Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

crbegin()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector< _Tp, _Alloc >::crbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

References `std::vector< Tp, Alloc >::end()`.

crend()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
const_reverse_iterator std::vector<_Tp, _Alloc >::crend ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

References [std::vector<_Tp, _Alloc >::begin\(\)](#).

data()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
_Tp * std::vector<_Tp, _Alloc >::data ( ) [inline], [noexcept]
```

Returns a pointer such that [data(), data() + size()) is a valid range. For a non-empty vector, data() == &front().

Referenced by [std::regex_traits<_Ch_type >::transform_primary\(\)](#).

emplace()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
template<typename... _Args>
```

```
iterator std::vector<_Tp, _Alloc >::emplace (
```

```
    const_iterator __position,
```

```
    _Args &&... __args ) [inline]
```

Inserts an object in vector before specified iterator.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__args</code>	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with T(std::forward<Args>(args)...) before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using std::list.

empty()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
bool std::vector<_Tp, _Alloc >::empty ( ) const [inline], [noexcept]
```

Returns true if the vector is empty. (Thus begin() would equal end().)

References [std::vector<_Tp, _Alloc >::begin\(\)](#), and [std::vector<_Tp, _Alloc >::end\(\)](#).

Referenced by [std::piecewise_constant_distribution<_RealType >::densities\(\)](#), [std::piecewise_linear_distribution<_RealType >::densities\(\)](#), [std::match_results<_Bi_iter, _Alloc >::end\(\)](#), [std::piecewise_constant_distribution<_RealType >::intervals\(\)](#), [std::piecewise_linear_distribution<_RealType >::intervals\(\)](#), [std::discrete_distribution<_IntType >::max\(\)](#), [std::piecewise_constant_distribution<_RealType >::max\(\)](#), [std::piecewise_linear_distribution<_RealType >::max\(\)](#), [std::piecewise_constant_distribution<_RealType >::min\(\)](#), [std::piecewise_linear_distribution<_RealType >::min\(\)](#), [std::discrete_distribution<_IntType >::probabilities\(\)](#), [std::match_results<_Bi_iter, _Alloc >::ready\(\)](#), and [std::match_results<_Bi_iter, _Alloc >::ready\(\)](#).

end() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
const_iterator std::vector<_Tp, _Alloc >::end ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

end() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::end ( ) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Referenced by [std::vector< _Tp, _Alloc >::vector\(\)](#), [std::vector< _Tp, _Alloc >::back\(\)](#), [std::vector< _Tp, _Alloc >::back\(\)](#), [std::vector< _Tp, _Alloc >::cbegin\(\)](#), [std::vector< _Tp, _Alloc >::empty\(\)](#), [std::match_results< _Bi_iter, _Alloc >::end\(\)](#), [__gnu_parallel::multiway_merge_exact_splitting\(\)](#), [std::operator<\(\), std::vector< _State< _TraitsT::char_type > >::operator=\(\)](#), [std::vector< _Tp, _Alloc >::operator=\(\)](#), [std::operator==\(\)](#), [std::vector< _Tp, _Alloc >::push_back\(\)](#), [std::vector< _Tp, _Alloc >::rbegin\(\)](#), [std::vector< _Tp, _Alloc >::rbegin\(\)](#), and [std::vector< _Tp, _Alloc >::resize\(\)](#).

erase() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::erase (
    const_iterator __first,
    const_iterator __last ) [inline]
```

Remove a range of elements.

Parameters

<code>__first</code>	Iterator pointing to the first element to be erased.
<code>__last</code>	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by `__last` prior to erasing (or `end()`).

This function will erase the elements in the range `[__first, __last)` and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

References [std::vector< _Tp, _Alloc >::begin\(\)](#), and [std::vector< _Tp, _Alloc >::cbegin\(\)](#).

erase() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::erase (
    const_iterator __position ) [inline]
```

Remove element at given position.

Parameters

<code>__position</code>	Iterator pointing to element to be erased.
-------------------------	--------------------------------------------

Returns

An iterator pointing to the next element (or `end()`).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

References [std::vector< _Tp, _Alloc >::begin\(\)](#), and [std::vector< _Tp, _Alloc >::cbegin\(\)](#).

front() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reference std::vector< _Tp, _Alloc >::front ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the vector.
References [std::vector<_Tp, _Alloc>::begin\(\)](#).

front() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
reference std::vector< _Tp, _Alloc >::front ( ) [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the vector.
References [std::vector<_Tp, _Alloc>::begin\(\)](#).
Referenced by [std::piecewise_constant_distribution<_RealType>::min\(\)](#), and [std::piecewise_linear_distribution<_RealType>::min\(\)](#).

get_allocator()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
allocator_type std::Vector_base< _Tp, _Alloc >::get_allocator ( ) const [inline], [noexcept]
```

Get a copy of the memory allocation object.
Referenced by [std::match_results<_Bi_iter, _Alloc>::get_allocator\(\)](#).

insert() [1/5]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
template<typename _InputIterator , typename = std::RequireInputIter<_InputIterator>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Inserts a range into the vector.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the range [`__first`,`__last`) into the vector before the location specified by *pos*. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

References [std::vector<_Tp, _Alloc>::begin\(\)](#), and [std::vector<_Tp, _Alloc>::cbegin\(\)](#).

insert() [2/5]

```
template<typename _Tp , typename _Alloc >
vector< _Tp, _Alloc >::iterator vector::insert (
    const_iterator __position,
    const value_type & __x )
```

Inserts given value into vector before specified iterator.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

References [std::begin\(\)](#), [std::cbegin\(\)](#), [std::end\(\)](#), and [std::move\(\)](#).

insert() [3/5]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    initializer_list< value_type > __l ) [inline]
```

Inserts an initializer_list into the vector.

Parameters

<code>__position</code>	An iterator into the vector.
<code>__l</code>	An initializer_list.

This function will insert copies of the data in the initializer_list *l* into the vector before the location specified by *position*. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

References [std::vector< _Tp, _Alloc >::begin\(\)](#), and [std::vector< _Tp, _Alloc >::cbegin\(\)](#).

insert() [4/5]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector< _Tp, _Alloc >::insert (
    const_iterator __position,
    size_type __n,
    const value_type & __x ) [inline]
```

Inserts a number of copies of given data into the vector.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__n</code>	Number of elements to be inserted.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

References [std::vector< _Tp, _Alloc >::begin\(\)](#), and [std::vector< _Tp, _Alloc >::cbegin\(\)](#).

insert() [5/5]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
iterator std::vector<_Tp, _Alloc>::insert (
    const_iterator __position,
    value_type && __x ) [inline]
```

Inserts given rvalue into vector before specified iterator.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

References [std::move\(\)](#).

max_size()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
size_type std::vector<_Tp, _Alloc>::max_size ( ) const [inline], [noexcept]
```

Returns the size() of the largest possible vector.

Referenced by [std::match_results<_Bi_iter, _Alloc>::max_size\(\)](#).

operator=() [1/3]

```
template<typename _Tp , typename _Alloc >
vector<_Tp, _Alloc> & vector::operator= (
    const vector<_Tp, _Alloc> & __x )
```

Vector assignment operator.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	----------------------------------------------------

All the elements of `__x` are copied, but any unused capacity in `__x` will not be copied.

Whether the allocator is copied depends on the allocator traits.

References [std::_Destroy\(\)](#), [std::vector<_Tp, _Alloc>::begin\(\)](#), [std::begin\(\)](#), [std::vector<_Tp, _Alloc>::end\(\)](#), [std::end\(\)](#), [std::vector<_Tp, _Alloc>::size\(\)](#), and [std::size\(\)](#).

operator=() [2/3]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
vector & std::vector<_Tp, _Alloc>::operator= (
    initializer_list<value_type> __l ) [inline]
```

Vector list assignment operator.

Parameters

	An initializer_list.
	
	
	
	

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned.

operator=() [3/3]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
vector & std::vector< _Tp, _Alloc >::operator= (
    vector< _Tp, _Alloc > && __x ) [inline], [noexcept]
```

Vector move assignment operator.

Parameters

	A vector of identical element and allocator types.
	

The contents of `__x` are moved into this vector (without copying, if the allocators permit it). Afterwards `__x` is a valid, but unspecified vector.

Whether the allocator is moved depends on the allocator traits.

References [std::move\(\)](#).

operator[]() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reference std::vector< _Tp, _Alloc >::operator[] (
    size_type __n ) const [inline], [noexcept]
```

Subscript access to the data contained in the vector.

Parameters

	The index of the element for which data should be accessed.
	

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

operator[]() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
reference std::vector< _Tp, _Alloc >::operator[] (
    size_type __n ) [inline], [noexcept]
```

Subscript access to the data contained in the vector.

Parameters

<code>_↔</code>	The index of the element for which data should be accessed.
<code>_n</code>	

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Referenced by `std::match_results<_Bi_iter, _Alloc>::operator[]()`.

pop_back()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::pop_back ( ) [inline], [noexcept]
```

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before `pop_back()` is called.

push_back()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::push_back (
    const value_type & __x ) [inline]
```

Add data to the end of the vector.

Parameters

<code>_↔</code>	Data to be added.
<code>_x</code>	

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

References `std::vector<_Tp, _Alloc>::end()`.

rbegin() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
const_reverse_iterator std::vector<_Tp, _Alloc>::rbegin ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

References `std::vector<_Tp, _Alloc>::end()`.

rbegin() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
reverse_iterator std::vector<_Tp, _Alloc>::rbegin ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

References `std::vector<_Tp, _Alloc>::end()`.

rend() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
const_reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

References [std::vector< _Tp, _Alloc >::begin\(\)](#).

rend() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
reverse_iterator std::vector< _Tp, _Alloc >::rend ( ) [inline], [noexcept]
```

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

References [std::vector< _Tp, _Alloc >::begin\(\)](#).

reserve()

```
template<typename _Tp , typename _Alloc >
```

```
void vector::reserve (
    size_type __n )
```

Attempt to preallocate enough memory for specified number of elements.

Parameters

_↵	Number of elements required.
_n	

Exceptions

std::length_error	If <i>n</i> exceeds <code>max_size()</code> .
-----------------------------------	-----------------------------------------------

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

References [std::_Destroy\(\)](#), and [std::size\(\)](#).

resize() [1/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
```

```
void std::vector< _Tp, _Alloc >::resize (
    size_type __new_size ) [inline]
```

Resizes the vector to the specified number of elements.

Parameters

__new_size	Number of elements the vector should contain.
----------------------------	-----------------------------------------------

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

References [std::vector< _Tp, _Alloc >::size\(\)](#).

Referenced by [__gnu_parallel::__shrink_and_double\(\)](#), and [__gnu_parallel::multiway_merge_exact_splitting\(\)](#).

resize() [2/2]

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::resize (
    size_type __new_size,
    const value_type & __x ) [inline]
```

Resizes the vector to the specified number of elements.

Parameters

<code>__new_size</code>	Number of elements the vector should contain.
<code>__x</code>	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

References [std::vector<_Tp, _Alloc>::end\(\)](#), and [std::vector<_Tp, _Alloc>::size\(\)](#).

shrink_to_fit()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::shrink_to_fit ( ) [inline]
```

A non-binding request to reduce capacity() to size().

size()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
size_type std::vector<_Tp, _Alloc>::size ( ) const [inline], [noexcept]
```

Returns the number of elements in the vector.

Referenced by [__gnu_parallel::__shrink\(\)](#), [__gnu_parallel::__shrink_and_double\(\)](#), [std::vector<_Tp, _Alloc>::M_range_check\(\)](#), [std::match_results<_Bi_iter, _Alloc>::empty\(\)](#), [__gnu_parallel::list_partition\(\)](#), [std::discrete_distribution<_IntType>::max\(\)](#), [std::vector<_Tp, _Alloc>::operator=\(\)](#), [std::operator==\(\)](#), [std::vector<_Tp, _Alloc>::resize\(\)](#), [std::vector<_Tp, _Alloc>::resize\(\)](#), [std::match_results<_Bi_iter, _Alloc>::size\(\)](#), and [std::regex_traits<_Ch_type>::transform_primary\(\)](#).

swap()

```
template<typename _Tp , typename _Alloc = std::allocator<_Tp>>
void std::vector<_Tp, _Alloc>::swap (
    vector<_Tp, _Alloc> & __x ) [inline], [noexcept]
```

Swaps data with another vector.

Parameters

<code>__x</code>	A vector of the same element and allocator types.
------------------	---------------------------------------------------

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Whether the allocators are swapped depends on the allocator traits.

Referenced by [std::match_results<_Bi_iter, _Alloc>::swap\(\)](#).

5.1035.1 Detailed Description

template<typename **_Alloc**>
class **std::vector**< **bool**, **_Alloc** >

A specialization of vector for booleans which offers fixed time access to individual elements in any order.

Template Parameters

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Note that `vector<bool>` does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

See also

vector for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting (`[]`) access is also provided as with C-style arrays.

The documentation for this class was generated from the following files:

- [stl_bvector.h](#)
- [vector.tcc](#)

5.1036 std::wbuffer_convert< _Codecvt, _Elem, _Tr > Class Template Reference

5.1036.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
class std::wbuffer_convert<_Codecvt, _Elem, _Tr >
```

Buffer conversions.

5.1036.2 Member Typedef Documentation**__streambuf_type**

```
template<typename _CharT , typename _Traits >
typedef basic\_streambuf<char\_type, traits\_type> std::basic\_streambuf<\_CharT, \_Traits >::\_\_↵
streambuf_type [inherited]
```

This is a non-standard type.

char_type

```
template<typename _CharT , typename _Traits >
typedef _CharT std::basic\_streambuf<\_CharT, \_Traits >::char\_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

int_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::int_type std::basic\_streambuf<\_CharT, \_Traits >::int\_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

off_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::off_type std::basic\_streambuf<\_CharT, \_Traits >::off\_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

pos_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::pos_type std::basic\_streambuf<\_CharT, \_Traits >::pos\_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

traits_type

```
template<typename _CharT , typename _Traits >
typedef _Traits std::basic\_streambuf< _CharT, _Traits >::traits_type [inherited]
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

5.1036.3 Constructor & Destructor Documentation

wbuffer_convert() [1/2]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
std::wbuffer\_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert ( ) [inline]
```

Default constructor.

wbuffer_convert() [2/2]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
std::wbuffer\_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert (
    streambuf * __bytebuf,
    _Codecvt * __pcvt = new _Codecvt,
    state_type __state = state_type() ) [inline], [explicit]
```

Constructor.

Parameters

__bytebuf	The underlying byte stream buffer.
__pcvt	The facet to use for conversions.
__state	Initial conversion state.

Takes ownership of [__pcvt](#) and will delete it in the destructor.

References [std::basic_streambuf< _CharT, _Traits >::setg\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::setp\(\)](#).

5.1036.4 Member Function Documentation

eback()

```
template<typename _CharT , typename _Traits >
char\_type * std::basic\_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- [eback\(\)](#) returns the beginning pointer for the input sequence
- [gptr\(\)](#) returns the next pointer for the input sequence
- [egptr\(\)](#) returns the end pointer for the input sequence

egptr()

```
template<typename _CharT , typename _Traits >
char\_type * std::basic\_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow\(\)](#).

epptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

gbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::gbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

getloc()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

gptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence

- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow\(\)](#).

imbue()

```
template<typename _CharT , typename _Traits >
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
    const locale & __loc ) [inline], [protected], [virtual], [inherited]
```

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), and [std::basic_filebuf<char_type, traits_type>](#).

in_avail()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

overflow()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
_Wide_streambuf::int_type std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow (
    typename _Wide_streambuf::int_type __c ) [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

References [std::basic_streambuf<_CharT, _Traits>::sputc\(\)](#).

pbackfail()

```
template<typename _CharT, typename _Traits>
virtual int_type std::basic_streambuf<_CharT, _Traits>::pbackfail (
    int_type __c = traits_type::eof() ) [inline], [protected], [virtual], [inherited]
```

Tries to back up the input sequence.

Parameters

<code>__c</code>	The character to be inserted back into the sequence.
------------------	------------------------------------------------------

Returns

`eof()` on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns `eof()`.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), [std::basic_filebuf<char_type, traits_type>](#), [__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>](#), and [std::basic_stringbuf<_CharT, _Traits, _Alloc>](#).

pbase()

```
template<typename _CharT, typename _Traits>
char_type * std::basic_streambuf<_CharT, _Traits>::pbase ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

pbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::pbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the write position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

pptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

pubimbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc ) [inline], [inherited]
```

Entry point for imbue().

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__off</code>	Offset.
--------------------	---------

Parameters

<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual seekpos function.

pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]
```

Calls virtual sync function.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::sync()`, and `std::basic_istream<_CharT, _Traits>::sync()`.

sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Referenced by `std::basic_istream<char>::getline()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::istreambuf_iterator<_CharT, _Traits>::operator++()`.

seekoff()

```
template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual],
[inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, traits_type, _Alloc >`.

seekpos()

```
template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual],
[inherited]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, traits_type, _Alloc >`.

setbuf()

```
template<typename _CharT , typename _Traits >
virtual basic_streambuf< char_type, _Traits > * std::basic_streambuf< _CharT, _Traits >::setbuf
(
    char_type * ,
    streamsize ) [inline], [protected], [virtual], [inherited]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, traits_type, _Alloc >`.

setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
```

```
char_type * __gnext,
char_type * __gend ) [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`.

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::setp (
    char_type * __pbeg,
    char_type * __pend ) [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`.

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, and `std::basic_istream<char>::seekg()`.

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
```

```
char_type * __s,
streamsize __n ) [inline], [inherited]
```

Entry point for `xsgetn`.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

`showmanyc()`

```
template<typename _CharT , typename _Traits >
virtual streamsize std::basic_streambuf< _CharT, _Traits >::showmanyc ( ) [inline], [protected],
[virtual], [inherited]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, `std::basic_filebuf< char_type, traits_type >`, and `std::basic_stringbuf< _CharT, traits_type, allocator_type >`.

`snextc()`

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::getline()`, `std::basic_istream< char >::putback()`, and `std::basic_istream< char >::seekg()`.

`sputbackc()`

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
char_type __c ) [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

<code>__c</code>	The character to push back.
------------------	-----------------------------

Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

sputc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputc (
    char_type __c) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

<code>__c</code>	A character to output.
------------------	------------------------

Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`, and `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow()`.

sputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sputn (
    const char_type * __s,
    streamsize __n) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

state()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
state_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::state ( ) const [inline], [noexcept]
```

The conversion state following the last conversion.

sungetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream< _CharT, _Traits >::unget()`.

sync()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
int std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync ( ) [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::basic_streambuf< _CharT, _Traits >::pubsync()`.

uflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

underflow()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
_Wide_streambuf::int_type std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow ( ) [inline],
[protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, and `std::basic_streambuf<_CharT, _Traits>::gptr()`.

xsggetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsggetn (
    char_type * __s,
    streamsize __n) [protected], [virtual], [inherited]
```

Multiple character extraction.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

References `std::min()`.

xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (
    const char_type * __s,
    streamsize __n) [protected], [virtual], [inherited]
```

Multiple character insertion.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either *n* characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

References `std::min()`.

5.1037.1 Detailed Description

template<typename _Tp>
class std::weak_ptr<_Tp>

A non-owning observer for a pointer owned by a [shared_ptr](#).

A [weak_ptr](#) provides a safe alternative to a raw pointer when you want a non-owning reference to an object that is managed by a [shared_ptr](#).

Unlike a raw pointer, a [weak_ptr](#) can be converted to a new [shared_ptr](#) that shares ownership with every other [shared_ptr](#) that already owns the pointer. In other words you can upgrade from a non-owning “weak” reference to an owning [shared_ptr](#), without having access to any of the existing [shared_ptr](#) objects.

Also unlike a raw pointer, a `weak_ptr` does not become “dangling” after the object it points to has been destroyed. Instead, a `weak_ptr` becomes *expired* and can no longer be converted to a `shared_ptr` that owns the freed pointer, so you cannot accidentally access the pointed-to object after it has been destroyed.

The documentation for this class was generated from the following file:

5.1038.1 Detailed Description

```
template<typename _RealType = double>
class std::weibull_distribution<_RealType>
```

A `weibull_distribution` random number distribution.

The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^\alpha\right)$$

5.1038.2 Member Typedef Documentation

`result_type`

```
template<typename _RealType = double>
typedef _RealType std::weibull_distribution< _RealType >::result_type
```

The type of the range of the distribution.

5.1038.3 Member Function Documentation

`a()`

```
template<typename _RealType = double>
_RealType std::weibull_distribution< _RealType >::a ( ) const [inline]
```

Return the *a* parameter of the distribution.
Referenced by `std::gamma_distribution<result_type>::operator()`.

`b()`

```
template<typename _RealType = double>
_RealType std::weibull_distribution< _RealType >::b ( ) const [inline]
```

Return the *b* parameter of the distribution.
Referenced by `std::gamma_distribution<result_type>::operator()`.

`max()`

```
template<typename _RealType = double>
result_type std::weibull_distribution< _RealType >::max ( ) const [inline]
```

Returns the least upper bound value of the distribution.
References `std::numeric_limits<_Tp>::max()`.

`min()`

```
template<typename _RealType = double>
result_type std::weibull_distribution< _RealType >::min ( ) const [inline]
```

Returns the greatest lower bound value of the distribution.

`operator()()`

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::weibull_distribution< _RealType >::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.
References `std::weibull_distribution<_RealType>::operator()`.
Referenced by `std::weibull_distribution<_RealType>::operator()`.

`param()` [1/2]

```
template<typename _RealType = double>
param_type std::weibull_distribution< _RealType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.
Referenced by `std::operator>>()`.

param() [2/2]

```
template<typename _RealType = double>
void std::weibull_distribution< _RealType >::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--------------------------------------------

reset()

```
template<typename _RealType = double>
void std::weibull_distribution< _RealType >::reset ( ) [inline]
```

Resets the distribution state.

5.1038.4 Friends And Related Symbol Documentation**operator==**

```
template<typename _RealType = double>
bool operator== (
    const weibull_distribution< _RealType > & __d1,
    const weibull_distribution< _RealType > & __d2 ) [friend]
```

Return true if two Weibull distributions have the same parameters.

5.1039.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, type-
name _Byte_alloc = allocator<char>>>
class std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >
```

String conversions.

5.1039.2 Constructor & Destructor Documentation

`wstring_convert()` [1/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert ( ) [inline]
Default constructor.
```

`wstring_convert()` [2/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    _Codecvt * __pcvt ) [inline], [explicit]
```

Constructor.

Parameters

<code>__pcvt</code>	The facet to use for conversions.
---------------------	-----------------------------------

Takes ownership of `__pcvt` and will delete it in the destructor.

`wstring_convert()` [3/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    _Codecvt * __pcvt,
    state_type __state ) [inline]
```

Construct with an initial conversion state.

Parameters

<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor. The object's conversion state will persist between conversions.

wstring_convert() [4/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert (
    const byte_string & __byte_err,
    const wide_string & __wide_err = wide_string() ) [inline], [explicit]
```

Construct with error strings.

Parameters

<code>__byte_err</code>	A string to return on failed conversions.
<code>__wide_err</code>	A wide string to return on failed conversions.

5.1039.3 Member Function Documentation

converted()

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
size_t std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::converted ( ) const
[inline], [noexcept]
```

The number of elements successfully converted in the last conversion.

from_bytes() [1/4]

```
template<typename _Codecvt , typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>,
typename _Byte_alloc = allocator<char>>
wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes (
    char __byte ) [inline]
```

Convert from bytes.

6.2.1 Detailed Description

The header provides an interface to the C++ ABI.

6.2.2 Function Documentation

__cxa_demangle()

```
char * __cxxabiv1::__cxa_demangle (
    const char * __mangled_name,
    char * __output_buffer,
    size_t * __length,
    int * __status )
```

Demangling routine. ABI-mandated entry point in the C++ runtime library for demangling.

Parameters

<code>__mangled_name</code>	A NUL-terminated character string containing the name to be demangled.
<code>__output_buffer</code>	A region of memory, allocated with malloc, of * <code>__length</code> bytes, into which the demangled name is stored. If <code>__output_buffer</code> is not long enough, it is expanded using realloc. <code>__output_buffer</code> may instead be NULL; in that case, the demangled name is placed in a region of memory allocated with malloc.

Parameters

<code>__length</code>	If <code>__length</code> is non-null, the length of the buffer containing the demangled name is placed in <code>*__length</code> .
<code>__status</code>	If <code>__status</code> is non-null, <code>*__status</code> is set to one of the following values: 0: The demangling operation succeeded. -1: A memory allocation failure occurred. -2: <i>mangled_name</i> is not a valid name under the C++ ABI mangling rules. -3: One of the arguments is invalid.

Returns

A pointer to the start of the NUL-terminated demangled name, or NULL if the demangling fails. The caller is responsible for deallocating this memory using `free`.

The demangling is performed using the C++ ABI mangling rules, with GNU extensions. For example, this function is used in `__gnu_cxx::__verbose_terminate_handler`.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_demangling.html for other examples of use.

Note

The same demangling functionality is available via `libiberty` (`<libiberty/demangle.h>` and `libiberty.h`) in GCC 3.1 and later, but that requires explicit installation (`-enable-install-libiberty`) and uses a different API, although the ABI is unchanged.

- `void * operator new[] (std::size_t, void *__p)` noexcept
- `new_handler std::set_new_handler (new_handler)` throw ()

Variables

- `const nothrow_t std::nothrow`

6.5.1 Detailed Description

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see https://gcc.gnu.org/onlinedocs/libstdc++/manual/dynamic_memory.html for more.

6.5.2 Function Documentation

operator new()

```
void * operator new (
    std::size_t )
```

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.15.1 Detailed Description

This is a Standard C++ Library header.

6.16 auto_ptr.h File Reference

Classes

- class `std::auto_ptr< _Tp >`
- struct `std::auto_ptr_ref< _Tp1 >`

Namespaces

- namespace `std`

6.16.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.17 `backward_warning.h` File Reference

6.17.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

6.18 `binders.h` File Reference

Classes

- class [std::binder1st<_Operation>](#)
- class [std::binder2nd<_Operation>](#)

Namespaces

- namespace [std](#)

Functions

- [template<typename _Operation, typename _Tp> binder1st<_Operation> std::bind1st](#) (const _Operation &__fn, const _Tp &__x)
- [template<typename _Operation, typename _Tp> binder2nd<_Operation> std::bind2nd](#) (const _Operation &__fn, const _Tp &__x)

6.18.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<functional>`.

6.19 `hash_fun.h` File Reference

Namespaces

- namespace [__gnu_cxx](#)

Functions

- [size_t __gnu_cxx::__stl_hash_string](#) (const char *__s)

6.19.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

6.20 `hash_map` File Reference

Classes

- class [__gnu_cxx::hash_map<_Key, _Tp, _HashFn, _EqualKey, _Alloc>](#)
- class [__gnu_cxx::hash_multimap<_Key, _Tp, _HashFn, _EqualKey, _Alloc>](#)

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

Macros

- `#define _BACKWARD_HASH_MAP`

Functions

- `template<class _Key, class _Tp, class _HashFn, class _EqKey, class _Alloc >`
`bool __gnu_cxx::operator!= (const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm1, const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm2)`
- `template<class _Key, class _Tp, class _HF, class _EqKey, class _Alloc >`
`bool __gnu_cxx::operator!= (const hash_multimap< _Key, _Tp, _HF, _EqKey, _Alloc > &__hm1, const hash_multimap< _Key, _Tp, _HF, _EqKey, _Alloc > &__hm2)`
- `template<class _Key, class _Tp, class _HashFn, class _EqKey, class _Alloc >`
`bool __gnu_cxx::operator== (const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm1, const hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm2)`
- `template<class _Key, class _Tp, class _HF, class _EqKey, class _Alloc >`
`bool __gnu_cxx::operator== (const hash_multimap< _Key, _Tp, _HF, _EqKey, _Alloc > &__hm1, const hash_multimap< _Key, _Tp, _HF, _EqKey, _Alloc > &__hm2)`
- `template<class _Key, class _Tp, class _HashFn, class _EqKey, class _Alloc >`
`void __gnu_cxx::swap (hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm1, hash_map< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm2)`
- `template<class _Key, class _Tp, class _HashFn, class _EqKey, class _Alloc >`
`void __gnu_cxx::swap (hash_multimap< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm1, hash_multimap< _Key, _Tp, _HashFn, _EqKey, _Alloc > &__hm2)`

6.20.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

6.21 hash_set File Reference

Classes

- class [__gnu_cxx::hash_multiset](#)< _Value, _HashFcn, _EqualKey, _Alloc >
- class [__gnu_cxx::hash_set](#)< _Value, _HashFcn, _EqualKey, _Alloc >

Namespaces

- namespace [__gnu_cxx](#)
- namespace [std](#)

Macros

- `#define _BACKWARD_HASH_SET`

Functions

- `template<class _Val, class _HashFcn, class _EqualKey, class _Alloc >`
`bool __gnu_cxx::operator!= (const hash_multiset< _Val, _HashFcn, _EqualKey, _Alloc > &__hs1, const hash_multiset< _Val, _HashFcn, _EqualKey, _Alloc > &__hs2)`

- `template<class _Value, class _HashFcn, class _EqualKey, class _Alloc >`
`bool __gnu_cxx::operator!= (const hash_set< _Value, _HashFcn, _EqualKey, _Alloc > &__hs1, const hash_set< _Value, _HashFcn, _EqualKey, _Alloc > &__hs2)`
- `template<class _Val, class _HashFcn, class _EqualKey, class _Alloc >`
`bool __gnu_cxx::operator== (const hash_multiset< _Val, _HashFcn, _EqualKey, _Alloc > &__hs1, const hash_multiset< _Val, _HashFcn, _EqualKey, _Alloc > &__hs2)`
- `template<class _Value, class _HashFcn, class _EqualKey, class _Alloc >`

`void __gnu_cxx::swap (hash_set< _Val, _HashFcn, _EqualKey, _Alloc > &__hs1, hash_set< _Val, _HashFcn, _EqualKey, _Alloc > &__hs2)`

6.21.1 Detailed Description

This file is a GNU extension to the Standard C++ Library (possibly containing extensions from the HP/SGI STL subset).

6.22 `strstream` File Reference

Namespaces

- namespace [std](#)

6.22.1 Detailed Description

This is a Standard C++ Library header.

6.23 `barrier` File Reference

Macros

- `#define _GLIBCXX_BARRIER`

6.23.1 Detailed Description

This is a Standard C++ Library header.

6.24 `bit` File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_BIT`

6.24.1 Detailed Description

This is a Standard C++ Library header.

6.25 algorithmfwd.h File Reference

Namespaces

- namespace [std](#)

Functions

- `template<typename _Filter >`

6.25.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<algorithm>`.

6.26 `algorithmfwd.h` File Reference

6.26.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

6.27 align.h File Reference

Namespaces

- namespace [std](#)

Functions

- `void * std::align (size_t __align, size_t __size, void *&__ptr, size_t &__space) noexcept`

6.27.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.28 alloc_traits.h File Reference

Classes

- struct [std::allocator_traits< _Alloc >](#)
- struct [std::allocator_traits< allocator< _Tp > >](#)
- struct [std::allocator_traits< allocator< void > >](#)

Namespaces

- namespace [std](#)

Macros

- `#define __cpp_lib_allocator_traits_is_always_equal`

Typedefs

- `template<typename _Alloc >`
`using std::__RequireAllocator = typename enable_if< __is_allocator< _Alloc >::value, _Alloc >::type`
- `template<typename _Alloc >`
`using std::__RequireNotAllocator = typename enable_if<!__is_allocator< _Alloc >::value, _Alloc >::type`

Functions

- `template<typename _Alloc >`
`constexpr void std::__alloc_on_copy (_Alloc &__one, const _Alloc &__two)`
- `template<typename _Alloc >`
`constexpr _Alloc std::__alloc_on_copy (const _Alloc &__a)`
- `template<typename _Alloc >`
`constexpr void std::__alloc_on_move (_Alloc &__one, _Alloc &__two)`
- `template<typename _Alloc >`
`constexpr void std::__alloc_on_swap (_Alloc &__one, _Alloc &__two)`
- `template<typename _ForwardIterator, typename _Allocator >`
`void std::_Destroy (_ForwardIterator __first, _ForwardIterator __last, _Allocator &__alloc)`
- `template<typename _ForwardIterator, typename _Tp >`
`void std::_Destroy (_ForwardIterator __first, _ForwardIterator __last, allocator< _Tp > &)`

6.28.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.29 alloc_traits.h File Reference

Classes

- struct [__gnu_cxx::__alloc_traits](#)< _Alloc, typename >

Namespaces

- namespace [__gnu_cxx](#)

6.29.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

6.30 allocated_ptr.h File Reference

Namespaces

- namespace [std](#)

6.30.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.31 allocator.h File Reference

Classes

- class [std::allocator< _Tp >](#)
- class [std::allocator< void >](#)

Namespaces

- namespace [std](#)

Macros

- `#define __cpp_lib_incomplete_container_elements`

Functions

- `template<typename _T1 , typename _T2 >`
`constexpr bool std::operator!= (const allocator< _T1 > &, const allocator< _T2 > &) noexcept`
- `template<typename _T1 , typename _T2 >`
`constexpr bool std::operator== (const allocator< _T1 > &, const allocator< _T2 > &) noexcept`

6.31.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.32 atomic_base.h File Reference

Classes

- struct [std::__atomic_base< _ITp >](#)
- struct [std::__atomic_base< _PTp * >](#)
- struct [std::__atomic_flag_base](#)
- struct [std::atomic_flag](#)

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX20_INIT(l)`

6.141.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<deque>`.

6.141.2 Macro Definition Documentation

`_GLIBCXX_DEQUE_BUF_SIZE`

```
#define _GLIBCXX_DEQUE_BUF_SIZE
```

This function controls the size of memory nodes.

Parameters

<code>__size</code>	The size of an element.
---------------------	-------------------------

Returns

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

6.144.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

This file implements `reverse_iterator`, `back_insert_iterator`, `front_insert_iterator`, `insert_iterator`, `__normal_iterator`, and their supporting functions and overloaded operators.

6.155.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<memory>`.

6.156 `stl_relops.h` File Reference

Namespaces

- namespace `std`
- namespace `std::rel_ops`

Functions

- `template<class _Tp >`
`bool` `std::rel_ops::operator!=` (`const _Tp &__x`, `const _Tp &__y`)
- `template<class _Tp >`
`bool` `std::rel_ops::operator<=` (`const _Tp &__x`, `const _Tp &__y`)
- `template<class _Tp >`
`bool` `std::rel_ops::operator>` (`const _Tp &__x`, `const _Tp &__y`)
- `template<class _Tp >`
`bool` `std::rel_ops::operator>=` (`const _Tp &__x`, `const _Tp &__y`)

6.156.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<utility>`.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std_UTILITY_H`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads

Short summary: the `rel_ops` operators should be avoided for the present.

6.176.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

6.177 valarray_array.h File Reference

6.182.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.183 `cassert` File Reference

6.183.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `assert.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.184 `complex` File Reference

Macros

- `#define _GLIBCXX_CCOMPLEX`

6.184.1 Detailed Description

This is a Standard C++ Library header.

6.185 ccomplex File Reference

Macros

- `#define _GLIBCXX_TR1_CCOMPLEX`

6.185.1 Detailed Description

This is a TR1 C++ Library header.

6.186 cctype File Reference

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CCTYPE`

6.186.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `cctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.187 cctype File Reference

Macros

- `#define _GLIBCXX_TR1_CCTYPE`

6.187.1 Detailed Description

This is a TR1 C++ Library header.

6.188 cerrno File Reference

Macros

- `#define _GLIBCXX_CERRNO`
- `#define errno`

6.188.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.189 cenv File Reference

Macros

- `#define _GLIBCXX_CFENV`

6.189.1 Detailed Description

This is a Standard C++ Library header.

6.190 cenv File Reference

Macros

- `#define _GLIBCXX_TR1_CENV`

6.190.1 Detailed Description

This is a TR1 C++ Library header.

6.191 cfloat File Reference

Macros

- `#define _GLIBCXX_CFLOAT`
- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

6.191.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.192 cfloat File Reference

Macros

- `#define _GLIBCXX_TR1_CFLOAT`

6.192.1 Detailed Description

This is a TR1 C++ Library header.

Variables

- `template<typename _Rep >`
`constexpr bool std::chrono::treat_as_floating_point_v`

6.194.1 Detailed Description

This is a Standard C++ Library header.

6.195 chrono File Reference

Namespaces

- namespace `std`
- namespace `std::chrono`

Macros

- `#define _GLIBCXX_EXPERIMENTAL_CHRONO`

Variables

- `template<typename _Rep >`
`constexpr bool std::chrono::experimental::treat_as_floating_point_v`

6.195.1 Detailed Description

This is a TS C++ Library header.

6.196 `cinttypes` File Reference

Macros

- `#define _GLIBCXX_CINTTYPES`

6.196.1 Detailed Description

This is a Standard C++ Library header.

6.197 `cinttypes` File Reference

Macros

- `#define _GLIBCXX_TR1_CINTTYPES`

6.197.1 Detailed Description

This is a TR1 C++ Library header.

6.198 `ciso646` File Reference

6.198.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `iso646.h`, which is empty in C++.

6.199 `climits` File Reference

Macros

- `#define _GLIBCXX_CLIMITS`
- `#define LLONG_MAX`
- `#define LLONG_MIN`
- `#define ULLONG_MAX`

6.199.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `limits.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.200 `climits` File Reference

Macros

- `#define _GLIBCXX_TR1_CLIMITS`

6.200.1 Detailed Description

This is a TR1 C++ Library header.

6.201 clocale File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CLOCALE`

6.201.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `locale.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.207.1 Detailed Description

This is a TR1 C++ Library header.

6.208 complex.h File Reference

Macros

- `#define _GLIBCXX_COMPLEX_H`

6.208.1 Detailed Description

This is a Standard C++ Library header.

6.209 concepts File Reference

Macros

- `#define _GLIBCXX_CONCEPTS`

6.209.1 Detailed Description

This is a Standard C++ Library header.

6.210 condition_variable File Reference

Classes

- class `std::condition_variable`
- class `std::_V2::condition_variable_any`

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CONDITION_VARIABLE`

Enumerations

- enum class `std::cv_status` { `no_timeout`, `timeout` }

Functions

- void `std::notify_all_at_thread_exit (condition_variable &, unique_lock< mutex >)`

6.210.1 Detailed Description

This is a Standard C++ Library header.

6.211 csetjmp File Reference

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CSETJMP`
- `#define setjmp(env)`

6.211.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `setjmp.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.212 csignal File Reference

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CSIGNAL`

6.212.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `signal.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.213 cstdalign File Reference

Macros

- `#define _GLIBCXX_CSTDALIGN`

6.213.1 Detailed Description

This is a Standard C++ Library header.

6.214 cstdarg File Reference

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CSTDARG`
- `#define va_end(ap)`

6.214.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdarg.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.215 cstdint File Reference**Macros**

- `#define _GLIBCXX_TR1_CSTDARG`

6.215.1 Detailed Description

This is a TR1 C++ Library header.

6.216 cstdint File Reference**Macros**

- `#define _GLIBCXX_CSTDBOOL`

6.216.1 Detailed Description

This is a Standard C++ Library header.

6.217 cstdint File Reference**Macros**

- `#define _GLIBCXX_TR1_CSTDBOOL`

6.217.1 Detailed Description

This is a TR1 C++ Library header.

6.218 cstdint File Reference**Namespaces**

- namespace [std](#)

Macros

- `#define __cpp_lib_byte`
- `#define _GLIBCXX_CSTDDEF`

Typedefs

- `template<typename _IntegerType >`
`using std::__byte_op_t = typename __byte_operand< _IntegerType >::__type`

Enumerations

- enum class [std::byte](#) : unsigned char

Functions

- constexpr [byte](#) [std::operator&](#) ([byte](#) __l, [byte](#) __r) noexcept
- constexpr [byte](#) & [std::operator&=](#) ([byte](#) &__l, [byte](#) __r) noexcept

6.218.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdint.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.219 cstdint File Reference

Namespaces

- namespace [std](#)

Macros

- `#define` [_GLIBCXX_CSTDINT](#)

6.219.1 Detailed Description

This is a Standard C++ Library header.

6.220 cstdint File Reference

Namespaces

- namespace [std](#)
- namespace [std::tr1](#)

Macros

- `#define` [_GLIBCXX_TR1_CSTDINT](#)

6.220.1 Detailed Description

This is a TR1 C++ Library header.

6.221 cstdio File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CSTDIO`

6.221.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdio.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.222 cstdio File Reference

Macros

- `#define _GLIBCXX_TR1_CSTDIO`

6.222.1 Detailed Description

This is a TR1 C++ Library header.

6.223 cstdlib File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CSTDLIB`
- `#define EXIT_FAILURE`
- `#define EXIT_SUCCESS`

Functions

- void **std::abort** (void) throw ()
- int **std::atexit** (void(*) (void)) throw ()
- void **std::exit** (int) throw ()

6.223.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `stdlib.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.224 cstdlib File Reference

Macros

- `#define _GLIBCXX_TR1_CSTDLIB`

6.224.1 Detailed Description

This is a TR1 C++ Library header.

6.225 cstring File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CSTRING`

Functions

- `void * std::memchr (void *__s, int __c, size_t __n)`
- `char * std::strchr (char *__s, int __n)`
- `char * std::strpbrk (char *__s1, const char *__s2)`
- `char * std::strrchr (char *__s, int __n)`
- `char * std::strstr (char *__s1, const char *__s2)`

6.225.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `string.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.226 ctgmath File Reference

Macros

- `#define _GLIBCXX_CTGMATH`

6.226.1 Detailed Description

This is a Standard C++ Library header.

6.227 ctgmath File Reference

Macros

- `#define _GLIBCXX_TR1_CTGMATH`

6.227.1 Detailed Description

This is a TR1 C++ Library header.

6.228 ctime File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CTIME`

6.228.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `time.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.229 ctime File Reference

Macros

- `#define _GLIBCXX_TR1_CTIME`

6.229.1 Detailed Description

This is a TR1 C++ Library header.

6.230 cuchar File Reference

Macros

- `#define _GLIBCXX_CUCHAR`

6.230.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `uchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.231 wchar File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_CWCHAR`

Functions

- `wchar_t * std::wcschr (wchar_t *__p, wchar_t __c)`
- `wchar_t * std::wcpbrk (wchar_t *__s1, const wchar_t *__s2)`
- `wchar_t * std::wcsrchr (wchar_t *__p, wchar_t __c)`
- `wchar_t * std::wcsstr (wchar_t *__s1, const wchar_t *__s2)`
- `wchar_t * std::wmemchr (wchar_t *__p, wchar_t __c, size_t __n)`

6.231.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wchar.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.232 `cwchar` File Reference

Namespaces

- namespace `std`
- namespace `std::tr1`

Macros

- `#define _GLIBCXX_TR1_CWCHAR`

6.232.1 Detailed Description

This is a TR1 C++ Library header.

6.233 `cwctype` File Reference

Namespaces

- namespace `std`

Macros

- `#define _GLIBCXX_CWCTYPE`

6.233.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `wctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.234 `cwctype` File Reference

Namespaces

- namespace `std`
- namespace `std::tr1`

Macros

- `#define _GLIBCXX_TR1_CWCTYPE`

6.234.1 Detailed Description

This is a TR1 C++ Library header.

6.235 assertions.h File Reference

Macros

- `#define __glibcxx_requires_non_empty_range(_First, _Last)`
- `#define __glibcxx_requires_nonempty()`
- `#define __glibcxx_requires_subscript(_N)`
- `#define _GLIBCXX_DEBUG_ASSERT(_Condition)`
- `#define _GLIBCXX_DEBUG_ONLY(_Statement)`
- `#define _GLIBCXX_DEBUG_PEDASSERT(_Condition)`

6.235.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.240.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.240.2 Macro Definition Documentation

`__glibcxx_check_erase`

```
#define __glibcxx_check_erase(  
    _Position )
```

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

`__glibcxx_check_erase_after`

```
#define __glibcxx_check_erase_after(  
    _Position )
```

Verify that we can erase the element after the iterator `_Position`. We can erase the element if the `_Position` iterator is before a dereferenceable one and references this sequence.

`__glibcxx_check_erase_range`

```
#define __glibcxx_check_erase_range(  
    _First,  
    _Last )
```

Verify that we can erase the elements in the iterator range `[_First, _Last)`. We can erase the elements if `[_First, _Last)` is a valid iterator range within this sequence.

`__glibcxx_check_erase_range_after`

```
#define __glibcxx_check_erase_range_after(  
    _First,  
    _Last )
```

Verify that we can erase the elements in the iterator range `(_First, _Last)`. We can erase the elements if `(_First, _Last)` is a valid iterator range within this sequence.

`__glibcxx_check_heap_pred`

```
#define __glibcxx_check_heap_pred(  
    _First,  
    _Last,  
    _Pred )
```

Verify that the iterator range `[_First, _Last)` is a heap w.r.t. the predicate `_Pred`.

`__glibcxx_check_insert`

```
#define __glibcxx_check_insert(  
    _Position )
```

Verify that we can insert into `*this` with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular, either dereferenceable or past-the-end, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

`__glibcxx_check_insert_after`

```
#define __glibcxx_check_insert_after(  
    _Position )
```

Verify that we can insert into **this* after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular, either dereferenceable or before-begin, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

`__glibcxx_check_insert_range`

```
#define __glibcxx_check_insert_range(
    _Position,
    _First,
    _Last,
    _Dist )
```

Verify that we can insert the values in the iterator range `[_First, _Last)` into **this* with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

`__glibcxx_check_insert_range_after`

```
#define __glibcxx_check_insert_range_after(
    _Position,
    _First,
    _Last,
    _Dist )
```

Verify that we can insert the values in the iterator range `[_First, _Last)` into **this* after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

`__glibcxx_check_partitioned_lower`

```
#define __glibcxx_check_partitioned_lower(
    _First,
    _Last,
    _Value )
```

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value`.

`__glibcxx_check_partitioned_lower_pred`

```
#define __glibcxx_check_partitioned_lower_pred(
    _First,
    _Last,
    _Value,
    _Pred )
```

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

`__glibcxx_check_partitioned_upper_pred`

```
#define __glibcxx_check_partitioned_upper_pred(
    _First,
    _Last,
    _Value,
    _Pred )
```

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

`__glibcxx_check_sorted_pred`

```
#define __glibcxx_check_sorted_pred(
    _First,
    _Last,
    _Pred )
```

Verify that the iterator range `[_First, _Last)` is sorted by the predicate `_Pred`.

`_GLIBCXX_DEBUG_VERIFY_COND_AT`

```
#define _GLIBCXX_DEBUG_VERIFY_COND_AT(
    _Cond,
    _ErrMsg,
    _File,
    _Line,
    _Func )
```

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

- namespace [__gnu_pbds](#)

6.288.1 Detailed Description

Contains an implementation class for pat_trie_.

6.289 traits.hpp File Reference

Classes

- struct [__gnu_pbds::detail::tree_traits](#)< Key, Mapped, Cmp_Fn, Node_Update, rb_tree_tag, _Alloc >
- struct [__gnu_pbds::detail::tree_traits](#)< Key, null_type, Cmp_Fn, Node_Update, rb_tree_tag, _Alloc >

Namespaces

- namespace [__gnu_pbds](#)

6.289.1 Detailed Description

Contains an implementation for `rb_tree_`.

6.290 traits.hpp File Reference

Classes

- struct [__gnu_pbds::detail::tree_traits< Key, Mapped, Cmp_Fn, Node_Update, splay_tree_tag, _Alloc >](#)
- struct [__gnu_pbds::detail::tree_traits< Key, null_type, Cmp_Fn, Node_Update, splay_tree_tag, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.290.1 Detailed Description

Contains an implementation for `splay_tree_`.

6.291 binary_heap_.hpp File Reference

Classes

- class [__gnu_pbds::detail::binary_heap< Value_Type, Cmp_Fn, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_VALID(X)`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_DEBUG_VERIFY(_Cond)`
- `#define PB_DS_ENTRY_CMP_DEC`
- `#define PB_DS_RESIZE_POLICY_DEC`

6.291.1 Detailed Description

Contains an implementation class for a binary heap.

6.292 const_iterator.hpp File Reference

Classes

- class [__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_BIN_HEAP_CIT_BASE`

6.292.1 Detailed Description

Contains an iterator class returned by the table's `const find` and `insert` methods.

6.293 `const_iterator.hpp` File Reference

Classes

- class `__gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_< Node, _Alloc >`

Namespaces

- namespace `__gnu_pbds`

Macros

- `#define PB_DS_BASIC_HEAP_CIT_BASE`
- `#define PB_DS_CLASS_C_DEC`

6.293.1 Detailed Description

Contains an iterator class returned by the table's `const find` and `insert` methods.

6.294 `const_iterator.hpp` File Reference

6.294.1 Detailed Description

Contains an iterator class used for `const` ranging over the elements of the table.

This file is intended to be included inside a class definition, with `PB_DS_CLASS_C_DEC` defined to the name of the enclosing class.

6.295 `constructors_destructor_fn_imps.hpp` File Reference

6.295.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

6.296 `constructors_destructor_fn_imps.hpp` File Reference

6.296.1 Detailed Description

Contains an implementation class for `binary_heap_`.

6.297 `constructors_destructor_fn_imps.hpp` File Reference

6.297.1 Detailed Description

Contains an implementation for `binomial_heap_`.

6.298 `constructors_destructor_fn_imps.hpp` File Reference

6.298.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.299 constructors_destructor_fn_imps.hpp File Reference**6.299.1 Detailed Description**

Contains an implementation class for left_child_next_sibling_heap_.

6.300 constructors_destructor_fn_imps.hpp File Reference**6.300.1 Detailed Description**

Contains an implementation class for ov_tree_.

6.301 constructors_destructor_fn_imps.hpp File Reference**6.301.1 Detailed Description**

Contains an implementation class for a pairing heap.

6.302 constructors_destructor_fn_imps.hpp File Reference**6.302.1 Detailed Description**

Contains an implementation class for pat_trie.

6.303 constructors_destructor_fn_imps.hpp File Reference**6.303.1 Detailed Description**

Contains an implementation for rb_tree_.

6.304 constructors_destructor_fn_imps.hpp File Reference**6.304.1 Detailed Description**

Contains an implementation for rc_binomial_heap_.

6.305 constructors_destructor_fn_imps.hpp File Reference**6.305.1 Detailed Description**

Contains an implementation class for splay_tree_.

6.306 constructors_destructor_fn_imps.hpp File Reference**6.306.1 Detailed Description**

Contains an implementation for thin_heap_.

6.307 debug_fn_imps.hpp File Reference**6.307.1 Detailed Description**

Contains an implementation class for bin_search_tree_.

6.308 debug_fn_imps.hpp File Reference**6.308.1 Detailed Description**

Contains an implementation class for a binary_heap.

6.309 debug_fn_imps.hpp File Reference

6.309.1 Detailed Description

Contains an implementation for binomial_heap_.

6.310 debug_fn_imps.hpp File Reference

6.310.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.311 debug_fn_imps.hpp File Reference

6.311.1 Detailed Description

Contains implementations of cc_ht_map_'s debug-mode functions.

6.312 debug_fn_imps.hpp File Reference

6.312.1 Detailed Description

Contains implementations of gp_ht_map_'s debug-mode functions.

6.313 debug_fn_imps.hpp File Reference

6.313.1 Detailed Description

Contains an implementation class for left_child_next_sibling_heap_.

6.314 debug_fn_imps.hpp File Reference

6.314.1 Detailed Description

Contains implementations of cc_ht_map_'s debug-mode functions.

6.315 debug_fn_imps.hpp File Reference

6.315.1 Detailed Description

Contains an implementation class for ov_tree_.

6.316 debug_fn_imps.hpp File Reference

6.316.1 Detailed Description

Contains an implementation class for a pairing heap.

6.317 debug_fn_imps.hpp File Reference

6.317.1 Detailed Description

Contains an implementation class for pat_trie_.

6.318 debug_fn_imps.hpp File Reference

6.318.1 Detailed Description

Contains an implementation for rb_tree_.

6.323.1 Detailed Description

Contains an implementation class for a binary_heap.

6.324 erase_fn_imps.hpp File Reference

6.324.1 Detailed Description

Contains an implementation class for bin_search_tree_.

6.325 erase_fn_imps.hpp File Reference

6.325.1 Detailed Description

Contains an implementation class for a binary_heap.

6.326 erase_fn_imps.hpp File Reference

6.326.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.327 erase_fn_imps.hpp File Reference

6.327.1 Detailed Description

Contains implementations of cc_ht_map_'s erase related functions.

6.328 erase_fn_imps.hpp File Reference

6.328.1 Detailed Description

Contains implementations of gp_ht_map_'s erase related functions.

6.329 erase_fn_imps.hpp File Reference

6.329.1 Detailed Description

Contains an implementation class for left_child_next_sibling_heap_.

6.330 erase_fn_imps.hpp File Reference

6.330.1 Detailed Description

Contains implementations of lu_map_.

6.331 erase_fn_imps.hpp File Reference

6.331.1 Detailed Description

Contains an implementation class for ov_tree_.

6.332 erase_fn_imps.hpp File Reference

6.332.1 Detailed Description

Contains an implementation class for a pairing heap.

6.333 erase_fn_imps.hpp File Reference

6.333.1 Detailed Description

Contains an implementation class for pat_trie.

6.334 erase_fn_imps.hpp File Reference

6.334.1 Detailed Description

Contains an implementation for rb_tree_.

6.335 erase_fn_imps.hpp File Reference**6.335.1 Detailed Description**

Contains an implementation for rc_binomial_heap_.

6.336 erase_fn_imps.hpp File Reference**6.336.1 Detailed Description**

Contains an implementation class for splay_tree_.

6.337 erase_fn_imps.hpp File Reference**6.337.1 Detailed Description**

Contains an implementation for thin_heap_.

6.338 find_fn_imps.hpp File Reference**6.338.1 Detailed Description**

Contains an implementation class for bin_search_tree_.

6.339 find_fn_imps.hpp File Reference**6.339.1 Detailed Description**

Contains an implementation class for a binary_heap.

6.340 find_fn_imps.hpp File Reference**6.340.1 Detailed Description**

Contains an implementation class for a base of binomial heaps.

6.341 find_fn_imps.hpp File Reference**6.341.1 Detailed Description**

Contains implementations of cc_ht_map_'s find related functions.

6.342 find_fn_imps.hpp File Reference**6.342.1 Detailed Description**

Contains implementations of gp_ht_map_'s find related functions.

6.343 find_fn_imps.hpp File Reference**6.343.1 Detailed Description**

Contains implementations of lu_map_.

6.344 find_fn_imps.hpp File Reference**6.344.1 Detailed Description**

Contains an implementation class for a pairing heap.

6.345 find_fn_imps.hpp File Reference

6.345.1 Detailed Description

Contains an implementation class for pat_trie.

6.346 find_fn_imps.hpp File Reference

6.346.1 Detailed Description

Contains an implementation for rb_tree_.

6.347 find_fn_imps.hpp File Reference

6.347.1 Detailed Description

Contains an implementation class for splay_tree_.

6.348 find_fn_imps.hpp File Reference

6.348.1 Detailed Description

Contains an implementation for thin_heap_.

6.349 info_fn_imps.hpp File Reference

6.349.1 Detailed Description

Contains an implementation class for bin_search_tree_.

6.350 info_fn_imps.hpp File Reference

6.350.1 Detailed Description

Contains an implementation class for a binary_heap.

6.351 info_fn_imps.hpp File Reference

6.351.1 Detailed Description

Contains implementations of cc_ht_map_'s entire container info related functions.

6.352 info_fn_imps.hpp File Reference

6.352.1 Detailed Description

Contains implementations of gp_ht_map_'s entire container info related functions.

6.353 info_fn_imps.hpp File Reference

6.353.1 Detailed Description

Contains an implementation class for left_child_next_sibling_heap_.

6.354 info_fn_imps.hpp File Reference

6.354.1 Detailed Description

Contains implementations of lu_map_.

6.355 info_fn_imps.hpp File Reference**6.355.1 Detailed Description**

Contains an implementation class for `ov_tree_`.

6.356 info_fn_imps.hpp File Reference**6.356.1 Detailed Description**

Contains an implementation class for `pat_trie`.

6.357 info_fn_imps.hpp File Reference**6.357.1 Detailed Description**

Contains an implementation for `rb_tree_`.

6.358 info_fn_imps.hpp File Reference**6.358.1 Detailed Description**

Contains an implementation.

6.359 insert_fn_imps.hpp File Reference**6.359.1 Detailed Description**

Contains an implementation class for `bin_search_tree_`.

6.360 insert_fn_imps.hpp File Reference**6.360.1 Detailed Description**

Contains an implementation class for a `binary_heap`.

6.361 insert_fn_imps.hpp File Reference**6.361.1 Detailed Description**

Contains an implementation class for a base of binomial heaps.

6.362 insert_fn_imps.hpp File Reference**6.362.1 Detailed Description**

Contains implementations of `cc_ht_map_`'s insert related functions.

6.363 insert_fn_imps.hpp File Reference**6.363.1 Detailed Description**

Contains implementations of `gp_ht_map_`'s insert related functions.

6.364 insert_fn_imps.hpp File Reference**6.364.1 Detailed Description**

Contains an implementation class for `left_child_next_sibling_heap_`.

6.365 insert_fn_imps.hpp File Reference

6.365.1 Detailed Description

Contains implementations of lu_map_.

6.366 insert_fn_imps.hpp File Reference

6.366.1 Detailed Description

Contains an implementation class for ov_tree_.

6.367 insert_fn_imps.hpp File Reference

Contains implementations of cc_ht_map_'s insert related functions, when the hash value is stored.

6.435 insert_store_hash_fn_imps.hpp File Reference

6.435.1 Detailed Description

Contains implementations of gp_ht_map_'s find related functions, when the hash value is stored.

6.436 resize_fn_imps.hpp File Reference

6.436.1 Detailed Description

Contains implementations of cc_ht_map_'s resize related functions.

6.437 resize_fn_imps.hpp File Reference

6.437.1 Detailed Description

Contains implementations of gp_ht_map_'s resize related functions.

6.438 resize_no_store_hash_fn_imps.hpp File Reference

6.438.1 Detailed Description

Contains implementations of cc_ht_map_'s resize related functions, when the hash value is not stored.

6.439 resize_no_store_hash_fn_imps.hpp File Reference

6.439.1 Detailed Description

Contains implementations of gp_ht_map_'s resize related functions, when the hash value is not stored.

6.440 resize_store_hash_fn_imps.hpp File Reference

6.440.1 Detailed Description

Contains implementations of cc_ht_map_'s resize related functions, when the hash value is stored.

6.441 resize_store_hash_fn_imps.hpp File Reference

6.441.1 Detailed Description

Contains implementations of gp_ht_map_'s resize related functions, when the hash value is stored.

6.442 size_fn_imps.hpp File Reference

6.442.1 Detailed Description

Contains implementations of cc_ht_map_'s entire container size related functions.

6.443 cond_dealtor.hpp File Reference

Classes

- class [__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.443.1 Detailed Description

Contains a conditional deallocator.

6.444 container_base_dispatch.hpp File Reference

Classes

- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, cc_hash_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, gp_hash_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, list_update_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, ov_tree_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, pat_trie_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, rb_tree_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, Mapped, _Alloc, splay_tree_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, cc_hash_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, gp_hash_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, list_update_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, ov_tree_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, pat_trie_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, rb_tree_tag, Policy_TI >](#)
- struct [__gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, splay_tree_tag, Policy_TI >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_VALID(X)`
- `#define PB_DS_CHECK_KEY_DOES_NOT_EXIST(_Key)`
- `#define PB_DS_CHECK_KEY_EXISTS(_Key)`
- `#define PB_DS_DATA_FALSE_INDICATOR`
- `#define PB_DS_DATA_TRUE_INDICATOR`
- `#define PB_DS_DEBUG_VERIFY(_Cond)`
- `#define PB_DS_EP2VP(X)`
- `#define PB_DS_EP2VP(X)`
- `#define PB_DS_V2F(X)`
- `#define PB_DS_V2F(X)`
- `#define PB_DS_V2S(X)`
- `#define PB_DS_V2S(X)`

6.444.1 Detailed Description

Contains associative container dispatching.

6.445 debug_map_base.hpp File Reference

6.445.1 Detailed Description

Contains a debug-mode base for all maps.

6.446 `eq_by_less.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::eq_by_less< Key, Cmp_Fn >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.446.1 Detailed Description

Contains an equivalence function.

6.447 `hash_eq_fn.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, false >](#)
- struct [__gnu_pbds::detail::hash_eq_fn< Key, Eq_Fn, _Alloc, true >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.447.1 Detailed Description

Contains 2 equivalence functions, one employing a hash value, and one ignoring it.

6.448 `find_no_store_hash_fn_imps.hpp` File Reference

6.448.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is not stored.

6.449 `gp_ht_map_.hpp` File Reference

Classes

- class [__gnu_pbds::detail::gp_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Probe_Fn, Probe_Fn, Resize_](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_GEN_POS`
- `#define PB_DS_GP_HASH_NAME`
- `#define PB_DS_GP_HASH_TRAITS_BASE`
- `#define PB_DS_HASH_EQ_FN_C_DEC`
- `#define PB_DS_RANGED_PROBE_FN_C_DEC`

6.449.1 Detailed Description

Contains an implementation class for general probing hash.

6.450 iterator_fn_imps.hpp File Reference

6.450.1 Detailed Description

Contains implementations of gp_ht_map_'s iterators related functions, e.g., begin().

6.451 direct_mask_range_hashing_imp.hpp File Reference

6.451.1 Detailed Description

Contains a range-hashing policy implementation

6.452 direct_mod_range_hashing_imp.hpp File Reference

6.452.1 Detailed Description

Contains a range-hashing policy implementation

6.453 linear_probe_fn_imp.hpp File Reference

6.453.1 Detailed Description

Contains a probe policy implementation

6.454 mask_based_range_hashing.hpp File Reference

Classes

- class [__gnu_pbds::detail::mask_based_range_hashing< Size_Type >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.454.1 Detailed Description

Contains a range hashing policy base.

6.455 mod_based_range_hashing.hpp File Reference

Classes

- class [__gnu_pbds::detail::mod_based_range_hashing< Size_Type >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.455.1 Detailed Description

Contains a range hashing policy base.

6.456 probe_fn_base.hpp File Reference

Classes

- class [__gnu_pbds::detail::probe_fn_base<_Alloc>](#)

Namespaces

- namespace [__gnu_pbds](#)

6.456.1 Detailed Description

Contains a probe policy base.

6.457 quadratic_probe_fn_imp.hpp File Reference

6.457.1 Detailed Description

Contains a probe policy implementation

6.458 ranged_hash_fn.hpp File Reference

Classes

- class [__gnu_pbds::detail::ranged_hash_fn<Key, Hash_Fn, _Alloc, Comb_Hash_Fn, false>](#)
- class [__gnu_pbds::detail::ranged_hash_fn<Key, Hash_Fn, _Alloc, Comb_Hash_Fn, true>](#)
- class [__gnu_pbds::detail::ranged_hash_fn<Key, null_type, _Alloc, Comb_Hash_Fn, false>](#)
- class [__gnu_pbds::detail::ranged_hash_fn<Key, null_type, _Alloc, Comb_Hash_Fn, true>](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_CLASS_T_DEC`

6.458.1 Detailed Description

Contains a unified ranged hash functor, allowing the hash tables to deal with a single class for ranged hashing.

6.459 ranged_probe_fn.hpp File Reference

Classes

- class [__gnu_pbds::detail::ranged_probe_fn<Key, Hash_Fn, _Alloc, Comb_Probe_Fn, Probe_Fn, false>](#)
- class [__gnu_pbds::detail::ranged_probe_fn<Key, Hash_Fn, _Alloc, Comb_Probe_Fn, Probe_Fn, true>](#)
- class [__gnu_pbds::detail::ranged_probe_fn<Key, null_type, _Alloc, Comb_Probe_Fn, null_type, false>](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_CLASS_T_DEC`

6.459.1 Detailed Description

Contains a unified ranged probe functor, allowing the probe tables to deal with a single class for ranged probing.

6.460 sample_probe_fn.hpp File Reference

Classes

- class [__gnu_pbds::sample_probe_fn](#)

Namespaces

- namespace [__gnu_pbds](#)

6.460.1 Detailed Description

Contains a sample probe policy.

6.461 sample_range_hashing.hpp File Reference

Classes

- class [__gnu_pbds::sample_range_hashing](#)

Namespaces

- namespace [__gnu_pbds](#)

6.461.1 Detailed Description

Contains a range hashing policy.

6.462 sample_ranged_hash_fn.hpp File Reference

Classes

- class [__gnu_pbds::sample_ranged_hash_fn](#)

Namespaces

- namespace [__gnu_pbds](#)

6.462.1 Detailed Description

Contains a ranged hash policy.

6.463 `sample_ranged_probe_fn.hpp` File Reference

Classes

- class [__gnu_pbds::sample_ranged_probe_fn](#)

Namespaces

- namespace [__gnu_pbds](#)

6.463.1 Detailed Description

Contains a ranged probe policy.

6.464 `left_child_next_sibling_heap_.hpp` File Reference

Classes

- class [__gnu_pbds::detail::left_child_next_sibling_heap< Value_Type, Cmp_Fn, Node_Metadata, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`

6.464.1 Detailed Description

Contains an implementation class for a basic heap.

6.465 `node.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::left_child_next_sibling_heap_node< _Value, _Metadata, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.465.1 Detailed Description

Contains an implementation struct for this type of heap's node.

6.466 `node.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::rb_tree_node< Value_Type, Metadata, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.466.1 Detailed Description

Contains an implementation for rb_tree_.

6.467 node.hpp File Reference

Classes

- struct [__gnu_pbds::detail::splay_tree_node_< Value_Type, Metadata, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.467.1 Detailed Description

Contains an implementation struct for splay_tree_'s node.

6.468 entry_metadata_base.hpp File Reference

Namespaces

- namespace [__gnu_pbds](#)

6.468.1 Detailed Description

Contains an implementation for a list update map.

6.469 lu_map_.hpp File Reference

Classes

- class [__gnu_pbds::detail::lu_map< Key, Mapped, Eq_Fn, _Alloc, Update_Policy >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- #define **PB_DS_CLASS_C_DEC**
- #define **PB_DS_CLASS_T_DEC**
- #define **PB_DS_GEN_POS**
- #define **PB_DS_LU_NAME**
- #define **PB_DS_LU_TRAITS_BASE**

6.469.1 Detailed Description

Contains a list update map.

6.470 lu_counter_metadata.hpp File Reference

Classes

- class [__gnu_pbds::detail::lu_counter_metadata< Size_Type >](#)
- class [__gnu_pbds::detail::lu_counter_policy_base< Size_Type >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.470.1 Detailed Description

Contains implementation of a lu counter policy's metadata.

6.471 sample_update_policy.hpp File Reference**Classes**

- struct [__gnu_pbds::sample_update_policy](#)

Namespaces

- namespace [__gnu_pbds](#)

6.471.1 Detailed Description

Contains a sample policy for list update containers.

6.472 ov_tree_map_.hpp File Reference**Classes**

- class [__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor< Size_Type >](#)
- class [__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_CONST_NODE_ITERATOR_NAME`
- `#define PB_DS_OV_TREE_NAME`
- `#define PB_DS_OV_TREE_TRAITS_BASE`

6.472.1 Detailed Description

Contains an implementation class for ov_tree.

6.473 pairing_heap_.hpp File Reference**Classes**

- class [__gnu_pbds::detail::pairing_heap< Value_Type, Cmp_Fn, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_NODE_CONSISTENT(_Node, _Bool)`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_P_HEAP_BASE`

6.473.1 Detailed Description

Contains an implementation class for a pairing heap.

6.474 insert_join_fn_imps.hpp File Reference**6.474.1 Detailed Description**

Contains an implementation class for pat_trie.

6.475 pat_trie.hpp File Reference**Classes**

- class [__gnu_pbds::detail::pat_trie_map< Key, Mapped, Node_And_It_Traits, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_NODE_VALID(X)`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_PAT_TRIE_NAME`
- `#define PB_DS_PAT_TRIE_TRAITS_BASE`
- `#define PB_DS_RECURSIVE_COUNT_LEAFS(X)`

6.475.1 Detailed Description

Contains an implementation class for a patricia tree.

6.476 pat_trie_base.hpp File Reference**Classes**

- class [__gnu_pbds::detail::pat_trie_base::_Clter< Node, Leaf, Head, Inode, Is_Forward_Iterator >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Head< _ATraits, Metadata >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >](#)
- class [__gnu_pbds::detail::pat_trie_base::_Iter< Node, Leaf, Head, Inode, Is_Forward_Iterator >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Node_base< _ATraits, Metadata >](#)
- class [__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _Clterator, Iterator, _Alloc >](#)
- class [__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _Clterator, Iterator, _Alloc >](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::const_iterator](#)
- struct [__gnu_pbds::detail::pat_trie_base::_Inode< _ATraits, Metadata >::iterator](#)
- struct [__gnu_pbds::detail::pat_trie_base](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- #define **PB_DS_CLASS_C_DEC**
- #define **PB_DS_CLASS_T_DEC**
- #define **PB_DS_CONST_IT_C_DEC**
- #define **PB_DS_CONST_ODIR_IT_C_DEC**
- #define **PB_DS_IT_C_DEC**
- #define **PB_DS_ODIR_IT_C_DEC**
- #define **PB_DS_PAT_TRIE_NODE_CONST_ITERATOR_C_DEC**
- #define **PB_DS_PAT_TRIE_NODE_ITERATOR_C_DEC**

6.476.1 Detailed Description

Contains the base class for a patricia tree.

6.477 split_fn_imps.hpp File Reference

6.477.1 Detailed Description

Contains an implementation class for pat_trie.

6.478 synth_access_traits.hpp File Reference

Classes

- struct [__gnu_pbds::detail::synth_access_traits< Type_Traits, Set, _ATraits >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- #define **PB_DS_SYNTH_E_ACCESS_TRAITS_C_DEC**
- #define **PB_DS_SYNTH_E_ACCESS_TRAITS_T_DEC**

6.478.1 Detailed Description

Contains an implementation class for a patricia tree.

6.479 update_fn_imps.hpp File Reference

6.479.1 Detailed Description

Contains an implementation class for pat_trie_.

6.480 priority_queue_base_dispatch.hpp File Reference

Classes

- struct [__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binary_heap_tag, null_type>](#)
- struct [__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, binomial_heap_tag, null_type>](#)
- struct [__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, pairing_heap_tag, null_type>](#)
- struct [__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, rc_binomial_heap_tag, null_type>](#)
- struct [__gnu_pbds::detail::container_base_dispatch<_VTp, Cmp_Fn, _Alloc, thin_heap_tag, null_type>](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_VALID(X)`
- `#define PB_DS_DEBUG_VERIFY(_Cond)`

6.480.1 Detailed Description

Contains an pqiative container dispatching base.

6.481 rb_tree_.hpp File Reference

Classes

- class [__gnu_pbds::detail::rb_tree_map<Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc>](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_RB_TREE_BASE`
- `#define PB_DS_RB_TREE_BASE_NAME`
- `#define PB_DS_RB_TREE_NAME`
- `#define PB_DS_STRUCT_ONLY_ASSERT_VALID(X)`

6.481.1 Detailed Description

Contains an implementation for Red Black trees.

6.482 rc.hpp File Reference

Classes

- class [__gnu_pbds::detail::rc<_Node, _Alloc>](#)

Namespaces

- namespace [__gnu_pbds](#)

6.482.1 Detailed Description

Contains a redundant (binary counter).

6.483 rc_binomial_heap_.hpp File Reference

Classes

- class [__gnu_pbds::detail::rc_binomial_heap< Value_Type, Cmp_Fn, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- #define **PB_DS_CLASS_C_DEC**
- #define **PB_DS_CLASS_T_DEC**
- #define **PB_DS_RC_C_DEC**

6.483.1 Detailed Description

Contains an implementation for redundant-counter binomial heap.

6.484 cc_hash_max_collision_check_resize_trigger_imp.hpp File Reference

6.484.1 Detailed Description

Contains a resize trigger implementation.

6.485 hash_exponential_size_policy_imp.hpp File Reference

6.485.1 Detailed Description

Contains a resize size policy implementation.

6.486 hash_load_check_resize_trigger_imp.hpp File Reference

6.486.1 Detailed Description

Contains a resize trigger implementation.

6.487 hash_load_check_resize_trigger_size_base.hpp File Reference

Classes

- class [__gnu_pbds::detail::hash_load_check_resize_trigger_size_base< Size_Type, true >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.487.1 Detailed Description

Contains an base holding size for some resize policies.

6.488 hash_prime_size_policy_imp.hpp File Reference

6.488.1 Detailed Description

Contains a resize size policy implementation.

6.489 hash_standard_resize_policy_imp.hpp File Reference

6.489.1 Detailed Description

Contains a resize policy implementation.

6.490 sample_resize_policy.hpp File Reference

Classes

- class [__gnu_pbds::sample_resize_policy](#)

Namespaces

- namespace [__gnu_pbds](#)

6.490.1 Detailed Description

Contains a sample resize policy for hash tables.

6.491 sample_resize_trigger.hpp File Reference

Classes

- class [__gnu_pbds::sample_resize_trigger](#)

Namespaces

- namespace [__gnu_pbds](#)

6.491.1 Detailed Description

Contains a sample resize trigger policy class.

6.492 sample_size_policy.hpp File Reference

Classes

- class [__gnu_pbds::sample_size_policy](#)

Namespaces

- namespace [__gnu_pbds](#)

6.492.1 Detailed Description

Contains a sample size resize-policy.

6.493 `splay_fn_imps.hpp` File Reference

6.493.1 Detailed Description

Contains an implementation class for `splay_tree_`.

6.494 `splay_tree_.hpp` File Reference

Classes

- class [__gnu_pbds::detail::splay_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_BASE_NODE_CONSISTENT(_Node)`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_S_TREE_BASE`
- `#define PB_DS_S_TREE_BASE_NAME`
- `#define PB_DS_S_TREE_NAME`

6.494.1 Detailed Description

Contains an implementation class for splay trees.

6.495 `standard_policies.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::default_comb_hash_fn](#)
- struct [__gnu_pbds::detail::default_eq_fn< Key >](#)
- struct [__gnu_pbds::detail::default_hash_fn< Key >](#)
- struct [__gnu_pbds::detail::default_probe_fn< Comb_Probe_Fn >](#)
- struct [__gnu_pbds::detail::default_resize_policy< Comb_Hash_Fn >](#)
- struct [__gnu_pbds::detail::default_trie_access_traits< std::basic_string< Char, Char_Traits, std::allocator< char > > >](#)
- struct [__gnu_pbds::detail::default_update_policy](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define __dtrie_alloc`
- `#define __dtrie_string`

Enumerations

- enum { `default_store_hash` }

6.495.1 Detailed Description

Contains standard policies for containers.

6.495.2 Enumeration Type Documentation

anonymous enum

`anonymous enum`

Enumeration for default behavior of stored hash data.

6.496 thin_heap.hpp File Reference

Classes

- class [__gnu_pbds::detail::thin_heap< Value_Type, Cmp_Fn, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_ASSERT_AUX_NULL(X)`
- `#define PB_DS_ASSERT_NODE_CONSISTENT(_Node, _Bool)`
- `#define PB_DS_BASE_T_P`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`

Enumerations

- enum { `num_distinct_rank_bounds` }

Variables

- static const std::size_t [__gnu_pbds::detail::g_a_rank_bounds](#) [num_distinct_rank_bounds]

6.496.1 Detailed Description

Contains an implementation class for a thin heap.

6.497 node_metadata_selector.hpp File Reference

Classes

- struct [__gnu_pbds::detail::tree_metadata_helper< Node_Update, false >](#)
- struct [__gnu_pbds::detail::tree_metadata_helper< Node_Update, true >](#)
- struct [__gnu_pbds::detail::tree_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.497.1 Detailed Description

Contains an implementation class for trees.

6.498 node_metadata_selector.hpp File Reference

Classes

- struct [__gnu_pbds::detail::trie_metadata_helper< Node_Update, false >](#)
- struct [__gnu_pbds::detail::trie_metadata_helper< Node_Update, true >](#)
- struct [__gnu_pbds::detail::trie_node_metadata_dispatch< Key, Data, Cmp_Fn, Node_Update, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.498.1 Detailed Description

Contains an implementation class for tries.

6.499 order_statistics_imp.hpp File Reference

6.499.1 Detailed Description

Contains forward declarations for order_statistics_key

6.500 order_statistics_imp.hpp File Reference

6.500.1 Detailed Description

Contains forward declarations for order_statistics_key

6.501 sample_tree_node_update.hpp File Reference

Classes

- class [__gnu_pbds::sample_tree_node_update< Const_Node_Iter, Node_Iter, Cmp_Fn, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.501.1 Detailed Description

Contains a samle node update functor.

6.502 tree_trace_base.hpp File Reference

6.502.1 Detailed Description

Contains tree-related policies.

6.503 prefix_search_node_update_imp.hpp File Reference

6.503.1 Detailed Description

Contains an implementation of prefix_search_node_update.

6.504 sample_trie_access_traits.hpp File Reference

Classes

- struct [__gnu_pbds::sample_trie_access_traits](#)

Namespaces

- namespace [__gnu_pbds](#)

6.504.1 Detailed Description

Contains a sample probe policy.

6.505 sample_trie_node_update.hpp File Reference

Classes

- class [__gnu_pbds::sample_trie_node_update](#)< Node_Cltr, Node_Itr, ATraits, _Alloc >

Namespaces

- namespace [__gnu_pbds](#)

6.505.1 Detailed Description

Contains a samle node update functor.

6.506 trie_policy_base.hpp File Reference

Classes

- class [__gnu_pbds::detail::trie_policy_base](#)< Node_Cltr, Node_Itr, ATraits, _Alloc >

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`

6.506.1 Detailed Description

Contains an implementation of trie_policy_base.

6.507 trie_string_access_traits_imp.hpp File Reference

6.507.1 Detailed Description

Contains a policy for extracting character positions from a string for a vector-based PATRICIA tree

6.508 type_utils.hpp File Reference

Namespaces

- namespace [__gnu_pbds](#)

Macros

- `#define PB_DS_STATIC_ASSERT(UNIQUE, E)`

Typedefs

- `typedef std::tr1::integral_constant< int, 0 > __gnu_pbds::detail::false_type`
- `typedef std::tr1::integral_constant< int, 1 > __gnu_pbds::detail::true_type`

6.508.1 Detailed Description

Contains utilities for handling types. All of these classes are based on Modern C++ by Andrei Alexandrescu.

6.509 types_traits.hpp File Reference

Classes

- [struct __gnu_pbds::detail::maybe_null_type< Key, Mapped, _Alloc, Store_Hash >](#)
- [struct __gnu_pbds::detail::maybe_null_type< Key, null_type, _Alloc, Store_Hash >](#)
- [struct __gnu_pbds::detail::no_throw_copies< Key, Mapped >](#)
- [struct __gnu_pbds::detail::no_throw_copies< Key, null_type >](#)
- [struct __gnu_pbds::detail::rebind_traits< _Alloc, T >](#)
- [struct __gnu_pbds::detail::select_value_type< Key, Mapped >](#)
- [struct __gnu_pbds::detail::select_value_type< Key, null_type >](#)
- [struct __gnu_pbds::detail::stored_data< _Tv, _Th, Store_Hash >](#)
- [struct __gnu_pbds::detail::stored_data< _Tv, _Th, false >](#)
- [struct __gnu_pbds::detail::stored_hash< _Th >](#)
- [struct __gnu_pbds::detail::stored_value< _Tv >](#)
- [struct __gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.509.1 Detailed Description

Contains a traits class of types used by containers.

6.510 iterator.hpp File Reference

6.510.1 Detailed Description

Contains an `iterator_class` used for ranging over the elements of the table.

This file is intended to be included inside a class definition, with `PB_DS_CLASS_C_DEC` defined to the name of the enclosing class.

6.511 point_iterator.hpp File Reference

6.511.1 Detailed Description

Contains an iterator class returned by the tables' find and insert methods.

This file is intended to be included inside a class definition, with `PB_DS_CLASS_C_DEC` defined to the name of the enclosing class.

6.512 exception.hpp File Reference

Classes

- struct [__gnu_pbds::container_error](#)
- struct [__gnu_pbds::insert_error](#)
- struct [__gnu_pbds::join_error](#)
- struct [__gnu_pbds::resize_error](#)

Namespaces

- namespace [__gnu_pbds](#)

Functions

- void [__gnu_pbds::__throw_container_error\(\)](#)
- void [__gnu_pbds::__throw_insert_error\(\)](#)
- void [__gnu_pbds::__throw_join_error\(\)](#)
- void [__gnu_pbds::__throw_resize_error\(\)](#)

6.512.1 Detailed Description

Contains exception classes.

6.513 hash_policy.hpp File Reference

Classes

- class [__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >](#)
- class [__gnu_pbds::direct_mask_range_hashing< Size_Type >](#)

- `#define PB_DS_SIZE_BASE_C_DEC`

6.513.1 Detailed Description

Contains hash-related policies.

6.514 `list_update_policy.hpp` File Reference

Classes

- class [__gnu_pbds::lu_counter_policy< Max_Count, _Alloc >](#)
- class [__gnu_pbds::lu_move_to_front_policy< _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.514.1 Detailed Description

Contains policies for list update containers.

6.515 `priority_queue.hpp` File Reference

Classes

- class [__gnu_pbds::priority_queue< _Tv, Cmp_Fn, Tag, _Alloc >](#)

Namespaces

- namespace [__gnu_pbds](#)

6.515.1 Detailed Description

Contains priority_queues.

6.516 `tag_and_trait.hpp` File Reference

Classes

6.520.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Author

Bob Walters

Provides reusable `_Pointer_adapter` for assisting in the development of custom pointer types that can be used with the standard containers via the `allocator::pointer` and `allocator::const_pointer` typedefs.

6.521 `pool_allocator.h` File Reference

Classes

- class `__gnu_cxx::pool_alloc< _Tp >`
- class `__gnu_cxx::pool_alloc_base`

Namespaces

6.531.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (`throw_value`, `throw_allocator`) intended to be used as value and allocator types while testing exception safety in templized containers and algorithms. The allocator has additional log and debug features. The exception generated is of type `forced_exception_error`.

6.551.1 Detailed Description

This is a Standard C++ Library header.

6.552 iostream File Reference

Namespaces

- namespace [std](#)

Macros

- `#define _GLIBCXX_ISTREAM`

Variables

- static `ios_base::Init` `std::__ioinit`

Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html> and the [I/O forward declarations](#)

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.

- `ostream` `std::cerr`
- `istream` `std::cin`
- `ostream` `std::clog`
- `ostream` `std::cout`
- `wostream` `std::wcerr`
- `wistream` `std::wcin`
- `wostream` `std::wclog`
- `wostream` `std::wcout`

6.570.1 Detailed Description

This is a TS C++ Library header.

6.570.2 Function Documentation

`get_default_resource()`

```
memory_resource * std::experimental::fundamentals_v2::pmr::get_default_resource ( ) [inline],  
[noexcept]
```

Get the current default resource.

`set_default_resource()`

```
memory_resource * std::experimental::fundamentals_v2::pmr::set_default_resource (  
    memory_resource * __r ) [inline], [noexcept]
```

Change the default resource and return the previous one.

6.577.1 Detailed Description

Parallel STL function calls corresponding to `stl_numeric.h`. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

6.581.1 Detailed Description

Parallel STL function calls corresponding to the `stl_algo.h` header.

The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

6.583.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort.

It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

6.584.1 Detailed Description

Sequential helper functions. This file is a GNU parallel extension to the Standard C++ Library.

6.585 basic_iterator.h File Reference

6.585.1 Detailed Description

Includes the original header files concerned with iterators except for stream iterators. This file is a GNU parallel extension to the Standard C++ Library.

6.586 checkers.h File Reference

Namespaces

- namespace [__gnu_parallel](#)

Functions

- `template<typename _Iter, typename _Compare >`
`bool __gnu_parallel::__is_sorted (_Iter __begin, _Iter __end, _Compare __comp)`

6.586.1 Detailed Description

Routines for checking the correctness of algorithm results. This file is a GNU parallel extension to the Standard C++ Library.

6.587 compiletime_settings.h File Reference

Macros

- `#define _GLIBCXX_CALL(__n)`
- `#define _GLIBCXX_PARALLEL_ASSERTIONS`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`
- `#define _GLIBCXX_SCALE_DOWN_FPU`
- `#define _GLIBCXX_VERBOSE_LEVEL`

6.587.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

6.587.2 Macro Definition Documentation

[_GLIBCXX_CALL](#)

```
#define _GLIBCXX_CALL(  
    __n )
```

Macro to produce log message when entering a function.

Parameters

_↔ _n	Input size.
---------------------------	-------------

See also

[_GLIBCXX_VERBOSE_LEVEL](#)

[_GLIBCXX_PARALLEL_ASSERTIONS](#)

```
#define _GLIBCXX_PARALLEL_ASSERTIONS
```

Switch on many [_GLIBCXX_PARALLEL_ASSERTIONS](#) in parallel code. Should be switched on only locally.

`_GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`

```
#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1
```

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the L1 cache for `gnu_parallel::__parallel_random_shuffle()`.

`_GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`

```
#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB
```

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the TLB for `gnu_parallel::__parallel_random_shuffle()`.

`_GLIBCXX_SCALE_DOWN_FPU`

```
#define _GLIBCXX_SCALE_DOWN_FPU
```

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

`_GLIBCXX_VERBOSE_LEVEL`

```
#define _GLIBCXX_VERBOSE_LEVEL
```

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

`__gnu_parallel::Settings::find_algorithm`

`_GLIBCXX_FIND_GROWING_BLOCKS`

```
#define _GLIBCXX_FIND_GROWING_BLOCKS
```

Include the growing blocks variant for `std::find`.

See also

`__gnu_parallel::Settings::find_algorithm`

`_GLIBCXX_MERGESORT`

```
#define _GLIBCXX_MERGESORT
```

Include parallel multi-way mergesort.

See also

`__gnu_parallel::Settings::sort_algorithm`

`_GLIBCXX_QUICKSORT`

```
#define _GLIBCXX_QUICKSORT
```

Include parallel unbalanced quicksort.

See also

`__gnu_parallel::Settings::sort_algorithm`

`_GLIBCXX_TREE_DYNAMIC_BALANCING`

```
#define _GLIBCXX_TREE_DYNAMIC_BALANCING
```

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

`_GLIBCXX_TREE_FULL_COPY`

```
#define _GLIBCXX_TREE_FULL_COPY
```

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

See also

`__gnu_parallel::_Rb_tree`

`_GLIBCXX_TREE_INITIAL_SPLITTING`

```
#define _GLIBCXX_TREE_INITIAL_SPLITTING
```

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

6.598.1 Detailed Description

Functions to find elements of a certain global `__rank` in multiple sorted sequences. Also serves for splitting such sequence sets.

The algorithm description can be found in

P. J. Varman, S. D. Scheufler, B. R. Iyer, and G. R. Ricard. Merging Multiple Lists on Hierarchical-Memory Multiprocessors. *Journal of Parallel and Distributed Computing*, 12(2):171-177, 1991.

This file is a GNU parallel extension to the Standard C++ Library.

6.599 multiway_merge.h File Reference

6.599.1 Detailed Description

Implementation of sequential and parallel multiway merge.

Explanations on the high-speed merging routines in the appendix of

P. Sanders. Fast priority queues for cached memory. ACM Journal of Experimental Algorithmics, 5, 2000.

This file is a GNU parallel extension to the Standard C++ Library.

6.599.2 Macro Definition Documentation

`_GLIBCXX_PARALLEL_LENGTH`

```
#define _GLIBCXX_PARALLEL_LENGTH(  
    __s )
```

Length of a sequence described by a pair of iterators.

6.613.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

6.614 settings.h File Reference

Classes

- struct [__gnu_parallel::Settings](#)

Namespaces

- namespace [__gnu_parallel](#)

Macros

- `#define _GLIBCXX_PARALLEL_CONDITION(__c)`

6.614.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

6.614.2 Deciding whether to run an algorithm in parallel.

There are several ways the user can switch on and off the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel↵::sequential_tag()` to the end of the parameter list, e. g.

```
std::sort(__v.begin(), __v.end(), __gnu_parallel::sequential_tag());
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. It is a tristate variable corresponding to:

- a. `force_sequential`, meaning the sequential algorithm is executed.
- b. `force_parallel`, meaning the parallel algorithm is executed.
- c. `heuristic`

For heuristic, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`__s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

6.614.3 Macro Definition Documentation

`_GLIBCXX_PARALLEL_CONDITION`

```
#define _GLIBCXX_PARALLEL_CONDITION(
    __c )
```

Determine at compile(?)-time if the parallel variant of an algorithm should be called.

Parameters

<code>__c</code>	A condition that is convertible to bool that is overruled by <code>__gnu_parallel::_Settings::algorithm_strategy</code> .
<code>__c</code>	Usually a decision based on the input size.

6.659.1 Detailed Description

This is a TS C++ Library header.

This header defines variable templates for the C++14 type traits.

Equivalent variable templates are defined in namespace `std` since C++17.

6.689.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<system_error>`.

6.690 extc++.h File Reference

6.690.1 Detailed Description

This is an implementation file for a precompiled header.

6.691 messages_members.h File Reference

Namespaces

- namespace [std](#)

6.691.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

6.692 opt_random.h File Reference

Namespaces

- namespace [std](#)

6.692.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<random>`.

6.693 os_defines.h File Reference

Macros

- `#define __NO_CTYPE`
- `#define _GLIBCXX_NATIVE_THREAD_ID`
- `#define _GLIBCXX_NO_OBSOLETE_ISINF_ISNAN_DYNAMIC`

6.693.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iosfwd>`.

6.694 stdc++.h File Reference

6.694.1 Detailed Description

This is an implementation file for a precompiled header.

6.695 stdtr1c++.h File Reference

6.695.1 Detailed Description

This is an implementation file for a precompiled header.

6.696 time_members.h File Reference

Namespaces

- namespace [std](#)

6.696.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.
