<code>__begin1</code>	Begin iterator of first sequence.
<code>__end1</code>	End iterator of first sequence.
<code>__begin2</code>	Begin iterator of second sequence.
<code>__pred</code>	Find predicate.

[operator\(\)\(\)](#)

```
template<typename _RAIter1, typename _RAIter2, typename _Pred >
bool __gnu_parallel::__mismatch_selector::operator() (
    _RAIter1 __i1,
    _RAIter2 __i2,
    _Pred __pred ) [inline]
```

Test on one position.

Parameters

<code>__i1</code>	_Iterator on first sequence.
<code>__i2</code>	_Iterator on second sequence (unused).
<code>__pred</code>	Find predicate.

6.35 `__gnu_cxx::__mt_alloc< _Tp, _Poolp >` Class Template Reference

```
#include <mt_allocator.h>
```

Inheritance diagram for `__gnu_cxx::__mt_alloc<_Tp, _Poolp>`:

Public Types

- `typedef _Poolp __policy_type`
- `typedef _Poolp::pool_type __pool_type`
- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef std::ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef std::true_type propagate_on_container_move_assignment`
- `typedef _Tp & reference`
- `typedef std::size_t size_type`
- `typedef _Tp value_type`

Public Member Functions

- `__mt_alloc` (const [__mt_alloc](#) &) noexcept
- `template<typename _Tp1, typename _Poolp1 > __mt_alloc` (const [__mt_alloc](#)<_Tp1, _Poolp1 > &) noexcept
- `const __pool_base::_Tune M_get_options ()`
- `void M_set_options (__pool_base::_Tune __t)`
- `const_pointer address (const_reference __x) const noexcept`
- `pointer address (reference __x) const noexcept`
- `pointer allocate (size_type __n, const void * = 0)`
- `template<typename _Up, typename... _Args> void construct (_Up * __p, _Args &&... __args)`
- `void deallocate (pointer __p, size_type __n)`
- `template<typename _Up > void destroy (_Up * __p)`
- `size_type max_size () const noexcept`

6.35.1 Detailed Description

```
template<typename _Tp, typename _Poolp = __common_pool_policy<__pool, true >>
class __gnu_cxx::__mt_alloc< _Tp, _Poolp >
```

This is a fixed size (power of 2) allocator which - when compiled with thread support - will maintain one freelist per size per thread plus a *global* one. Steps are taken to limit the per thread freelist sizes (by returning excess back to the *global* list).

Further details: https://gcc.gnu.org/onlinedocs/libstdc++/manual/mt_allocator.html

6.44.1 Detailed Description

Part of std::numeric_limits.

The `static const` members are usable as integral constant expressions.

Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the std::numeric_limits class.

6.44.2 Member Data Documentation

digits

```
constexpr int std::__numeric_limits_base::digits [static], [constexpr]
```

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

digits10

```
constexpr int std::__numeric_limits_base::digits10 [static], [constexpr]
```

The number of base 10 digits that can be represented without change.

has_denorm

```
constexpr float\_denorm\_style std::__numeric_limits_base::has_denorm [static], [constexpr]
```

See std::float_denorm_style for more information.

has_denorm_loss

`constexpr bool std::__numeric_limits_base::has_denorm_loss [static], [constexpr]`
True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.

has_infinity

`constexpr bool std::__numeric_limits_base::has_infinity [static], [constexpr]`
True if the type has a representation for positive infinity.

has_quiet_NaN

`constexpr bool std::__numeric_limits_base::has_quiet_NaN [static], [constexpr]`
True if the type has a representation for a quiet (non-signaling) Not a Number.

has_signaling_NaN

`constexpr bool std::__numeric_limits_base::has_signaling_NaN [static], [constexpr]`
True if the type has a representation for a signaling Not a Number.

is_bounded

`constexpr bool std::__numeric_limits_base::is_bounded [static], [constexpr]`
True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.

is_exact

`constexpr bool std::__numeric_limits_base::is_exact [static], [constexpr]`
True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.

is_iec559

`constexpr bool std::__numeric_limits_base::is_iec559 [static], [constexpr]`
True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

is_integer

`constexpr bool std::__numeric_limits_base::is_integer [static], [constexpr]`
True if the type is integer.

is_modulo

`constexpr bool std::__numeric_limits_base::is_modulo [static], [constexpr]`
True if the type is *modulo*. A type is modulo if, for any operation involving +, -, or * on values of that type whose result would fall outside the range [min(),max()), the value returned differs from the true value by an integer multiple of max() - min() + 1. On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

is_signed

```
constexpr bool std::__numeric_limits_base::is_signed [static], [constexpr]
```

True if the type is signed.

is_specialized

```
constexpr bool std::__numeric_limits_base::is_specialized [static], [constexpr]
```

This will be true for all fundamental types (which have specializations), and false for everything else.

max_digits10

```
constexpr int std::__numeric_limits_base::max_digits10 [static], [constexpr]
```

The number of base 10 digits required to ensure that values which differ are always differentiated.

max_exponent

```
constexpr int std::__numeric_limits_base::max_exponent [static], [constexpr]
```

The maximum positive integer such that `radix` raised to the power of (one less than that integer) is a representable finite floating point number.

max_exponent10

```
constexpr int std::__numeric_limits_base::max_exponent10 [static], [constexpr]
```

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

min_exponent

```
constexpr int std::__numeric_limits_base::min_exponent [static], [constexpr]
```

The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

min_exponent10

```
constexpr int std::__numeric_limits_base::min_exponent10 [static], [constexpr]
```

The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

radix

```
constexpr int std::__numeric_limits_base::radix [static], [constexpr]
```

For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

round_style

```
constexpr float_round_style std::__numeric_limits_base::round_style [static], [constexpr]
```

See `std::float_round_style` for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

tinyness_before

`constexpr bool std::__numeric_limits_base::tinyness_before [static], [constexpr]`
True if tininess is detected before rounding. (see IEC 559)

traps

`constexpr bool std::__numeric_limits_base::traps [static], [constexpr]`
True if trapping is implemented for this type.

- static `_Obj *volatile _S_free_list [_S_free_list_size]`
- static `size_t _S_heap_size`
- static `char * _S_start_free`

6.50.1 Detailed Description

Base class for `__pool_alloc`.

Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new

1. If the clients request an object of size $> _S_max_bytes$, the resulting object will be obtained directly from new
2. In all other cases, we allocate an object of size exactly `__S_round_up(requested_size)`. Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

The documentation for this class was generated from the following file:

- [pool_allocator.h](#)

6.52.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class __gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc>
```

Documentation? What's that? Nathan Myers ncm@cantrip.org.

A string looks like this:

```

                                     [_Rep]
                                     _M_length
[ __rc_string_base<char_type>]      _M_capacity
_M_datapointer                    _M_refcount
_M_p ----->                     unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_refdata()`, and `__rc_string_base::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

6.62.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename >
class _Base>
class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >
```

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

6.62.2 Constructor & Destructor Documentation

`__versa_string`() [1/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _Alloc & __a = _Alloc() ) [inline], [explicit], [noexcept]
```

Construct an empty string using allocator `a`.

`__versa_string()` [2/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Construct string with copy of value of `__str`.

Parameters

<code>__str</code>	Source string.
--------------------	----------------

`__versa_string()` [3/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline], [noexcept]
```

String move constructor.

Parameters

<code>__str</code>	Source string.
--------------------	----------------

The newly-constructed string contains the exact contents of `__str`. The contents of `__str` are a valid, but unspecified string.

`__versa_string()` [4/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    std::initializer_list< _CharT > __l,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string from an initializer list.

Parameters

<code>__l</code>	<code>std::initializer_list</code> of characters.
<code>__a</code>	Allocator to use (default is default allocator).

`__versa_string()` [5/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n = npos ) [inline]
```

Construct string as copy of a substring.

Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy (default remainder).

__versa_string() [6/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n,
    const _Alloc & __a ) [inline]
```

Construct string as copy of a substring.

Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

__versa_string() [7/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string initialized by a character array.

Parameters

<code>__s</code>	Source character array.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

__versa_string() [8/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
```

```
const _CharT * __s,
const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a C string.

Parameters

<code>__s</code>	Source C string.
<code>__a</code>	Allocator to use (default is default allocator).

`__versa_string()` [9/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as multiple characters.

Parameters

<code>__n</code>	Number of characters.
<code>__c</code>	Character to use.
<code>__a</code>	Allocator to use (default is default allocator).

`__versa_string()` [10/10]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    _InputIterator __beg,
    _InputIterator __end,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a range.

Parameters

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

`~__versa_string()`

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
```

```
typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::~__versa_string ( ) [inline], [noexcept]
Destroy the string instance.
```

6.62.3 Member Function Documentation

append() [1/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
template<class _InputIterator , typename = std::RequireInputIter<_InputIterator>>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Append a range of characters.

Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [first,last) to this string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

append() [2/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append\(\)](#), [std::getline\(\)](#), [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=\(\(\)\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=\(\(\)\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+=\(\(\)\)](#).

append() [3/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
```

```

        size_type __pos,
        size_type __n ) [inline]

```

Append a substring.

Parameters

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

`append()` [4/7]

```

template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    const _CharT * __s ) [inline]

```

Append a C string.

Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

Returns

Reference to this string.

`append()` [5/7]

```

template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    const _CharT * __s,
    size_type __n ) [inline]

```

Append a C substring.

Parameters

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

Returns

Reference to this string.

append() [6/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    size_type __n,
    _CharT __c ) [inline]
```

Append multiple characters.

Parameters

<code>↵ _n</code>	The number of characters to append.
<code>↵ _c</code>	The character to use.

Returns

Reference to this string.

Appends n copies of c to this string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

append() [7/7]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append (
    std::initializer_list< _CharT > __l ) [inline]
```

Append an initializer_list of characters.

Parameters

<code>↵ ↵ ↵ ↵ l</code>	The initializer_list of characters to append.
--	---

Returns

Reference to this string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::append\(\)](#).

assign() [1/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline], [noexcept]
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap\(\)](#).

assign() [2/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Set value to a range of characters.

Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

assign() [3/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _A](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base](#) and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator=\(\)](#).

assign() [4/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos,
    size_type __n ) [inline]
```

Set value to a substring of a string.

Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

assign() [5/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (
    const _CharT * __s ) [inline]
```

Set value to contents of a C string.

Parameters

<code>__s</code>	The C string to use.
------------------	----------------------

Returns

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

assign() [6/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
    const _CharT * __s,
    size_type __n ) [inline]
```

Set value to a C substring.

Parameters

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

assign() [7/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
    size_type __n,
    _CharT __c ) [inline]
```

Set value to multiple characters.

Parameters

<code>__n</code>	Length of the resulting string.
<code>__c</code>	The character to use.

Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size()`.

assign() [8/8]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (
    std::initializer_list<_CharT > __l ) [inline]
```

Set value to an `initializer_list` of characters.

Parameters

\leftrightarrow	The initializer_list of characters to assign.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
$/$	

Returns

Reference to this string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#).

at() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
reference \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base >::at (
    size_type __n ) [inline]
```

Provides access to the data contained in the string.

Parameters

$_ \leftrightarrow$	The index of the character to access.
$_n$	

Returns

Read/write reference to the character.

Exceptions

std::out_of_range	If $_n$ is an invalid index.
-----------------------------------	-------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::size\(\)](#).

at() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_reference \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base >::at (
    size_type __n ) const [inline]
```

Provides access to the data contained in the string.

Parameters

$_ \leftrightarrow$	The index of the character to access.
$_n$	

Returns

Read-only (const) reference to the character.

Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

back() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator\[\]\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

back() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back ( ) [inline], [noexcept]
```

Returns a read/write reference to the data at the last element of the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator\[\]\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

begin() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

begin() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::crend\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rend\(\)](#).

c_str()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const _CharT * __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::c_str ( ) const [inline],
[noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

capacity()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::capacity ( ) const [inline],
[noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _T](#)

cbegin()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cbegin ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

cend()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::cend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

clear()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::clear ( ) [inline], [noexcept]
```

Erases the string, making it empty.

compare() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) const [inline]
```

Compare to a string.

Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data\(\)](#), [std::min\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _T](#)

Referenced by [__gnu_cxx::operator<\(\)](#), [__gnu_cxx::operator<\(\)](#), [__gnu_cxx::operator<\(\)](#), [__gnu_cxx::operator<=\(\)](#), [__gnu_cxx::operator<=\(\)](#), [__gnu_cxx::operator<=\(\)](#), [__gnu_cxx::operator==\(\)](#), [__gnu_cxx::operator==\(\)](#), [__gnu_cxx::operator==\(\)](#), and [__gnu_cxx::operator==\(\)](#).

[__gnu_cxx::operator>\(\)](#), [__gnu_cxx::operator>\(\)](#), [__gnu_cxx::operator>\(\)](#), [__gnu_cxx::operator>=\(\)](#), [__gnu_cxx::operator>=\(\)](#), and [__gnu_cxx::operator>=\(\)](#).

`compare()` [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    const _CharT * __s ) const
```

Compare to a C string.

Parameters

<code>__s</code>	C string to compare against.
------------------	------------------------------

Returns

Integer < 0 , 0 , or > 0 .

Returns an integer < 0 if this string is ordered before `__s`, 0 if their values are equivalent, or > 0 if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#).

`compare()` [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) const
```

Compare substring to a string.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

Returns

Integer < 0 , 0 , or > 0 .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::data\(\)](#), [std::min\(\)](#), and [__gnu_cxx::__versa_string<_CharT,](#)

compare() [4/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s ) const
```

Compare substring to a C string.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#).

compare() [5/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2 ) const
```

Compare substring against a character array.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is

ordered first.

NB: `__s` must have at least `n2` characters, `l0` has no special meaning.

References [std::min\(\)](#).

compare() [6/6]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
int __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare (
    size_type __pos1,
    size_type __n1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n2 ) const
```

Compare substring to a substring.

Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

Returns

Integer < 0 , 0 , or > 0 .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::data\(\)](#), and [std::min\(\)](#).

copy()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0 ) const
```

Copy substring into C string.

Parameters

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

<code>std::out_of_range</code>	If <code>pos > size()</code> .
--------------------------------	-----------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

crbegin()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crbegin ( )
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end\(\)](#).

crend()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crend ( )
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin\(\)](#).

data()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const _CharT * __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data ( ) const [inline],
[noexcept]
```

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of\(\)](#).

empty()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
bool __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::empty ( ) const [inline],
[noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

end() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::end \( \) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

end() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::end \( \) [inline], [noexcept]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::crbegin\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _A](#) and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rbegin\(\)](#).

erase() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::erase \(
    const_iterator __first,
    const_iterator __last ) [inline]
```

Remove a range of characters.

Parameters

<code><i>__first</i></code>	Iterator referencing the first character to remove.
<code><i>__last</i></code>	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator \_\_gnu\_cxx::\_\_versa\_string<\_CharT, \_Traits, \_Alloc, \_Base>::erase \(
    const_iterator __position ) [inline]
```

Remove one character.

Parameters

<code><i>__position</i></code>	Iterator referencing the character to remove.
--------------------------------	---

Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

erase() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (
    size_type __pos = 0,
    size_type __n = npos ) [inline]
```

Remove characters.

Parameters

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are $< __n$ characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#).

find() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]
```

Find position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::find (
    const \_\_versa\_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#) and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

find() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, ↵
_Traits, _Alloc, _Base >::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find position of a C substring.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to search for.

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of\(\)](#) and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of\(\)](#).

find() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::find (
```

```
const _CharT * __s,
size_type __pos = 0 ) const [inline]
```

Find position of a C string.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find\(\)](#).

find_first_not_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_first_not_of (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]
```

Find position of a different character.

Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find_first_not_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character not in string.

Parameters

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::data\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_not_of\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_not_of\(\)](#).

find_first_not_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find position of a character not in C substring.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find_first_not_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline]
```

Find position of a character not in C string.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_not_of\(\)](#).

find_first_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,

    _CharT __c,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(c, pos)`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find\(\)](#).

find_first_of() [2/4]

```

    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

    const _CharT * __s,
```

```
size_type __pos,
size_type __n ) const
```

Find position of a character of C substring.

Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

`find_first_of()` [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,

size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_of (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline]
```

Find position of a character of C string.

Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of\(\)](#).

`find_last_not_of()` [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find_last_not_of (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a different character.

Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find_last_not_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character not in string.

Parameters

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of\(\)](#).

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of\(\)](#), and [__gnu_cxx::__versa_string< _Cha](#)

find_last_not_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>

_Traits, _Alloc, _Base >::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find last position of a character not in C substring.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find_last_not_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos ) const [inline]
```

Find last position of a character not in C string.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_not_of\(\)](#).

find_last_of() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    _CharT __c,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(c, pos)`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind\(\)](#).

find_last_of() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of\(\)](#).

find_last_of() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find last position of a character of C substring.

Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

find_last_of() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of (
    const _CharT * __s,
    size_type __pos = npos ) const [inline]
```

Find last position of a character of C string.

Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_last_of\(\)](#).

front() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator\[\]\(\)](#).

front() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator\[\]\(\)](#).

get_allocator()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ( )
const [inline], [noexcept]
```

Return copy of allocator used to construct this string.

insert() [1/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    _CharT __c ) [inline]
```

Insert one character.

Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

insert() [2/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    _InputIterator __beg,
    _InputIterator __end ) [inline]
```

Insert a range of characters.

Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

Returns

Iterator referencing the first inserted char.

Exceptions

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Inserts characters in range `[beg,end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

insert() [3/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    size_type __n,
    _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert\(\)](#).

insert() [4/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    const_iterator __p,
    std::initializer_list< _CharT > __l ) [inline]
```

Insert an initializer_list of characters.

Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__l</code>	The initializer_list of characters to insert.

Returns

Iterator referencing the first inserted char.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::insert\(\)](#).

insert() [5/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
```

```

typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    const _CharT * __s ) [inline]

```

Insert a C string.

Parameters

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

`insert()` [6/9]

```

template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n ) [inline]

```

Insert a C substring.

Parameters

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

insert() [7/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos,
    size_type __n,
    _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

insert() [8/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Insert value of a string.

Parameters

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _](#)

insert() [9/9]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (
    size_type __pos1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n ) [inline]
```

Insert a substring.

Parameters

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos1 > size()</code> or <code>__pos2 > __str.size()</code> .

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#).

length()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::length ( ) const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

max_size()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::max_size ( ) const [inline],
[noexcept]
```

Returns the size() of the largest possible string.

Referenced by `std::getline()`.

operator+=() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+= (
    _CharT __c ) [inline]
```

Append a character.

Parameters

<code>__c</code>	The character to append.
------------------	--------------------------

Returns

Reference to this string.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::push_back()`.

operator+=() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+= (
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) [inline]
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append()`.

operator+=() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+= (
    const _CharT * __s ) [inline]
```

Append a C string.

Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

Returns

Reference to this string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append\(\)](#).

operator+=() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator+= (
    std::initializer_list< _CharT > __l ) [inline]
```

Append an initializer_list of characters.

Parameters

↵	The initializer_list of characters to be appended.
↵	
↵	
↵	
/	

Returns

Reference to this string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append\(\)](#).

operator=() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline], [noexcept]
```

String move assignment operator.

Parameters

__str	Source string.
-------	----------------

The contents of __str are moved into this string (without copying). __str is a valid, but unspecified string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::swap\(\)](#).

operator=() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    _CharT __c ) [inline]
```

Set value to string of length 1.

Parameters

↵	Source character.
_c	

Assigning to a character makes this string length 1 and `(*this)[0] == __c`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#).

operator=() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator= (
    const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Assign the value of *str* to this string.

Parameters

<code>__str</code>	Source string.
--------------------	----------------

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#).

operator=() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator= (
    const _CharT * __s ) [inline]
```

Copy contents of *s* into this string.

Parameters

<code>__s</code>	Source null-terminated string.
------------------	--------------------------------

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#).

operator=() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::operator= (
    std::initializer_list<_CharT > __l ) [inline]
```

Set value to string constructed from initializer list.

Parameters

<code>__l</code>	<code>std::initializer_list</code> .
------------------	--------------------------------------

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign\(\)](#).

operator[]() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
    size_type __pos ) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::back\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator\[\]\(\)](#).

`operator[]()` [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator[] (
    size_type __pos ) [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

`pop_back()`

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::pop_back ( ) [inline]
```

Remove the last character.

The string must be non-empty.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size\(\)](#).

`push_back()`

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::push_back (
    _CharT __c ) [inline]
```

Append a single character.

Parameters

<code>_↔</code>	Character to append.
<code>_C</code>	

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::capacity\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits,](#)

Referenced by [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::operator+\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::oper](#)

rbegin() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin ( )
```

```
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::end\(\)](#).

rbegin() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rbegin ( ) [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::end\(\)](#).

rend() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend ( )
```

```
const [inline], [noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::begin\(\)](#).

rend() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rend ( ) [inline],
[noexcept]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::begin\(\)](#).

replace() [1/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
```

```
template<class _InputIterator , typename = std::RequireInputIter<_InputIterator>>
```

```
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __il,
```

```
const_iterator __i2,
_InputIterator __k1,
_InputIterator __k2 ) [inline]
```

Replace range of characters with range.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [2/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]
```

Replace range of characters with string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace()`, and `__gnu_cxx::__versa_string< _CharT, _Traits,`

replace() [3/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _CharT * __s ) [inline]
```

Replace range of characters with C string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace()`.

replace() [4/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _CharT * __s,
    size_type __n ) [inline]
```

Replace range of characters with C substring.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from <code>s</code> to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the first *n* characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#).

replace() [5/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
    size_type __n,
    _CharT __c ) [inline]
```

Replace range of characters with multiple characters.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [6/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    const_iterator __i1,
    const_iterator __i2,
```

```
std::initializer_list<_CharT> __l ) [inline]
```

Replace range of characters with `initializer_list`.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace()`.

`replace()` [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename,
typename> class _Base>
```

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (
    size_type __pos,
    size_type __n,
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) [inline]
```

Replace characters with value from another string.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is

beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#).

replace() [8/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s ) [inline]
```

Replace characters with value of a C string.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the characters of `__s` are inserted. If `pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown.

The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace\(\)](#).

replace() [9/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2 ) [inline]
```

Replace characters with value of a C substring.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>__s</code> to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos1 > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [10/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c ) [inline]
```

Replace characters with multiple characters.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [11/11]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (
    size_type __pos1,
    size_type __n1,
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos2,
    size_type __n2 ) [inline]
```

Replace characters with value from another string.

Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos1 > size()</code> or <code>__pos2 > str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace\(\)](#).

reserve()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::reserve (
    size_type __res_arg = 0 ) [inline]
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number

requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Referenced by [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::operator+\(\)](#), [__gnu_cxx::operator+\(\)](#), and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+\(\)](#).

resize() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize (
    size_type __n ) [inline]
```

Resizes the string to the specified number of characters.

Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize\(\)](#).

resize() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize (
    size_type __n,
    _CharT __c )
```

Resizes the string to the specified number of characters.

Parameters

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize\(\)](#).

rfind() [1/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

rfind() [2/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
    const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind\(\)](#).

Referenced by [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of\(\)](#), [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of\(\)](#), and [__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind\(\)](#).

rfind() [3/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find last position of a C substring.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#).

rfind() [4/4]

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos = npos ) const [inline]
```

Find last position of a C string.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind\(\)](#).

shrink_to_fit()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::shrink_to_fit ( ) [inline],
[noexcept]
```

A non-binding request to reduce capacity() to size().

References [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::capacity\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#) and [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::size\(\)](#).

size()

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size ( ) const [inline],
[noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::at\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::at\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::back\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::ba](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::cend\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::co](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end\(\)](#), [__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end\(\)](#).

```

__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find(), __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find
__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::find_first_of(), __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Bas

```

substr()

```

template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
__versa_string __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::substr (
    size_type __pos = 0,
    size_type __n = npos ) const [inline]

```

Get a substring.

Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

<code>std::out_of_range</code>	If <code>pos > size()</code> .
--------------------------------	-----------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

swap()

```

template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::swap (
    __versa_string<_CharT, _Traits, _Alloc, _Base> & __s ) [inline], [noexcept]

```

Swap contents with another string.

Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign()`, `__gnu_cxx::__versa_string<_CharT, _Traits, _A` and `__gnu_cxx::swap()`.

6.62.4 Member Data Documentation

npos

```
template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename,
typename > class _Base>
const __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _↔
CharT, _Traits, _Alloc, _Base >::npos [static]
```

Value returned by various member functions when they fail.

The documentation for this class was generated from the following files:

6.72 __gnu_cxx::_Caster<_ToType> Struct Template Reference

```
#include <cast.h>
```

Public Types

- typedef _ToType::element_type * **type**

6.72.1 Detailed Description

```
template<typename _ToType>
struct __gnu_cxx::_Caster< _ToType >
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef element_type which names the type it points to. 2) has a get() const method which returns element_type*. 3) has a constructor which can take one element_type* argument. This type supports the semantics of the pointer cast operators (below.)

The documentation for this struct was generated from the following file:

- [cast.h](#)

6.73 __gnu_cxx::_Char_traits<_CharT> Struct Template Reference

```
#include <char_traits.h>
```

Public Types

- typedef unsigned long **int_type**
- typedef [std::streamoff](#) **off_type**
- typedef [std::streampos](#) **pos_type**
- typedef [std::mbstate_t](#) **state_type**

6.73.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::_Char_types< _CharT >
```

Mapping from character type to associated types.

Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, streamoff, streampos, and mbstate_t. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

The documentation for this struct was generated from the following file:

- [char_traits.h](#)

Protected Attributes

- [_Deque_impl](#) [_M_impl](#)

6.77.1 Detailed Description

```
template<typename _Tp, typename _Alloc>
class std::_Deque_base< _Tp, _Alloc >
```

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

6.77.2 Member Function Documentation

_M_initialize_map()

```
template<typename _Tp , typename _Alloc >  
void std::_Deque_base<_Tp, _Alloc>::_M_initialize_map (  
    size_t __num_elements ) [protected]
```

Layout storage.

Parameters

<code>__num_elements</code>	The count of T's for which to allocate space at first.
-----------------------------	--

Returns

Nothing.

The initial underlying memory layout is a bit complicated...

References [std::max\(\)](#).

The documentation for this class was generated from the following file:

6.78.1 Detailed Description

`template<typename _Tp, typename _Ref, typename _Ptr>`

`struct std::Deque_iterator<_Tp, _Ref, _Ptr>`

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

6.78.2 Member Function Documentation**`_M_set_node()`**

```
template<typename _Tp, typename _Ref, typename _Ptr>
void std::Deque_iterator<_Tp, _Ref, _Ptr>::_M_set_node (
    _Map_pointer __new_node) [inline], [noexcept]
```

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

The documentation for this struct was generated from the following files:

- [stl_algobase.h](#)
- [stl_deque.h](#)

6.79.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>
```

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

6.79.2 Constructor & Destructor Documentation

`_DRandomShufflingGlobalData()`

```
template<typename _RAIter>
__gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_DRandomShufflingGlobalData (
    _RAIter & __source ) [inline]
```

Constructor.

6.79.3 Member Data Documentation

`_M_bin_proc`

```
template<typename _RAIter>
_ThreadIndex* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_bin_proc
```

Number of the thread that will further process the corresponding bin.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.

`_M_dist`

```
template<typename _RAIter >
```

```
_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_dist
```

Two-dimensional array to hold the thread-bin distribution.

Dimensions `(_M_num_threads + 1) __x (_M_num_bins + 1)`.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_num_bins`

```
template<typename _RAIter >
```

```
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bins
```

Number of bins to distribute to.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_num_bits`

```
template<typename _RAIter >
```

```
int __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_num_bits
```

Number of bits needed to address the bins.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_source`

```
template<typename _RAIter >
```

```
_RAIter& __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_source
```

Begin iterator of the `__source`.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_starts`

```
template<typename _RAIter >
```

```
_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_starts
```

Start indexes of the threads' `__chunks`.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_temporaries`

```
template<typename _RAIter >
```

```
_ValueType** __gnu_parallel::_DRandomShufflingGlobalData< _RAIter >::_M_temporaries
```

Temporary arrays for each thread.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

```
template<typename _RAIter, typename _RandomNumberGenerator>
struct __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >
```

Local data for a thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

6.80.2 Member Data Documentation

`__bins_end`

```
template<typename _RAIter , typename _RandomNumberGenerator >
_BinIndex __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end
```

End index for bins taken care of by this thread.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_bins_begin`

```
template<typename _RAIter , typename _RandomNumberGenerator >
_BinIndex __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin
```

Begin index for bins taken care of by this thread.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_num_threads`

```
template<typename _RAIter , typename _RandomNumberGenerator >
int __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads
```

Number of threads participating in total.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_sd`

```
template<typename _RAIter , typename _RandomNumberGenerator >
_DRandomShufflingGlobalData<_RAIter>* __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_sd
```

Pointer to global data.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

`_M_seed`

```
template<typename _RAIter , typename _RandomNumberGenerator >
uint32_t __gnu_parallel::__DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed
```

Random `_M_seed` for this thread.

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__parallel_random_shuffle_drs_pu\(\)](#).

The documentation for this struct was generated from the following file:

6.82 `__gnu_debug::_Equal_to<_Type>` Class Template Reference

```
#include <safe_sequence.h>
```

Public Member Functions

- `_Equal_to (const _Type &__v)`
- `bool operator() (const _Type &__x) const`

6.82.1 Detailed Description

```
template<typename _Type>
```

```
class __gnu_debug::_Equal_to<_Type>
```

A simple function object that returns true if the passed-in value is equal to the stored value.

The documentation for this class was generated from the following file:

- [safe_sequence.h](#)

6.83 `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>` Class Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_EqualFromLess<_T1, _T2, _Compare>`:

**Public Types**

- `typedef _T1 first_argument_type`
- `typedef bool result_type`
- `typedef _T2 second_argument_type`

Public Member Functions

- **_EqualFromLess** (*_Compare* &*__comp*)
- **bool operator()** (const *_T1* &*__a*, const *_T2* &*__b*)

6.83.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_EqualFromLess< _T1, _T2, _Compare >
```

Constructs predicate for equality from strict weak ordering predicate.

6.83.2 Member Typedef Documentation

first_argument_type

```
typedef _T1 std::binary_function< _T1 , _T2 , bool >::first_argument_type [inherited]
first_argument_type is the type of the first argument
```

result_type

```
typedef bool std::binary_function< _T1 , _T2 , bool >::result_type [inherited]
result_type is the return type
```

second_argument_type

```
typedef _T2 std::binary_function< _T1 , _T2 , bool >::second_argument_type [inherited]
second_argument_type is the type of the second argument
```

The documentation for this class was generated from the following file:

- [base.h](#)

6.84 __gnu_parallel::_EqualTo< _T1, _T2 > Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_EqualTo< _T1, _T2 >`:

Public Types

- typedef [_T1](#) [first_argument_type](#)
- typedef bool [result_type](#)
- typedef [_T2](#) [second_argument_type](#)

Public Member Functions

- bool **operator()** (const [_T1](#) &__t1, const [_T2](#) &__t2) const

6.84.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::__EqualTo<_T1, _T2>
```

Similar to std::equal_to, but allows two different types.

6.84.2 Member Typedef Documentation

first_argument_type

```
typedef \_T1 std::binary\_function< \_T1 , \_T2 , bool >::first_argument_type [inherited]
first_argument_type is the type of the first argument
```

result_type

```
typedef bool std::binary\_function< \_T1 , \_T2 , bool >::result_type [inherited]
result_type is the return type
```

second_argument_type

```
typedef \_T2 std::binary\_function< \_T1 , \_T2 , bool >::second_argument_type [inherited]
second_argument_type is the type of the second argument
```

- `::vector< pair< _Bilter, int > > _M_rep_count`
- `_ResultsVec & _M_results`
- `_State_info< __search_mode, _ResultsVec > _M_states`

6.85.1 Detailed Description

```
template<typename _Bilter, typename _Alloc, typename _TraitsT, bool __dfs_mode>
class std::__detail::_Executor< _Bilter, _Alloc, _TraitsT, __dfs_mode >
```

Takes a regex and an input string and does the matching.

The `_Executor` class has two modes: DFS mode and BFS mode, controlled by the template parameter `__dfs_mode`.

The documentation for this class was generated from the following files:

- [regex.h](#)
- [regex_executor.h](#)
- [regex_executor.tcc](#)

Friends

- template<typename _Up >
void **swap** ([_ExtPtr_allocator](#)<_Up> &, [_ExtPtr_allocator](#)<_Up> &)

6.86.1 Detailed Description

template<typename _Tp>
class `__gnu_cxx::_ExtPtr_allocator<_Tp>`

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See `ext/pointer.h`) Memory allocation in this example is still performed using `std::allocator`.

The documentation for this class was generated from the following file:

- [extptr_allocator.h](#)

6.87 `__gnu_cxx::__detail::_Ffit_finder<_Tp>` Class Template Reference

- [_Fwd_list_node_base](#) & [operator=](#) (const [_Fwd_list_node_base](#) &)=delete

Public Attributes

- [_Fwd_list_node_base](#) * [_M_next](#)

6.93.1 Detailed Description

A helper basic node class for forward_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

The documentation for this struct was generated from the following file:

- [forward_list.h](#)

6.94 __gnu_parallel::_GuardedIterator<_RAIter, _Compare> Class Template Reference

```
#include <multiway_merge.h>
```

Public Member Functions

- [_GuardedIterator](#) ([_RAIter](#) __begin, [_RAIter](#) __end, [_Compare](#) &__comp)
- [operator _RAIter](#) () const
- [std::iterator_traits](#)<[_RAIter](#)>::value_type & [operator*](#) () const
- [_GuardedIterator](#)<[_RAIter](#), [_Compare](#)> & [operator++](#) ()

Friends

- bool `operator<` (const `_GuardedIterator`< `_RAIter`, `_Compare` > &__bi1, const `_GuardedIterator`< `_RAIter`, `_Compare` > &__bi2)
- bool `operator<=` (const `_GuardedIterator`< `_RAIter`, `_Compare` > &__bi1, const `_GuardedIterator`< `_RAIter`, `_Compare` > &__bi2)

6.94.1 Detailed Description

```
template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >
```

`_Iterator` wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons.

The implicit supremum comes with a performance cost.

Deriving from `_RAIter` is not possible since `_RAIter` need not be a class.

6.94.2 Constructor & Destructor Documentation

`_GuardedIterator()`

```
template<typename _RAIter , typename _Compare >
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::_GuardedIterator (
    _RAIter __begin,
    _RAIter __end,
    _Compare & __comp ) [inline]
```

Constructor. Sets iterator to beginning of sequence.

Parameters

<code>__begin</code>	Begin iterator of sequence.
<code>__end</code>	End iterator of sequence.
<code>__comp</code>	Comparator provided for associated overloaded compare operators.

6.94.3 Member Function Documentation

`operator _RAIter()`

```
template<typename _RAIter , typename _Compare >
__gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator _RAIter ( ) const [inline]
```

Convert to wrapped iterator.

Returns

Wrapped iterator.

`operator*()`

```
template<typename _RAIter , typename _Compare >
std::iterator_traits< _RAIter >::value_type & __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator* ( ) const [inline]
```

Dereference operator.

Returns

Referenced element.

operator++()

```
template<typename _RAIter, typename _Compare >
__GuardedIterator< _RAIter, _Compare > & __gnu_parallel::_GuardedIterator< _RAIter, _Compare >::operator++ ( ) [inline]
```

Pre-increment operator.

Returns

This.

6.94.4 Friends And Related Symbol Documentation**operator<**

```
template<typename _RAIter, typename _Compare >
bool operator< (
    const __GuardedIterator< _RAIter, _Compare > & __bi1,
    const __GuardedIterator< _RAIter, _Compare > & __bi2 ) [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

Returns

true if less.

operator<=

```
template<typename _RAIter, typename _Compare >
bool operator<= (
    const __GuardedIterator< _RAIter, _Compare > & __bi1,
    const __GuardedIterator< _RAIter, _Compare > & __bi2 ) [friend]
```

Compare two elements referenced by guarded iterators.

Parameters

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

Returns

True if less equal.

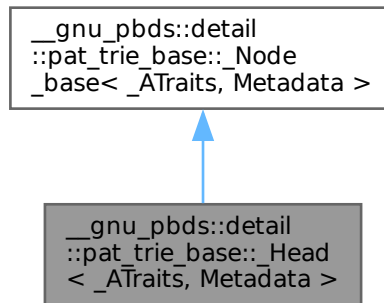

The documentation for this class was generated from the following file:

- [multiway_merge.h](#)

```
#include <pointer.h>
```

6.97.1 Detailed Description

The specialization on this type helps resolve the problem of reference to void, and eliminates the need to specialize `_Pointer_adapter` for cases of `void*`, `const void*`, and so on.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

6.98 __gnu_pbds::detail::pat_trie_base::_Iter< Node, Leaf, Head, Inode, Is_Forward_Iterator > Class Template Reference

- constexpr bool [operator>=](#) (const `pair<_Iterator1, _Iterator2>` &__x, const `pair<_Iterator1, _Iterator2>` &__y)

6.99.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::__IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>
```

A pair of iterators. The usual iterator operations are applied to both child iterators.

6.99.2 Member Typedef Documentation

`first_type`

```
typedef _Iterator1 std::pair<\_Iterator1, \_Iterator2>::first\_type [inherited]
```

The type of the `first` member.

`second_type`

```
typedef _Iterator2 std::pair<\_Iterator1, \_Iterator2>::second\_type [inherited]
```

The type of the `second` member.

6.99.3 Member Function Documentation

`swap()`

```
constexpr void std::pair<\_Iterator1, \_Iterator2>::swap (
    pair<\_Iterator1, \_Iterator2> &__p) [inline], [constexpr], [noexcept], [inherited]
```

Swap the first members and then the second members.

6.99.4 Friends And Related Symbol Documentation

make_pair()

```
constexpr pair< typename __decay_and_strip< _Iterator1 >::__type, typename __decay_and_strip< _Iterator2 >::__type > make_pair (
    _Iterator1 && __x,
    _Iterator2 && __y ) [related]
```

A convenience wrapper for creating a pair from two objects.

Parameters

\leftrightarrow __x	The first object.
\leftrightarrow __y	The second object.

Returns

A newly-constructed pair<> object of the appropriate type.

The C++98 standard says the objects are passed by reference-to-const, but C++03 says they are passed by value (this was LWG issue #181).

Since C++11 they have been passed by forwarding reference and then forwarded to the new members of the pair. To create a pair with a member of reference type, pass a `reference_wrapper` to this function.

operator"!=()

```
constexpr bool operator!= (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Uses `operator==` to find the result.

operator<()

```
constexpr bool operator< (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Defines a lexicographical order for pairs.

For two pairs of the same type, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.

operator<=()

```
constexpr bool operator<= (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Uses `operator<` to find the result.

operator==(())

```
constexpr bool operator== (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Two pairs of the same type are equal iff their members are equal.

operator>()

```
constexpr bool operator> (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Uses `operator<` to find the result.

operator>=()

```
constexpr bool operator>= (
    const pair< _Iterator1 , _Iterator2 > & __x,
    const pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Uses `operator<` to find the result.

swap()

```
constexpr enable_if< __and< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >↵
::value >::type swap (
    pair< _Iterator1 , _Iterator2 > & __x,
    pair< _Iterator1 , _Iterator2 > & __y ) [related]
```

Swap overload for pairs. Calls `std::pair::swap()`.

Note

This `std::swap` overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

6.99.5 Member Data Documentation**first**

```
_Iterator1 std::pair< _Iterator1 , _Iterator2 >::first [inherited]
```

The first member.

second

```
_Iterator2 std::pair< _Iterator1 , _Iterator2 >::second [inherited]
```

The second member.

The documentation for this class was generated from the following file:

Public Attributes

- _Iterator1 **_M_first**
- _Iterator2 **_M_second**
- _Iterator3 **_M_third**

6.100.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>
class __gnu_parallel::_IteratorTriple< _Iterator1, _Iterator2, _Iterator3, _IteratorCategory >
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.

The documentation for this class was generated from the following file:

- [iterator.h](#)

6.101 __gnu_parallel::_Job< _DifferenceTp > Struct Template Reference

```
#include <workstealing.h>
```

Public Types

- typedef _DifferenceTp **_DifferenceType**

Public Attributes

- volatile _DifferenceType **_M_first**
- volatile _DifferenceType **_M_last**
- volatile _DifferenceType **_M_load**

6.101.1 Detailed Description

```
template<typename _DifferenceTp>
struct __gnu_parallel::_Job< _DifferenceTp >
```

One __job for a certain thread.

6.101.2 Member Data Documentation

_M_first

```
template<typename _DifferenceTp >
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first
```

First element.

Changed by owning and stealing thread. By stealing thread, always incremented.

Referenced by [__gnu_parallel::__for_each_template_random_access_workstealing\(\)](#).

_M_last

```
template<typename _DifferenceTp >
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last
```

Last element.
 Changed by owning thread only.
 Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

_M_load

```
template<typename _DifferenceTp >
volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load
```

Number of elements, i.e. `_M_last - _M_first + 1`.
 Changed by owning thread only.
 Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.
 The documentation for this struct was generated from the following file:

- [workstealing.h](#)

6.112 `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>::_Loser` Struct Reference

```
#include <losertree.h>
```

Public Attributes

- `_Tp` `_M_key`
- `int` `_M_source`
- `bool` `_M_sup`

6.112.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser
```

Internal representation of a `_LoserTree` element.

6.112.2 Member Data Documentation

`_M_key`

```
template<typename _Tp , typename _Compare >
_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key
_M_key of the element in the _LoserTree.
Referenced by \_\_gnu\_parallel::\_LoserTreeBase< \_Tp, \_Compare >::\_\_insert\_start\(\).
```

`_M_source`

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source
_index of the __source __sequence.
Referenced by \_\_gnu\_parallel::\_LoserTreeBase< \_Tp, \_Compare >::\_\_get\_min\_source\(\), and \_\_gnu\_parallel::\_LoserTreeBase< \_Tp, \_Compare >::\_\_insert\_start\(\).
```

`_M_sup`

```
template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup
flag, true iff this is a "maximum" __sentinel.
Referenced by \_\_gnu\_parallel::\_LoserTreeBase< \_Tp, \_Compare >::\_\_insert\_start\(\).
The documentation for this struct was generated from the following file:
```

- [losertree.h](#)

6.113 `__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser` Struct Reference

```
#include <losertree.h>
```

Public Attributes

- `const _Tp * _M_keyp`
- `int _M_source`
- `bool _M_sup`

6.113.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser
```

Internal representation of `_LoserTree` `__elements`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

6.114 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference

```
#include <loserTree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`:

**Public Member Functions**

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` &`__key`, int `__source`, bool `__sup`)

Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_log_k`
- unsigned int `_M_offset`

6.114.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >
```

Stable `_LoserTree` variant.

Provides the stable implementations of `insert_start`, `__init_winner`, `__init` and `__delete_min_insert`.

Unstable variant is done using partial specialisation below.

6.114.2 Member Function Documentation**`__delete_min_insert()`**

```
template<bool __stable, typename _Tp, typename _Compare >
void __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup ) [inline]
```

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

References [std::swap\(\)](#).

__get_min_source()

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( ) [inline], [inherited]
```

Returns

the index of the sequence with the smallest element.

References [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_losers](#), and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::](#)

__insert_start()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup ) [inline], [inherited]
```

Initializes the sequence “_M_source” with the element “__key”.

Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_first_insert](#), [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::](#)
[__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_losers](#), [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_sou](#)
and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::__M_sup](#).

6.114.3 Member Data Documentation**__M_log_k**

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__M_log_k [protected], [inherited]
log_2{__M_k}
```

Referenced by [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#).

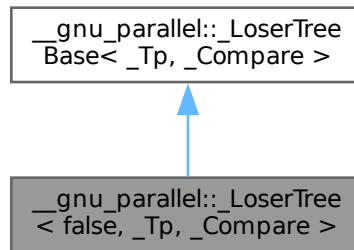

The documentation for this class was generated from the following file:

- [losertree.h](#)

6.115 __gnu_parallel::_LoserTree< false, _Tp, _Compare > Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

Public Member Functions

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` & `__key`, int `__source`, bool `__sup`)

Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

6.115.1 Detailed Description

template<typename `_Tp`, typename `_Compare`>
class `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`

Unstable `_LoserTree` variant.

Stability (non-stable here) is selected with partial specialization.

6.115.2 Member Function Documentation

`__delete_min_insert()`

```

template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup ) [inline]
  
```

Delete the `_M_key` smallest element and insert the element `__key` instead.

Parameters

<code>__key</code>	the <code>_M_key</code> to insert
<code>__sup</code>	true iff <code>__key</code> is an explicitly marked supremum

References [std::swap\(\)](#).

__get_min_source()

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( ) [inline], [inherited]
```

Returns

the index of the sequence with the smallest element.

References [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::M_losers](#), and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::](#)

__init_winner()

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (
    unsigned int __root ) [inline]
```

Computes the winner of the competition at position “__root”.

Called recursively (starting at 0) to build the initial tree.

Parameters

<code>__root</code>	__index of the “game” to start.
---------------------	---------------------------------

__insert_start()

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup ) [inline], [inherited]
```

Initializes the sequence “_M_source” with the element “__key”.

Parameters

<code>__key</code>	the element to insert
<code>__source</code>	__index of the __source __sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit __supremum.

References [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::M_first_insert](#), [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::](#)
[__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::M_losers](#), [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::M_sou](#)
and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::M_sup](#).

The documentation for this class was generated from the following file:

6.116 __gnu_parallel::_LoserTreeBase< _Tp, _Compare > Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreeBase<_Tp, _Compare>`:

Classes

- struct `_Loser`

Public Member Functions

- `_LoserTreeBase` (unsigned int __k, _Compare __comp)
- `~_LoserTreeBase` ()
- int `__get_min_source` ()
- void `__insert_start` (const _Tp &__key, int __source, bool __sup)

Protected Attributes

- _Compare `_M_comp`
- bool `_M_first_insert`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- unsigned int `_M_log_k`
- `_Loser` * `_M_losers`
- unsigned int `_M_offset`

6.116.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase<_Tp, _Compare>
```

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine.

This is a well-performing variant.

Parameters

<code>_Tp</code>	the element type
<code>_Compare</code>	the comparator to use, defaults to <code>std::less<_Tp></code>

6.116.2 Constructor & Destructor Documentation

`__LoserTreeBase()`

```
template<typename _Tp , typename _Compare >
__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__LoserTreeBase (
    unsigned int __k,
    _Compare __comp ) [inline]
```

The constructor.

Parameters

<code>__k</code>	The number of sequences to merge.
<code>__comp</code>	The comparator to use.

References [__gnu_parallel::__rd_log2\(\)](#), [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_first_insert](#), [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_log_k](#), and [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_losers](#).

`~__LoserTreeBase()`

```
template<typename _Tp , typename _Compare >
__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::~~__LoserTreeBase ( ) [inline]
```

The destructor.

References [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_losers](#).

6.116.3 Member Function Documentation

`__get_min_source()`

```
template<typename _Tp , typename _Compare >
int __gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__get_min_source ( ) [inline]
```

Returns

the index of the sequence with the smallest element.

References [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_losers](#), and [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_sup](#).

`__insert_start()`

```
template<typename _Tp , typename _Compare >
void __gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__insert_start (
    const _Tp & __key,
    int __source,
    bool __sup ) [inline]
```

Initializes the sequence “`_M_source`” with the element “`__key`”.

Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_first_insert](#), [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__M_losers](#), [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__Loser::__M_source](#), and [__gnu_parallel::__LoserTreeBase< _Tp, _Compare >::__Loser::__M_sup](#).

6.116.4 Member Data Documentation

`_M_comp`

```
template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp [protected]
__Compare to use.
```

`_M_first_insert`

```
template<typename _Tp , typename _Compare >
bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert [protected]
```

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Referenced by [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#), and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#).

`_M_log_k`

```
template<typename _Tp , typename _Compare >
unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected]
```

`log_2[_M_k]`

Referenced by [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#).

`_M_losers`

```
template<typename _Tp , typename _Compare >
__Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected]
```

`_LoserTree` elements.

Referenced by [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#), [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#), and [__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase\(\)](#).

- unsigned int `_M_ik`
- unsigned int `_M_k`
- _Loser * `_M_losers`
- unsigned int `_M_offset`

6.122.1 Detailed Description

```
template<typename _Tp, typename _Compare>
```

```
class __gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare>
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

The documentation for this class was generated from the following file:

- [losertree.h](#)

6.123 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference

```
#include <multiway_merge.h>
```

Static Public Attributes

- static const bool `_M_use_pointer`

6.123.1 Detailed Description

```
template<typename _Tp>
struct __gnu_parallel::_LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies.

The field “`_M_use_pointer`” is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

Parameters

<code>_Tp</code>	type to give the loser tree traits for.
------------------	---

6.123.2 Member Data Documentation

`_M_use_pointer`

```
template<typename _Tp >
const bool __gnu_parallel::_LoserTreeTraits< _Tp >::_M_use_pointer [static]
```

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

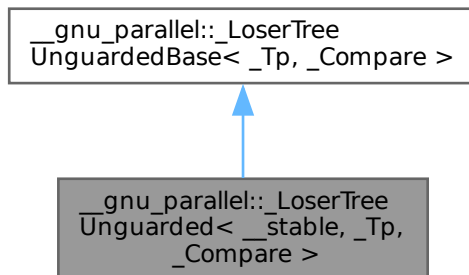

The documentation for this struct was generated from the following file:

- [multiway_merge.h](#)

6.127.1 Detailed Description

```
template<typename Metadata, typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >
```

Metadata base primary template.

The documentation for this struct was generated from the following file:

- [pat_trie_base.hpp](#)

6.128 `__gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

Public Types

- typedef `_Alloc` **allocator_type**
- typedef `null_type` **metadata_type**

6.128.1 Detailed Description

```
template<typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >
```

Specialization for null metadata.

The documentation for this struct was generated from the following file:

- [pat_trie_base.hpp](#)

6.129 `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>` Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>`:

**Public Types**

- typedef `_Arg1` [first_argument_type](#)
- typedef `_Result` [result_type](#)
- typedef `_Arg2` [second_argument_type](#)

Public Member Functions

- `_Result` **operator()** (const `_Tp1` &`__x`, const `_Tp2` &`__y`) const

6.129.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__((*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0)))>
struct __gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>
```

Similar to `std::multiplies`, but allows two different types.

6.129.2 Member Typedef Documentation**first_argument_type**

```
template<typename _Arg1 , typename _Arg2 , typename _Result >
typedef _Arg1 std::binary\_function<\_Arg1, \_Arg2, \_Result>::first\_argument\_type [inherited]
first_argument_type is the type of the first argument
```

result_type

```
template<typename _Arg1 , typename _Arg2 , typename _Result >
typedef _Result std::binary\_function<\_Arg1, \_Arg2, \_Result>::result\_type [inherited]
result_type is the return type
```

second_argument_type

```
template<typename _Arg1 , typename _Arg2 , typename _Result >
typedef _Arg2 std::binary\_function< _Arg1, _Arg2, _Result >::second_argument_type [inherited]
```

`second_argument_type` is the type of the second argument

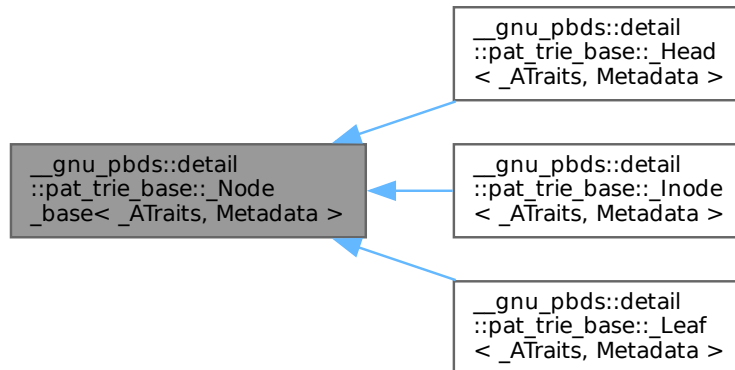

The documentation for this struct was generated from the following file:

6.131.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, typename _CIterator, typename
Iterator, typename _Alloc>
class __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >
```

Node const iterator.

6.131.2 Member Typedef Documentation

metadata_const_reference

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef rebind\_traits<_Alloc,metadata\_type>::const_reference \_\_gnu\_pbds::detail::pat\_trie\_base::\_Node\_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference
Const metadata reference type.
```

metadata_type

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
typedef Node::metadata_type \_\_gnu\_pbds::detail::pat\_trie\_base::\_Node\_citer< Node, Leaf, Head,
Inode, _CIterator, Iterator, _Alloc >::metadata_type
Metadata type.
```

6.131.3 Member Function Documentation

get_child()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
\_Node\_citer \_\_gnu\_pbds::detail::pat\_trie\_base::\_Node\_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::get_child (
    size_type i ) const [inline]
Returns a __const node __iterator to the corresponding node's i-th child.
References std::advance\(\).
```

get_metadata()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
metadata\_const\_reference \_\_gnu\_pbds::detail::pat\_trie\_base::\_Node\_citer< Node, Leaf, Head, Inode,
_CIterator, Iterator, _Alloc >::get_metadata ( ) const [inline]
Metadata access.
```

num_children()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,
Iterator, _Alloc >::num_children ( ) const [inline]
```

Returns the number of children in the corresponding node.

References [std::distance\(\)](#).

Referenced by [__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*\(\)](#), and [__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*\(\)](#).

operator"!=()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator!= (
    const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )
const [inline]
```

Compares content (negatively) to a different iterator object.

operator*()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _C
Iterator, Iterator, _Alloc >::operator* ( ) const [inline]
```

Const access; returns the __const iterator* associated with the current leaf.

References [__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::num_children\(\)](#).

operator==()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,
_Alloc >::operator== (
    const _Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )
const [inline]
```

Compares content to a different iterator object.

valid_prefix()

```
template<typename Node , typename Leaf , typename Head , typename Inode , typename _CIterator ,
typename Iterator , typename _Alloc >
std::pair< a_const_iterator, a_const_iterator > __gnu_pbds::detail::pat_trie_base::_Node_citer<
Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::valid_prefix ( ) const [inline]
```

Subtree valid prefix.

- `constexpr const _Tp & _M_get () const noexcept`
- `constexpr _Tp & _M_get () noexcept`
- `constexpr bool _M_is_engaged () const noexcept`
- `constexpr void _M_reset () noexcept`

6.140.1 Detailed Description

```
template<typename _Tp, bool = is_trivially_copy_constructible_v<_Tp>, bool = is_trivially_move_constructible_v<_Tp>>
struct std::Optional_base< _Tp, bool, bool >
```

Class template that provides copy/move constructors of optional.

Such a separate base class template is necessary in order to conditionally make copy/move constructors trivial.

When the contained value is trivially copy/move constructible, the copy/move constructors of `_Optional_base` will invoke the trivial copy/move constructor of `_Optional_payload`. Otherwise, they will invoke `_Optional_payload(bool, const _Optional_payload&)` or `_Optional_payload(bool, _Optional_payload&&)` to initialize the contained value, if copying/moving an engaged optional.

Whether the other special members are trivial is determined by the `_Optional_payload<_Tp>` specialization used for the `_M_payload` member.

See also

`optional`, `_Enable_special_members`

6.144.1 Detailed Description

`template<typename _RAIter>`
`struct __gnu_parallel::_PMWMSortingData<_RAIter>`

Data accessed by all threads.

PMWMS = parallel multiway mergesort

6.144.2 Member Data Documentation

`_M_num_threads`

`template<typename _RAIter>`
`_ThreadIndex __gnu_parallel::_PMWMSortingData<_RAIter>::_M_num_threads`

Number of threads involved.

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

`_M_offsets`

`template<typename _RAIter>`
`_DifferenceType* __gnu_parallel::_PMWMSortingData<_RAIter>::_M_offsets`

Offsets to add to the found positions.

Referenced by `__gnu_parallel::parallel_sort_mwms()`.

`_M_pieces`

`template<typename _RAIter>`
`std::vector<_Piece<_DifferenceType>>* __gnu_parallel::_PMWMSortingData<_RAIter>::_M_pieces`

Pieces of data to merge [thread][__sequence].

Referenced by `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

`_M_samples`

`template<typename _RAIter>`
`_ValueType* __gnu_parallel::_PMWMSortingData<_RAIter>::_M_samples`

Samples.

Referenced by `__gnu_parallel::__determine_samples()`, and `__gnu_parallel::parallel_sort_mwms()`.

`_M_source`

`template<typename _RAIter>`
`_RAIter __gnu_parallel::_PMWMSortingData<_RAIter>::_M_source`

Input __begin.

Referenced by `__gnu_parallel::__determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

`_M_starts`

`template<typename _RAIter>`
`_DifferenceType* __gnu_parallel::_PMWMSortingData<_RAIter>::_M_starts`

Start indices, per thread.

Referenced by `__gnu_parallel::__determine_samples()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

`_M_temporary`

```
template<typename _RAIter >
```

```
_ValueType** \_\_gnu\_parallel::\_PMWMSortingData< _RAIter >::_M_temporary
```

Storage in which to sort.

Referenced by [__gnu_parallel::parallel_sort_mwms\(\)](#), and [__gnu_parallel::parallel_sort_mwms_pu\(\)](#).

The documentation for this struct was generated from the following file:

6.145.1 Detailed Description

```
template<typename _Storage_policy>
class __gnu_cxx::_Pointer_adapter< _Storage_policy >
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to const and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The const qualifier works with this pointer adapter as follows:

```
_Tp* == _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* == _Pointer_adapter<_Std_pointer_impl<const
_Tp> >; _Tp* const == const _Pointer_adapter<_Std_pointer_impl<_Tp> >; const _Tp* const == const _Pointer_
adapter<_Std_pointer_impl<const _Tp> >;
```

The documentation for this class was generated from the following file:

6.146 __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp > Class Template Reference

```
#include <base.h>
```

Public Types

- typedef `_DifferenceTp` **DifferenceType**
- typedef `_PseudoSequenceIterator< _Tp, uint64_t >` **iterator**

Public Member Functions

- `_PseudoSequence` (const `_Tp` &__val, `DifferenceType` __count)
- `iterator begin` () const
- `iterator end` () const

6.146.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

Parameters

<code>_Tp</code>	Sequence <code>_M_value</code> type.
<code>_DifferenceTp</code>	Sequence difference type.

6.146.2 Constructor & Destructor Documentation

`__PseudoSequence()`

```
template<typename _Tp , typename _DifferenceTp >
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (
    const _Tp & __val,
    _DifferenceType __count ) [inline]
```

Constructor.

Parameters

<code>__val</code>	Element of the sequence.
<code>__count</code>	Number of (virtual) copies.

6.146.3 Member Function Documentation

`begin()`

```
template<typename _Tp , typename _DifferenceTp >
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin ( ) const [inline]
```

Begin iterator.

`end()`

```
template<typename _Tp , typename _DifferenceTp >
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end ( ) const [inline]
```

End iterator.

The documentation for this class was generated from the following file:

Public Member Functions

- `_PseudoSequenceliterator` (const `_Tp` &__val, `_DifferenceType` __pos)
- bool `operator!=` (const `_PseudoSequenceliterator` &__i2)
- const `_Tp` & `operator*` () const
- `_PseudoSequenceliterator` & `operator++` ()
- `_PseudoSequenceliterator` `operator++` (int)
- `_DifferenceType` `operator-` (const `_PseudoSequenceliterator` &__i2)
- bool `operator==` (const `_PseudoSequenceliterator` &__i2)
- const `_Tp` & `operator[]` (`_DifferenceType`) const

6.147.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >
```

_Iterator associated with __gnu_parallel::_PseudoSequence. It features the usual random-access iterator functionality.

Parameters

<code>_Tp</code>	Sequence _M_value type.
<code>_DifferenceTp</code>	Sequence difference type.

The documentation for this class was generated from the following file:

- **Piece** **M_global**
- **Piece** **M_initial**
- `RestrictedBoundedConcurrentQueue< Piece >` **M_leftover_parts**
- `ThreadIndex` **M_num_threads**

6.148.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::_QSBThreadLocal< _RAIter >
```

Information local to one thread in the parallel quicksort run.

6.148.2 Member Typedef Documentation

Piece

```
template<typename _RAIter >
typedef std::pair<_RAIter, _RAIter> __gnu_parallel::_QSBThreadLocal< _RAIter >::_Piece
```

Continuous part of the sequence, described by an iterator pair.

6.148.3 Constructor & Destructor Documentation

`_QSBThreadLocal()`

```
template<typename _RAIter >
__gnu_parallel::__QSBThreadLocal< _RAIter >::__QSBThreadLocal (
    int __queue_size ) [inline]
```

Constructor.

Parameters

<code>__queue_size</code>	size of the work-stealing queue.
---------------------------	----------------------------------

6.148.4 Member Data Documentation

`_M_elements_leftover`

```
template<typename _RAIter >
volatile _DifferenceType* __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_elements_leftover
```

Pointer to a counter of elements left over to sort.

Referenced by [__gnu_parallel::__parallel_sort_qsb\(\)](#), [__gnu_parallel::__qsb_conquer\(\)](#), and [__gnu_parallel::__qsb_local_sort_with_helping\(\)](#).

`_M_global`

```
template<typename _RAIter >
_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_global
```

The complete sequence to sort.

`_M_initial`

```
template<typename _RAIter >
_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_initial
```

Initial piece to work on.

Referenced by [__gnu_parallel::__qsb_conquer\(\)](#), and [__gnu_parallel::__qsb_local_sort_with_helping\(\)](#).

`_M_leftover_parts`

```
template<typename _RAIter >
_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_↔
leftover_parts
```

Work-stealing queue.

Referenced by [__gnu_parallel::__qsb_local_sort_with_helping\(\)](#).

`_M_num_threads`

```
template<typename _RAIter >
_ThreadIndex __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_num_threads
```

Number of threads involved in this algorithm.

Referenced by [__gnu_parallel::__qsb_local_sort_with_helping\(\)](#).

- uint32_t [operator\(\)](#) ()
- uint32_t [operator\(\)](#) (uint64_t local_supremum)

6.150.1 Detailed Description

Random number generator, based on the Mersenne twister.

6.150.2 Constructor & Destructor Documentation

[_RandomNumber](#)() [1/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber ( ) [inline]
```

Default constructor. Seed with 0.

[_RandomNumber](#)() [2/2]

```
__gnu_parallel::_RandomNumber::_RandomNumber (
    uint32_t __seed,
    uint64_t _M_supremum = 0x100000000ULL ) [inline]
```

Constructor.

Parameters

__seed	Random __seed.
_M_supremum	Generate integer random numbers in the interval [0,_M_supremum).

6.150.3 Member Function Documentation

`__genrand_bits()`

```
unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (
    int __bits ) [inline]
```

Generate a number of random bits, run-time parameter.

Parameters

<code>__bits</code>	Number of bits to generate.
---------------------	-----------------------------

`operator>()` [1/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() ( ) [inline]
```

Generate unsigned random 32-bit integer.

`operator>()` [2/2]

```
uint32_t __gnu_parallel::_RandomNumber::operator() (
    uint64_t local_supremum ) [inline]
```

Generate unsigned random 32-bit integer in the interval [0,local_supremum).

The documentation for this class was generated from the following file:

- [random_number.h](#)

6.151 `__gnu_cxx::Relative_pointer_impl<_Tp>` Class Template Reference

```
#include <pointer.h>
```

Public Types

- typedef `_Tp element_type`

Public Member Functions

- `_Tp * get () const`
- bool `operator<` (const [_Relative_pointer_impl](#) &__rarg) const
- bool `operator==` (const [_Relative_pointer_impl](#) &__rarg) const
- void `set` (`_Tp *`__arg)

6.151.1 Detailed Description

```
template<typename _Tp>
```

```
class __gnu_cxx::Relative_pointer_impl<_Tp>
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

The documentation for this class was generated from the following file:

- [pointer.h](#)

6.152 `__gnu_cxx::Relative_pointer_impl< const _Tp >` Class Template Reference

```
#include <pointer.h>
```

Public Types

- typedef const _Tp **element_type**

Public Member Functions

- const _Tp * **get** () const
- bool **operator<** (const [_Relative_pointer_impl](#) &__rarg) const
- bool **operator==** (const [_Relative_pointer_impl](#) &__rarg) const
- void **set** (const _Tp *__arg)

6.152.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::Relative_pointer_impl< const _Tp >
```

`Relative_pointer_impl` needs a specialization for const T because of the casting done during pointer arithmetic. The documentation for this class was generated from the following file:

- [pointer.h](#)

6.153 `__gnu_parallel::RestrictedBoundedConcurrentQueue< _Tp >` Class Template Reference

```
#include <queue.h>
```

Public Member Functions

- [_RestrictedBoundedConcurrentQueue](#) ([_SequenceIndex](#) __max_size)
- [~_RestrictedBoundedConcurrentQueue](#) ()
- bool [pop_back](#) (_Tp &__t)
- bool [pop_front](#) (_Tp &__t)
- void [push_front](#) (const _Tp &__t)

6.153.1 Detailed Description

```
template<typename _Tp>
class __gnu_parallel::RestrictedBoundedConcurrentQueue< _Tp >
```

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

Parameters

<code>_Tp</code>	Contained element type.
------------------	-------------------------

6.153.2 Constructor & Destructor Documentation

`_RestrictedBoundedConcurrentQueue()`

```
template<typename _Tp >
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (
    __SequenceIndex __max_size ) [inline]
```

Constructor. Not to be called concurrent, of course.

Parameters

<code>__max_size</code>	Maximal number of elements to be contained.
-------------------------	---

References [__gnu_parallel::__encode2\(\)](#).

`~_RestrictedBoundedConcurrentQueue()`

```
template<typename _Tp >
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~~_RestrictedBoundedConcurrentQueue ( )
[inline]
```

Destructor. Not to be called concurrent, of course.

6.153.3 Member Function Documentation

`pop_back()`

```
template<typename _Tp >
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (
    _Tp & __t ) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

References [__gnu_parallel::__compare_and_swap\(\)](#), [__gnu_parallel::__decode2\(\)](#), and [__gnu_parallel::__encode2\(\)](#).

`pop_front()`

```
template<typename _Tp >
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (
    _Tp & __t ) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

References [__gnu_parallel::__compare_and_swap\(\)](#), [__gnu_parallel::__decode2\(\)](#), and [__gnu_parallel::__encode2\(\)](#).

`push_front()`

```
template<typename _Tp >
void __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::push_front (
    const _Tp & __t ) [inline]
```

Pushes one element into the queue at the front end. Must not be called concurrently with `pop_front()`.

References [__gnu_parallel::__decode2\(\)](#), [__gnu_parallel::__encode2\(\)](#), and [__gnu_parallel::__fetch_and_add\(\)](#).

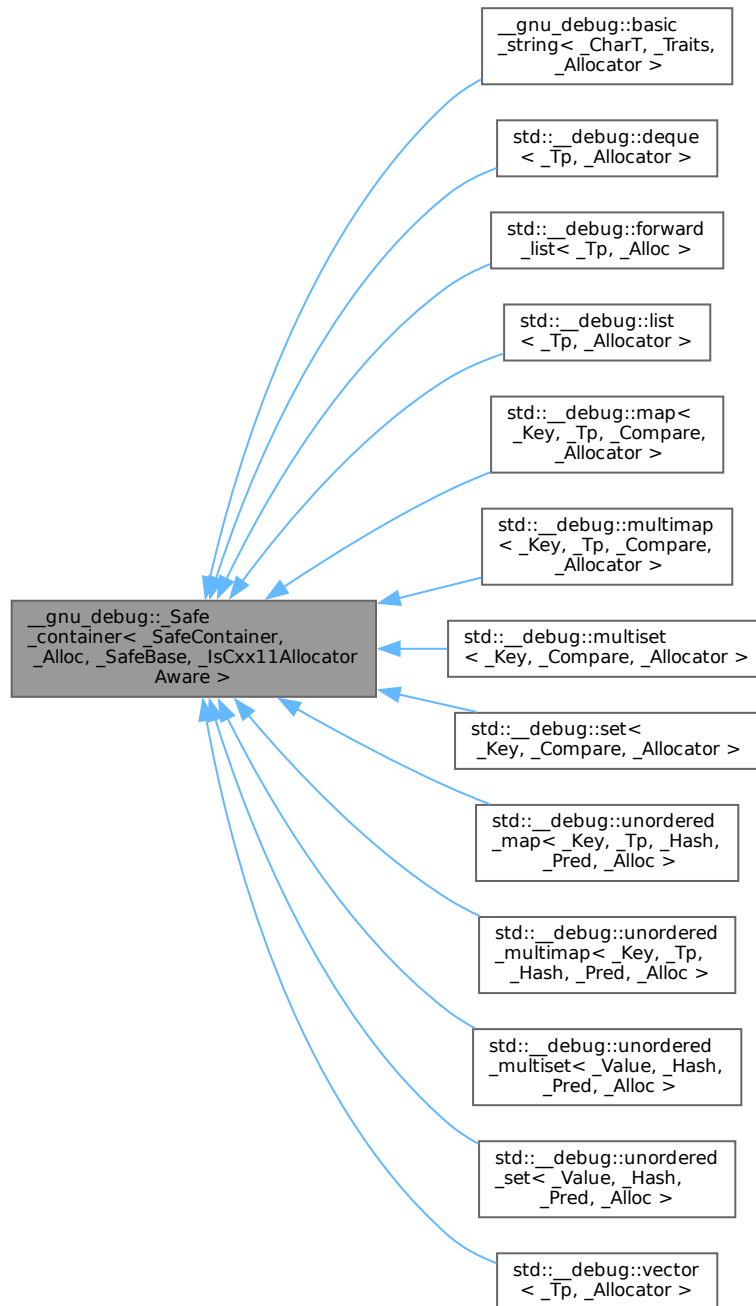

The documentation for this class was generated from the following file:

6.155.1 Detailed Description

```
template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list< _SafeSequence >
```

Special iterators swap and invalidation for forward_list because of the before_begin iterator.

6.155.2 Member Function Documentation

[_M_detach_all\(\)](#)

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by [__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base\(\)](#).

[_M_detach_singular\(\)](#)

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]
```

Detach all singular iterators.

Postcondition

for all iterators i attached to this sequence, i->_M_version == _M_version.

[_M_get_mutex\(\)](#)

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected],
[inherited]
```

For use in _Safe_sequence.

Referenced by [__gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if\(\)](#).

[_M_invalidate_all\(\)](#)

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]
```

Invalidates all iterators.

References [__gnu_debug::_Safe_sequence_base::_M_version](#).

[_M_invalidate_if\(\)](#)

```
void __gnu_debug::_Safe_sequence< _SafeSequence >::_M_invalidate_if (
    _Predicate __pred ) [inherited]
```

Invalidates all iterators x that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

`_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

`_M_transfer_from_if()`

```
void __gnu_debug::_Safe_sequence<_SafeSequence>::_M_transfer_from_if (
    _Safe_sequence<_SafeSequence> & __from,
    _Predicate __pred ) [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

6.155.3 Member Data Documentation**`_M_const_iterators`**

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators [inherited]
```

The list of constant iterators that reference this container.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

`_M_iterators`

```
_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]
```

The list of mutable iterators that reference this container.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

`_M_version`

```
unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]
```

The container version number. This number may never be 0.

Referenced by `__gnu_debug::_Safe_sequence_base::_M_invalidate_all()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>`.

6.156.1 Detailed Description

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_↵
Iterator>::iterator_category>
class \_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, \_Category >
```

Safe iterator wrapper.

The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Note that `_Iterator` must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before `_Iterator` get destroyed. Otherwise it would result in a data race.

6.156.2 Constructor & Destructor Documentation

[_Safe_iterator\(\)](#) [1/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
\_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, \_Category >::_Safe_iterator ( ) [inline],
[noexcept]
```

Postcondition

the iterator is singular and unattached

Referenced by [__gnu_debug::_Safe_iterator](#)< [_Iterator](#), [_Sequence](#), [_Category](#) >::operator++().

[_Safe_iterator\(\)](#) [2/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_↵
traits<_Iterator>::iterator_category>
\_\_gnu\_debug::\_Safe\_iterator< \_Iterator, \_Sequence, \_Category >::_Safe_iterator (
    \_Iterator __i,
    const \_Safe\_sequence\_base * __seq ) [inline], [noexcept]
```

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

References [__gnu_debug::_Safe_iterator_base::M_singular\(\)](#).

`_Safe_iterator()` [3/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
    const _Safe_iterator< _Iterator, _Sequence, _Category > & __x ) [inline], [noexcept]
```

Copy construction.

References [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach\(\)](#).

`_Safe_iterator()` [4/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
    _Safe_iterator< _Iterator, _Sequence, _Category > && __x ) [inline], [noexcept]
```

Move construction.

Postcondition

`__x` is singular and unattached

References [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_detach\(\)](#), and [std::swap\(\)](#).

`_Safe_iterator()` [5/5]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
template<typename _MutableIterator >
__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (
    const _Safe_iterator< _MutableIterator, _Sequence, typename __gnu_cxx::__enable_if<
        _IsConstant::__value &&std::__are_same< _MutableIterator, _OtherIterator >::__value, _Category
    >::__type > & __x ) [inline], [noexcept]
```

Converting constructor from a mutable iterator to a constant iterator.

References [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach\(\)](#).

6.156.3 Member Function Documentation**`_M_attach()`** [1/2]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach (
    _Safe_sequence_base * __seq ) [inline]
```

Attach iterator to the given sequence.

References [__gnu_debug::_Safe_iterator_base::_M_attach\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_detach\(\)](#).
Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator\(const_iterator\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator\(const_iterator, const_iterator\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#).

`_M_attach()` [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    _Safe_sequence_base * __seq,
    bool __constant ) [protected], [inherited]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by [__gnu_debug::_Safe_iterator_base::_Safe_iterator_base\(\)](#), [__gnu_debug::_Safe_iterator_base::_Safe_iterator_base\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach\(\)](#).

M_attach_single() [1/2]

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
void __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach_single (
    _Safe_sequence_base * __seq ) [inline]
```

Likewise, but not thread-safe.

References [__gnu_debug::_Safe_iterator_base::_M_attach_single\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach\(\)](#).

M_attach_single() [2/2]

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    _Safe_sequence_base * __seq,
    bool __constant ) throw ( ) [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach_single\(\)](#).

M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq ) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References [__gnu_debug::_Safe_iterator_base::_M_sequence](#).

M_before_dereferenceable()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_before_dereferenceable (
    ) const [inline]
```

Is the iterator before a dereferenceable one?

References [__gnu_debug::_base\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_incrementable\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_base\(\)](#).

M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x ) const throw ( ) [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

M_dereferenceable()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable ( ) const [inline]
```

Is the iterator dereferenceable?

References [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_is_before_begin\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_is_before_end\(\)](#), and [__gnu_debug::_Safe_iterator_base::_M_singular\(\)](#).

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator*\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#).

`_M_detach()`

```
void __gnu_debug::__Safe_iterator_base::_M_detach ( ) [protected], [inherited]
```

Detach the iterator for whatever sequence it is attached to, if any.

Referenced by [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#).

`_M_detach_single()`

```
void __gnu_debug::__Safe_iterator_base::_M_detach_single ( ) throw ( ) [inherited]
```

Likewise, but not thread-safe.

Referenced by [__gnu_debug::__Safe_sequence<_Sequence>::_M_transfer_from_if\(\)](#).

`_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::__Safe_iterator_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]
```

For use in `_Safe_iterator`.

Referenced by [__gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#), [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#), [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::__Safe_local_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#).

`_M_incrementable()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
bool __gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_incrementable ( ) const [inline]
```

Is the iterator incrementable?

References [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_is_end\(\)](#), and [__gnu_debug::__Safe_iterator_base::_M_is_end\(\)](#).

Referenced by [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_before_dereferenceable\(\)](#), [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#), and [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#).

`_M_invalidate()`

```
void __gnu_debug::__Safe_iterator_base::_M_invalidate ( ) [inline], [inherited]
```

Invalidate the iterator, making it singular.

References [__gnu_debug::__Safe_iterator_base::_M_version](#).

`_M_is_before_begin()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
bool __gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_is_before_begin ( ) const [inline]
```

Is this iterator equal to the sequence's `before_begin()` iterator if any?

Referenced by [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_dereferenceable\(\)](#).

`_M_is_begin()`

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
bool __gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::_M_is_begin ( ) const [inline]
```

Is this iterator equal to the sequence's `begin()` iterator?

References [__gnu_debug::__Safe_iterator<_Iterator, _Sequence, _Category>::base\(\)](#).

M_is_beginnest()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_beginnest ( ) const
[inline]
```

Is this iterator equal to the sequence's before_begin() iterator if any or begin() otherwise?

M_is_end()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_end ( ) const [inline]
```

Is this iterator equal to the sequence's end() iterator?

References [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::base\(\)](#).

Referenced by [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable\(\)](#), and [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_incrementable\(\)](#).

M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( ) [inherited]
```

Reset all member variables

M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( ) [inherited]
```

Is this iterator singular?

Referenced by [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator\(\)](#), [__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence, _Category >::_Safe_local_iterator\(\)](#), [__gnu_debug::_check_singular_aux\(\)](#), [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_dereferenceable\(\)](#), [__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable\(\)](#), [__gnu_debug::_Safe_iterator< _Iterator, _Sequence >::_M_incrementable\(\)](#), and [__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable\(\)](#).

M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw ( ) [inline], [inherited]
```

Unlink itself

References [__gnu_debug::_Safe_iterator_base::_M_next](#), and [__gnu_debug::_Safe_iterator_base::_M_prior](#).

S_constant()

```
template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
static constexpr bool __gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_S_constant
( ) [inline], [static], [constexpr]
```

Determine if this is a constant iterator.

Referenced by [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_attach\(\)](#), and [__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_M_is_begin\(\)](#).

6.157.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

6.157.2 Constructor & Destructor Documentation

`_Safe_iterator_base()` [1/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( ) [inline], [protected]
```

Initializes the iterator and makes it singular.

`_Safe_iterator_base()` [2/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
    const _Safe_sequence_base * __seq,
    bool __constant ) [inline], [protected]
```

Initialize the iterator to reference the sequence pointed to by `__seq`. `__constant` is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

References `_M_attach()`.

`_Safe_iterator_base()` [3/3]

```
__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (
    const \_Safe\_iterator\_base & __x,
    bool __constant ) [inline], [protected]
```

Initializes the iterator to reference the same sequence that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

References [_M_attach\(\)](#), and [_M_sequence](#).

6.157.3 Member Function Documentation**`_M_attach()`**

```
void __gnu_debug::_Safe_iterator_base::_M_attach (
    \_Safe\_sequence\_base * __seq,
    bool __constant ) [protected]
```

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by [_Safe_iterator_base\(\)](#), [_Safe_iterator_base\(\)](#), and [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M](#)

`_M_attach_single()`

```
void __gnu_debug::_Safe_iterator_base::_M_attach_single (
    \_Safe\_sequence\_base * __seq,
    bool __constant ) throw ( ) [protected]
```

Likewise, but not thread-safe.

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_attach_single\(\)](#).

`_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const \_Safe\_sequence\_base * __seq ) const [inline]
```

Determines if we are attached to the given sequence.

References [_M_sequence](#).

`_M_can_compare()`

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const \_Safe\_iterator\_base & __x ) const throw ( )
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

`_M_detach()`

```
void __gnu_debug::_Safe_iterator_base::_M_detach ( ) [protected]
```

Detach the iterator for whatever sequence it is attached to, if any.

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::_Safe_iterator<_Itera](#)

`_M_detach_single()`

```
void __gnu_debug::_Safe_iterator_base::_M_detach_single ( ) throw ( )
```

Likewise, but not thread-safe.

Referenced by [__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if\(\)](#).

M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw ( ) [protected]
```

For use in `_Safe_iterator`.

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#).

M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline]
```

Invalidate the iterator, making it singular.

References [_M_version](#).

M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( )
```

Reset all member variables

M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( )
```

Is this iterator singular?

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator\(\)](#), [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::check_singular_aux\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_dereferenceable\(\)](#), [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_dereferenceable\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_incrementable\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_incrementable\(\)](#).

M_unlink()

```
void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw ( ) [inline]
```

Unlink itself

References [_M_next](#), and [_M_prior](#).

6.157.4 Member Data Documentation**M_next**

```
\_Safe\_iterator\_base\* __gnu_debug::_Safe_iterator_base::_M_next
```

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [__gnu_debug::_Safe_sequence<_SafeSequence>::_M_invalidate_if\(\)](#), [__gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if\(\)](#), and [_M_unlink\(\)](#).

6.158.1 Detailed Description

`template<typename _Iterator, typename _Sequence>`
`class __gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>`

Safe iterator wrapper.

The class template `_Safe_local_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_local_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

6.158.2 Constructor & Destructor Documentation**`_Safe_local_iterator()` [1/5]**

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::__Safe_local_iterator ( ) [inline],
[noexcept]
```

Postcondition

the iterator is singular and unattached

Referenced by `__gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::operator++()`.

`_Safe_local_iterator()` [2/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::__Safe_local_iterator (
    _Iterator __i,
    const _Safe_sequence_base * __cont ) [inline]
```

Safe iterator construction from an unsafe iterator and its sequence.

Precondition

`seq` is not NULL

Postcondition

this is not singular

References `__gnu_debug::__Safe_iterator_base::_M_singular()`.

_Safe_local_iterator() [3/5]

```
template<typename _Iterator , typename _Sequence >
__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (
    const _Safe_local_iterator< _Iterator, _Sequence > & __x ) [inline], [noexcept]
```

Copy construction.

_M_attach() [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
    _Safe_sequence_base * __seq,
    bool __constant ) [protected], [inherited]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by [__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base\(\)](#), [__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base\(\)](#), and [__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach\(\)](#).

`_M_attach_single()` [1/2]

```
template<typename _Iterator , typename _Sequence >
void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach_single (
    _Safe_sequence_base * __seq ) [inline]
```

Likewise, but not thread-safe.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach_single()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach_single()`.

`_M_attach_single()` [2/2]

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
    _Safe_sequence_base * __seq,
    bool __constant ) throw ( ) [protected], [inherited]
```

Likewise, but not thread-safe.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach_single()`.

`_M_attached_to()`

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq ) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References `__gnu_debug::_Safe_iterator_base::_M_sequence`.

`_M_can_compare()`

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x ) const throw ( ) [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

`_M_dereferenceable()`

```
template<typename _Iterator , typename _Sequence >
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_dereferenceable ( ) const
[inline]
```

Is the iterator dereferenceable?

References `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_is_end()`, and `__gnu_debug::_Safe_iterator_base::_M_singular()`.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator*()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator[]()`.

`_M_detach()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ( ) [protected], [inherited]
```

Detach the iterator for whatever container it is attached to, if any.

Referenced by `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator=()`, and `__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::~operator=()`.

`_M_detach_single()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( ) throw ( ) [protected], [inherited]
```

Likewise, but not thread-safe.

`_M_get_mutex()`

```
__gnu_cxx::mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw ( ) [protected],
[inherited]
```

For use in `_Safe_iterator`.

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#).

_M_in_same_bucket()

```
template<typename _Iterator, typename _Sequence>
template<typename _Other>
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_in_same_bucket (
    const _Safe_local_iterator<_Other, _Sequence> & __other) const [inline]
```

Is this iterator part of the same bucket as the other one?

References [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::bucket\(\)](#).

_M_incrementable()

```
template<typename _Iterator, typename _Sequence>
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_incrementable () const [inline]
```

Is the iterator incrementable?

References [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_is_end\(\)](#), and [__gnu_debug::_Safe_iterator_base::_M_singular\(\)](#).

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator--\(\)](#).

_M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate () [inline], [inherited]
```

Invalidate the iterator, making it singular.

References [__gnu_debug::_Safe_iterator_base::_M_version\(\)](#).

_M_is_begin()

```
template<typename _Iterator, typename _Sequence>
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_is_begin () const [inline]
```

Is this iterator equal to the sequence's begin(bucket) iterator?

References [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::base\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::bucket\(\)](#).

_M_is_end()

```
template<typename _Iterator, typename _Sequence>
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_is_end () const [inline]
```

Is this iterator equal to the sequence's end(bucket) iterator?

References [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::base\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::bucket\(\)](#).

6.158.4 Member Data Documentation

`_M_next`

`_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next` [inherited]

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `__gnu_debug::Safe_sequence<_SafeSequence>::_M_invalidate_if()`, `__gnu_debug::Safe_sequence<_Sequence>` and `__gnu_debug::Safe_iterator_base::_M_unlink()`.

`_M_prior`

`_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior` [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by `__gnu_debug::Safe_sequence<_SafeSequence>::_M_invalidate_if()`, `__gnu_debug::Safe_sequence<_Sequence>` and `__gnu_debug::Safe_iterator_base::_M_unlink()`.

`_M_sequence`

`_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence` [inherited]

The sequence this iterator references; may be `NULL` to indicate a singular iterator.

Referenced by `__gnu_debug::Safe_iterator_base::_Safe_iterator_base()`, `__gnu_debug::Safe_local_iterator_base::_Safe_local_iterator_base()`, `__gnu_debug::Safe_iterator_base::_M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator++()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence, _Category>::operator--()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence, _Category>::operator=()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=()`.

`_M_version`

`unsigned int __gnu_debug::_Safe_iterator_base::_M_version` [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by `__gnu_debug::Safe_iterator_base::_M_invalidate()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence, _Category>::operator=()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence, _Category>::operator=()`.

6.159.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_local_iterator_base` base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

6.159.2 Constructor & Destructor Documentation

`_Safe_local_iterator_base()` [1/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( ) [inline], [protected]
```

Initializes the iterator and makes it singular.

`_Safe_local_iterator_base()` [2/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
    const \_Safe\_sequence\_base * __seq,
    bool __constant ) [inline], [protected]
```

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

References [_M_attach\(\)](#).

`_Safe_local_iterator_base()` [3/3]

```
__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base (
    const \_Safe\_local\_iterator\_base & __x,
    bool __constant ) [inline], [protected]
```

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

References [_M_attach\(\)](#), and [__gnu_debug::_Safe_iterator_base::_M_sequence](#).

6.159.3 Member Function Documentation

`_M_attach()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach (
    \_Safe\_sequence\_base * __seq,
    bool __constant ) [protected]
```

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by [_Safe_local_iterator_base\(\)](#), [_Safe_local_iterator_base\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence](#)

`_M_attach_single()`

```
void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (
    \_Safe\_sequence\_base * __seq,
    bool __constant ) throw ( ) [protected]
```

Likewise, but not thread-safe.

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::_M_attach_single\(\)](#).

M_attached_to()

```
bool __gnu_debug::_Safe_iterator_base::_M_attached_to (
    const _Safe_sequence_base * __seq ) const [inline], [inherited]
```

Determines if we are attached to the given sequence.

References [__gnu_debug::_Safe_iterator_base::_M_sequence](#).

M_can_compare()

```
bool __gnu_debug::_Safe_iterator_base::_M_can_compare (
    const _Safe_iterator_base & __x ) const throw ( ) [inherited]
```

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

M_detach()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach ( ) [protected]
```

Detach the iterator for whatever container it is attached to, if any.

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator=\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Itera](#)

M_detach_single()

```
void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( ) throw ( ) [protected]
```

Likewise, but not thread-safe.

M_get_mutex()

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ( ) throw ( ) [protected],
[inherited]
```

For use in `_Safe_iterator`.

Referenced by [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Se](#),
[__gnu_debug::_Safe_local_iterator<_Iterator, _Sequence>::operator++\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Cate](#),
[__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), [__gnu_debug::_Safe_local_iterator<_Iterator, _Sequen](#),
[__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::operator=\(\)](#), and [__gnu_debug::_Safe_local_iterator<_Iterator, _Se](#)

M_invalidate()

```
void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline], [inherited]
```

Invalidate the iterator, making it singular.

References [__gnu_debug::_Safe_iterator_base::_M_version](#).

M_reset()

```
void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( ) [inherited]
```

Reset all member variables

M_singular()

```
bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( ) [inherited]
```

Is this iterator singular?

Referenced by [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator\(\)](#), [__gnu_debug::_Safe_local_iterator<](#)
[__gnu_debug::_check_singular_aux\(\)](#), [__gnu_debug::_Safe_iterator<_Iterator, _Sequence, _Category>::_M_dereferenceable\(\)](#),

- `void _M_swap (_Safe_sequence_base &__x) noexcept`

6.160.1 Detailed Description

```

template<typename _Sequence>
class __gnu_debug::_Safe_node_sequence<_Sequence>

```

Like `_Safe_sequence` but with a special `_M_invalidate_all` implementation not invalidating past-the-end iterators. Used by node based sequence.

6.160.2 Member Function Documentation

`_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~Safe_sequence_base()`.

`_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]
```

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

`_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]
```

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

`_M_invalidate_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]
```

Invalidates all iterators.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

`_M_invalidate_if()`

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (
    _Predicate __pred ) [inherited]
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

`_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

`_M_swap()`

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
    _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

`_M_transfer_from_if()`

```
template<typename _Sequence>
template<typename _Predicate>
```

```
void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (
    __Safe_sequence< _Sequence > & __from,
    _Predicate __pred ) [inherited]
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

6.161.1 Detailed Description

`template<typename _Sequence>`
class `__gnu_debug::_Safe_sequence<_Sequence>`

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing

the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

6.161.2 Member Function Documentation

`_M_detach_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_all ( ) [protected], [inherited]
```

Detach all iterators, leaving them singular.

Referenced by [__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base\(\)](#).

`_M_detach_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]
```

Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

`_M_get_mutex()`

```
__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected],  
[inherited]
```

For use in `_Safe_sequence`.

Referenced by [__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if\(\)](#).

`_M_invalidate_all()`

```
void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const [inline], [protected], [inherited]
```

Invalidates all iterators.

References [__gnu_debug::_Safe_sequence_base::_M_version](#).

`_M_invalidate_if()`

```
template<typename _Sequence >  
template<typename _Predicate >  
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (  
    _Predicate __pred )
```

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

`_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

`_M_swap()`

```
void __gnu_debug::_Safe_sequence_base::_M_swap (  
    _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

`_M_transfer_from_if()`

```
template<typename _Sequence>
template<typename _Predicate>
void __gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if (
    _Safe_sequence<_Sequence> & __from,
    _Predicate __pred)
```

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

6.162.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.

The [_Safe_sequence_base](#) class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from [_Safe_sequence_base](#) publicly, so that safe iterators (which inherit [_Safe_iterator_base](#)) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

6.162.2 Constructor & Destructor Documentation**[~_Safe_sequence_base\(\)](#)**

```
\_\_gnu\_debug::\_Safe\_sequence\_base::~\_Safe\_sequence\_base ( ) [inline], [protected]
```

Notify all iterators that reference this sequence that the sequence is being destroyed.

6.163.1 Detailed Description

`template<typename _Container>`
`class __gnu_debug::__Safe_unordered_container<_Container>`

Base class for constructing a *safe* unordered container type that tracks iterators that reference it.

The class template `_Safe_unordered_container` simplifies the construction of *safe* unordered containers that track the iterators that reference the container, so that the iterators are notified of changes in the container that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `↵ Safe_iterator` for this container and `local_iterator` and `const_local_iterator` types that are instantiations of class template `_Safe_local_iterator` for this container. Iterators will then be tracked automatically.

6.163.2 Member Function Documentation

`_M_detach_all()`

`void __gnu_debug::__Safe_unordered_container_base::_M_detach_all () [protected], [inherited]`
 Detach all iterators, leaving them singular.

`_M_detach_singular()`

`void __gnu_debug::__Safe_sequence_base::_M_detach_singular () [protected], [inherited]`
 Detach all singular iterators.

Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

`_M_get_mutex()`

`__gnu_cxx::__mutex & __gnu_debug::__Safe_sequence_base::_M_get_mutex () throw () [protected], [inherited]`
 For use in `_Safe_sequence`.
 Referenced by `__gnu_debug::__Safe_sequence<_Sequence>::_M_transfer_from_if()`.

`_M_invalidate_all()`

`void __gnu_debug::__Safe_sequence_base::_M_invalidate_all () const [inline], [protected], [inherited]`
 Invalidates all iterators.
 References `__gnu_debug::__Safe_sequence_base::_M_version`.

`_M_invalidate_if()`

`template<typename _Container >`
`template<typename _Predicate >`

```
void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_if (
    _Predicate __pred )
```

Invalidates all iterators *x* that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

`_M_invalidate_local_if()`

```
template<typename _Container >
template<typename _Predicate >
void __gnu_debug::_Safe_unordered_container< _Container >::_M_invalidate_local_if (
    _Predicate __pred )
```

Invalidates all local iterators *x* that reference this container, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal local iterators nested in the safe ones.

`_M_revalidate_singular()`

```
void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]
```

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

`_M_swap()` [1/2]

```
void __gnu_debug::_Safe_sequence_base::_M_swap (
    _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]
```

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

`_M_swap()` [2/2]

```
void __gnu_debug::_Safe_unordered_container_base::_M_swap (
    _Safe_unordered_container_base & __x ) [protected], [noexcept], [inherited]
```

Swap this container with the given container. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

6.164.1 Detailed Description

Base class that supports tracking of local iterators that reference an unordered container.

The `_Safe_unordered_container_base` class provides basic support for tracking iterators into an unordered container. Containers that track iterators must derived from `_Safe_unordered_container_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains four linked lists of iterators, one for constant iterators, one for mutable iterators, one for constant local iterators, one for mutable local iterators and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* containers may fail to provide the exception-safety guarantees required by the C++ standard.

6.164.2 Constructor & Destructor Documentation

`~_Safe_unordered_container_base()`

```
__gnu_debug::_Safe_unordered_container_base::~~_Safe_unordered_container_base ( ) [inline], [protected],
[noexcept]
```

Notify all iterators that reference this container that the container is being destroyed.

6.168.1 Detailed Description

```
template<typename _CharT>
class std::__detail::_Scanner< _CharT >
```

Scans an input range for regex tokens.

The `_Scanner` class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

6.168.2 Member Enumeration Documentation

_TokenT

```
enum std::__detail::_ScannerBase::_TokenT : unsigned [inherited]
```

Token types returned from the scanner.

6.170.1 Detailed Description

class `_Settings` Run-time settings for the parallel mode including all tunable parameters.

6.170.2 Member Function Documentation

get()

```
static const \_Settings & __gnu_parallel::_Settings::get ( ) throw ( ) [static]
```

Get the global settings.

Referenced by [__gnu_parallel::_find_template\(\)](#), [__gnu_parallel::_find_template\(\)](#), [__gnu_parallel::_find_template\(\)](#), [__gnu_parallel::_for_each_template_random_access_workstealing\(\)](#), [__gnu_parallel::_parallel_nth_element\(\)](#), [__gnu_parallel::_parallel_partial_sum\(\)](#), [__gnu_parallel::_parallel_partial_sum_linear\(\)](#), [__gnu_parallel::_parallel_partition\(\)](#), [__gnu_parallel::_parallel_random_shuffle_drs\(\)](#), [__gnu_parallel::_parallel_sort\(\)](#), [__gnu_parallel::_parallel_sort\(\)](#), [__gnu_parallel::_parallel_sort_qs_conquer\(\)](#), [__gnu_parallel::_qsb_local_sort_with_helping\(\)](#), [__gnu_parallel::_sequential_random_s](#), [__gnu_parallel::multiway_merge_sampling_splitting\(\)](#), [__gnu_parallel::parallel_multiway_merge\(\)](#), [__gnu_parallel::parallel_sort_mwms\(\)](#), and [__gnu_parallel::parallel_sort_mwms_pu\(\)](#).

set()

```
static void __gnu_parallel::_Settings::set (  
    _Settings & ) throw ( )    [static]
```

Set the global settings.

6.170.3 Member Data Documentation**accumulate_minimal_n**

[_SequenceIndex](#) `__gnu_parallel::_Settings::accumulate_minimal_n`

Minimal input size for accumulate.

adjacent_difference_minimal_n

`unsigned int __gnu_parallel::_Settings::adjacent_difference_minimal_n`

Minimal input size for adjacent_difference.

cache_line_size

`unsigned int __gnu_parallel::_Settings::cache_line_size`

Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.

Referenced by [__gnu_parallel::__for_each_template_random_access_workstealing\(\)](#).

count_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::count_minimal_n`

Minimal input size for count and count_if.

fill_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::fill_minimal_n`

Minimal input size for fill.

find_increasing_factor

`double __gnu_parallel::_Settings::find_increasing_factor`

Block size increase factor for find.

find_initial_block_size

[_SequenceIndex](#) `__gnu_parallel::_Settings::find_initial_block_size`

Initial block size for find.

Referenced by [__gnu_parallel::__find_template\(\)](#).

find_maximum_block_size

[_SequenceIndex](#) `__gnu_parallel::_Settings::find_maximum_block_size`

Maximal block size for find.

find_scale_factor

`float __gnu_parallel::_Settings::find_scale_factor`

Block size scale-down factor with respect to current position.

Referenced by [__gnu_parallel::__find_template\(\)](#).

find_sequential_search_size

[_SequenceIndex](#) `__gnu_parallel::_Settings::find_sequential_search_size`

Start with looking for this many elements sequentially, for find.

Referenced by [__gnu_parallel::__find_template\(\)](#), and [__gnu_parallel::__find_template\(\)](#).

for_each_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::for_each_minimal_n`

Minimal input size for for_each.

generate_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for generate.

L1_cache_size

`unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

L2_cache_size

`unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Referenced by [__gnu_parallel::__parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::__sequential_random_shuffle\(\)](#).

max_element_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for max_element.

merge_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::merge_minimal_n`

Minimal input size for merge.

merge_oversampling

`unsigned int __gnu_parallel::_Settings::merge_oversampling`

Oversampling factor for merge.

Referenced by [__gnu_parallel::multiway_merge_sampling_splitting\(\)](#), and [__gnu_parallel::parallel_multiway_merge\(\)](#).

min_element_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::min_element_minimal_n`

Minimal input size for min_element.

multiway_merge_minimal_k

`int __gnu_parallel::_Settings::multiway_merge_minimal_k`

Oversampling factor for multiway_merge.

multiway_merge_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::multiway_merge_minimal_n`

Minimal input size for multiway_merge.

multiway_merge_oversampling

`unsigned int __gnu_parallel::_Settings::multiway_merge_oversampling`
Oversampling factor for multiway_merge.

nth_element_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::nth_element_minimal_n`
Minimal input size for nth_element.
Referenced by [__gnu_parallel::__parallel_nth_element\(\)](#).

partial_sort_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::partial_sort_minimal_n`
Minimal input size for partial_sort.

partial_sum_dilation

`float __gnu_parallel::_Settings::partial_sum_dilation`
Ratio for partial_sum. Assume "sum and write result" to be this factor slower than just "sum".
Referenced by [__gnu_parallel::__parallel_partial_sum_linear\(\)](#).

partial_sum_minimal_n

`unsigned int __gnu_parallel::_Settings::partial_sum_minimal_n`
Minimal input size for partial_sum.

partition_chunk_share

`double __gnu_parallel::_Settings::partition_chunk_share`
Chunk size for partition, relative to input size. If > 0.0, this value overrides partition_chunk_size.
Referenced by [__gnu_parallel::__parallel_partition\(\)](#).

partition_chunk_size

[_SequenceIndex](#) `__gnu_parallel::_Settings::partition_chunk_size`
Chunk size for partition.
Referenced by [__gnu_parallel::__parallel_partition\(\)](#).

partition_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::partition_minimal_n`
Minimal input size for partition.
Referenced by [__gnu_parallel::__parallel_nth_element\(\)](#).

qsb_steals

[_SequenceIndex](#) `__gnu_parallel::_Settings::qsb_steals`
The number of stolen ranges in load-balanced quicksort.

random_shuffle_minimal_n

`unsigned int __gnu_parallel::_Settings::random_shuffle_minimal_n`
Minimal input size for random_shuffle.

replace_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::replace_minimal_n`
Minimal input size for `replace` and `replace_if`.

search_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::search_minimal_n`
Minimal input size for `search` and `search_n`.

set_difference_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::set_difference_minimal_n`
Minimal input size for `set_difference`.

set_intersection_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::set_intersection_minimal_n`
Minimal input size for `set_intersection`.

set_symmetric_difference_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::set_symmetric_difference_minimal_n`
Minimal input size for `set_symmetric_difference`.

set_union_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::set_union_minimal_n`
Minimal input size for `set_union`.

sort_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::sort_minimal_n`
Minimal input size for parallel sorting.

sort_mwms_oversampling

`unsigned int __gnu_parallel::_Settings::sort_mwms_oversampling`
Oversampling factor for `parallel_std::sort` (MWMS).
Referenced by [__gnu_parallel::parallel_sort_mwms\(\)](#), and [__gnu_parallel::parallel_sort_mwms_pu\(\)](#).

sort_qs_num_samples_preset

`unsigned int __gnu_parallel::_Settings::sort_qs_num_samples_preset`
Such many samples to take to find a good pivot (quicksort).

sort_qsb_base_case_maximal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::sort_qsb_base_case_maximal_n`
Maximal subsequence `__length` to switch to unbalanced `__base` case. Applies to `std::sort` with dynamically load-balanced quicksort.
Referenced by [__gnu_parallel::__qsb_local_sort_with_helping\(\)](#).

TLB_size

`unsigned int __gnu_parallel::_Settings::TLB_size`

size of the Translation Lookaside Buffer (underestimation).

Referenced by [__gnu_parallel::_parallel_random_shuffle_drs\(\)](#), and [__gnu_parallel::_sequential_random_shuffle\(\)](#).

transform_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::transform_minimal_n`

Minimal input size for parallel `std::transform`.

unique_copy_minimal_n

[_SequenceIndex](#) `__gnu_parallel::_Settings::unique_copy_minimal_n`

Minimal input size for `unique_copy`.

- [regex_automaton.tcc](#)

6.177 __gnu_cxx::_Std_pointer_impl< _Tp > Class Template Reference

```
#include <pointer.h>
```

Public Types

- typedef _Tp element_type

Public Member Functions

- _Tp * get () const
- bool operator< (const _Std_pointer_impl &__arg) const
- bool operator== (const _Std_pointer_impl &__arg) const
- void set (element_type *__arg)

6.177.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::Std_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

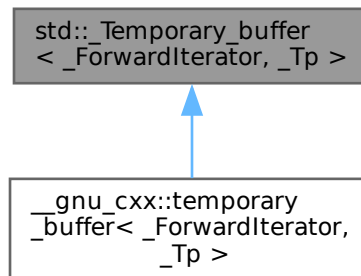

The documentation for this class was generated from the following file:

- [pointer.h](#)

6.178 `std::Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

```
#include <stl_tempbuf.h>
```

Inheritance diagram for `std::Temporary_buffer<_ForwardIterator, _Tp>`:

Public Types

- typedef pointer **iterator**
- typedef value_type * **pointer**
- typedef ptrdiff_t **size_type**
- typedef _Tp **value_type**

Public Member Functions

- `_Temporary_buffer` (`_ForwardIterator __seed`, `size_type __original_len`)
- iterator `begin` ()
- iterator `end` ()
- `size_type requested_size` () const
- `size_type size` () const

Protected Attributes

- pointer **_M_buffer**
- `size_type _M_len`
- `size_type _M_original_len`

6.178.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer<_ForwardIterator, _Tp>
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

6.178.2 Constructor & Destructor Documentation

`_Temporary_buffer()`

```
template<typename _ForwardIterator, typename _Tp>
std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer (
    _ForwardIterator __seed,
    size_type __original_len )
```

Constructs a temporary buffer of a size somewhere between zero and the given length.

References `std::pair<_T1, _T2>::first`, and `std::pair<_T1, _T2>::second`.

6.178.3 Member Function Documentation

`begin()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::begin ( ) [inline]
```

As per Table mumble.

`end()`

```
template<typename _ForwardIterator, typename _Tp>
iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::end ( ) [inline]
```

As per Table mumble.

`requested_size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size ( ) const [inline]
```

Returns the size requested by the constructor; may be `>size()`.

`size()`

```
template<typename _ForwardIterator, typename _Tp>
size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::size ( ) const [inline]
```

As per Table mumble.

The documentation for this class was generated from the following file:

- [stl_tempbuf.h](#)

6.179 `std::_Tuple_impl<_Idx, _Elements>` Struct Template Reference

6.179.1 Detailed Description

```
template<size_t _Idx, typename... _Elements>
struct std::_Tuple_impl<_Idx, _Elements>
```

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time `get()` operation.

The documentation for this struct was generated from the following file:

- [tuple](#)

6.180.1 Detailed Description

`template<size_t _Idx, typename _Head, typename... _Tail>`
`struct std::_Tuple_impl<_Idx, _Head, _Tail...>`

Recursive tuple implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).

The documentation for this struct was generated from the following file:

- [tuple](#)

6.181 `__gnu_cxx::Unqualified_type<_Tp>` Struct Template Reference

```
#include <pointer.h>
```

Public Types

- `typedef _Tp type`

6.181.1 Detailed Description

`template<typename _Tp>`
`struct __gnu_cxx::Unqualified_type<_Tp>`

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_type` is still `T`.

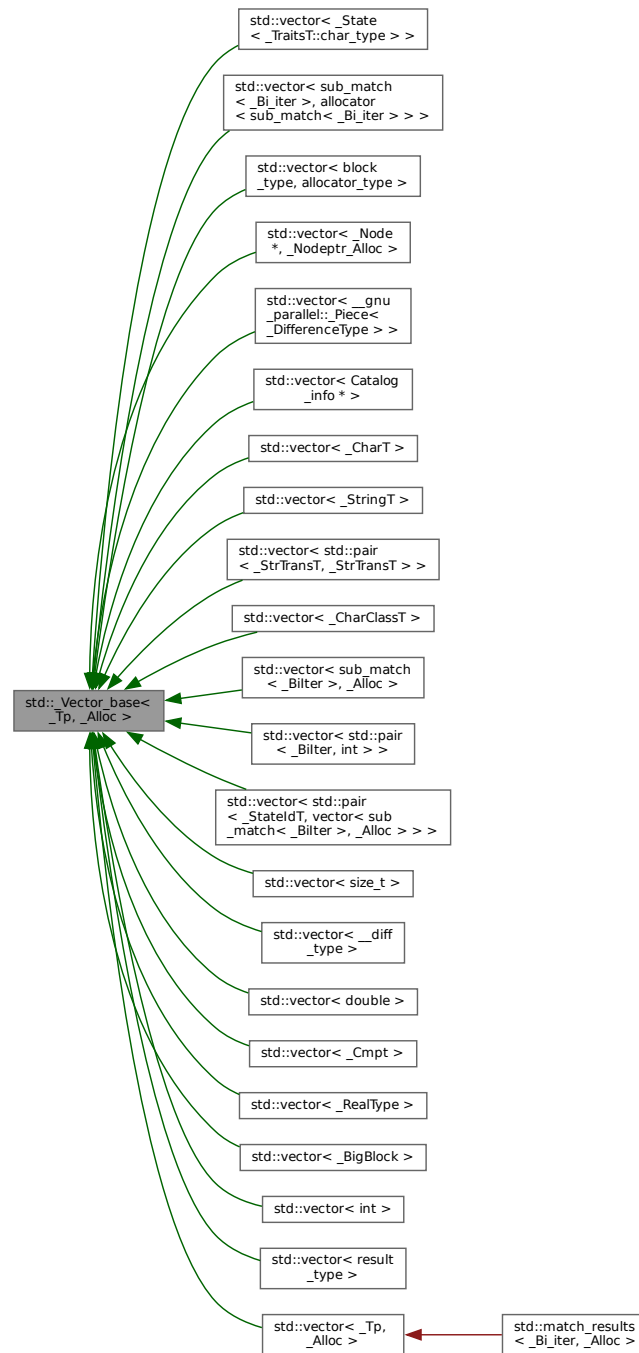

The documentation for this struct was generated from the following file:

- [pointer.h](#)

6.182 `std::_Vector_base<_Tp, _Alloc>` Struct Template Reference

```
#include <stl_vector.h>
```

template<std::size_t _Len, std::size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__↵
type)>
struct std::aligned_storage< _Len, _Align >
```

Alignment type.

The value of _Align is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than _Len (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most _Len and whose alignment is a divisor of _Align.

The documentation for this struct was generated from the following file:

6.191 std::aligned_union< _Len, _Types > Struct Template Reference

Public Types

- typedef [aligned_storage](#)< _S_len, [alignment_value](#) >::type **type**

Static Public Attributes

- static const size_t [alignment_value](#)

6.191.1 Detailed Description

```
template<size_t _Len, typename... _Types>
struct std::aligned_union< _Len, _Types >
```

Provide aligned storage for types.

[meta.trans.other]

Provides aligned storage for any of the provided types of at least size _Len.

See also

[aligned_storage](#)

6.191.2 Member Typedef Documentation

type

```
template<size_t _Len, typename... _Types>
typedef aligned\_storage<_S_len,alignment\_value>::type std::aligned\_union< _Len, _Types >::type
```

The storage.

6.195.1 Detailed Description

```
template<typename _Alloc>
struct std::allocator_traits< _Alloc >
```

Uniform interface to all allocator types.

Since

C++11

6.195.2 Member Typedef Documentation

allocator_type

```
template<typename _Alloc >
typedef _Alloc std::allocator_traits< _Alloc >::allocator_type
The allocator type.
```

const_pointer

```
template<typename _Alloc >
using std::allocator_traits< _Alloc >::const_pointer = typename _Ptr<__c_pointer, const value_type>↵
::type
The allocator's const pointer type.
Alloc::const_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<const
value_type>
```

const_void_pointer

```
template<typename _Alloc >
using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const
void>::type
The allocator's const void pointer type.
Alloc::const_void_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<const
void>
```

difference_type

```
template<typename _Alloc >
using std::allocator_traits< _Alloc >::difference_type = typename _Diff<_Alloc, pointer>::type
The allocator's difference type.
Alloc::difference_type if that type exists, otherwise pointer_traits<pointer>::difference↵
_type
```

is_always_equal

```
template<typename _Alloc >
using std::allocator_traits< _Alloc >::is_always_equal = __detected_or_t<typename is_empty<↵
_Alloc>::type, __equal, _Alloc>
Whether all instances of the allocator type compare equal.
Alloc::is_always_equal if that type exists, otherwise is_empty<Alloc>::type
```

pointer

```
template<typename _Alloc >
using std::allocator_traits< _Alloc >::pointer = __detected_or_t<value_type*, __pointer, _Alloc>
```

The allocator's pointer type.

Alloc::pointer if that type exists, otherwise value_type*

propagate_on_container_copy_assignment

```
template<typename _Alloc>
using std::allocator_traits<_Alloc>::propagate_on_container_copy_assignment = __detected_or_t<false_type, __pocca, _Alloc>
```

How the allocator is propagated on copy assignment.

Alloc::propagate_on_container_copy_assignment if that type exists, otherwise false_type

propagate_on_container_move_assignment

```
template<typename _Alloc>
using std::allocator_traits<_Alloc>::propagate_on_container_move_assignment = __detected_or_t<false_type, __pocma, _Alloc>
```

How the allocator is propagated on move assignment.

Alloc::propagate_on_container_move_assignment if that type exists, otherwise false_type

propagate_on_container_swap

```
template<typename _Alloc>
using std::allocator_traits<_Alloc>::propagate_on_container_swap = __detected_or_t<false_type, __pocs, _Alloc>
```

How the allocator is propagated on swap.

Alloc::propagate_on_container_swap if that type exists, otherwise false_type

size_type

```
template<typename _Alloc>
using std::allocator_traits<_Alloc>::size_type = typename _Size<_Alloc, difference_type>::type
```

The allocator's size type.

Alloc::size_type if that type exists, otherwise make_unsigned<difference_type>::type

value_type

```
template<typename _Alloc>
typedef _Alloc::value_type std::allocator_traits<_Alloc>::value_type
```

The allocated type.

void_pointer

```
template<typename _Alloc>
using std::allocator_traits<_Alloc>::void_pointer = typename _Ptr<__v_pointer, void>::type
```

The allocator's void pointer type.

Alloc::void_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<void>

6.195.3 Member Function Documentation

allocate() [1/2]

```
template<typename _Alloc>
static constexpr pointer std::allocator_traits<_Alloc>::allocate (
    _Alloc & __a,
    size_type __n ) [inline], [static], [constexpr]
```

Allocate memory.

Parameters

$_a$	An allocator.
$_n$	The number of objects to allocate space for.

Calls `a.allocate(n)`

allocate() [2/2]

```
template<typename _Alloc >
static constexpr pointer std::allocator_traits< _Alloc >::allocate (
    _Alloc & __a,
    size_type __n,
    const_void_pointer __hint ) [inline], [static], [constexpr]
```

Allocate memory.

Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

construct()

```
template<typename _Alloc >
template<typename _Tp , typename... _Args>
static constexpr auto std::allocator_traits< _Alloc >::construct (
    _Alloc & __a,
    _Tp * __p,
    _Args &&... __args ) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__↵
args)...)) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

deallocate()

```
template<typename _Alloc >
```

```
static constexpr void std::allocator_traits<_Alloc>::deallocate (
    _Alloc & __a,
    pointer __p,
    size_type __n ) [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

`destroy()`

```
template<typename _Alloc>
template<typename _Tp>
static constexpr void std::allocator_traits<_Alloc>::destroy (
    _Alloc & __a,
    _Tp * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

Referenced by [std::_Destroy\(\)](#).

`max_size()`

```
template<typename _Alloc>
static constexpr size_type std::allocator_traits<_Alloc>::max_size (
    const _Alloc & __a ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

<code>__a</code>	An allocator.
------------------	---------------

Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

select_on_container_copy_construction()

```
template<typename _Alloc >
static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
    const _Alloc & __rhs ) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

The documentation for this struct was generated from the following file:

6.196.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< allocator< _Tp > >
```

Partial specialization for std::allocator.

6.196.2 Member Typedef Documentation

allocator_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::allocator_type = allocator<_Tp>
The allocator type.
```

const_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::const_pointer = const _Tp*
The allocator's const pointer type.
```

const_void_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::const_void_pointer = const void*
The allocator's const void pointer type.
```

difference_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::difference_type = std::ptrdiff_t
The allocator's difference type.
```

is_always_equal

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::is_always_equal = true_type
Whether all instances of the allocator type compare equal.
```

pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::pointer = _Tp*
The allocator's pointer type.
```

propagate_on_container_copy_assignment

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment = false_type
How the allocator is propagated on copy assignment.
```

propagate_on_container_move_assignment

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment = true_type
How the allocator is propagated on move assignment.
```

propagate_on_container_swap

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap = false_type
```

How the allocator is propagated on swap.

size_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::size_type = std::size_t
```

The allocator's size type.

value_type

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::value_type = _Tp
```

The allocated type.

void_pointer

```
template<typename _Tp >
using std::allocator_traits< allocator< _Tp > >::void_pointer = void*
```

The allocator's void pointer type.

6.196.3 Member Function Documentation**allocate() [1/2]**

```
template<typename _Tp >
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n ) [inline], [static], [constexpr]
```

Allocate memory.

Parameters

\leftarrow __a	An allocator.
\leftarrow __n	The number of objects to allocate space for.

Calls `a.allocate(n)`

allocate() [2/2]

```
template<typename _Tp >
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
    const_void_pointer __hint ) [inline], [static], [constexpr]
```

Allocate memory.

Parameters

__a	An allocator.
__n	The number of objects to allocate space for.

Parameters

<code>__hint</code>	Aid to locality.
---------------------	------------------

Returns

Memory of suitable size and alignment for n objects of type `value_type`

Returns `a.allocate(n, hint)`

construct()

```
template<typename _Tp >
template<typename _Up, typename... _Args>
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args ) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17. Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead.`

deallocate()

```
template<typename _Tp >
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n ) [inline], [static], [constexpr]
```

Deallocate memory.

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

destroy()

```
template<typename _Tp >
template<typename _Up >
```

```
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
    allocator_type & __a,
    _Up * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`.

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)`.

`max_size()`

```
template<typename _Tp >
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
    const allocator_type & __a ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Parameters

<code>__a</code>	An allocator.
------------------	---------------

Returns

`__a.max_size()`

`select_on_container_copy_construction()`

```
template<typename _Tp >
static constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container←
_copy_construction (
    const allocator_type & __rhs ) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

Returns

`__rhs`

The documentation for this struct was generated from the following file:

6.197.1 Detailed Description

Explicit specialization for `std::allocator<void>`.

6.197.2 Member Typedef Documentation

`allocator_type`

```
using std::allocator_traits< allocator< void > >::allocator_type = allocator<void>
```

The allocator type.

`const_pointer`

```
using std::allocator_traits< allocator< void > >::const_pointer = const void*
```

The allocator's const pointer type.

`const_void_pointer`

```
using std::allocator_traits< allocator< void > >::const_void_pointer = const void*
```

The allocator's const void pointer type.

difference_type

```
using std::allocator_traits< allocator< void > >::difference_type = std::ptrdiff_t
```

The allocator's difference type.

is_always_equal

```
using std::allocator_traits< allocator< void > >::is_always_equal = true_type
```

Whether all instances of the allocator type compare equal.

pointer

```
using std::allocator_traits< allocator< void > >::pointer = void*
```

The allocator's pointer type.

propagate_on_container_copy_assignment

```
using std::allocator_traits< allocator< void > >::propagate_on_container_copy_assignment = false_type
```

How the allocator is propagated on copy assignment.

propagate_on_container_move_assignment

```
using std::allocator_traits< allocator< void > >::propagate_on_container_move_assignment = true_type
```

How the allocator is propagated on move assignment.

propagate_on_container_swap

```
using std::allocator_traits< allocator< void > >::propagate_on_container_swap = false_type
```

How the allocator is propagated on swap.

size_type

```
using std::allocator_traits< allocator< void > >::size_type = std::size_t
```

The allocator's size type.

value_type

```
using std::allocator_traits< allocator< void > >::value_type = void
```

The allocated type.

void_pointer

```
using std::allocator_traits< allocator< void > >::void_pointer = void*
```

The allocator's void pointer type.

6.197.3 Member Function Documentation**allocate()**

```
static void * std::allocator_traits< allocator< void > >::allocate (
    allocator_type & ,
    size_type ,
    const void * = nullptr ) [static], [delete]
```

allocate is ill-formed for allocator<void>

construct()

```
template<typename _Up , typename... _Args>
static constexpr void std::allocator_traits< allocator< void > >::construct (
    allocator_type & ,
    _Up * __p,
    _Args &&... __args ) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17. Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead. References std::_Construct\(\).`

deallocate()

```
static void std::allocator_traits< allocator< void > >::deallocate (
    allocator_type & ,
    void * ,
    size_type ) [static], [delete]
```

deallocate is ill-formed for `allocator<void>`

destroy()

```
template<typename _Up >
static constexpr void std::allocator_traits< allocator< void > >::destroy (
    allocator_type & ,
    _Up * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`

Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Invokes the destructor for `*__p`.

References [std::_Destroy\(\)](#).

max_size()

```
static size_type std::allocator_traits< allocator< void > >::max_size (
    const allocator_type & ) [static], [delete]
```

max_size is ill-formed for `allocator<void>`

select_on_container_copy_construction()

```
static constexpr allocator_type std::allocator_traits< allocator< void > >::select_on_container↵
```

```
_copy_construction (
    const allocator_type & __rhs ) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

Returns

`__rhs`

6.198.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< pmr::polymorphic_allocator< _Tp > >
```

Partial specialization for `std::pmr::polymorphic_allocator`.

6.198.2 Member Typedef Documentation

allocator_type

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocator_type = pmr::polymorphic_allocator<_Tp>
```

The allocator type.

const_pointer

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_pointer = const _Tp*
```

The allocator's const pointer type.

const_void_pointer

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_void_pointer = const
void*
```

The allocator's const void pointer type.

difference_type

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::difference_type = std::ptrdiff_t
```

The allocator's difference type.

is_always_equal

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::is_always_equal = false_type
```

Whether all instances of the allocator type compare equal.

pointer

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::pointer = _Tp*
```

The allocator's pointer type.

propagate_on_container_copy_assignment

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_copy_assignment = false_type
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

propagate_on_container_move_assignment

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_move_assignment = false_type
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

propagate_on_container_swap

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_swap =
false_type
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

size_type

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::size_type = std::size_t
```

The allocator's size type.

value_type

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::value_type = _Tp
```

The allocated type.

void_pointer

```
template<typename _Tp >
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::void_pointer = void*
```

The allocator's void pointer type.

6.198.3 Member Function Documentation**allocate() [1/2]**

```
template<typename _Tp >
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n ) [inline], [static]
```

Allocate memory.

Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`.

allocate() [2/2]

```
template<typename _Tp >
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
    const_void_pointer ) [inline], [static]
```

Allocate memory.

Parameters

\leftrightarrow _a	An allocator.
\leftrightarrow _n	The number of objects to allocate space for.

Returns

Memory of suitable size and alignment for n objects of type value_type.

The third parameter is ignored..

Returns a.allocate(n).

construct()

```
template<typename _Tp >
template<typename _Up , typename... _Args>
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args ) [inline], [static]
```

Construct an object of type _Up

Parameters

__a	An allocator.
__p	Pointer to memory of suitable size and alignment for an object of type _Up.
__args	Constructor arguments.

Calls __a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17.
 Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead.

deallocate()

```
template<typename _Tp >
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n ) [inline], [static]
```

Deallocate memory.

Parameters

\leftrightarrow _a	An allocator.
\leftrightarrow _p	Pointer to the memory to deallocate.
\leftrightarrow _n	The number of objects space was allocated for.

Calls a.deallocate(p, n).

destroy()

```
template<typename _Tp >
template<typename _Up >
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::destroy (
    allocator_type & ,
    _Up * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Up`

Parameters

<code>↔ _a</code>	An allocator.
<code>↔ _p</code>	Pointer to the object to destroy

Calls `p->_Up()`.

max_size()

```
template<typename _Tp >
static constexpr size_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::max_size
(
    const allocator_type & ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Returns

```
numeric_limits<size_t>::max() / sizeof(value_type)
```

select_on_container_copy_construction()

```
template<typename _Tp >
static allocator_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::select_on_↔
container_copy_construction (
    const allocator_type & ) [inline], [static], [noexcept]
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

6.202.1 Detailed Description

A type-safe container of any type.

An `any` object's state is either empty or it stores a contained object of CopyConstructible type.

Since

C++17

6.202.2 Constructor & Destructor Documentation

[any](#)() [1/6]

```
constexpr std::any::any ( ) [inline], [constexpr], [noexcept]
```

Default constructor, creates an empty object.

[any](#)() [2/6]

```
std::any::any (
    const any &__other ) [inline]
```

Copy constructor, copies the state of `__other`.

any() [3/6]

```
std::any::any (
    any && __other ) [inline], [noexcept]
```

Move constructor, transfer the state from __other.

Postcondition

!__other.has_value() (this postcondition is a GNU extension)

any() [4/6]

```
template<typename _Tp , typename _VTP = _Decay_if_not_any<_Tp>, typename _Mgr = _Manager<_VTP>,
enable_if_t< is_copy_constructible_v< _VTP > &&!__is_in_place_type_v< _VTP >, bool > = true>
std::any::any (
    _Tp && __value ) [inline]
```

Construct with a copy of __value as the contained object.

any() [5/6]

```
template<typename _Tp , typename... _Args, typename _VTP = decay_t<_Tp>, typename _Mgr = _←
Manager<_VTP>, __any_constructible_t< _VTP, _Args &&... > = false>
std::any::any (
```

```
    in_place_type_t< _Tp > ,
    _Args &&... __args ) [inline], [explicit]
```

Construct with an object created from __args as the contained object.

any() [6/6]

```
template<typename _Tp , typename _Up , typename... _Args, typename _VTP = decay_t<_Tp>, typename
_Mgr = _Manager<_VTP>, __any_constructible_t< _VTP, initializer_list< _Up > &, _Args &&... > =
false>
```

```
std::any::any (
    in_place_type_t< _Tp > ,
    initializer_list< _Up > __il,
    _Args &&... __args ) [inline], [explicit]
```

Construct with an object created from __il and __args as the contained object.

~any()

```
std::any::~any ( ) [inline]
```

Destructor, calls reset()

6.202.3 Member Function Documentation**emplace()** [1/2]

```
template<typename _Tp , typename... _Args>
__emplace_t< decay_t< _Tp >, _Args... > std::any::emplace (
    _Args &&... __args ) [inline]
```

Emplace with an object created from __args as the contained object.

emplace() [2/2]

```
template<typename _Tp , typename _Up , typename... _Args>
__emplace_t< decay_t< _Tp >, initializer_list< _Up > &, _Args &&... > std::any::emplace (
```

```
initializer_list< _Up > __il,  
_Args &&... __args ) [inline]
```

Emplace with an object created from `__il` and `__args` as the contained object.

has_value()

```
bool std::any::has_value ( ) const [inline], [noexcept]
```

Reports whether there is a contained object or not.

operator=() [1/3]

```
template<typename _Tp >  
enable_if_t< is_copy_constructible< _Decay_if_not_any< _Tp > >::value, any & > std::any::operator=  
(  
    _Tp && __rhs ) [inline]
```

Store a copy of `__rhs` as the contained object.

operator=() [2/3]

```
any & std::any::operator= (  
    any && __rhs ) [inline], [noexcept]
```

Move assignment operator.

Postcondition

`!__rhs.has_value()` (not guaranteed for other implementations)

operator=() [3/3]

```
any & std::any::operator= (  
    const any & __rhs ) [inline]
```

Copy the state of another object.

reset()

```
void std::any::reset ( ) [inline], [noexcept]
```

If not empty, destroy the contained object.

swap()

```
void std::any::swap (  
    any & __rhs ) [inline], [noexcept]
```

Exchange state with another object.

type()

```
const type_info & std::any::type ( ) const [inline], [noexcept]
```

The typeid of the contained object, or typeid(void) if empty.

6.203.1 Detailed Description

A type-safe container of any type.

An `any` object's state is either empty or it stores a contained object of CopyConstructible type.

6.203.2 Constructor & Destructor Documentation

`any()` [1/5]

```
std::experimental::fundamentals_v1::any::any ( ) [inline], [noexcept]
```

Default constructor, creates an empty object.

`any()` [2/5]

```
std::experimental::fundamentals_v1::any::any (
    const any & __other ) [inline]
```

Copy constructor, copies the state of `__other`.

any() [3/5]

```
std::experimental::fundamentals_v1::any::any (
    any && __other ) [inline], [noexcept]
```

Move constructor, transfer the state from __other.

Postcondition

__other.empty() (this postcondition is a GNU extension)

any() [4/5]

```
template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if< is_constructible< _Tp, _ValueType && >::value, bool >::type = true>
std::experimental::fundamentals_v1::any::any (
    _ValueType && __value ) [inline]
```

Construct with a copy of __value as the contained object.

any() [5/5]

```
template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>,
typename enable_if<!is_constructible< _Tp, _ValueType && >::value, bool >::type = false>
std::experimental::fundamentals_v1::any::any (
    _ValueType && __value ) [inline]
```

Construct with a copy of __value as the contained object.

~any()

```
std::experimental::fundamentals_v1::any::~~any ( ) [inline]
```

Destructor, calls clear()

6.203.3 Member Function Documentation**clear()**

```
void std::experimental::fundamentals_v1::any::clear ( ) [inline], [noexcept]
```

If not empty, destroy the contained object.

empty()

```
bool std::experimental::fundamentals_v1::any::empty ( ) const [inline], [noexcept]
```

Reports whether there is a contained object or not.

operator=() [1/3]

```
template<typename _ValueType >
enable_if_t<!is_same< any, decay_t< _ValueType > >::value, any & > std::experimental::fundamentals_v1::any::operator= (
    _ValueType && __rhs ) [inline]
```

Store a copy of __rhs as the contained object.

operator=() [2/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
    any && __rhs ) [inline], [noexcept]
```

Move assignment operator.

Postcondition

`__rhs.empty()` (not guaranteed for other implementations)

operator=() [3/3]

```
any & std::experimental::fundamentals_v1::any::operator= (
    const any & __rhs ) [inline]
```

Copy the state of another object.

swap()

```
void std::experimental::fundamentals_v1::any::swap (
    any & __rhs ) [inline], [noexcept]
```

Exchange state with another object.

type()

```
const type_info & std::experimental::fundamentals_v1::any::type ( ) const [inline], [noexcept]
```

The `typeid` of the contained object, or `typeid(void)` if empty.

6.204.1 Detailed Description

`template<typename _Tp, std::size_t _Nm>`
`struct std::array<_Tp, _Nm >`

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).
 Sets support random access iterators.

Template Parameters

<i>Tp</i>	Type of element. Required to be a complete type.
<i>Nm</i>	Number of elements.

The documentation for this struct was generated from the following file:

- [array](#)

6.206.1 Detailed Description

```
template<typename _Tp>
class std::atomic<_Tp>
```

Generic atomic type, primary class template.

Template Parameters

<code>_Tp</code>	Type to be made atomic, must be trivially copyable.
------------------	---

The documentation for this class was generated from the following file:

- [atomic](#)

6.207 `std::atomic<_Tp * >` Struct Template Reference

Public Types

- typedef `__atomic_base<_Tp * >` `__base_type`
- typedef `_Tp *` `__pointer_type`
- using `difference_type` = `ptrdiff_t`
- using `value_type` = `_Tp *`

Public Member Functions

- constexpr `atomic` (`__pointer_type` `__p`) noexcept
- `atomic` (const `atomic` &)=delete
- bool `compare_exchange_strong` (`__pointer_type` &`__p1`, `__pointer_type` `__p2`, `memory_order` `__m1`, `memory_order` `__m2`) noexcept

6.225.1 Detailed Description

`template<typename _Tp>`
`class std::auto_ptr< _Tp >`

A simple smart pointer providing strict ownership semantics.
The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyConstructible requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.

`_GLIBCXX_RESOLVE_LIB_DEFECTS`

1. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

6.225.2 Member Typedef Documentation

`element_type`

`template<typename _Tp >`
`typedef _Tp std::auto_ptr< _Tp >::element_type`
The pointed-to type.

6.225.3 Constructor & Destructor Documentation

`auto_ptr()` [1/4]

`template<typename _Tp >`
`std::auto_ptr< _Tp >::auto_ptr (`
`element_type * __p = 0) throw ()` [inline], [explicit]

An `auto_ptr` is usually constructed from a raw pointer.

Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`.

auto_ptr() [2/4]

```
template<typename _Tp >
std::auto_ptr<_Tp >::auto_ptr (
    auto_ptr<_Tp > & __a ) throw ( )    [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

<code>__a</code>	Another auto_ptr of the same type.
------------------	------------------------------------

This object now *owns* the object previously owned by `__a`, which has given up ownership.

auto_ptr() [3/4]

```
template<typename _Tp >
template<typename _Tp1 >
std::auto_ptr<_Tp >::auto_ptr (
    auto_ptr<_Tp1 > & __a ) throw ( )    [inline]
```

An auto_ptr can be constructed from another auto_ptr.

Parameters

<code>__a</code>	Another auto_ptr of a different but related type.
------------------	---

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element_type.

This object now *owns* the object previously owned by `__a`, which has given up ownership.

~auto_ptr()

```
template<typename _Tp >
std::auto_ptr<_Tp >::~~auto_ptr ( )    [inline]
```

When the auto_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get()` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

auto_ptr() [4/4]

```
template<typename _Tp >
std::auto_ptr<_Tp >::auto_ptr (
    auto_ptr_ref<element_type > __ref ) throw ( )    [inline]
```

Automatic conversions.

These operations are supposed to convert an auto_ptr into and from an auto_ptr_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(.....);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
```

But it doesn't work, and won't be fixed. For further details see <http://cplusplus.github.io/LWG/lwg-closed.html#463>

6.225.4 Member Function Documentation

get()

```
template<typename _Tp >
element_type * std::auto_ptr< _Tp >::get ( ) const throw ( )    [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This `auto_ptr` still owns the memory.

operator*()

```
template<typename _Tp >
element_type & std::auto_ptr< _Tp >::operator* ( ) const throw ( )    [inline]
```

Smart pointer dereferencing.

If this `auto_ptr` no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

operator->()

```
template<typename _Tp >
element_type * std::auto_ptr< _Tp >::operator-> ( ) const throw ( )    [inline]
```

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

operator=() [1/2]

```
template<typename _Tp >
auto_ptr & std::auto_ptr< _Tp >::operator= (
    auto_ptr< _Tp > & __a ) throw ( )    [inline]
```

`auto_ptr` assignment operator.

Parameters

<code>__a</code>	Another <code>auto_ptr</code> of the same type.
------------------	---

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References `std::auto_ptr< _Tp >::reset()`.

operator=() [2/2]

```
template<typename _Tp >
template<typename _Tp1 >
auto_ptr & std::auto_ptr< _Tp >::operator= (
    auto_ptr< _Tp1 > & __a ) throw ( )    [inline]
```

`auto_ptr` assignment operator.

Parameters

<code>__a</code>	Another <code>auto_ptr</code> of a different but related type.
------------------	--

A pointer-to-`Tp1` must be convertible to a pointer-to-`Tp/element_type`.

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References `std::auto_ptr<_Tp>::reset()`.

release()

```
template<typename _Tp >
element_type * std::auto_ptr<_Tp>::release ( ) throw ( )    [inline]
```

Bypassing the smart pointer.

Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

Note

This `auto_ptr` no longer owns the memory. When this object goes out of scope, nothing will happen.

reset()

```
template<typename _Tp >
void std::auto_ptr<_Tp>::reset (
    element_type * __p = 0 ) throw ( )    [inline]
```

Forcibly deletes the managed object.

Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`. The previous object has been deleted.

Referenced by `std::auto_ptr<_Tp>::operator=()`, and `std::auto_ptr<_Tp>::operator=()`.

The documentation for this class was generated from the following files:

- [shared_ptr_base.h](#)
- [auto_ptr.h](#)

6.226 `std::auto_ptr_ref<_Tp1>` > Struct Template Reference

```
#include <auto_ptr.h>
```

Public Member Functions

- `auto_ptr_ref (_Tp1 * __p)`

Public Attributes

- `_Tp1 * _M_ptr`

6.226.1 Detailed Description

```
template<typename _Tp1>
struct std::auto_ptr_ref<_Tp1 >
```

A wrapper class to provide `auto_ptr` with reference semantics. For example, an `auto_ptr` can be assigned (or constructed from) the result of a function which returns an `auto_ptr` by value.

All the `auto_ptr_ref` stuff should happen behind the scenes.

The documentation for this struct was generated from the following file:

- [auto_ptr.h](#)

6.227 `std::back_insert_iterator<_Container>` Class Template Reference

```
#include <stl_iterator.h>
```

Inheritance diagram for `std::back_insert_iterator<_Container>`:

Public Types

- typedef `_Container` [container_type](#)
- using **difference_type** = `ptrdiff_t`
- typedef [output_iterator_tag](#) [iterator_category](#)
- typedef void [pointer](#)
- typedef void [reference](#)
- typedef void [value_type](#)

Public Member Functions

- constexpr [back_insert_iterator](#) (`_Container &__x`)
- constexpr [back_insert_iterator](#) & [operator*](#) ()
- constexpr [back_insert_iterator](#) & [operator++](#) ()
- constexpr [back_insert_iterator](#) [operator++](#) (int)
- constexpr [back_insert_iterator](#) & [operator=](#) (const typename `_Container::value_type` &__value)
- constexpr [back_insert_iterator](#) & **[operator=](#)** (typename `_Container::value_type` &&__value)

Protected Attributes

- `_Container * container`

6.227.1 Detailed Description

```
template<typename _Container>
class std::back_insert_iterator<_Container>
```

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

6.227.2 Member Typedef Documentation**container_type**

```
template<typename _Container>
typedef _Container std::back_insert_iterator<_Container>::container_type
```

A nested typedef for the type of whatever container you used.

iterator_category

```
typedef output_iterator_tag std::iterator< output_iterator_tag , void , void , void , void >←
::iterator_category [inherited]
```

One of the [tag types](#).

pointer

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::pointer [inherited]
```

This type represents a pointer-to-value_type.

reference

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::reference [inherited]
```

This type represents a reference-to-value_type.

value_type

```
typedef void std::iterator< output_iterator_tag , void , void , void , void >::value_type [inherited]
```

The type "pointed to" by the iterator.

6.227.3 Constructor & Destructor Documentation**back_insert_iterator()**

```
template<typename _Container>
constexpr std::back_insert_iterator<_Container>::back_insert_iterator (
    _Container & __x ) [inline], [explicit], [constexpr]
```

The only way to create this iterator is with a container.

6.227.4 Member Function Documentation**operator*()**

```
template<typename _Container>
```

```
constexpr back_insert_iterator & std::back_insert_iterator< _Container >::operator* ( ) [inline],
[constexpr]
```

Simply returns `*this`.

operator++() [1/2]

```
template<typename _Container >
constexpr back_insert_iterator & std::back_insert_iterator< _Container >::operator++ ( ) [inline],
[constexpr]
```

Simply returns `*this`. (This iterator does not *move*.)

operator++() [2/2]

```
template<typename _Container >
constexpr back_insert_iterator std::back_insert_iterator< _Container >::operator++ (
    int ) [inline], [constexpr]
```

Simply returns `*this`. (This iterator does not *move*.)

operator=()

```
template<typename _Container >
constexpr back_insert_iterator & std::back_insert_iterator< _Container >::operator= (
    const typename _Container::value_type & __value ) [inline], [constexpr]
```

Parameters

<code>__value</code>	An instance of whatever type <code>container_type::const_reference</code> is; presumably a reference-to-const <code>T</code> for <code>container<T></code> .
----------------------	--

Returns

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container. The documentation for this class was generated from the following file:

- [bits/stl_iterator.h](#)

6.228 std::bad_alloc Class Reference

Inheritance diagram for `std::bad_alloc`:

Public Member Functions

- `bad_alloc` (const `bad_alloc` &)=default
- `bad_alloc` & `operator=` (const `bad_alloc` &)=default
- virtual const char * `what` () const throw ()

6.228.1 Detailed Description

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

6.228.2 Member Function Documentation

`what()`

```
virtual const char * std::bad_alloc::what ( ) const throw ( ) [virtual]
```

Returns a C-style character string describing the general cause of the current error.

Reimplemented from `std::exception`.

The documentation for this class was generated from the following file:

basic_branch (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

6.241.1 Detailed Description

template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>

class `__gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >`

A branched, tree-like (tree, trie) container abstraction.

Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Tag</i>	Instantiating data structure type, see container_tag.
<i>Node_Update</i>	Updates nodes, restores invariants.
<i>Policy_Tl</i>	Policy typelist.

Template Parameters

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Base is dispatched at compile time via Tag, from the following choices: `tree_tag`, `trie_tag`, and their descendants. Base choices are: `detail::ov_tree_map`, `detail::rb_tree_map`, `detail::splay_tree_map`, and `detail::pat_trie_map`. The documentation for this class was generated from the following file:

- [assoc_container.hpp](#)

Friends

- class `ios_base`

6.243.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_filebuf< _CharT, _Traits >
```

The actual work of input and output (for files).

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on `traits_type`, specific to this class:

- `traits_type::pos_type` must be `fpos<traits_type::state_type>`
- `traits_type::off_type` must be `streamoff`
- `traits_type::state_type` must be Assignable and DefaultConstructible,
- `traits_type::state_type()` must be the initial state for `codecvt`.

6.243.2 Constructor & Destructor Documentation

`basic_filebuf()`

```
template<typename _CharT , typename _Traits >
std::basic_filebuf< _CharT, _Traits >::basic_filebuf
```

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

References [std::basic_streambuf<_CharT, _Traits>::_M_buf_locale](#).

~basic_filebuf()

```
template<typename _CharT , typename _Traits >
virtual std::basic_filebuf< _CharT, _Traits >::~~basic_filebuf ( ) [inline], [virtual]
```

The destructor closes the file first.

6.243.3 Member Function Documentation

_M_create_pback()

```
template<typename _CharT , typename _Traits >
void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( ) [inline], [protected]
```

Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

_M_destroy_pback()

```
template<typename _CharT , typename _Traits >
void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( ) throw ( ) [inline], [protected]
```

Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

_M_set_buffer()

```
template<typename _CharT , typename _Traits >
void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (
    streamsize __off ) [inline], [protected]
```

This function sets the pointers of the internal buffer, both get and put areas. Typically:

`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).

NB: `eptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.

Referenced by [std::basic_filebuf<_CharT, _Traits>::close\(\)](#).

close()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close
```

Closes the currently associated file.

Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

References [std::basic_filebuf<_CharT, _Traits>::_M_mode](#), [std::basic_filebuf<_CharT, _Traits>::_M_pback_init](#), [std::basic_filebuf<_CharT, _Traits>::_M_reading](#), and [std::basic_filebuf<_CharT, _Traits>::_M_set_buffer\(\)](#).

eback()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

egptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic\_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow\(\)](#).

epptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic\_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

gbump()

```
template<typename _CharT , typename _Traits >
void std::basic\_streambuf< _CharT, _Traits >::gbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

getloc()

```
template<typename _CharT , typename _Traits >
```

```
locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

gptr()

```
template<typename _CharT , typename _Traits >
```

```
char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow()`.

imbue()

```
template<typename _CharT , typename _Traits >
```

```
void std::basic_filebuf< _CharT, _Traits >::imbue (
    const locale & __loc ) [protected], [virtual]
```

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::cur`.

in_avail()

```
template<typename _CharT , typename _Traits >
```

```
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

is_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_filebuf< _CharT, _Traits >::is_open ( ) const throw ( )    [inline]
```

Returns true if the external file is open.

open() [1/3]

```
template<typename _CharT , typename _Traits >
template<typename _Path >
_If_fs_path< _Path, __filebuf_type * > std::basic_filebuf< _CharT, _Traits >::open (
    const _Path & __s,
    ios_base::openmode __mode )    [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

Returns

`this` on success, NULL on failure

open() [2/3]

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode )
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Returns

`this` on success, NULL on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

ios_base Flag combination					stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.
A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

References [std::ios_base::app](#), [std::ios_base::cur](#), and [std::ios_base::out](#).

pbackfail()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::pbackfail (
    int_type __c = _Traits::eof() ) [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

References [std::ios_base::cur](#), and [std::ios_base::in](#).

pbase()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

pbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::pbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the write position.

Parameters

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

pptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

pubimbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc ) [inline], [inherited]
```

Entry point for imbue().

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]
```

Calls virtual `sync` function.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`, and `std::basic_istream< _CharT, _Traits >::sync()`.

sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Referenced by `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< char >::ignore()`, `std::istreambuf_iterator< _CharT, _Traits >::operator++()`, and `std::basic_istream< char >::seekg()`.

seekoff()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `std::ios_base::cur`.

seekpos()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::pos_type std::basic_filebuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

References `std::ios_base::beg`.

setbuf()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::__streambuf_type * std::basic_filebuf< _CharT, _Traits >↵
::setbuf (
    char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Manipulates the buffer.

Parameters

<code>↵ __s</code>	Pointer to a buffer area.
<code>↵ __n</code>	Size of <code>__s</code> .

Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend ) [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert\(\)](#).

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::setp (
    char_type * __pbeg,
    char_type * __pend ) [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert\(\)](#).

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::istreambuf_iterator<_CharT, _Traits>::operator++\(\)](#), and [std::basic_istream<char>::seekg\(\)](#).

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for `xsgetn`.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::showmanyc [protected], [virtual]
Investigating the data available.
```

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::binary`, and `std::ios_base::in`.

snextc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]
Getting the next character.
```

Returns

The next character, or eof.

Calls `sputc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::seekg()`, and `std::basic_istream< char >::unget()`.

sputbackc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (
    char_type __c ) [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

<code>__c</code>	The character to push back.
------------------	-----------------------------

Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

sputc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
    char_type __c ) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

<code>__c</code>	A character to output.
------------------	------------------------

Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`, and `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow()`.

sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
    const char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

sungetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbckfail()`. The effect is to *unget* the last character *gotten*.

Referenced by [std::basic_istream< _CharT, _Traits >::unget\(\)](#).

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_filebuf< _CharT, _Traits >::sync [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

uflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in [__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >](#).

underflow()

```
template<typename _CharT , typename _Traits >
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow
[protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::in`.

xsgetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (
    char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Multiple character extraction.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::in`.

xspn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::xspn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Multiple character insertion.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic_streambuf<_CharT, _Traits>](#).

References [std::ios_base::app](#), [std::min\(\)](#), and [std::ios_base::out](#).

6.243.4 Member Data Documentation

M_buf

```
template<typename _CharT , typename _Traits >
char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf [protected]
Pointer to the beginning of internal buffer.
```

M_buf_locale

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]
Current locale setting.
Referenced by std::basic\_filebuf<\_CharT, \_Traits>::basic\_filebuf\(\).
```

M_buf_size

```
template<typename _CharT , typename _Traits >
size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected]
Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.
```

M_ext_buf

```
template<typename _CharT , typename _Traits >
char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected]
Buffer for external characters. Used for input when codecvt::always_noconv() == false. When valid, this corresponds to eback().
```

M_ext_buf_size

```
template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected]
Size of buffer held by _M_ext_buf.
```

M_ext_next

```
template<typename _CharT , typename _Traits >
const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected]
Pointers into the buffer held by _M_ext_buf that delimit a subsequence of bytes that have been read but not yet converted. When valid, _M_ext_next corresponds to egptr().
```

M_in_beg

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]
Start of get area.
```

`_M_in_cur`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]
Current read area.
```

`_M_in_end`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected], [inherited]
End of get area.
```

`_M_mode`

```
template<typename _CharT , typename _Traits >
ios_base::openmode std::basic_filebuf< _CharT, _Traits >::_M_mode [protected]
Place to stash in || out || in | out settings for current filebuf.
Referenced by std::basic_filebuf< _CharT, _Traits >::close().
```

`_M_out_beg`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected], [inherited]
Start of put area.
```

`_M_out_cur`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected], [inherited]
Current put area.
```

`_M_out_end`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected], [inherited]
End of put area.
```

`_M_pback`

```
template<typename _CharT , typename _Traits >
char_type std::basic_filebuf< _CharT, _Traits >::_M_pback [protected]
Necessary bits for putback buffer management.
```

Note

pbacks of over one character are not currently supported.

`_M_pback_cur_save`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_filebuf< _CharT, _Traits >::_M_pback_cur_save [protected]
Necessary bits for putback buffer management.
```

Note

pbacks of over one character are not currently supported.

`_M_pback_end_save`

```
template<typename _CharT , typename _Traits >
char_type* std::basic\_filebuf< _CharT, _Traits >::_M_pback_end_save [protected]
```

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

`_M_pback_init`

```
template<typename _CharT , typename _Traits >
bool std::basic\_filebuf< _CharT, _Traits >::_M_pback_init [protected]
```

Necessary bits for putback buffer management.

Note

pbacks of over one character are not currently supported.

Referenced by [std::basic_filebuf< _CharT, _Traits >::close\(\)](#).

`_M_reading`

```
template<typename _CharT , typename _Traits >
bool std::basic\_filebuf< _CharT, _Traits >::_M_reading [protected]
_M_reading == false && _M_writing == false for uncommitted mode; _M_reading == true for read mode; _M_writing
== true for write mode;
```

NB: `_M_reading == true && _M_writing == true` is unused.

Referenced by [std::basic_filebuf< _CharT, _Traits >::close\(\)](#).

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (float &__f)`
- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

6.244.1 Detailed Description

template<typename [_CharT](#), typename [_Traits](#)>

class [std::basic_fstream](#)<_CharT, _Traits>

Controlling input and output for files.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits <_CharT>.

This class supports reading from and writing to named files, using the inherited functions from [std::basic_istream](#). To control the associated sequence, an instance of [std::basic_filebuf](#) is used, which this page refers to as *sb*.

6.244.2 Member Typedef Documentation

[__num_put_type](#)

template<typename [_CharT](#) , typename [_Traits](#) >

typedef [num_put](#)<_CharT, [ostreambuf_iterator](#)<_CharT, _Traits> > [std::basic_ios](#)<_CharT, _Traits>::[__num_put_type](#) [inherited]

These are non-standard types.

[event_callback](#)

typedef void(* [std::ios_base::event_callback](#)) ([event](#) __e, [ios_base](#) &__b, int __i) [inherited]

The type of an event callback function.

Parameters

_↵ _e	One of the members of the event enum.
_↵ _b	Reference to the ios_base object.
_↵ _i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several [ios_base](#) and [basic_ios](#) functions, specifically [imbue\(\)](#), [copyfmt\(\)](#), and [~ios\(\)](#).

[fmtflags](#)

typedef [_Ios_Fmtflags](#) [std::ios_base::fmtflags](#) [inherited]

This is a bitmask type.

`__Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

iostate

```
typedef __Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`__Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.244.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.244.4 Constructor & Destructor Documentation**basic_fstream() [1/4]**

```
template<typename _CharT , typename _Traits >
```

```
std::basic_fstream<_CharT, _Traits>::basic_fstream ( ) [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_fstream() [2/4]

```
template<typename _CharT , typename _Traits >
```

```
std::basic_fstream<_CharT, _Traits>::basic_fstream (
```

```
    const char * __s,
```

```
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [explicit]
```

Create an input/output file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

basic_fstream() [3/4]

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::basic_fstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [explicit]
```

Create an input/output file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

basic_fstream() [4/4]

```
template<typename _CharT , typename _Traits >
template<typename _Path , typename _Require = _If_fs_path<_Path>>
std::basic_fstream< _CharT, _Traits >::basic_fstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Create an input/output file stream.

Parameters

<code>__s</code>	<code>filesystem::path</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

~basic_fstream()

```
template<typename _CharT , typename _Traits >
std::basic_fstream< _CharT, _Traits >::~~basic_fstream ( ) [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

6.244.5 Member Function Documentation**_M_getloc()**

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get\(\)](#), [std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_date\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_weekday\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_year\(\)](#), [std::num_put< _CharT, _Outlter >::do_put\(\)](#), [std::time_put< _CharT, _Outlter >::do_put\(\)](#), and [std::time_put< _CharT, _Outlter >::put\(\)](#).

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#).

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios< _CharT, _Traits >::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::putb\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ios< _CharT, _Traits >::setsb\(\)](#), and [std::basic_istream< _CharT, _Traits >::unget\(\)](#).

close()

```
template<typename _CharT , typename _Traits >
void std::basic_fstream< _CharT, _Traits >::close ( ) [inline]
```

Close the file.

Calls [std::basic_filebuf::close\(\)](#). If that function fails, [failbit](#) is set in the stream's error state.

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits >::exceptions()`, `std::basic_ios<_CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits >::eof ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the eofbit is set.

Note that other `iosstate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits >::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios<_CharT, _Traits >::exceptions ( ) const [inline], [inherited]
Throwing exceptions on errors.
```

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iosstate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits >::exceptions (
    iosstate __except ) [inline], [inherited]
Throwing exceptions on errors.
```

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
```

```

std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

std::ifstream f ("/etc/motd");

std::cerr << "Setting badbit\n";
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}

```

References [std::basic_ios<_CharT, _Traits>::clear\(\)](#).

fail()

```

template<typename _CharT , typename _Traits >
bool std::basic\_ios<\_CharT, \_Traits>::fail \( \) const [inline], [inherited]

```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::operator bool\(\)](#), [std::basic_ios<_CharT, _Traits>::operator!\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), and [std::basic_ostream<_CharT, _Traits>::tellp\(\)](#).

fill() [1/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \( \) const [inline], [inherited]

```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::widen\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), and [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

fill() [2/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \(
    char\_type \_\_ch ) [inline], [inherited]

```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::operator<<()`, `std::operator>>()`, `std::operator>>()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::flush()`.

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline], [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

*this

Returns `get(__sb,widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim ) [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

Returns

*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#), [std::basic_streambuf< _CharT, _Traits >::snextc\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::setstate\(\)](#).

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c ) [inherited]
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

*this

Returns `get(__s,__n,widen("\n"))`.

get() [6/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
------------------	----------------------

Parameters

<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

ignore() [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sbumpc\(\)](#).

ignore() [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

ignore() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n,
    int_type __delim ) [inherited]
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A “stop” character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), and [std::ios_base::goodbit](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< _CharT, _Traits >::basic_ios()`.

is_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_fstream< _CharT, _Traits >::is_open ( ) [inline]
```

Wrapper to test for an open file.

Returns

`rdbuf()->is_open()`

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

open() [1/3]

```
template<typename _CharT , typename _Traits >
template<typename _Path >
_If_fs_path<_Path, void> std::basic_fstream<_CharT, _Traits>::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT , typename _Traits >
void std::basic_fstream<_CharT, _Traits>::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

open() [3/3]

```
template<typename _CharT , typename _Traits >
void std::basic_fstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `io manip` header.

operator<<() [3/17]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

$_p$	A variable of pointer type.
-------	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

$_f$	A variable of builtin floating point type.
-------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

$_f$	A variable of builtin floating point type.
-------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
```

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    int __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [10/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

\leftarrow	A variable of builtin floating point type.
$_ \leftarrow$	
\leftarrow	
$_ \leftarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::num_put< _CharT, _OutIter >::put\(\)](#), and [std::basic_ios< _CharT, _Traits >](#)

operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_↔$ $_n$	A variable of builtin integral type.
----------------	--------------------------------------

Returns

$*this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_↔$ $_n$	A variable of builtin integral type.
----------------	--------------------------------------

Returns

$*this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_↔$ $_n$	A variable of builtin integral type.
----------------	--------------------------------------

Returns

$*this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT, typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type & (*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type & (*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

operator>>() [4/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

\leftarrow __ \leftarrow \leftarrow __ \leftarrow <i>f</i>	A variable of builtin floating point type.
--	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

\leftarrow __ \leftarrow \leftarrow __ \leftarrow <i>f</i>	A variable of builtin floating point type.
--	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT , typename _Traits >

    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), [std::num_get< _CharT, _InIter >::get\(\)](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
```

```
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned int & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    unsigned long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
```

```
unsigned short & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

`operator>>()` [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

`peek()`

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

`precision()` [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of precision().

put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c ) [inherited]
```

Simple insertion.

Parameters

<code>__c</code>	The character to insert.
------------------	--------------------------

Returns

*this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#).

putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

<code>__c</code>	The character to push back into the input stream.
------------------	---

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a void* associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
__filebuf_type * std::basic_fstream<_CharT, _Traits>::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (
    basic_streambuf<_CharT, _Traits> * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ios<_CharT, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::setstate()`.

read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
```

```
char_type * __s,
streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos ) [inherited]
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rddbuf()` is a null pointer, returns -1.

Otherwise, calls `rddbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tellp()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tie() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
```

```
char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by [std::basic_ios<_CharT, _Traits>::fill\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic_ostream< char, _Traits>::put\(\)](#).

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by [std::basic_ios< _CharT, _Traits>::copyfmt\(\)](#), [std::num_put< _CharT, _Outiter>::do_put\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::write (
    const char_type * __s,
    streamsize __n ) [inherited]
```

Character string insertion.

Parameters

 <code>__s</code>	The array to insert.
 <code>__n</code>	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.244.6 Member Data Documentation**M_gcount**

```
template<typename _CharT , typename _Traits >
```

```
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left`|`right`|`internal`. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by [std::basic_filebuf< _CharT, _Traits >::overflow\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsputn\(\)](#).

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by [std::basic_filebuf< _CharT, _Traits >::open\(\)](#).

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ios< _CharT, _Traits >::bad\(\)](#), [std::basic_ios< _CharT, _Traits >::fail\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< char >::get\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_istream< char >::peek\(\)](#), [std::basic_ostream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Referenced by [std::dec\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::hex\(\)](#), and [std::oct\(\)](#).

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by [std::basic_filebuf< _CharT, _Traits >::seekpos\(\)](#).

binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by [std::basic_filebuf< _CharT, _Traits >::showmanyc\(\)](#).

boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract bool in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_put< _CharT, _OutIter >::do_put\(\)](#), and [std::noboolalpha\(\)](#).

cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

```

Referenced by std::basic_istream<_CharT, _Traits>::sentry::sentry(), std::time_get<_CharT, _InIter>::do_get(),
std::num_get<_CharT, _InIter>::do_get(), std::num_get<_CharT, _InIter>::do_get(), std::num_get<_CharT, _InIter>::do_get(),
std::num_get<_CharT, _InIter>::do_get(), std::time_get<_CharT, _InIter>::do_get_date(), std::time_get<_CharT, _InIter>::do_get_
std::time_get<_CharT, _InIter>::do_get_time(), std::time_get<_CharT, _InIter>::do_get_weekday(), std::time_get<_CharT, _InIter>
std::basic_ios<_CharT, _Traits>::eof(), std::basic_istream<char>::get(), std::basic_istream<_CharT, _Traits>::get(),
std::basic_istream<_CharT, _Traits>::get(), std::time_get<_CharT, _InIter>::get(), std::basic_istream<_CharT, _Traits>::operator>
std::operator>>(), std::basic_istream<_CharT, _Traits>::peek(), std::basic_istream<_CharT, _Traits>::putback(),
std::basic_istream<_CharT, _Traits>::read(), std::basic_istream<_CharT, _Traits>::readsome(), std::basic_istream<char>::seekg()
std::basic_istream<_CharT, _Traits>::seekg(), std::basic_istream<_CharT, _Traits>::seekg(), std::basic_istream<_CharT, _Traits>::
and std::ws().

```

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<char>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekp()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _Inlter>::do_get\(\)](#),

[std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_year\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#),

[std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _Inlter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#),

[std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#),

[std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::put\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::unget\(\)](#), and [std::ws\(\)](#).

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_put<_CharT, _Outlter>::do_put\(\)](#), and [std::hex\(\)](#).

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#),

[std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#),

[std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_filebuf<_CharT, _Traits>::underflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num_put<_CharT, _Outlter>::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf<_CharT, _Traits>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::tellp\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put<_CharT, _Outiter>::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

6.245.1 Detailed Description

`template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, typename Tag, typename Policy_Tl, typename _Alloc>`
`class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >`

A hashed container abstraction.

Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Policy_Tl</i>	Policy typelist.
<i>_Alloc</i>	Allocator type.

Base is dispatched at compile time via `Tag`, from the following choices: `cc_hash_tag`, `gp_hash_tag`, and descendants of `basic_hash_tag`.

Base choices are: `detail::cc_ht_map`, `detail::gp_ht_map`

 - `__istream_type & operator>> (ios_base &(*__pf)(ios_base &))`

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

 - `__istream_type & operator>> (long & __n)`
 - `__istream_type & operator>> (unsigned long & __n)`
 - `__istream_type & operator>> (long long & __n)`
 - `__istream_type & operator>> (unsigned long long & __n)`
-
- `__istream_type & operator>> (float & __f)`
 - `__istream_type & operator>> (double & __f)`
 - `__istream_type & operator>> (long double & __f)`

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

6.247.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ifstream< _CharT, _Traits >
```

Controlling input for files.

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

This class supports reading from named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

6.247.2 Member Typedef Documentation

`__num_put_type`

```
template<typename _CharT , typename _Traits >
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

`fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`

- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.247.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.247.4 Constructor & Destructor Documentation**basic_ifstream() [1/4]**

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ifstream< _CharT, _Traits >::basic_ifstream ( ) [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_ifstream() [2/4]

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

`ios_base::in` is automatically included in `__mode`.

basic_ifstream() [3/4]

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

Parameters

<code>__s</code>	<code>std::string</code> specifying the filename.
------------------	---

Parameters

<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).
---------------------	--

`ios_base::in` is automatically included in `__mode`.

basic_ifstream() [4/4]

```
template<typename _CharT , typename _Traits >
template<typename _Path , typename _Require = _If_fs_path<_Path>>
std::basic_ifstream< _CharT, _Traits >::basic_ifstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Create an input file stream.

Parameters

<code>__s</code>	filesystem::path specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

`ios_base::in` is automatically included in `__mode`.

~basic_ifstream()

```
template<typename _CharT , typename _Traits >
std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream ( ) [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

6.247.5 Member Function Documentation**_M_getloc()**

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_date()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_weekday()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::num_put<_CharT, _Outlter>::do_put()`, `std::time_put<_CharT, _Outlter>::do_put()`, `std::time_get<_CharT, _Inlter>::get()`, and `std::time_put<_CharT, _Outlter>::put()`.

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`.

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios< _CharT, _Traits >::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::putb\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ios< _CharT, _Traits >::setsbstate\(\)](#), and [std::basic_istream< _CharT, _Traits >::unget\(\)](#).

close()

```
template<typename _CharT , typename _Traits >
void std::basic_ifstream< _CharT, _Traits >::close ( ) [inline]
```

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [std::__addressof\(\)](#), [std::basic_ios< _CharT, _Traits >::exceptions\(\)](#), [std::basic_ios< _CharT, _Traits >::fill\(\)](#), [std::ios_base::flags\(\)](#), [std::ios_base::getloc\(\)](#), [std::ios_base::precision\(\)](#), [std::basic_ios< _CharT, _Traits >::tie\(\)](#), [std::tie\(\)](#), and [std::ios_base::width\(\)](#).

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

References [std::ios_base::eofbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References `std::basic_ios<_CharT, _Traits>::clear()`.

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References `std::ios_base::badbit`, `std::ios_base::failbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<_CharT, _Traits>::operator bool()`, `std::basic_ios<_CharT, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_ifstream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]
Character counting.
```

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits >::int_type std::basic_ifstream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_ifstream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline], [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

`*this`

Returns `get(__sb, widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim ) [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic_istream< _CharT, _Traits >::_M_gcount](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::sgetc\(\)](#), [std::basic_streambuf< _CharT, _Traits >::snextc\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::sputc\(\)](#).

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c ) [inherited]
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::_M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

`*this`

Returns `get(__s, __n, widen("\n"))`.

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A “stop” character.

Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, `failbit` is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_ifstream<_CharT, _Traits>::_M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_ifstream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

 <code>__s</code>	A character array in which to store the data.
 <code>__n</code>	Maximum number of characters to extract.

Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

good()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

ignore() [1/3]

```
template<typename _CharT , typename _Traits >
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

ignore() [2/3]

```
template<typename _CharT , typename _Traits >
```

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::sgetc()`.

ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim ) [inherited]
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios_base::imbue\(\)](#).

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic_ios<_CharT, _Traits>::basic_ios\(\)](#).

is_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_ifstream<_CharT, _Traits>::is_open ( ) [inline]
Wrapper to test for an open file.
```

Returns

`rdbuf() -> is_open()`

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios<_CharT, _Traits>::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

open() [1/3]

```
template<typename _CharT , typename _Traits >
template<typename _Path >
_If_fs_path< _Path, void > std::basic_ifstream< _CharT, _Traits >::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT , typename _Traits >
void std::basic_ifstream< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

open() [3/3]

```
template<typename _CharT , typename _Traits >
void std::basic_ifstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.
References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.
References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the `io manip` header.

operator>>() [2/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.
For more information, see the `io manip` header.

operator>>() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

operator>>() [4/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::operator>> (
    int & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::ws and std::dec use these functions in constructs like std::cin >> std::ws. For more information, see the iomanip header.

operator>>() [9/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> (
    long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [10/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> (
    long double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

\leftarrow	A variable of builtin floating point type.
$_ \leftarrow$	
\leftarrow	
$_ \leftarrow$	
f	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> (
    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::operator>> (
    short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), [std::num_get<_CharT, _InIter>::get\(\)](#), [std::ios_base::goodbit](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
```

Integer arithmetic extractors.

<code>_↵</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

Integer arithmetic extractors.

<code>_↵</code>	A variable of builtin integral type.
<code>_n</code>	

Integer arithmetic extractors.

<code>_↵</code>	A variable of builtin integral type.
<code>_n</code>	

Generated by Doxygen

```
unsigned short & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> (
    void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits >::int_type std::basic_ifstream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References [std::basic_ifstream<_CharT, _Traits>::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#).

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

<code>__c</code>	The character to push back into the input stream.
------------------	---

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
__filebuf_type * std::basic_ifstream< _CharT, _Traits >::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iosstate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ios<_CharT, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::tellg()`.

read()

```
template<typename _CharT, typename _Traits>
basic_istream< _CharT, _Traits> & std::basic_istream< _CharT, _Traits>::read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits>::rdbuf()`.

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream< _CharT, _Traits>::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters

- if $A > 0$, extracts $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic_ifstream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::min\(\)](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios< _CharT, _Traits >::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::seekg (
    pos_type __pos ) [inherited]
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#) and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rddbuf()` is a null pointer, returns -1.

Otherwise, calls `rddbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tie() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios<_CharT, _Traits>::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<_CharT, _Traits>::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream<char, _Traits>::put()`.

`width()` [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

`width()` [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

`xalloc()`

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.247.6 Member Data Documentation

`_M_gcount`

```
template<typename _CharT , typename _Traits >
```

```
streamsize std::basic_istream< _CharT, _Traits >::M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< _CharT, _Traits >::ungget()`, and `std::ws()`.

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_r`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_r`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<char>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::ws()`.

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::time_get< _CharT, _InIter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _InIter >::do_get_year\(\)](#), [std::basic_ios< _CharT, _Traits >::fail\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::time_get< _CharT, _InIter >::get\(\)](#), [std::basic_istream< char >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::read\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), and [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#).

fixed

const [fmtflags](#) std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

const [fmtflags](#) std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of [setf](#).

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

const [iostate](#) std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::time_get< _CharT, _InIter >::do_get\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::time_get< _CharT, _InIter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _InIter >::do_get_year\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::time_get< _CharT, _InIter >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_ostream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::unsetg\(\)](#), and [std::ws\(\)](#).

hex

const [fmtflags](#) std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_put< _CharT, _OutIter >::do_put\(\)](#), and [std::hex\(\)](#).

in

const [openmode](#) std::ios_base::in [static], [inherited]

Open for input. Default for [ifstream](#) and [fstream](#).

Referenced by [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_filebuf< _CharT, _Traits >::pbackfail\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos\(\)](#), [std::basic_filebuf< _CharT, _Traits >::showmanyc\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_filebuf< _CharT, _Traits >::underflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num_put< _CharT, _OutIter >::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf< _CharT, _Traits >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::tellp\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

The documentation for this class was generated from the following file:

6.249.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_ios< _CharT, _Traits >

Template class basic_ios, virtual base class for all stream classes.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT> .

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

6.249.2 Member Typedef Documentation

[__ctype_type](#)

```
template<typename _CharT , typename _Traits >
typedef ctype<_CharT> std::basic\_ios< _CharT, _Traits >::__ctype_type
```

These are non-standard types.

[__num_get_type](#)

```
template<typename _CharT , typename _Traits >
typedef num\_get<_CharT, istreambuf\_iterator<_CharT, _Traits> > std::basic\_ios< _CharT, _Traits >::__num_get_type
```

These are non-standard types.

__num_put_type

```
template<typename _CharT , typename _Traits >
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type
```

These are non-standard types.

char_type

```
template<typename _CharT , typename _Traits >
typedef _CharT std::basic_ios< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the ios_base object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`

- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

int_type

```
template<typename _CharT , typename _Traits >
typedef _Traits::int_type std::basic_ios< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

off_type

```
template<typename _CharT , typename _Traits >
typedef _Traits::off_type std::basic_ios< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`

- in
- out
- trunc

pos_type

```
template<typename _CharT , typename _Traits >
typedef _Traits::pos_type std::basic_ios< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

traits_type

```
template<typename _CharT , typename _Traits >
typedef _Traits std::basic_ios< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

6.249.3 Member Enumeration Documentation

event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.249.4 Constructor & Destructor Documentation

basic_ios() [1/2]

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::basic_ios (
    basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]
```

Constructor performs initialization.

The parameter is passed by derived streams.

References `std::basic_ios< _CharT, _Traits >::init()`.

~basic_ios()

```
template<typename _CharT , typename _Traits >
virtual std::basic_ios< _CharT, _Traits >::~basic_ios ( ) [inline], [virtual]
```

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by `rdbuf()`.

basic_ios() [2/2]

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::basic_ios ( ) [inline], [protected]
```

Empty.

The default constructor does nothing and is not normally accessible to users.

6.249.5 Member Function Documentation**_M_getloc()**

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get\(\)](#), [std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_date\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_weekday\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_year\(\)](#), [std::num_put< _CharT, _Outlter >::do_put\(\)](#), [std::time_put< _CharT, _Outlter >::do_put\(\)](#), [std::time_get< _CharT, _Inlter >::get\(\)](#), and [std::time_put< _CharT, _Outlter >::put\(\)](#).

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#).

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit )
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios< _CharT, _Traits >::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::putb\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ios< _CharT, _Traits >::setsb\(\)](#), and [std::basic_istream< _CharT, _Traits >::unget\(\)](#).

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
```

```
const basic_ios< _CharT, _Traits > & __rhs )
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline]
```

Throwing exceptions on errors.

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline]
Fast error checking.
```

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline]
Retrieves the empty character.
```

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline]
Sets a new empty character.
```

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_put<_CharT, _Outlter>::do_put\(\)](#), [std::num_put<_CharT, _Outlter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _Outlter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc )
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios_base::imbue\(\)](#).

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic_ios< _CharT, _Traits >::basic_ios\(\)](#).

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

operator"!"()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#).

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of precision().

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< char >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_ostream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::read\(\)](#), [std::basic_istream< _CharT, _Traits >::readsomewhat\(\)](#), [std::basic_istream< char >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekk\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb )
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
ios_state std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::setstate()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

setf() [1/2]

```
fmtflags std::ios_base::setf (
```

```
fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::tr2::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< _CharT, _Traits >::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream< char, _Traits >::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.249.6 Member Data Documentation**adjustfield**

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), and [std::right\(\)](#).

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by [std::basic_filebuf<_CharT, _Traits>::overflow\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsputn\(\)](#).

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by [std::basic_filebuf<_CharT, _Traits>::open\(\)](#).

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::bad\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<char>::get\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_ostream<_CharT, _Traits>::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::peek\(\)](#), [std::basic_istream<char>::peek\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_istream<_CharT, _Traits>::ung](#) and [std::ws\(\)](#).

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

`std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, and `std::ws()`.

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::hex()`.

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, and `std::left()`.

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xspn()`.

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [__istream_type](#) & [operator>>](#) (long double &__f)

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [__ostream_type](#) & [operator<<](#) ([ios_base](#) &(*__pf)([ios_base](#) &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the [sentry](#) documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`

- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type * __s, streamsize __n)`

6.250.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_iostream< _CharT, _Traits >
```

Template class `basic_iostream`.

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

This class multiply inherits from the input and output stream classes simply to provide a single interface.

6.250.2 Member Typedef Documentation

`__num_put_type`

```
template<typename _CharT , typename _Traits >
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.250.3 Member Enumeration Documentation

event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.250.4 Constructor & Destructor Documentation

basic_iostream()

```
template<typename _CharT , typename _Traits >  
std::basic_iostream< _CharT, _Traits >::basic_iostream (  
    basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]
```

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

~basic_iostream()

```
template<typename _CharT , typename _Traits >  
virtual std::basic_iostream< _CharT, _Traits >::~~basic_iostream ( ) [inline], [virtual]
```

Destructor does nothing.

6.250.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get\(\)](#), [std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_date\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_weekday\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_year\(\)](#), [std::num_put< _CharT, _Outlter >::do_put\(\)](#), [std::time_get< _CharT, _Inlter >::get\(\)](#), and [std::time_put< _CharT, _Outlter >::put\(\)](#).

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic\_ios< \_CharT, \_Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#).

clear()

```
template<typename _CharT , typename _Traits >
void std::basic\_ios< \_CharT, \_Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios< _CharT, _Traits >::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::putb\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ios< _CharT, _Traits >::setsb\(\)](#), and [std::basic_istream< _CharT, _Traits >::unget\(\)](#).

copyfmt()

```
template<typename _CharT , typename _Traits >
basic\_ios< \_CharT, \_Traits > & std::basic\_ios< \_CharT, \_Traits >::copyfmt (
    const basic\_ios< \_CharT, \_Traits > & \_\_rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits >::exceptions()`, `std::basic_ios<_CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits >::eof ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the `eofbit` is set.

Note that other `iosstate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits >::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios<_CharT, _Traits >::exceptions ( ) const [inline], [inherited]
Throwing exceptions on errors.
```

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iosstate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits >::exceptions (
    iosstate __except ) [inline], [inherited]
Throwing exceptions on errors.
```

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
```

```

std::set_terminate ( __gnu_cxx::__verbose_terminate_handler);

std::ifstream f ( "/etc/motd");

std::cerr << "Setting badbit\n";
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}

```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```

template<typename _CharT , typename _Traits >
bool std::basic\_ios< \_CharT, \_Traits >::fail \( \) const [inline], [inherited]

```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#).

fill() [1/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios< \_CharT, \_Traits >::fill \( \) const [inline], [inherited]

```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios< \_CharT, \_Traits >::fill \(
    char\_type \_\_ch ) [inline], [inherited]

```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::operator<<()`, `std::operator>>()`, `std::operator>>()`, `std::__detail::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, and `std::operator>>()`.

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::flush()`.

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline], [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

`*this`

Returns `get(__sb,widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim ) [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#), [std::basic_streambuf< _CharT, _Traits >::snextc\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::setstate\(\)](#).

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c ) [inherited]
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

*this

Returns `get(__s,__n,widen("\n"))`.

get() [6/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
------------------	----------------------

Parameters

<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sbumpc()`.

ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sgetc()`.

ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim ) [inherited]
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A “stop” character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, and `std::ios_base::goodbit`.

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< _CharT, _Traits >::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

operator bool()

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

operator"!()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*)(__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
```

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩	A variable of builtin floating point type.
↩	
↩	
↩	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↩	A variable of builtin floating point type.
↩	
↩	
↩	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

↩	A variable of builtin integral type.
<i>n</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

`operator<<()` [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::num_put< _CharT, _Outiter >::put\(\)](#), and [std::basic_ios< _CharT, _Traits >](#)

`operator<<()` [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

`operator<<()` [15/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
```

```
__ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

operator>>() [4/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↵	A variable of builtin floating point type.
_↵	
↵	
_↵	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↵	A variable of builtin floating point type.
_↵	
↵	
_↵	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT, typename _Traits>

```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [9/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [10/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    long double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

<code>f</code>	A variable of builtin floating point type.
----------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), [std::num_get< _CharT, _InIter >::get\(\)](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

operator>>() [13/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned int & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c ) [inherited]
```

Simple insertion.

Parameters

<code>__c</code>	The character to insert.
------------------	--------------------------

Returns

*this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

<code>__c</code>	The character to push back into the input stream.
------------------	---

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sputbackc\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix )    [inline], [inherited]
```

Access to void pointer array.

Parameters

 <code>__ix</code>	Index into the array.
---	-----------------------

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits>::rdbuf ( ) const    [inline],
[inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<char>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::peek\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsomewhat\(\)](#), [std::basic_istream<char>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_ostream<_CharT, _Traits>::tellg\(\)](#), [std::basic_istream<_CharT, _Traits>::unget\(\)](#), and [std::ws\(\)](#).

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf<_CharT, _Traits > * std::basic_ios<_CharT, _Traits>::rdbuf (
    basic_streambuf<_CharT, _Traits > * __sb )    [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

`rdstate()`

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::tellg()`.

`read()`

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream<_CharT, _Traits>::_M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), and [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#).

readsome()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_istream<_CharT, _Traits>::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

 <code>__s</code>	A character array.
 <code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called A here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic_istream<_CharT, _Traits>::_M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::min\(\)](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios< _CharT, _Traits >::failbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#) and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos ) [inherited]
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios< _CharT, _Traits >::failbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#) and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
```

```
    off_type __off,  
    ios_base::seekdir __dir ) [inherited]
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

seekp() [2/2]

```
template<typename _CharT , typename _Traits >  
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (  
    pos_type __pos ) [inherited]
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

setf() [1/2]

```
fmtflags std::ios_base::setf (  
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#),

[std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits](#)

[std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >](#)

[std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_streambuf<_CharT, _Traits>::pubsync\(\)](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios_base::badbit](#), [std::ios_base::cur](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::in](#), and [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#).

tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tie() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios<_CharT, _Traits>::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<_CharT, _Traits>::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream<char, _Traits>::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

write()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n ) [inherited]
```

Character string insertion.

Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.250.6 Member Data Documentation

M_gcount

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<char>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::read\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), and [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::unget\(\)](#), and [std::ws\(\)](#).

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::hex\(\)](#).

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#), and [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#).

`std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

Friends

- class [sentry](#)

6.251.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_istream<_CharT, _Traits>

Template class basic_istream.

Template Parameters

_CharT	Type of character stream.
_Traits	Traits for character type, defaults to char_traits<_CharT> .

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual input.

6.251.2 Member Typedef Documentation

[__num_put_type](#)

```
template<typename _CharT, typename _Traits>
typedef num\_put<_CharT, ostreambuf\_iterator<_CharT, _Traits> > std::basic\_ios<_CharT, _Traits>::\_\_num\_put\_type [inherited]
```

These are non-standard types.

[event_callback](#)

```
typedef void(* std::ios\_base::event\_callback) (event __e, ios\_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

__e	One of the members of the event enum.
__b	Reference to the ios_base object.
__i	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically

`imbue()`, `copyfmt()`, and `~ios()`.

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.251.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.251.4 Constructor & Destructor Documentation**basic_istream()**

```
template<typename _CharT , typename _Traits >
std::basic_istream< _CharT, _Traits >::basic_istream (
    __streambuf_type * __sb ) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

~basic_istream()

```
template<typename _CharT , typename _Traits >
virtual std::basic_istream< _CharT, _Traits >::~~basic_istream ( ) [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

6.251.5 Member Function Documentation

`_M_getloc()`

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money_get<_CharT, _Inlter>::do_get\(\)](#), [std::time_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_date\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_weekday\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_year\(\)](#), [std::num_put<_CharT, _Outlter>::do_put\(\)](#), [std::time_get<_CharT, _Inlter>::get\(\)](#), and [std::time_put<_CharT, _Outlter>::put\(\)](#).

`bad()`

```
template<typename _CharT , typename _Traits >  
bool std::basic\_ios<\_CharT, \_Traits>::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#).

`clear()`

```
template<typename _CharT , typename _Traits >  
void std::basic\_ios<\_CharT, \_Traits>::clear (  
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios<_CharT, _Traits>::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::putb\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ios<_CharT, _Traits>::setsb\(\)](#), and [std::basic_istream<_CharT, _Traits>::unget\(\)](#).

`copyfmt()`

```
template<typename _CharT , typename _Traits >  
basic\_ios<\_CharT, \_Traits> & std::basic\_ios<\_CharT, \_Traits>::copyfmt (  
    const basic\_ios<\_CharT, \_Traits> & \_\_rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [std::__addressof\(\)](#), [std::basic_ios<_CharT, _Traits>::exceptions\(\)](#), [std::basic_ios<_CharT, _Traits>::fill\(\)](#), [std::ios_base::flags\(\)](#), [std::ios_base::getloc\(\)](#), [std::ios_base::precision\(\)](#), [std::basic_ios<_CharT, _Traits>::tie\(\)](#), [std::tie\(\)](#), and [std::ios_base::width\(\)](#).

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::eofbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]
Throwing exceptions on errors.
```

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#).

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except ) [inline], [inherited]
Throwing exceptions on errors.
```

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
```

```

std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

std::ifstream f ("/etc/motd");

std::cerr << "Setting badbit\n";
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}

```

References [std::basic_ios<_CharT, _Traits>::clear\(\)](#).

fail()

```

template<typename _CharT , typename _Traits >
bool std::basic\_ios<\_CharT, \_Traits>::fail \( \) const [inline], [inherited]

```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::operator bool\(\)](#), [std::basic_ios<_CharT, _Traits>::operator!\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), and [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

fill() [1/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \( \) const [inline], [inherited]

```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::widen\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), and [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

fill() [2/2]

```

template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \(
    char\_type \_\_ch ) [inline], [inherited]

```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream<_CharT, _Traits>::gcount ( ) const [inline]
Character counting.
```

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (
    void )
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

*this

Returns `get(__sb,widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim )
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A “stop” character.

Returns

*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::get()`, `std::basic_streambuf< _CharT, _Traits >::sgetc()`, `std::basic_streambuf< _CharT, _Traits >::snexctc()`, and `std::basic_streambuf< _CharT, _Traits >::sbumpc()`.

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c )
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n ) [inline]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

*this

Returns `get(__s,__n,widen('\n'))`.

get() [6/6]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (
    char_type * __s,
    streamsize __n,
    char_type __delim )
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

Returns

*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream<_CharT, _Traits>::_M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n ) [inline]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

Returns

*this

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim )
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim )
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

ignore() [1/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    void )
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::sbumpc\(\)](#).

ignore() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n )
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#).

ignore() [3/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (
    streamsize __n,
    int_type __delim )
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< _CharT, _Traits >::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

operator bool()

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator"!()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
```

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type &(*)(__ios_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

operator>>() [2/17]

```
template<typename _CharT , typename _Traits >
```

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type &(*)(__istream_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

operator>>() [3/17]

```
template<typename _CharT , typename _Traits >
```

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb )
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

operator>>() [4/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f ) [inline]
```

Floating point arithmetic extractors.

Parameters

<code>f</code>	A variable of builtin floating point type.
----------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f ) [inline]
```

Floating point arithmetic extractors.

Parameters

\leftarrow	A variable of builtin floating point type.
$_ \leftarrow$	
\leftarrow	
$_ \leftarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n )
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_ n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    ios_base &(*) (ios_base &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n ) [inline]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n ) [inline]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p ) [inline]
```

Basic arithmetic extractors.

Parameters

 __p	A variable of pointer type.
--	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (
    void )
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c )
```

Unextracting a single character.

`std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n )
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

readsome()

```
template<typename _CharT, typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n )
```

Extraction until the buffer is exhausted, but no more.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the `streambuf`'s buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the `streambuf`.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir )
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos )
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#) and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void )
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void )
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

tie() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

tie() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie (
    basic_ostream<_CharT, _Traits> * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (
    void )
```

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios<_CharT, _Traits>::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<_CharT, _Traits>::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream<char, _Traits>::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of width().

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.251.6 Member Data Documentation**M_gcount**

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by [std::basic_filebuf<_CharT, _Traits>::open\(\)](#).

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::bad\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<char>::get\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_ostream<_CharT, _Traits>::operator<<\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::peek\(\)](#), [std::basic_istream<char>::peek\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_istream<_CharT, _Traits>::ung](#) and [std::ws\(\)](#).

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by [std::dec\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::hex\(\)](#), and [std::oct\(\)](#).

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by [std::basic_filebuf<_CharT, _Traits>::seekpos\(\)](#).

binary

```
const openmode std::ios_base::binary [static], [inherited]
```

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#).

boolalpha

```
const fmtflags std::ios_base::boolalpha [static], [inherited]
```

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by [std::boolalpha\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::noboolalpha\(\)](#).

cur

```
const seekdir std::ios_base::cur [static], [inherited]
```

Request a seek relative to the current position within the sequence.

Referenced by [std::basic_filebuf<_CharT, _Traits>::imbue\(\)](#), [std::basic_filebuf<_CharT, _Traits>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#), [std::basic_filebuf<_CharT, _Traits>::seekoff\(\)](#), [std::basic_stringbuf<_CharT, _Traits>::seekoff\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), and [std::basic_ostream<_CharT, _Traits>::tellp\(\)](#).

dec

```
const fmtflags std::ios_base::dec [static], [inherited]
```

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

end

```
const seekdir std::ios_base::end [static], [inherited]
```

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

eofbit

```
const iostate std::ios_base::eofbit [static], [inherited]
```

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_date\(\)](#), [std::time_get<_CharT, _InIter>::do_get_r](#), [std::time_get<_CharT, _InIter>::do_get_time\(\)](#), [std::time_get<_CharT, _InIter>::do_get_weekday\(\)](#), [std::time_get<_CharT, _InIter>](#), [std::basic_ios<_CharT, _Traits>::eof\(\)](#), [std::basic_istream<char>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>](#), [std::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::peek\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::read\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<char>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::](#) and [std::ws\(\)](#).

failbit

```
const iostate std::ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<char, _Traits>::operator<<()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, and `std::left()`.

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`.

`std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by `std::nounitbuf()`, and `std::unitbuf()`.

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

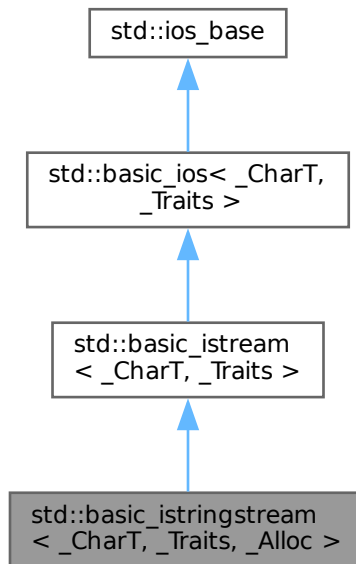

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter >::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).
 The documentation for this class was generated from the following files:

- `__istream_type & operator>> (ios_base & (*__pf)(ios_base &))`

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (double & __f)`
- `__istream_type & operator>> (long double & __f)`

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

6.252.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istream< _CharT, _Traits, _Alloc >
```

Controlling input for std::string.

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator<_CharT></code> .

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

6.252.2 Member Typedef Documentation

`__num_put_type`

```
template<typename _CharT , typename _Traits >
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_put_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

`fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`

- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.252.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.252.4 Constructor & Destructor Documentation**basic_istream() [1/3]**

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream ( ) [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using `in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_istream() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (
    ios_base::openmode __mode ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::in` is automatically included in `__mode`.

Initializes `sb` using `__mode|in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_istream() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
--------------------	--

Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::in` is automatically included in *mode*.

Initializes *sb* using *str* and *mode*`|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

~basic_istream()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_istream< _CharT, _Traits, _Alloc >::~~basic_istream ( ) [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

6.252.5 Member Function Documentation**_M_getloc()**

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::time_put< _CharT, _OutIter >::do_put()`, and `std::time_put< _CharT, _OutIter >::put()`.

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::__detail::operator>>()`, `std::basic_istream<_CharT, _Traits>::putb`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ios<_CharT, _Traits>::sets` and `std::basic_istream<_CharT, _Traits>::unset()`.

copyfmt()

```
template<typename _CharT, typename _Traits>
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
    const basic_ios<_CharT, _Traits> & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT, typename _Traits>
bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline], [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

*this

Returns `get(__sb,widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim ) [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

Returns

*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#), [std::basic_streambuf< _CharT, _Traits >::snextc\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::setstate\(\)](#).

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c ) [inherited]
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

*this

Returns `get(__s,__n,widen("\n"))`.

get() [6/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
------------------	----------------------

Parameters

<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

ignore() [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sbumpc\(\)](#).

ignore() [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

ignore() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n,
    int_type __delim ) [inherited]
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A “stop” character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), and [std::ios_base::goodbit](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< _CharT, _Traits >::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

operator bool()

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator"!()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
```

```
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

operator>>() [2/17]

```
template<typename _CharT , typename _Traits >
```

```
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __istream_type &(*)(__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

operator>>() [3/17]

```
template<typename _CharT , typename _Traits >
```

```
basic_istream< _CharT, _Traits > & std::basic_istream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set `failbit` in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, `failbit` is set.

References [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

operator>>() [4/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (

```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [14/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

 __p	A variable of pointer type.
--	-----------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (
    void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

putback()

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (
    char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

<code>_↔ _c</code>	The character to push back into the input stream.
------------------------	---

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic_istream<_CharT, _Traits>::_M_gcount](#), [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sputbackc\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__stringbuf_type * std::basic_istream<_CharT, _Traits, _Alloc>::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (
    basic_streambuf<_CharT, _Traits> * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by [std::basic_ios< _CharT, _Traits >::bad\(\)](#), [std::basic_ios< _CharT, _Traits >::eof\(\)](#), [std::basic_ios< _CharT, _Traits >::fail\(\)](#), [std::basic_ios< _CharT, _Traits >::good\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::seek\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::setstate\(\)](#), and [std::basic_istream< _CharT, _Traits >::tellg\(\)](#).

read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

readsome()

```
template<typename _CharT, typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called A here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::min\(\)](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios< _CharT, _Traits >::fail](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (
    pos_type __pos ) [inherited]
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios< _CharT, _Traits >::fail](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::tr2::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

str() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__string_type std::basic_istream< _CharT, _Traits, _Alloc >::str ( ) const [inline]
```

Copying out the string buffer.

Returns

```
rdbuf ()->str ()
```

str() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_istream< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s ) [inline]
```

Setting a new buffer.

Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf ()->str (s)`.

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf ()` is a null pointer, returns -1.

Otherwise, calls `rdbuf ()->pubsync ()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount ()`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_streambuf< _CharT, _Traits >::pubsync\(\)](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tie() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<_CharT, _Traits>::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream<char, _Traits>::put()`.

`width()` [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

`width()` [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

`xalloc()`

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.252.6 Member Data Documentation

`_M_gcount`

```
template<typename _CharT , typename _Traits >
```

```
streamsize std::basic_istream< _CharT, _Traits >::M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< _CharT, _Traits >::ungget()`, and `std::ws()`.

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<char>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::read\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), and [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

fixed

const [fmtflags](#) std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

const [fmtflags](#) std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of [setf](#).

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

const [iostate](#) std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<_CharT, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::unsetg\(\)](#), and [std::ws\(\)](#).

hex

const [fmtflags](#) std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::hex\(\)](#).

in

const [openmode](#) std::ios_base::in [static], [inherited]

Open for input. Default for [ifstream](#) and [fstream](#).

Referenced by [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_filebuf<_CharT, _Traits>::underflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num_put< _CharT, _Outlter >::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf< _CharT, _Traits >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put< _CharT, _Outlter >::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

const [fmtflags](#) `std::ios_base::skipws` [static], [inherited]

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

const [openmode](#) `std::ios_base::trunc` [static], [inherited]

Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

const [fmtflags](#) `std::ios_base::unitbuf` [static], [inherited]

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

const [fmtflags](#) `std::ios_base::uppercase` [static], [inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

The documentation for this class was generated from the following files:

- `__ostream_type & operator<<` (ios_base &(*__pf)(ios_base &))

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<<` (long __n)
- `__ostream_type & operator<<` (unsigned long __n)
- `__ostream_type & operator<<` (bool __n)
- `__ostream_type & operator<<` (short __n)

- `__ostream_type & operator<<` (int __n)
- `__ostream_type & operator<<` (unsigned int __n)
- `__ostream_type & operator<<` (long long __n)
- `__ostream_type & operator<<` (unsigned long long __n)
- `__ostream_type & operator<<` (double __f)
- `__ostream_type & operator<<` (float __f)
- `__ostream_type & operator<<` (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.253.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ofstream<_CharT, _Traits>
```

Controlling output for files.

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

6.253.2 Member Typedef Documentation

`__num_get_type`

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>
::__num_get_type [inherited]
```

These are non-standard types.

event_callback

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>↵ __e</code>	One of the members of the event enum.
<code>↵ __b</code>	Reference to the ios_base object.
<code>↵ __i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.253.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.253.4 Constructor & Destructor Documentation

basic_ofstream() [1/4]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream ( ) [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

basic_ofstream() [2/4]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::out ) [inline], [explicit]
```

Create an output file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

`ios_base::out` is automatically included in `__mode`.

basic_ofstream() [3/4]

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::out ) [inline], [explicit]
```

Create an output file stream.

Parameters

<code>__s</code>	<code>std::string</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

`ios_base::out` is automatically included in `__mode`.

basic_ofstream() [4/4]

```
template<typename _CharT , typename _Traits >
template<typename _Path , typename _Require = _If_fs_path<_Path>>
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Create an output file stream.

Parameters

<code>__s</code>	<code>filesystem::path</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code>).

`ios_base::out` is automatically included in `__mode`.

~basic_ofstream()

```
template<typename _CharT , typename _Traits >
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream ( ) [inline]
```

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

6.253.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putb()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::setsb()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

close()

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::close ( ) [inline]
```

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the `eofbit` is set.

Note that other `iosstate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iosstate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::flush [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() ->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits`

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

good()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

imbue()

```
template<typename _CharT , typename _Traits >
```

```
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic_ios< _CharT, _Traits >::basic_ios\(\)](#).

is_open()

```
template<typename _CharT , typename _Traits >
bool std::basic_ofstream< _CharT, _Traits >::is_open ( ) [inline]
```

Wrapper to test for an open file.

Returns

```
rdbuf() -> is_open()
```

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

 <code>__ix</code>	Index into the array.
---	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>>>(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

open() [1/3]

```
template<typename _CharT , typename _Traits >
template<typename _Path >
_If_fs_path< _Path, void > std::basic_ofstream< _CharT, _Traits >::open (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

open() [2/3]

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

open() [3/3]

```
template<typename _CharT , typename _Traits >
void std::basic_ofstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Opens an external file.

Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set `failbit` in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted),

or

- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

<code>f</code>	A variable of builtin floating point type.
----------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ofstream< _CharT, _Traits >::operator<< (
    float __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::operator<< (
    int __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

↵	A variable of builtin integral type.
<i>n</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ofstream< _CharT, _Traits >::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

\leftarrow __ \leftarrow \leftarrow __ \leftarrow f	A variable of builtin floating point type.
---	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

\leftarrow __n	A variable of builtin integral type.
---------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ofstream< _CharT, _Traits > & std::basic_ofstream< _CharT, _Traits >::operator<< (
    short __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::num_put< _CharT, _Outiter >::put\(\)](#), and [std::basic_ios< _CharT, _Traits >](#)

operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ofstream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ofstream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c ) [inherited]
```

Simple insertion.

Parameters

<code>__c</code>	The character to insert.
------------------	--------------------------

Returns

*this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
__filebuf_type * std::basic_ofstream< _CharT, _Traits >::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current basic_filebuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See std::ios_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekf()`, `std::basic_istream< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::tellg()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::seekp (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, and `std::basic_ios< _CharT, _Traits>::setstate()`.

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream< _CharT, _Traits> & std::basic_ostream< _CharT, _Traits>::seekp (
    pos_type __pos ) [inherited]
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits>::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits>::rdbuf()`, and `std::basic_ios< _CharT, _Traits>::setstate()`.

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::tr2::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
Getting the current write position.
```

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`

tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Referenced by `std::basic_ios< _CharT, _Traits >::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ofstream< char, _Traits >::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

write()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n ) [inherited]
```

Character string insertion.

Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.253.6 Member Data Documentation

adjustfield

const `fmtflags` std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

const `openmode` std::ios_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

const `openmode` std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

badbit

const `istate` std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< _CharT, _Traits >::ung` and `std::ws()`.

basefield

const `fmtflags` std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _Initer >::do_get()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::hex()`, and `std::oct()`.

beg

const `seekdir` std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

binary

const `openmode` std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::time_get< _CharT, _Inlter >::do_get\(\)](#),

[std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_year\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#),

[std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::time_get< _CharT, _Inlter >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#),

[std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#),

[std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsomewhat\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::num_put< _CharT, _Outlter >::do_put\(\)](#), and [std::hex\(\)](#).

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_filebuf< _CharT, _Traits >::pbackfail\(\)](#),

[std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos\(\)](#), [std::basic_filebuf< _CharT, _Traits >::showmanyc\(\)](#),

[std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_filebuf< _CharT, _Traits >::underflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.) Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf<_CharT, _Traits>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::tellp\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

`const openmode std::ios_base::trunc` [static], [inherited]
Truncate an existing stream when opening. Default for `ofstream`.

unitbuf

const `fmt::ios_base::unitbuf` [static], [inherited]
 Flushes output after each output operation.
 Referenced by `std::nounitbuf()`, and `std::unitbuf()`.

uppercase

const `fmt::ios_base::uppercase` [static], [inherited]
 Replaces certain lowercase letters with their uppercase equivalents in generated output.
 Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.
 The documentation for this class was generated from the following file:

- fstream

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [__ostream_type & operator<<](#) (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.254.1 Detailed Description

template<typename _CharT, typename _Traits>

class std::basic_ostream<_CharT, _Traits>

Template class basic_ostream.

Template Parameters

<i>_CharT</i>	Type of character stream.
<i>_Traits</i>	Traits for character type, defaults to char_traits<_CharT>.

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from basic_streambuf to do the actual output.

6.254.2 Member Typedef Documentation

`__num_get_type`

```
template<typename _CharT , typename _Traits >
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits
>::__num_get_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the ios_base object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios_base and basic_ios functions, specifically imbue(), copyfmt(), and ~ios().

`fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`

- uppercase
- adjustfield
- basefield
- floatfield

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

6.254.3 Member Enumeration Documentation

event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.254.4 Constructor & Destructor Documentation

basic_ostream()

```
template<typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits >::basic_ostream (
    __streambuf_type * __sb ) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

~basic_ostream()

```
template<typename _CharT , typename _Traits >
virtual std::basic_ostream< _CharT, _Traits >::~~basic_ostream ( ) [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

6.254.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios<_CharT, _Traits>::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::putb](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ios<_CharT, _Traits>::sets](#) and [std::basic_istream<_CharT, _Traits>::unset\(\)](#).

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
    const basic_ios<_CharT, _Traits> & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [std::__addressof\(\)](#), [std::basic_ios<_CharT, _Traits>::exceptions\(\)](#), [std::basic_ios<_CharT, _Traits>::fill\(\)](#), [std::ios_base::flags\(\)](#), [std::ios_base::getloc\(\)](#), [std::ios_base::precision\(\)](#), [std::basic_ios<_CharT, _Traits>::tie\(\)](#), [std::tie\(\)](#), and [std::ios_base::width\(\)](#).

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

References [std::ios_base::eofbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]
```

Throwing exceptions on errors.

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#).

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline], [inherited]
```

Throwing exceptions on errors.

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush
Synchronizing the stream buffer.
```

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>](#)

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

good()

```
template<typename _CharT, typename _Traits>
```

```
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

imbue()

```
template<typename _CharT, typename _Traits>
```

```
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT, typename _Traits>
```

```
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<_CharT, _Traits>::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#).

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ios_type &(*) (__ios_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb )
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set `failbit` in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets `failbit` in the error state

If the function inserts no characters, `failbit` is set.

operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    bool __n ) [inline]
```

Integer arithmetic inserters.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

$\ast this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p ) [inline]
```

Pointer arithmetic inserters.

Parameters

$_ \leftarrow$	A variable of pointer type.
$_p$	

Returns

$\ast this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline]
```

Floating point arithmetic inserters.

Parameters

\leftarrow	A variable of builtin floating point type.
$_ \leftarrow$	
\leftarrow	
$_ \leftarrow$	
f	

Returns

$\ast this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f ) [inline]
```

Floating point arithmetic inserters.

Parameters

\leftrightarrow	A variable of builtin floating point type.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n )
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `io manip` header.

operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n ) [inline]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f ) [inline]
```

Floating point arithmetic inserters.

Parameters

\leftrightarrow	A variable of builtin floating point type.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_ n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n )
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_ n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::num_put<_CharT, _OutIter>::put()`, and `std::basic_ios<_CharT, _Traits>`

operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT, typename _Traits>
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    unsigned short __n ) [inline]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

put()

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (
    char_type __c )
```

Simple insertion.

Parameters

<code>_↔</code>	The character to insert.
<code>_C</code>	

Returns

*this

Tries to insert `__C`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>_↔</code>	Index into the array.
<code>_ix</code>	

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline],
[inherited]
```

Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<char>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::peek\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<char>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

[std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_ostream<_CharT, _Traits>::tellp\(\)](#), [std::basic_istream<_CharT, _Traits>::unget\(\)](#), and [std::ws\(\)](#).

rdbuf() [2/2]

```
template<typename _CharT, typename _Traits>
basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (
    basic_streambuf<_CharT, _Traits> * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT, typename _Traits>
iostate std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by [std::basic_ios<_CharT, _Traits>::bad\(\)](#), [std::basic_ios<_CharT, _Traits>::eof\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_ios<_CharT, _Traits>::good\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::setstate\(\)](#), and [std::basic_istream<_CharT, _Traits>::tellg\(\)](#).

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir )
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos )
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_ostream< _CharT, _Traits >::sentry::sentry\(\)](#),

[std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::getline\(\)](#), [std::getline\(\)](#),

[std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_ostream< _CharT, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT,](#)

[std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits](#)

[std::tr2::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::peek\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#),

[std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits](#)

[std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >](#)

[std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellp()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`

tie() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

Referenced by `std::basic_ios< _CharT, _Traits >::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream< char, _Traits >::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

write()

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n )
```

Character string insertion.

Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( )    [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.254.6 Member Data Documentation

adjustfield

const `fmtflags` std::ios_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

const `openmode` std::ios_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

ate

const `openmode` std::ios_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

badbit

const `iostate` std::ios_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<char, _Traits>::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::basic_ostream<char, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

basefield

const `fmtflags` std::ios_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _Initer>::do_get()`, `std::num_put<_CharT, _Outiter>::do_put()`, `std::hex()`, and `std::oct()`.

beg

const `seekdir` std::ios_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

binary

const `openmode` std::ios_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const iostate std::ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::time_get< _CharT, _Inlter >::do_get\(\)](#),

[std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get< _CharT, _Inlter >::do_get_year\(\)](#), [std::basic_ostream< _CharT, _Traits >::flush\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#),

[std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::time_get< _CharT, _Inlter >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#),

[std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_ostream< char, _Traits >::operator<<\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::operator>>\(\)](#),

[std::basic_istream< char >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::operator>>\(\)](#), [std::basic_istream< _CharT, _Traits >::put\(\)](#), [std::basic_istream< _CharT, _Traits >::putback\(\)](#), [std::basic_istream< _CharT, _Traits >::readsome\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::sync\(\)](#), [std::basic_istream< _CharT, _Traits >::unget\(\)](#), and [std::ws\(\)](#).

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get< _CharT, _Inlter >::do_get\(\)](#), [std::num_put< _CharT, _Outlter >::do_put\(\)](#), and [std::hex\(\)](#).

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_filebuf< _CharT, _Traits >::pbackfail\(\)](#),

[std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos\(\)](#), [std::basic_filebuf< _CharT, _Traits >::showmanyc\(\)](#),

[std::basic_istream< _CharT, _Traits >::tellg\(\)](#), [std::basic_filebuf< _CharT, _Traits >::underflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.) Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf<_CharT, _Traits>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::pbackfail\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::tellp\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nunitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

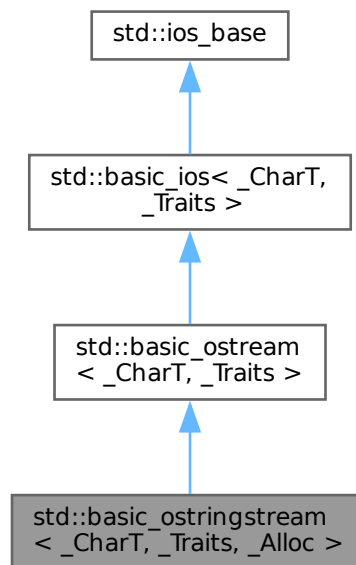

Referenced by [std::num_put< _CharT, _Outiter >::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [__ostream_type](#) & [operator<<](#) (long __n)
 - [__ostream_type](#) & [operator<<](#) (unsigned long __n)
 - [__ostream_type](#) & [operator<<](#) (bool __n)

 - [__ostream_type](#) & [operator<<](#) (float __f)

- `__ostream_type & operator<<` (long double __f)

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If badbit is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.255.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_ostringstream<_CharT, _Traits, _Alloc>
```

Controlling output for std::string.

Template Parameters

<i>_CharT</i>	Type of character stream.
<i>_Traits</i>	Traits for character type, defaults to <code>char_traits<_CharT></code> .
<i>_Alloc</i>	Allocator type, defaults to <code>allocator<_CharT></code> .

This class supports writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

6.255.2 Member Typedef Documentation

`__num_get_type`

```
template<typename _CharT, typename _Traits>
typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

`fmtflags`

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`

- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

`iosstate`

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

`openmode`

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

`seekdir`

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.255.3 Member Enumeration Documentation

event

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.255.4 Constructor & Destructor Documentation

basic_ostringstream() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream ( ) [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_ostringstream() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
    ios_base::openmode __mode ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_ostringstream() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::out ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `str` and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

~basic_ostringstream()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_ostringstream< _CharT, _Traits, _Alloc >::~~basic_ostringstream ( ) [inline]
```

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

6.255.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money_get<_CharT, _Inlter>::do_get\(\)](#), [std::time_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_date\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_weekday\(\)](#), [std::time_get<_CharT, _Inlter>::do_get_year\(\)](#), [std::num_put<_CharT, _Outlter>::do_put\(\)](#), [std::time_put<_CharT, _Outlter>::do_put\(\)](#), and [std::time_put<_CharT, _Outlter>::put\(\)](#).

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#).

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits>::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios<_CharT, _Traits>::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#), and [std::basic_istream<_CharT, _Traits>::unget\(\)](#).

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (
    const basic_ios<_CharT, _Traits> & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits >::exceptions()`, `std::basic_ios<_CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits >::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]
Throwing exceptions on errors.
```

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits >::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::exceptions (
    iostate __except ) [inline], [inherited]
Throwing exceptions on errors.
```

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the

following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

    std::ifstream f ("/etc/motd");

    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);

    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios< _CharT, _Traits >::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::operator bool\(\)](#), [std::basic_ios< _CharT, _Traits >::operator!\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_istream< _CharT, _Traits >::seekg\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_istream< _CharT, _Traits >::tellg\(\)](#), and [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios< _CharT, _Traits >::widen\(\)](#).

Referenced by [std::basic_ios< _CharT, _Traits >::copyfmt\(\)](#), and [std::basic_ios< _CharT, _Traits >::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::__detail::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::flush\(\)](#).

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::operator>>()`, `std::operator>>()`, and `std::ws()`.

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios<_CharT, _Traits>::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits>::init (
    basic_streambuf<_CharT, _Traits> * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios<_CharT, _Traits>::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

operator bool()

```
template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

operator"!()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic_ios< _CharT, _Traits >::fail\(\)](#).

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

operator<<() [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

\leftrightarrow	A variable of builtin floating point type.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

\leftrightarrow	A variable of builtin floating point type.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_ n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

$_ \leftrightarrow$	A variable of builtin integral type.
$_ n$	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::num_put< _CharT, _OutIter >::put\(\)](#), and [std::basic_ios< _CharT, _Traits >](#)

operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c ) [inherited]
```

Simple insertion.

Parameters

<code>__c</code>	The character to insert.
------------------	--------------------------

Returns

*this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix ) [inline], [inherited]
```

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__stringbuf_type * std::basic_ostringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of [std::basic_ios::rdbuf\(\)](#).

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_stringbuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_stringbuf< _CharT, _Traits > * __sb ) [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;

foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT, typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::tellg()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekp() [1/2]

```
template<typename _CharT, typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    pos_type __pos ) [inherited]
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask ) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state ) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

str() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__string_type std::basic_ostringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]
```

Copying out the string buffer.

Returns

`rddbuf() -> str()`

str() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_ostringstream< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s ) [inline]
```

Setting a new buffer.

Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf() -> str(s)`.

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`

tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios<_CharT, _Traits>::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream<char, _Traits>::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of `width()`.

write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n ) [inherited]
```

Character string insertion.

Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.255.6 Member Data Documentation

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<char, _Traits>::operator<<()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<char>::peek()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_istream<_CharT, _Traits>::unget()` and `std::ws()`.

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<char>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::read\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), and [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

fixed

const [fmtflags](#) std::ios_base::fixed [static], [inherited]

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

const [fmtflags](#) std::ios_base::floatfield [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of [setf](#).

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

const [iostate](#) std::ios_base::goodbit [static], [inherited]

Indicates all is well.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::unsetg\(\)](#), and [std::ws\(\)](#).

hex

const [fmtflags](#) std::ios_base::hex [static], [inherited]

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::hex\(\)](#).

in

const [openmode](#) std::ios_base::in [static], [inherited]

Open for input. Default for [ifstream](#) and [fstream](#).

Referenced by [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), [std::basic_filebuf<_CharT, _Traits>::underflow\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn\(\)](#), and [std::basic_filebuf<_CharT, _Traits>::xsgetn\(\)](#).

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num_put< _CharT, _OutIter >::do_put\(\)](#), and [std::left\(\)](#).

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic_filebuf< _CharT, _Traits >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::seekp\(\)](#), [std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp\(\)](#), [std::basic_ostream< _CharT, _Traits >::tellp\(\)](#), and [std::basic_filebuf< _CharT, _Traits >::xsputn\(\)](#).

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

const [fmtflags](#) std::ios_base::skipws [static], [inherited]

Skips leading white space before certain input operations.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

const [openmode](#) std::ios_base::trunc [static], [inherited]

Truncate an existing stream when opening. Default for ofstream.

unitbuf

const [fmtflags](#) std::ios_base::unitbuf [static], [inherited]

Flushes output after each output operation.

Referenced by [std::nunitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

const [fmtflags](#) std::ios_base::uppercase [static], [inherited]

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put< _CharT, _OutIter >::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

6.256.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex< _Ch_type, _Rx_traits >
```

Objects of specializations of this class represent regular expressions constructed from sequences of character type `_Ch_type`.

Storage for the regular expression is allocated and deallocated as necessary by the member functions of this class.

6.256.2 Constructor & Destructor Documentation

basic_regex() [1/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex ( ) [inline], [noexcept]
```

Constructs a basic regular expression that does not match any character sequence.

basic_regex() [2/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    flag_type __f = ECMAScript ) [inline], [explicit]
```

Constructs a basic regular expression from the sequence `[__p, __p + char_traits<_Ch_type>::length(__p))` interpreted according to the flags in `__f`.

Parameters

<code>__p</code>	A pointer to the start of a C-style null-terminated string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

Exceptions

<code>regex_error</code>	if <code>__p</code> is not a valid regular expression.
--------------------------	--

basic_regex() [3/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    std::size_t __len,
    flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from the sequence `[p, p + len)` interpreted according to the flags in `f`.

Parameters

<code>__p</code>	A pointer to the start of a string containing a regular expression.
<code>__len</code>	The length of the string containing the regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

Exceptions

<i>regex_error</i>	if <code>__p</code> is not a valid regular expression.
--------------------	--

basic_regex() [4/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const basic_regex< _Ch_type, _Rx_traits > & __rhs ) [default]
```

Copy-constructs a basic regular expression.

Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

basic_regex() [5/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    basic_regex< _Ch_type, _Rx_traits > && __rhs ) [default], [noexcept]
```

Move-constructs a basic regular expression.

Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

basic_regex() [6/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Ch_alloc >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s,
    flag_type __f = ECMAScript ) [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

Parameters

<code>__s</code>	A string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

Exceptions

<i>regex_error</i>	if <code>__s</code> is not a valid regular expression.
--------------------	--

basic_regex() [7/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _FwdIter >
std::basic_regex<_Ch_type, _Rx_traits >::basic_regex (
    _FwdIter __first,
    _FwdIter __last,
    flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from the range `[first, last)` interpreted according to the flags in `f`.

Parameters

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__f</code>	The format flags of the regular expression.

Exceptions

<code>regex_error</code>	if <code>[__first, __last)</code> is not a valid regular expression.
--------------------------	--

References `std::basic_regex<_Ch_type, _Rx_traits>::assign()`.

basic_regex() [8/8]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
std::basic_regex<_Ch_type, _Rx_traits >::basic_regex (
    initializer_list<_Ch_type> __l,
    flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from an initializer list.

Parameters

<code>__l</code>	The initializer list.
<code>__f</code>	The format flags of the regular expression.

Exceptions

<code>regex_error</code>	if <code>__l</code> is not a valid regular expression.
--------------------------	--

~basic_regex()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
```

`std::basic_regex< _Ch_type, _Rx_traits >::~~basic_regex ()` [inline]
 Destroys a basic regular expression.

6.256.3 Member Function Documentation

assign() [1/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _InputIterator >
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
    _InputIterator __first,
    _InputIterator __last,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object.

Parameters

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__flags</code>	Syntax option flags.

Exceptions

<code>regex_error</code>	if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------------	--

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

assign() [2/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
    basic_regex< _Ch_type, _Rx_traits > && __rhs ) [inline], [noexcept]
```

Move-assigns one regular expression to another.

Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

References `std::move()`.

assign() [3/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
    const _Ch_type * __p,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

Parameters

<code>__p</code>	A pointer to a C-style null-terminated string containing a regular expression pattern.
------------------	--

Parameters

<code>__flags</code>	Syntax option flags.
----------------------	----------------------

Exceptions

<code>regex_error</code>	if <code>__p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------------	--

assign() [4/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    const _Ch_type * __p,
    size_t __len,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

Parameters

<code>__p</code>	A pointer to a C-style string containing a regular expression pattern.
<code>__len</code>	The length of the regular expression pattern string.
<code>__flags</code>	Syntax option flags.

Exceptions

<code>regex_error</code>	if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------------	--

assign() [5/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    const basic_regex<_Ch_type, _Rx_traits> & __rhs ) [inline], [noexcept]
```

Assigns one regular expression to another.

Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::basic_regex()`, `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, `std::basic_regex<_Ch_type, _Rx_traits>::operator=()`, `std::basic_regex<_Ch_type, _Rx_traits>::operator=()`, and `std::basic_regex<_Ch_type, _Rx_traits>::operator=()`.

assign() [6/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Alloc >
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
```

```
const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s,
flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

Parameters

<code>__s</code>	A string containing a regular expression pattern.
<code>__flags</code>	Syntax option flags.

Exceptions

<i>regex_error</i>	if <code>__s</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------	--

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

assign() [7/7]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
    initializer_list< _Ch_type > __l,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object.

Parameters

<code>__l</code>	An initializer list representing a regular expression.
<code>__flags</code>	Syntax option flags.

Exceptions

<i>regex_error</i>	if <code>__l</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------	--

flags()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
flag_type std::basic_regex< _Ch_type, _Rx_traits >::flags ( ) const [inline], [noexcept]
```

Gets the flags used to construct the regular expression or in the last call to `assign()`.

getloc()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex< _Ch_type, _Rx_traits >::getloc ( ) const [inline], [noexcept]
```

Gets the locale currently imbued in the regular expression object.

imbue()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
locale_type std::basic_regex< _Ch_type, _Rx_traits >::imbue (
```

```
locale_type __loc ) [inline]
```

Imbues the regular expression object with the given locale.

Parameters

<code>__loc</code>	A locale.
--------------------	-----------

References [std::swap\(\)](#).

mark_count()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
unsigned int std::basic_regex<_Ch_type, _Rx_traits >::mark_count ( ) const [inline], [noexcept]
```

Gets the number of marked subexpressions within the regular expression.

operator=() [1/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    basic_regex<_Ch_type, _Rx_traits > && ) [default]
```

Move-assigns one regular expression to another.

operator=() [2/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const _Ch_type * __p ) [inline]
```

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

Parameters

<code>__p</code>	A pointer to the start of a null-terminated C-style string containing a regular expression.
------------------	---

References [std::basic_regex<_Ch_type, _Rx_traits >::assign\(\)](#).

operator=() [3/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const basic_regex<_Ch_type, _Rx_traits > & ) [default]
```

Assigns one regular expression to another.

operator=() [4/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
template<typename _Ch_traits , typename _Alloc >
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    const basic_string<_Ch_type, _Ch_traits, _Alloc > & __s ) [inline]
```

Replaces a regular expression with a new one constructed from a string.

Parameters

<code>__s</code>	A pointer to a string containing a regular expression.
------------------	--

References [std::basic_regex<_Ch_type, _Rx_traits >::assign\(\)](#).

operator=() [5/5]

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::operator= (
    initializer_list<_Ch_type > __l ) [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

Parameters

↵	The initializer list.
↵	
↵	
↵	
↵	

Exceptions

<i>regex_error</i>	if <code>__l</code> is not a valid regular expression.
--------------------	--

References [std::basic_regex<_Ch_type, _Rx_traits >::assign\(\)](#).

swap()

```
template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>
void std::basic_regex<_Ch_type, _Rx_traits >::swap (
    basic_regex<_Ch_type, _Rx_traits > & __rhs ) [inline], [noexcept]
```

Swaps the contents of two regular expression objects.

Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

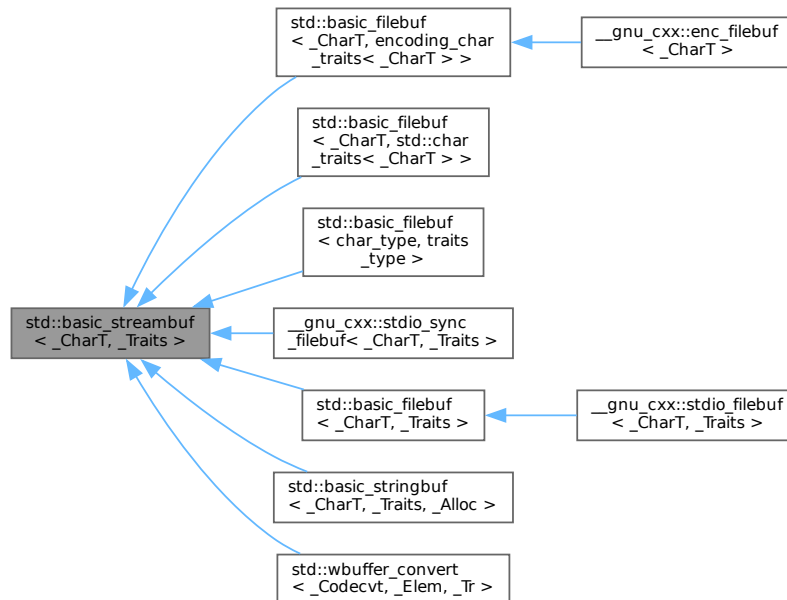

References [std::swap\(\)](#).

6.257.1 Detailed Description

template<typename _CharT, typename _Traits>
class std::basic_streambuf< _CharT, _Traits >

The actual work of input and output (interface).

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:

- The controlled input sequence can be not readable.
- The controlled output sequence can be not writable.
- The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
- The controlled sequences can support operations *directly* to or from associated sequences.
- The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations

performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:

- the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
- the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
- the *end pointer*, or first element address beyond the end of the array (called *xend* here).

3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:

- If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
- If *xnext* is not a null pointer and *xnext* < *xend* for an output sequence, then a *write position* is available. In this case, **xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
- If *xnext* is not a null pointer and *xbeg* < *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
- If *xnext* is not a null pointer and *xnext* < *xend* for an input sequence, then a *read position* is available. In this case, **xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

6.257.2 Member Typedef Documentation

`__streambuf_type`

```
template<typename _CharT , typename _Traits >
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf< _CharT, _Traits >::__↵
streambuf_type
```

This is a non-standard type.

`char_type`

```
template<typename _CharT , typename _Traits >
typedef _CharT std::basic_streambuf< _CharT, _Traits >::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

`int_type`

```
template<typename _CharT , typename _Traits >
typedef traits_type::int_type std::basic_streambuf< _CharT, _Traits >::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

`off_type`

```
template<typename _CharT , typename _Traits >
typedef traits_type::off_type std::basic_streambuf< _CharT, _Traits >::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

pos_type

```
template<typename _CharT , typename _Traits >
typedef traits_type::pos_type std::basic_streambuf< _CharT, _Traits >::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

traits_type

```
template<typename _CharT , typename _Traits >
typedef _Traits std::basic_streambuf< _CharT, _Traits >::traits_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

6.257.3 Constructor & Destructor Documentation**~basic_streambuf()**

```
template<typename _CharT , typename _Traits >
virtual std::basic_streambuf< _CharT, _Traits >::~~basic_streambuf ( ) [inline], [virtual]
```

Destructor deallocates no buffer space.

basic_streambuf()

```
template<typename _CharT , typename _Traits >
std::basic_streambuf< _CharT, _Traits >::basic_streambuf ( ) [inline], [protected]
```

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the basic_streambuf class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

6.257.4 Member Function Documentation**eback()**

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

egptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence

- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow\(\)](#).

epptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

gbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::gbump (
    int __n ) [inline], [protected]
```

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

getloc()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline]
```

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

gptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow\(\)](#).

imbue()

```
template<typename _CharT , typename _Traits >
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
    const locale & __loc ) [inline], [protected], [virtual]
```

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

in_avail()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline]
```

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

overflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::overflow (
    int_type __c = traits_type::eof() ) [inline], [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns eof().

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, `__gnu_cxx::stdio_sync_filebuf<std::basic_stringbuf<_CharT, _Traits, _Alloc>`, and `std::wbuffer_convert<_Codecvt, _Elem, _Tr>`.

pbackfail()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf<_CharT, _Traits>::pbackfail (
    int_type __c = traits_type::eof() ) [inline], [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

Returns

eof() on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns eof().

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, `__gnu_cxx::stdio_sync_filebuf<std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

pbase()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf<_CharT, _Traits>::pbase ( ) const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

pbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf<_CharT, _Traits>::pbump (
    int __n ) [inline], [protected]
```

Moving the write position.

Parameters

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

pptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

pubimbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc ) [inline]
```

Entry point for imbue().

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Alters the stream position.

Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Alters the stream position.

Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline]
```

Calls virtual `sync` function.

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync()`, and `std::basic_istream< _CharT, _Traits >::sync()`.

sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline]
```

Getting the next character.

Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Referenced by `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< char >::ignore()`, `std::istreambuf_iterator< _CharT, _Traits >::operator++()`, and `std::basic_istream< char >::seekg()`.

seekoff()

```
template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), [std::basic_filebuf<char_type, traits_type>](#), and [std::basic_stringbuf<_CharT, _Traits>](#).

seekpos()

```
template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), [std::basic_filebuf<char_type, traits_type>](#), and [std::basic_stringbuf<_CharT, _Traits>](#).

setbuf()

```
template<typename _CharT , typename _Traits >
virtual basic_streambuf< char_type, _Traits > * std::basic_streambuf< _CharT, _Traits >::setbuf
(
    char_type * ,
    streamsize ) [inline], [protected], [virtual]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

Note

Base class version does nothing, returns `this`.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), [std::basic_filebuf<char_type, traits_type>](#), and [std::basic_stringbuf<_CharT, _Traits>](#).

setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend ) [inline], [protected]
```

Setting the three read area pointers.

Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert\(\)](#).

setp()

```
template<typename _CharT, typename _Traits>
void std::basic_streambuf<_CharT, _Traits>::setp (
    char_type * __pbeg,
    char_type * __pend ) [inline], [protected]
```

Setting the three write area pointers.

Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == ep_ptr()`

Referenced by [std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert\(\)](#).

sgetc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::istreambuf_iterator<_CharT, _Traits>::operator++\(\)](#), and [std::basic_istream<char>::seekg\(\)](#).

sgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (
    char_type * __s,
    streamsize __n ) [inline]
```

Entry point for `xsgetn`.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT, typename _Traits>
virtual streamsize std::basic_streambuf<_CharT, _Traits>::showmanyc ( ) [inline], [protected],
[virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits>`.

snextc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::seekg()`, and `std::basic_istream<char>::unget()`.

sputbackc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputbackc (
    char_type __c ) [inline]
```

Pushing characters back into the input stream.

Parameters

<code>__c</code>	The character to push back.
------------------	-----------------------------

Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

sputc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sputc (
    char_type __c ) [inline]
```

Entry point for all single-character output functions.

Parameters

<code>__c</code>	A character to output.
------------------	------------------------

Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::basic_istream<_CharT, _Traits>::get()`, `std::ostreambuf_iterator<_CharT, _Traits>::operator=()`, and `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow()`.

sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
    const char_type * __s,
    streamsize __n ) [inline]
```

Entry point for all single-character output functions.

Parameters

<code>__s</code>	A buffer read area.
<code>__n</code>	A count.

One of two public output functions.

Returns `xputn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

sungetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream<_CharT, _Traits>::unget()`.

sync()

```
template<typename _CharT , typename _Traits >
virtual int std::basic_streambuf< _CharT, _Traits >::sync ( ) [inline], [protected], [virtual]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in `std::wbuffer_convert<_Codecvt, _Elem, _Tr>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

uflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

underflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::underflow ( ) [inline], [protected],
[virtual]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

Note

Base class version does nothing, returns eof().

Reimplemented in [std::wbuffer_convert<_Codecvt, _Elem, _Tr>](#), [__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), [std::basic_filebuf<char_type, traits_type>](#), and [std::basic_stringbuf<_CharT, _Traits, _Alloc>](#).

xsgetn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsgetn (
    char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Multiple character extraction.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic_filebuf<_CharT, _Traits>](#), [std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>](#), [std::basic_filebuf<_CharT, std::char_traits<_CharT>>](#), and [std::basic_filebuf<char_type, traits_type>](#).

References [std::min\(\)](#).

xsputn()

```
template<typename _CharT, typename _Traits>
streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Multiple character insertion.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

References `std::min()`.

6.257.5 Member Data Documentation

`_M_buf_locale`

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected]
```

Current locale setting.

Referenced by `std::basic_filebuf<_CharT, _Traits>::basic_filebuf()`.

`_M_in_beg`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected]
```

Start of get area.

`_M_in_cur`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected]
```

Current read area.

`_M_in_end`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_end [protected]
```

End of get area.

`_M_out_beg`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_beg [protected]
```

Start of put area.

`_M_out_cur`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_cur [protected]
```

Current put area.

`_M_out_end`

```
template<typename _CharT , typename _Traits >
char_type* std::basic_streambuf< _CharT, _Traits >::_M_out_end [protected]
```

End of put area.

The documentation for this class was generated from the following files:

- `iosfwd`
- `streambuf`
- `streambuf.tcc`

6.258 `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>` Class Template Reference

6.258.1 Detailed Description

template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>

class `__gnu_debug::basic_string<_CharT, _Traits, _Allocator>`

Class std::basic_string with safety/checking/debug instrumentation.

6.258.2 Member Function Documentation

append() [1/5]

```
template<typename _CharT, typename _Traits, typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string<_CharT, _Traits, _Alloc >::append (
    const _Tp & __svt ) [inline], [inherited]
```

Append a string_view.

Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to be appended.
--------------------	--

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#).

append() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::append (
    const _Tp & __svt,
    size_type __pos,
    size_type __n = npos ) [inline], [inherited]
```

Append a range of characters from a `string_view`.

Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to be appended from.
<code>__pos</code>	The position in the <code>string_view</code> to append from.
<code>__n</code>	The number of characters to append from the <code>string_view</code> .

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#).

append() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic\_string< _CharT, _Traits, _Alloc > & std::basic\_string< _CharT, _Traits, _Alloc >::append (
    const basic\_string< _CharT, _Traits, _Alloc > & __str ) [inherited]
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#), and [std::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::collate<_CharT>::do_transform\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator+=\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator+=\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator+=\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator+=\(\)](#), and [std::operator>>\(\)](#).

append() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos ) [inherited]
```

Append a substring.

Parameters

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

References `std::size()`.

append() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    initializer_list< _CharT > __l ) [inline], [inherited]
```

Append an `initializer_list` of characters.

Parameters

<code>↵</code>	The <code>initializer_list</code> of characters to append.
<code>__↵</code>	
<code>↵</code>	
<code>__↵</code>	
<code>/</code>	

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

assign() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept], [inherited]
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References [std::basic_string<_CharT, _Traits, _Alloc>::swap\(\)](#).

assign() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt ) [inline], [inherited]
```

Set value from a string_view.

Parameters

<code>__svt</code>	The source object convertible to string_view.
--------------------	---

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#).

assign() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt,
    size_type __pos,
    size_type __n = npos ) [inline], [inherited]
```

Set value from a range of characters in a string_view.

Parameters

<code>__svt</code>	The source object convertible to string_view.
<code>__pos</code>	The position in the string_view to assign from.
<code>__n</code>	The number of characters to assign.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#).

assign() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inherited]
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

References [std::basic_string< _CharT, _Traits, _Alloc >::get_allocator\(\)](#).

Referenced by [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::operator=\(\)](#), and [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#).

assign() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n = npos ) [inline], [inherited]
```

Set value to a substring of a string.

Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#).

at() [1/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
    size_type __n ) [inline]
```

Provides access to the data contained in the string.

Parameters

\leftrightarrow <code>_n</code>	The index of the character to access.
--------------------------------------	---------------------------------------

Returns

Read/write reference to the character.

Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

at() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::at (
    size_type __n ) const [inline]
```

Provides access to the data contained in the string.

Parameters

\leftrightarrow <code>_n</code>	The index of the character to access.
--------------------------------------	---------------------------------------

Returns

Read-only (const) reference to the character.

Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

back() [1/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic_string< _CharT, _Traits, _Alloc >::back ( ) [inline]
```

Returns a read/write reference to the data at the last element of the string.

back() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const_reference std::basic_string< _CharT, _Traits, _Alloc >::back ( ) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the last element of the string.

capacity()

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
size_type std::basic\_string<_CharT, _Traits, _Alloc >::capacity ( ) const [inline], [noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

compare() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic\_string<_CharT, _Traits, _Alloc >::compare (
    const _Tp & __svt ) const [inline], [noexcept], [inherited]
```

Compare to a `string_view`.

Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
--------------------	---

Returns

Integer < 0 , 0 , or > 0 .

References [std::min\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

compare() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic\_string<_CharT, _Traits, _Alloc >::compare (
    const basic\_string<_CharT, _Traits, _Alloc > & __str ) const [inline], [inherited]
```

Compare to a string.

Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

Returns

Integer < 0 , 0 , or > 0 .

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::min\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

compare() [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic\_string<_CharT, _Traits, _Alloc >::compare (
    size_type __pos,
```

```

        size_type __n,
        const _Tp & __svt ) const [inline], [noexcept], [inherited]

```

Compare to a `string_view`.

Parameters

<code>__pos</code>	A position in the string to start comparing from.
<code>__n</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.

Returns

Integer < 0 , 0 , or > 0 .

`compare()` [4/6]

```

template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) const [inherited]

```

Compare substring to a string.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

Returns

Integer < 0 , 0 , or > 0 .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::min()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

`compare()` [5/6]

```

template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) const [inline], [noexcept], [inherited]

```

Compare to a `string_view`.

Parameters

<code>__pos1</code>	A position in the string to start comparing from.
<code>__n1</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
<code>__pos2</code>	A position in the <code>string_view</code> to start comparing from.
<code>__n2</code>	The number of characters to compare.

Returns

Integer < 0, 0, or > 0.

compare() [6/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n2 = npos ) const [inherited]
```

Compare substring to a substring.

Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::min()`.

data()

```
template<typename _CharT , typename _Traits , typename _Alloc >
_CharT * std::basic_string<_CharT, _Traits, _Alloc>::data ( ) [inline], [noexcept], [inherited]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

empty()

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
```

```
std::allocator<_CharT>>
bool std::basic_string< _CharT, _Traits, _Alloc >::empty ( ) const [inline], [noexcept]
Returns true if the string is empty. Equivalent to *this == "".
```

erase() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >↵
::erase (
    iterator __first,
    iterator __last ) [inherited]
```

Remove a range of characters.

Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    iterator __position ) [inline], [inherited]
```

Remove one character.

Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

find() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::find (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

References [std::basic_string<_CharT, _Traits, _Alloc>::find\(\)](#).

find() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

find_first_not_of() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, size_type> std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a character not in a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

References [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#).

find_first_not_of() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a character not in string.

Parameters

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#).

find_first_of() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a character of a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

References [std::basic_string<_CharT, _Traits, _Alloc>::find_first_of\(\)](#).

find_first_of() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = 0 ) const [inline], [noexcept], [inherited]
```

Find position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`.

find_last_not_of() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, size_type> std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a character not in a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

References `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`.

find_last_not_of() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a character not in string.

Parameters

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`.

find_last_of() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic\_string< _CharT, _Traits, _Alloc >::find_last_of (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a character of string.

Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

References [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#).

find_last_of() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string< _CharT, _Traits, _Alloc >::find_last_of (
    const basic\_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string< _CharT, _Traits, _Alloc >::data\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#), and [std::basic_string< _CharT, _Traits, _Alloc >::size\(\)](#).

Referenced by [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#), and [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#).

front() [1/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
reference std::basic\_string< _CharT, _Traits, _Alloc >::front ( ) [inline]
```

Returns a read/write reference to the data at the first element of the string.

front() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

const_reference `std::basic_string<_CharT, _Traits, _Alloc>::front () const` [inline], [noexcept]
Returns a read-only (constant) reference to the data at the first element of the string.

`get_allocator()`

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
allocator_type std::basic_string<_CharT, _Traits, _Alloc>::get_allocator ( ) const [inline],
[noexcept]
```

Return copy of allocator used to construct this string.

`insert()` [1/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    _CharT __c ) [inline], [inherited]
```

Insert one character.

Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

`insert()` [2/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<class _InputIterator>
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    _InputIterator __beg,
    _InputIterator __end ) [inline], [inherited]
```

Insert a range of characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

insert() [3/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    initializer_list<_CharT> __l ) [inline], [inherited]
```

Insert an initializer_list of characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The initializer_list of characters to insert.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [4/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    size_type __n,
    _CharT __c ) [inline], [inherited]
```

Insert multiple characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [5/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos,
    const _Tp & __svt ) [inline], [inherited]
```

Insert a string_view.

Parameters

<code>__pos</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [6/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n = npos ) [inline], [inherited]
```

Insert a string_view.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert from.
<code>__pos2</code>	Position in string_view to insert from.
<code>__n</code>	The number of characters to insert.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

insert() [7/8]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::insert (
```

```
size_type __pos1,
const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline], [inherited]
```

Insert value of a string.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string< _CharT, _Traits, _Alloc >::insert()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

`insert()` [8/8]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n = npos ) [inline], [inherited]
```

Insert a substring.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 > size()</code> or <code>__pos2 > str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

length()

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::length ( ) const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

max_size()

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::max\_size ( ) const [inline], [noexcept]
```

Returns the size() of the largest possible string.

operator __sv_type()

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
std::basic\_string<\_CharT, \_Traits, \_Alloc>::operator \_\_sv\_type ( ) const [inline], [noexcept],
[inherited]
```

Convert to a string_view.

Returns

A string_view.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

operator+=() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
template<typename _Tp >
```

```
_If_sv< _Tp, basic\_string & > std::basic\_string<\_CharT, \_Traits, \_Alloc>::operator+= (
    const _Tp & __svt ) [inline], [inherited]
```

Append a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to be appended.
--------------------	---

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#).

operator+=() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
basic\_string & std::basic\_string<\_CharT, \_Traits, \_Alloc>::operator+= (
    const basic\_string<\_CharT, \_Traits, \_Alloc> & __str ) [inline], [inherited]
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#).

replace() [1/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _Tp & __svt ) [inline], [inherited]
```

Replace range of characters with `string_view`.

Parameters

<code>__i1</code>	An iterator referencing the start position to replace at.
<code>__i2</code>	An iterator referencing the end position for the replace.
<code>__svt</code>	The object convertible to <code>string_view</code> to insert from.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::begin\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [2/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic\_string & std::basic\_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2 ) [inline], [inherited]
```

Replace range of characters with range.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [3/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s ) [inline], [inherited]
```

Replace range of characters with C string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [4/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s,
    size_type __n ) [inline], [inherited]
```

Replace range of characters with C substring.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

Returns

Reference to this string.

Exceptions

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [5/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    const basic_string<_CharT, _Traits, _Alloc> & __str ) [inline], [inherited]
```

Replace range of characters with string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

Returns

Reference to this string.

Exceptions

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

replace() [6/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    initializer_list<_CharT> __l ) [inline], [inherited]
```

Replace range of characters with `initializer_list`.

Parameters

<code>↵ __i1</code>	Iterator referencing start of range to replace.
-------------------------	---

Parameters

<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The initializer_list of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    size_type __n,
    _CharT __c) [inline], [inherited]
```

Replace range of characters with multiple characters.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

[std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#),
[std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#),
[std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#),
[std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#),
[std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [10/11]

```

template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) [inline], [inherited]
  
```

Replace range of characters with `string_view`.

Parameters

<code>__pos1</code>	The position to replace at.
<code>__n1</code>	The number of characters to replace.
<code>__svt</code>	The object convertible to <code>string_view</code> to insert from.
<code>__pos2</code>	The position in the <code>string_view</code> to insert from.
<code>__n2</code>	The number of characters to insert.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [11/11]

```

template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n2 = npos ) [inline], [inherited]
  
```

Replace characters with value from another string.

Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of <code>str</code> to use.
<code>__n2</code>	Number of characters from <code>str</code> to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos1 > size()</code> or <code>__pos2 > __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

reserve() [1/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
void std::basic_string< _CharT, _Traits, _Alloc >::reserve
```

Equivalent to `shrink_to_fit()`.

reserve() [2/2]

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
    size_type __res_arg )
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

rfind() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
template<typename _Tp >
```

```
_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a string_view.

Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

References [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#).

rfind() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos ) const [inline], [noexcept], [inherited]
```

Find last position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#).

size()

```
template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
```

```
size_type std::basic_string< _CharT, _Traits, _Alloc >::size ( ) const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

swap()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
    basic_string< _CharT, _Traits, _Alloc > & __s ) [noexcept], [inherited]
```

Swap contents with another string.

Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, and `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`.

6.258.3 Member Data Documentation

npos

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator =
std::allocator<_CharT>>
const basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _↵
Alloc>::npos [static]
```

Value returned by various member functions when they fail.

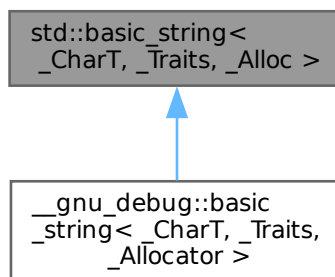

The documentation for this class was generated from the following file:

6.259.1 Detailed Description

template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >

Managing sequences of characters and character-like objects.

Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator<_CharT></code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#). Of the [optional sequence requirements](#), only `push_back`, `at`, and array access are supported.

Todo Needs documentation! See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation+style.html>

Documentation? What's that? Nathan Myers ncm@cantrip.org.

A string looks like this:

```

[basic_string<char_type>]      [_Rep]
                               _M_length
_M_dataplus                   _M_capacity
_M_p ----->                 _M_refcount
                               unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string↔::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a Copy-On-Write C++ string implementation.

6.259.2 Constructor & Destructor Documentation

basic_string() [1/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( ) [inline], [noexcept]
```

Default constructor creates an empty string.

Referenced by [std::basic_string< _CharT, _Traits, _Alloc >::substr\(\)](#).

basic_string() [2/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _Alloc & __a ) [inline], [explicit]
```

Construct an empty string using allocator *a*.

basic_string() [3/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Construct string with copy of value of *str*.

Parameters

<code>__str</code>	Source string.
--------------------	----------------

basic_string() [4/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    const _Alloc & __a = _Alloc() )
```

Construct string as copy of a substring.

Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__a</code>	Allocator to use.

basic_string() [5/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n )
```

Construct string as copy of a substring.

Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.

basic_string() [6/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos,
    size_type __n,
    const _Alloc & __a )
```

Construct string as copy of a substring.

Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

basic_string() [7/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string initialized by a character array.

Parameters

<code>__s</code>	Source character array.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

basic_string() [8/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename = _RequireAllocator<_Alloc>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _CharT * __s,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a C string.

Parameters

 <code>_s</code>	Source C string.
 <code>_a</code>	Allocator to use (default is default allocator).

basic_string() [9/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as multiple characters.

Parameters

 <code>_n</code>	Number of characters.
 <code>_c</code>	Character to use.
 <code>_a</code>	Allocator to use (default is default allocator).

basic_string() [10/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]
```

Move construct string.

Parameters

<code>__str</code>	Source string.
--------------------	----------------

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

basic_string() [11/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    initializer_list< _CharT > __l,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string from an initializer list.

Parameters

 <code>_l</code>	std::initializer_list of characters.
 <code>_a</code>	Allocator to use (default is default allocator).

basic_string() [12/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    _InputIterator __beg,
    _InputIterator __end,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a range.

Parameters

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

basic_string() [13/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp , typename = enable_if_t<is_convertible_v<const _Tp&, __sv_type>>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _Tp & __t,
    size_type __pos,
    size_type __n,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string from a substring of a string_view.

Parameters

<code>__t</code>	Source object convertible to string view.
<code>__pos</code>	The index of the first character to copy from <code>__t</code> .
<code>__n</code>	The number of characters to copy from <code>__t</code> .
<code>__a</code>	Allocator to use.

basic_string() [14/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp , typename = _If_sv<_Tp, void>>
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (
    const _Tp & __t,
    const _Alloc & __a = _Alloc() ) [inline], [explicit]
```

Construct string from a string_view.

Parameters

<code>↔ __t</code>	Source object convertible to string view.
<code>↔ __a</code>	Allocator to use (default is default allocator).

~basic_string()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string ( ) [inline], [noexcept]
```

Destroy the string instance.

References [std::basic_string<_CharT, _Traits, _Alloc >::get_allocator\(\)](#).

6.259.3 Member Function Documentation**append() [1/9]**

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::append (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Append a range of characters.

Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

Returns

Reference to this string.

Appends characters in the range [`__first`,`__last`) to this string.

References [std::basic_string<_CharT, _Traits, _Alloc >::replace\(\)](#).

append() [2/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::append (
    const _CharT * __s ) [inline]
```

Append a C string.

Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc >::append\(\)](#).

append() [3/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::append (
    const _CharT * __s,
    size_type __n )
```

Append a C substring.

Parameters

<code>_↔ _s</code>	The C string to append.
<code>_↔ _n</code>	The number of characters to append.

Returns

Reference to this string.

References [std::size\(\)](#).

append() [4/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::append (
    const _Tp & __svt ) [inline]
```

Append a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to be appended.
--------------------	---

Returns

Reference to this string.

References [std::basic_string< _CharT, _Traits, _Alloc >::append\(\)](#).

append() [5/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::append (
    const _Tp & __svt,
    size_type __pos,
    size_type __n = npos ) [inline]
```

Append a range of characters from a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to be appended from.
<code>__pos</code>	The position in the string_view to append from.
<code>__n</code>	The number of characters to append from the string_view.

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

append() [6/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
    const basic_string<_CharT, _Traits, _Alloc> & __str )
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::size()`, and `std::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::collate<_CharT>::do_transform()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator+=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator+=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator+=()`, and `std::operator>>()`.

append() [7/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos,
    size_type __n = npos )
```

Append a substring.

Parameters

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of str to append.
<code>__n</code>	The number of characters to append.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

Returns

Reference to this string.

Sets value of string to characters in the range `[__first,__last)`.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

assign() [2/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References `std::basic_string<_CharT, _Traits, _Alloc>::swap()`.

assign() [3/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _CharT * __s ) [inline]
```

Set value to contents of a C string.

Parameters

<code>__s</code>	The C string to use.
------------------	----------------------

Returns

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

References `std::basic_string<_CharT, _Traits, _Alloc>::assign()`.

assign() [4/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::assign (
```

```
const _CharT * __s,
size_type __n )
```

Set value to a C substring.

Parameters

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

References [std::size\(\)](#).

assign() [5/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt ) [inline]
```

Set value from a string_view.

Parameters

<code>__svt</code>	The source object convertible to string_view.
--------------------	---

Returns

Reference to this string.

References [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#).

assign() [6/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt,
    size_type __pos,
    size_type __n = npos ) [inline]
```

Set value from a range of characters in a string_view.

Parameters

<code>__svt</code>	The source object convertible to string_view.
<code>__pos</code>	The position in the string_view to assign from.
<code>__n</code>	The number of characters to assign.

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::assign()`.

assign() [7/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::assign (
    const basic_string<_CharT, _Traits, _Alloc> & __str )
```

Set value to contents of another string.

Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`.

assign() [8/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos,
    size_type __n = npos ) [inline]
```

Set value to a substring of a string.

Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#).

assign() [9/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    initializer_list< _CharT > __l ) [inline]
```

Set value to an initializer_list of characters.

Parameters

	The initializer_list of characters to assign.
	
	
	
	

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#).

assign() [10/10]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    size_type __n,
    _CharT __c ) [inline]
```

Set value to multiple characters.

Parameters

   	Length of the resulting string.
 	The character to use.

Returns

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

at() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string< _CharT, _Traits, _Alloc >::at (
    size_type __n ) [inline]
```

Provides access to the data contained in the string.

Parameters

<code>_↔</code>	The index of the character to access.
<code>_n</code>	

Returns

Read/write reference to the character.

Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.
References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

at() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (
    size_type __n ) const [inline]
```

Provides access to the data contained in the string.

Parameters

<code>_↔</code>	The index of the character to access.
<code>_n</code>	

Returns

Read-only (const) reference to the character.

Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.
References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

back() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic_string<_CharT, _Traits, _Alloc>::back ( ) [inline]
```

Returns a read/write reference to the data at the last element of the string.

References [std::basic_string<_CharT, _Traits, _Alloc>::empty\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator\[\]\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

back() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

const_reference [std::basic_string<_CharT, _Traits, _Alloc>::back \(\)](#) const [inline], [noexcept]
 Returns a read-only (constant) reference to the data at the last element of the string.
 References [std::basic_string<_CharT, _Traits, _Alloc>::empty\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator\[\]\(\)](#),
 and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

begin() [1/2]

template<typename _CharT , typename _Traits , typename _Alloc >
 iterator [std::basic_string<_CharT, _Traits, _Alloc>::begin \(\)](#) [inline]
 Returns a read/write iterator that points to the first character in the string. Unshares the string.
 Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::crend\(\)](#), [std::regex_match\(\)](#), [std::regex_match\(\)](#),
[std::regex_replace\(\)](#), [std::regex_replace\(\)](#), [std::regex_search\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rend\(\)](#),
[std::basic_string<_CharT, _Traits, _Alloc>::rend\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

begin() [2/2]

template<typename _CharT , typename _Traits , typename _Alloc >
 const_iterator [std::basic_string<_CharT, _Traits, _Alloc>::begin \(\)](#) const [inline], [noexcept]
 Returns a read-only (constant) iterator that points to the first character in the string.

c_str()

template<typename _CharT , typename _Traits , typename _Alloc >
 const _CharT * [std::basic_string<_CharT, _Traits, _Alloc>::c_str \(\)](#) const [inline], [noexcept]
 Return const pointer to null-terminated contents.
 This is a handle to internal data. Do not modify or dire things may happen.
 Referenced by [std::collate<_CharT>::do_compare\(\)](#), [std::money_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#),
[std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::num_get<_CharT, _Inlter>::do_get\(\)](#), [std::collate<_CharT>::do_transform\(\)](#),
[std::regex_replace\(\)](#), and [std::experimental::filesystem::v1::filesystem_error::what\(\)](#).

capacity()

template<typename _CharT , typename _Traits , typename _Alloc >
 size_type [std::basic_string<_CharT, _Traits, _Alloc>::capacity \(\)](#) const [inline], [noexcept]
 Returns the total number of characters that the string can hold before needing to allocate more memory.
 Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::push_back\(\)](#).

cbegin()

template<typename _CharT , typename _Traits , typename _Alloc >
 const_iterator [std::basic_string<_CharT, _Traits, _Alloc>::cbegin \(\)](#) const [inline], [noexcept]
 Returns a read-only (constant) iterator that points to the first character in the string.

cend()

template<typename _CharT , typename _Traits , typename _Alloc >
 const_iterator [std::basic_string<_CharT, _Traits, _Alloc>::cend \(\)](#) const [inline], [noexcept]
 Returns a read-only (constant) iterator that points one past the last character in the string.
 References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

clear()

template<typename _CharT , typename _Traits , typename _Alloc >
 void [std::basic_string<_CharT, _Traits, _Alloc>::clear \(\)](#) [inline], [noexcept]
 Erases the string, making it empty.
 References [std::basic_string<_CharT, _Traits, _Alloc>::get_allocator\(\)](#).

compare() [1/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    const _CharT * __s ) const [noexcept]
```

Compare to a C string.

Parameters

<code>__s</code>	C string to compare against.
------------------	------------------------------

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__s`, 0 if their values are equivalent, or > 0 if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#), and [std::size\(\)](#).

compare() [2/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, int > std::basic_string<_CharT, _Traits, _Alloc>::compare (
    const _Tp & __svt ) const [inline], [noexcept]
```

Compare to a string_view.

Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
--------------------	---

Returns

Integer < 0, 0, or > 0.

References [std::min\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

compare() [3/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    const basic_string<_CharT, _Traits, _Alloc> & __str ) const [inline]
```

Compare to a string.

Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__str`, 0 if their values are equivalent, or > 0 if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

compare() [4/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const _Tp & __svt ) const [inline], [noexcept]
```

Compare to a `string_view`.

Parameters

<code>__pos</code>	A position in the string to start comparing from.
<code>__n</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.

Returns

Integer < 0, 0, or > 0.

compare() [5/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) const
```

Compare substring to a string.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

`compare()` [6/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s ) const
```

Compare substring to a C string.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

Returns

Integer < 0 , 0 , or > 0 .

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(), __s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::min()`.

`compare()` [7/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2 ) const
```

Compare substring against a character array.

Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of <code>s</code> .

Returns

Integer < 0 , 0 , or > 0 .

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(), __s, rlen)`.

::compare(substring.data(),s,rlen). If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: s must have at least n2 characters, '\0' has no special meaning.

References [std::min\(\)](#).

compare() [8/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic\_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) const [inline], [noexcept]
```

Compare to a string_view.

Parameters

<code>__pos1</code>	A position in the string to start comparing from.
<code>__n1</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to string_view to compare against.
<code>__pos2</code>	A position in the string_view to start comparing from.
<code>__n2</code>	The number of characters to compare.

Returns

Integer < 0, 0, or > 0.

compare() [9/9]

```
template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic\_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const basic\_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos ) const
```

Compare substring to a substring.

Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), and [std::min\(\)](#).

copy()

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc>::size_type basic_string<_CharT, _Traits, _Alloc>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0 ) const
```

Copy substring into C string.

Parameters

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

Returns

Number of characters actually copied

Exceptions

<code>std::out_of_range</code>	If <code>__pos > size()</code> .
--------------------------------	-------------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

crbegin()

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crbegin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References [std::basic_string<_CharT, _Traits, _Alloc>::end\(\)](#).

crend()

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::crend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References [std::basic_string<_CharT, _Traits, _Alloc>::begin\(\)](#).

data() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const _CharT * std::basic_string<_CharT, _Traits, _Alloc>::data ( ) const [inline], [noexcept]
```

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

Referenced by [std::basic_regex<_Ch_type, _Rx_traits>::assign\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::compare\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::compare\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::compare\(\)](#), [std::collate<_CharT>::do_compare\(\)](#), [std::collate<_CharT>::do_transform\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#), [std::match_results<_Bi_iter, _Alloc>::format\(\)](#), [std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::from_bytes\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::operator __sv_type\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rfind\(\)](#), [std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::to_bytes\(\)](#), [std::regex_traits<_Ch_type>::transform\(\)](#), and [std::filesystem::filesystem_error::what\(\)](#).

data() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
_CharT * std::basic_string<_CharT, _Traits, _Alloc>::data ( ) [inline], [noexcept]
```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

empty()

```
template<typename _CharT, typename _Traits, typename _Alloc>
bool std::basic_string<_CharT, _Traits, _Alloc>::empty ( ) const [inline], [noexcept]
```

Returns true if the string is empty. Equivalent to `*this == ""`.

References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::back\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::back\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::front\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::front\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::pop_back\(\)](#).

end() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
iterator std::basic_string<_CharT, _Traits, _Alloc>::end ( ) [inline]
```

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::crbegin\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::crbegin\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rbegin\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::rbegin\(\)](#), [std::regex_match\(\)](#), [std::regex_match\(\)](#), [std::regex_replace\(\)](#), [std::regex_replace\(\)](#), and [std::regex_search\(\)](#).

end() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc>
const_iterator std::basic_string<_CharT, _Traits, _Alloc>::end ( ) const [inline], [noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

References [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

erase() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >↵
::erase (
    iterator __first,
    iterator __last )
```

Remove a range of characters.

Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

erase() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (
    iterator __position ) [inline]
```

Remove one character.

Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

erase() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (
    size_type __pos = 0,
    size_type __n = npos ) [inline]
```

Remove characters.

Parameters

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is beyond the end of this string.
--------------------------------	---

Removes *__n* characters from this string starting at *__pos*. The length of the string is reduced by *__n*. If there are $< _n$ characters to remove, the remainder of the string is truncated. If *__p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#), [std::operator>>\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::pop_back\(\)](#).

find() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]
```

Find position of a character.

Parameters

<i>__c</i>	Character to locate.
<i>__pos</i>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from *__pos*, searches forward for *__c* within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find position of a C substring.

Parameters

<i>__s</i>	C string to locate.
<i>__pos</i>	Index of character to search from.
<i>__n</i>	Number of characters from <i>s</i> to search for.

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References `std::data()`, and `std::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find()`, `std::basic_string<_CharT, _Traits, _Alloc>::find()`, `std::basic_string<_CharT, _Traits, _Alloc>::find()`, and `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`.

find() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a C string.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::find()`.

find() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, size_type > std::basic_string<_CharT, _Traits, _Alloc>::find (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a `string_view`.

Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

References `std::basic_string<_CharT, _Traits, _Alloc>::find()`.

find() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::find (
```

```
const basic_string< _CharT, _Traits, _Alloc > & __str,
size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic_string< _CharT, _Traits, _Alloc >::data\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::find\(\)](#), and [std::basic_string< _CharT, _Traits, _Alloc >::size\(\)](#).

find_first_not_of() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]
```

Find position of a different character.

Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_first_not_of() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find position of a character not in C substring.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_first_not_of() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_not\_of (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character not in C string.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#).

find_first_not_of() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, size_type > std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_not\_of (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character not in a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

References [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#).

find_first_not_of() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::find\_first\_not\_of (
    const basic\_string<\_CharT, \_Traits, \_Alloc> & __str,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character not in string.

Parameters

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

find_first_of() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    _CharT __c,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

References [std::basic_string<_CharT, _Traits, _Alloc>::find\(\)](#).

find_first_of() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find position of a character of C substring.

Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_first_of() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string< _CharT, _Traits, _Alloc >::find_first_of (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character of C string.

Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string< _CharT, _Traits, _Alloc >::find_first_of\(\)](#).

find_first_of() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic\_string< _CharT, _Traits, _Alloc >::find_first_of (
    const _Tp & __svt,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character of a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

References [std::basic_string< _CharT, _Traits, _Alloc >::find_first_of\(\)](#).

find_first_of() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string< _CharT, _Traits, _Alloc >::find_first_of (
    const basic\_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_first_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

find_last_not_of() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc >::size_type std::basic_string<_CharT, _Traits, _Alloc
>::find_last_not_of (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a different character.

Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_last_not_of() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string<_CharT, _Traits, _Alloc >::size_type std::basic_string<_CharT, _Traits, _Alloc
>::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find last position of a character not in C substring.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to consider.

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_last_not_of() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of (
    const _CharT * __s,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character not in C string.

Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of\(\)](#).

find_last_of() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    _CharT __c,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

References [std::basic_string< _CharT, _Traits, _Alloc >::rfind\(\)](#).

find_last_of() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_last_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find last position of a character of C substring.

Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

find_last_of() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    const _CharT * __s,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character of C string.

Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#).

find_last_of() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character of string.

Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

References [std::basic_string< _CharT, _Traits, _Alloc >::find_last_of\(\)](#).

find_last_of() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >

    const basic\_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a character of string.

Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::find_last_of\(\)](#).

front() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::front \( \) [inline]
```

Returns a read/write reference to the data at the first element of the string.

References [std::basic_string<_CharT, _Traits, _Alloc>::empty\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::operator\[\]\(\)](#).

front() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::front \( \) const [inline], [noexcept]
```

Returns a read-only (constant) reference to the data at the first element of the string.

References [std::basic_string<_CharT, _Traits, _Alloc>::empty\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::operator\[\]\(\)](#).

get_allocator()

```
template<typename _CharT , typename _Traits , typename _Alloc >
allocator_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::get\_allocator \( \) const [inline],
[noexcept]
```

Return copy of allocator used to construct this string.

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::~~basic_string\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::clear\(\)](#), [std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::from_bytes\(\)](#), [std::operator+\(\)](#), [std::operator+\(\)](#), and [std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::to_bytes\(\)](#).

insert() [1/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
iterator std::basic\_string<\_CharT, \_Traits, \_Alloc>::insert \(
    iterator __p,
    _CharT __c ) [inline]
```

Insert one character.

Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

Returns

Iterator referencing newly inserted char.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

insert() [2/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    _InputIterator __beg,
    _InputIterator __end ) [inline]
```

Insert a range of characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

insert() [3/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string<_CharT, _Traits, _Alloc>::insert (
    iterator __p,
    initializer_list<_CharT> __l ) [inline]
```

Insert an `initializer_list` of characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [4/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::insert (
    iterator __p,
    size_type __n,
    _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [5/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    const _CharT * __s ) [inline]
```

Insert a C string.

Parameters

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.

Inserts the first n characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

insert() [6/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos,
    const _CharT * __s,
    size_type __n )
```

Insert a C substring.

Parameters

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first n characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

insert() [7/11]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::insert (
    size_type __pos,
    const _Tp & __svt ) [inline]
```

Insert a string_view.

Parameters

<code>__pos</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert.

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::insert()`.

insert() [8/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos,
    size_type __n,
    _CharT __c ) [inline]
```

Insert multiple characters.

Parameters

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

insert() [9/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n = npos ) [inline]
```

Insert a string_view.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert from.
<code>__pos2</code>	Position in string_view to insert from.
<code>__n</code>	The number of characters to insert.

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

insert() [10/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Insert value of a string.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::insert()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

insert() [11/11]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n = npos ) [inline]
```

Insert a substring.

Parameters

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 > size()</code> or <code>__pos2 > str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::insert\(\)](#).

length()

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::length ( ) const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by [std::collate<_CharT>::do_compare\(\)](#), [std::collate<_CharT>::do_transform\(\)](#), [std::regex_traits<_Ch_type>::length\(\)](#), [std::regex_replace\(\)](#), and [std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::to_bytes\(\)](#).

max_size()

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size ( ) const [inline], [noexcept]
```

Returns the size() of the largest possible string.

Referenced by [std::getline\(\)](#), and [std::operator>>\(\)](#).

operator __sv_type()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_string<_CharT, _Traits, _Alloc>::operator __sv_type ( ) const [inline], [noexcept]
```

Convert to a string_view.

Returns

A string_view.

References [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

operator+=() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
    _CharT __c ) [inline]
```

Append a character.

Parameters

<code>__c</code>	The character to append.
------------------	--------------------------

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::push_back\(\)](#).

operator+=() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const _CharT * __s ) [inline]
```

Append a C string.

Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

operator+=() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const _Tp & __svt ) [inline]
```

Append a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to be appended.
--------------------	---

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

operator+=() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Append a string to this string.

Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

operator+=() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (
    initializer_list< _CharT > __l ) [inline]
```

Append an initializer_list of characters.

Parameters

↩	The initializer_list of characters to be appended.
↩	
↩	
↩	
/	

Returns

Reference to this string.

References [std::basic_string< _CharT, _Traits, _Alloc >::append\(\)](#).

operator=() [1/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    _CharT __c ) [inline]
```

Set value to string of length 1.

Parameters

↩	Source character.
__c	

Assigning to a character makes this string length 1 and (*this)[0] == c.

References [std::basic_string< _CharT, _Traits, _Alloc >::assign\(\)](#).

operator=() [2/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]
```

Move assign the value of *str* to this string.

Parameters

__str	Source string.
-------	----------------

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

References [std::basic_string< _CharT, _Traits, _Alloc >::swap\(\)](#).

operator=() [3/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator= (
    const _CharT * __s ) [inline]
```

Copy contents of *s* into this string.

Parameters

<code>_↔</code>	Source null-terminated string.
<code>_S</code>	

References [std::basic_string<_CharT, _Traits, _Alloc >::assign\(\)](#).

operator=() [4/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::operator= (
    const _Tp & __svt ) [inline]
```

Set value to string constructed from a string_view.

Parameters

<code>__svt</code>	An object convertible to string_view.
------------------------------------	---------------------------------------

References [std::basic_string<_CharT, _Traits, _Alloc >::assign\(\)](#).

operator=() [5/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic\_string & std::basic\_string< _CharT, _Traits, _Alloc >::operator= (
    const basic\_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Assign the value of *str* to this string.

Parameters

<code>__str</code>	Source string.
------------------------------------	----------------

References [std::basic_string<_CharT, _Traits, _Alloc >::assign\(\)](#).

operator=() [6/6]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic\_string & std::basic\_string< _CharT, _Traits, _Alloc >::operator= (
    initializer\_list< _CharT > __l ) [inline]
```

Set value to string constructed from initializer list.

Parameters

<code>↔</code>	std::initializer_list .
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>/</code>	

References [std::basic_string<_CharT, _Traits, _Alloc >::assign\(\)](#).

operator[]() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
```

```
reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos ) [inline]
```

Subscript access to the data contained in the string.

Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

Returns

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.) Unshares the string.

References [std::basic_string< _CharT, _Traits, _Alloc >::size\(\)](#).

operator[]() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos ) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

References [std::basic_string< _CharT, _Traits, _Alloc >::size\(\)](#).

Referenced by [std::basic_string< _CharT, _Traits, _Alloc >::back\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::back\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::front\(\)](#), and [std::basic_string< _CharT, _Traits, _Alloc >::front\(\)](#).

pop_back()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ( ) [inline]
```

Remove the last character.

The string must be non-empty.

References [std::basic_string< _CharT, _Traits, _Alloc >::empty\(\)](#), [std::basic_string< _CharT, _Traits, _Alloc >::erase\(\)](#), and [std::basic_string< _CharT, _Traits, _Alloc >::size\(\)](#).

push_back()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
    _CharT __c ) [inline]
```

Append a single character.

Parameters

<code>_↔</code>	Character to append.
<code>_C</code>	

References `std::basic_string<_CharT, _Traits, _Alloc>::capacity()`, `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::collate<_CharT>::do_transform()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator+=()`, `std::tr2::operator>>()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`.

rbegin() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) [inline]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

References `std::basic_string<_CharT, _Traits, _Alloc>::end()`.

rbegin() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References `std::basic_string<_CharT, _Traits, _Alloc>::end()`.

rend() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) [inline]
```

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

References `std::basic_string<_CharT, _Traits, _Alloc>::begin()`.

rend() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References `std::basic_string<_CharT, _Traits, _Alloc>::begin()`.

replace() [1/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::replace (
    const_iterator __i1,
    const_iterator __i2,
    const _Tp & __svt ) [inline]
```

Replace range of characters with string_view.

Parameters

<code>__i1</code>	An iterator referencing the start position to replace at.
<code>__i2</code>	An iterator referencing the end position for the replace.
<code>__svt</code>	The object convertible to <code>string_view</code> to insert from.

Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::begin()`, and `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

replace() [2/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    _InputIterator __k1,
    _InputIterator __k2 ) [inline]
```

Replace range of characters with range.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [3/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s ) [inline]
```

Replace range of characters with C string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [4/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    const _CharT * __s,
    size_type __n ) [inline]
```

Replace range of characters with C substring.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from <code>s</code> to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of

result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.
References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [5/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Replace range of characters with string.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

replace() [6/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    iterator __i1,
    iterator __i2,
    initializer_list< _CharT > __l ) [inline]
```

Replace range of characters with `initializer_list`.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, characters in the range `[__k1, __k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [7/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    iterator __i1,
    iterator __i2,
    size_type __n,
    _CharT __c ) [inline]
```

Replace range of characters with multiple characters.

Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

Returns

Reference to this string.

Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [8/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, basic_string & > std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos,
    size_type __n,
    const _Tp & __svt ) [inline]
```

Replace range of characters with string_view.

Parameters

<code>__pos</code>	The position to replace at.
--------------------	-----------------------------

Parameters

<code>__n</code>	The number of characters to replace.
<code>__svt</code>	The object convertible to <code>string_view</code> to insert.

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [9/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
    size_type __n,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]
```

Replace characters with value from another string.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::size\(\)](#).

replace() [10/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos,
```

```
size_type __n1,
const _CharT * __s ) [inline]
```

Replace characters with value of a C string.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>pos > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [11/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::replace
(
    size_type __pos,
    size_type __n1,
    const _CharT * __s,
    size_type __n2 )
```

Replace characters with value of a C substring.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>s</code> to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>pos1 > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [12/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos,
    size_type __n1,
    size_type __n2,
    _CharT __c ) [inline]
```

Replace characters with multiple characters.

Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos > size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

replace() [13/14]

```
template<typename _CharT, typename _Traits, typename _Alloc>
template<typename _Tp>
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) [inline]
```

Replace range of characters with string_view.

Parameters

<code>__pos1</code>	The position to replace at.
<code>__n1</code>	The number of characters to replace.
<code>__svt</code>	The object convertible to string_view to insert from.
<code>__pos2</code>	The position in the string_view to insert from.

Parameters

<code>__n2</code>	The number of characters to insert.
-------------------	-------------------------------------

Returns

Reference to this string.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

replace() [14/14]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos ) [inline]
```

Replace characters with value from another string.

Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

Returns

Reference to this string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos1 > size()</code> or <code>__pos2 > __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::replace\(\)](#).

reserve() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::reserve
Equivalent to shrink_to_fit().
```

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::push_back\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::shrink_to_fit\(\)](#).

reserve() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::reserve (
    size_type __res_arg )
```

Attempt to preallocate enough memory for specified number of characters.

Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

References [std::size\(\)](#).

Referenced by [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::num_get< _CharT, _InIter >::do_get\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow\(\)](#).

resize() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n ) [inline]
```

Resizes the string to the specified number of characters.

Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

References [std::basic_string< _CharT, _Traits, _Alloc >::resize\(\)](#).

resize() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n,
    _CharT __c )
```

Resizes the string to the specified number of characters.

Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

Parameters

<code>__c</code>	Character to fill any new elements.
------------------	-------------------------------------

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

References [std::size\(\)](#).

Referenced by [std::money_get<_CharT, _InIter>::do_get\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::resize\(\)](#).

rfind() [1/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a character.

Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

rfind() [2/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find last position of a C substring.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#), and [std::size\(\)](#).

rfind() [3/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string< _CharT, _Traits, _Alloc >::rfind (
    const _CharT * __s,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a C string.

Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic_string< _CharT, _Traits, _Alloc >::rfind\(\)](#).

rfind() [4/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, size_type > std::basic\_string< _CharT, _Traits, _Alloc >::rfind (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string_view.

Parameters

<code>__svt</code>	The object convertible to string_view to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

References [std::basic_string< _CharT, _Traits, _Alloc >::rfind\(\)](#).

rfind() [5/5]

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic\_string< _CharT, _Traits, _Alloc >::rfind (
    const basic\_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string.

Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::rfind()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find_last_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::rfind()`, `std::basic_string<_CharT, _Traits, _Alloc>::rfind()`, and `std::basic_string<_CharT, _Traits, _Alloc>::rfind()`.

shrink_to_fit()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string<_CharT, _Traits, _Alloc>::shrink_to_fit ( ) [inline], [noexcept]
```

A non-binding request to reduce capacity() to size().

References `std::basic_string<_CharT, _Traits, _Alloc>::reserve()`.

size()

```
template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::size ( ) const [inline], [noexcept]
```

Returns the number of characters in the string, not including any null-termination.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::at()`, `std::basic_string<_CharT, _Traits, _Alloc>::back()`, `std::basic_string<_CharT, _Traits, _Alloc>::back()`, `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::compare()`, `std::basic_string<_CharT, _Traits, _Alloc>::empty()`, `std::basic_string<_CharT, _Traits, _Alloc>::end()`, `std::basic_string<_CharT, _Traits, _Alloc>::end()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_first_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_last_of()`, `std::match_results<_Bi_iter, _Alloc>::format()`, `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::from_bytes()`, `std::basic_string<_CharT, _Traits, _Alloc>::insert()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator __sv_type()`, `std::operator+`, `std::operator+`, `std::tr2::operator>>()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator[]()`, `std::basic_string<_CharT, _Traits, _Alloc>::operator[]()`, `std::basic_string<_CharT, _Traits, _Alloc>::pop_back()`, `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`, `std::basic_string<_CharT, _Traits, _Alloc>::replace()`, `std::basic_string<_CharT, _Traits, _Alloc>::replace()`, `std::basic_string<_CharT, _Traits, _Alloc>::rfind()`, `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::to_bytes()`, and `std::regex_traits<_Ch_type>::transform()`.

substr()

```
template<typename _CharT , typename _Traits , typename _Alloc >
basic_string std::basic_string<_CharT, _Traits, _Alloc>::substr (
    size_type __pos = 0,
    size_type __n = npos ) const [inline]
```

Get a substring.

Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

Returns

The new string.

Exceptions

<code>std::out_of_range</code>	If <code>__pos > size()</code> .
--------------------------------	-------------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

References [std::basic_string<_CharT, _Traits, _Alloc>::basic_string\(\)](#).

swap()

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::swap (
    basic_string< _CharT, _Traits, _Alloc > & __s ) [noexcept]
```

Swap contents with another string.

Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by [std::basic_string<_CharT, _Traits, _Alloc>::assign\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::operator=\(\)](#).

6.259.4 Member Data Documentation**npos**

```
template<typename _CharT , typename _Traits , typename _Alloc >
const basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _↵
_Alloc >::npos [static]
```

Value returned by various member functions when they fail.

6.260.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::basic_string_view<_CharT, _Traits >
```

A non-owning reference to a string.

Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

A `basic_string_view` looks like this:

```
_CharT*    _M_str
size_t     _M_len
```

The documentation for this class was generated from the following files:

- [string_view](#)
- [bits/string_view.tcc](#)

6.261 std::experimental::fundamentals_v1::basic_string_view<_CharT, _Traits > Class Template Reference

6.261.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::experimental::fundamentals_v1::basic_string_view< _CharT, _Traits >
```

A non-owning reference to a string.

Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .

A `basic_string_view` looks like this:

```
_CharT*      _M_str
size_t       _M_len
```

The documentation for this class was generated from the following files:

- [experimental/string_view](#)
- [experimental/bits/string_view.tcc](#)

6.262.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >
```

The actual work of input and output (for std::string).

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator<_CharT></code> .

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)

For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

6.262.2 Constructor & Destructor Documentation

basic_stringbuf() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ( ) [inline]
```

Starts with an empty string buffer.

The default constructor initializes the parent class using its own default ctor.

basic_stringbuf() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
    ios_base::openmode __mode ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

The default constructor initializes the parent class using its own default ctor.

basic_stringbuf() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf (
    const __string_type & __str,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

6.262.3 Member Function Documentation

eback()

```
template<typename _CharT , typename _Traits >
char_type * std::basic\_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

egptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic\_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected],
[inherited]
```

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow\(\)](#).

epptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic\_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- ep_ptr() returns the end pointer for the output sequence

gbump()

```
template<typename _CharT , typename _Traits >
void std::basic\_streambuf< _CharT, _Traits >::gbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

getloc()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]
Locale access.
```

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

gptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]
Access to the get area.
```

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::underflow()`.

imbue()

```
template<typename _CharT , typename _Traits >
virtual void std::basic_streambuf< _CharT, _Traits >::imbue (
    const locale & __loc ) [inline], [protected], [virtual], [inherited]
```

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

in_avail()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]
Looking ahead into the stream.
```

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

overflow()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::overflow (
    int_type __c = traits_type::eof() ) [protected], [virtual]
```

Consumes data from the buffer; writes to the controlled sequence.

Parameters

<code>_↵</code>	An additional character to consume.
<code>_C</code>	

Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::basic_string< _CharT, _Traits, _Alloc >::assign()`, `std::ios_base::in`, `std::max()`, `std::min()`, `std::ios_base::out`, `std::basic_string< _CharT, _Traits, _Alloc >::push_back()`, and `std::basic_string< _CharT, _Traits, _Alloc >::reserve()`.

pbackfail()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::pbackfail (
    int_type __c = traits_type::eof() ) [protected], [virtual]
```

Tries to back up the input sequence.

Parameters

<code>_↵</code>	The character to be inserted back into the sequence.
<code>_C</code>	

Returns

`eof()` on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

References [std::ios_base::out](#).

pbase()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected],
[inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

pbump()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::pbump (
    int __n ) [inline], [protected], [inherited]
```

Moving the write position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

pptr()

```
template<typename _CharT , typename _Traits >
char_type * std::basic_streambuf< _CharT, _Traits >::pptr ( ) const [inline], [protected], [inherited]
```

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

pubimbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (
    const locale & __loc ) [inline], [inherited]
```

Entry point for imbue().

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived imbue(__loc).

pubseekoff()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

pubseekpos()

```
template<typename _CharT , typename _Traits >
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekpos function.

pubsetbuf()

```
template<typename _CharT , typename _Traits >
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of pubfoo dispatch to the protected derived foo member functions, passing the arguments (if any) and returning the result unchanged.

pubsync()

```
template<typename _CharT , typename _Traits >
int std::basic_streambuf< _CharT, _Traits >::pubsync ( ) [inline], [inherited]
```

Calls virtual sync function.

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::sync\(\)](#), and [std::basic_istream< _CharT, _Traits >::sync\(\)](#).

sbumpc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sbumpc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns [uflow\(\)](#).

Referenced by [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::basic_istream< char >::ignore\(\)](#), [std::istreambuf_iterator< _CharT, _Traits >::operator++\(\)](#), and [std::basic_istream< char >::seekg\(\)](#).

seekoff()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

References [std::ios_base::cur](#), [std::ios_base::end](#), [std::ios_base::in](#), and [std::ios_base::out](#).

seekpos()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _↵
_Alloc >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic_streambuf< _CharT, _Traits >](#).

References [std::ios_base::in](#), and [std::ios_base::out](#).

setbuf()

```
template<typename _CharT , typename _Traits , typename _Alloc >
virtual __streambuf_type * std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (
    char_type * __s,
    streamsize __n ) [inline], [protected], [virtual]
```

Manipulates the buffer.

Parameters

<code>__s</code>	Pointer to a buffer area.
<code>__n</code>	Size of <code>__s</code> .

Returns

`this`

If no buffer has already been created, and both `__s` and `__n` are non-zero, then `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

setg()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setg (
    char_type * __gbeg,
    char_type * __gnext,
    char_type * __gend ) [inline], [protected], [inherited]
```

Setting the three read area pointers.

Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Referenced by `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert()`.

setp()

```
template<typename _CharT , typename _Traits >
void std::basic_streambuf< _CharT, _Traits >::setp (
    char_type * __pbeg,
    char_type * __pend ) [inline], [protected], [inherited]
```

Setting the three write area pointers.

Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Referenced by [std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert\(\)](#).

sgetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), [std::basic_istream< _CharT, _Traits >::get\(\)](#), [std::basic_istream< _CharT, _Traits >::getline\(\)](#), [std::basic_istream< _CharT, _Traits >::ignore\(\)](#), [std::istreambuf_iterator< _CharT, _Traits >::operator++\(\)](#), and [std::basic_istream< char >::seekg\(\)](#).

sgetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sgetn (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for `xsgetn`.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

showmanyc()

```
template<typename _CharT , typename _Traits , typename _Alloc >
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc ( ) [inline],
[protected], [virtual]
```

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

snextc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::snextc ( ) [inline], [inherited]
```

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::seekg()`, and `std::basic_istream<char>::unget()`.

sputbackc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputbackc (
    char_type __c ) [inline], [inherited]
```

Pushing characters back into the input stream.

Parameters

<code>__c</code>	The character to push back.
------------------	-----------------------------

Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Referenced by `std::basic_istream<_CharT, _Traits>::putback()`.

sputc()

```
template<typename _CharT, typename _Traits>
int_type std::basic_streambuf<_CharT, _Traits>::sputc (
    char_type __c ) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

$_c$	A character to output.
-------	------------------------

Returns

$_c$, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores $_c$ in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`, `std::ostreambuf_iterator< _CharT, _Traits >::operator=()`, and `std::wbuffer_convert< _Codecvt, _Elem, _Tr >::overflow()`.

sputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::sputn (
    const char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry point for all single-character output functions.

Parameters

$_s$	A buffer read area.
$_n$	A count.

One of two public output functions.

Returns `xsputn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

str() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__string_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::str ( ) const [inline]
```

Copying out the string buffer.

Returns

A copy of one of the underlying sequences.

If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1

str() [2/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_stringbuf< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s ) [inline]
```

Setting a new buffer.

Parameters

<code>_↔</code>	The string to use as a new sequence.
<code>_s</code>	

Deallocates any previous stored sequence, then copies *s* to use as a new one.

sungetc()

```
template<typename _CharT , typename _Traits >
int_type std::basic_streambuf< _CharT, _Traits >::sungetc ( ) [inline], [inherited]
```

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Referenced by `std::basic_istream< _CharT, _Traits >::unget()`.

sync()

```
template<typename _CharT , typename _Traits >
virtual int std::basic_streambuf< _CharT, _Traits >::sync ( ) [inline], [protected], [virtual],
[inherited]
```

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented in `std::wbuffer_convert< _Codecvt, _Elem, _Tr >`, `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::c_encoding_char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

uflow()

```
template<typename _CharT , typename _Traits >
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual],
[inherited]
```

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf< _CharT, _Traits >`.

underflow()

```
template<class _CharT , class _Traits , class _Alloc >
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _Alloc >::underflow [protected], [virtual]
Fetches more data from the controlled sequence.
```

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::in`.

xsggetn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::xsggetn (
    char_type * __s,
    streamsize __n ) [protected], [virtual], [inherited]
```

Multiple character extraction.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf< _CharT, _Traits >`, `std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >`, `std::basic_filebuf< _CharT, std::char_traits< _CharT > >`, and `std::basic_filebuf< char_type, traits_type >`.

References `std::min()`.

xsputn()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::xsputn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual], [inherited]
```

Multiple character insertion.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic_filebuf< _CharT, _Traits >](#), [std::basic_filebuf< _CharT, encoding_char_traits< _CharT > >](#), [std::basic_filebuf< _CharT, std::char_traits< _CharT > >](#), and [std::basic_filebuf< char_type, traits_type >](#).

Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `false`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`

Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to `true`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

6.263.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringstream<_CharT, _Traits, _Alloc>
```

Controlling input and output for `std::string`.

Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits<_CharT></code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator<_CharT></code> .

This class supports reading from and writing to objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

6.263.2 Member Typedef Documentation

`__num_put_type`

```
template<typename _CharT, typename _Traits>
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

`event_callback`

```
typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]
```

The type of an event callback function.

Parameters

<code>_e</code>	One of the members of the event enum.
<code>_b</code>	Reference to the <code>ios_base</code> object.
<code>_i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

fmtflags

```
typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]
```

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

iostate

```
typedef _Ios_Iostate std::ios_base::iostate [inherited]
```

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

openmode

```
typedef _Ios_Openmode std::ios_base::openmode [inherited]
```

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

seekdir

```
typedef _Ios_Seekdir std::ios_base::seekdir [inherited]
```

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

6.263.3 Member Enumeration Documentation**event**

```
enum std::ios_base::event [inherited]
```

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

6.263.4 Constructor & Destructor Documentation

basic_stringstream() [1/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream ( ) [inline]
```

Default constructor starts with an empty string buffer.

Initializes `sb` using the mode `in|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_stringstream() [2/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
    ios_base::openmode __m ) [inline], [explicit]
```

Starts with an empty string buffer.

Parameters

<code>__m</code>	Whether the buffer can read, or write, or both.
------------------	---

Initializes `sb` using the mode from `__m`, and passes `&sb` to the base class initializer. Does not allocate any buffer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

basic_stringstream() [3/3]

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (
    const __string_type & __str,
    ios_base::openmode __m = ios_base::out | ios_base::in ) [inline], [explicit]
```

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__m</code>	Whether the buffer can read, or write, or both.

Initializes `sb` using `__str` and `__m`, and passes `&sb` to the base class initializer. That's a lie. We initialize the base class with `NULL`, because the string class does its own memory management.

~basic_stringstream()

```
template<typename _CharT , typename _Traits , typename _Alloc >
std::basic_stringstream< _CharT, _Traits, _Alloc >::~~basic_stringstream ( ) [inline]
```

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

6.263.5 Member Function Documentation

_M_getloc()

```
const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by [std::money_get<_CharT, _Inlter >::do_get\(\)](#), [std::time_get<_CharT, _Inlter >::do_get\(\)](#), [std::num_get<_CharT, _Inlter >::do_get\(\)](#), [std::time_get<_CharT, _Inlter >::do_get_date\(\)](#), [std::time_get<_CharT, _Inlter >::do_get_monthname\(\)](#), [std::time_get<_CharT, _Inlter >::do_get_weekday\(\)](#), [std::time_get<_CharT, _Inlter >::do_get_year\(\)](#), [std::num_put<_CharT, _Outlter >::do_put\(\)](#), [std::time_put<_CharT, _Outlter >::do_put\(\)](#), [std::time_get<_CharT, _Inlter >::get\(\)](#), and [std::time_put<_CharT, _Outlter >::put\(\)](#).

bad()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), and [std::basic_ios<_CharT, _Traits >::rdstate\(\)](#).

Referenced by [std::basic_ostream<_CharT, _Traits >::sentry::sentry\(\)](#).

clear()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic_ios<_CharT, _Traits >::exceptions\(\)](#), [std::__detail::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits >::putb\(\)](#), [std::basic_istream<_CharT, _Traits >::seekg\(\)](#), [std::basic_istream<_CharT, _Traits >::seekg\(\)](#), [std::basic_ios<_CharT, _Traits >::setsbstate\(\)](#), and [std::basic_istream<_CharT, _Traits >::unget\(\)](#).

copyfmt()

```
template<typename _CharT , typename _Traits >
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

eof()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]
Fast error checking.
```

Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

exceptions() [1/2]

```
template<typename _CharT , typename _Traits >
iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]
Throwing exceptions on errors.
```

Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

exceptions() [2/2]

```
template<typename _CharT , typename _Traits >
void std::basic_ios<_CharT, _Traits>::exceptions (
    iostate __except ) [inline], [inherited]
Throwing exceptions on errors.
```

Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>

int main()
{
```

```
std::set_terminate (__gnu_cxx::__verbose_terminate_handler);

std::ifstream f ("/etc/motd");

std::cerr << "Setting badbit\n";
f.setstate (std::ios_base::badbit);

std::cerr << "Setting exception mask\n";
f.exceptions (std::ios_base::badbit);
}
```

References [std::basic_ios<_CharT, _Traits>::clear\(\)](#).

fail()

```
template<typename _CharT , typename _Traits >
bool std::basic\_ios<\_CharT, \_Traits>::fail \( \) const [inline], [inherited]
```

Fast error checking.

Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), and [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::operator bool\(\)](#), [std::basic_ios<_CharT, _Traits>::operator!\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), [std::basic_istream<_CharT, _Traits>::tellg\(\)](#), and [std::basic_ostream<_CharT, _Traits>::tellg\(\)](#).

fill() [1/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \( \) const [inline], [inherited]
```

Retrieves the *empty* character.

Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::widen\(\)](#).

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), and [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

fill() [2/2]

```
template<typename _CharT , typename _Traits >
char_type std::basic\_ios<\_CharT, \_Traits>::fill \(
    char\_type \_\_ch ) [inline], [inherited]
```

Sets a new *empty* character.

Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic_ios<_CharT, _Traits>::fill\(\)](#).

flags() [1/2]

```
fmtflags std::ios_base::flags ( ) const [inline], [inherited]
```

Access to format flags.

Returns

The format control flags for both input and output.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator<<\(\), std::operator>>\(\), std::operator>>\(\), std::operator>>\(\), std::operator>>\(\), std::operator>>\(\), std::operator>>\(\), std::operator>>\(\), and std::operator>>\(\)](#).

flags() [2/2]

```
fmtflags std::ios_base::flags (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags all at once.

Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

flush()

```
template<typename _CharT , typename _Traits >
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush [inherited]
```

Synchronizing the stream buffer.

Returns

*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::flush\(\)](#).

gcount()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream<_CharT, _Traits>::gcount ( ) const [inline], [inherited]
```

Character counting.

Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

get() [1/6]

```
template<typename _CharT , typename _Traits >
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::ios_base::eofbit](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

get() [2/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb ) [inline], [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

Returns

*this

Returns `get(__sb,widen("\n"))`.

get() [3/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    __streambuf_type & __sb,
    char_type __delim ) [inherited]
```

Extraction into another streambuf.

Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

Returns

*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_streambuf< _CharT, _Traits >::sgetc\(\)](#), [std::basic_streambuf< _CharT, _Traits >::snextc\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::setstate\(\)](#).

get() [4/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type & __c ) [inherited]
```

Simple extraction.

Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

Returns

*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), and [std::ios_base::goodbit](#).

get() [5/6]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

Returns

*this

Returns `get(__s,__n,widen("\n"))`.

get() [6/6]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Simple multiple-character extraction.

Parameters

<code>__s</code>	Pointer to an array.
------------------	----------------------

Parameters

<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

Note

This function is not overloaded on signed char and unsigned char.

References [std::basic_istream<_CharT, _Traits >::_M_gcount](#), and [std::ios_base::goodbit](#).

getline() [1/3]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

getline() [2/3]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

String extraction.

Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

getline() [3/3]

```
basic_istream< char > & std::basic_istream< char >::getline (
    char_type * __s,
    streamsize __n,
    char_type __delim ) [inherited]
```

Explicit specialization declarations, defined in `src/istream.cc`.

getloc()

```
locale std::ios_base::getloc ( ) const [inline], [inherited]
```

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic_ios<_CharT, _Traits>::copyfmt\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), [std::operator>>\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

good()

```
template<typename _CharT , typename _Traits >
bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic_ios<_CharT, _Traits>::rdstate\(\)](#).

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), and [std::__detail::operator>>\(\)](#).

ignore() [1/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    void ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sbumpc\(\)](#).

ignore() [2/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n ) [inherited]
```

Simple extraction.

Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), [std::ios_base::goodbit](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_streambuf<_CharT, _Traits>::sgetc\(\)](#).

ignore() [3/3]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (
    streamsize __n,
    int_type __delim ) [inherited]
```

Discarding characters.

Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

Returns

*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

References [std::basic_istream<_CharT, _Traits>::M_gcount](#), and [std::ios_base::goodbit](#).

imbue()

```
template<typename _CharT , typename _Traits >
locale std::basic_ios< _CharT, _Traits >::imbue (
    const locale & __loc ) [inherited]
```

Moves to a new locale.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

init()

```
template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_ios< _CharT, _Traits >::basic_ios()`.

iword()

```
long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

narrow()

```
template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

operator bool()

```
template<typename _CharT , typename _Traits >
```

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator"!()

```
template<typename _CharT , typename _Traits >
```

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

operator<<() [1/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [2/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

operator<<() [3/17]

```
template<typename _CharT , typename _Traits >
```

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

`operator<<()` [4/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

`operator<<()` [5/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    const void * __p ) [inline], [inherited]
```

Pointer arithmetic inserters.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [6/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [7/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    float __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

↔	A variable of builtin floating point type.
↔	
↔	
↔	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [8/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    int __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

↔	A variable of builtin integral type.
<i>n</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [9/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits >::operator<< (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

operator<<() [10/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits >::operator<< (
    long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

\leftarrow	A variable of builtin integral type.
\leftarrow	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [11/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream<_CharT, _Traits >::operator<< (
    long double __f ) [inline], [inherited]
```

Floating point arithmetic inserters.

Parameters

\leftarrow	A variable of builtin floating point type.
\leftarrow	
\leftarrow	
\leftarrow	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [12/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [13/17]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    short __n ) [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::num_put< _CharT, _Outiter >::put\(\)](#), and [std::basic_ios< _CharT, _Traits >](#)

operator<<() [14/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

operator<<() [15/17]

```
template<typename _CharT , typename _Traits >
```

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [16/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator<<() [17/17]

```
template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to perform numeric formatting.

operator>>() [1/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
```

```
__ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

operator>>() [2/17]

```
template<typename _CharT, typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `iosmanip` header.

operator>>() [3/17]

```
template<typename _CharT, typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

operator>>() [4/17]

```
template<typename _CharT, typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [5/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    double & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩	A variable of builtin floating point type.
↩	
↩	
↩	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [6/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    float & __f ) [inline], [inherited]
```

Floating point arithmetic extractors.

Parameters

↩	A variable of builtin floating point type.
↩	
↩	
↩	
<i>f</i>	

Returns

*this if successful

These functions use the stream's current locale (specifically, the num_get facet) to parse the input data.

operator>>() [7/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    int & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

$_ \leftarrow$	A variable of builtin integral type.
$_n$	

Returns

$\ast this$ if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [8/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    ios_base &(*) (ios_base &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

operator>>() [9/17]

```
template<typename _CharT , typename _Traits >

```

Floating point arithmetic extractors.

Parameters

\leftarrow	A variable of builtin floating point type.
$_ \leftarrow$	
\leftarrow	
$_ \leftarrow$	
f	

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [11/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [12/17]

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    short & __n ) [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios_base::badbit](#), [std::ios_base::failbit](#), [std::num_get< _CharT, _InIter >::get\(\)](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::setstate\(\)](#).

operator>>() [13/17]

```
template<typename _CharT , typename _Traits >

```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [15/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [16/17]

```
template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    unsigned short & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

Parameters

 <code>__n</code>	A variable of builtin integral type.
--	--------------------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

operator>>() [17/17]

```
template<typename _CharT, typename _Traits>
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    void *& __p ) [inline], [inherited]
```

Basic arithmetic extractors.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

Returns

*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

peek()

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (
    void ) [inherited]
```

Looking ahead in the stream.

Returns

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

precision() [1/2]

```
streamsize std::ios_base::precision ( ) const [inline], [inherited]
```

Flags access.

Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

precision() [2/2]

```
streamsize std::ios_base::precision (
    streamsize __prec ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of `precision()`.

put()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (
    char_type __c ) [inherited]
```

Simple insertion.

Parameters

<code>__c</code>	The character to insert.
------------------	--------------------------

Returns

*this

Tries to insert `__c`.

Note

This function is not overloaded on signed char and unsigned char.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), and [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#).

putback()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (
    char_type __c ) [inherited]
```

Unextracting a single character.

Parameters

<code>__c</code>	The character to push back into the input stream.
------------------	---

Returns

*this

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic_istream< _CharT, _Traits >::M_gcount](#), [std::ios_base::badbit](#), [std::basic_ios< _CharT, _Traits >::clear\(\)](#), [std::ios_base::eofbit](#), [std::ios_base::goodbit](#), [std::basic_ios< _CharT, _Traits >::rdbuf\(\)](#), [std::basic_ios< _CharT, _Traits >::rdstate\(\)](#), [std::basic_ios< _CharT, _Traits >::setstate\(\)](#), and [std::basic_streambuf< _CharT, _Traits >::sputbackc\(\)](#).

pword()

```
void *& std::ios_base::pword (
    int __ix )    [inline], [inherited]
```

Access to void pointer array.

Parameters

 <code>__ix</code>	Index into the array.
---	-----------------------

Returns

A reference to a void* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

rdbuf() [1/2]

```
template<typename _CharT , typename _Traits , typename _Alloc >
__stringbuf_type * std::basic_stringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const    [inline]
```

Accessing the underlying buffer.

Returns

The current basic_stringbuf buffer.

This hides both signatures of std::basic_ios::rdbuf().

rdbuf() [2/2]

```
template<typename _CharT , typename _Traits >
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (
    basic_streambuf< _CharT, _Traits > * __sb )    [inherited]
```

Changing the underlying buffer.

Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
```

```
std::streambuf* p = .....;
foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

rdstate()

```
template<typename _CharT , typename _Traits >
iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::rdbuf()`.

read()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

readsome()

```
template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rddbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios<_CharT, _Traits>::rddbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

register_callback()

```
void std::ios_base::register_callback (
    event_callback __fn,
    int __index ) [inherited]
```

Add the callback `__fn` with parameter `__index`.

Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

seekg() [1/2]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current read position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekg() [2/2]

```
template<typename _CharT, typename _Traits>
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (
    pos_type __pos) [inherited]
```

Changing the current read position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::basic_ios<_CharT, _Traits>::clear\(\)](#), [std::ios_base::eofbit](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::goodbit](#), [std::ios_base::in](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [1/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    off_type __off,
    ios_base::seekdir __dir) [inherited]
```

Changing the current write position.

Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

seekp() [2/2]

```
template<typename _CharT, typename _Traits>
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (
    pos_type __pos) [inherited]
```

Changing the current write position.

Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

Returns

*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::failbit](#), [std::ios_base::out](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

setf() [1/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::__detail::operator>>\(\)](#).

setf() [2/2]

```
fmtflags std::ios_base::setf (
    fmtflags __fmtfl,
    fmtflags __mask) [inline], [inherited]
```

Setting new format flags.

Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

setstate()

```
template<typename _CharT, typename _Traits >
void std::basic_ios< _CharT, _Traits >::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::getline()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

str() [1/2]

```
template<typename _CharT, typename _Traits, typename _Alloc >
__string_type std::basic_stringstream< _CharT, _Traits, _Alloc >::str ( ) const [inline]
```

Copying out the string buffer.

Returns

`rdbuf() -> str()`

str() [2/2]

```
template<typename _CharT, typename _Traits, typename _Alloc >
void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (
    const __string_type & __s) [inline]
```

Setting a new buffer.

Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf() -> str(s)`.

sync()

```
template<typename _CharT , typename _Traits >
int std::basic_istream< _CharT, _Traits >::sync (
    void ) [inherited]
```

Synchronizing the stream buffer.

Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios_base::badbit](#), [std::ios_base::goodbit](#), [std::basic_streambuf<_CharT, _Traits>::pubsync\(\)](#), [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#), and [std::basic_ios<_CharT, _Traits>::setstate\(\)](#).

sync_with_stdio()

```
static bool std::ios_base::sync_with_stdio (
    bool __sync = true ) [static], [inherited]
```

Interaction with the standard C I/O objects.

Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

tellg()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios_base::badbit](#), [std::ios_base::cur](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::ios_base::in](#), and [std::basic_ios<_CharT, _Traits>::rdbuf\(\)](#).

tellp()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
```

Getting the current write position.

Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

tie() [1/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

tie() [2/2]

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

unget()

```
template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

Returns

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

Note

This function first clears eofbit. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sungetc()`.

Referenced by `std::__detail::operator>>()`.

unsetf()

```
void std::ios_base::unsetf (
    fmtflags __mask ) [inline], [inherited]
```

Clearing format flags.

Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

widen()

```
template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
    char __c ) const [inline], [inherited]
```

Widens characters.

Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::basic_ios< _CharT, _Traits >::fill()`, `std::getline()`, `std::getline()`, `std::tr2::operator>>()`, and `std::basic_ostream< char, _Traits >::put()`.

width() [1/2]

```
streamsize std::ios_base::width ( ) const [inline], [inherited]
```

Flags access.

Returns

The minimum field width to generate on output operations.

Minimum field width refers to the number of characters.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::operator>>()`, and `std::operator>>()`.

width() [2/2]

```
streamsize std::ios_base::width (
    streamsize __wide ) [inline], [inherited]
```

Changing flags.

Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

Returns

The previous value of width().

write()

```
template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (
    const char_type * __s,
    streamsize __n ) [inherited]
```

Character string insertion.

Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

Returns

*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

Note

This function is not overloaded on signed char and unsigned char.

xalloc()

```
static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]
```

Access to unique indices.

Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

6.263.6 Member Data Documentation

M_gcount

```
template<typename _CharT , typename _Traits >
```

```
streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]
```

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< char >::unget()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

adjustfield

```
const fmtflags std::ios_base::adjustfield [static], [inherited]
```

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

app

```
const openmode std::ios_base::app [static], [inherited]
```

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

ate

```
const openmode std::ios_base::ate [static], [inherited]
```

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

badbit

```
const iostate std::ios_base::badbit [static], [inherited]
```

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::basic_ostream< char, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::peek()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

basefield

```
const fmtflags std::ios_base::basefield [static], [inherited]
```

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _Initer >::do_get()`, `std::num_put< _CharT, _Outiter >::do_put()`, `std::hex()`, and `std::oct()`.

beg

```
const seekdir std::ios_base::beg [static], [inherited]
```

failbit

```
const ios_base::failbit [static], [inherited]
```

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::basic_ostream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ios<_CharT, _Traits>::fail\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<char>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::read\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekp\(\)](#), [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#), and [std::basic_ostream<_CharT, _Traits>::seekp\(\)](#).

fixed

```
const fmtflags std::ios_base::fixed [static], [inherited]
```

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

floatfield

```
const fmtflags std::ios_base::floatfield [static], [inherited]
```

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

goodbit

```
const ios_base::goodbit [static], [inherited]
```

Indicates all is well.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get_monthname\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::basic_ostream<_CharT, _Traits>::flush\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::get\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), [std::basic_istream<_CharT, _Traits>::getline\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_istream<_CharT, _Traits>::ignore\(\)](#), [std::basic_ostream<char, _Traits>::operator<<\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::basic_istream<char>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_istream<_CharT, _Traits>::operator>>\(\)](#), [std::basic_ostream<_CharT, _Traits>::put\(\)](#), [std::basic_istream<_CharT, _Traits>::putback\(\)](#), [std::basic_istream<_CharT, _Traits>::readsome\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::sync\(\)](#), [std::basic_istream<_CharT, _Traits>::unget\(\)](#), and [std::ws\(\)](#).

hex

```
const fmtflags std::ios_base::hex [static], [inherited]
```

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num_get<_CharT, _InIter>::do_get\(\)](#), [std::num_put<_CharT, _OutIter>::do_put\(\)](#), and [std::hex\(\)](#).

in

```
const openmode std::ios_base::in [static], [inherited]
```

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow\(\)](#), [std::basic_filebuf<_CharT, _Traits>::pbackfail\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_istream<_CharT, _Traits>::seekg\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos\(\)](#), [std::basic_filebuf<_CharT, _Traits>::showmanyc\(\)](#), and [std::ws\(\)](#).

`std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _`
and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

internal

```
const fmtflags std::ios_base::internal [static], [inherited]
```

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

left

```
const fmtflags std::ios_base::left [static], [inherited]
```

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, and `std::left()`.

oct

```
const fmtflags std::ios_base::oct [static], [inherited]
```

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

out

```
const openmode std::ios_base::out [static], [inherited]
```

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::pbackfail()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

right

```
const fmtflags std::ios_base::right [static], [inherited]
```

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by `std::right()`.

scientific

```
const fmtflags std::ios_base::scientific [static], [inherited]
```

Generates floating-point output in scientific notation.

Referenced by `std::hexfloat()`, and `std::scientific()`.

showbase

```
const fmtflags std::ios_base::showbase [static], [inherited]
```

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

showpoint

```
const fmtflags std::ios_base::showpoint [static], [inherited]
```

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

showpos

```
const fmtflags std::ios_base::showpos [static], [inherited]
```

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

skipws

```
const fmtflags std::ios_base::skipws [static], [inherited]
```

Skips leading white space before certain input operations.

Referenced by [std::basic_istream<_CharT, _Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::__detail::operator>>\(\)](#), and [std::skipws\(\)](#).

trunc

```
const openmode std::ios_base::trunc [static], [inherited]
```

Truncate an existing stream when opening. Default for ofstream.

unitbuf

```
const fmtflags std::ios_base::unitbuf [static], [inherited]
```

Flushes output after each output operation.

Referenced by [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

uppercase

```
const fmtflags std::ios_base::uppercase [static], [inherited]
```

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num_put<_CharT, _OutIter>::do_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

6.264.1 Detailed Description

A Bernoulli random number distribution.

Generates a sequence of true and false values with likelihood p that true will come up and $(1 - p)$ that false will appear.

6.264.2 Member Typedef Documentation

result_type

```
typedef bool std::bernoulli_distribution::result_type
```

The type of the range of the distribution.

6.264.3 Constructor & Destructor Documentation

bernoulli_distribution() [1/2]

```
std::bernoulli_distribution::bernoulli_distribution ( ) [inline]
```

Constructs a Bernoulli distribution with likelihood 0.5.

bernoulli_distribution() [2/2]

```
std::bernoulli_distribution::bernoulli_distribution (
    double __p ) [inline], [explicit]
```

Constructs a Bernoulli distribution with likelihood p .

Parameters

<code>__p</code>	[IN] The likelihood of a true result being returned. Must be in the interval $[0, 1]$.
------------------	---

6.264.4 Member Function Documentation

max()

```
result_type std::bernoulli_distribution::max ( ) const [inline]
```

Returns the least upper bound value of the distribution.

References [std::numeric_limits<_Tp>::max\(\)](#).

min()

```
result_type std::bernoulli_distribution::min ( ) const [inline]
```

Returns the greatest lower bound value of the distribution.

References [std::numeric_limits<_Tp>::min\(\)](#).

operator>()

```
template<typename _UniformRandomNumberGenerator >
result_type std::bernoulli_distribution::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

References [operator\(\)\(\)](#).

Referenced by [operator\(\)\(\)](#).

p()

```
double std::bernoulli_distribution::p ( ) const [inline]
```

Returns the `p` parameter of the distribution.

param() [1/2]

```
param_type std::bernoulli_distribution::param ( ) const [inline]
```

Returns the parameter set of the distribution.

Referenced by [std::operator>>\(\)](#).

param() [2/2]

```
void std::bernoulli_distribution::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

reset()

```
void std::bernoulli_distribution::reset ( ) [inline]
```

Resets the distribution state.

Does nothing for a Bernoulli distribution.

6.264.5 Friends And Related Symbol Documentation

operator==

```
bool operator== (
    const bernoulli_distribution & __d1,
    const bernoulli_distribution & __d2 ) [friend]
```

Return true if two Bernoulli distributions have the same parameters.

template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_CIttr, class Node_Itr,
class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >
```

Binary search tree traits, primary template.

6.270.2 Member Typedef Documentation

node_const_iterator

```
template<typename Key , typename Mapped , class Cmp_Fn , template< typename Node_CIttr, class
Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node , typename _Alloc >
typedef bin\_search\_tree\_const\_node\_it< Node, point\_const\_iterator, point\_iterator, _Alloc> \_\_gnu\_pbds::detail::bin\_search\_tree\_traits
<Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

The documentation for this struct was generated from the following file:

- [bin_search_tree_/traits.hpp](#)

6.271 [__gnu_pbds::detail::bin_search_tree_traits](#)< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc > Struct Template Reference

```
#include <traits.hpp>
```

Public Types

- typedef [bin_search_tree_const_it](#) < typename node_alloc_traits::pointer, typename [type_traits::value_type](#), typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc > **const_reverse_iterator**
- typedef Node **node**
- typedef [bin_search_tree_const_node_it](#) < Node, [point_const_iterator](#), [point_iterator](#), _Alloc > [node_const_iterator](#)
- typedef [node_const_iterator](#) **node_iterator**
- typedef Node_Update< [node_const_iterator](#), [node_iterator](#), Cmp_Fn, _Alloc > **node_update**
- typedef [__gnu_pbds::null_node_update](#)< [node_const_iterator](#), [node_iterator](#), Cmp_Fn, _Alloc > * **null_node_update_pointer**

- typedef [point_const_iterator](#) **point_iterator**
- typedef [const_reverse_iterator](#) **reverse_iterator**

6.271.1 Detailed Description

```
template<typename Key, class Cmp_Fn, template< typename Node_CIttr, class Node_Itr, class _Cmp_Fn, type-
name _Alloc > class Node_Update, class Node, typename _Alloc>
struct __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >
```

Specialization.

6.271.2 Member Typedef Documentation

`node_const_iterator`

```
template<typename Key , class Cmp_Fn , template< typename Node_CIttr, class Node_Itr, class _Cmp_Fn, type-
name _Alloc > class Node_Update, class Node , typename _Alloc >
typedef bin_search_tree_const_node_it< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_traits<
Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

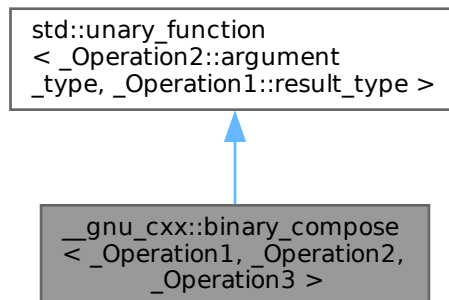

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

6.281.1 Detailed Description

template<typename _IntType = int>
class std::binomial_distribution< _IntType >

A discrete binomial random number distribution.

The formula for the binomial probability density function is $p(i|t, p) = \binom{t}{i} p^i (1-p)^{t-i}$ where t and p are the parameters of the distribution.

6.281.2 Member Typedef Documentation

result_type

```
template<typename _IntType = int>
typedef _IntType std::binomial_distribution< _IntType >::result_type
```

The type of the range of the distribution.

6.281.3 Member Function Documentation

max()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::max ( ) const [inline]
```

Returns the least upper bound value of the distribution.

min()

```
template<typename _IntType = int>
result_type std::binomial_distribution< _IntType >::min ( ) const [inline]
```

Returns the greatest lower bound value of the distribution.

operator>() [1/2]

```
template<typename _IntType = int>
template<typename _UniformRandomNumberGenerator >
result_type std::binomial_distribution< _IntType >::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

References [std::binomial_distribution< _IntType >::operator\(\)\(\)](#).

Referenced by [std::binomial_distribution< _IntType >::operator\(\)\(\)](#).

operator>() [2/2]

```
template<typename _IntType >
template<typename _UniformRandomNumberGenerator >
binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator()
(
```

```

    _UniformRandomNumberGenerator & __urng,
    const param_type & __param )

```

A rejection algorithm when $t * p \geq 8$ and a simple waiting time method - the second in the referenced book - otherwise. NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.

Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).

References `std::abs()`, `std::numeric_limits<_Tp>::epsilon()`, `std::log()`, and `std::numeric_limits<_Tp>::max()`.

p()

```

template<typename _IntType = int>
double std::binomial_distribution< _IntType >::p ( ) const [inline]

```

Returns the distribution p parameter.

param() [1/2]

```

template<typename _IntType = int>
param_type std::binomial_distribution< _IntType >::param ( ) const [inline]

```

Returns the parameter set of the distribution.

param() [2/2]

```

template<typename _IntType = int>
void std::binomial_distribution< _IntType >::param (
    const param_type & __param ) [inline]

```

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

reset()

```

template<typename _IntType = int>
void std::binomial_distribution< _IntType >::reset ( ) [inline]

```

Resets the distribution state.

References `std::normal_distribution<_RealType>::reset()`.

t()

```

template<typename _IntType = int>
_IntType std::binomial_distribution< _IntType >::t ( ) const [inline]

```

Returns the distribution t parameter.

6.281.4 Friends And Related Symbol Documentation

operator<<

```

template<typename _IntType = int>
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic_ostream< _CharT, _Traits > & operator<< (
    std::basic_ostream< _CharT, _Traits > & __os,
    const std::binomial_distribution< _IntType1 > & __x ) [friend]

```

Inserts a binomial_distribution random number distribution `__x` into the output stream `__os`.

Parameters

<code>__os</code>	An output stream.
<code>__x</code>	A <code>binomial_distribution</code> random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

operator==

```
template<typename _IntType = int>
bool operator== (
    const binomial\_distribution< _IntType > & __d1,
    const binomial\_distribution< _IntType > & __d2 ) [friend]
```

Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

operator>>

```
template<typename _IntType = int>
template<typename _IntType1 , typename _CharT , typename _Traits >
std::basic\_istream< _CharT, _Traits > & operator>> (
    std::basic\_istream< _CharT, _Traits > & __is,
    std::binomial\_distribution< _IntType1 > & __x ) [friend]
```

Extracts a `binomial_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

<code>__is</code>	An input stream.
<code>__x</code>	A <code>binomial_distribution</code> random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

6.285.1 Detailed Description

template<typename _Tp>
class `__gnu_cxx::bitmap_allocator<_Tp>`

Bitmap Allocator, primary template.

6.285.2 Member Function Documentation

`_M_allocate_single_object()`

```
template<typename _Tp >
pointer __gnu_cxx::bitmap_allocator<_Tp>::_M_allocate_single_object ( ) [inline]
Allocates memory for a single object of size sizeof(_Tp).
```

Exceptions

<code>std::bad_alloc.</code>	If memory cannot be allocated.
------------------------------	--------------------------------

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.

References [__gnu_cxx::__detail::__bit_allocate\(\)](#), [__gnu_cxx::__detail::__num_bitmaps\(\)](#), and [__gnu_cxx::_Bit_scan_forward\(\)](#).

`_M_deallocate_single_object()`

```
template<typename _Tp >
void __gnu_cxx::bitmap_allocator<_Tp>::_M_deallocate_single_object (
```

```
pointer __p ) throw ( ) [inline]
```

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity: $O(\lg(N))$, but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in $O(1)$ time by the `deallocate` function.

References [__gnu_cxx::__detail::__bit_free\(\)](#), [__gnu_cxx::__detail::__num_bitmaps\(\)](#), and [__gnu_cxx::free_list::_M_insert\(\)](#).

6.287.1 Detailed Description

template<size_t _Nb>
class std::bitset<_Nb>

The `bitset` class represents a *fixed-size* sequence of bits.

(Note that `bitset` does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let *B* be the number of bits in a word, then $(Nb+(B-1))/B$ words will be used for storage. $B - Nb \bmod B$ bits are unused. (They are the high-order bits in the highest word.) It is a class invariant that those unused bits are always zero.

If you think of `bitset` as a *simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant* / *right-hand* position, and the bit at index *Nb*-1 in the *most significant* / *left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a')* is *0001100001* on a modern ASCII system.

```

#include <bitset>
#include <iostream>
#include <sstream>

using namespace std;

int main()
{
    long        a = 'a';
    bitset<10>   b(a);

    cout << "b('a') is " << b << endl;

    ostringstream s;
    s << b;
    string str = s.str();
    cout << "index 3 in the string is " << str[3] << " but\n"
         << "index 3 in the bitset is " << b[3] << endl;
}

```

Also see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the bitset is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` is a regular array, and is indexed as such. This is carefully encapsulated.

6.287.2 Constructor & Destructor Documentation

`bitset()` [1/5]

```

template<size_t _Nb>
constexpr std::bitset< _Nb >::bitset ( ) [inline], [constexpr], [noexcept]

```

All bits set to zero.

`bitset()` [2/5]

```

template<size_t _Nb>
constexpr std::bitset< _Nb >::bitset (
    unsigned long long __val ) [inline], [constexpr], [noexcept]

```

Initial bits bitwise-copied from a single word (others set to zero).

`bitset()` [3/5]

```

template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::bitset< _Nb >::bitset (
    const std::basic_string< _CharT, _Traits, _Alloc > & __s,
    size_t __position = 0 ) [inline], [explicit]

```

Use a subset of a string.

Parameters

<code>__s</code>	A string of 0 and 1 characters.
<code>__position</code>	Index of the first character in <code>__s</code> to use; defaults to zero.

Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is bigger the size of <code>__s</code> .
<code>std::invalid_argument</code>	If a character appears in the string which is neither 0 nor 1.

bitset() [4/5]

```
template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::bitset<_Nb>::bitset (
    const std::basic_string<_CharT, _Traits, _Alloc> & __s,
    size_t __position,
    size_t __n ) [inline]
```

Use a subset of a string.

Parameters

<code>__s</code>	A string of 0 and 1 characters.
<code>__position</code>	Index of the first character in <code>__s</code> to use.
<code>__n</code>	The number of characters to copy.

Exceptions

<code>std::out_of_range</code>	If <code>__position</code> is bigger the size of <code>__s</code> .
<code>std::invalid_argument</code>	If a character appears in the string which is neither 0 nor 1.

bitset() [5/5]

```
template<size_t _Nb>
template<typename _CharT >
std::bitset<_Nb>::bitset (
    const _CharT * __str,
    typename std::basic_string<_CharT>::size_type __n = std::basic_string<_CharT>::npos,
    _CharT __zero = _CharT('0'),
    _CharT __one = _CharT('1') ) [inline], [explicit]
```

Construct from a character array.

Parameters

<code>__str</code>	An array of characters <i>zero</i> and <i>one</i> .
<code>__n</code>	The number of characters to use.
<code>__zero</code>	The character corresponding to the value 0.
<code>__one</code>	The character corresponding to the value 1.

Exceptions

<code>std::invalid_argument</code>	If a character appears in the string which is neither <code>__zero</code> nor <code>__one</code> .
------------------------------------	--

6.287.3 Member Function Documentation**all()**

```
template<size_t _Nb>
```

```
bool std::bitset<_Nb>::all ( ) const [inline], [noexcept]
```

Tests whether all the bits are on.

Returns

True if all the bits are set.

any()

```
template<size_t _Nb>
```

```
bool std::bitset<_Nb>::any ( ) const [inline], [noexcept]
```

Tests whether any of the bits are on.

Returns

True if at least one bit is set.

count()

```
template<size_t _Nb>
```

```
size_t std::bitset<_Nb>::count ( ) const [inline], [noexcept]
```

Returns the number of bits which are set.

flip() [1/2]

```
template<size_t _Nb>
```

```
bitset<_Nb> & std::bitset<_Nb>::flip ( ) [inline], [noexcept]
```

Toggles every bit to its opposite value.

flip() [2/2]

```
template<size_t _Nb>
```

```
bitset<_Nb> & std::bitset<_Nb>::flip (
    size_t __position ) [inline]
```

Toggles a given bit to its opposite value.

Parameters

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

none()

```
template<size_t _Nb>
```

```
bool std::bitset<_Nb>::none ( ) const [inline], [noexcept]
```

Tests whether any of the bits are on.

Returns

True if none of the bits are set.

operator&=()

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator&= (
    const bitset<_Nb> & __rhs ) [inline], [noexcept]
```

Operations on bitsets.

Parameters

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

operator<<()

```
template<size_t _Nb>
bitset<_Nb> > std::bitset<_Nb>::operator<< (
    size_t __position ) const [inline], [noexcept]
```

Self-explanatory.

operator<<=()

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator<<= (
    size_t __position ) [inline], [noexcept]
```

Operations on bitsets.

Parameters

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

operator==()

```
template<size_t _Nb>
bool std::bitset<_Nb>::operator== (
    const bitset<_Nb> & __rhs ) const [inline], [noexcept]
```

These comparisons for equality/inequality are, well, *bitwise*.

operator>>()

```
template<size_t _Nb>
bitset<_Nb> > std::bitset<_Nb>::operator>> (
    size_t __position ) const [inline], [noexcept]
```

Self-explanatory.

operator>>=()

```
template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator>>= (
    size_t __position ) [inline], [noexcept]
```

Operations on bitsets.

Parameters

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

operator[]() [1/2]

```
template<size_t _Nb>
reference std::bitset< _Nb >::operator[] (
    size_t __position ) [inline]
```

Array-indexing support.

Parameters

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

operator[]() [2/2]

```
template<size_t _Nb>
constexpr bool std::bitset< _Nb >::operator[] (
    size_t __position ) const [inline], [constexpr]
```

Array-indexing support.

Parameters

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

Returns

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

Note

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

_GLIBCXX_RESOLVE_LIB_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

operator^=()

```
template<size_t _Nb>
```

```

bitset<_Nb> & std::bitset<_Nb>::operator^= (
    const bitset<_Nb> & __rhs ) [inline], [noexcept]

```

Operations on bitsets.

Parameters

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

`operator" |=()`

```

template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::operator|= (
    const bitset<_Nb> & __rhs ) [inline], [noexcept]

```

Operations on bitsets.

Parameters

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

`operator~()`

```

template<size_t _Nb>
bitset<_Nb> std::bitset<_Nb>::operator~ ( ) const [inline], [noexcept]

```

See the no-argument `flip()`.

`reset()` [1/2]

```

template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::reset ( ) [inline], [noexcept]

```

Sets every bit to false.

`reset()` [2/2]

```

template<size_t _Nb>
bitset<_Nb> & std::bitset<_Nb>::reset (
    size_t __position ) [inline]

```

Sets a given bit to false.

Parameters

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is bigger the size of the set.
--------------------------------	--

Same as writing `set(pos, false)`.

set() [1/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::set ( ) [inline], [noexcept]
```

Sets every bit to true.

set() [2/2]

```
template<size_t _Nb>
bitset< _Nb > & std::bitset< _Nb >::set (
    size_t __position,
    bool __val = true ) [inline]
```

Sets a given bit to a particular value.

Parameters

<code>__position</code>	The index of the bit.
<code>__val</code>	Either true or false, defaults to true.

Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

size()

```
template<size_t _Nb>
constexpr size_t std::bitset< _Nb >::size ( ) const [inline], [constexpr], [noexcept]
```

Returns the total number of bits.

test()

```
template<size_t _Nb>
bool std::bitset< _Nb >::test (
    size_t __position ) const [inline]
```

Tests the value of a bit.

Parameters

<code>__position</code>	The index of a bit.
-------------------------	---------------------

Returns

The value at *pos*.

Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

to_string()

```
template<size_t _Nb>
template<class _CharT , class _Traits , class _Alloc >
std::basic_string< _CharT, _Traits, _Alloc > std::bitset< _Nb >::to_string ( ) const [inline]
```

Returns a character interpretation of the bitset.

Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

to_ulong()

```
template<size_t _Nb>
unsigned long std::bitset< _Nb >::to_ulong ( ) const [inline]
```

Returns a numerical interpretation of the bitset.

Returns

The integral equivalent of the bits.

Exceptions

<i>std::overflow_error</i>	If there are too many bits to be represented in an unsigned long.
----------------------------	---

6.288.1 Detailed Description

`bool_set`

See N2136, `Bool_set`: multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.

The implicit conversion to `bool` is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a `bool` the conversion happens implicitly. Thus most objections should be eliminated.

6.288.2 Constructor & Destructor Documentation

`bool_set()` [1/2]

```
constexpr std::tr2::bool_set::bool_set ( ) [inline], [constexpr]  
Default constructor.
```

`bool_set()` [2/2]

```
constexpr std::tr2::bool_set::bool_set (  
    bool __t ) [inline], [constexpr]  
Constructor from bool.
```

6.288.3 Member Function Documentation

`equals()`

```
bool std::tr2::bool_set::equals (  
    bool_set __b ) const [inline]  
Return true if states are equal.
```

`is_emptyset()`

```
bool std::tr2::bool_set::is_emptyset ( ) const [inline]  
Return true if this is empty.
```

`is_indeterminate()`

```
bool std::tr2::bool_set::is_indeterminate ( ) const [inline]  
Return true if this is indeterminate.
```

`is_singleton()`

```
bool std::tr2::bool_set::is_singleton ( ) const [inline]  
Return true if this is false or true (normal boolean).
```

`operator bool()`

```
std::tr2::bool_set::operator bool ( ) const [inline]  
Conversion to bool.
```

6.291.1 Detailed Description

`template<typename _RealType = double>`
class `std::cauchy_distribution<_RealType>`

A `cauchy_distribution` random number distribution.

The formula for the normal probability mass function is $p(x|a, b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$

6.291.2 Member Typedef Documentation

result_type

`template<typename _RealType = double>`
`typedef _RealType std::cauchy_distribution<_RealType>::result_type`
 The type of the range of the distribution.

6.291.3 Member Function Documentation

max()

`template<typename _RealType = double>`
`result_type std::cauchy_distribution<_RealType>::max () const [inline]`
 Returns the least upper bound value of the distribution.
 References `std::numeric_limits<_Tp>::max()`.

min()

`template<typename _RealType = double>`
`result_type std::cauchy_distribution<_RealType>::min () const [inline]`
 Returns the greatest lower bound value of the distribution.
 References `std::numeric_limits<_Tp>::lowest()`.

operator()()

```
template<typename _RealType = double>
template<typename _UniformRandomNumberGenerator >
result_type std::cauchy_distribution< _RealType >::operator() (
    _UniformRandomNumberGenerator & __urng ) [inline]
```

Generating functions.

References [std::cauchy_distribution< _RealType >::operator\(\)\(\)](#).

Referenced by [std::cauchy_distribution< _RealType >::operator\(\)\(\)](#).

param() [1/2]

```
template<typename _RealType = double>
param_type std::cauchy_distribution< _RealType >::param ( ) const [inline]
```

Returns the parameter set of the distribution.

Referenced by [std::operator>>\(\)](#).

param() [2/2]

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

reset()

```
template<typename _RealType = double>
void std::cauchy_distribution< _RealType >::reset ( ) [inline]
```

Resets the distribution state.

6.291.4 Friends And Related Symbol Documentation**operator==**

```
template<typename _RealType = double>
bool operator== (
    const cauchy_distribution< _RealType > & __d1,
    const cauchy_distribution< _RealType > & __d2 ) [friend]
```

Return true if two Cauchy distributions have the same parameters.

6.292.1 Detailed Description

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
```

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

6.292.2 Member Enumeration Documentation

anonymous enum

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
anonymous enum
```

Enumerator

<code>external_load_access</code>	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.
-----------------------------------	---

6.292.3 Constructor & Destructor Documentation

cc_hash_max_collision_check_resize_trigger()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_↔
hash_max_collision_check_resize_trigger (
    float load = 0.5 )
```

Default constructor, or constructor taking load, a __load factor which it will attempt to maintain.

6.292.4 Member Function Documentation

get_load()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::get_load ( ) const [inline]
```

Returns the current load.

is_grow_needed()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::is_grow_needed (
    size_type size,
    size_type num_entries ) const [inline], [protected]
```

Queries whether a grow is needed. This method is called only if this object indicated is needed.

is_resize_needed()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::is_resize_needed ( ) const [inline], [protected]
```

Queries whether a resize is needed.

notify_cleared()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_cleared ( ) [protected]
```

Notifies the table was cleared.

notify_erase_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_erase_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

notify_erase_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_erase_search_end ( ) [inline], [protected]
```

Notifies a search ended.

notify_erase_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erase_search_start ( ) [inline], [protected]
```

Notifies an erase search started.

notify_erased()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_erased (
    size_type num_entries ) [inline], [protected]
```

Notifies an element was erased.

notify_externally_resized()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_externally_resized (
    size_type new_size ) [protected]
```

Notifies the table was resized externally.

notify_find_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

notify_find_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_end ( ) [inline], [protected]
```

Notifies a search ended.

notify_find_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_find_search_start ( ) [inline], [protected]
```

Notifies a find search started.

notify_insert_search_collision()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_collision ( ) [inline], [protected]
```

Notifies a search encountered a collision.

notify_insert_search_end()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵
::notify_insert_search_end ( ) [inline], [protected]
```

Notifies a search ended.

notify_insert_search_start()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_insert_search_start ( ) [inline], [protected]
```

Notifies an insert search started.

notify_inserted()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_inserted (
    size_type num_entries ) [inline], [protected]
```

Notifies an element was inserted.

notify_resized()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::notify_resized (
    size_type new_size ) [protected]
```

Notifies the table was resized as a result of this object's signifying that a resize is needed.

set_load()

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↔
::set_load (
    float load )
```

Sets the load; does not resize the container.

6.293.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn = typename detail::default_hash_fn<Key>::type,
typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type,
typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash,
typename _Alloc = std::allocator<char>>>
class __gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >
```

A collision-chaining hash-based associative container.

Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Comb_Hash_Fn</i>	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
<i>_Alloc</i>	Allocator type.

Base tag choices are: `cc_hash_tag`.

Base is `basic_hash_table`.

6.293.2 Constructor & Destructor Documentation

`cc_hash_table()` [1/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table ( ) [inline]
```

Default constructor.

`cc_hash_table()` [2/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `Hash_Fn` object of the container object.

`cc_hash_table()` [3/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

`cc_hash_table()` [4/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<↵
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_↵
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std↵
::allocator<char>>>
```

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object.

`cc_hash_table()` [5/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object.

`cc_hash_table()` [6/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (
    It first,
    It last ) [inline]
```

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

`cc_hash_table()` [7/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h ) [inline]
```

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

`cc_hash_table()` [8/10]

```
template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>
```

```

Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e ) [inline]

```

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, and r_eq_fn will be copied by the eq_fn object of the container object.

cc_hash_table() [9/10]

```

template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch ) [inline]

```

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, and r_comb_hash_fn will be copied by the comb_hash_fn object of the container object.

cc_hash_table() [10/10]

```

template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<
Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn =
detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_
policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::
allocator<char>>
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp ) [inline]

```

Constructor taking __iterators to a range of value_types and some policy objects The value_types between first_it and last_it will be inserted into the container object. r_hash_fn will be copied by the hash_fn object of the container object, r_eq_fn will be copied by the eq_fn object of the container object, r_comb_hash_fn will be copied by the comb_hash_fn

object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object. The documentation for this class was generated from the following file:

6.295.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool
Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn,
Resize_Policy >
```

A collision-chaining hash-based container.

Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor. Default is <code>__gnu_cxx::hash</code> .
<i>Eq_Fn</i>	Equal functor. Default <code>std::equal_to<Key></code>
<i>_Alloc</i>	Allocator type.
<i>Store_Hash</i>	If key type stores extra metadata. Defaults to false.
<i>Comb_Hash_Fn</i>	Combining hash functor. If <i>Hash_Fn</i> is not <code>null_type</code> , then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default <code>direct_mask_range_hashing</code> .
<i>Resize_Policy</i>	Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_hash_fn`, `detail::types_traits`. (Optional: `detail::debug_map_base`.)

6.295.2 Member Enumeration Documentation

anonymous enum

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
```

anonymous enum

Value stores hash, true or false.

6.295.3 Member Function Documentation

empty()

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
```

```
bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_
Fn, Resize_Policy >::empty ( ) const [inline]
```

True if `size() == 0`.

get_comb_hash_fn() [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
```

```
Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( )
```

Return current `comb_hash_fn`.

`get_comb_hash_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↵
Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( ) const
Return current const comb_hash_fn.
```

`get_eq_fn()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↵
Hash_Fn, Resize_Policy >::get_eq_fn ( )
Return current eq_fn.
```

`get_eq_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( ) const
Return current const eq_fn.
```

`get_hash_fn()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_↵
Hash_Fn, Resize_Policy >::get_hash_fn ( )
Return current hash_fn.
```

`get_hash_fn()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( ) const
Return current const hash_fn.
```

`get_resize_policy()` [1/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash,
Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( )
Return current resize_policy.
```

`get_resize_policy()` [2/2]

```
template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc ,
bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy >
const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_↵
Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( ) const
Return current const resize_policy.
```

- static constexpr int_type **to_int_type** (const char_type &__c)

6.296.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::char_traits<_CharT>
```

Base class used to implement std::char_traits.

Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the int_type and state_type typedefs, and the eof() member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace std may not be specialized for fundamental types, but classes in namespace __gnu_cxx may be.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out include/ext/pod_char_traits.h.

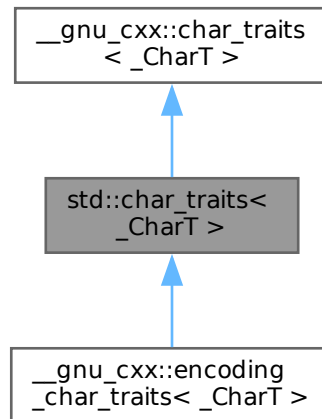

The documentation for this struct was generated from the following file:

- [char_traits.h](#)

6.297 std::char_traits<_CharT> Struct Template Reference

```
#include <char_traits.h>
```

Inheritance diagram for std::char_traits<_CharT>:

- static constexpr char_type **to_char_type** (const int_type &__c)
- static constexpr int_type **to_int_type** (const char_type &__c)

6.297.1 Detailed Description

```
template<typename _CharT>
struct std::char_traits< _CharT >
```

Basis for explicit traits specializations.

Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around `__gnu_cxx::char_traits`, it is possible to achieve a more appropriate definition by specializing `__gnu_cxx::char_traits`.

See https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

6.302.1 Detailed Description

`template<typename _RealType = double>`
`class std::chi_squared_distribution< _RealType >`

A `chi_squared_distribution` random number distribution.

The formula for the normal probability mass function is $p(x|n) = \frac{x^{(n/2)-1} e^{-x/2}}{\Gamma(n/2) 2^{n/2}}$

6.302.2 Member Typedef Documentation

result_type

`template<typename _RealType = double>`
`typedef _RealType std::chi_squared_distribution< _RealType >::result_type`
 The type of the range of the distribution.

6.302.3 Member Function Documentation

max()

`template<typename _RealType = double>`
`result_type std::chi_squared_distribution< _RealType >::max () const [inline]`
 Returns the least upper bound value of the distribution.
 References `std::numeric_limits< _Tp >::max()`.

min()

`template<typename _RealType = double>`
`result_type std::chi_squared_distribution< _RealType >::min () const [inline]`
 Returns the greatest lower bound value of the distribution.

operator()()

`template<typename _RealType = double>`
`template<typename _UniformRandomNumberGenerator >`
`result_type std::chi_squared_distribution< _RealType >::operator() (`
`_UniformRandomNumberGenerator & __urng) [inline]`
 Generating functions.

param() [1/2]

`template<typename _RealType = double>`
`param_type std::chi_squared_distribution< _RealType >::param () const [inline]`
 Returns the parameter set of the distribution.

param() [2/2]

```
template<typename _RealType = double>
void std::chi_squared_distribution<_RealType>::param (
    const param_type & __param ) [inline]
```

Sets the parameter set of the distribution.

Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

References [std::gamma_distribution<_RealType>::param\(\)](#).

reset()

```
template<typename _RealType = double>
void std::chi_squared_distribution<_RealType>::reset ( ) [inline]
```

Resets the distribution state.

References [std::gamma_distribution<_RealType>::reset\(\)](#).

6.302.4 Friends And Related Symbol Documentation**operator<<**

```
template<typename _RealType = double>
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_ostream<_CharT, _Traits> & operator<< (
    std::basic_ostream<_CharT, _Traits> & __os,
    const std::chi_squared_distribution<_RealType1> & __x ) [friend]
```

Inserts a `chi_squared_distribution` random number distribution `__x` into the output stream `__os`.

Parameters

<code>__os</code>	An output stream.
<code>__x</code>	A <code>chi_squared_distribution</code> random number distribution.

Returns

The output stream with the state of `__x` inserted or in an error state.

operator==

```
template<typename _RealType = double>
bool operator== (
    const chi_squared_distribution<_RealType> & __d1,
    const chi_squared_distribution<_RealType> & __d2 ) [friend]
```

Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

operator>>

```
template<typename _RealType = double>
template<typename _RealType1 , typename _CharT , typename _Traits >
std::basic_istream<_CharT, _Traits> & operator>> (
```

```
std::basic_istream< _CharT, _Traits > & __is,
std::chi_squared_distribution< _RealType1 > & __x ) [friend]
```

Extracts a `chi_squared_distribution` random number distribution `__x` from the input stream `__is`.

Parameters

<code>__is</code>	An input stream.
<code>__x</code>	A <code>chi_squared_distribution</code> random number generator engine.

Returns

The input stream with `__x` extracted or in an error state.

6.303.1 Detailed Description

template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt<_InternT, _ExternT, _StateT >

Primary class template codecvt.

NB: Generic, mostly useless implementation.

6.303.2 Member Function Documentation

do_always_noconv()

```
template<typename _InternT , typename _ExternT , typename _StateT >
virtual bool std::codecvt< \_InternT, \_ExternT, \_StateT >::do\_always\_noconv \( \) const throw ( )
[protected], [virtual]
```

Implements [std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >](#).

do_encoding()

```
template<typename _InternT , typename _ExternT , typename _StateT >

    extern_type * __to,
```

```
extern_type * __to_end,
extern_type *& __to_next ) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

out for more information.

Implements [std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >](#).

do_unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
virtual result std::__codecvt<_InternT, _ExternT, _StateT >::do_unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >](#).

in()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The state argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how state is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type * __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type * __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

References [std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out\(\)](#).

unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type * __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type * __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type * __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

unshift()

```
result std::__codecvt_abstract_base< _InternT, _ExternT, encoding_state >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type * __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions. The source and destination character sets are determined by the facet's locale, internal and external types. The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

unshift()

```
result std::__codecvt_abstract_base< char , char , mbstate_t >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling codecvt::do_unshift().

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions. The source and destination character sets are determined by the facet's locale, internal and external types. The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

6.306.1 Detailed Description

Class `codecvt<char16_t, char, mbstate_t>` specialization.
Converts between UTF-16 and UTF-8.

6.306.2 Member Function Documentation

do_always_noconv()

```
virtual bool std::codecvt< char16_t, char, mbstate_t >::do_always_noconv ( ) const throw ( )  
[protected], [virtual]
```

Implements [std::__codecvt_abstract_base](#)< char16_t, char, mbstate_t >.

do_encoding()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_encoding ( ) const throw ( ) [protected],
[virtual]
```

Implements [std::__codecvt_abstract_base< char16_t, char, mbstate_t >](#).

do_in()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< char16_t, char, mbstate_t >](#).

do_length()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< char16_t, char, mbstate_t >](#).

do_max_length()

```
virtual int std::codecvt< char16_t, char, mbstate_t >::do_max_length ( ) const throw ( ) [protected],
[virtual]
```

Implements [std::__codecvt_abstract_base< char16_t, char, mbstate_t >](#).

do_out()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

[do_out](#) for more information.

Implements [std::__codecvt_abstract_base< char16_t, char, mbstate_t >](#).

do_unshift()

```
virtual result std::codecvt< char16_t, char, mbstate_t >::do_unshift (
    state_type & __state,
```

```

extern_type * __to,
extern_type * __to_end,
extern_type *& __to_next ) const [protected], [virtual]

```

Implements `std::__codecvt_abstract_base< char16_t, char, mbstate_t >`.

in()

```

result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]

```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

out()

```

result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]

```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

unshift()

```
result std::__codecvt_abstract_base< char16_t , char , mbstate_t >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore `state` to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

    extern_type *& __to_next ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< char32_t, char, mbstate_t >](#).

in()

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of extern_type to output string of intern_type. This is analogous to mbsrtowcs. It does this by calling codecvt::do_in.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.
__from_next	Returns start of unconverted data.
__to	Start of output buffer.
__to_end	End of output buffer.
__to_next	Returns start of unused output area.

Returns

codecvt_base::result.

out()

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This is analogous to wcsrtombs. It does this by calling codecvt::do_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from_end) are converted and written to [to,to_end). from_next and to_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from_next and to_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt_base::result. If all the input is converted, returns codecvt_base::ok. If no conversion is necessary, returns codecvt_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt_base::partial. Otherwise the conversion failed and codecvt_base::error is returned.

Parameters

__state	Persistent conversion state data.
__from	Start of input.
__from_end	End of input.

Parameters

<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

unshift()

```
result std::__codecvt_abstract_base< char32_t , char , mbstate_t >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

6.308.1 Detailed Description

Class `codecvt<wchar_t, char, mbstate_t>` specialization.
Converts between narrow and wide characters in the native character set

6.308.2 Member Function Documentation

`do_always_noconv()`

```
virtual bool std::codecvt< wchar_t, char, mbstate_t >::do_always_noconv ( ) const throw ( )    [protected],
[virtual]
```

Implements `std::__codecvt_abstract_base< wchar_t, char, mbstate_t >`.

`do_encoding()`

```
virtual int std::codecvt< wchar_t, char, mbstate_t >::do_encoding ( ) const throw ( )    [protected],
[virtual]
```

Implements `std::__codecvt_abstract_base< wchar_t, char, mbstate_t >`.

do_in()

```
virtual result std::codecvt< wchar_t, char, mbstate_t >::do_in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< wchar_t, char, mbstate_t >](#).

do_length()

```
virtual int std::codecvt< wchar_t, char, mbstate_t >::do_length (
    state_type & ,
    const extern_type * __from,
    const extern_type * __end,
    size_t __max ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< wchar_t, char, mbstate_t >](#).

do_max_length()

```
virtual int std::codecvt< wchar_t, char, mbstate_t >::do_max_length ( ) const throw ( ) [protected],
[virtual]
```

Implements [std::__codecvt_abstract_base< wchar_t, char, mbstate_t >](#).

do_out()

```
virtual result std::codecvt< wchar_t, char, mbstate_t >::do_out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [protected], [virtual]
```

Convert from internal to external character set.

Converts input string of intern_type to output string of extern_type. This function is a hook for derived classes to change the value returned.

See also

[do_out\(\)](#) for more information.

Implements [std::__codecvt_abstract_base< wchar_t, char, mbstate_t >](#).

do_unshift()

```
virtual result std::codecvt< wchar_t, char, mbstate_t >::do_unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [protected], [virtual]
```

Implements [std::__codecvt_abstract_base< wchar_t, char, mbstate_t >](#).

in()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

out()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

unshift()

```
result std::__codecvt_abstract_base< wchar_t , char , mbstate_t >::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

    extern_type * __to_end,
    extern_type *& __to_next ) const [protected], [virtual], [inherited]

```

Implements [std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >](#).

in()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (
    state_type & __state,
    const extern_type * __from,
    const extern_type * __from_end,
    const extern_type *& __from_next,
    intern_type * __to,
    intern_type * __to_end,
    intern_type *& __to_next ) const [inline], [inherited]
```

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

out()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

`codecvt_base::result`.

References [std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::do_out\(\)](#).

unshift()

```
template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT>::unshift (
    state_type & __state,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

Returns

codecvt_base::result.

6.311.1 Detailed Description

template<typename _CharT>
class std::collate<_CharT>

Facet for localized string comparison.

This facet encapsulates the code to compare strings in a localized manner.

The collate template uses protected virtual functions to provide the actual results. The public accessors forward the call to the virtual functions. These virtual functions are hooks for developers to implement the behavior they require from the collate facet.

6.311.2 Member Typedef Documentation**char_type**

```
template<typename _CharT >
typedef _CharT std::collate<\_CharT>::char\_type
Public typedefs.
```

string_type

```
template<typename _CharT >
typedef basic\_string<\_CharT> std::collate<\_CharT>::string\_type
Public typedefs.
```

6.311.3 Constructor & Destructor Documentation**collate()** [1/2]

```
template<typename _CharT >
std::collate<\_CharT>::collate (
    size_t __refs = 0 ) [inline], [explicit]
```

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

<code>__refs</code>	Passed to the base facet class.
---------------------	---------------------------------

collate() [2/2]

```
template<typename _CharT >
std::collate< _CharT >::collate (
    __c_locale __cloc,
    size_t __refs = 0 ) [inline], [explicit]
```

Internal constructor. Not for general use.

This is a constructor for use by the library itself to set up new locales.

Parameters

<code>__cloc</code>	The C locale.
<code>__refs</code>	Passed to the base facet class.

~collate()

```
template<typename _CharT >
virtual std::collate< _CharT >::~~collate ( ) [inline], [protected], [virtual]
```

Destructor.

6.311.4 Member Function Documentation**compare()**

```
template<typename _CharT >
int std::collate< _CharT >::compare (
    const _CharT * __lo1,
    const _CharT * __hi1,
    const _CharT * __lo2,
    const _CharT * __hi2 ) const [inline]
```

Compare two strings.

This function compares two strings and returns the result by calling `collate::do_compare()`.

Parameters

<code>__lo1</code>	Start of string 1.
<code>__hi1</code>	End of string 1.
<code>__lo2</code>	Start of string 2.
<code>__hi2</code>	End of string 2.

Returns

1 if `string1 > string2`, -1 if `string1 < string2`, else 0.

do_compare()

```
template<typename _CharT >
int std::collate< _CharT >::do_compare (
```

```

    const _CharT * __lo1,
    const _CharT * __hi1,
    const _CharT * __lo2,
    const _CharT * __hi2 ) const [protected], [virtual]

```

Compare two strings.

This function is a hook for derived classes to change the value returned.

See also

`compare()`.

Parameters

<code>__lo1</code>	Start of string 1.
<code>__hi1</code>	End of string 1.
<code>__lo2</code>	Start of string 2.
<code>__hi2</code>	End of string 2.

Returns

1 if `string1 > string2`, -1 if `string1 < string2`, else 0.

References [std::basic_string<_CharT, _Traits, _Alloc>::c_str\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::length\(\)](#).

`do_hash()`

```

template<typename _CharT >
long std::collate<_CharT>::do_hash (
    const _CharT * __lo,
    const _CharT * __hi ) const [protected], [virtual]

```

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

<code>__lo</code>	Start of string.
<code>__hi</code>	End of string.

Returns

Hash value.

`do_transform()`

```

template<typename _CharT >
collate<_CharT>::string_type std::collate<_CharT>::do_transform (
    const _CharT * __lo,
    const _CharT * __hi ) const [protected], [virtual]

```

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

Parameters

<code>_↔ _lo</code>	Start.
<code>_↔ _hi</code>	End.

Returns

transformed string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::c_str\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::length\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::push_back\(\)](#).

hash()

```
template<typename _CharT >
long std::collate<_CharT>::hash (
    const _CharT * __lo,
    const _CharT * __hi ) const [inline]
```

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning `collate::do_hash()`.

Parameters

<code>_↔ _lo</code>	Start of string.
<code>_↔ _hi</code>	End of string.

Returns

Hash value.

transform()

```
template<typename _CharT >
string_type std::collate<_CharT>::transform (
    const _CharT * __lo,
    const _CharT * __hi ) const [inline]
```

Transform string to comparable form.

This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning `collate::do_transform()`.

Parameters

<code>_↔ _lo</code>	Start of string.
<code>_↔ _hi</code>	End of string.

Returns

Transformed `string_type`.

6.312.1 Detailed Description

`template<typename _CharT>`
`class std::collate_byname<_CharT>`

class `collate_byname` [22.2.4.2].

6.312.2 Member Typedef Documentation

`char_type`

```
template<typename _CharT >
typedef _CharT std::collate_byname<_CharT>::char_type
```

Public typedefs.

`string_type`

```
template<typename _CharT >
typedef basic_string<_CharT> std::collate_byname<_CharT>::string_type
```

Public typedefs.

6.312.3 Member Function Documentation

compare()

```
template<typename _CharT >
int std::collate< _CharT >::compare (
    const _CharT * __lo1,
    const _CharT * __hi1,
    const _CharT * __lo2,
    const _CharT * __hi2 ) const [inline], [inherited]
```

Compare two strings.

This function compares two strings and returns the result by calling `collate::do_compare()`.

Parameters

<code>__lo1</code>	Start of string 1.
<code>__hi1</code>	End of string 1.
<code>__lo2</code>	Start of string 2.
<code>__hi2</code>	End of string 2.

Returns

1 if `string1 > string2`, -1 if `string1 < string2`, else 0.

do_compare()

```
template<typename _CharT >
int std::collate< _CharT >::do_compare (
    const _CharT * __lo1,
    const _CharT * __hi1,
    const _CharT * __lo2,
    const _CharT * __hi2 ) const [protected], [virtual], [inherited]
```

Compare two strings.

This function is a hook for derived classes to change the value returned.

See also

`compare()`.

Parameters

<code>__lo1</code>	Start of string 1.
<code>__hi1</code>	End of string 1.
<code>__lo2</code>	Start of string 2.
<code>__hi2</code>	End of string 2.

Returns

1 if `string1 > string2`, -1 if `string1 < string2`, else 0.

References `std::basic_string< _CharT, _Traits, _Alloc >::c_str()`, `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::basic_string< _CharT, _Traits, _Alloc >::length()`.

do_hash()

```
template<typename _CharT >
long std::collate<_CharT>::do_hash (
    const _CharT * __lo,
    const _CharT * __hi ) const [protected], [virtual], [inherited]
```

Return hash of a string.

This function computes and returns a hash on the input string. This function is a hook for derived classes to change the value returned.

Parameters

_lo	Start of string.
_hi	End of string.

Returns

Hash value.

do_transform()

```
template<typename _CharT >
collate<_CharT>::string_type std::collate<_CharT>::do_transform (
    const _CharT * __lo,
    const _CharT * __hi ) const [protected], [virtual], [inherited]
```

Transform string to comparable form.

This function is a hook for derived classes to change the value returned.

Parameters

_lo	Start.
_hi	End.

Returns

transformed string.

References [std::basic_string<_CharT, _Traits, _Alloc>::append\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::c_str\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::data\(\)](#), [std::basic_string<_CharT, _Traits, _Alloc>::length\(\)](#), and [std::basic_string<_CharT, _Traits, _Alloc>::push_back\(\)](#).

hash()

```
template<typename _CharT >
long std::collate<_CharT>::hash (
    const _CharT * __lo,
    const _CharT * __hi ) const [inline], [inherited]
```

Return hash of a string.

This function computes and returns a hash on the input string. It does so by returning `collate::do_hash()`.

Parameters

<code>_↔ _lo</code>	Start of string.
<code>_↔ _hi</code>	End of string.

Returns

Hash value.

transform()

```
template<typename _CharT >
string_type std::collate< _CharT >::transform (
    const _CharT * __lo,
    const _CharT * __hi ) const [inline], [inherited]
```

Transform string to comparable form.

This function is a wrapper for `strxfrm` functionality. It takes the input string and returns a modified string that can be directly compared to other transformed strings. In the C locale, this function just returns a copy of the input string. In some other locales, it may replace two chars with one, change a char for another, etc. It does so by returning `collate::do_transform()`.

Parameters

<code>_↔ _lo</code>	Start of string.
<code>_↔ _hi</code>	End of string.

Returns

Transformed `string_type`.

6.322.1 Detailed Description

template<typename _Tp>
class std::complex<_Tp>

Template to represent complex numbers.

Specializations for float, double, and long double are part of the library. Results with any other type are not guaranteed.

Parameters

<i>Tp</i>	Type of real and imaginary values.
-----------	------------------------------------

6.322.2 Member Typedef Documentation

value_type

```
template<typename _Tp>
typedef _Tp std::complex<_Tp>::value_type
Value typedef.
```

6.322.3 Constructor & Destructor Documentation

complex() [1/2]

```
template<typename _Tp>
constexpr std::complex<_Tp>::complex (
    const _Tp & __r = _Tp(),
    const _Tp & __i = _Tp() ) [inline], [constexpr]
```

Default constructor. First parameter is x, second parameter is y. Unspecified parameters default to 0.

complex() [2/2]

```
template<typename _Tp>
template<typename _Up>
constexpr std::complex<_Tp>::complex (
    const complex<_Up> & __z ) [inline], [constexpr]
```

Converting constructor.

6.322.4 Member Function Documentation

operator+=()

```
template<typename _Tp>
constexpr complex<_Tp> & std::complex<_Tp>::operator+= (
    const _Tp & __t ) [inline], [constexpr]
```

Add a scalar to this complex number.

operator-=()

```
template<typename _Tp>
constexpr complex<_Tp> & std::complex<_Tp>::operator-= (
    const _Tp & __t ) [inline], [constexpr]
```

Subtract a scalar from this complex number.

6.326 `__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >` Class Template Reference

```
#include <cond_key_dtor_entry_dealtor.hpp>
```

Public Types

- typedef HT_Map::entry **entry**
- typedef HT_Map::entry_allocator **entry_allocator**
- typedef alloc_traits::allocator_type **entry_allocator**
- typedef alloc_traits::pointer **entry_pointer**
- typedef HT_Map::key_type **key_type**

Public Member Functions

- **cond_dealtor** (entry_allocator *p_a, entry *p_e)
- **cond_dealtor** (entry_pointer p_e)
- void **set_key_destruct** ()
- void **set_no_action** ()
- void **set_no_action_destructor** ()

Protected Attributes

- bool **m_key_destruct**
- entry_allocator *const **m_p_a**
- entry *const **m_p_e**

6.326.1 Detailed Description

```
template<typename Entry, typename _Alloc>
class __gnu_pbds::detail::cond_dealtor< Entry, _Alloc >
```

Conditional deallocate constructor argument.

Conditional dey destructor, cc_hash.

The documentation for this class was generated from the following files:

- [cond_dealtor.hpp](#)
- [cond_key_dtor_entry_dealtor.hpp](#)

6.327 `__gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor< Size_Type >` Class Template Reference

```
#include <ov_tree_map_.hpp>
```

Public Member Functions

- `cond_dtor` (value_vector a_vec, iterator &r_last_it, Size_Type total_size)
- void `set_no_action` ()

Protected Attributes

- value_vector `m_a_vec`
- const Size_Type `m_max_size`
- bool `m_no_action`
- iterator & `m_r_last_it`

6.327.1 Detailed Description

```
template<typename Key, typename Mapped, typename Cmp_Fn, typename Node_And_It_Traits, typename _↵
_Alloc>
```

```
template<typename Size_Type>
```

```
class __gnu_pbds::detail::ov_tree_map< Key, Mapped, Cmp_Fn, Node_And_It_Traits, _Alloc >::cond_dtor<
Size_Type >
```

Conditional destructor.

#include <container_base_dispatch.hpp>
```

Public Types

- typedef `splay_tree_set< Key, null_type, at0t, at1t, _Alloc >` `type`

6.360.1 Detailed Description

```
template<typename Key, typename _Alloc, typename Policy_Tl>
struct __gnu_pbds::detail::container_base_dispatch< Key, null_type, _Alloc, splay_tree_tag, Policy_Tl >
```

Specialization splay tree set.

6.360.2 Member Typedef Documentation

type

```
template<typename Key , typename _Alloc , typename Policy_Tl >
typedef splay_tree_set<Key, null_type, at0t, at1t, _Alloc> __gnu_pbds::detail::container_base_dispatch<
Key, null_type, _Alloc, splay_tree_tag, Policy_Tl >::type
Dispatched type.
```

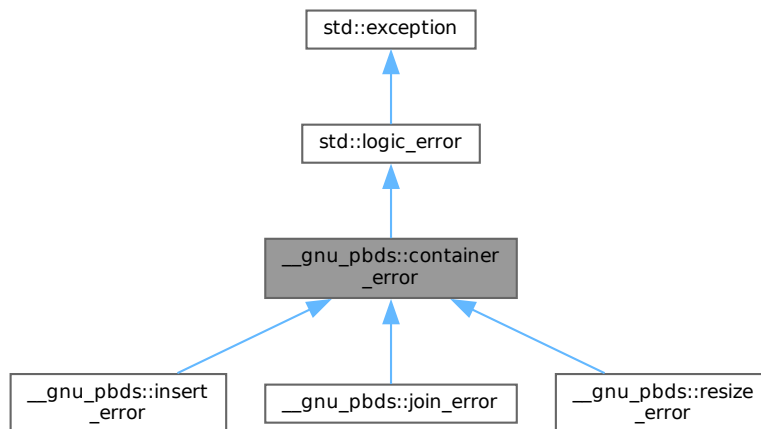

The documentation for this struct was generated from the following file:

- [container_base_dispatch.hpp](#)

6.361 `__gnu_pbds::container_error` Struct Reference

```
#include <exception.hpp>
```

Inheritance diagram for `__gnu_pbds::container_error`:

Public Member Functions

- virtual const char * [what](#) () const noexcept

6.361.1 Detailed Description

Base class for exceptions.

6.361.2 Member Function Documentation

`what()`

```
virtual const char * std::logic_error::what ( ) const [virtual], [noexcept], [inherited]
```

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future_error](#).

The documentation for this struct was generated from the following file:

- [exception.hpp](#)

6.362 `__gnu_pbds::container_tag` Struct Reference

```
#include <tag_and_trait.hpp>
```

Inheritance diagram for `__gnu_pbds::container_tag`:

6.362.1 Detailed Description

Base data structure tag.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

6.363 `__gnu_pbds::container_traits< Cntnr >` Struct Template Reference

```
#include <tag_and_trait.hpp>
```

Inheritance diagram for `__gnu_pbds::container_traits< Cntnr >`:

Public Types

- enum { `order_preserving` , `erase_can_throw` , `split_join_can_throw` , `reverse_iteration` }
- typedef `container_traits_base< container_category >` **base_type**
- typedef `Cntnr::container_category` **container_category**
- typedef `Cntnr` **container_type**
- typedef `base_type::invalidation_guarantee` **invalidation_guarantee**

6.363.1 Detailed Description

```
template<typename Cntnr>
struct __gnu_pbds::container_traits< Cntnr >
```

Container traits.

6.363.2 Member Enumeration Documentation

anonymous enum

```
template<typename Cntnr >
anonymous enum
```

Enumerator

<code>order_preserving</code>	True only if Cntnr objects guarantee storing keys by order.
<code>erase_can_throw</code>	True only if erasing a key can throw.
<code>split_join_can_throw</code>	True only if split or join operations can throw.
<code>reverse_iteration</code>	True only reverse iterators are supported.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

6.364 `__gnu_pbds::container_traits_base<_Tag>` Struct Template Reference

6.364.1 Detailed Description

`template<typename _Tag>`

`struct __gnu_pbds::container_traits_base<_Tag>`

Primary template, container traits base.

The documentation for this struct was generated from the following file:

- [tag_and_trait.hpp](#)

6.365 `__gnu_pbds::container_traits_base<binary_heap_tag>` Struct Reference

```
#include <tag_and_trait.hpp>
```

Public Types

6.379.1 Detailed Description

template<typename _CharT>
class std::ctype<_CharT >

Primary class template ctype facet.

This template class defines classification and conversion functions for character sets. It wraps ctype functionality. Ctype gets used by streams for many I/O operations.

This template provides the protected virtual functions the developer will have to replace in a derived class or specialization to make a working facet. The public functions that access them are defined in `__ctype_abstract_base`, to allow for implementation flexibility. See `ctype<wchar_t>` for an example. The functions are documented in `__ctype_abstract_base`.

Note: implementations are provided for all the protected virtual functions, but will likely not be useful.

6.379.2 Member Function Documentation

do_is() [1/2]

```
template<typename _CharT >
virtual const char_type * std::ctype<_CharT>::do_is (
    const char_type * __lo,
    const char_type * __hi,
    mask * __vec ) const [protected], [virtual]
```

Return a mask array.

This function finds the mask for each char_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

Returns

`__hi`.

Implements [std::__ctype_abstract_base<_CharT>](#).

do_is() [2/2]

```
template<typename _CharT >
virtual bool std::ctype<_CharT>::do_is (
    mask __m,
    char_type __c ) const [protected], [virtual]
```

Test char_type classification.

This function finds a mask M for c and compares it to mask m.

do_is() is a hook for a derived facet to change the behavior of classifying. do_is() must always return the same result for the same input.

Parameters

<code>__c</code>	The char_type to find the mask of.
<code>__m</code>	The mask to compare against.

Returns

$(M \& _m) \neq 0$.

Implements [std::__ctype_abstract_base<_CharT>](#).

do_narrow() [1/2]

```
template<typename _CharT >
virtual char std::ctype<_CharT>::do_narrow (
```

```
char_type __c,
char __default ) const [protected], [virtual]
```

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `__default` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__c</code>	The <code>char_type</code> to convert.
<code>__default</code>	Char to return if conversion fails.

Returns

The converted `char`.

Implements [std::__ctype_abstract_base<_CharT>](#).

Referenced by [std::ctype<char>::narrow\(\)](#), and [std::ctype<char>::narrow\(\)](#).

`do_narrow()` [2/2]

```
template<typename _CharT >
virtual const char_type * std::ctype<_CharT>::do_narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __default,
    char * __to ) const [protected], [virtual]
```

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `__default` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__default</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

Implements [std::__ctype_abstract_base<_CharT>](#).

`do_scan_is()`

```
template<typename _CharT >
virtual const char_type * std::ctype<_CharT>::do_scan_is (
```

```
mask __m,
const char_type * __lo,
const char_type * __hi ) const [protected], [virtual]
```

Find char_type matching mask.

This function searches for and returns the first char_type c in [__lo,__hi) for which is(__m,c) is true.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

Pointer to a matching char_type if found, else __hi.

Implements [std::ctype_abstract_base<_CharT>](#).

do_scan_not()

```
template<typename _CharT>
virtual const char_type * std::ctype<_CharT>::do_scan_not (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const [protected], [virtual]
```

Find char_type not matching mask.

This function searches for and returns a pointer to the first char_type c of [lo,hi) for which is(m,c) is false.

do_scan_is() is a hook for a derived facet to change the behavior of match searching. do_is() must always return the same result for the same input.

Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

Pointer to a non-matching char_type if found, else __hi.

Implements [std::ctype_abstract_base<_CharT>](#).

do_tolower() [1/2]

```
template<typename _CharT>
virtual const char_type * std::ctype<_CharT>::do_tolower (
```

```
char_type * __lo,
const char_type * __hi ) const [protected], [virtual]
```

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

`__hi`.

Implements [std::__ctype_abstract_base<_CharT>](#).

`do_tolower()` [2/2]

```
template<typename _CharT >
virtual char_type std::ctype<_CharT>::do_tolower (
    char_type __c ) const [protected], [virtual]
```

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

<code>__c</code>	The <code>char_type</code> to convert.
------------------	--

Returns

The lowercase `char_type` if convertible, else `__c`.

Implements [std::__ctype_abstract_base<_CharT>](#).

Referenced by [std::ctype<char>::tolower\(\)](#), and [std::ctype<char>::tolower\(\)](#).

`do_toupper()` [1/2]

```
template<typename _CharT >
virtual const char_type * std::ctype<_CharT>::do_toupper (
    char_type * __lo,
    const char_type * __hi ) const [protected], [virtual]
```

Convert array to uppercase.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to uppercase if possible. Other elements remain untouched.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

 <code>__lo</code>	Pointer to start of range.
 <code>__hi</code>	Pointer to end of range.

Returns

`__hi`.Implements [std::__ctype_abstract_base<_CharT>](#).**do_toupper()** [2/2]

```
template<typename _CharT >
virtual char_type std::ctype<_CharT>::do_toupper (
    char_type __c ) const [protected], [virtual]
```

Convert to uppercase.

This virtual function converts the `char_type` argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`do_toupper()` is a hook for a derived facet to change the behavior of uppercasing. `do_toupper()` must always return the same result for the same input.

Parameters

 <code>__c</code>	The <code>char_type</code> to convert.
---	--

Returns

The uppercase `char_type` if convertible, else `__c`.Implements [std::__ctype_abstract_base<_CharT>](#).Referenced by [std::ctype<char>::toupper\(\)](#), and [std::ctype<char>::toupper\(\)](#).**do_widen()** [1/2]

```
template<typename _CharT >
virtual char_type std::ctype<_CharT>::do_widen (
    char __c ) const [protected], [virtual]
```

Widen char.

This virtual function converts the `char` to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

 <code>__c</code>	The char to convert.
---	----------------------

Returns

The converted `char_type`

Implements [std::__ctype_abstract_base<_CharT>](#).

Referenced by [std::ctype<char>::widen\(\)](#), and [std::ctype<char>::widen\(\)](#).

do_widen() [2/2]

```
template<typename _CharT >
virtual const char * std::ctype<\_CharT>::do\_widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const [protected], [virtual]
```

Widen char array.

This function converts each char in the input to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

__lo	Pointer to start range.
__hi	Pointer to end of range.
__to	Pointer to the destination array.

Returns

[__hi](#).

Implements [std::__ctype_abstract_base<_CharT>](#).

is() [1/2]

```
template<typename _CharT >
const char_type * std::\_\_ctype\_abstract\_base<\_CharT>::is (
    const char_type * __lo,
    const char_type * __hi,
    mask * __vec ) const [inline], [inherited]
```

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

__lo	Pointer to start of range.
__hi	Pointer to end of range.
__vec	Pointer to an array of mask storage.

Returns

`__hi.`References [std::__ctype_abstract_base< _CharT >::do_is\(\)](#).**is()** [2/2]

```
template<typename _CharT >
bool std::__ctype_abstract_base< _CharT >::is (
    mask __m,
    char_type __c ) const [inline], [inherited]
```

Test char_type classification.

This function finds a mask M for `__c` and compares it to mask `__m`. It does so by returning the value of `ctype<char_type>::do_is()`.

Parameters

<code>__c</code>	The char_type to compare the mask of.
<code>__m</code>	The mask to compare against.

Returns

`(M & __m) != 0.`References [std::__ctype_abstract_base< _CharT >::do_is\(\)](#).Referenced by [std::basic_istream< _CharT, _Traits >::sentry::sentry\(\)](#), and [std::time_get< _CharT, _InIter >::get\(\)](#).**narrow()** [1/2]

```
template<typename _CharT >
char std::__ctype_abstract_base< _CharT >::narrow (
    char_type __c,
    char __dfault ) const [inline], [inherited]
```

Narrow char_type to char.

This function converts the char_type to char using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead. It does so by returning `ctype<char_type>::do_narrow(__c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__c</code>	The char_type to convert.
<code>__dfault</code>	Char to return if conversion fails.

Returns

The converted char.

References [std::__ctype_abstract_base<_CharT>::do_narrow\(\)](#).

Referenced by [std::time_get<_CharT, _InIter>::do_get_year\(\)](#), [std::time_get<_CharT, _InIter>::get\(\)](#), and [std::time_put<_CharT, _OutIter>::put\(\)](#).

narrow() [2/2]

```
template<typename _CharT >
const char_type * std::__ctype_abstract_base<_CharT>::narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __default,
    char * __to ) const [inline], [inherited]
```

Narrow array to char array.

This function converts each char_type in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char_type in the input that cannot be converted, *default* is used instead. It does so by returning `ctype<char_type>::do_narrow(__lo, __hi, __default, __to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__default</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

References [std::__ctype_abstract_base<_CharT>::do_narrow\(\)](#).

scan_is()

```
template<typename _CharT >
const char_type * std::__ctype_abstract_base<_CharT>::scan_is (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const [inline], [inherited]
```

Find char_type matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which `is(m,c)` is true. It does so by returning `ctype<char_type>::do_scan_is()`.

Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

Pointer to matching char_type if found, else __hi.

References [std::__ctype_abstract_base<_CharT>::do_scan_is\(\)](#).

scan_not()

```
template<typename _CharT >
const char_type * std::__ctype_abstract_base<_CharT>::scan_not (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const [inline], [inherited]
```

Find char_type not matching a mask.

This function searches for and returns the first char_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char_type>::do_scan_not().

Parameters

 __m	The mask to compare against.
 __lo	Pointer to first char in range.
 __hi	Pointer to end of range.

Returns

Pointer to non-matching char if found, else __hi.

References [std::__ctype_abstract_base<_CharT>::do_scan_not\(\)](#).

tolower() [1/2]

```
template<typename _CharT >
const char_type * std::__ctype_abstract_base<_CharT>::tolower (
    char_type * __lo,
    const char_type * __hi ) const [inline], [inherited]
```

Convert array to lowercase.

This function converts each char_type in the range [__lo,__hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>::do_tolower(__lo,__hi).

Parameters

 __lo	Pointer to start of range.
 __hi	Pointer to end of range.

Returns

__hi.

References [std::__ctype_abstract_base<_CharT>::do_tolower\(\)](#).

tolower() [2/2]

```
template<typename _CharT >
char_type std::__ctype_abstract_base< _CharT >::tolower (
    char_type __c ) const [inline], [inherited]
```

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_tolower(c).

Parameters

 __c	The char_type to convert.
--	---------------------------

Returns

The lowercase char_type if convertible, else __c.

References [std::__ctype_abstract_base< _CharT >::do_tolower\(\)](#).

Referenced by [std::time_get< _CharT, _InIter >::get\(\)](#).

toupper() [1/2]

```
template<typename _CharT >
const char_type * std::__ctype_abstract_base< _CharT >::toupper (
    char_type * __lo,
    const char_type * __hi ) const [inline], [inherited]
```

Convert array to uppercase.

This function converts each char_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning ctype<char_type>::do_toupper(lo, hi).

Parameters

 __lo	Pointer to start of range.
 __hi	Pointer to end of range.

Returns

__hi.

References [std::__ctype_abstract_base< _CharT >::do_toupper\(\)](#).

toupper() [2/2]

```
template<typename _CharT >
char_type std::__ctype_abstract_base< _CharT >::toupper (
    char_type __c ) const [inline], [inherited]
```

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char_type>::do_toupper(c).

Parameters

 <code>__c</code>	The char_type to convert.
--	---------------------------

Returns

The uppercase char_type if convertible, else `__c`.

References [std::__ctype_abstract_base<_CharT>::do_toupper\(\)](#).

Referenced by [std::time_get<_CharT, _InIter>::get\(\)](#).

widen() [1/2]

```
template<typename _CharT >
char_type std::__ctype_abstract_base<_CharT>::widen (
    char __c ) const [inline], [inherited]
```

Widen char to char_type.

This function converts the char argument to char_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

 <code>__c</code>	The char to convert.
--	----------------------

Returns

The converted char_type.

References [std::__ctype_abstract_base<_CharT>::do_widen\(\)](#).

Referenced by [std::money_get<_CharT, _InIter>::do_get\(\)](#), [std::time_get<_CharT, _InIter>::do_get\(\)](#), [std::money_put<_CharT, _OutIter>::do_put\(\)](#), and [std::time_put<_CharT, _OutIter>::do_put\(\)](#).

widen() [2/2]

```
template<typename _CharT >
const char * std::__ctype_abstract_base<_CharT>::widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const [inline], [inherited]
```

Widen array to char_type.

This function converts each char in the input to char_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

 <code>__lo</code>	Pointer to start of range.
 <code>__hi</code>	Pointer to end of range.
 <code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

References [std::__ctype_abstract_base<_CharT>::do_widen\(\)](#).

6.380.1 Detailed Description

The `ctype<char>` specialization.

This class defines classification and conversion functions for the `char` type. It gets used by `char` streams for many I/O operations. The `char` specialization provides a number of optimizations as well.

6.380.2 Member Typedef Documentation

`char_type`

```
typedef char std::ctype< char >::char_type
```

Typedef for the template parameter `char`.

6.380.3 Constructor & Destructor Documentation

`ctype()` [1/2]

```
std::ctype< char >::ctype (
    const mask * __table = 0,
    bool __del = false,
    size_t __refs = 0 ) [explicit]
```

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

<code>__table</code>	If non-zero, table is used as the per-char mask. Else <code>classic_table()</code> is used.
<code>__del</code>	If true, passes ownership of table to this facet.
<code>__refs</code>	Passed to the base facet class.

`ctype()` [2/2]

```
std::ctype< char >::ctype (
    __c_locale __cloc,
    const mask * __table = 0,
    bool __del = false,
    size_t __refs = 0 ) [explicit]
```

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

Parameters

<code>__cloc</code>	Handle to C locale data.
<code>__table</code>	If non-zero, table is used as the per-char mask.
<code>__del</code>	If true, passes ownership of table to this facet.
<code>__refs</code>	Passed to the base facet class.

`~ctype()`

```
virtual std::ctype< char >::~~ctype ( ) [protected], [virtual]
```

Destructor.

This function deletes `table()` if `del` was true in the constructor.

6.380.4 Member Function Documentation

`classic_table()`

```
static const mask * std::ctype< char >::classic_table ( ) throw ( ) [static]
```

Returns a pointer to the C locale mask table.

`do_narrow()` [1/2]

```
virtual char std::ctype< char >::do_narrow (
    char_type __c,
    char __default ) const [inline], [protected], [virtual]
```

Narrow char.

This virtual function converts the `char` to `char` using the simplest reasonable transformation. If the conversion fails, `default` is returned instead. For an underived `ctype<char>` facet, `c` will be returned unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__c</code>	The char to convert.
<code>__default</code>	Char to return if conversion fails.

Returns

The converted char.

`do_narrow()` [2/2]

```
virtual const char_type * std::ctype< char >::do_narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __default,
    char * __to ) const [inline], [protected], [virtual]
```

Narrow char array to char array.

This virtual function converts each `char` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char` in the input that cannot be converted, `default` is used instead. For an underived `ctype<char>` facet, the argument will be copied unchanged.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__dfault</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

`do_tolower()` [1/2]

```
virtual const char_type * std::ctype< char >::do_tolower (
    char_type * __lo,
    const char_type * __hi ) const [protected], [virtual]
```

Convert array to lowercase.

This virtual function converts each char in the range `[lo,hi)` to lowercase if possible. Other chars remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to first char in range.
<code>__hi</code>	Pointer to end of range.

Returns

`__hi`.

`do_tolower()` [2/2]

```
virtual char_type std::ctype< char >::do_tolower (
    char_type __c ) const [protected], [virtual]
```

Convert to lowercase.

This virtual function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

Returns

The lowercase char if convertible, else `__c`.

do_toupper() [1/2]

```
virtual const char_type * std::ctype< char >::do_toupper (
    char_type * __lo,
    const char_type * __hi ) const [protected], [virtual]
```

Convert array to uppercase.

This virtual function converts each char in the range [lo,hi) to uppercase if possible. Other chars remain untouched.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

`__hi`.

do_toupper() [2/2]

```
virtual char_type std::ctype< char >::do_toupper (
    char_type __c ) const [protected], [virtual]
```

Convert to uppercase.

This virtual function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do_toupper() is a hook for a derived facet to change the behavior of uppercasing. do_toupper() must always return the same result for the same input.

Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

Returns

The uppercase char if convertible, else `__c`.

do_widen() [1/2]

```
virtual char_type std::ctype< char >::do_widen (
    char __c ) const [inline], [protected], [virtual]
```

Widen char.

This virtual function converts the char to char using the simplest reasonable transformation. For an underived ctype<char> facet, the argument will be returned unchanged.

do_widen() is a hook for a derived facet to change the behavior of widening. do_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecv`t for that.

Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

Returns

The converted character.

`do_widen()` [2/2]

```
virtual const char * std::ctype< char >::do_widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const [inline], [protected], [virtual]
```

Widen char array.

This function converts each char in the range [lo,hi) to char using the simplest reasonable transformation. For an undervied `ctype<char>` facet, the argument will be copied unchanged.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecv`t for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

`is()` [1/2]

```
const char * std::ctype< char >::is (
    const char * __lo,
    const char * __hi,
    mask * __vec ) const [inline]
```

Return a mask array.

This function finds the mask for each char in the range [lo, hi) and successively writes it to `vec`. `vec` must have as many elements as the char array.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

Returns`__hi`.**is()** [2/2]

```
bool std::ctype< char >::is (
    mask __m,
    char __c ) const [inline]
```

Test char classification.

This function compares the mask table[c] to `__m`.**Parameters**

<code>__c</code>	The char to compare the mask of.
<code>__m</code>	The mask to compare against.

ReturnsTrue if `__m & table[__c]` is true, false otherwise.**narrow()** [1/2]

```
char std::ctype< char >::narrow (
    char_type __c,
    char __dfault ) const [inline]
```

Narrow char.

This function converts the char to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. For an underived ctype<char> facet, c will be returned unchanged.

This function works as if it returns ctype<char>::do_narrow(c). do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

<code>__c</code>	The char to convert.
<code>__dfault</code>	Char to return if conversion fails.

Returns

The converted character.

References [std::ctype< _CharT >::do_narrow\(\)](#).**narrow()** [2/2]

```
const char_type * std::ctype< char >::narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __dfault,
    char * __to ) const [inline]
```

Narrow char array.

This function converts each char in the input to char using the simplest reasonable transformation and writes the results to the destination array. For any char in the input that cannot be converted, *dfault* is used instead. For an underived ctype<char> facet, the argument will be copied unchanged.

This function works as if it returns ctype<char>::do_narrow(lo, hi, dfault, to). do_narrow() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__dfault</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

References [std::ctype<_CharT>::do_narrow\(\)](#).

scan_is()

```
const char * std::ctype< char >::scan_is (
    mask __m,
    const char * __lo,
    const char * __hi ) const [inline]
```

Find char matching a mask.

This function searches for and returns the first char in [lo,hi) for which is(m,char) is true.

Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

Returns

Pointer to a matching char if found, else `__hi`.

scan_not()

```
const char * std::ctype< char >::scan_not (
    mask __m,
    const char * __lo,
    const char * __hi ) const [inline]
```

Find char not matching a mask.

This function searches for and returns a pointer to the first char in [__lo,__hi) for which is(m,char) is false.

Parameters

 _m	The mask to compare against.
 _lo	Pointer to start of range.
 _hi	Pointer to end of range.

Returns

Pointer to a non-matching char if found, else __hi.

table()

```
const mask * std::ctype< char >::table ( ) const throw ( ) [inline]
```

Returns a pointer to the mask table provided to the constructor, or the default from classic_table() if none was provided.

tolower() [1/2]

```
const char_type * std::ctype< char >::tolower (
    char_type * __lo,
    const char_type * __hi ) const [inline]
```

Convert array to lowercase.

This function converts each char in the range [lo,hi) to lowercase if possible. Other chars remain untouched.

tolower() acts as if it returns ctype<char>::do_tolower(__lo, __hi). do_tolower() must always return the same result for the same input.

Parameters

 _lo	Pointer to first char in range.
 _hi	Pointer to end of range.

Returns

__hi.

References [std::ctype< _CharT >::do_tolower\(\)](#).

tolower() [2/2]

```
char_type std::ctype< char >::tolower (
    char_type __c ) const [inline]
```

Convert to lowercase.

This function converts the char argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

tolower() acts as if it returns ctype<char>::do_tolower(__c). do_tolower() must always return the same result for the same input.

Parameters

 _c	The char to convert.
---	----------------------

Returns

The lowercase char if convertible, else `__c`.

References [std::ctype<_CharT>::do_tolower\(\)](#).

toupper() [1/2]

```
const char_type * std::ctype< char >::toupper (
    char_type * __lo,
    const char_type * __hi ) const [inline]
```

Convert array to uppercase.

This function converts each char in the range `[__lo,__hi)` to uppercase if possible. Other chars remain untouched.

`toupper()` acts as if it returns `ctype<char>::do_toupper(__lo, __hi)`. `do_toupper()` must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to first char in range.
<code>__hi</code>	Pointer to end of range.

Returns

`__hi`.

References [std::ctype<_CharT>::do_toupper\(\)](#).

toupper() [2/2]

```
char_type std::ctype< char >::toupper (
    char_type __c ) const [inline]
```

Convert to uppercase.

This function converts the char argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

`toupper()` acts as if it returns `ctype<char>::do_toupper(c)`. `do_toupper()` must always return the same result for the same input.

Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

Returns

The uppercase char if convertible, else `__c`.

References [std::ctype<_CharT>::do_toupper\(\)](#).

widen() [1/2]

```
char_type std::ctype< char >::widen (
    char __c ) const [inline]
```

Widen char.

This function converts the char to `char_type` using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be returned unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>_↔</code>	The char to convert.
<code>_c</code>	

Returns

The converted character.

References [std::ctype< _CharT >::do_widen\(\)](#).

widen() [2/2]

```
const char * std::ctype< char >::widen (
    const char * __lo,
    const char * __hi,
    char_type * __to ) const [inline]
```

Widen char array.

This function converts each char in the input to char using the simplest reasonable transformation. For an underived `ctype<char>` facet, the argument will be copied unchanged.

This function works as if it returns `ctype<char>::do_widen(c)`. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>_↔</code> <code>_lo</code>	Pointer to first char in range.
<code>_↔</code> <code>_hi</code>	Pointer to end of range.
<code>_↔</code> <code>_to</code>	Pointer to the destination array.

Returns

`__hi`.

References [std::ctype< _CharT >::do_widen\(\)](#).

6.380.5 Member Data Documentation

id

```
locale::id std::ctype< char >::id [static]
```

The facet id for `ctype<char>`

table_size

```
const size_t std::ctype< char >::table_size [static]
```

The size of the mask table. It is `SCHAR_MAX + 1`.

The documentation for this class was generated from the following files:

6.381.1 Detailed Description

The `ctype<wchar_t>` specialization.

This class defines classification and conversion functions for the `wchar_t` type. It gets used by `wchar_t` streams for many I/O operations. The `wchar_t` specialization provides a number of optimizations as well. `ctype<wchar_t>` inherits its public methods from `__ctype_abstract_base<wchar_t>`.

6.381.2 Member Typedef Documentation

char_type

```
typedef wchar_t std::ctype< wchar_t >::char_type
```

Typedef for the template parameter `wchar_t`.

6.381.3 Constructor & Destructor Documentation

ctype() [1/2]

```
std::ctype< wchar_t >::ctype (
    size_t __refs = 0 ) [explicit]
```

Constructor performs initialization.

This is the constructor provided by the standard.

Parameters

<code>__refs</code>	Passed to the base facet class.
---------------------	---------------------------------

ctype() [2/2]

```
std::ctype< wchar_t >::ctype (
    __c_locale __cloc,
    size_t __refs = 0 ) [explicit]
```

Constructor performs static initialization.

This constructor is used to construct the initial C locale facet.

Parameters

<code>__cloc</code>	Handle to C locale data.
<code>__refs</code>	Passed to the base facet class.

~ctype()

```
virtual std::ctype< wchar_t >::~~ctype ( ) [protected], [virtual]
```

Destructor.

6.381.4 Member Function Documentation

do_is() [1/2]

```
virtual const char_type * std::ctype< wchar_t >::do_is (
    const char_type * __lo,
    const char_type * __hi,
    mask * __vec ) const [protected], [virtual]
```

Return a mask array.

This function finds the mask for each `wchar_t` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the input.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

Returns

`__hi`.

Implements [std::__ctype_abstract_base< wchar_t >](#).

do_is() [2/2]

```
virtual bool std::ctype< wchar_t >::do_is (
    mask __m,
    char_type __c ) const [protected], [virtual]
```

Test `wchar_t` classification.

This function finds a mask `M` for `c` and compares it to mask `m`.

`do_is()` is a hook for a derived facet to change the behavior of classifying. `do_is()` must always return the same result for the same input.

Parameters

<code>__c</code>	The <code>wchar_t</code> to find the mask of.
<code>__m</code>	The mask to compare against.

Returns

`(M & __m) != 0`.

Implements [std::__ctype_abstract_base< wchar_t >](#).

do_narrow() [1/2]

```
virtual char std::ctype< wchar_t >::do_narrow (
    char_type __c,
    char __dfault ) const [protected], [virtual]
```

Narrow `wchar_t` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `dfault` is returned instead. For an underived `ctype<wchar_t>` facet, `c` will be cast to `char` and returned.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__c</code>	The <code>wchar_t</code> to convert.
------------------	--------------------------------------

Parameters

<code>__default</code>	Char to return if conversion fails.
------------------------	-------------------------------------

Returns

The converted char.

Implements `std::__ctype_abstract_base< wchar_t >`.

do_narrow() [2/2]

```
virtual const char_type * std::__ctype< wchar_t >::do_narrow (
    const char_type * __lo,
    const char_type * __hi,
    char __default,
    char * __to ) const [protected], [virtual]
```

Narrow `wchar_t` array to char array.

This virtual function converts each `wchar_t` in the range `[lo,hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `wchar_t` in the input that cannot be converted, *default* is used instead. For an undervied `ctype<wchar_t>` facet, the argument will be copied, casting each element to `char`.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__default</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

Returns

`__hi`.

Implements `std::__ctype_abstract_base< wchar_t >`.

do_scan_is()

```
virtual const char_type * std::__ctype< wchar_t >::do_scan_is (
    mask __m,
    const char_type * __lo,
    const char_type * __hi ) const [protected], [virtual]
```

Find `wchar_t` matching mask.

This function searches for and returns the first `wchar_t` `c` in `[__lo,__hi)` for which `is(__m,c)` is true.

`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.

Parameters

<code>__lo</code>	Pointer to start of range.
