo,__hi) to uppercase if possible. Other chars remain untouched.

toupper() acts as if it returns ctype<char>:: do_toupper(__lo, __hi). do_toupper() must always return the same result for the same input.

Parameters

_↩ _lo	Pointer to first char in range.
_↩ _hi	Pointer to end of range.

Returns

__hi.

Definition at line 819 of file locale_facets.h.
References std::ctype< _CharT >::do_toupper().

4.428.3.20 toupper() [2/2]

```
char_type std::ctype< char >::toupper (
        char_type __c ) const  [inline], [inherited]
```

Convert to uppercase.
This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument. toupper() acts as if it returns ctype<char>::do_toupper(c). do_toupper() must always return the same result for the same input.

Parameters

_↩ _c	The char to convert.

Returns

The uppercase char if convertible, else *__c*.

Definition at line 802 of file locale_facets.h.
References std::ctype< _CharT >::do_toupper().

4.428.3.21 widen() [1/2]

```
char_type std::ctype< char >::widen (
        char __c ) const  [inline], [inherited]
```

Widen char.
This function converts the char to char_type using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.
This function works as if it returns ctype<char>::do_widen(c). do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

_↩ _c	The char to convert.

Returns

The converted character.

Definition at line 872 of file locale_facets.h.
References std::ctype< _CharT >::do_widen().

4.428.3.22 widen() [2/2]

```
const char* std::ctype< char >::widen (
        const char * __lo,
        const char * __hi,
        char_type * __to ) const  [inline], [inherited]
```

Widen char array.
This function converts each char in the input to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be copied unchanged.
This function works as if it returns ctype<char>::do_widen(c). do_widen() must always return the same result for the same input.
Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

__lo	Pointer to first char in range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

__hi.

Definition at line 899 of file locale_facets.h.
References std::ctype< _CharT >::do_widen().

4.428.4 Member Data Documentation

4.428.4.1 id

```
locale::id std::ctype< char >::id  [static], [inherited]
```

The facet id for ctype<char>
Definition at line 703 of file locale_facets.h.

4.428.4.2 table_size

```
const size_t std::ctype< char >::table_size  [static], [inherited]
```

The size of the mask table. It is SCHAR_MAX + 1.
Definition at line 705 of file locale_facets.h.

4.433.1 Detailed Description

3.2.3 Class decimal64.
Definition at line 313 of file decimal.

4.433.2 Constructor & Destructor Documentation

4.433.2.1 decimal64() `std::decimal::decimal64::decimal64 ( __decfloat64 __z ) [inline]`

Conforming extension: Conversion from scalar decimal type.
Definition at line 337 of file decimal.
The documentation for this class was generated from the following file:

- decimal

4.434 __gnu_pbds::detail::default_comb_hash_fn Struct Reference

Public Types

- typedef direct_mask_range_hashing type

4.434.1 Detailed Description

Primary template, default_comb_hash_fn.
Definition at line 80 of file standard_policies.hpp.

4.434.2 Member Typedef Documentation

4.434.2.1 type `typedef direct_mask_range_hashing __gnu_pbds::detail::default_comb_hash_fn::type`

Dispatched type.
Definition at line 83 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.435 std::default_delete< _Tp > Struct Template Reference

Public Member Functions

- constexpr default_delete () noexcept=default
- template<typename _Up , typename = _Require<is_convertible<_Up*, _Tp*>>>
  default_delete (const default_delete< _Up > &) noexcept
- void operator() (_Tp *__ptr) const

4.435.1 Detailed Description

template<typename _Tp>
struct std::default_delete< _Tp >

Primary template of default_delete, used by unique_ptr for single objects.
Definition at line 63 of file unique_ptr.h.

4.435.2 Constructor & Destructor Documentation

4.435.2.1 default_delete() [1/2] `template<typename _Tp >`

```
constexpr std::default_delete< _Tp >::default_delete ( )  [constexpr], [default], [noexcept]
```

Default constructor.

4.435.2.2 default_delete() [2/2] `template<typename _Tp >`

```
template<typename _Up , typename = _Require<is_convertible<_Up*, _Tp*>>>
std::default_delete< _Tp >::default_delete (
            const default_delete< _Up > &  )  [inline], [noexcept]
```

Converting constructor.
Allows conversion from a deleter for objects of another type, _Up, only if _Up* is convertible to _Tp*.
Definition at line 75 of file unique_ptr.h.

4.435.3 Member Function Documentation

4.435.3.1 operator()() `template<typename _Tp >`

```
void std::default_delete< _Tp >::operator() (
            _Tp * __ptr ) const  [inline]
```

Calls `delete __ptr`
Definition at line 79 of file unique_ptr.h.
The documentation for this struct was generated from the following file:

- unique_ptr.h

4.436 std::default_delete< _Tp[]> Struct Template Reference

Public Member Functions

- constexpr default_delete () noexcept=default
- template<typename _Up , typename = _Require<is_convertible<_Up(*)[], _Tp(*)[]>>>
  default_delete (const default_delete< _Up[]> &) noexcept
- template<typename _Up >
  enable_if< is_convertible< _Up(*)[], _Tp(*)[]>::value >::type operator() (_Up *__ptr) const

4.436.1 Detailed Description

template<typename _Tp>
struct std::default_delete< _Tp[]>

Specialization of default_delete for arrays, used by `unique_ptr<T[]>`
Definition at line 94 of file unique_ptr.h.

4.436.2 Constructor & Destructor Documentation

4.436.2.1 default_delete() [1/2] template<typename _Tp >

```
constexpr std::default_delete< _Tp[]>::default_delete ( )  [constexpr], [default], [noexcept]
```

Default constructor.

4.436.2.2 default_delete() [2/2] template<typename _Tp >

```
template<typename _Up , typename = _Require<is_convertible<_Up(*)[], _Tp(*)[]>>>
std::default_delete< _Tp[]>::default_delete (
            const default_delete< _Up[]> &  )  [inline], [noexcept]
```

Converting constructor.
Allows conversion from a deleter for arrays of another type, such as a const-qualified version of `_Tp`.
Conversions from types derived from `_Tp` are not allowed because it is undefined to `delete[]` an array of derived types through a pointer to the base type.
Definition at line 111 of file unique_ptr.h.

4.436.3 Member Function Documentation

4.436.3.1 operator()() template<typename _Tp >

```
template<typename _Up >
enable_if<is_convertible<_Up(*)[], _Tp(*)[]>::value>::type std::default_delete< _Tp[]>::operator()
(
            _Up * __ptr ) const  [inline]
```

Calls `delete[] __ptr`
Definition at line 116 of file unique_ptr.h.
The documentation for this struct was generated from the following file:

- unique_ptr.h

4.437 __gnu_pbds::detail::default_eq_fn< Key > Struct Template Reference

Public Types

- typedef std::equal_to< Key > type

4.437.1 Detailed Description

template<typename Key>
struct __gnu_pbds::detail::default_eq_fn< Key >

Primary template, default_eq_fn.
Definition at line 67 of file standard_policies.hpp.

4.437.2 Member Typedef Documentation

4.437.2.1 type template<typename Key >

typedef std::equal_to<Key> __gnu_pbds::detail::default_eq_fn< Key >::type

Dispatched type.
Definition at line 70 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.438 __gnu_pbds::detail::default_hash_fn< Key > Struct Template Reference

Public Types

- typedef std::tr1::hash< Key > type

4.438.1 Detailed Description

template<typename Key>
struct __gnu_pbds::detail::default_hash_fn< Key >

Primary template, default_hash_fn.
Definition at line 59 of file standard_policies.hpp.

4.438.2 Member Typedef Documentation

4.438.2.1 type template<typename Key >

typedef std::tr1::hash<Key> __gnu_pbds::detail::default_hash_fn< Key >::type

Dispatched type.
Definition at line 62 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.439 __gnu_parallel::default_parallel_tag Struct Reference

Inheritance diagram for __gnu_parallel::default_parallel_tag:

Public Member Functions

- **default_parallel_tag** (_ThreadIndex __num_threads)
- _ThreadIndex __get_num_threads ()
- void set_num_threads (_ThreadIndex __num_threads)

4.439.1 Detailed Description

Recommends parallel execution using the default parallel algorithm.
Definition at line 79 of file tags.h.

4.439.2 Member Function Documentation

4.439.2.1 __get_num_threads() _ThreadIndex __gnu_parallel::parallel_tag::__get_num_threads ( ) [inline], [inherited]

Find out desired number of threads.

Returns

Desired number of threads.

Definition at line 63 of file tags.h.
Referenced by __gnu_parallel::__parallel_sort().

4.439.2.2 set_num_threads() void __gnu_parallel::parallel_tag::set_num_threads (_ThreadIndex *__num_threads*) [inline], [inherited]

Set the desired number of threads.

Parameters

__num_threads	Desired number of threads.

Definition at line 73 of file tags.h.
The documentation for this struct was generated from the following file:

- tags.h

4.440 __gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn > Struct Template Reference

Public Types

- typedef cond_type::__type type

4.440.1 Detailed Description

template<typename Comb_Probe_Fn>
struct __gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >

Primary template, default_probe_fn.
Definition at line 117 of file standard_policies.hpp.

4.440.2 Member Typedef Documentation

4.440.2.1 type template<typename Comb_Probe_Fn >

```
typedef cond_type::__type __gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >::type
```

Dispatched type.
Definition at line 129 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.441 __gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn > Struct Template Reference

Public Types

- typedef hash_standard_resize_policy< size_policy_type, trigger, false, size_type > type

4.441.1 Detailed Description

template<typename Comb_Hash_Fn>
struct __gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn >

Primary template, default_resize_policy.
Definition at line 88 of file standard_policies.hpp.

4.441.2 Member Typedef Documentation

4.441.2.1 type template<typename Comb_Hash_Fn >

```
typedef hash_standard_resize_policy<size_policy_type, trigger, false, size_type> __gnu_pbds::detail::default_resi
Comb_Hash_Fn >::type
```

Dispatched type.
Definition at line 105 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.442 __gnu_pbds::detail::default_trie_access_traits< Key > Struct Template Reference

4.442.1 Detailed Description

template<typename Key>
struct __gnu_pbds::detail::default_trie_access_traits< Key >

Primary template, default_trie_access_traits.
Definition at line 135 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.443 __gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > > Struct Template Reference

Public Types

- typedef trie_string_access_traits< string_type > type

4.443.1 Detailed Description

template<typename Char, typename Char_Traits>
struct __gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >

Partial specialization, default_trie_access_traits.
Definition at line 142 of file standard_policies.hpp.

4.443.2 Member Typedef Documentation

4.443.2.1 type template<typename Char , typename Char_Traits > typedef trie_string_access_traits<string_type> __gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >::type

Dispatched type.
Definition at line 149 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.444 __gnu_pbds::detail::default_update_policy Struct Reference

Public Types

- typedef lu_move_to_front_policy type

4.444.1 Detailed Description

Default update policy.
Definition at line 109 of file standard_policies.hpp.

4.444.2 Member Typedef Documentation

4.444.2.1 type typedef lu_move_to_front_policy __gnu_pbds::detail::default_update_policy::type

Dispatched type.
Definition at line 112 of file standard_policies.hpp.
The documentation for this struct was generated from the following file:

- standard_policies.hpp

4.445 std::defer_lock_t Struct Reference

4.445.1 Detailed Description

Do not acquire ownership of the mutex.
Definition at line 129 of file std_mutex.h.
The documentation for this struct was generated from the following file:

- std_mutex.h

4.446 std::__debug::deque< _Tp, _Allocator > Class Template Reference

4.446.1 Detailed Description

template<typename _Tp, typename _Allocator = std::allocator<_Tp>>
class std::__debug::deque< _Tp, _Allocator >

Class std::deque with safety/checking/debug instrumentation.
Definition at line 50 of file debug/deque.

4.446.2 Member Function Documentation

4.446.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.446.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.446.2.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.446.2.4 _M_invalidate_all() `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]`

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.446.2.5 _M_invalidate_if()

```
template<typename _Sequence >
template<typename _Predicate >
void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (
            _Predicate __pred ) [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
Definition at line 37 of file safe_sequence.tcc.

4.446.2.6 _M_revalidate_singular() void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.446.2.7 _M_swap() void __gnu_debug::_Safe_sequence_base::_M_swap (_Safe_sequence_base & __x) [protected], [noexcept], [inherited]

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

4.446.2.8 _M_transfer_from_if() template<typename _Sequence > template<typename _Predicate > void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (_Safe_sequence< _Sequence > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.

Definition at line 68 of file safe_sequence.tcc.

References std::__addressof(), __gnu_debug::_Safe_sequence_base::_M_const_iterators, __gnu_debug::_Safe_iterator_base::_M_detach_single(), __gnu_debug::_Safe_sequence_base::_M_get_mutex(), __gnu_debug::_Safe_sequence_base::_M_iterators, __gnu_debug::_Safe_iterator_base::_M_next, __gnu_debug::_Safe_iterator_base::_M_prior, __gnu_debug::_Safe_iterator_base::_M_sequence, and __gnu_debug::_Safe_iterator_base::_M_version.

4.446.3 Member Data Documentation

4.446.3.1 _M_const_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.

Definition at line 197 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.446.3.2 _M_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.

Definition at line 194 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.446.3.3 _M_version unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.

Definition at line 200 of file safe_base.h.

Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.447.1 Detailed Description

template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
class std::deque< _Tp, _Alloc >

A standard container using fixed-size memory allocation and constant-time manipulation of elements at either end.

Template Parameters

_Tp	Type of element.
_Alloc	Allocator type, defaults to allocator<_Tp>.

Meets the requirements of a container, a reversible container, and a sequence, including the optional sequence requirements.
In previous HP/SGI versions of deque, there was an extra template parameter so users could control the node size. This extension turned out to violate the C++ standard (it can be detected using template template parameters), and it was removed.
Here's how a deque<Tp> manages memory. Each deque has 4 members:

- Tp** _M_map
- size_t _M_map_size
- iterator _M_start, _M_finish

map_size is at least 8. map is an array of map_size pointers-to-*nodes*. (The name map has nothing to do with the std::map class, and **nodes** should not be confused with std::list's usage of *node*.)
A *node* has no specific type name as such, but it is referred to as *node* in this file. It is a simple array-of-Tp. If Tp is very large, there will be one Tp element per node (i.e., an *array* of one). For non-huge Tp's, node size is inversely related to Tp size: the larger the Tp, the fewer Tp's will fit in a node. The goal here is to keep the total size of a node relatively small and constant over different Tp's, to improve allocator efficiency.
Not every pointer in the map array will point to a node. If the initial number of elements in the deque is small, the /middle/ map pointers will be valid, and the ones at the edges will be unused. This same situation will arise as the map grows: available map pointers, if any, will be on the ends. As new nodes are created, only a subset of the map's pointers need to be copied *outward*.
Class invariants:

- For any nonsingular iterator i:
  - i.node points to a member of the map array. (Yes, you read that correctly: i.node does not actually point to a node.) The member of the map array is what actually points to the node.

  - i.first == *(i.node) (This points to the node (first Tp element).)
  - i.last == i.first + node_size
  - i.cur is a pointer in the range [i.first, i.last). NOTE: the implication of this is that i.cur is always a dereferenceable pointer, even if i is a past-the-end iterator.

- Start and Finish are always nonsingular iterators. NOTE: this means that an empty deque must have one node, a deque with <N elements (where N is the node buffer size) must have one node, a deque with N through (2N-1) elements must have two nodes, etc.
- For every node other than start.node and finish.node, every element in the node is an initialized object. If start.↩ node == finish.node, then [start.cur, finish.cur) are initialized objects, and the elements outside that range are uninitialized storage. Otherwise, [start.cur, start.last) and [finish.first, finish.cur) are initialized objects, and [start.↩ first, start.cur) and [finish.cur, finish.last) are uninitialized storage.
- [map, map + map_size) is a valid, non-empty range.
- [start.node, finish.node] is a valid range contained within [map, map + map_size).
- A pointer in the range [map, map + map_size) points to an allocated node if and only if the pointer is in the range [start.node, finish.node].

  Here's the magic: nothing in deque is **aware** of the discontiguous storage!

  The memory setup and layout occurs in the parent, _Base, and the iterator class is entirely responsible for *leaping* from one node to the next. All the implementation routines for deque itself work only through the start and finish iterators. This keeps the routines simple and sane, and we can use other standard algorithms as well.

4.447.2 Constructor & Destructor Documentation

4.447.2.1 deque() [1/10] template<typename _Tp , typename _Alloc = std::allocator<_Tp>> std::deque< _Tp, _Alloc >::deque ( ) [default]

Creates a deque with no elements.

4.447.2.2 deque() [2/10] template<typename _Tp , typename _Alloc = std::allocator<_Tp>> std::deque< _Tp, _Alloc >::deque (const allocator_type & __a) [inline], [explicit]

Creates a deque with no elements.

Parameters

_↩ _a	An allocator object.

Definition at line 841 of file stl_deque.h.

4.447.2.3 deque() [3/10] template<typename _Tp , typename _Alloc = std::allocator<_Tp>> std::deque< _Tp, _Alloc >::deque (size_type __n, const allocator_type & __a = allocator_type()) [inline], [explicit]

Creates a deque with default constructed elements.

Parameters

_↩ _n	The number of elements to initially create.
_↩ _a	An allocator.

This constructor fills the deque with *n* default constructed elements.
Definition at line 854 of file stl_deque.h.

4.447.2.4 deque() [4/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            size_type __n,
            const value_type & __value,
            const allocator_type & __a = allocator_type() )  [inline]
```

Creates a deque with copies of an exemplar element.

Parameters

__n	The number of elements to initially create.
__value	An element to copy.
__a	An allocator.

This constructor fills the deque with __*n* copies of __*value*.
Definition at line 866 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_fill_initialize().

4.447.2.5 deque() [5/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            const deque< _Tp, _Alloc > & __x )  [inline]
```

Deque copy constructor.

Parameters

_↩ _x	A deque of identical element and allocator types.

The newly-created deque uses a copy of the allocator object used by __*x* (unless the allocator traits dictate a different object).
Definition at line 893 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::end().

4.447.2.6 deque() [6/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            deque< _Tp, _Alloc > &&  )  [default]
```

Deque move constructor.
The newly-created deque contains the exact contents of the moved instance. The contents of the moved instance are a valid, but unspecified deque.

4.447.2.7 deque() [7/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            const deque< _Tp, _Alloc > & __x,
            const allocator_type & __a )  [inline]
```

Copy constructor with alternative allocator.
Definition at line 912 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::end().

4.447.2.8 deque() [8/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            deque< _Tp, _Alloc > && __x,
            const allocator_type & __a )  [inline]
```

Move constructor with alternative allocator.
Definition at line 919 of file stl_deque.h.

4.447.2.9 deque() [9/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::deque (
            initializer_list< value_type > __l,
            const allocator_type & __a = allocator_type() )  [inline]
```

Builds a deque from an initializer list.

Parameters

__l	An initializer_list.
__a	An allocator object.

Create a deque consisting of copies of the elements in the initializer_list *__l*.
This will call the element type's copy constructor N times (where N is __l.size()) and do no memory reallocation.
Definition at line 952 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_range_initialize().

4.447.2.10 deque() [10/10]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
std::deque< _Tp, _Alloc >::deque (
            _InputIterator __first,
            _InputIterator __last,
            const allocator_type & __a = allocator_type() )  [inline]
```

Builds a deque from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__a	An allocator object.

Create a deque consisting of copies of the elements from [__first, __last).
If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor N times

(where N is distance(__first,__last)) and do no memory reallocation. But if only input iterators are used, then this will do at most 2N calls to the copy constructor, and logN memory reallocations.
Definition at line 979 of file stl_deque.h.
References std::__iterator_category(), and std::deque< _Tp, _Alloc >::_M_range_initialize().

4.447.2.11 ~deque()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
std::deque< _Tp, _Alloc >::~deque ( )  [inline]
```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1003 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::end().

4.447.3 Member Function Documentation

4.447.3.1 _M_fill_initialize()

```
template<typename _Tp , typename _Alloc >
void deque::_M_fill_initialize (
            const value_type & __value )  [protected]
```

Fills the deque with copies of value.

Parameters

__value	Initial value.

Returns

Nothing.

Precondition

_M_start and _M_finish have already been initialized, but none of the deque's elements have yet been constructed.

This function is called only when the user provides an explicit size (with or without an explicit exemplar value).
Definition at line 393 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::deque().

4.447.3.2 _M_initialize_map()

```
void std::_Deque_base< _Tp, std::allocator< _Tp > >::_M_initialize_map (
            size_t __num_elements )  [protected], [inherited]
```

Layout storage.

Parameters

__num_elements	The count of T's for which to allocate space at first.

Returns

Nothing.

The initial underlying memory layout is a bit complicated...
Definition at line 583 of file stl_deque.h.

4.447.3.3 _M_new_elements_at_back() template<typename _Tp , typename _Alloc >

```
void deque::_M_new_elements_at_back (
            size_type __new_elements )  [protected]
```

Memory-handling helpers for the previous internal insert functions.
Definition at line 903 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::_M_reserve_elements_at_back().

4.447.3.4 _M_new_elements_at_front() template<typename _Tp , typename _Alloc >

```
void deque::_M_new_elements_at_front (
            size_type __new_elements )  [protected]
```

Memory-handling helpers for the previous internal insert functions.
Definition at line 878 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::_M_reserve_elements_at_front().

4.447.3.5 _M_pop_back_aux() template<typename _Tp , typename _Alloc >

```
void deque::_M_pop_back_aux  [protected]
```

Helper functions for push_* and pop_*.
Definition at line 557 of file deque.tcc.

4.447.3.6 _M_pop_front_aux() template<typename _Tp , typename _Alloc >

```
void deque::_M_pop_front_aux  [protected]
```

Helper functions for push_* and pop_*.
Definition at line 573 of file deque.tcc.

4.447.3.7 _M_push_back_aux() template<typename _Tp , typename _Alloc >

```
template<typename... _Args>
void deque::_M_push_back_aux (
            _Args &&... __args )  [protected]
```

Helper functions for push_* and pop_*.
Definition at line 481 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::push_back().

4.447.3.8 _M_push_front_aux() template<typename _Tp , typename _Alloc >

```
template<typename... _Args>
void deque::_M_push_front_aux (
            _Args &&... __args )  [protected]
```

Helper functions for push_* and pop_*.
Definition at line 520 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::push_front().

4.447.3.9 _M_range_check() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
void std::deque< _Tp, _Alloc >::_M_range_check (
            size_type __n ) const  [inline], [protected]
```

Safety check used only from at().

Definition at line 1351 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::size().
Referenced by std::deque< _Tp, _Alloc >::at().

4.447.3.10 _M_range_initialize() [1/2] template<typename _Tp , typename _Alloc >

```
template<typename _ForwardIterator >
void deque::_M_range_initialize (
            _ForwardIterator __first,
            _ForwardIterator __last,
            std::forward_iterator_tag ) [protected]
```

Fills the deque with whatever is in [first,last).

Parameters

__first	An input iterator.
__last	An input iterator.

Returns

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using push_back on each value from the iterator.
Definition at line 443 of file deque.tcc.
References std::distance().

4.447.3.11 _M_range_initialize() [2/2] template<typename _Tp , typename _Alloc >

```
template<typename _InputIterator >
void deque::_M_range_initialize (
            _InputIterator __first,
            _InputIterator __last,
            std::input_iterator_tag ) [protected]
```

Fills the deque with whatever is in [first,last).

Parameters

__first	An input iterator.
__last	An input iterator.

Returns

Nothing.

If the iterators are actually forward iterators (or better), then the memory layout can be done all at once. Else we move forward using push_back on each value from the iterator.
Definition at line 419 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::deque().

4.447.3.12 _M_reallocate_map() template<typename _Tp , typename _Alloc >

```
void deque::_M_reallocate_map (
```

```
            size_type __nodes_to_add,
            bool __add_at_front )  [protected]
```

Memory-handling helpers for the major map.
Makes sure the _M_map has space for new nodes. Does not actually add the nodes. Can invalidate _M_map pointers. (And consequently, deque iterators.)
Definition at line 928 of file deque.tcc.
References std::max().
Referenced by std::deque< _Tp, _Alloc >::_M_reserve_map_at_back(), and std::deque< _Tp, _Alloc >::_M_reserve_map_at_front().

Definition at line 2087 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_new_elements_at_front().

4.447.3.15 _M_reserve_map_at_back() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
void std::deque< _Tp, _Alloc >::_M_reserve_map_at_back (
            size_type __nodes_to_add = 1 )  [inline], [protected]
```

Memory-handling helpers for the major map.
Makes sure the _M_map has space for new nodes. Does not actually add the nodes. Can invalidate _M_map pointers. (And consequently, deque iterators.)
Definition at line 2123 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_reallocate_map().

4.447.3.16 _M_reserve_map_at_front() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
void std::deque< _Tp, _Alloc >::_M_reserve_map_at_front (
            size_type __nodes_to_add = 1 )  [inline], [protected]
```

Memory-handling helpers for the major map.
Makes sure the _M_map has space for new nodes. Does not actually add the nodes. Can invalidate _M_map pointers. (And consequently, deque iterators.)
Definition at line 2131 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_reallocate_map().

4.447.3.17 assign() [1/3] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
```

```
void std::deque< _Tp, _Alloc >::assign (
            _InputIterator __first,
            _InputIterator __last )  [inline]
```

Assigns a range to a deque.

Parameters

__first	An input iterator.
__last	An input iterator.

This function fills a deque with copies of the elements in the range [__first,__last).
Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned.
Definition at line 1085 of file stl_deque.h.
References std::__iterator_category().

4.447.3.18 assign() [2/3] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
void std::deque< _Tp, _Alloc >::assign (
            initializer_list< value_type > __l )  [inline]
```

Assigns an initializer list to a deque.

Parameters

__l	An initializer_list.

This function fills a deque with copies of the elements in the initializer_list *__l*.
Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned.
Definition at line 1110 of file stl_deque.h.

4.447.3.19 assign() [3/3] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
void std::deque< _Tp, _Alloc >::assign (
            size_type __n,
            const value_type & __val )  [inline]
```

Assigns a given value to a deque.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a deque with *n* copies of the given value. Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned.
Definition at line 1066 of file stl_deque.h.

4.447.3.20 at() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
reference std::deque< _Tp, _Alloc >::at (
            size_type __n ) [inline]
```

Provides access to the data contained in the deque.

Parameters

_↩ _n	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws out_of_range if the check fails.
Definition at line 1373 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_range_check().

4.447.3.21 at() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
const_reference std::deque< _Tp, _Alloc >::at (
            size_type __n ) const [inline]
```

Provides access to the data contained in the deque.

Parameters

_↩ _n	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

Exceptions

std::out_of_range	If *__n* is an invalid index.

This function provides for safer data access. The parameter is first checked that it is in the range of the deque. The function throws out_of_range if the check fails.
Definition at line 1391 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_range_check().

4.447.3.22 back() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
const_reference std::deque< _Tp, _Alloc >::back ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the deque.

Definition at line 1437 of file stl_deque.h.

4.447.3.23 back() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

reference std::deque< _Tp, _Alloc >::back ( ) [inline], [noexcept]

Returns a read/write reference to the data at the last element of the deque.
Definition at line 1424 of file stl_deque.h.

4.447.3.24 begin() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

const_iterator std::deque< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.
Definition at line 1133 of file stl_deque.h.

4.447.3.25 begin() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

iterator std::deque< _Tp, _Alloc >::begin ( ) [inline], [noexcept]

Returns a read/write iterator that points to the first element in the deque. Iteration is done in ordinary element order.
Definition at line 1125 of file stl_deque.h.
Referenced by std::deque< _Tp, _Alloc >::deque(), std::deque< _Tp, _Alloc >::~deque(), std::deque< _Tp, _Alloc >::clear(), std::deque< _Tp, _Alloc >::insert(), std::operator<(), std::deque< _Tp, _Alloc >::operator=(), and std::operator==().

4.447.3.26 cbegin() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

const_iterator std::deque< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points to the first element in the deque. Iteration is done in ordinary element order.
Definition at line 1196 of file stl_deque.h.
Referenced by std::deque< _Tp, _Alloc >::insert().

4.447.3.27 cend() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

const_iterator std::deque< _Tp, _Alloc >::cend ( ) const [inline], [noexcept]

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.
Definition at line 1205 of file stl_deque.h.

4.447.3.28 clear() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

void std::deque< _Tp, _Alloc >::clear ( ) [inline], [noexcept]

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1790 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin().

4.447.3.29 crbegin() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

const_reverse_iterator std::deque< _Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1214 of file stl_deque.h.

4.447.3.30 crend() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
const_reverse_iterator std::deque< _Tp, _Alloc >::crend ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.
Definition at line 1223 of file stl_deque.h.

4.447.3.31 emplace() template<typename _Tp , typename _Alloc >

```
template<typename...  _Args>
deque< _Tp, _Alloc >::iterator deque::emplace (
            const_iterator __position,
            _Args &&...  __args )
```

Inserts an object in deque before specified iterator.

Parameters

__position	A const_iterator into the deque.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location.
Definition at line 187 of file deque.tcc.
Referenced by std::deque< _Tp, _Alloc >::insert().

4.447.3.32 empty() template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
bool std::deque< _Tp, _Alloc >::empty ( ) const  [inline], [noexcept]
```

Returns true if the deque is empty. (Thus begin() would equal end().)
Definition at line 1308 of file stl_deque.h.

4.447.3.33 end() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
const_iterator std::deque< _Tp, _Alloc >::end ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the deque. Iteration is done in ordinary element order.
Definition at line 1151 of file stl_deque.h.

4.447.3.34 end() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
iterator std::deque< _Tp, _Alloc >::end ( )  [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the deque. Iteration is done in ordinary element order.
Definition at line 1142 of file stl_deque.h.
Referenced by std::deque< _Tp, _Alloc >::deque(), std::deque< _Tp, _Alloc >::~deque(), std::operator<(), std::deque< _Tp, _Alloc >::operator=(), and std::operator==().

4.447.3.35 erase() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
iterator std::deque< _Tp, _Alloc >::erase (
            const_iterator __first,
            const_iterator __last )  [inline]
```

Remove a range of elements.

Parameters

__first	Iterator pointing to the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by *last* prior to erasing (or end()).

This function will erase the elements in the range [__first,__last) and shorten the deque accordingly.
The user is cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1754 of file stl_deque.h.

4.447.3.36 erase() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
iterator std::deque< _Tp, _Alloc >::erase (
            const_iterator __position )  [inline]
```

Remove element at given position.

Parameters

__position	Iterator pointing to element to be erased.

Returns

An iterator pointing to the next element (or end()).

This function will erase the element at the given position and thus shorten the deque by one.
The user is cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1730 of file stl_deque.h.

4.447.3.37 front() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
const_reference std::deque< _Tp, _Alloc >::front ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the deque.
Definition at line 1413 of file stl_deque.h.

4.447.3.38 front() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
reference std::deque< _Tp, _Alloc >::front ( )  [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the deque.
Definition at line 1402 of file stl_deque.h.

4.447.3.39 get_allocator() template<typename _Tp , typename _Alloc = std::allocator<_Tp>> allocator_type std::deque< _Tp, _Alloc >::get_allocator ( ) const [inline], [noexcept]

Get a copy of the memory allocation object.
Definition at line 1116 of file stl_deque.h.
Referenced by std::deque< _Tp, _Alloc >::operator=().

4.447.3.40 insert() [1/5] template<typename _Tp , typename _Alloc = std::allocator<_Tp>> iterator std::deque< _Tp, _Alloc >::insert (const_iterator __p, initializer_list< value_type > __l) [inline]

Inserts an initializer list into the deque.

Parameters

__p	An iterator into the deque.
__l	An initializer_list.

Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the initializer_list *__l* into the deque before the location specified by *__p*. This is known as *list insert*.
Definition at line 1630 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::cbegin().

4.447.3.41 insert() [2/5] template<typename _Tp , typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>> iterator std::deque< _Tp, _Alloc >::insert (const_iterator __position, _InputIterator __first, _InputIterator __last) [inline]

Inserts a range into the deque.

Parameters

__position	A const_iterator into the deque.
__first	An input iterator.
__last	An input iterator.

Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the range [__first,__last) into the deque before the location specified by *__position*. This is known as *range insert*.
Definition at line 1685 of file stl_deque.h.
References std::__iterator_category(), std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::cbegin().

4.447.3.42 insert() [3/5] template<typename _Tp , typename _Alloc >

```
deque< _Tp, _Alloc >::iterator deque::insert (
            const_iterator __position,
            const value_type & __x )
```

Inserts given value into deque before specified iterator.

Parameters

__position	A const_iterator into the deque.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location.
Definition at line 210 of file deque.tcc.

4.447.3.43 insert() [4/5] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
iterator std::deque< _Tp, _Alloc >::insert (
            const_iterator __position,
            size_type __n,
            const value_type & __x )  [inline]
```

Inserts a number of copies of given data into the deque.

Parameters

__position	A const_iterator into the deque.
__n	Number of elements to be inserted.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *__position*.
Definition at line 1649 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::begin(), and std::deque< _Tp, _Alloc >::cbegin().

4.447.3.44 insert() [5/5] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

```
iterator std::deque< _Tp, _Alloc >::insert (
            const_iterator __position,
            value_type && __x )  [inline]
```

Inserts given rvalue into deque before specified iterator.

Parameters

__position	A const_iterator into the deque.
__x	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location.
Definition at line 1616 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::emplace(), and std::move().

4.447.3.45 max_size() `template<typename _Tp , typename _Alloc = std::allocator<_Tp>>`

```
size_type std::deque< _Tp, _Alloc >::max_size ( ) const  [inline], [noexcept]
```

Returns the size() of the largest possible deque.

Definition at line 1235 of file stl_deque.h.

4.447.3.46 operator=() [1/3] `template<typename _Tp , typename _Alloc >`

```
deque< _Tp, _Alloc > & deque::operator= (
            const deque< _Tp, _Alloc > & __x )
```

Deque assignment operator.

Parameters

_↩ _x	A deque of identical element and allocator types.

All the elements of *x* are copied.
The newly-created deque uses a copy of the allocator object used by *__x* (unless the allocator traits dictate a different object).
Definition at line 95 of file deque.tcc.
References std::deque< _Tp, _Alloc >::begin(), std::deque< _Tp, _Alloc >::end(), std::deque< _Tp, _Alloc >::get_↩ allocator(), and std::deque< _Tp, _Alloc >::size().

4.447.3.47 operator=() [2/3] `template<typename _Tp , typename _Alloc = std::allocator<_Tp>>`

```
deque& std::deque< _Tp, _Alloc >::operator= (
            deque< _Tp, _Alloc > && __x )  [inline], [noexcept]
```

Deque move assignment operator.

Parameters

_↩ _x	A deque of identical element and allocator types.

The contents of *__x* are moved into this deque (without copying, if the allocators permit it). *__x* is a valid, but unspecified deque.
Definition at line 1028 of file stl_deque.h.
References std::move().

4.447.3.48 operator=() [3/3] `template<typename _Tp , typename _Alloc = std::allocator<_Tp>>`

```
deque& std::deque< _Tp, _Alloc >::operator= (
            initializer_list< value_type > __l )  [inline]
```

Assigns an initializer list to a deque.

Parameters

↩ _↩ ↩ _↩ *l*	An initializer_list.

This function fills a deque with copies of the elements in the initializer_list *__l*.
Note that the assignment completely changes the deque and that the resulting deque's size is the same as the number of elements assigned.
Definition at line 1047 of file stl_deque.h.

4.447.3.49 operator[]() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reference std::deque< _Tp, _Alloc >::operator[] (
            size_type __n ) const  [inline], [noexcept]
```

Subscript access to the data contained in the deque.

Parameters

_↩ *_n*	The index of the element for which data should be accessed.

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Definition at line 1342 of file stl_deque.h.

4.447.3.50 operator[]() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
reference std::deque< _Tp, _Alloc >::operator[] (
            size_type __n )  [inline], [noexcept]
```

Subscript access to the data contained in the deque.

Parameters

_↩ *_n*	The index of the element for which data should be accessed.

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)
Definition at line 1324 of file stl_deque.h.

4.447.3.51 pop_back()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::pop_back ( )  [inline], [noexcept]
```

Removes last element.
This is a typical stack operation. It shrinks the deque by one.
Note that no data is returned, and if the last element's data is needed, it should be retrieved before pop_back() is called.
Definition at line 1552 of file stl_deque.h.

4.447.3.52 pop_front()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::pop_front ( )  [inline], [noexcept]
```

Removes first element.
This is a typical stack operation. It shrinks the deque by one.
Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop_front() is called.
Definition at line 1529 of file stl_deque.h.

4.447.3.53 push_back()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::push_back (
            const value_type & __x )  [inline]
```

Add data to the end of the deque.

Parameters

_↩ _x	Data to be added.

This is a typical stack operation. The function creates an element at the end of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.
Definition at line 1493 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_push_back_aux().

4.447.3.54 push_front()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::deque< _Tp, _Alloc >::push_front (
            const value_type & __x )  [inline]
```

Add data to the front of the deque.

Parameters

_↩ _x	Data to be added.

This is a typical stack operation. The function creates an element at the front of the deque and assigns the given data to it. Due to the nature of a deque this operation can be done in constant time.
Definition at line 1456 of file stl_deque.h.
References std::deque< _Tp, _Alloc >::_M_push_front_aux().

4.447.3.55 rbegin() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::deque< _Tp, _Alloc >::rbegin ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.
Definition at line 1169 of file stl_deque.h.

4.447.3.56 rbegin() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

reverse_iterator std::deque< _Tp, _Alloc >::rbegin ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to the last element in the deque. Iteration is done in reverse element order.

Definition at line 1160 of file stl_deque.h.

4.447.3.57 rend() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

const_reverse_iterator std::deque< _Tp, _Alloc >::rend ( ) const [inline], [noexcept]

Returns a read-only (constant) reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1187 of file stl_deque.h.

4.447.3.58 rend() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

reverse_iterator std::deque< _Tp, _Alloc >::rend ( ) [inline], [noexcept]

Returns a read/write reverse iterator that points to one before the first element in the deque. Iteration is done in reverse element order.

Definition at line 1178 of file stl_deque.h.

4.447.3.59 resize() [1/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

void std::deque< _Tp, _Alloc >::resize (
size_type *__new_size*) [inline]

Resizes the deque to the specified number of elements.

Parameters

__new_size	Number of elements the deque should contain.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise default constructed elements are appended.

Definition at line 1249 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::size().

4.447.3.60 resize() [2/2] template<typename _Tp , typename _Alloc = std::allocator<_Tp>>

void std::deque< _Tp, _Alloc >::resize (
size_type *__new_size*,
const value_type & *__x*) [inline]

Resizes the deque to the specified number of elements.

Parameters

__new_size	Number of elements the deque should contain.
__x	Data with which new elements should be populated.

This function will resize the deque to the specified number of elements. If the number is smaller than the deque's current size the deque is truncated, otherwise the deque is extended and new elements are populated with given data.

Definition at line 1271 of file stl_deque.h.

References std::deque< _Tp, _Alloc >::size().

4.447.3.61 shrink_to_fit() template<typename _Tp , typename _Alloc = std::allocator<_Tp>> void std::deque< _Tp, _Alloc >::shrink_to_fit ( ) [inline], [noexcept]

A non-binding request to reduce memory use.

Definition at line 1299 of file stl_deque.h.

4.447.3.62 size() template<typename _Tp , typename _Alloc = std::allocator<_Tp>> size_type std::deque< _Tp, _Alloc >::size ( ) const [inline], [noexcept]

Returns the number of elements in the deque.

Definition at line 1230 of file stl_deque.h.
Referenced by std::deque< _Tp, _Alloc >::_M_range_check(), std::deque< _Tp, _Alloc >::operator=(), std::operator==(), and std::deque< _Tp, _Alloc >::resize().

4.447.3.63 swap() template<typename _Tp , typename _Alloc = std::allocator<_Tp>> void std::deque< _Tp, _Alloc >::swap (deque< _Tp, _Alloc > & __x) [inline], [noexcept]

Swaps data with another deque.

Parameters

_x	A deque of the same element and allocator types.

This exchanges the elements between two deques in constant time. (Four pointers, so it should be quite fast.) Note that the global std::swap() function is specialized such that std::swap(d1,d2) will feed to this function.
Whether the allocators are swapped depends on the allocator traits.
Definition at line 1772 of file stl_deque.h.
The documentation for this class was generated from the following files:

- stl_deque.h
- deque.tcc

4.448 std::tr2::direct_bases< _Tp > Struct Template Reference

Public Types

- typedef __reflection_typelist< __direct_bases(_Tp)... > **type**

4.448.1 Detailed Description

template<typename _Tp>
struct std::tr2::direct_bases< _Tp >

Enumerate all the direct base classes of a class. Form of a typelist.
Definition at line 95 of file tr2/type_traits.
The documentation for this struct was generated from the following file:

- tr2/type_traits

4.449 __gnu_pbds::direct_mask_range_hashing< Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::direct_mask_range_hashing< Size_Type >:

Public Types

- size_type operator() (size_type hash) const
- size_type **range_hash** (size_type hash) const
- void **swap** (mask_based_range_hashing &other)

4.449.1 Detailed Description

template<typename Size_Type = std::size_t>
class __gnu_pbds::direct_mask_range_hashing< Size_Type >

A mask range-hashing class (uses a bitmask).
Definition at line 109 of file hash_policy.hpp.

4.449.2 Member Function Documentation

4.449.2.1 operator()() `template<typename Size_Type = std::size_t>`

```
size_type __gnu_pbds::direct_mask_range_hashing< Size_Type >::operator() (
            size_type hash ) const  [inline], [protected]
```

Transforms the __hash value hash into a ranged-hash value (using a bit-mask).
The documentation for this class was generated from the following file:

- hash_policy.hpp

4.450 __gnu_pbds::direct_mod_range_hashing< Size_Type > Class Template Reference

- void **swap** (mod_based_range_hashing &other)

4.450.1 Detailed Description

template<typename Size_Type = std::size_t>
class __gnu_pbds::direct_mod_range_hashing< Size_Type >

A mod range-hashing class (uses the modulo function).
Definition at line 141 of file hash_policy.hpp.

4.450.2 Member Function Documentation

4.450.2.1 operator()() template<typename Size_Type = std::size_t>

```
size_type __gnu_pbds::direct_mod_range_hashing< Size_Type >::operator() (
            size_type hash ) const  [inline], [protected]
```

Transforms the __hash value hash into a ranged-hash value (using a modulo operation).
The documentation for this class was generated from the following file:

- hash_policy.hpp

4.451.1 Detailed Description

template<typename _RandomNumberEngine, size_t __p, size_t __r>
class std::discard_block_engine< _RandomNumberEngine, __p, __r >

Produces random numbers from some base engine by discarding blocks of data.
0 <= __r <= __p
Definition at line 884 of file random.h.

4.451.2 Member Typedef Documentation

4.451.2.1 result_type `template<typename _RandomNumberEngine , size_t __p, size_t __r>`

`typedef _RandomNumberEngine::result_type std::discard_block_engine< _RandomNumberEngine, __p, __r >::result_type`

The type of the generated random value.
Definition at line 891 of file random.h.

4.451.3 Constructor & Destructor Documentation

4.451.3.1 discard_block_engine() [1/5] `template<typename _RandomNumberEngine , size_t __p, size_t __r>`

`std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine ( ) [inline]`

Constructs a default discard_block_engine engine.
The underlying engine is default constructed as well.
Definition at line 906 of file random.h.

4.451.3.2 discard_block_engine() [2/5] `template<typename _RandomNumberEngine , size_t __p, size_t __r>`

`std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine ( const _RandomNumberEngine & __rng ) [inline], [explicit]`

Copy constructs a discard_block_engine engine.
Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 916 of file random.h.

4.451.3.3 discard_block_engine() [3/5]

```
template<typename _RandomNumberEngine , size_t __p, size_t __r>
std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine (
            _RandomNumberEngine && __rng ) [inline], [explicit]
```

Move constructs a discard_block_engine engine.
Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 926 of file random.h.

4.451.3.4 discard_block_engine() [4/5]

```
template<typename _RandomNumberEngine , size_t __p, size_t __r>
std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine (
            result_type __s ) [inline], [explicit]
```

Seed constructs a discard_block_engine engine.
Constructs the underlying generator engine seeded with __s.

Parameters

_↩ _s	A seed value for the base class engine.

Definition at line 936 of file random.h.

4.451.3.5 discard_block_engine() [5/5]

```
template<typename _RandomNumberEngine , size_t __p, size_t __r>
template<typename _Sseq , typename = _If_seed_seq<_Sseq>>
std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard_block_engine (
            _Sseq & __q ) [inline], [explicit]
```

Generator construct a discard_block_engine engine.

Parameters

_↩ _q	A seed sequence.

Definition at line 946 of file random.h.

4.451.4 Member Function Documentation

4.451.4.1 base()

```
template<typename _RandomNumberEngine , size_t __p, size_t __r>
const _RandomNumberEngine& std::discard_block_engine< _RandomNumberEngine, __p, __r >::base ( )
const [inline], [noexcept]
```

Gets a const reference to the underlying generator engine object.
Definition at line 990 of file random.h.

4.451.4.2 discard() template<typename _RandomNumberEngine , size_t __p, size_t __r>

void std::discard_block_engine< _RandomNumberEngine, __p, __r >::discard (unsigned long long __z) [inline]

Discard a sequence of random numbers.

Definition at line 1011 of file random.h.

4.451.4.3 max() template<typename _RandomNumberEngine , size_t __p, size_t __r>

static constexpr result_type std::discard_block_engine< _RandomNumberEngine, __p, __r >::max ( ) [inline], [static], [constexpr]

Gets the maximum value in the generated random number range.

Definition at line 1004 of file random.h.

References std::max().

4.451.4.4 min() template<typename _RandomNumberEngine , size_t __p, size_t __r>

static constexpr result_type std::discard_block_engine< _RandomNumberEngine, __p, __r >::min ( ) [inline], [static], [constexpr]

Gets the minimum value in the generated random number range.

Definition at line 997 of file random.h.

References std::min().

4.451.4.5 operator()() template<typename _RandomNumberEngine , size_t __p, size_t __r>

discard_block_engine< _RandomNumberEngine, __p, __r >::result_type std::discard_block_engine< _↩ RandomNumberEngine, __p, __r >::operator()

Gets the next value in the generated random number sequence.

Definition at line 681 of file bits/random.tcc.

4.451.4.6 seed() [1/3] template<typename _RandomNumberEngine , size_t __p, size_t __r>

void std::discard_block_engine< _RandomNumberEngine, __p, __r >::seed ( ) [inline]

Reseeds the discard_block_engine object with the default seed for the underlying base class generator engine.

Definition at line 955 of file random.h.

4.451.4.7 seed() [2/3] template<typename _RandomNumberEngine , size_t __p, size_t __r>

template<typename _Sseq >
_If_seed_seq<_Sseq> std::discard_block_engine< _RandomNumberEngine, __p, __r >::seed (_Sseq & __q) [inline]

Reseeds the discard_block_engine object with the given seed sequence.

Parameters

_↩ _q	A seed generator function.

Definition at line 979 of file random.h.

4.451.4.8 seed() [3/3] template<typename _RandomNumberEngine , size_t __p, size_t __r>

void std::discard_block_engine< _RandomNumberEngine, __p, __r >::seed (

```
            result_type __s )  [inline]
```

Reseeds the discard_block_engine object with the default seed for the underlying base class generator engine.
Definition at line 966 of file random.h.

4.451.5 Friends And Related Function Documentation

4.451.5.1 operator<< template<typename _RandomNumberEngine , size_t __p, size_t __r>

```
template<typename _RandomNumberEngine1 , size_t __p1, size_t __r1, typename _CharT , typename _↩
Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::discard_block_engine< _RandomNumberEngine1, __p1, __r1 > & __x )  [friend]
```

Inserts the current state of a discard_block_engine random number generator engine __x into the output stream __os.

Parameters

__os	An output stream.
__x	A discard_block_engine random number generator engine.

Returns

The output stream with the state of __x inserted or in an error state.

4.451.5.2 operator== template<typename _RandomNumberEngine , size_t __p, size_t __r>

```
bool operator== (
            const discard_block_engine< _RandomNumberEngine, __p, __r > & __lhs,
            const discard_block_engine< _RandomNumberEngine, __p, __r > & __rhs )  [friend]
```

Compares two discard_block_engine random number generator objects of the same type for equality.

Parameters

__lhs	A discard_block_engine random number generator object.
__rhs	Another discard_block_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1035 of file random.h.

4.451.5.3 operator>> template<typename _RandomNumberEngine , size_t __p, size_t __r>

```
template<typename _RandomNumberEngine1 , size_t __p1, size_t __r1, typename _CharT , typename _↩
Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::discard_block_engine< _RandomNumberEngine1, __p1, __r1 > & __x )  [friend]
```

Extracts the current state of a % subtract_with_carry_engine random number generator engine __x from the input stream __is.

Parameters

_↩ _*is*	An input stream.
_↩ _*x*	A discard_block_engine random number generator engine.

Returns

The input stream with the state of __x extracted or in an error state.

4.452.1 Detailed Description

template<typename _IntType = int>
class std::discrete_distribution< _IntType >

A discrete_distribution random number distribution.
The formula for the discrete probability mass function is
Definition at line 5277 of file random.h.

4.452.2 Member Typedef Documentation

4.452.2.1 result_type `template<typename _IntType = int>`

```
typedef _IntType std::discrete_distribution< _IntType >::result_type
```

The type of the range of the distribution.
Definition at line 5284 of file random.h.

4.452.3 Member Function Documentation

4.452.3.1 max() `template<typename _IntType = int>`

```
result_type std::discrete_distribution< _IntType >::max ( ) const  [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 5402 of file random.h.
References std::vector< _Tp, _Alloc >::empty(), and std::vector< _Tp, _Alloc >::size().

4.452.3.2 min() `template<typename _IntType = int>`

```
result_type std::discrete_distribution< _IntType >::min ( ) const  [inline]
```

Returns the greatest lower bound value of the distribution.
Definition at line 5395 of file random.h.

4.452.3.3 operator()() `template<typename _IntType = int>`

```
template<typename _UniformRandomNumberGenerator >
result_type std::discrete_distribution< _IntType >::operator() (
            _UniformRandomNumberGenerator & __urng )  [inline]
```

Generating functions.
Definition at line 5413 of file random.h.

4.452.3.4 param() [1/2] template<typename _IntType = int>

param_type std::discrete_distribution< _IntType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 5380 of file random.h.

4.452.3.5 param() [2/2] template<typename _IntType = int>

void std::discrete_distribution< _IntType >::param (
const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 5388 of file random.h.

4.452.3.6 probabilities() template<typename _IntType = int>

std::vector<double> std::discrete_distribution< _IntType >::probabilities ( ) const [inline]

Returns the probabilities of the distribution.

Definition at line 5370 of file random.h.

References std::vector< _Tp, _Alloc >::empty().

4.452.3.7 reset() template<typename _IntType = int>

void std::discrete_distribution< _IntType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 5363 of file random.h.

4.452.4 Friends And Related Function Documentation

4.452.4.1 operator<< template<typename _IntType = int>

template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
std::basic_ostream< _CharT, _Traits > & __os,
const std::discrete_distribution< _IntType1 > & __x) [friend]

Inserts a discrete_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A discrete_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.452.4.2 operator== template<typename _IntType = int>

```
bool operator== (
            const discrete_distribution< _IntType > & __d1,
            const discrete_distribution< _IntType > & __d2 )  [friend]
```

Return true if two discrete distributions have the same parameters.
Definition at line 5448 of file random.h.

4.452.4.3 operator>> template<typename _IntType = int>

```
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::discrete_distribution< _IntType1 > & __x )  [friend]
```

Extracts a discrete_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A discrete_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.459.1 Detailed Description

template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
class std::tr2::dynamic_bitset< _WordT, _Alloc >

The dynamic_bitset class represents a sequence of bits.
See N2050, Proposal to Add a Dynamically Sizeable Bitset to the Standard Library. http://www.open-std.↩org/jtc1/sc22/wg21/docs/papers/2006/n2050.pdf
In the general unoptimized case, storage is allocated in word-sized blocks. Let B be the number of bits in a word, then (Nb+(B-1))/B words will be used for storage. B - NbB bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.
If you think of dynamic_bitset as "a simple array of bits," be aware that your mental picture is reversed: a dynamic_bitset behaves the same way as bits in integers do, with the bit at index 0 in the "least significant / right-hand" position, and the bit at index Nb-1 in the "most significant / left-hand" position. Thus, unlike other containers, a dynamic_bitset's index "counts from right to left," to put it very loosely.
This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints "b('a') is 0001100001" on a modern ASCII system.

```
#include <dynamic_bitset>
#include <iostream>
#include <sstream>
using namespace std;
int main()
{
    long         a = 'a';
    dynamic_bitset<> b(a);
    cout « "b('a') is " « b « endl;
    ostringstream s;
    s « b;
    string  str = s.str();
    cout « "index 3 in the string is " « str[3] « " but\n"
         « "index 3 in the bitset is " « b[3] « endl;
}
```

Most of the actual code isn't contained in dynamic_bitset<> itself, but in the base class __dynamic_bitset_base. The base class works with whole words, not with individual bits. This allows us to specialize __dynamic_bitset_base for the important special case where the dynamic_bitset is only a single word.
Extra confusion can result due to the fact that the storage for __dynamic_bitset_base *is* a vector, and is indexed as such. This is carefully encapsulated.
Definition at line 419 of file dynamic_bitset.

4.459.2 Constructor & Destructor Documentation

4.459.2.1 dynamic_bitset() [1/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset ( )  [default]
```

All bits set to zero.

4.459.2.2 dynamic_bitset() [2/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            const allocator_type & __alloc )  [inline], [explicit]
```

All bits set to zero.
Definition at line 578 of file dynamic_bitset.

4.459.2.3 dynamic_bitset() [3/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            size_type __nbits,
            unsigned long long __val = 0ULL,
            const allocator_type & __alloc = allocator_type() )  [inline], [explicit]
```

Initial bits bitwise-copied from a single word (others set to zero).
Definition at line 584 of file dynamic_bitset.

4.459.2.4 dynamic_bitset() [4/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
template<typename _CharT , typename _Traits , typename _Alloc1 >
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            const std::basic_string< _CharT, _Traits, _Alloc1 > & __str,
            typename basic_string< _CharT, _Traits, _Alloc1 >::size_type __pos = 0,
            typename basic_string< _CharT, _Traits, _Alloc1 >::size_type __n = std::basic_string<↩
_CharT, _Traits, _Alloc1>::npos,
            _CharT __zero = _CharT('0'),
            _CharT __one = _CharT('1'),
            const allocator_type & __alloc = allocator_type() )  [inline], [explicit]
```

Use a subset of a string.

Parameters

__str	A string of '0' and '1' characters.
__pos	Index of the first character in __str to use.
__n	The number of characters to copy.
__zero	The character to use for unset bits.
__one	The character to use for set bits.
__alloc	An allocator.

Exceptions

std::out_of_range	If __pos is bigger the size of __str.
std::invalid_argument	If a character appears in the string which is neither '0' nor '1'.

Definition at line 609 of file dynamic_bitset.

4.459.2.5 dynamic_bitset() [5/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            const char * __str,
            const allocator_type & __alloc = allocator_type() )  [inline], [explicit]
```

Construct from a string.

Parameters

__str	A string of '0' and '1' characters.
__alloc	An allocator.

Exceptions

std::invalid_argument	If a character appears in the string which is neither '0' nor '1'.

Definition at line 636 of file dynamic_bitset.

4.459.2.6 dynamic_bitset() [6/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            const dynamic_bitset< _WordT, _Alloc > &  )  [default]
```

Copy constructor.

4.459.2.7 dynamic_bitset() [7/7]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
std::tr2::dynamic_bitset< _WordT, _Alloc >::dynamic_bitset (
            dynamic_bitset< _WordT, _Alloc > && __b )  [inline], [noexcept]
```

Move constructor.
Definition at line 648 of file dynamic_bitset.

4.459.3 Member Function Documentation

4.459.3.1 all()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_↩
WordT>>
bool std::tr2::dynamic_bitset< _WordT, _Alloc >::all ( ) const  [inline]
```

Tests whether all the bits are on.

Returns

True if all the bits are set.

Definition at line 1036 of file dynamic_bitset.

4.459.3.2 any()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
bool std::tr2::dynamic_bitset< _WordT, _Alloc >::any ( ) const  [inline]
```

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

Definition at line 1044 of file dynamic_bitset.

4.459.3.3 append() [1/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std↩
::allocator<_WordT>>
template<typename _BlockInputIterator >
void std::tr2::dynamic_bitset< _WordT, _Alloc >::append (
            _BlockInputIterator __first,
            _BlockInputIterator __last )  [inline]
```

Append an iterator range of blocks.
Definition at line 744 of file dynamic_bitset.

4.459.3.4 append() [2/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std↩
::allocator<_WordT>>
void std::tr2::dynamic_bitset< _WordT, _Alloc >::append (
            block_type __block )  [inline]
```

Append a block.
Definition at line 726 of file dynamic_bitset.

4.459.3.5 clear()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
void std::tr2::dynamic_bitset< _WordT, _Alloc >::clear ( )  [inline]
```

Clear the bitset.
Definition at line 701 of file dynamic_bitset.

4.459.3.6 count()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::count ( ) const  [inline], [noexcept]
```

Returns the number of bits which are set.
Definition at line 992 of file dynamic_bitset.

4.459.3.7 empty()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
bool std::tr2::dynamic_bitset< _WordT, _Alloc >::empty ( ) const  [inline], [noexcept]
```

Returns true if the dynamic_bitset is empty.

Definition at line 1007 of file dynamic_bitset.

4.459.3.8 find_first() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::find_first ( ) const [inline]

Finds the index of the first "on" bit.

Returns

The index of the first bit set, or size() if not found.

See also

find_next

Definition at line 1072 of file dynamic_bitset.

4.459.3.9 find_next() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::find_next (
size_t *__prev*) const [inline]

Finds the index of the next "on" bit after prev.

Returns

The index of the next bit set, or size() if not found.

Parameters

__prev	Where to start searching.

See also

find_first

Definition at line 1082 of file dynamic_bitset.

4.459.3.10 flip() [1/2] template<typename _WordT = unsigned long long, typename _Alloc = std↩ ::allocator<_WordT>>

dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::flip ( ) [inline]

Toggles every bit to its opposite value.
Definition at line 883 of file dynamic_bitset.

4.459.3.11 flip() [2/2] template<typename _WordT = unsigned long long, typename _Alloc = std↩ ::allocator<_WordT>>

dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::flip (
size_type *__pos*) [inline]

Toggles a given bit to its opposite value.

Parameters

__pos	The index of the bit.

Exceptions

std::out_of_range	If *__pos* is bigger the size of the set.

Definition at line 896 of file dynamic_bitset.

4.459.3.12 get_allocator()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
allocator_type std::tr2::dynamic_bitset< _WordT, _Alloc >::get_allocator ( ) const  [inline], [noexcept]
```

Return the allocator for the bitset.
Definition at line 681 of file dynamic_bitset.

4.459.3.13 max_size()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
constexpr size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::max_size ( )  [inline], [constexpr], [noexcept]
```

Returns the maximum size of a dynamic_bitset object having the same type as *this. The real answer is max() * bits_per_block but is likely to overflow.
Definition at line 1014 of file dynamic_bitset.

4.459.3.14 none()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
bool std::tr2::dynamic_bitset< _WordT, _Alloc >::none ( ) const  [inline]
```

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

Definition at line 1052 of file dynamic_bitset.

4.459.3.15 num_blocks()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::num_blocks ( ) const  [inline], [noexcept]
```

Returns the total number of blocks.
Definition at line 1002 of file dynamic_bitset.

4.459.3.16 operator&=() [1/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator&= (
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__rhs	A same-sized dynamic_bitset.

These should be self-explanatory.
Definition at line 759 of file dynamic_bitset.

4.459.3.17 operator&=() [2/2] template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

```
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator&= (
            dynamic_bitset< _WordT, _Alloc > && __rhs )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__rhs	A same-sized dynamic_bitset.

These should be self-explanatory.
Definition at line 766 of file dynamic_bitset.

4.459.3.18 operator-=() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

```
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator-= (
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__rhs	A same-sized dynamic_bitset.

These should be self-explanatory.
Definition at line 787 of file dynamic_bitset.

4.459.3.19 operator<<() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

```
dynamic_bitset std::tr2::dynamic_bitset< _WordT, _Alloc >::operator<< (
            size_type __pos ) const  [inline]
```

Self-explanatory.
Definition at line 1057 of file dynamic_bitset.

4.459.3.20 operator<<=() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

```
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator<<= (
            size_type __pos )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__pos	The number of places to shift.

These should be self-explanatory.
Definition at line 801 of file dynamic_bitset.

4.459.3.21 operator=() [1/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator= (
            const dynamic_bitset< _WordT, _Alloc > &  )  [default]
```

Copy assignment operator.

4.459.3.22 operator=() [2/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator= (
            dynamic_bitset< _WordT, _Alloc > && __b )  [inline], [noexcept]
```

Move assignment operator.
Definition at line 665 of file dynamic_bitset.

4.459.3.23 operator>>()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset std::tr2::dynamic_bitset< _WordT, _Alloc >::operator>> (
            size_type __pos ) const  [inline]
```

Self-explanatory.
Definition at line 1062 of file dynamic_bitset.

4.459.3.24 operator>>=()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator>>= (
            size_type __pos )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__pos	The number of places to shift.

These should be self-explanatory.
Definition at line 815 of file dynamic_bitset.

4.459.3.25 operator[]() [1/2]

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
reference std::tr2::dynamic_bitset< _WordT, _Alloc >::operator[] (
            size_type __pos )  [inline]
```

Array-indexing support.

Parameters

__pos	Index into the dynamic_bitset.

Returns

A bool for a 'const dynamic_bitset'. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

Definition at line 918 of file dynamic_bitset.

4.459.3.26 operator[]() [2/2]

```
template<typename _WordT = unsigned long long, typename _Alloc =
std::allocator<_WordT>>
const_reference std::tr2::dynamic_bitset< _WordT, _Alloc >::operator[] (
            size_type __pos ) const  [inline]
```

Array-indexing support.

Parameters

__pos	Index into the dynamic_bitset.

Returns

A bool for a 'const dynamic_bitset'. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

Definition at line 922 of file dynamic_bitset.

4.459.3.27 operator^=()

```
template<typename _WordT = unsigned long long, typename _Alloc = std↩
::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator^= (
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__rhs	A same-sized dynamic_bitset.

These should be self-explanatory.
Definition at line 780 of file dynamic_bitset.

4.459.3.28 operator"|=()

```
template<typename _WordT = unsigned long long, typename _Alloc = std↩
::allocator<_WordT>>
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::operator|= (
            const dynamic_bitset< _WordT, _Alloc > & __rhs )  [inline]
```

Operations on dynamic_bitsets.

Parameters

__rhs	A same-sized dynamic_bitset.

These should be self-explanatory.
Definition at line 773 of file dynamic_bitset.

4.459.3.29 operator~() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

dynamic_bitset std::tr2::dynamic_bitset< _WordT, _Alloc >::operator~ ( ) const [inline]

See the no-argument flip().
Definition at line 905 of file dynamic_bitset.

4.459.3.30 push_back() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

void std::tr2::dynamic_bitset< _WordT, _Alloc >::push_back (
bool __bit) [inline]

Push a bit onto the high end of the bitset.
Definition at line 711 of file dynamic_bitset.

4.459.3.31 reset() [1/2] template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::reset ( ) [inline]

Sets every bit to false.
Definition at line 858 of file dynamic_bitset.

4.459.3.32 reset() [2/2] template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::reset (
size_type __pos) [inline]

Sets a given bit to false.

Parameters

__pos	The index of the bit.

Exceptions

std::out_of_range	If *__pos* is bigger the size of the set.

Same as writing `set(__pos, false)`.
Definition at line 872 of file dynamic_bitset.

4.459.3.33 resize() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>

void std::tr2::dynamic_bitset< _WordT, _Alloc >::resize (
size_type __nbits,
bool __value = false) [inline]

Resize the bitset.
Definition at line 688 of file dynamic_bitset.

4.459.3.34 set() [1/2] template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

```
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::set ( )  [inline]
```

Sets every bit to true.
Definition at line 833 of file dynamic_bitset.

4.459.3.35 set() [2/2] template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

```
dynamic_bitset& std::tr2::dynamic_bitset< _WordT, _Alloc >::set (
            size_type __pos,
            bool __val = true )  [inline]
```

Sets a given bit to a particular value.

Parameters

__pos	The index of the bit.
__val	Either true or false, defaults to true.

Exceptions

std::out_of_range	If *__pos* is bigger the size of the set.

Definition at line 847 of file dynamic_bitset.

4.459.3.36 size() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

```
size_type std::tr2::dynamic_bitset< _WordT, _Alloc >::size ( ) const  [inline], [noexcept]
```

Returns the total number of bits.
Definition at line 997 of file dynamic_bitset.
Referenced by std::tr2::operator>>().

4.459.3.37 swap() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

```
void std::tr2::dynamic_bitset< _WordT, _Alloc >::swap (
            dynamic_bitset< _WordT, _Alloc > & __b )  [inline], [noexcept]
```

Swap with another bitset.
Definition at line 654 of file dynamic_bitset.

4.459.3.38 test() template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩ _WordT>>

```
bool std::tr2::dynamic_bitset< _WordT, _Alloc >::test (
            size_type __pos ) const  [inline]
```

Tests the value of a bit.

Parameters

__pos	The index of a bit.

Returns

The value at *__pos*.

Exceptions

std::out_of_range	If *__pos* is bigger the size of the set.

Definition at line 1024 of file dynamic_bitset.

4.459.3.39 to_string()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
template<typename _CharT = char, typename _Traits = std::char_traits<_CharT>, typename _Alloc1 =
std::allocator<_CharT>>
std::basic_string<_CharT, _Traits, _Alloc1> std::tr2::dynamic_bitset< _WordT, _Alloc >::to_↩
string (
            _CharT __zero = _CharT('0'),
            _CharT __one = _CharT('1') ) const  [inline]
```

Returns a character interpretation of the dynamic_bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).
Definition at line 958 of file dynamic_bitset.

4.459.3.40 to_ullong()

```
template<typename _WordT = unsigned long long, typename _Alloc = std↩
::allocator<_WordT>>
unsigned long long std::tr2::dynamic_bitset< _WordT, _Alloc >::to_ullong ( ) const  [inline]
```

Returns a numerical interpretation of the dynamic_bitset.

Returns

The integral equivalent of the bits.

Exceptions

std::overflow_error	If there are too many bits to be represented in an `unsigned long`.

Definition at line 943 of file dynamic_bitset.

4.459.3.41 to_ulong()

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<↩
_WordT>>
unsigned long std::tr2::dynamic_bitset< _WordT, _Alloc >::to_ulong ( ) const  [inline]
```

Returns a numerical interpretation of the dynamic_bitset.

Returns

The integral equivalent of the bits.

Exceptions

std::overflow_error	If there are too many bits to be represented in an `unsigned long`.

Definition at line 933 of file dynamic_bitset.

4.462.1 Detailed Description

template<**typename _CharT**>
class __gnu_cxx::enc_filebuf< _CharT >

class enc_filebuf.
Definition at line 42 of file enc_filebuf.h.

4.462.2 Member Function Documentation

4.462.2.1 _M_create_pback() `void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_create_pback ( ) [inline], [protected], [inherited]`

Initializes pback buffers, and moves normal buffers to safety. Assumptions: _M_in_cur has already been moved back
Definition at line 199 of file fstream.

4.462.2.2 _M_destroy_pback() `void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_destroy_pback ( ) throw ( ) [inline], [protected], [inherited]`

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.
Definition at line 216 of file fstream.

4.462.2.3 _M_set_buffer() void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_set_buffer (streamsize __off) [inline], [protected], [inherited]

This function sets the pointers of the internal buffer, both get and put areas. Typically:
__off == egptr() - eback() upon underflow/uflow (**read** mode); __off == 0 upon overflow (**write** mode); __off == -1 upon open, setbuf, seekoff/pos (**uncommitted** mode).
NB: epptr() - pbase() == _M_buf_size - 1, since _M_buf_size reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.
Definition at line 459 of file fstream.

4.462.2.4 close() basic_filebuf< _CharT, encoding_char_traits< _CharT > >::__filebuf_type * std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::close [inherited]

Closes the currently associated file.

Returns

this on success, NULL on failure

If no file is currently open, this function immediately fails.
If a *put buffer area* exists, overflow(eof) is called to flush all the characters. The file is then closed.
If any operations fail, this function also fails.
Definition at line 361 of file fstream.tcc.

4.462.2.5 eback() template<typename _CharT , typename _Traits > char_type* std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 489 of file streambuf.

4.462.2.6 egptr() template<typename _CharT , typename _Traits > char_type* std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 495 of file streambuf.

4.462.2.7 epptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected], [inherited]

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 542 of file streambuf.

4.462.2.8 gbump() template<typename _CharT , typename _Traits >

void std::basic_streambuf< _CharT, _Traits >::gbump (
int __*n*) [inline], [protected], [inherited]

Moving the read position.

Parameters

_↩ _*n*	The delta by which to move.

This just advances the read position without returning any data.
Definition at line 505 of file streambuf.

4.462.2.9 getloc() template<typename _CharT , typename _Traits >

locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]

Locale access.

Returns

The current locale in effect.

If pubimbue(loc) has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.
Definition at line 233 of file streambuf.

4.462.2.10 gptr() template<typename _CharT , typename _Traits >

char_type* std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]

Access to the get area.
These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Definition at line 492 of file streambuf.

4.462.2.11 imbue() void std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::imbue (

const locale & __*loc*) [protected], [virtual], [inherited]

Changes translations.

Parameters

__loc	A new locale.

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 434 of file fstream.tcc.

4.462.2.12 in_avail() `template<typename _CharT , typename _Traits >`

`streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.
Definition at line 291 of file streambuf.

4.462.2.13 is_open() `bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::is_open ( ) const throw ( ) [inline], [inherited]`

Returns true if the external file is open.
Definition at line 265 of file fstream.

4.462.2.14 open() `[1/2]` `basic_filebuf< _CharT, encoding_char_traits< _CharT > >::__filebuf_type * std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::open ( const char * __s, ios_base::openmode __mode ) [inherited]`

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named *__s* using the flags given in *__mode*.
Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines app, in|out|app, in|app, binary|app, binary|in|out|app, and binary|in|app per DR 596)

```
+-------------------------------------------------------+
```

ios_base Flag combination				stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r
	+	+			r+
	+	+	+		w+
	+	+		+	a+
	+			+	a+
+		+			wb
+		+		+	ab
+				+	ab
+		+	+		wb
+	+				rb
+	+	+			r+b
+	+	+	+		w+b
+	+	+		+	a+b
+	+			+	a+b

Definition at line 310 of file fstream.tcc.

4.462.2.15 open() [2/2]

```
__filebuf_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT
> >::open (
            const std::string & __s,
            ios_base::openmode __mode )  [inline], [inherited]
```

Opens an external file.

Parameters

__s	The name of the file.
__mode	The open mode flags.

Returns

`this` on success, NULL on failure

Definition at line 331 of file fstream.

4.462.2.16 overflow()

```
basic_filebuf< _CharT, encoding_char_traits< _CharT > >::int_type std::basic_filebuf<
_CharT, encoding_char_traits< _CharT > >::overflow (
            int_type __c = _Traits::eof() )  [protected], [virtual], [inherited]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

_↩ _c	An additional character to consume.

Returns

eof() to indicate failure, something else (usually __*c*, or not_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if __*c* is not `eof()`.
For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 393 of file fstream.tcc.

4.462.2.17 pbackfail()

```
basic_filebuf< _CharT, encoding_char_traits< _CharT > >::int_type std::basic_filebuf<
_CharT, encoding_char_traits< _CharT > >::pbackfail (
            int_type __c = _Traits::eof() )  [protected], [virtual], [inherited]
```

Tries to back up the input sequence.

Parameters

_↩ _*c*	The character to be inserted back into the sequence.

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 383 of file fstream.tcc.

4.462.2.18 pbase()

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::pbase ( ) const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 536 of file streambuf.

4.462.2.19 pbump() template<typename _CharT , typename _Traits >

```
void std::basic_streambuf< _CharT, _Traits >::pbump (
            int __n )  [inline], [protected], [inherited]
```

Moving the write position.

Parameters

_↩ _n	The delta by which to move.

This just advances the write position without returning any data.
Definition at line 552 of file streambuf.

4.462.2.20 pptr() template<typename _CharT , typename _Traits >

```
char_type* std::basic_streambuf< _CharT, _Traits >::pptr ( ) const  [inline], [protected], [inherited]
```

Access to the put area.
These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

Definition at line 539 of file streambuf.

4.462.2.21 pubimbue() template<typename _CharT , typename _Traits >

```
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
            const locale & __loc )  [inline], [inherited]
```

Entry point for imbue().

Parameters

__loc	The new locale.

Returns

The previous locale.

Calls the derived imbue(__loc).
Definition at line 216 of file streambuf.

4.462.2.22 pubseekoff() template<typename _CharT , typename _Traits >

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__off	Offset.

Parameters

__way	Value for ios_base::seekdir.
__mode	Value for ios_base::openmode.

Calls virtual seekoff function.
Definition at line 258 of file streambuf.

4.462.2.23 pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
            pos_type __sp,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [inline], [inherited]
```

Alters the stream position.

Parameters

__sp	Position
__mode	Value for ios_base::openmode.

Calls virtual seekpos function.
Definition at line 270 of file streambuf.

4.462.2.24 pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf* std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry points for derived buffer functions.
The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.
Definition at line 246 of file streambuf.

4.462.2.25 pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( )  [inline], [inherited]
```

Calls virtual sync function.
Definition at line 278 of file streambuf.
Referenced by std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync().

4.462.2.26 sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.
Definition at line 323 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::seekg().

4.462.2.27 seekoff()

```
basic_filebuf< _CharT, encoding_char_traits< _CharT > >::pos_type std::basic_filebuf<
_CharT, encoding_char_traits< _CharT > >::seekoff (
            off_type __off,
            ios_base::seekdir __way,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [protected], [virtual],
[inherited]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 416 of file fstream.tcc.

4.462.2.28 seekpos()

```
basic_filebuf< _CharT, encoding_char_traits< _CharT > >::pos_type std::basic_filebuf<
_CharT, encoding_char_traits< _CharT > >::seekpos (
            pos_type __pos,
            ios_base::openmode __mode = ios_base::in | ios_base::out )  [protected], [virtual],
[inherited]
```

Alters the stream positions.
Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 420 of file fstream.tcc.

4.462.2.29 setbuf()

```
basic_filebuf< _CharT, encoding_char_traits< _CharT > >::__streambuf_type *
std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::setbuf (
            char_type * __s,
            streamsize __n )  [protected], [virtual], [inherited]
```

Manipulates the buffer.

Parameters

__s	Pointer to a buffer area.
__n	Size of *__s*.

Returns

`this`

If no file has been opened, and both *__s* and *__n* are zero, then the stream becomes unbuffered. Otherwise, *__s* is used as a buffer; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering for more.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 413 of file fstream.tcc.

4.462.2.30 setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
            char_type * __gbeg,
            char_type * __gnext,
            char_type * __gend )  [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

__gbeg	A pointer.
__gnext	A pointer.
__gend	A pointer.

Postcondition

__gbeg == `eback()`, *__gnext* == `gptr()`, and *__gend* == `egptr()`

Definition at line 516 of file streambuf.

4.462.2.31 setp()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setp (
            char_type * __pbeg,
            char_type * __pend )  [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

__pbeg	A pointer.
__pend	A pointer.

Postcondition

__pbeg == `pbase()`, *__pbeg* == `pptr()`, and *__pend* == `epptr()`

Definition at line 562 of file streambuf.

4.462.2.32 sgetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( )  [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.
Definition at line 345 of file streambuf.
Referenced by std::basic_istream< char >::getline(), and std::basic_istream< char >::tellg().

4.462.2.33 sgetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
```

```
            char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry point for xsgetn.

Parameters

_↩ _s	A buffer area.
_↩ _n	A count.

Returns xsgetn(__s,__n). The effect is to fill __s[0] through __s[__n-1] with characters from the input sequence, if possible.
Definition at line 364 of file streambuf.

4.462.2.34 showmanyc() `streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::showmanyc [protected], [virtual], [inherited]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` *will not return* `traits::eof()` *until at least that number of characters have been supplied. If* `showmanyc()` *returns -1, then calls to* `underflow()` *or* `uflow()` *will fail.* [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to underflow or uflow] will not return* `eof()` *but that they will return immediately.*

The standard adds that *the morphemes of* `showmanyc` *are* ***es-how-many-see****, not* ***show-manic****.*

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 372 of file fstream.tcc.

4.462.2.35 snextc() `template<typename _CharT , typename _Traits > int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )  [inline], [inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.
Definition at line 305 of file streambuf.
Referenced by std::basic_istream< char >::getline(), std::basic_istream< char >::putback(), and std::basic_istream< char >::tellg().

4.462.2.36 sputbackc() `template<typename _CharT , typename _Traits > int_type std::basic_streambuf< _CharT, _Traits >::sputbackc ( char_type __c )  [inline], [inherited]`

Pushing characters back into the input stream.

Parameters

_↩ _c	The character to push back.

Returns

The previous character, if possible.

Similar to sungetc(), but __c is pushed onto the stream instead of *the previous character.* If successful, the next character fetched from the input stream will be __c.
Definition at line 379 of file streambuf.

4.462.2.37 sputc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
            char_type __c )  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _c	A character to output.

Returns

__c, if possible.

One of two public output functions.
If a write position is available for the output sequence (i.e., the buffer is not full), stores __c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↩ __c)`.
Definition at line 431 of file streambuf.
Referenced by std::ostreambuf_iterator< _CharT, _Traits >::operator=().

4.462.2.38 sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
            const char_type * __s,
            streamsize __n )  [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

_↩ _s	A buffer read area.
_↩ _n	A count.

One of two public output functions.
Returns xsputn(__s,__n). The effect is to write __s[0] through __s[__n-1] to the output sequence, if possible.
Definition at line 457 of file streambuf.

4.462.2.39 sungetc() template<typename _CharT , typename _Traits > int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns pbackfail(). The effect is to *unget* the last character *gotten*.
Definition at line 404 of file streambuf.

4.462.2.40 sync() int std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::sync (void) [protected], [virtual], [inherited]

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 431 of file fstream.tcc.

4.462.2.41 uflow() template<typename _CharT , typename _Traits > virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.
Reimplemented in __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >.
Definition at line 707 of file streambuf.

4.462.2.42 underflow() basic_filebuf< _CharT, encoding_char_traits< _CharT > >::int_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::underflow [protected], [virtual], [inherited]

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.
For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.
A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html

Note

Base class version does nothing, returns eof().

Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 380 of file fstream.tcc.

4.462.2.43 xsgetn()

```
streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >↩
::xsgetn (
            char_type * __s,
            streamsize __n )  [protected], [virtual], [inherited]
```

Multiple character extraction.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills __s[0] through __s[__n-1] with characters from the input sequence, as if by `sbumpc()`. Stops when either __n characters have been copied, or when `traits::eof()` would be copied.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 437 of file fstream.tcc.

4.462.2.44 xsputn()

```
streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >↩
::xsputn (
            const char_type * __s,
            streamsize __n )  [protected], [virtual], [inherited]
```

Multiple character insertion.

Parameters

_↩ _s	A buffer area.
_↩ _n	Maximum number of characters to write.

Returns

The number of characters written.

Writes __s[0] through __s[__n-1] to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.
It is expected that derived classes provide a more efficient implementation by overriding this definition.
Reimplemented from std::basic_streambuf< _CharT, _Traits >.
Definition at line 440 of file fstream.tcc.

4.462.3 Member Data Documentation

4.462.3.1 _M_buf

`char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_buf [protected], [inherited]`

Pointer to the beginning of internal buffer.
Definition at line 136 of file fstream.

4.462.3.2 _M_buf_locale

`template<typename _CharT , typename _Traits > locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]`

Current locale setting.
Definition at line 199 of file streambuf.
Referenced by std::basic_filebuf< _CharT, _Traits >::basic_filebuf().

4.462.3.3 _M_buf_size

`size_t std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_buf_size [protected], [inherited]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.
Definition at line 143 of file fstream.

4.462.3.4 _M_ext_buf

`char* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_buf [protected], [inherited]`

Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().
Definition at line 178 of file fstream.

4.462.3.5 _M_ext_buf_size

`streamsize std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_buf_size [protected], [inherited]`

Size of buffer held by _M_ext_buf.
Definition at line 183 of file fstream.

4.462.3.6 _M_ext_next

`const char* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_ext_next [protected], [inherited]`

Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().
Definition at line 190 of file fstream.

4.462.3.7 _M_in_beg

`template<typename _CharT , typename _Traits > char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]`

Start of get area.
Definition at line 191 of file streambuf.

4.462.3.8 _M_in_cur

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]`
Current read area.
Definition at line 192 of file streambuf.

4.462.3.9 _M_in_end

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]`
End of get area.
Definition at line 193 of file streambuf.

4.462.3.10 _M_mode

`ios_base::openmode std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_mode [protected], [inherited]`
Place to stash in || out || in | out settings for current filebuf.
Definition at line 121 of file fstream.

4.462.3.11 _M_out_beg

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]`
Start of put area.
Definition at line 194 of file streambuf.

4.462.3.12 _M_out_cur

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]`
Current put area.
Definition at line 195 of file streambuf.

4.462.3.13 _M_out_end

`template<typename _CharT , typename _Traits >`
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]`
End of put area.
Definition at line 196 of file streambuf.

4.462.3.14 _M_pback

`char_type std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback [protected], [inherited]`
Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 164 of file fstream.

4.462.3.15 _M_pback_cur_save

`char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_cur_save [protected], [inherited]`
Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 165 of file fstream.

4.462.3.16 _M_pback_end_save

`char_type* std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_end_save [protected], [inherited]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 166 of file fstream.

4.462.3.17 _M_pback_init

`bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_pback_init [protected], [inherited]`

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Definition at line 167 of file fstream.

4.462.3.18 _M_reading

`bool std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >::_M_reading [protected], [inherited]`

_M_reading == false && _M_writing == false for **uncommitted** mode; _M_reading == true for **read** mode; _M_writing == true for **write** mode;
NB: _M_reading == true && _M_writing == true is unused.
Definition at line 155 of file fstream.

- error_category & **operator=** (const error_category &)=delete
- bool **operator==** (const error_category &__other) const noexcept

4.475.1 Detailed Description

Abstract base class for types defining a category of error codes.
An error category defines a context that give meaning to the integer stored in an `error_code` or `error_condition` object. For example, the standard `errno` constants such a `EINVAL` and `ENOMEM` are associated with the "generic" category and other OS-specific error numbers are associated with the "system" category, but a user-defined category might give different meanings to the same numerical values.
Definition at line 89 of file system_error.
The documentation for this class was generated from the following file:

- system_error

- bool **operator==** (const error_code &__lhs, const error_code &__rhs) noexcept

- error_code **make_error_code** (errc __e) noexcept

4.476.1 Detailed Description

Class error_code
This class is a value type storing an integer error number and a category that gives meaning to the error number. Typically this is done close the the point where the error happens, to capture the original error value.
An `error_code` object can be used to store the original error value emitted by some subsystem, with a category relevant to the subsystem. For example, errors from POSIX library functions can be represented by an `errno` value and the "generic" category, but errors from an HTTP library might be represented by an HTTP response status code (e.g. 404) and a custom category defined by the library.
Definition at line 180 of file system_error.
The documentation for this struct was generated from the following file:

- bool **operator==** (const error_condition &__lhs, const error_code &__rhs) noexcept
- bool **operator==** (const error_condition &__lhs, const error_condition &__rhs) noexcept

4.477.1 Detailed Description

Class error_condition
This class represents error conditions that may be visible at an API boundary. Different `error_code` values that can occur within a library or module might map to the same `error_condition`.
An `error_condition` represents something that the program can test for, and subsequently take appropriate action.
Definition at line 278 of file system_error.

4.481.1 Detailed Description

template<typename _RealType = double>
class std::exponential_distribution< _RealType >

An exponential continuous distribution for random numbers.
The formula for the exponential probability density function is $p(x|\lambda) = \lambda e^{-\lambda x}$.

Table 1943 Distribution Statistics

Mean	$\frac{1}{\lambda}$
Median	$\frac{\ln 2}{\lambda}$
Mode	$zero$
Range	$[0, \infty]$
Standard Deviation	$\frac{1}{\lambda}$

Definition at line 4645 of file random.h.

4.481.2 Member Typedef Documentation

4.481.2.1 result_type `template<typename _RealType = double>`

`typedef _RealType std::exponential_distribution< _RealType >::result_type`

The type of the range of the distribution.
Definition at line 4652 of file random.h.

4.481.3 Constructor & Destructor Documentation

4.481.3.1 exponential_distribution() [1/2] `template<typename _RealType = double>`

`std::exponential_distribution< _RealType >::exponential_distribution ( ) [inline]`

Constructs an exponential distribution with inverse scale parameter 1.0.
Definition at line 4689 of file random.h.

4.481.3.2 exponential_distribution() [2/2] `template<typename _RealType = double>`

```
std::exponential_distribution< _RealType >::exponential_distribution (
            _RealType __lambda ) [inline], [explicit]
```

Constructs an exponential distribution with inverse scale parameter λ.
Definition at line 4696 of file random.h.

4.481.4 Member Function Documentation

4.481.4.1 lambda() `template<typename _RealType = double>`

`_RealType std::exponential_distribution< _RealType >::lambda ( ) const [inline]`

Returns the inverse scale parameter of the distribution.
Definition at line 4717 of file random.h.

4.481.4.2 max() template<typename _RealType = double>

result_type std::exponential_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 4746 of file random.h.

References std::numeric_limits< _Tp >::max().

4.481.4.3 min() template<typename _RealType = double>

result_type std::exponential_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 4739 of file random.h.

4.481.4.4 operator()() template<typename _RealType = double>

template<typename _UniformRandomNumberGenerator >
result_type std::exponential_distribution< _RealType >::operator() (
_UniformRandomNumberGenerator & __*urng*) [inline]

Generating functions.

Definition at line 4754 of file random.h.

4.481.4.5 param() [1/2] template<typename _RealType = double>

param_type std::exponential_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 4724 of file random.h.

Referenced by std::operator>>().

4.481.4.6 param() [2/2] template<typename _RealType = double>

void std::exponential_distribution< _RealType >::param (
const param_type & __*param*) [inline]

Sets the parameter set of the distribution.

Parameters

__*param*	The new parameter set of the distribution.

Definition at line 4732 of file random.h.

4.481.4.7 reset() template<typename _RealType = double>

void std::exponential_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Has no effect on exponential distributions.

Definition at line 4711 of file random.h.

4.481.5 Friends And Related Function Documentation

4.481.5.1 operator== template<typename _RealType = double>

bool operator== (

```
const exponential_distribution< _RealType > & __d1,
const exponential_distribution< _RealType > & __d2 )  [friend]
```

Return true if two exponential distributions have the same parameters.
Definition at line 4794 of file random.h.
The documentation for this class was generated from the following files:

- random.h
- bits/random.tcc

4.483.1 Detailed Description

template<typename _RealType = double>
class std::extreme_value_distribution< _RealType >

A extreme_value_distribution random number distribution.
The formula for the normal probability mass function is

$$p(x|a,b) = \frac{1}{b}\exp(\frac{a-x}{b} - \exp(\frac{a-x}{b}))$$

Definition at line 5070 of file random.h.

4.483.2 Member Typedef Documentation

4.483.2.1 result_type `template<typename _RealType = double>`

`typedef _RealType std::extreme_value_distribution< _RealType >::result_type`

The type of the range of the distribution.
Definition at line 5077 of file random.h.

4.483.3 Member Function Documentation

4.483.3.1 a() `template<typename _RealType = double>`

`_RealType std::extreme_value_distribution< _RealType >::a ( ) const [inline]`

Return the a parameter of the distribution.
Definition at line 5135 of file random.h.

4.483.3.2 b() `template<typename _RealType = double>`

`_RealType std::extreme_value_distribution< _RealType >::b ( ) const [inline]`

Return the b parameter of the distribution.
Definition at line 5142 of file random.h.

4.483.3.3 max() template<typename _RealType = double>

result_type std::extreme_value_distribution< _RealType >::max ( ) const [inline]

Returns the least upper bound value of the distribution.

Definition at line 5171 of file random.h.

References std::numeric_limits< _Tp >::max().

4.483.3.4 min() template<typename _RealType = double>

result_type std::extreme_value_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 5164 of file random.h.

References std::numeric_limits< _Tp >::lowest().

4.483.3.5 operator()() template<typename _RealType = double>

```
template<typename _UniformRandomNumberGenerator >
result_type std::extreme_value_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

Definition at line 5179 of file random.h.

4.483.3.6 param() [1/2] template<typename _RealType = double>

param_type std::extreme_value_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 5149 of file random.h.

Referenced by std::operator>>().

4.483.3.7 param() [2/2] template<typename _RealType = double>

```
void std::extreme_value_distribution< _RealType >::param (
            const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 5157 of file random.h.

4.483.3.8 reset() template<typename _RealType = double>

void std::extreme_value_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 5128 of file random.h.

4.483.4 Friends And Related Function Documentation

4.483.4.1 operator== template<typename _RealType = double>

```
bool operator== (
```

```
const extreme_value_distribution< _RealType > & __d1,
const extreme_value_distribution< _RealType > & __d2 )  [friend]
```

Return true if two extreme value distributions have the same parameters.
Definition at line 5214 of file random.h.

Friends

- class **locale**
- class **locale::_Impl**

4.484.1 Detailed Description

Localization functionality base class.
The facet class is the base class for a localization feature, such as money, time, and number printing. It provides common support for facets and reference management.
Facets may not be copied or assigned.
Definition at line 373 of file locale_classes.h.

4.484.2 Constructor & Destructor Documentation

4.484.2.1 facet() `std::locale::facet::facet (`

```
size_t __refs = 0 ) throw ( )  [inline], [explicit], [protected]
```

Facet constructor.
This is the constructor provided by the standard. If refs is 0, the facet is destroyed when the last referencing locale is destroyed. Otherwise the facet will never be destroyed.

Parameters

__refs	The initial value for reference count.

Definition at line 405 of file locale_classes.h.

4.484.2.2 ~facet() `virtual std::locale::facet::~facet ( ) [protected], [virtual]`

Facet destructor.

The documentation for this class was generated from the following file:

- locale_classes.h

4.485 std::ios_base::failure Class Reference

Inheritance diagram for std::ios_base::failure:

4.488.1 Detailed Description

template<typename _RealType = double>
class std::fisher_f_distribution< _RealType >

A fisher_f_distribution random number distribution.
The formula for the normal probability mass function is

$$p(x|m,n) = \frac{\Gamma((m+n)/2)}{\Gamma(m/2)\Gamma(n/2)}(\frac{m}{n})^{m/2}x^{(m/2)-1}(1+\frac{mx}{n})^{-(m+n)/2}$$

Definition at line 3062 of file random.h.

4.488.2 Member Typedef Documentation

4.488.2.1 result_type `template<typename _RealType = double>`

```
typedef _RealType std::fisher_f_distribution< _RealType >::result_type
```

The type of the range of the distribution.
Definition at line 3069 of file random.h.

4.488.3 Member Function Documentation

4.488.3.1 max() `template<typename _RealType = double>`

```
result_type std::fisher_f_distribution< _RealType >::max ( ) const  [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 3164 of file random.h.
References std::numeric_limits< _Tp >::max().

4.488.3.2 min() template<typename _RealType = double>

result_type std::fisher_f_distribution< _RealType >::min ( ) const [inline]

Returns the greatest lower bound value of the distribution.

Definition at line 3157 of file random.h.

4.488.3.3 operator()() template<typename _RealType = double>

template<typename _UniformRandomNumberGenerator >
result_type std::fisher_f_distribution< _RealType >::operator() (
_UniformRandomNumberGenerator & __urng) [inline]

Generating functions.

Definition at line 3172 of file random.h.

4.488.3.4 param() [1/2] template<typename _RealType = double>

param_type std::fisher_f_distribution< _RealType >::param ( ) const [inline]

Returns the parameter set of the distribution.

Definition at line 3142 of file random.h.

4.488.3.5 param() [2/2] template<typename _RealType = double>

void std::fisher_f_distribution< _RealType >::param (
const param_type & __param) [inline]

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 3150 of file random.h.

4.488.3.6 reset() template<typename _RealType = double>

void std::fisher_f_distribution< _RealType >::reset ( ) [inline]

Resets the distribution state.

Definition at line 3121 of file random.h.

References std::gamma_distribution< _RealType >::reset().

4.488.4 Friends And Related Function Documentation

4.488.4.1 operator<< template<typename _RealType = double>

template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
std::basic_ostream< _CharT, _Traits > & __os,
const std::fisher_f_distribution< _RealType1 > & __x) [friend]

Inserts a fisher_f_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A fisher_f_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.488.4.2 operator== template<typename _RealType = double>

```
bool operator== (
            const fisher_f_distribution< _RealType > & __d1,
            const fisher_f_distribution< _RealType > & __d2 )  [friend]
```

Return true if two Fisher f distributions have the same parameters and the sequences that would be generated are equal.
Definition at line 3220 of file random.h.

4.488.4.3 operator>> template<typename _RealType = double>

```
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::fisher_f_distribution< _RealType1 > & __x )  [friend]
```

Extracts a fisher_f_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A fisher_f_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.491.1 Detailed Description

template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
class std::__debug::forward_list< _Tp, _Alloc >

Class std::forward_list with safety/checking/debug instrumentation.
Definition at line 189 of file debug/forward_list.

4.491.2 Member Function Documentation

4.491.2.1 _M_detach_all() `void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]`

Detach all iterators, leaving them singular.
Referenced by __gnu_debug::_Safe_sequence_base::~_Safe_sequence_base().

4.491.2.2 _M_detach_singular() `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

4.491.2.3 _M_get_mutex() `__gnu_cxx::__mutex& __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

For use in _Safe_sequence.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.491.2.4 _M_invalidate_all() void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]

Invalidates all iterators.
Definition at line 256 of file safe_base.h.
References __gnu_debug::_Safe_sequence_base::_M_version.

4.491.2.5 _M_invalidate_if() void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if (_Predicate __pred) [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
Definition at line 117 of file safe_sequence.tcc.

4.491.2.6 _M_revalidate_singular() void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

4.491.2.7 _M_transfer_from_if() void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_transfer_from_if (_Safe_sequence< _SafeSequence > & __from, _Predicate __pred) [inherited]

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns `true`. `__pred` will be invoked with the normal iterators nested in the safe ones.
Definition at line 125 of file safe_sequence.tcc.

4.491.3 Member Data Documentation

4.491.3.1 _M_const_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]

The list of constant iterators that reference this container.
Definition at line 197 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.491.3.2 _M_iterators _Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]

The list of mutable iterators that reference this container.
Definition at line 194 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if().

4.491.3.3 _M_version unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]

The container version number. This number may never be 0.
Definition at line 200 of file safe_base.h.
Referenced by __gnu_debug::_Safe_sequence_base::_M_invalidate_all().

4.492.1 Detailed Description

template<typename _Tp, typename _Alloc = allocator<_Tp>>
class std::forward_list< _Tp, _Alloc >

A standard container with linear time access to elements, and fixed time insertion/deletion at any point in the sequence.

Template Parameters

_Tp	Type of element.
_Alloc	Allocator type, defaults to allocator<_Tp>.

Meets the requirements of a container, a sequence, including the optional sequence requirements with the exception of at and operator[].
This is a *singly linked* list. Traversal up the list requires linear time, but adding and removing elements (or *nodes*) is done in constant time, regardless of where the change takes place. Unlike std::vector and std::deque, random-access iterators are not provided, so subscripting ([]) access is not allowed. For algorithms which only need sequential access, this lack makes no difference.
Also unlike the other standard containers, std::forward_list provides specialized algorithms unique to linked lists, such as splicing, sorting, and in-place reversal.
Definition at line 423 of file forward_list.h.

4.492.2 Constructor & Destructor Documentation

4.492.2.1 forward_list() [1/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list ( )  [default]
```

Creates a forward_list with no elements.

4.492.2.2 forward_list() [2/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            const _Alloc & __al )  [inline], [explicit], [noexcept]
```

Creates a forward_list with no elements.

Parameters

_↩ _al	An allocator object.

Definition at line 466 of file forward_list.h.

4.492.2.3 forward_list() [3/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            const forward_list< _Tp, _Alloc > & __list,
            const _Alloc & __al )  [inline]
```

Copy constructor with allocator argument.

Parameters

__list	Input list to copy.
__al	An allocator object.

Definition at line 475 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::begin(), and std::forward_list< _Tp, _Alloc >::end().

4.492.2.4 forward_list() [4/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            forward_list< _Tp, _Alloc > && __list,
            const _Alloc & __al )  [inline], [noexcept]
```

Move constructor with allocator argument.

Parameters

__list	Input list to move.
__al	An allocator object.

Definition at line 503 of file forward_list.h.

4.492.2.5 forward_list() [5/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            size_type __n,
            const _Alloc & __al = _Alloc() )  [inline], [explicit]
```

Creates a forward_list with default constructed elements.

Parameters

_↩ _n	The number of elements to initially create.
_↩ _al	An allocator object.

This constructor creates the forward_list with *__n* default constructed elements.
Definition at line 518 of file forward_list.h.

4.492.2.6 forward_list() [6/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            size_type __n,
            const _Tp & __value,
            const _Alloc & __al = _Alloc() )  [inline]
```

Creates a forward_list with copies of an exemplar element.

Parameters

__n	The number of elements to initially create.
__value	An element to copy.
__al	An allocator object.

This constructor fills the forward_list with *__n* copies of *__value*.
Definition at line 531 of file forward_list.h.

4.492.2.7 forward_list() [7/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
std::forward_list< _Tp, _Alloc >::forward_list (
            _InputIterator __first,
```

```
            _InputIterator __last,
            const _Alloc & __al = _Alloc() )  [inline]
```

Builds a forward_list from a range.

Parameters

__first	An input iterator.
__last	An input iterator.
__al	An allocator object.

Create a forward_list consisting of copies of the elements from [*__first*,*__last*). This is linear in N (where N is distance(↩ *__first*,*__last*)).
Definition at line 548 of file forward_list.h.

4.492.2.8 forward_list() [8/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            const forward_list< _Tp, _Alloc > & __list )  [inline]
```

The forward_list copy constructor.

Parameters

__list	A forward_list of identical element and allocator types.

Definition at line 558 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::begin(), and std::forward_list< _Tp, _Alloc >::end().

4.492.2.9 forward_list() [9/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            forward_list< _Tp, _Alloc > &&  )  [default]
```

The forward_list move constructor.

Parameters

__list	A forward_list of identical element and allocator types.

The newly-created forward_list contains the exact contents of the moved instance. The contents of the moved instance are a valid, but unspecified forward_list.

4.492.2.10 forward_list() [10/10]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::forward_list (
            std::initializer_list< _Tp > __il,
            const _Alloc & __al = _Alloc() )  [inline]
```

Builds a forward_list from an initializer_list.

Parameters

_↩ _il	An initializer_list of value_type.
_↩ _al	An allocator object.

Create a forward_list consisting of copies of the elements in the initializer_list *__il*. This is linear in __il.size().
Definition at line 582 of file forward_list.h.

4.492.2.11 ~forward_list()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
std::forward_list< _Tp, _Alloc >::~forward_list ( )  [inline], [noexcept]
```

The forward_list dtor.
Definition at line 590 of file forward_list.h.

4.492.3 Member Function Documentation

4.492.3.1 assign() [1/3]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
template<typename _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
void std::forward_list< _Tp, _Alloc >::assign (
            _InputIterator __first,
            _InputIterator __last )  [inline]
```

Assigns a range to a forward_list.

Parameters

__first	An input iterator.
__last	An input iterator.

This function fills a forward_list with copies of the elements in the range [*__first*,*__last*).
Note that the assignment completely changes the forward_list and that the number of elements of the resulting forward_list is the same as the number of elements assigned.
Definition at line 658 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::assign(), and std::forward_list< _Tp, _Alloc >::operator=().

4.492.3.2 assign() [2/3]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::assign (
            size_type __n,
            const _Tp & __val )  [inline]
```

Assigns a given value to a forward_list.

Parameters

__n	Number of elements to be assigned.
__val	Value to be assigned.

This function fills a forward_list with *__n* copies of the given value. Note that the assignment completely changes the forward_list, and that the resulting forward_list has __n elements.
Definition at line 675 of file forward_list.h.

4.492.3.3 assign() [3/3]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::assign (
            std::initializer_list< _Tp > __il )  [inline]
```

Assigns an initializer_list to a forward_list.

Parameters

_↩ _*il*	An initializer_list of value_type.

Replace the contents of the forward_list with copies of the elements in the initializer_list __*il*. This is linear in il.size().
Definition at line 687 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::assign().

4.492.3.4 before_begin() [1/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

const_iterator std::forward_list< _Tp, _Alloc >::before_begin ( ) const [inline], [noexcept]
Returns a read-only (constant) iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.
Definition at line 711 of file forward_list.h.

4.492.3.5 before_begin() [2/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

iterator std::forward_list< _Tp, _Alloc >::before_begin ( ) [inline], [noexcept]
Returns a read/write iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.
Definition at line 702 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::insert_after().

4.492.3.6 begin() [1/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

const_iterator std::forward_list< _Tp, _Alloc >::begin ( ) const [inline], [noexcept]
Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.
Definition at line 728 of file forward_list.h.

4.492.3.7 begin() [2/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

iterator std::forward_list< _Tp, _Alloc >::begin ( ) [inline], [noexcept]
Returns a read/write iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.
Definition at line 719 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::forward_list().

4.492.3.8 cbefore_begin() template<typename _Tp , typename _Alloc = allocator<_Tp>>

const_iterator std::forward_list< _Tp, _Alloc >::cbefore_begin ( ) const [inline], [noexcept]
Returns a read-only (constant) iterator that points before the first element in the forward_list. Iteration is done in ordinary element order.
Definition at line 764 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::emplace_front(), and std::forward_list< _Tp, _Alloc >::push_front().

4.492.3.9 cbegin() template<typename _Tp , typename _Alloc = allocator<_Tp>>

const_iterator std::forward_list< _Tp, _Alloc >::cbegin ( ) const [inline], [noexcept]
Returns a read-only (constant) iterator that points to the first element in the forward_list. Iteration is done in ordinary element order.

Definition at line 755 of file forward_list.h.
Referenced by std::operator<(), std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

4.492.3.10 cend() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
const_iterator std::forward_list< _Tp, _Alloc >::cend ( ) const  [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.
Definition at line 773 of file forward_list.h.
Referenced by std::operator<(), std::forward_list< _Tp, _Alloc >::operator=(), and std::operator==().

4.492.3.11 clear() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
void std::forward_list< _Tp, _Alloc >::clear ( )  [inline], [noexcept]
```

Erases all the elements.
Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1086 of file forward_list.h.

4.492.3.12 emplace_after() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
template<typename...  _Args>
iterator std::forward_list< _Tp, _Alloc >::emplace_after (
            const_iterator __pos,
            _Args &&...  __args )  [inline]
```

Constructs object in forward_list after the specified iterator.

Parameters

__pos	A const_iterator into the forward_list.
__args	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.
Definition at line 895 of file forward_list.h.

4.492.3.13 emplace_front() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
template<typename...  _Args>
void std::forward_list< _Tp, _Alloc >::emplace_front (
            _Args &&...  __args )  [inline]
```

Constructs object in forward_list at the front of the list.

Parameters

__args	Arguments.

This function will insert an object of type Tp constructed with Tp(std::forward<Args>(args)...) at the front of the list

Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.
Definition at line 834 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::cbefore_begin(), and std::forward_list< _Tp, _Alloc >::front().

4.492.3.14 empty()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
bool std::forward_list< _Tp, _Alloc >::empty ( ) const  [inline], [noexcept]
```

Returns true if the forward_list is empty. (Thus begin() would equal end().)
Definition at line 781 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::insert_after().

4.492.3.15 end() [1/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
const_iterator std::forward_list< _Tp, _Alloc >::end ( ) const  [inline], [noexcept]
```

Returns a read-only iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.
Definition at line 746 of file forward_list.h.

4.492.3.16 end() [2/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::end ( )  [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the forward_list. Iteration is done in ordinary element order.
Definition at line 737 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::forward_list(), and std::forward_list< _Tp, _Alloc >::insert_after().

4.492.3.17 erase_after() [1/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::erase_after (
            const_iterator __pos )  [inline]
```

Removes the element pointed to by the iterator following `pos`.

Parameters

__pos	Iterator pointing before element to be erased.

Returns

An iterator pointing to the element following the one that was erased, or end() if no such element exists.

This function will erase the element at the given position and thus shorten the forward_list by one.
Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 998 of file forward_list.h.

4.492.3.18 erase_after() [2/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::erase_after (
            const_iterator __pos,
            const_iterator __last )  [inline]
```

Remove a range of elements.

Parameters

__pos	Iterator pointing before the first element to be erased.
__last	Iterator pointing to one past the last element to be erased.

Returns

@ __last.

This function will erase the elements in the range (__pos,__last) and shorten the forward_list accordingly.
This operation is linear time in the size of the range and only invalidates iterators/references to the element being removed. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1021 of file forward_list.h.

4.492.3.19 front() [1/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
reference std::forward_list< _Tp, _Alloc >::front ( )  [inline]
```

Returns a read/write reference to the data at the first element of the forward_list.
Definition at line 798 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::emplace_front().

4.492.3.20 front() [2/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
const_reference std::forward_list< _Tp, _Alloc >::front ( ) const  [inline]
```

Returns a read-only (constant) reference to the data at the first element of the forward_list.
Definition at line 809 of file forward_list.h.

4.492.3.21 get_allocator() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
allocator_type std::forward_list< _Tp, _Alloc >::get_allocator ( ) const  [inline], [noexcept]
```

Get a copy of the memory allocation object.
Definition at line 692 of file forward_list.h.

4.492.3.22 insert_after() [1/4] template<typename _Tp , typename _Alloc >

```
template<typename _InputIterator , typename >
forward_list< _Tp, _Alloc >::iterator forward_list::insert_after (
            const_iterator __pos,
            _InputIterator __first,
            _InputIterator __last )
```

Inserts a range into the forward_list.

Parameters

__pos	An iterator into the forward_list.
__first	An input iterator.
__last	An input iterator.

Returns

An iterator pointing to the last inserted element or *__pos* if *__first* == *__last*.

This function will insert copies of the data in the range [*__first*,*__last*) into the forward_list after the location specified by *__pos*.
This operation is linear in the number of elements inserted and does not invalidate iterators and references.
Definition at line 270 of file forward_list.tcc.
References std::forward_list< _Tp, _Alloc >::before_begin(), std::forward_list< _Tp, _Alloc >::empty(), and std::forward_list< _Tp, _Alloc >::end().

4.492.3.23 insert_after() [2/4]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::insert_after (
            const_iterator __pos,
            const _Tp & __val )  [inline]
```

Inserts given value into forward_list after specified iterator.

Parameters

__pos	An iterator into the forward_list.
__val	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value after the specified location. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.
Definition at line 912 of file forward_list.h.
Referenced by std::forward_list< _Tp, _Alloc >::insert_after().

4.492.3.24 insert_after() [3/4]

```
template<typename _Tp , typename _Alloc >
forward_list< _Tp, _Alloc >::iterator forward_list::insert_after (
            const_iterator __pos,
            size_type __n,
            const _Tp & __val )
```

Inserts a number of copies of given data into the forward_list.

Parameters

__pos	An iterator into the forward_list.
__n	Number of elements to be inserted.
__val	Data to be inserted.

Returns

An iterator pointing to the last inserted copy of *val* or *pos* if *n* == 0.

This function will insert a specified number of copies of the given data after the location specified by *pos*.
This operation is linear in the number of elements inserted and does not invalidate iterators and references.
Definition at line 255 of file forward_list.tcc.
References std::forward_list< _Tp, _Alloc >::before_begin(), and std::forward_list< _Tp, _Alloc >::end().

4.492.3.25 insert_after() [4/4]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
iterator std::forward_list< _Tp, _Alloc >::insert_after (
            const_iterator __pos,
            std::initializer_list< _Tp > __il )  [inline]
```

Inserts the contents of an initializer_list into forward_list after the specified iterator.

Parameters

__pos	An iterator into the forward_list.
__il	An initializer_list of value_type.

Returns

An iterator pointing to the last inserted element or *__pos* if *__il* is empty.

This function will insert copies of the data in the initializer_list *__il* into the forward_list before the location specified by *__pos*.
This operation is linear in the number of elements inserted and does not invalidate iterators and references.
Definition at line 977 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::insert_after().

4.492.3.26 max_size()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
size_type std::forward_list< _Tp, _Alloc >::max_size ( ) const  [inline], [noexcept]
```

Returns the largest possible number of elements of forward_list.
Definition at line 788 of file forward_list.h.
References __gnu_cxx::__alloc_traits< _Alloc, typename >::max_size().

4.492.3.27 merge() [1/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::merge (
            forward_list< _Tp, _Alloc > && __list )  [inline]
```

Merge sorted lists.

Parameters

__list	Sorted list to merge.

Assumes that both *list* and this list are sorted according to operator<(). Merges elements of *__list* into this list in sorted order, leaving *__list* empty when complete. Elements in this list precede elements in *__list* that are equal.
Definition at line 1242 of file forward_list.h.
References std::move().

4.492.3.28 merge() [2/2]

```
template<typename _Tp , typename _Alloc >
template<typename _Comp >
void forward_list::merge (
            forward_list< _Tp, _Alloc > && __list,
            _Comp __comp )
```

Merge sorted lists according to comparison function.

Parameters

__list	Sorted list to merge.
__comp	Comparison function defining sort order.

Assumes that both *__list* and this list are sorted according to comp. Merges elements of *__list* into this list in sorted order, leaving *__list* empty when complete. Elements in this list precede elements in *__list* that are equivalent according to comp().
Definition at line 372 of file forward_list.tcc.

4.492.3.29 operator=() [1/3]

```
template<typename _Tp , typename _Alloc >
forward_list< _Tp, _Alloc > & forward_list::operator= (
            const forward_list< _Tp, _Alloc > & __list )
```

The forward_list assignment operator.

Parameters

__list	A forward_list of identical element and allocator types.

All the elements of *__list* are copied.
Whether the allocator is copied depends on the allocator traits.
Definition at line 139 of file forward_list.tcc.
References std::__addressof(), std::forward_list< _Tp, _Alloc >::cbegin(), and std::forward_list< _Tp, _Alloc >::cend().

4.492.3.30 operator=() [2/3]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
forward_list& std::forward_list< _Tp, _Alloc >::operator= (
            forward_list< _Tp, _Alloc > && __list )  [inline], [noexcept]
```

The forward_list move assignment operator.

Parameters

__list	A forward_list of identical element and allocator types.

The contents of *__list* are moved into this forward_list (without copying, if the allocators permit it).
Afterwards *__list* is a valid, but unspecified forward_list
Whether the allocator is moved depends on the allocator traits.
Definition at line 618 of file forward_list.h.
References std::move().

4.492.3.31 operator=() [3/3]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
forward_list& std::forward_list< _Tp, _Alloc >::operator= (
            std::initializer_list< _Tp > __il )  [inline]
```

The forward_list initializer list assignment operator.

Parameters

__il	An initializer_list of value_type.

Replace the contents of the forward_list with copies of the elements in the initializer_list *__il*. This is linear in __il.size().
Definition at line 637 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::assign().

4.492.3.32 pop_front()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::pop_front ( )  [inline]
```

Removes first element.
This is a typical stack operation. It shrinks the forward_list by one. Due to the nature of a forward_list this operation can be done in constant time, and only invalidates iterators/references to the element being removed.
Note that no data is returned, and if the first element's data is needed, it should be retrieved before pop_front() is called.
Definition at line 877 of file forward_list.h.

4.492.3.33 push_front()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::push_front (
            const _Tp & __val )  [inline]
```

Add data to the front of the forward_list.

Parameters

__val	Data to be added.

This is a typical stack operation. The function creates an element at the front of the forward_list and assigns the given data to it. Due to the nature of a forward_list this operation can be done in constant time, and does not invalidate iterators and references.
Definition at line 854 of file forward_list.h.
References std::forward_list< _Tp, _Alloc >::cbefore_begin().

4.492.3.34 remove()

```
template<typename _Tp , typename _Alloc >
auto forward_list::remove (
            const _Tp & __val )
```

Remove all elements equal to value.

Parameters

__val	The value to remove.

Removes every element in the list equal to *__val*. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 289 of file forward_list.tcc.

4.492.3.35 remove_if()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
template<typename _Pred >
__remove_return_type std::forward_list< _Tp, _Alloc >::remove_if (
            _Pred __pred )
```

Remove all elements satisfying a predicate.

Parameters

__pred	Unary predicate function or object.

Removes every element in the list for which the predicate returns true. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.492.3.36 resize() [1/2] template<typename _Tp , typename _Alloc >

```
void forward_list::resize (
            size_type __sz )
```

Resizes the forward_list to the specified number of elements.

Parameters

__sz	Number of elements the forward_list should contain.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current number of elements the forward_list is truncated, otherwise the forward_list is extended and the new elements are default constructed.
Definition at line 181 of file forward_list.tcc.
References std::initializer_list< _E >::end().

4.492.3.37 resize() [2/2] template<typename _Tp , typename _Alloc >

```
void forward_list::resize (
            size_type __sz,
            const value_type & __val )
```

Resizes the forward_list to the specified number of elements.

Parameters

__sz	Number of elements the forward_list should contain.
__val	Data with which new elements should be populated.

This function will resize the forward_list to the specified number of elements. If the number is smaller than the forward_list's current number of elements the forward_list is truncated, otherwise the forward_list is extended and new elements are populated with given data.
Definition at line 200 of file forward_list.tcc.
References std::initializer_list< _E >::end().

4.492.3.38 reverse() template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
void std::forward_list< _Tp, _Alloc >::reverse ( )  [inline], [noexcept]
```

Reverse the elements in list.
Reverse the order of elements in the list in linear time.
Definition at line 1295 of file forward_list.h.

4.492.3.39 sort() [1/2] template<typename _Tp , typename _Alloc = allocator<_Tp>>

```
void std::forward_list< _Tp, _Alloc >::sort ( )  [inline]
```

Sort the elements of the list.

Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.
Definition at line 1276 of file forward_list.h.

4.492.3.40 sort() [2/2]

```
template<typename _Tp , class _Alloc >
template<typename _Comp >
void forward_list::sort (
            _Comp __comp )
```

Sort the forward_list using a comparison function.
Sorts the elements of this list in NlogN time. Equivalent elements remain in list order.
Definition at line 421 of file forward_list.tcc.

4.492.3.41 splice_after() [1/4]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::splice_after (
            const_iterator __pos,
            forward_list< _Tp, _Alloc > && ,
            const_iterator __before,
            const_iterator __last )  [inline], [noexcept]
```

Insert range from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.
__before	Iterator referencing before the start of range in list.
__last	Iterator referencing the end of range in list.

Removes elements in the range (__before,__last) and inserts them after *__pos* in constant time.
Undefined if *__pos* is in (__before,__last).
Definition at line 1147 of file forward_list.h.

4.492.3.42 splice_after() [2/4]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::splice_after (
            const_iterator __pos,
            forward_list< _Tp, _Alloc > && __list )  [inline], [noexcept]
```

Insert contents of another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.

The elements of *list* are inserted in constant time after the element referenced by *pos*. *list* becomes an empty list.
Requires this != *x*.
Definition at line 1103 of file forward_list.h.

4.492.3.43 splice_after() [3/4]

```
template<typename _Tp , typename _Alloc >
void forward_list::splice_after (
            const_iterator __pos,
```

```
            forward_list< _Tp, _Alloc > && __list,
            const_iterator __i )  [noexcept]
```

Insert element from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.
__i	Iterator referencing the element before the element to move.

Removes the element in list *list* referenced by *i* and inserts it into the current list after *pos*.
Definition at line 238 of file forward_list.tcc.

4.492.3.44 splice_after() [4/4]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::splice_after (
            const_iterator __pos,
            forward_list< _Tp, _Alloc > & ,
            const_iterator __before,
            const_iterator __last )  [inline], [noexcept]
```

Insert range from another forward_list.

Parameters

__pos	Iterator referencing the element to insert after.
__list	Source list.
__before	Iterator referencing before the start of range in list.
__last	Iterator referencing the end of range in list.

Removes elements in the range (__before,__last) and inserts them after *__pos* in constant time.
Undefined if *__pos* is in (__before,__last).
Definition at line 1152 of file forward_list.h.

4.492.3.45 swap()

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
void std::forward_list< _Tp, _Alloc >::swap (
            forward_list< _Tp, _Alloc > & __list )  [inline], [noexcept]
```

Swaps data with another forward_list.

Parameters

__list	A forward_list of the same element and allocator types.

This exchanges the elements between two lists in constant time. Note that the global std::swap() function is specialized such that std::swap(l1,l2) will feed to this function.
Whether the allocators are swapped depends on the allocator traits.
Definition at line 1040 of file forward_list.h.

4.492.3.46 unique() [1/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
__remove_return_type std::forward_list< _Tp, _Alloc >::unique ( )  [inline]
```

Remove consecutive duplicate elements.

For each consecutive set of elements with the same value, remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.
Definition at line 1211 of file forward_list.h.

4.492.3.47 unique() [2/2]

```
template<typename _Tp , typename _Alloc = allocator<_Tp>>
template<typename _BinPred >
__remove_return_type std::forward_list< _Tp, _Alloc >::unique (
            _BinPred __binary_pred )
```

Remove consecutive elements satisfying a predicate.

Parameters

__binary_pred	Binary predicate function or object.

For each consecutive set of elements [first,last) that satisfy predicate(first,i) where i is an iterator in [first,last), remove all but the first one. Remaining elements stay in list order. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

4.493 std::fpos< _StateT > Class Template Reference

Public Member Functions

- **fpos** (const fpos &)=default
- fpos (streamoff __off)
- operator streamoff () const
- fpos operator+ (streamoff __off) const
- fpos & operator+= (streamoff __off)
- streamoff operator- (const fpos &__other) const
- fpos operator- (streamoff __off) const
- fpos & operator-= (streamoff __off)
- fpos & **operator=** (const fpos &)=default
- _StateT state () const
- void state (_StateT __st)

4.493.1 Detailed Description

template<typename _StateT>
class std::fpos< _StateT >

Class representing stream positions.
The standard places no requirements upon the template parameter StateT. In this implementation StateT must be DefaultConstructible, CopyConstructible and Assignable. The standard only requires that fpos should contain a member of type StateT. In this implementation it also contains an offset stored as a signed integer.

Parameters

StateT	Type passed to and returned from state().

Definition at line 112 of file postypes.h.

4.493.2 Constructor & Destructor Documentation

4.493.2.1 fpos() template<typename _StateT >

```
std::fpos< _StateT >::fpos (
            streamoff __off )  [inline]
```

Construct position from offset.
Definition at line 133 of file postypes.h.

4.493.3 Member Function Documentation

4.493.3.1 operator streamoff() template<typename _StateT >

```
std::fpos< _StateT >::operator streamoff ( ) const  [inline]
```

Convert to streamoff.
Definition at line 143 of file postypes.h.

4.493.3.2 operator+() template<typename _StateT >

```
fpos std::fpos< _StateT >::operator+ (
            streamoff __off ) const  [inline]
```

Add position and offset.
Definition at line 184 of file postypes.h.

4.493.3.3 operator+=() template<typename _StateT >

```
fpos& std::fpos< _StateT >::operator+= (
            streamoff __off )  [inline]
```

Add offset to this position.
Definition at line 160 of file postypes.h.

4.493.3.4 operator-() [1/2] template<typename _StateT >

```
streamoff std::fpos< _StateT >::operator- (
            const fpos< _StateT > & __other ) const  [inline]
```

Subtract position to return offset.
Definition at line 211 of file postypes.h.

4.493.3.5 operator-() [2/2] template<typename _StateT >

```
fpos std::fpos< _StateT >::operator- (
            streamoff __off ) const  [inline]
```

Subtract offset from position.
Definition at line 198 of file postypes.h.

4.493.3.6 operator-=() template<typename _StateT >

```
fpos& std::fpos< _StateT >::operator-= (
            streamoff __off )  [inline]
```

Subtract offset from this position.
Definition at line 171 of file postypes.h.

4.493.3.7 state() [1/2] template<typename _StateT >

```
_StateT std::fpos< _StateT >::state ( ) const  [inline]
```

Return the last set value of *st*.
Definition at line 152 of file postypes.h.

4.493.3.8 state() [2/2] template<typename _StateT >

```
void std::fpos< _StateT >::state (
            _StateT __st )  [inline]
```

Remember the value of *st*.
Definition at line 147 of file postypes.h.

4.494 __gnu_cxx::free_list Class Reference

Inheritance diagram for __gnu_cxx::free_list:

Public Types

- typedef __mutex **__mutex_type**
- typedef vector_type::iterator **iterator**
- typedef std::size_t * **value_type**
- typedef __detail::__mini_vector< value_type > **vector_type**

Public Member Functions

- void _M_clear ()
- std::size_t * _M_get (std::size_t __sz)
- void _M_insert (std::size_t *__addr) throw ()

4.494.1 Detailed Description

The free list class for managing chunks of memory to be given to and returned by the bitmap_allocator.
Definition at line 516 of file bitmap_allocator.h.

4.494.2 Member Function Documentation

4.494.2.1 _M_clear() void __gnu_cxx::free_list::_M_clear ( )

This function just clears the internal Free List, and gives back all the memory to the OS.

4.494.2.2 _M_get() std::size_t* __gnu_cxx::free_list::_M_get (std::size_t __sz)

This function gets a block of memory of the specified size from the free list.

Parameters

__sz	The size in bytes of the memory required.

Returns

A pointer to the new memory block of size at least equal to that requested.

4.494.2.3 _M_insert() `void __gnu_cxx::free_list::_M_insert ( std::size_t * __addr ) throw ( ) [inline]`

This function returns the block of memory to the internal free list.

Parameters

__addr	The pointer to the memory block that was given by a call to the _M_get function.

Definition at line 626 of file bitmap_allocator.h.
The documentation for this class was generated from the following file:

- bitmap_allocator.h

4.495 std::from_chars_result Struct Reference

Public Attributes

- errc **ec**
- const char * **ptr**

4.495.1 Detailed Description

Result type of std::from_chars.
Definition at line 66 of file charconv.
The documentation for this struct was generated from the following file:

- charconv

4.496 std::front_insert_iterator< _Container > Class Template Reference

Inheritance diagram for std::front_insert_iterator< _Container >:

Public Types

- typedef _Container container_type
- typedef void difference_type
- typedef output_iterator_tag iterator_category
- typedef void pointer
- typedef void reference
- typedef void value_type

Public Member Functions

- constexpr front_insert_iterator (_Container &__x)
- constexpr front_insert_iterator & operator* ()
- constexpr front_insert_iterator & operator++ ()
- constexpr front_insert_iterator operator++ (int)
- constexpr front_insert_iterator & operator= (const typename _Container::value_type &__value)
- constexpr front_insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container * **container**

4.496.1 Detailed Description

template<typename _Container>
class std::front_insert_iterator< _Container >

Turns assignment into insertion.
These are output iterators, constructed from a container-of-T. Assigning a T to the iterator prepends it to the container using push_front.
Tip: Using the front_inserter function to create these iterators can save typing.
Definition at line 719 of file bits/stl_iterator.h.

4.496.2 Member Typedef Documentation

4.496.2.1 container_type `template<typename _Container >`

`typedef _Container std::front_insert_iterator< _Container >::container_type`

A nested typedef for the type of whatever container you used.
Definition at line 727 of file bits/stl_iterator.h.

4.496.2.2 difference_type `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.
Definition at line 134 of file stl_iterator_base_types.h.

4.496.2.3 iterator_category `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the tag types.
Definition at line 130 of file stl_iterator_base_types.h.

4.496.2.4 pointer `typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]`

This type represents a pointer-to-value_type.
Definition at line 136 of file stl_iterator_base_types.h.

4.496.2.5 reference

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]`

This type represents a reference-to-value_type.
Definition at line 138 of file stl_iterator_base_types.h.

4.496.2.6 value_type

`typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]`

The type "pointed to" by the iterator.
Definition at line 132 of file stl_iterator_base_types.h.

4.496.3 Constructor & Destructor Documentation

4.496.3.1 front_insert_iterator()

`template<typename _Container >`
`constexpr std::front_insert_iterator< _Container >::front_insert_iterator ( _Container & __x ) [inline], [explicit], [constexpr]`

The only way to create this iterator is with a container.
Definition at line 736 of file bits/stl_iterator.h.

4.496.4 Member Function Documentation

4.496.4.1 operator∗()

`template<typename _Container >`
`constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator* ( ) [inline], [constexpr]`

Simply returns ∗this.
Definition at line 778 of file bits/stl_iterator.h.

4.496.4.2 operator++() [1/2]

`template<typename _Container >`
`constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator++ ( ) [inline], [constexpr]`

Simply returns ∗this. (This iterator does not *move*.)
Definition at line 784 of file bits/stl_iterator.h.

4.496.4.3 operator++() [2/2]

`template<typename _Container >`
`constexpr front_insert_iterator std::front_insert_iterator< _Container >::operator++ ( int ) [inline], [constexpr]`

Simply returns ∗this. (This iterator does not *move*.)
Definition at line 790 of file bits/stl_iterator.h.

4.496.4.4 operator=()

`template<typename _Container >`
`constexpr front_insert_iterator& std::front_insert_iterator< _Container >::operator= ( const typename _Container::value_type & __value ) [inline], [constexpr]`

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the front, if you like). Assigning a value to the iterator will always prepend the value to the front of the container.
Definition at line 760 of file bits/stl_iterator.h.

4.497.1 Detailed Description

template<typename _Res, typename... _ArgTypes>
class std::function< _Res(_ArgTypes...)>

Primary class template for std::function.
Polymorphic function wrapper.
Definition at line 303 of file std_function.h.

4.497.2 Constructor & Destructor Documentation

4.497.2.1 function() [1/5] template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function ( ) [inline], [noexcept]

Default construct creates an empty function call wrapper.

Postcondition

! (bool)∗this

Definition at line 330 of file std_function.h.

4.497.2.2 function() [2/5] template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (nullptr_t) [inline], [noexcept]

Creates an empty function call wrapper.

Postcondition

! (bool)∗this

Definition at line 337 of file std_function.h.

4.497.2.3 function() [3/5] template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (const function< _Res(_ArgTypes...)> & __x)

Function copy constructor.

Parameters

_↩ _x	A function object with identical call signature.

Postcondition

bool(∗this) == bool(__x)

The newly-created function contains a copy of the target of __x (if it has one).
Definition at line 587 of file std_function.h.

4.497.2.4 function() [4/5] template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::function (function< _Res(_ArgTypes...)> && __x) [inline], [noexcept]

Function move constructor.

Parameters

_↩ _x	A function object rvalue with identical call signature.

The newly-created function contains the target of __x (if it has one).

Definition at line 357 of file std_function.h.

4.497.2.5 function() [5/5] template<typename _Res , typename... _ArgTypes> template<typename _Functor , typename , typename > std::function< _Res(_ArgTypes...)>::function (_Functor __f)

Builds a function that targets a copy of the incoming function object.

Parameters

↩ _↩ ↩ _↩ *f*	A function object that is callable with parameters of type `T1`, `T2`, ..., `TN` and returns a value convertible to `Res`.

The newly-created function object will target a copy of *__f*. If *__f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `__f.get()`. If *__f* is a NULL function pointer or NULL pointer-to-member, the newly-created object will be empty.
If *__f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.
Definition at line 601 of file std_function.h.
References std::move().

4.497.3 Member Function Documentation

4.497.3.1 operator bool() template<typename _Res , typename... _ArgTypes> std::function< _Res(_ArgTypes...)>::operator bool ( ) const [inline], [explicit], [noexcept]

Determine if the function wrapper has a target.

Returns

`true` when this function object contains a target, or `false` when it is empty.

This function will not throw an exception.
Definition at line 498 of file std_function.h.

4.497.3.2 operator()() template<typename _Res , typename... _ArgTypes> _Res std::function< _Res(_ArgTypes...)>::operator() (_ArgTypes... __args) const

Invokes the function targeted by `*this`.

Returns

the result of the target.

Exceptions

bad_function_call	when !(bool)*this

The function call operator invokes the target function object stored by `this`.

Definition at line 617 of file std_function.h.

4.497.3.3 operator=() [1/5] template<typename _Res , typename... _ArgTypes> template<typename _Functor > _Requires<_Callable<typename decay<_Functor>::type>, function&> std::function< _Res(_Arg↩ Types...)>::operator= (_Functor && __f) [inline]

Function assignment to a new target.

Parameters

↩ _↩ ↩ _↩ *f*	A function object that is callable with parameters of type `T1`, `T2`, ..., `TN` and returns a value convertible to `Res`.

Returns

`*this`

This function object wrapper will target a copy of *__f*. If *__f* is `reference_wrapper<F>`, then this function object will contain a reference to the function object `__f.get()`. If *__f* is a NULL function pointer or NULL pointer-to-member, `this` object will be empty.
If *__f* is a non-NULL function pointer or an object of type `reference_wrapper<F>`, this function will not throw.
Definition at line 457 of file std_function.h.

4.497.3.4 operator=() [2/5] template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (const function< _Res(_ArgTypes...)> & __x) [inline]

Function assignment operator.

Parameters

_↩ *_x*	A function with identical call signature.

Postcondition

(bool)*this == (bool)x

Returns

`*this`

The target of *__x* is copied to `*this`. If *__x* has no target, then `*this` will be empty.
If *__x* targets a function pointer or a reference to a function object, then this operation will not throw an exception.
Definition at line 396 of file std_function.h.

4.497.3.5 operator=() [3/5] template<typename _Res , typename... _ArgTypes> function& std::function< _Res(_ArgTypes...)>::operator= (function< _Res(_ArgTypes...)> && __x) [inline], [noexcept]

Function move-assignment operator.

Parameters

_↩ _x	A function rvalue with identical call signature.

Returns

*this

The target of __x is moved to *this. If __x has no target, then *this will be empty.
If __x targets a function pointer or a reference to a function object, then this operation will not throw an exception.
Definition at line 414 of file std_function.h.
References std::move().

4.497.3.6 operator=() [4/5] template<typename _Res , typename... _ArgTypes>

```
function& std::function< _Res(_ArgTypes...)>::operator= (
            nullptr_t  )  [inline], [noexcept]
```

Function assignment to zero.

Postcondition

! (bool)*this

Returns

*this

The target of *this is deallocated, leaving it empty.
Definition at line 428 of file std_function.h.

4.497.3.7 operator=() [5/5] template<typename _Res , typename... _ArgTypes>

```
template<typename _Functor >
function& std::function< _Res(_ArgTypes...)>::operator= (
            reference_wrapper< _Functor > __f )  [inline], [noexcept]
```

This is an overloaded member function, provided for convenience. It differs from the above function only in what argument(s) it accepts.
Definition at line 466 of file std_function.h.

4.497.3.8 swap() template<typename _Res , typename... _ArgTypes>

```
void std::function< _Res(_ArgTypes...)>::swap (
            function< _Res(_ArgTypes...)> & __x )  [inline], [noexcept]
```

Swap the targets of two function objects.

Parameters

_↩ _x	A function with identical call signature.

Swap the targets of this function object and __f. This function will not throw an exception.

Definition at line 481 of file std_function.h.

4.497.3.9 target() [1/2] template<typename _Res , typename... _ArgTypes> template<typename _Functor > const _Functor * std::function< _Res(_ArgTypes...)>::target [noexcept]

Access the stored target function object.

Returns

Returns a pointer to the stored target function object, if `typeid(_Functor)`.equals(target_type()); otherwise, a NULL pointer.

This function does not throw exceptions.
Definition at line 655 of file std_function.h.

4.497.3.10 target() [2/2] template<typename _Res , typename... _ArgTypes> template<typename _Functor > _Functor * std::function< _Res(_ArgTypes...)>::target [noexcept]

Access the stored target function object.

Returns

Returns a pointer to the stored target function object, if `typeid(_Functor)`.equals(target_type()); otherwise, a NULL pointer.

This function does not throw exceptions.
Definition at line 644 of file std_function.h.

4.497.3.11 target_type() template<typename _Res , typename... _ArgTypes> const type_info & std::function< _Res(_ArgTypes...)>::target_type [noexcept]

Determine the type of the target of this function object wrapper.

Returns

the type identifier of the target function object, or `typeid(void)` if !(bool)*this.

This function will not throw an exception.
Definition at line 628 of file std_function.h.

4.502.1 Detailed Description

template<typename _RealType = double>
class std::gamma_distribution< _RealType >

A gamma continuous distribution for random numbers.
The formula for the gamma probability density function is:

$$p(x|\alpha,\beta) = \frac{1}{\beta\Gamma(\alpha)}(x/\beta)^{\alpha-1}e^{-x/\beta}$$

Definition at line 2402 of file random.h.

4.502.2 Member Typedef Documentation

4.502.2.1 result_type

```
template<typename _RealType = double>
typedef _RealType std::gamma_distribution< _RealType >::result_type
```

The type of the range of the distribution.
Definition at line 2409 of file random.h.

4.502.3 Constructor & Destructor Documentation

4.502.3.1 gamma_distribution() [1/2]

```
template<typename _RealType = double>
std::gamma_distribution< _RealType >::gamma_distribution ( ) [inline]
```

Constructs a gamma distribution with parameters 1 and 1.
Definition at line 2458 of file random.h.

4.502.3.2 gamma_distribution() [2/2]

```
template<typename _RealType = double>
std::gamma_distribution< _RealType >::gamma_distribution (
            _RealType __alpha_val,
            _RealType __beta_val = _RealType(1) ) [inline], [explicit]
```

Constructs a gamma distribution with parameters α and β.
Definition at line 2465 of file random.h.

4.502.4 Member Function Documentation

4.502.4.1 alpha()

```
template<typename _RealType = double>
_RealType std::gamma_distribution< _RealType >::alpha ( ) const [inline]
```

Returns the α of the distribution.
Definition at line 2486 of file random.h.

4.502.4.2 beta()

```
template<typename _RealType = double>
_RealType std::gamma_distribution< _RealType >::beta ( ) const [inline]
```

Returns the β of the distribution.
Definition at line 2493 of file random.h.

4.502.4.3 max()

```
template<typename _RealType = double>
result_type std::gamma_distribution< _RealType >::max ( ) const [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 2522 of file random.h.
References std::numeric_limits< _Tp >::max().

4.502.4.4 min()

```
template<typename _RealType = double>
result_type std::gamma_distribution< _RealType >::min ( ) const [inline]
```

Returns the greatest lower bound value of the distribution.
Definition at line 2515 of file random.h.

4.502.4.5 operator()() [1/2] template<typename _RealType = double>

```
template<typename _UniformRandomNumberGenerator >
result_type std::gamma_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.
Definition at line 2530 of file random.h.

4.502.4.6 operator()() [2/2] template<typename _RealType >

```
template<typename _UniformRandomNumberGenerator >
gamma_distribution< _RealType >::result_type std::gamma_distribution< _RealType >::operator() (
            _UniformRandomNumberGenerator & __urng,
            const param_type & __param )
```

Marsaglia, G. and Tsang, W. W. "A Simple Method for Generating Gamma Variables" ACM Transactions on Mathematical Software, 26, 3, 363-372, 2000.
Definition at line 2320 of file bits/random.tcc.
References std::log(), and std::pow().

4.502.4.7 param() [1/2] template<typename _RealType = double>

```
param_type std::gamma_distribution< _RealType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.
Definition at line 2500 of file random.h.
Referenced by std::chi_squared_distribution< _RealType >::param().

4.502.4.8 param() [2/2] template<typename _RealType = double>

```
void std::gamma_distribution< _RealType >::param (
            const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 2508 of file random.h.

4.502.4.9 reset() template<typename _RealType = double>

```
void std::gamma_distribution< _RealType >::reset ( ) [inline]
```

Resets the distribution state.
Definition at line 2479 of file random.h.
References std::normal_distribution< _RealType >::reset().
Referenced by std::chi_squared_distribution< _RealType >::reset(), std::fisher_f_distribution< _RealType >::reset(), std::student_t_distribution< _RealType >::reset(), and std::negative_binomial_distribution< _IntType >::reset().

4.502.5 Friends And Related Function Documentation

4.502.5.1 operator<< template<typename _RealType = double>

```
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits>& operator<< (
```

```
            std::basic_ostream< _CharT, _Traits > & __os,
            const std::gamma_distribution< _RealType1 > & __x )  [friend]
```

Inserts a gamma_distribution random number distribution __x into the output stream __os.

Parameters

__os	An output stream.
__x	A gamma_distribution random number distribution.

Returns

The output stream with the state of __x inserted or in an error state.

4.502.5.2 operator== template<typename _RealType = double>

```
bool operator== (
            const gamma_distribution< _RealType > & __d1,
            const gamma_distribution< _RealType > & __d2 )  [friend]
```

Return true if two gamma distributions have the same parameters and the sequences that would be generated are equal.
Definition at line 2566 of file random.h.

4.502.5.3 operator>> template<typename _RealType = double>

```
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits>& operator>> (
            std::basic_istream< _CharT, _Traits > & __is,
            std::gamma_distribution< _RealType1 > & __x )  [friend]
```

Extracts a gamma_distribution random number distribution __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A gamma_distribution random number generator engine.

Returns

The input stream with __x extracted or in an error state.

4.503.1 Detailed Description

template<typename _IntType = int>
class std::geometric_distribution< _IntType >

A discrete geometric random number distribution.
The formula for the geometric probability density function is $p(i|p) = p(1-p)^i$ where p is the parameter of the distribution.
Definition at line 3978 of file random.h.

4.503.2 Member Typedef Documentation

4.503.2.1 result_type `template<typename _IntType = int>`

`typedef _IntType std::geometric_distribution< _IntType >::result_type`

The type of the range of the distribution.
Definition at line 3985 of file random.h.

4.503.3 Member Function Documentation

4.503.3.1 max() template<typename _IntType = int>

```
result_type std::geometric_distribution< _IntType >::max ( ) const  [inline]
```

Returns the least upper bound value of the distribution.
Definition at line 4080 of file random.h.
References std::numeric_limits< _Tp >::max().

4.503.3.2 min() template<typename _IntType = int>

```
result_type std::geometric_distribution< _IntType >::min ( ) const  [inline]
```

Returns the greatest lower bound value of the distribution.
Definition at line 4073 of file random.h.

4.503.3.3 operator()() template<typename _IntType = int>

```
template<typename _UniformRandomNumberGenerator >
result_type std::geometric_distribution< _IntType >::operator() (
            _UniformRandomNumberGenerator & __urng )  [inline]
```

Generating functions.
Definition at line 4088 of file random.h.

4.503.3.4 p() template<typename _IntType = int>

```
double std::geometric_distribution< _IntType >::p ( ) const  [inline]
```

Returns the distribution parameter p.
Definition at line 4051 of file random.h.

4.503.3.5 param() [1/2] template<typename _IntType = int>

```
param_type std::geometric_distribution< _IntType >::param ( ) const  [inline]
```

Returns the parameter set of the distribution.
Definition at line 4058 of file random.h.
Referenced by std::operator>>().

4.503.3.6 param() [2/2] template<typename _IntType = int>

```
void std::geometric_distribution< _IntType >::param (
            const param_type & __param )  [inline]
```

Sets the parameter set of the distribution.

Parameters

__param	The new parameter set of the distribution.

Definition at line 4066 of file random.h.

4.503.3.7 reset() template<typename _IntType = int>

```
void std::geometric_distribution< _IntType >::reset ( )  [inline]
```

Resets the distribution state.
Does nothing for the geometric distribution.
Definition at line 4045 of file random.h.

4.503.4 Friends And Related Function Documentation

4.503.4.1 operator== template<typename _IntType = int>

```
bool operator== (
            const geometric_distribution< _IntType > & __d1,
            const geometric_distribution< _IntType > & __d2 )  [friend]
```

Return true if two geometric distributions have the same parameters.
Definition at line 4123 of file random.h.

4.504.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
class __gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy, Store_Hash, _Alloc >

A general-probing hash-based associative container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor.
Eq_Fn	Equal functor.
Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies.
Probe_Fn	Probe functor.
Resize_Policy	Resizes hash.
Store_Hash	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
_Alloc	Allocator type.

Base tag choices are: gp_hash_tag.
Base is basic_hash_table.
Definition at line 368 of file assoc_container.hpp.

4.504.2 Constructor & Destructor Documentation

4.504.2.1 gp_hash_table() [1/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table ( )  [inline]
```

Default constructor.
Definition at line 382 of file assoc_container.hpp.

4.504.2.2 gp_hash_table() [2/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
```

```
Store_Hash, _Alloc >::gp_hash_table (
            const hash_fn & h )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object.
Definition at line 386 of file assoc_container.hpp.

4.504.2.3 gp_hash_table() [3/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table (
            const hash_fn & h,
            const eq_fn & e )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.
Definition at line 393 of file assoc_container.hpp.

4.504.2.4 gp_hash_table() [4/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_probe_fn & cp )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_probe_fn will be copied by the comb_probe_fn object of the container object.
Definition at line 401 of file assoc_container.hpp.

4.504.2.5 gp_hash_table() [5/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_probe_fn & cp,
            const probe_fn & p )  [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_probe_fn will be copied by the comb_probe_fn object of the container object, and r_probe_fn will be copied by the probe_fn object of the container object.

Definition at line 410 of file assoc_container.hpp.

4.504.2.6 gp_hash_table() [6/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table (
            const hash_fn & h,
            const eq_fn & e,
            const comb_probe_fn & cp,
            const probe_fn & p,
            const resize_policy & rp ) [inline]
```

Constructor taking some policy objects. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_probe_fn will be copied by the comb_probe_fn object of the container object, r_probe_fn will be copied by the probe_fn object of the container object, and r_resize_policy will be copied by the Resize_Policy object of the container object.
Definition at line 422 of file assoc_container.hpp.

4.504.2.7 gp_hash_table() [7/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,
Store_Hash, _Alloc >::gp_hash_table (
            It first,
            It last ) [inline]
```

Constructor taking __iterators to a range of value_types. The value_types between first_it and last_it will be inserted into the container object.
Definition at line 430 of file assoc_container.hpp.

4.504.2.8 gp_hash_table() [8/12]

```
template<typename Key , typename Mapped , typename Hash_Fn =
typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_↩
fn<Key>::type, typename Comb_Probe_Fn = detail::default_comb_hash_fn::type, typename Probe_↩
Fn = typename detail::default_probe_fn<Comb_Probe_Fn>::type, typename Resize_Policy = typename
detail::default_resize_policy<Comb_Probe_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::gp_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Probe_Fn, Probe_Fn, Resize_Policy,

4.506.1 Detailed Description

template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Probe_Fn, typename Probe_Fn, typename Resize_Policy>
class __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_Policy >

A general-probing hash-based container.

Template Parameters

Key	Key type.
Mapped	Map type.
Hash_Fn	Hashing functor. Default is __gnu_cxx::hash.
Eq_Fn	Equal functor. Default std::equal_to<Key>
_Alloc	Allocator type.
Store_Hash	If key type stores extra metadata. Defaults to false.

Template Parameters

Comb_Probe_Fn	Combining probe functor. If Hash_Fn is not null_type, then this is the ranged-probe functor; otherwise, this is the range-hashing functor. XXX See Design::Hash-Based Containers::Hash Policies. Default direct_mask_range_hashing.
Probe_Fn	Probe functor. Defaults to linear_probe_fn, also quadratic_probe_fn.
Resize_Policy	Resizes hash. Defaults to hash_standard_resize_policy, using hash_exponential_size_policy and hash_load_check_resize_trigger.

Bases are: detail::hash_eq_fn, Resize_Policy, detail::ranged_probe_fn, detail::types_traits. (Optional: detail::debug_↩ map_base.)
Definition at line 142 of file gp_ht_map_.hpp.

4.506.2 Member Enumeration Documentation

4.506.2.1 anonymous enum `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy >`

`anonymous enum`

Value stores hash, true or false.
Definition at line 209 of file gp_ht_map_.hpp.

4.506.3 Member Function Documentation

4.506.3.1 empty() `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_↩ Policy >`

`bool __gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_↩ Fn, Probe_Fn, Resize_Policy >::empty ( ) const [inline]`

True if size() == 0.

4.506.3.2 get_comb_probe_fn() [1/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Probe_Fn , typename Probe_Fn , typename Resize_Policy >`

- valarray< size_t > stride () const

Friends

- template<typename _Tp >
  class **valarray**

4.513.1 Detailed Description

Class defining multi-dimensional subset of an array.
The slice class represents a multi-dimensional subset of an array, specified by three parameter sets: start offset, size array, and stride array. The start offset is the index of the first element of the array that is part of the subset. The size and stride array describe each dimension of the slice. Size is the number of elements in that dimension, and stride is the distance in the array between successive elements in that dimension. Each dimension's size and stride is taken to begin at an array element described by the previous dimension. The size array and stride array must be the same size. For example, if you have offset==3, stride[0]==11, size[1]==3, stride[1]==3, then slice[0,0]==array[3], slice[0,1]==array[6], slice[0,2]==array[9], slice[1,0]==array[14], slice[1,1]==array[17], slice[1,2]==array[20].

Friends

- class **valarray**< **_Tp** >

4.514.1 Detailed Description

template<**typename _Tp**>
class std::gslice_array< **_Tp** >

Reference to multi-dimensional subset of an array.
A gslice_array is a reference to the actual elements of an array specified by a gslice. The way to get a gslice_array is to call operator[](gslice) on a valarray. The returned gslice_array then permits carrying operations out on the referenced subset of elements in the original valarray. For example, operator+=(valarray) will add values to the subset of elements in the underlying valarray this gslice_array refers to.

Parameters

Tp	Element type.

Definition at line 60 of file gslice_array.h.
The documentation for this class was generated from the following files:

- valarray
- gslice_array.h

- typedef size_t result_type

Public Member Functions

- size_t **operator()** (const __gnu_cxx::throw_value_limit &__val) const

4.523.1 Detailed Description

Explicit specialization of std::hash for __gnu_cxx::throw_value_limit.
Definition at line 977 of file throw_allocator.h.

4.523.2 Member Typedef Documentation

4.523.2.1 argument_type `typedef __gnu_cxx::throw_value_limit std::unary_function< __gnu_cxx::throw_value_limit , size_t >::argument_type [inherited]`

`argument_type` is the type of the argument
Definition at line 108 of file stl_function.h.

4.523.2.2 result_type `typedef size_t std::unary_function< __gnu_cxx::throw_value_limit , size_t >::result_type [inherited]`

`result_type` is the return type
Definition at line 111 of file stl_function.h.
The documentation for this struct was generated from the following file:

- throw_allocator.h

4.524 std::hash< __gnu_cxx::throw_value_random > Struct Reference

Inheritance diagram for std::hash< __gnu_cxx::throw_value_random >:

Public Types

- typedef __gnu_cxx::throw_value_random argument_type
- typedef size_t result_type

Public Member Functions

- size_t **operator()** (const __gnu_cxx::throw_value_random &__val) const

4.524.1 Detailed Description

Explicit specialization of std::hash for __gnu_cxx::throw_value_random.
Definition at line 993 of file throw_allocator.h.

4.524.2 Member Typedef Documentation

4.524.2.1 argument_type

`typedef __gnu_cxx::throw_value_random std::unary_function< __gnu_cxx::throw_value_random , size_t >::argument_type [inherited]`

`argument_type` is the type of the argument
Definition at line 108 of file stl_function.h.

4.524.2.2 result_type

`typedef size_t std::unary_function< __gnu_cxx::throw_value_random , size_t >::result_type [inherited]`

`result_type` is the return type
Definition at line 111 of file stl_function.h.
The documentation for this struct was generated from the following file:

- throw_allocator.h

4.525 std::hash< __shared_ptr< _Tp, _Lp > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const __shared_ptr< _Tp, _Lp > &__s) const noexcept

4.525.1 Detailed Description

template<typename _Tp, _Lock_policy _Lp>
struct std::hash< __shared_ptr< _Tp, _Lp > >

std::hash specialization for __shared_ptr.
Definition at line 1891 of file shared_ptr_base.h.
The documentation for this struct was generated from the following file:

- shared_ptr_base.h

4.526 std::hash< _Tp * > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (_Tp *__p) const noexcept

4.526.1 Detailed Description

template<typename _Tp>
struct std::hash< _Tp * >

Partial specializations for pointer types.
Definition at line 106 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.527 std::hash< bool > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (bool __val) const noexcept

4.527.1 Detailed Description

Explicit specialization for bool.
Definition at line 124 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.528 std::hash< char > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (char __val) const noexcept

4.528.1 Detailed Description

Explicit specialization for char.
Definition at line 127 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.529 std::hash< char16_t > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (char16_t __val) const noexcept

4.529.1 Detailed Description

Explicit specialization for char16_t.
Definition at line 144 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.530 std::hash< char32_t > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (char32_t __val) const noexcept

4.530.1 Detailed Description

Explicit specialization for char32_t.
Definition at line 147 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.531 std::hash< double > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (double __val) const noexcept

4.531.1 Detailed Description

Specialization for double.
Definition at line 243 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.532 std::hash< error_code > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const error_code &__e) const noexcept

4.532.1 Detailed Description

std::hash specialization for error_code.
Definition at line 479 of file system_error.
The documentation for this struct was generated from the following file:

- system_error

4.533 std::hash< experimental::optional< _Tp > > Struct Template Reference

Public Types

- using **argument_type** = experimental::optional< _Tp >
- using **result_type** = size_t

Public Member Functions

- size_t **operator()** (const experimental::optional< _Tp > &__t) const noexcept(noexcept(hash< _Tp > {}(*__t)))

4.533.1 Detailed Description

template<typename _Tp>
struct std::hash< experimental::optional< _Tp > >

std::hash partial specialization for experimental::optional
Definition at line 922 of file experimental/optional.
The documentation for this struct was generated from the following file:

- experimental/optional

4.534 std::hash< experimental::shared_ptr< _Tp > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const experimental::shared_ptr< _Tp > &__s) const noexcept

4.534.1 Detailed Description

template<typename _Tp>
struct std::hash< experimental::shared_ptr< _Tp > >

std::hash specialization for shared_ptr.
Definition at line 671 of file experimental/bits/shared_ptr.h.
The documentation for this struct was generated from the following file:

- experimental/bits/shared_ptr.h

4.535 std::hash< float > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (float __val) const noexcept

4.535.1 Detailed Description

Specialization for float.
Definition at line 231 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.536 std::hash< int > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (int __val) const noexcept

4.536.1 Detailed Description

Explicit specialization for int.
Definition at line 153 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.537 std::hash< long > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (long __val) const noexcept

4.537.1 Detailed Description

Explicit specialization for long.
Definition at line 156 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.538 std::hash< long double > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (long double __val) const noexcept

4.538.1 Detailed Description

Specialization for long double.
Definition at line 255 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.539 std::hash< long long > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (long long __val) const noexcept

4.539.1 Detailed Description

Explicit specialization for long long.
Definition at line 159 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.540 std::hash< shared_ptr< _Tp > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const shared_ptr< _Tp > &__s) const noexcept

4.540.1 Detailed Description

template<typename _Tp>
struct std::hash< shared_ptr< _Tp > >

std::hash specialization for shared_ptr.
Definition at line 883 of file bits/shared_ptr.h.
The documentation for this struct was generated from the following file:

- bits/shared_ptr.h

4.541 std::hash< short > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (short __val) const noexcept

4.541.1 Detailed Description

Explicit specialization for short.
Definition at line 150 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.542 std::hash< signed char > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (signed char __val) const noexcept

4.542.1 Detailed Description

Explicit specialization for signed char.
Definition at line 130 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.543 std::hash< string > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const string &__s) const noexcept

4.543.1 Detailed Description

std::hash specialization for string.
Definition at line 6820 of file basic_string.h.
The documentation for this struct was generated from the following file:

- basic_string.h

4.544 std::hash< thread::id > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const thread::id &__id) const noexcept

4.544.1 Detailed Description

std::hash specialization for thread::id.
Definition at line 338 of file thread.
The documentation for this struct was generated from the following file:

- thread

4.545 std::hash< type_index > Struct Reference

Public Types

- typedef type_index **argument_type**
- typedef size_t **result_type**

Public Member Functions

- size_t **operator()** (const type_index &__ti) const noexcept

4.545.1 Detailed Description

std::hash specialization for type_index.
Definition at line 114 of file typeindex.
The documentation for this struct was generated from the following file:

- typeindex

4.546 std::hash< u16string > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const u16string &__s) const noexcept

4.546.1 Detailed Description

std::hash specialization for u16string.
Definition at line 6869 of file basic_string.h.
The documentation for this struct was generated from the following file:

- basic_string.h

4.547 std::hash< u32string > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const u32string &__s) const noexcept

4.547.1 Detailed Description

std::hash specialization for u32string.
Definition at line 6884 of file basic_string.h.
The documentation for this struct was generated from the following file:

- basic_string.h

4.548 std::hash< unique_ptr< _Tp, _Dp > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >, and __uniq_ptr_hash< unique_ptr< _Tp, _Dp > >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

4.548.1 Detailed Description

template<typename _Tp, typename _Dp>
struct std::hash< unique_ptr< _Tp, _Dp > >

std::hash specialization for unique_ptr.
Definition at line 933 of file unique_ptr.h.
The documentation for this struct was generated from the following file:

- unique_ptr.h

4.549 std::hash< unsigned char > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned char __val) const noexcept

4.549.1 Detailed Description

Explicit specialization for unsigned char.
Definition at line 133 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.550 std::hash< unsigned int > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned int __val) const noexcept

4.550.1 Detailed Description

Explicit specialization for unsigned int.
Definition at line 165 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.551 std::hash< unsigned long > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned long __val) const noexcept

4.551.1 Detailed Description

Explicit specialization for unsigned long.
Definition at line 168 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.552 std::hash< unsigned long long > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned long long __val) const noexcept

4.552.1 Detailed Description

Explicit specialization for unsigned long long.
Definition at line 171 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.553 std::hash< unsigned short > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (unsigned short __val) const noexcept

4.553.1 Detailed Description

Explicit specialization for unsigned short.
Definition at line 162 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.554 std::hash< wchar_t > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (wchar_t __val) const noexcept

4.554.1 Detailed Description

Explicit specialization for wchar_t.
Definition at line 136 of file functional_hash.h.
The documentation for this struct was generated from the following file:

- functional_hash.h

4.555 std::hash< wstring > Struct Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const wstring &__s) const noexcept

4.555.1 Detailed Description

std::hash specialization for wstring.
Definition at line 6835 of file basic_string.h.
The documentation for this struct was generated from the following file:

- basic_string.h

4.556 std::hash<::bitset< _Nb > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**
- typedef _Result **result_type**

Public Member Functions

- size_t **operator()** (const ::bitset< _Nb > &__b) const noexcept

4.556.1 Detailed Description

template<size_t _Nb>
struct std::hash<::bitset< _Nb > >

std::hash specialization for bitset.
Definition at line 1569 of file bitset.
The documentation for this struct was generated from the following file:

- bitset

4.557 std::hash<::vector< bool, _Alloc > > Struct Template Reference

Inherits std::__hash_base< _Result, _Arg >.

Public Types

- typedef _Arg **argument_type**

- void **swap** (const hash_eq_fn &other)

4.560.1 Detailed Description

template<typename Key, class Eq_Fn, class _Alloc>
struct __gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, true >

Specialization 2 - The client requests that hash values be stored.
Definition at line 82 of file hash_eq_fn.hpp.
The documentation for this struct was generated from the following file:

- hash_eq_fn.hpp

4.561 __gnu_pbds::hash_exponential_size_policy< Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::hash_exponential_size_policy< Size_Type >:

Public Types

- typedef Size_Type **size_type**

Public Member Functions

- hash_exponential_size_policy (size_type start_size=8, size_type grow_factor=2)
- void **swap** (hash_exponential_size_policy< Size_Type > &other)

Protected Member Functions

- size_type **get_nearest_larger_size** (size_type size) const
- size_type **get_nearest_smaller_size** (size_type size) const

4.561.1 Detailed Description

template<typename Size_Type = std::size_t>
class __gnu_pbds::hash_exponential_size_policy< Size_Type >

A size policy whose sequence of sizes form an exponential sequence (typically powers of 2.
Definition at line 413 of file hash_policy.hpp.

4.561.2 Constructor & Destructor Documentation

4.561.2.1 hash_exponential_size_policy() `template<typename Size_Type = std::size_t>`

```
__gnu_pbds::hash_exponential_size_policy< Size_Type >::hash_exponential_size_policy (
            size_type start_size = 8,
            size_type grow_factor = 2 )
```

Default constructor, or onstructor taking a start_size, or constructor taking a start size and grow_factor. The policy will use the sequence of sizes start_size, start_size∗ grow_factor, start_size∗ grow_factor^2, ...
The documentation for this class was generated from the following file:

- hash_policy.hpp

4.562 __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type > Class Template Reference

Inheritance diagram for __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >:

Public Types

- void notify_resized (size_type new_size)

4.562.1 Detailed Description

template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >

A resize trigger policy based on a load check. It keeps the load factor between some load factors load_min and load_max.
Definition at line 175 of file hash_policy.hpp.

4.562.2 Member Enumeration Documentation

4.562.2.1 anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

Enumerator

external_load_access	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 180 of file hash_policy.hpp.

4.562.3 Constructor & Destructor Documentation

4.562.3.1 hash_load_check_resize_trigger()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
__gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::hash_load_check_resize_trigger
(
            float load_min = 0.125,
            float load_max = 0.5 )
```

Default constructor, or constructor taking load_min and load_max load factors between which this policy will keep the actual load.

4.562.4 Member Function Documentation

4.562.4.1 get_loads()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
std::pair<float, float> __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::get_loads ( ) const  [inline]
```

Returns a pair of the minimal and maximal loads, respectively.

4.562.4.2 notify_cleared()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_cleared ( )  [protected]
```

Notifies the table was cleared.

4.562.4.3 notify_inserted() template<bool External_Load_Access = false, typename Size_Type = std::size_t>

```
void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted (
            size_type num_entries )  [inline], [protected]
```

Notifies an element was inserted. The total number of entries in the table is num_entries.

4.562.4.4 notify_resized() template<bool External_Load_Access = false, typename Size_Type = std::size_t>

```
void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized (
            size_type new_size )  [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.

4.562.4.5 set_loads() template<bool External_Load_Access = false, typename Size_Type = std::size_t>

```
void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::set_loads (
            std::pair< float, float > load_pair )
```

Sets the loads through a pair of the minimal and maximal loads, respectively.
The documentation for this class was generated from the following file:

- hash_policy.hpp

4.563 __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size > Class Template Reference

4.563.1 Detailed Description

template<typename Size_Type, bool Hold_Size>
class __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, Hold_Size >

Primary template.
Definition at line 50 of file hash_load_check_resize_trigger_size_base.hpp.
The documentation for this class was generated from the following file:

- hash_load_check_resize_trigger_size_base.hpp

4.564 __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, true > Class Template Reference

Protected Types

- typedef Size_Type **size_type**

Protected Member Functions

- size_type **get_size** () const
- void **set_size** (size_type size)
- void **swap** (hash_load_check_resize_trigger_size_base &other)

4.564.1 Detailed Description

template<typename Size_Type>
class __gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, true >

Specializations.
Definition at line 54 of file hash_load_check_resize_trigger_size_base.hpp.
The documentation for this class was generated from the following file:

- hash_load_check_resize_trigger_size_base.hpp

4.570.1 Detailed Description

template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >

A resize policy which delegates operations to size and trigger policies.
Definition at line 489 of file hash_policy.hpp.

4.570.2 Member Enumeration Documentation

4.570.2.1 anonymous enum `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`

`anonymous enum [inherited]`

Enumerator

external_load_access	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.

Definition at line 180 of file hash_policy.hpp.

4.570.3 Constructor & Destructor Documentation

4.570.3.1 hash_standard_resize_policy() [1/3] `template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type = std::size_t>`

`__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size_Type >::hash_standard_resize_policy ( )`

Default constructor.

4.570.3.2 hash_standard_resize_policy() [2/3] `template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_`

```
Access = false, typename Size_Type = std::size_t>
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size↩
_Type >::hash_standard_resize_policy (
            const Size_Policy & r_size_policy )
```

constructor taking some policies r_size_policy will be copied by the Size_Policy object of this object.

4.570.3.3 hash_standard_resize_policy() [3/3]

```
template<typename Size_Policy = hash_exponential_↩
size_policy<>, typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_↩
Access = false, typename Size_Type = std::size_t>
__gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access, Size↩
_Type >::hash_standard_resize_policy (
            const Size_Policy & r_size_policy,
            const Trigger_Policy & r_trigger_policy )
```

constructor taking some policies. r_size_policy will be copied by the Size_Policy object of this object. r_trigger_policy will be copied by the Trigger_Policy object of this object.

4.570.4 Member Function Documentation

4.570.4.1 get_actual_size()

```
template<typename Size_Policy = hash_exponential_size_policy<>, typename
Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename
Size_Type = std::size_t>
size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_↩
Access, Size_Type >::get_actual_size ( ) const  [inline]
```

Returns the actual size of the container.

4.570.4.2 get_loads()

```
template<bool External_Load_Access = false, typename Size_Type = std::size↩
_t>
std::pair<float, float> __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_↩
Type >::get_loads ( ) const  [inline], [inherited]
```

Returns a pair of the minimal and maximal loads, respectively.

4.570.4.3 get_new_size()

```
template<typename Size_Policy = hash_exponential_size_policy<>, typename
Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename
Size_Type = std::size_t>
size_type __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_↩
Access, Size_Type >::get_new_size (
            size_type size,
            size_type num_used_e ) const  [protected]
```

Queries what the new size should be, when the container is resized naturally. The current __size of the container is size, and the number of used entries within the container is num_used_e.

4.570.4.4 get_size_policy() [1/2]

```
template<typename Size_Policy = hash_exponential_size_policy<>,
typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false,
typename Size_Type = std::size_t>
Size_Policy& __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size↩
_Access, Size_Type >::get_size_policy ( )
```

Access to the Size_Policy object used.

4.570.4.5 get_size_policy() [2/2]

```
template<typename Size_Policy = hash_exponential_size_policy<>,
typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false,
typename Size_Type = std::size_t>
const Size_Policy& __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External↩
_Size_Access, Size_Type >::get_size_policy ( ) const
```

Const access to the Size_Policy object used.

4.570.4.6 get_trigger_policy() [1/2]

```
template<typename Size_Policy = hash_exponential_size_policy<>,
typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false,
typename Size_Type = std::size_t>
Trigger_Policy& __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_↩
Size_Access, Size_Type >::get_trigger_policy ( )
```

Access to the Trigger_Policy object used.

4.570.4.7 get_trigger_policy() [2/2]

```
template<typename Size_Policy = hash_exponential_size_policy<>,
typename Trigger_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false,
typename Size_Type = std::size_t>
const Trigger_Policy& __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External↩
_Size_Access, Size_Type >::get_trigger_policy ( ) const
```

Access to the Trigger_Policy object used.

4.570.4.8 resize()

```
template<typename Size_Policy = hash_exponential_size_policy<>, typename Trigger↩
_Policy = hash_load_check_resize_trigger<>, bool External_Size_Access = false, typename Size_Type
= std::size_t>
void __gnu_pbds::hash_standard_resize_policy< Size_Policy, Trigger_Policy, External_Size_Access,
Size_Type >::resize (
            size_type suggested_new_size )
```

Resizes the container to suggested_new_size, a suggested size (the actual size will be determined by the Size_Policy object).

4.570.4.9 set_loads()

```
template<bool External_Load_Access = false, typename Size_Type = std::size↩
_t>
void __gnu_pbds::hash_load_check_resize_trigger< External_Load_Access, Size_Type >::set_loads (
            std::pair< float, float > load_pair )  [inherited]
```

Sets the loads through a pair of the minimal and maximal loads, respectively.
The documentation for this class was generated from the following file:

- hash_policy.hpp

4.571 std::locale::id Class Reference

Public Member Functions

- id ()
- size_t **_M_id** () const throw ()

Friends

- template<typename _Facet >
  bool has_facet (const locale &) throw ()
- class **locale**
- class **locale::_Impl**
- template<typename _Facet >
  const _Facet & use_facet (const locale &)

4.571.1 Detailed Description

Facet ID class.
The ID class provides facets with an index used to identify them. Every facet class must define a public static member locale::id, or be derived from a facet that provides this member, otherwise the facet cannot be used in a locale. The locale::id ensures that each class type gets a unique identifier.
Definition at line 485 of file locale_classes.h.

4.571.2 Constructor & Destructor Documentation

4.571.2.1 id() `std::locale::id::id ( ) [inline]`

Constructor.
Definition at line 516 of file locale_classes.h.

4.571.3 Friends And Related Function Documentation

4.571.3.1 has_facet `template<typename _Facet >`

```
bool has_facet (
            const locale &  ) throw ( )   [friend]
```

Test for the presence of a facet.
has_facet tests the locale argument for the presence of the facet type provided as the template parameter. Facets derived from the facet parameter will also return true.

Template Parameters

_Facet	The facet type to test the presence of.

Parameters

__loc	The locale to test.

Returns

true if `__loc` contains a facet of type _Facet, else false.

Definition at line 104 of file locale_classes.tcc.

4.571.3.2 use_facet `template<typename _Facet >`

```
const _Facet& use_facet (
            const locale &  )  [friend]
```

Return a facet.
use_facet looks for and returns a reference to a facet of type Facet where Facet is the template parameter. If has_↩ facet(locale) is true, there is a suitable facet to return. It throws std::bad_cast if the locale doesn't contain a facet of type Facet.

Template Parameters

_Facet	The facet type to access.

Parameters

__loc	The locale to use.

Returns

Reference to facet of type Facet.

Exceptions

std::bad_cast	if `__loc` doesn't contain a facet of type _Facet.

Definition at line 132 of file locale_classes.tcc.
The documentation for this class was generated from the following file:

- locale_classes.h

4.574.1 Detailed Description

template<typename _RandomNumberEngine, size_t __w, typename _UIntType>
class std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >

Produces random numbers by combining random numbers from some base engine to produce random numbers with a specifies number of bits __w.
Definition at line 1105 of file random.h.

4.574.2 Member Typedef Documentation

4.574.2.1 result_type

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
typedef _UIntType std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::result_type
```

The type of the generated random value.
Definition at line 1118 of file random.h.

4.574.3 Constructor & Destructor Documentation

4.574.3.1 independent_bits_engine() [1/5]

```
template<typename _RandomNumberEngine , size_t __w, typename
_UIntType >
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine ( )
[inline]
```

Constructs a default independent_bits_engine engine.
The underlying engine is default constructed as well.
Definition at line 1125 of file random.h.

4.574.3.2 independent_bits_engine() [2/5]

```
template<typename _RandomNumberEngine , size_t __w, typename
_UIntType >
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (
            const _RandomNumberEngine & __rng ) [inline], [explicit]
```

Copy constructs a independent_bits_engine engine.
Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1135 of file random.h.

4.574.3.3 independent_bits_engine() [3/5]

```
template<typename _RandomNumberEngine , size_t __w, typename
_UIntType >
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (
            _RandomNumberEngine && __rng ) [inline], [explicit]
```

Move constructs a independent_bits_engine engine.
Copies an existing base class random number generator.

Parameters

__rng	An existing (base class) engine object.

Definition at line 1145 of file random.h.

4.574.3.4 independent_bits_engine() [4/5]

```
template<typename _RandomNumberEngine , size_t __w, typename
_UIntType >
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (
            result_type __s ) [inline], [explicit]
```

Seed constructs a independent_bits_engine engine.
Constructs the underlying generator engine seeded with __s.

Parameters

_↩ _s	A seed value for the base class engine.

Definition at line 1155 of file random.h.

4.574.3.5 independent_bits_engine() [5/5]

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
template<typename _Sseq , typename = _If_seed_seq<_Sseq>>
std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::independent_bits_engine (
            _Sseq & __q )  [inline], [explicit]
```

Generator construct a independent_bits_engine engine.

Parameters

_↩ _q	A seed sequence.

Definition at line 1165 of file random.h.

4.574.4 Member Function Documentation

4.574.4.1 base()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
const _RandomNumberEngine& std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >↩
::base ( ) const  [inline], [noexcept]
```

Gets a const reference to the underlying generator engine object.
Definition at line 1200 of file random.h.

4.574.4.2 discard()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::discard (
            unsigned long long __z )  [inline]
```

Discard a sequence of random numbers.
Definition at line 1221 of file random.h.

4.574.4.3 max()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
static constexpr result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType
>::max ( )  [inline], [static], [constexpr]
```

Gets the maximum value in the generated random number range.
Definition at line 1214 of file random.h.

4.574.4.4 min()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
static constexpr result_type std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType
>::min ( )  [inline], [static], [constexpr]
```

Gets the minimum value in the generated random number range.
Definition at line 1207 of file random.h.

4.574.4.5 operator()()

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::result_type std::independent_bits_engine<
_RandomNumberEngine, __w, _UIntType >::operator()
```

Gets the next value in the generated random number sequence.

Definition at line 736 of file bits/random.tcc.

References std::__lg(), std::numeric_limits< _Tp >::max(), and std::numeric_limits< _Tp >::min().

4.574.4.6 seed() [1/3]

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed ( ) [inline]
```

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1174 of file random.h.

4.574.4.7 seed() [2/3]

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
template<typename _Sseq >
_If_seed_seq<_Sseq> std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed (
            _Sseq & __q ) [inline]
```

Reseeds the independent_bits_engine object with the given seed sequence.

Parameters

_↩ _q	A seed generator function.

Definition at line 1192 of file random.h.

4.574.4.8 seed() [3/3]

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
void std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType >::seed (
            result_type __s ) [inline]
```

Reseeds the independent_bits_engine object with the default seed for the underlying base class generator engine.

Definition at line 1182 of file random.h.

4.574.5 Friends And Related Function Documentation

4.574.5.1 operator==

```
template<typename _RandomNumberEngine , size_t __w, typename _UIntType >
bool operator== (
            const independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __lhs,
            const independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __rhs ) [friend]
```

Compares two independent_bits_engine random number generator objects of the same type for equality.

Parameters

__lhs	A independent_bits_engine random number generator object.
__rhs	Another independent_bits_engine random number generator object.

Returns

true if the infinite sequences of generated values would be equal, false otherwise.

Definition at line 1246 of file random.h.

4.574.5.2 operator>> template<typename _RandomNumberEngine , size_t __w, typename _UIntType > template<typename _CharT , typename _Traits > std::basic_istream<_CharT, _Traits>& operator>> (std::basic_istream< _CharT, _Traits > & __is, std::independent_bits_engine< _RandomNumberEngine, __w, _UIntType > & __x) [friend]

Extracts the current state of a % subtract_with_carry_engine random number generator engine __x from the input stream __is.

Parameters

_↩ _is	An input stream.
_↩ _x	A independent_bits_engine random number generator engine.

Returns

The input stream with the state of __x extracted or in an error state.

Definition at line 1264 of file random.h.

- class **valarray**< **_Tp** >

4.575.1 Detailed Description

template<class _Tp>
class std::indirect_array< _Tp >

Reference to arbitrary subset of an array.
An indirect_array is a reference to the actual elements of an array specified by an ordered array of indices. The way to get an indirect_array is to call operator[](valarray<size_t>) on a valarray. The returned indirect_array then permits carrying operations out on the referenced subset of elements in the original valarray.
For example, if an indirect_array is obtained using the array (4,2,0) as an argument, and then assigned to an array containing (1,2,3), then the underlying array will have array[0]==3, array[2]==2, and array[4]==1.

Parameters

Tp	Element type.

Definition at line 62 of file indirect_array.h.
The documentation for this class was generated from the following files:

- valarray
- indirect_array.h

template<class _E>
class std::initializer_list< _E >

initializer_list
Definition at line 47 of file initializer_list.

4.576.2 Friends And Related Function Documentation

4.576.2.1 begin() `template<class _Tp >`

```
constexpr const _Tp * begin (
            initializer_list< _Tp > __ils )  [related]
```

Return an iterator pointing to the first element of the initializer_list.

Parameters

_↩ _ils	Initializer list.

Definition at line 90 of file initializer_list.

4.576.2.2 end() `template<class _Tp >`

```
constexpr const _Tp * end (
            initializer_list< _Tp > __ils )  [related]
```

Return an iterator pointing to one past the last element of the initializer_list.

Parameters

_↩ _ils	Initializer list.

Definition at line 101 of file initializer_list.
Referenced by std::forward_list< _Tp, _Alloc >::resize().

- constexpr insert_iterator & operator++ ()
- constexpr insert_iterator & operator++ (int)
- constexpr insert_iterator & operator= (const typename _Container::value_type &__value)
- constexpr insert_iterator & **operator=** (typename _Container::value_type &&__value)

Protected Attributes

- _Container ∗ **container**
- _Iter **iter**

4.579.1 Detailed Description

template<typename _Container>
class std::insert_iterator< _Container >

Turns assignment into insertion.
These are output iterators, constructed from a container-of-T. Assigning a T to the iterator inserts it in the container at the iterator's position, rather than overwriting the value at that position.
(Sequences will actually insert a *copy* of the value before the iterator's position.)
Tip: Using the inserter function to create these iterators can save typing.
Definition at line 826 of file bits/stl_iterator.h.

4.579.2 Member Typedef Documentation

4.579.2.1 container_type `template<typename _Container >`

`typedef _Container std::insert_iterator< _Container >::container_type`

A nested typedef for the type of whatever container you used.
Definition at line 845 of file bits/stl_iterator.h.

4.579.2.2 difference_type `typedef void std::iterator< output_iterator_tag , void , void , void , void >::difference_type [inherited]`

Distance between iterators is represented as this type.
Definition at line 134 of file stl_iterator_base_types.h.

4.579.2.3 iterator_category `typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >::iterator_category [inherited]`

One of the tag types.
Definition at line 130 of file stl_iterator_base_types.h.

4.579.2.4 pointer

typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]

This type represents a pointer-to-value_type.
Definition at line 136 of file stl_iterator_base_types.h.

4.579.2.5 reference

typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]

This type represents a reference-to-value_type.
Definition at line 138 of file stl_iterator_base_types.h.

4.579.2.6 value_type

typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]

The type "pointed to" by the iterator.
Definition at line 132 of file stl_iterator_base_types.h.

4.579.3 Constructor & Destructor Documentation

4.579.3.1 insert_iterator()

template<typename _Container >
constexpr std::insert_iterator< _Container >::insert_iterator (
_Container & __x,
_Iter __i) [inline], [constexpr]

The only way to create this iterator is with a container and an initial position (a normal iterator into the container).
Definition at line 858 of file bits/stl_iterator.h.

4.579.4 Member Function Documentation

4.579.4.1 operator*()

template<typename _Container >
constexpr insert_iterator& std::insert_iterator< _Container >::operator* ( ) [inline], [constexpr]

Simply returns *this.
Definition at line 915 of file bits/stl_iterator.h.

4.579.4.2 operator++() [1/2]

template<typename _Container >
constexpr insert_iterator& std::insert_iterator< _Container >::operator++ ( ) [inline], [constexpr]

Simply returns *this. (This iterator does not *move*.)
Definition at line 921 of file bits/stl_iterator.h.

4.579.4.3 operator++() [2/2]

template<typename _Container >
constexpr insert_iterator& std::insert_iterator< _Container >::operator++ (
int) [inline], [constexpr]

Simply returns *this. (This iterator does not *move*.)
Definition at line 927 of file bits/stl_iterator.h.

4.579.4.4 operator=() template<typename _Container >

```
constexpr insert_iterator& std::insert_iterator< _Container >::operator= (
            const typename _Container::value_type & __value )  [inline], [constexpr]
```

Parameters

__value	An instance of whatever type container_type::const_reference is; presumably a reference-to-const T for container<T>.

Returns

This iterator, for chained operations.

This kind of iterator maintains its own position in the container. Assigning a value to the iterator will insert the value into the container at the place before the iterator.
The position is maintained such that subsequent assignments will insert values immediately after one another. For example,

```
// vector v contains A and Z
insert_iterator i (v, ++v.begin());
i = 1;
i = 2;
i = 3;
// vector v contains A, 1, 2, 3, and Z
```

Definition at line 895 of file bits/stl_iterator.h.

4.583.1 Detailed Description

The base of the I/O class hierarchy.
This class defines everything that can be defined about I/O that does not depend on the type of characters being input or output. Most people will only see `ios_base` when they need to specify the full name of the various I/O flags (e.g., the openmodes).
Definition at line 228 of file ios_base.h.

4.583.2 Member Typedef Documentation

4.583.2.1 event_callback `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i)`

The type of an event callback function.

Parameters

_↩ _e	One of the members of the event enum.
_↩ _b	Reference to the ios_base object.
_↩ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().
Definition at line 529 of file ios_base.h.

4.583.2.2 fmtflags `typedef _Ios_Fmtflags std::ios_base::fmtflags`

This is a bitmask type.
_Ios_Fmtflags is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed

- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

Definition at line 341 of file ios_base.h.

4.583.2.3 iostate `typedef _Ios_Iostate std::ios_base::iostate`

This is a bitmask type.
_Ios_Iostate is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type iostate are:

- badbit
- eofbit
- failbit
- goodbit

Definition at line 416 of file ios_base.h.

4.583.2.4 openmode `typedef _Ios_Openmode std::ios_base::openmode`

This is a bitmask type.
_Ios_Openmode is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type openmode are:

- app
- ate
- binary
- in
- out
- trunc

Definition at line 447 of file ios_base.h.

4.583.2.5 seekdir `typedef _Ios_Seekdir std::ios_base::seekdir`

This is an enumerated type.
_Ios_Seekdir is implementation-defined. Defined values of type seekdir are:

- beg
- cur, equivalent to SEEK_CUR in the C standard library.
- end, equivalent to SEEK_END in the C standard library.

Definition at line 479 of file ios_base.h.

4.583.3 Member Enumeration Documentation

4.583.3.1 event `enum std::ios_base::event`

The set of events that may be passed to an event callback.
erase_event is used during ~ios() and copyfmt(). imbue_event is used during imbue(). copyfmt_event is used during copyfmt().
Definition at line 512 of file ios_base.h.

4.583.4 Constructor & Destructor Documentation

4.583.4.1 ~ios_base() `virtual std::ios_base::~ios_base ( ) [virtual]`

Invokes each callback with erase_event. Destroys local storage.
Note that the ios_base object for the standard streams never gets destroyed. As a result, any callbacks registered with the standard streams will not get invoked with erase_event (unless copyfmt is used).

4.583.5 Member Function Documentation

4.583.5.1 _M_getloc() `const locale& std::ios_base::_M_getloc ( ) const [inline]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.
Definition at line 804 of file ios_base.h.
Referenced by std::money_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::num_put< _CharT, _OutIter >::do_put(), std::time_put< _CharT, _OutIter >::do_put(), std::time_get< _CharT, _InIter >::get(), and std::time_put< _CharT, _OutIter >::put().

4.583.5.2 flags() [1/2] `fmtflags std::ios_base::flags ( ) const [inline]`

Access to format flags.

Returns

The format control flags for both input and output.

Definition at line 649 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::operator<<(), std::operator>>(), and std::__detail::operator>>().

4.583.5.3 flags() [2/2]

```
fmtflags std::ios_base::flags (
        fmtflags __fmtfl ) [inline]
```

Setting new format flags all at once.

Parameters

__fmtfl	The new flags to set.

Returns

The previous format control flags.

This function overwrites all the format flags with *__fmtfl*.
Definition at line 660 of file ios_base.h.

4.583.5.4 getloc()

```
locale std::ios_base::getloc ( ) const [inline]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.
Definition at line 793 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), std::money_put< _CharT, _OutIter >::do_put(), and std::ws().

4.583.5.5 imbue()

```
locale std::ios_base::imbue (
        const locale & __loc ) throw ( )
```

Setting a new locale.

Parameters

__loc	The new locale.

Returns

The previous locale.

Sets the new locale for this stream, and then invokes each callback with imbue_event.
Referenced by std::basic_ios< _CharT, _Traits >::imbue().

4.583.5.6 iword()

```
long& std::ios_base::iword (
```

int __ix) [inline]

Access to integer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to an integer associated with the index.

The iword function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 839 of file ios_base.h.

4.583.5.7 precision() [1/2] streamsize std::ios_base::precision ( ) const [inline]

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.
Definition at line 719 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt().

4.583.5.8 precision() [2/2] streamsize std::ios_base::precision (streamsize __prec) [inline]

Changing flags.

Parameters

__prec	The new precision value.

Returns

The previous value of precision().

Definition at line 728 of file ios_base.h.

4.583.5.9 pword() void*& std::ios_base::pword (int __ix) [inline]

Access to void pointer array.

Parameters

_↩ _ix	Index into the array.

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.
The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.
Definition at line 860 of file ios_base.h.

4.583.5.10 register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index )
```

Add the callback __fn with parameter __index.

Parameters

__fn	The function to add.
__index	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

4.583.5.11 setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl )  [inline]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.
Definition at line 676 of file ios_base.h.
Referenced by std::__detail::operator>>().

4.583.5.12 setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask )  [inline]
```

Setting new format flags.

Parameters

__fmtfl	Additional flags to set.
__mask	The flags mask for *fmtfl*.

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.
Definition at line 693 of file ios_base.h.

4.583.5.13 sync_with_stdio() `static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static]`

Interaction with the standard C I/O objects.

Parameters

__sync	Whether to synchronize or not.

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., stdout) and the standard C++ objects (e.g., cout). User-declared streams are unaffected. See https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary

4.583.5.14 unsetf() `void std::ios_base::unsetf ( fmtflags __mask ) [inline]`

Clearing format flags.

Parameters

__mask	The flags to unset.

This function clears *__mask* in the format flags.
Definition at line 708 of file ios_base.h.

4.583.5.15 width() [1/2] `streamsize std::ios_base::width ( ) const [inline]`

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.
Definition at line 742 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::copyfmt(), and std::num_put< _CharT, _OutIter >::do_put().

4.583.5.16 width() [2/2] `streamsize std::ios_base::width ( streamsize __wide ) [inline]`

Changing flags.

Parameters

__wide	The new width value.

Returns

The previous value of width().

Definition at line 751 of file ios_base.h.

4.583.5.17 xalloc() `static int std::ios_base::xalloc ( ) throw ( ) [static]`

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.
The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

4.583.6 Member Data Documentation

4.583.6.1 adjustfield `const fmtflags std::ios_base::adjustfield [static]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.
Definition at line 396 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::internal(), std::left(), and std::right().

4.583.6.2 app `const openmode std::ios_base::app [static]`

Seek to end before each write.
Definition at line 450 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.583.6.3 ate `const openmode std::ios_base::ate [static]`

Open and seek to end immediately after opening.
Definition at line 453 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open().

4.583.6.4 badbit `const iostate std::ios_base::badbit [static]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).
Definition at line 420 of file ios_base.h.
Referenced by std::basic_ios< _CharT, _Traits >::bad(), std::basic_ios< _CharT, _Traits >::fail(), std::basic_istream< char >::get(), and std::basic_istream< char >::read().

4.583.6.5 basefield `const fmtflags std::ios_base::basefield [static]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.
Definition at line 399 of file ios_base.h.
Referenced by std::dec(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), std::hex(), and std::oct().

4.583.6.6 beg

`const seekdir std::ios_base::beg [static]`

Request a seek relative to the beginning of the stream.
Definition at line 482 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::seekpos(), and __gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >::seekpos().

4.583.6.7 binary

`const openmode std::ios_base::binary [static]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary.
Definition at line 458 of file ios_base.h.

4.583.6.8 boolalpha

`const fmtflags std::ios_base::boolalpha [static]`

Insert/extract `bool` in alphabetic rather than numeric format.
Definition at line 344 of file ios_base.h.
Referenced by std::boolalpha(), std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::noboolalpha().

4.583.6.9 cur

`const seekdir std::ios_base::cur [static]`

Request a seek relative to the current position within the sequence.
Definition at line 485 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::imbue(), std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_filebuf< _CharT, _Traits >::seekoff(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.583.6.10 dec

`const fmtflags std::ios_base::dec [static]`

Converts integer input or generates integer output in decimal base.
Definition at line 347 of file ios_base.h.
Referenced by std::dec().

4.583.6.11 end

`const seekdir std::ios_base::end [static]`

Request a seek relative to the current end of the sequence.
Definition at line 488 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::open(), and std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff().

4.583.6.12 eofbit

`const iostate std::ios_base::eofbit [static]`

Indicates that an input operation reached the end of an input sequence.
Definition at line 423 of file ios_base.h.
Referenced by std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_date(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_time(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::eof(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_istream< _CharT, _Traits >::unget(), and std::ws().

4.583.6.13 failbit

`const iostate std::ios_base::failbit [static]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Definition at line 428 of file ios_base.h.

Referenced by std::basic_ostream< _CharT, _Traits >::sentry::sentry(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ios< _CharT, _Traits >::fail(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< char >::getline(), and std::basic_istream< char >::operator>>().

4.583.6.14 fixed

`const fmtflags std::ios_base::fixed [static]`

Generate floating-point output in fixed-point notation.

Definition at line 350 of file ios_base.h.

Referenced by std::fixed(), and std::hexfloat().

4.583.6.15 floatfield

`const fmtflags std::ios_base::floatfield [static]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Definition at line 402 of file ios_base.h.

Referenced by std::defaultfloat(), std::fixed(), std::hexfloat(), and std::scientific().

4.583.6.16 goodbit

`const iostate std::ios_base::goodbit [static]`

Indicates all is well.

Definition at line 431 of file ios_base.h.

Referenced by std::basic_istream< _CharT, _Traits >::sentry::sentry(), std::time_get< _CharT, _InIter >::do_get(), std::num_get< _CharT, _InIter >::do_get(), std::time_get< _CharT, _InIter >::do_get_monthname(), std::time_get< _CharT, _InIter >::do_get_weekday(), std::time_get< _CharT, _InIter >::do_get_year(), std::basic_ostream< _CharT, _Traits >::flush(), std::basic_istream< _CharT, _Traits >::get(), std::time_get< _CharT, _InIter >::get(), std::basic_istream< _CharT, _Traits >::getline(), std::basic_istream< _CharT, _Traits >::ignore(), std::basic_ostream< _CharT, _Traits >::operator<<(), std::operator>>(), std::basic_istream< _CharT, _Traits >::operator>>(), std::basic_istream< char >::operator>>(), std::basic_istream< _CharT, _Traits >::peek(), std::basic_istream< char >::peek(), std::basic_ostream< _CharT, _Traits >::put(), std::basic_istream< _CharT, _Traits >::read(), std::basic_istream< _CharT, _Traits >::readsome(), std::basic_istream< char >::readsome(), std::basic_istream< _CharT, _Traits >::seekg(), std::basic_ostream< _CharT, _Traits >::seekp(), std::basic_istream< _CharT, _Traits >::sync(), and std::basic_istream< _CharT, _Traits >::unget().

4.583.6.17 hex

`const fmtflags std::ios_base::hex [static]`

Converts integer input or generates integer output in hexadecimal base.

Definition at line 353 of file ios_base.h.

Referenced by std::num_get< _CharT, _InIter >::do_get(), std::num_put< _CharT, _OutIter >::do_put(), and std::hex().

4.583.6.18 in

`const openmode std::ios_base::in [static]`

Open for input. Default for `ifstream` and fstream.

Definition at line 461 of file ios_base.h.

Referenced by std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_filebuf< _CharT, _Traits >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), std::basic_filebuf< _CharT, _Traits >::showmanyc(), std::basic_filebuf< _CharT, _Traits >::underflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow(), and std::basic_filebuf< _CharT, _Traits >::xsgetn().

4.583.6.19 internal `const fmtflags std::ios_base::internal [static]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.
Definition at line 358 of file ios_base.h.
Referenced by std::internal().

4.583.6.20 left `const fmtflags std::ios_base::left [static]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)
Definition at line 362 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), and std::left().

4.583.6.21 oct `const fmtflags std::ios_base::oct [static]`

Converts integer input or generates integer output in octal base.
Definition at line 365 of file ios_base.h.
Referenced by std::oct().

4.583.6.22 out `const openmode std::ios_base::out [static]`

Open for output. Default for `ofstream` and fstream.
Definition at line 464 of file ios_base.h.
Referenced by std::basic_filebuf< _CharT, _Traits >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff(), std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos(), and std::basic_filebuf< _CharT, _Traits >::xsputn().

4.583.6.23 right `const fmtflags std::ios_base::right [static]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)
Definition at line 369 of file ios_base.h.
Referenced by std::right().

4.583.6.24 scientific `const fmtflags std::ios_base::scientific [static]`

Generates floating-point output in scientific notation.
Definition at line 372 of file ios_base.h.
Referenced by std::hexfloat(), and std::scientific().

4.583.6.25 showbase `const fmtflags std::ios_base::showbase [static]`

Generates a prefix indicating the numeric base of generated integer output.
Definition at line 376 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::noshowbase(), and std::showbase().

4.583.6.26 showpoint `const fmtflags std::ios_base::showpoint [static]`

Generates a decimal-point character unconditionally in generated floating-point output.
Definition at line 380 of file ios_base.h.
Referenced by std::noshowpoint(), and std::showpoint().

4.583.6.27 showpos

`const fmtflags std::ios_base::showpos [static]`

Generates a + sign in non-negative generated numeric output.
Definition at line 383 of file ios_base.h.
Referenced by std::noshowpos(), and std::showpos().

4.583.6.28 skipws

`const fmtflags std::ios_base::skipws [static]`

Skips leading white space before certain input operations.
Definition at line 386 of file ios_base.h.
Referenced by std::noskipws(), std::__detail::operator>>(), and std::skipws().

4.583.6.29 trunc

`const openmode std::ios_base::trunc [static]`

Truncate an existing stream when opening. Default for `ofstream`.
Definition at line 467 of file ios_base.h.

4.583.6.30 unitbuf

`const fmtflags std::ios_base::unitbuf [static]`

Flushes output after each output operation.
Definition at line 389 of file ios_base.h.
Referenced by std::nounitbuf(), and std::unitbuf().

4.583.6.31 uppercase

`const fmtflags std::ios_base::uppercase [static]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.
Definition at line 393 of file ios_base.h.
Referenced by std::num_put< _CharT, _OutIter >::do_put(), std::nouppercase(), and std::uppercase().
The documentation for this class was generated from the following file:

- ios_base.h

4.584 std::is_abstract< _Tp > Struct Template Reference

Inheritance diagram for std::is_abstract< _Tp >:

Public Types

Static Public Attributes

- static constexpr _Tp **value**

4.628.1 Detailed Description

template<typename _Tp>
struct std::is_nothrow_default_constructible< _Tp >

is_nothrow_default_constructible
Definition at line 1017 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.629 std::is_nothrow_destructible< _Tp > Struct Template Reference

Inherits __is_nt_destructible_safe::type.

4.629.1 Detailed Description

template<typename _Tp>
struct std::is_nothrow_destructible< _Tp >

is_nothrow_destructible
Definition at line 892 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.630 std::is_nothrow_move_assignable< _Tp > Struct Template Reference

Inherits std::__is_nt_move_assignable_impl< _Tp, bool >.

4.630.1 Detailed Description

template<typename _Tp>
struct std::is_nothrow_move_assignable< _Tp >

is_nothrow_move_assignable
Definition at line 1173 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.631 std::is_nothrow_move_constructible< _Tp > Struct Template Reference

Inherits __is_nothrow_move_constructible_impl::type.

4.631.1 Detailed Description

template<typename _Tp>
struct std::is_nothrow_move_constructible< _Tp >

is_nothrow_move_constructible
Definition at line 1060 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.632 std::is_nothrow_swappable< _Tp > Struct Template Reference

Inherits __is_nothrow_swappable_impl::type.

4.632.1 Detailed Description

template<typename _Tp>
struct std::is_nothrow_swappable< _Tp >

is_nothrow_swappable
Definition at line 2729 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.633 std::is_nothrow_swappable_with< _Tp, _Up > Struct Template Reference

Inherits __is_nothrow_swappable_with_impl::type.

4.633.1 Detailed Description

template<typename _Tp, typename _Up>
struct std::is_nothrow_swappable_with< _Tp, _Up >

is_nothrow_swappable_with
Definition at line 2816 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.634 std::is_null_pointer< _Tp > Struct Template Reference

Inheritance diagram for std::is_null_pointer< _Tp >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.634.1 Detailed Description

template<typename _Tp>
struct std::is_null_pointer< _Tp >

is_null_pointer (LWG 2247).
Definition at line 513 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.635 std::is_object< _Tp > Struct Template Reference

Inheritance diagram for std::is_object< _Tp >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.635.1 Detailed Description

template<typename _Tp>
struct std::is_object< _Tp >

is_object
Definition at line 547 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.636 std::is_placeholder< _Tp > Struct Template Reference

Inheritance diagram for std::is_placeholder< _Tp >:

Public Types

- typedef integral_constant< int, __v > **type**
- typedef int **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr int **value**

4.636.1 Detailed Description

template<typename _Tp>
struct std::is_placeholder< _Tp >

Determines if the given type _Tp is a placeholder in a bind() expression and, if so, which placeholder it is.
C++11 [func.bind.isplace].
Definition at line 195 of file functional.
The documentation for this struct was generated from the following file:

- functional

4.637 std::is_placeholder< _Placeholder< _Num > > Struct Template Reference

Inheritance diagram for std::is_placeholder< _Placeholder< _Num > >:

Public Types

- typedef integral_constant< int, __v > **type**
- typedef int **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr int **value**

4.637.1 Detailed Description

template<int _Num>
struct std::is_placeholder< _Placeholder< _Num > >

Partial specialization of is_placeholder that provides the placeholder number for the placeholder objects defined by libstdc++.
Definition at line 258 of file functional.
The documentation for this struct was generated from the following file:

- functional

4.638 std::is_pod< _Tp > Struct Template Reference

Inheritance diagram for std::is_pod< _Tp >:

Public Types

- typedef integral_constant< bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.638.1 Detailed Description

template<typename _Tp>
struct std::is_pod< _Tp >

is_pod (deprecated in C++20)
Definition at line 695 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.639 std::is_pointer< _Tp > Struct Template Reference

Inheritance diagram for std::is_pointer< _Tp >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.639.1 Detailed Description

template<typename _Tp>
struct std::is_pointer< _Tp >

is_pointer
Definition at line 420 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.640 std::is_polymorphic< _Tp > Struct Template Reference

Inheritance diagram for std::is_polymorphic< _Tp >:

Public Types

- typedef integral_constant< bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.640.1 Detailed Description

template<typename _Tp>
struct std::is_polymorphic< _Tp >

is_polymorphic
Definition at line 721 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.641 std::is_reference< _Tp > Struct Template Reference

Inherits __or_::type.

4.641.1 Detailed Description

template<typename _Tp>
struct std::is_reference< _Tp >

is_reference
Definition at line 527 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.642 std::is_rvalue_reference< typename > Struct Template Reference

Inheritance diagram for std::is_rvalue_reference< typename >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.642.1 Detailed Description

template<typename>
struct std::is_rvalue_reference< typename >

is_rvalue_reference
Definition at line 435 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.643 std::is_same< _Tp, _Up > Struct Template Reference

Inheritance diagram for std::is_same< _Tp, _Up >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
- typedef _Tp **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr _Tp **value**

4.643.1 Detailed Description

template<typename _Tp, typename _Up>
struct std::is_same< _Tp, _Up >

is_same
Definition at line 1394 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.644 std::is_scalar< _Tp > Struct Template Reference

Inherits __or_::type.

4.644.1 Detailed Description

template<**typename** _Tp>
struct std::is_scalar< _Tp >

is_scalar
Definition at line 557 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.645 std::is_standard_layout< _Tp > Struct Template Reference

Inheritance diagram for std::is_standard_layout< _Tp >:

Public Types

- typedef integral_constant< bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.645.1 Detailed Description

template<**typename** _Tp>
struct std::is_standard_layout< _Tp >

is_standard_layout
Definition at line 685 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.646 std::is_swappable< _Tp > Struct Template Reference

Inherits __is_swappable_impl::type.

4.646.1 Detailed Description

template<**typename** _Tp>
struct std::is_swappable< _Tp >

Metafunctions used for detecting swappable types: p0185r1.
is_swappable
Definition at line 2720 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.647 std::is_swappable_with< _Tp, _Up > Struct Template Reference

Inherits __is_swappable_with_impl::type.

4.647.1 Detailed Description

template<typename _Tp, typename _Up>
struct std::is_swappable_with< _Tp, _Up >

is_swappable_with
Definition at line 2810 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.648 std::is_trivial< _Tp > Struct Template Reference

Inheritance diagram for std::is_trivial< _Tp >:

Public Types

- typedef integral_constant< bool, __v > **type**
- typedef bool **value_type**

Public Member Functions

- constexpr **operator value_type** () const noexcept
- constexpr value_type **operator()** () const noexcept

Static Public Attributes

- static constexpr bool **value**

4.648.1 Detailed Description

template<typename _Tp>
struct std::is_trivial< _Tp >

is_trivial
Definition at line 667 of file type_traits.
The documentation for this struct was generated from the following file:

- type_traits

4.649 std::is_trivially_assignable< _Tp, _Up > Struct Template Reference

Inheritance diagram for std::is_trivially_assignable< _Tp, _Up >:

Public Types

- typedef integral_constant< _Tp, __v > **type**
