#### 4.23.2.1 `operator"!=()` template<class \_Tp >

```
bool std::rel_ops::operator!= (
    const _Tp & __x,
    const _Tp & __y ) [inline]
```

Defines != for arbitrary types, in terms of ==.

#### Parameters

<a href="#">↩</a> __x	A thing.
<a href="#">↩</a> __y	Another thing.

## Returns

`__x != __y`

This function uses `==` to determine its result.

**4.23.2.2 operator<=()** `template<class _Tp >`

```
bool std::rel_ops::operator<= (
    const _Tp & __x,
    const _Tp & __y ) [inline]
```

Defines `<=` for arbitrary types, in terms of `<`.

## Parameters

<code>__x</code>	A thing.
<code>__y</code>	Another thing.

## Returns

`__x <= __y`

This function uses `<` to determine its result.

**4.23.2.3 operator>()** `template<class _Tp >`

```
bool std::rel_ops::operator> (
    const _Tp & __x,
    const _Tp & __y ) [inline]
```

Defines `>` for arbitrary types, in terms of `<`.

## Parameters

<code>__x</code>	A thing.
<code>__y</code>	Another thing.

## Returns

`__x > __y`

This function uses `<` to determine its result.

**4.23.2.4 operator>=()** `template<class _Tp >`

```
bool std::rel_ops::operator>= (
    const _Tp & __x,
    const _Tp & __y ) [inline]
```

Defines `>=` for arbitrary types, in terms of `<`.

## Parameters

<code>__x</code>	A thing.
------------------	----------

## Parameters

<code>__x</code>	Another thing.
<code>__y</code>	

## Returns

`__x >= __y`

This function uses `<` to determine its result.

## 4.24 `std::this_thread` Namespace Reference

### Functions

- [thread::id](#) `get_id()` noexcept
- `template<typename _Rep, typename _Period >`  
void [sleep\\_for](#) (const [chrono::duration](#)< \_Rep, \_Period > &\_\_ptime)
- `template<typename _Clock, typename _Duration >`  
void [sleep\\_until](#) (const [chrono::time\\_point](#)< \_Clock, \_Duration > &\_\_ptime)
- void [yield](#) () noexcept

#### 4.24.1 Detailed Description

ISO C++ 2011 namespace for interacting with the current thread.

C++11 30.3.2 [thread.thread.this] Namespace `this_thread`.

#### 4.24.2 Function Documentation

##### 4.24.2.1 `get_id()` `thread::id` `std::this_thread::get_id()` [inline], [noexcept]

The unique identifier of the current thread.

##### 4.24.2.2 `sleep_for()` `template<typename _Rep, typename _Period >`

```
void std::this_thread::sleep_for (
    const chrono::duration< _Rep, _Period > & __ptime ) [inline]
```

`this_thread::sleep_for`

Referenced by [sleep\\_until\(\)](#).

##### 4.24.2.3 `sleep_until()` `template<typename _Clock, typename _Duration >`

```
void std::this_thread::sleep_until (
    const chrono::time\_point< _Clock, _Duration > & __ptime ) [inline]
```

`this_thread::sleep_until`

References [sleep\\_for\(\)](#).

##### 4.24.2.4 `yield()` `void std::this_thread::yield()` [inline], [noexcept]

Allow the implementation to schedule a different thread.

## 4.25 std::tr1 Namespace Reference

#### 4.28.1 Detailed Description

Implementation details not part of the namespace std::tr2 interface.

## 5 Concept Documentation

### 5.1 std::assignable\_from Concept Reference

#### 5.1.1 Concept definition

```
template<typename _Lhs, typename _Rhs>
concept std::assignable_from = is_lvalue_reference_v<_Lhs>
    && common_reference_with<__detail::__cref<_Lhs>, __detail::__cref<_Rhs>
    && requires(_Lhs __lhs, _Rhs&& __rhs) {
        { __lhs = static_cast<_Rhs&&>(__rhs) } -> same_as<_Lhs>;
    }
```

#### 5.1.2 Detailed Description

[concept.assignable], concept assignable\_from

### 5.2 std::common\_reference\_with Concept Reference

#### 5.2.1 Concept definition

```
template<typename _Tp, typename _Up>
concept std::common_reference_with = same_as<common_reference_t<_Tp, _Up>, common_reference_t<_Up, _Tp>
    && convertible_to<_Tp, common_reference_t<_Tp, _Up>>
    && convertible_to<_Up, common_reference_t<_Tp, _Up>>
```

#### 5.2.2 Detailed Description

[concept.commonref], concept common\_reference\_with

### 5.3 std::common\_with Concept Reference

#### 5.3.1 Concept definition

```
template<typename _Tp, typename _Up>
concept std::common_with = same_as<common_type_t<_Tp, _Up>, common_type_t<_Up, _Tp>
    && requires {
        static_cast<common_type_t<_Tp, _Up>>(std::declval<_Tp>());
        static_cast<common_type_t<_Tp, _Up>>(std::declval<_Up>());
    }
    && common_reference_with<add_lvalue_reference_t<const _Tp>,
```

```

        add_lvalue_reference_t<const _Up>>
    && common_reference_with<add_lvalue_reference_t<common_type_t<_Tp, _Up>>,
        common_reference_t<
            add_lvalue_reference_t<const _Tp>,
            add_lvalue_reference_t<const _Up>>>

```

### 5.3.2 Detailed Description

[concept.common], concept common\_with

## 5.4 std::constructible\_from Concept Reference

### 5.4.1 Concept definition

```

template<typename _Tp, typename... _Args>
concept std::constructible_from = destructible<_Tp> && is_constructible_v<_Tp, _Args...>

```

### 5.4.2 Detailed Description

[concept.constructible], concept constructible\_from

## 5.5 std::convertible\_to Concept Reference

### 5.5.1 Concept definition

```

template<typename _From, typename _To>
concept std::convertible_to = is_convertible_v<_From, _To>
    && requires { static_cast<_To>(std::declval<_From>()); }

```

### 5.5.2 Detailed Description

[concept.convertible], concept convertible\_to

## 5.6 std::copy\_constructible Concept Reference

### 5.6.1 Concept definition

```

template<typename _Tp>
concept std::copy_constructible = move_constructible<_Tp>
    && constructible_from<_Tp, _Tp&> && convertible_to<_Tp&, _Tp>
    && constructible_from<_Tp, const _Tp&> && convertible_to<const _Tp&, _Tp>
    && constructible_from<_Tp, const _Tp> && convertible_to<const _Tp, _Tp>

```

### 5.6.2 Detailed Description

[concept.copyconstructible], concept copy\_constructible

## 5.7 std::default\_initializable Concept Reference

### 5.7.1 Concept definition

```

template<typename _Tp>
concept std::default_initializable = constructible_from<_Tp>
    && requires
    {
        _Tp{};
        (void) ::new _Tp;
    }

```

### 5.7.2 Detailed Description

[concept.defaultinitializable], concept default\_initializable

## 5.8 std::derived\_from Concept Reference

### 5.8.1 Concept definition

```
template<typename _Derived, typename _Base>
concept std::derived_from = __is_base_of(_Base, _Derived)
    && is_convertible_v<const volatile _Derived*, const volatile _Base*>
```

### 5.8.2 Detailed Description

[concept.derived], concept derived\_from

## 5.9 std::destructible Concept Reference

### 5.9.1 Concept definition

```
template<typename _Tp>
concept std::destructible = __detail::__destructible<_Tp>
```

### 5.9.2 Detailed Description

[concept.destructible], concept destructible

## 5.10 std::equivalence\_relation Concept Reference

### 5.10.1 Concept definition

```
template<typename _Rel, typename _Tp, typename _Up>
concept std::equivalence_relation = relation<_Rel, _Tp, _Up>
```

### 5.10.2 Detailed Description

[concept.equiv], concept equivalence\_relation

## 5.11 std::indirectly\_comparable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.11.1 Concept definition

```
template<typename _I1, typename _I2, typename _Rel, typename _P1 identity, typename _P2 identity>
concept std::indirectly_comparable = indirect_binary_predicate<_Rel, projected<_I1, _P1>,
    projected<_I2, _P2>>
```

### 5.11.2 Detailed Description

[alg.req.ind.cmp], concept indirectly\_comparable

## 5.12 std::indirectly\_copyable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.12.1 Concept definition

```
template<typename _In, typename _Out>
concept std::indirectly_copyable = indirectly_readable<_In>
    && indirectly_writable<_Out, iter_reference_t<_In>>
```

### 5.12.2 Detailed Description

[alg.req.ind.copy], concept indirectly\_copyable

## 5.13 std::indirectly\_movable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.13.1 Concept definition

```
template<typename _In, typename _Out>
concept std::indirectly_movable = indirectly_readable<_In>
    && indirectly_writable<_Out, iter_rvalue_reference_t<_In>>
```

### 5.13.2 Detailed Description

[alg.req.ind.move], concept indirectly\_movable

## 5.14 std::indirectly\_readable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.14.1 Concept definition

```
template<typename _In>
concept std::indirectly_readable = __detail::__indirectly_readable_impl<remove_cvref_t<_In>>
```

### 5.14.2 Detailed Description

Requirements for types that are readable by applying operator\*.

## 5.15 std::indirectly\_swappable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.15.1 Concept definition

```
template<typename _I1, typename _I2 _I1>
concept std::indirectly_swappable = indirectly_readable<_I1> && indirectly_readable<_I2>
    && requires(const _I1 __i1, const _I2 __i2)
    {
        ranges::iter_swap(__i1, __i1);
        ranges::iter_swap(__i2, __i2);
        ranges::iter_swap(__i1, __i2);
        ranges::iter_swap(__i2, __i1);
    }
```

### 5.15.2 Detailed Description

[alg.req.ind.swap], concept indirectly\_swappable

## 5.16 std::indirectly\_writable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.16.1 Concept definition

```
template<typename _Out, typename _Tp>
concept std::indirectly_writable = requires(_Out&& __o, _Tp&& __t)
    {
        *__o = std::forward<_Tp>(__t);
        *std::forward<_Out>(__o) = std::forward<_Tp>(__t);
        const_cast<const iter_reference_t<_Out>&&>(*__o)
            = std::forward<_Tp>(__t);
        const_cast<const iter_reference_t<_Out>&&>(*std::forward<_Out>(__o))
            = std::forward<_Tp>(__t);
    }
```

### 5.16.2 Detailed Description

Requirements for writing a value into an iterator's referenced object.

## 5.17 std::invocable Concept Reference

### 5.17.1 Concept definition

```
template<typename _Fn, typename... _Args>
concept std::invocable = is_invocable_v<_Fn, _Args...>
```

### 5.17.2 Detailed Description

[concept.invocable], concept invocable

## 5.18 std::mergeable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.18.1 Concept definition

```
template<typename _I1, typename _I2, typename _Out, typename _Rel ranges::less, typename _P1 identity, typename
_P2 identity>
concept std::mergeable = input_iterator<_I1> && input_iterator<_I2>
&& weakly_incrementable<_Out> && indirectly_copyable<_I1, _Out>
&& indirectly_copyable<_I2, _Out>
&& indirect_strict_weak_order<_Rel, projected<_I1, _P1>,
projected<_I2, _P2>
```

### 5.18.2 Detailed Description

[alg.req.mergeable], concept mergeable

## 5.19 std::move\_constructible Concept Reference

### 5.19.1 Concept definition

```
template<typename _Tp>
concept std::move_constructible = constructible_from<_Tp, _Tp> && convertible_to<_Tp, _Tp>
```

### 5.19.2 Detailed Description

[concept.moveconstructible], concept move\_constructible

## 5.20 std::permutable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.20.1 Concept definition

```
template<typename _Iter>
concept std::permutable = forward_iterator<_Iter>
&& indirectly_movable_storable<_Iter, _Iter>
&& indirectly_swappable<_Iter, _Iter>
```

### 5.20.2 Detailed Description

[alg.req.permutable], concept permutable

## 5.21 `std::predicate` Concept Reference

### 5.21.1 Concept definition

```
template<typename _Fn, typename... _Args>
concept std::predicate = regular_invocable<_Fn, _Args...>
    && __detail::__boolean_testable<invoke_result_t<_Fn, _Args...>
```

### 5.21.2 Detailed Description

[concept.predicate], concept predicate

## 5.22 `std::ranges::bidirectional_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.22.1 Concept definition

```
template<typename _Tp>
concept std::ranges::bidirectional_range = forward_range<_Tp> && bidirectional_iterator<iterator_t<_Tp>
```

### 5.22.2 Detailed Description

A range for which `ranges::begin` returns a bidirectional iterator.

## 5.23 `std::ranges::borrowed_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.23.1 Concept definition

```
template<typename _Tp>
concept std::ranges::borrowed_range = range<_Tp> && __detail::__maybe_borrowed_range<_Tp>
```

### 5.23.2 Detailed Description

[range.range] The `borrowed_range` concept.

## 5.24 `std::ranges::common_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.24.1 Concept definition

```
template<typename _Tp>
concept std::ranges::common_range = range<_Tp> && same_as<iterator_t<_Tp>, sentinel_t<_Tp>
```

### 5.24.2 Detailed Description

A range for which `ranges::begin` and `ranges::end` return the same type.

## 5.25 `std::ranges::contiguous_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.25.1 Concept definition

```
template<typename _Tp>
concept std::ranges::contiguous_range = random_access_range<_Tp> && contiguous_iterator<iterator_t<_Tp>>
    && requires(_Tp& __t)
{
    { ranges::data(__t) } -> same_as<add_pointer_t<range_reference_t<_Tp>>>;
}
```

### 5.25.2 Detailed Description

A range for which `ranges::begin` returns a contiguous iterator.

## 5.26 std::ranges::forward\_range Concept Reference

```
#include <ranges_base.h>
```

### 5.26.1 Concept definition

```
template<typename _Tp>
concept std::ranges::forward_range = input_range<_Tp> && forward_iterator<iterator_t<_Tp>>
```

### 5.26.2 Detailed Description

A range for which `ranges::begin` returns a forward iterator.

## 5.27 std::ranges::input\_range Concept Reference

```
#include <ranges_base.h>
```

### 5.27.1 Concept definition

```
template<typename _Tp>
concept std::ranges::input_range = range<_Tp> && input_iterator<iterator_t<_Tp>>
```

### 5.27.2 Detailed Description

A range for which `ranges::begin` returns an input iterator.

## 5.28 std::ranges::output\_range Concept Reference

```
#include <ranges_base.h>
```

### 5.28.1 Concept definition

```
template<typename _Range, typename _Tp>
concept std::ranges::output_range = range<_Range> && output_iterator<iterator_t<_Range>, _Tp>
```

### 5.28.2 Detailed Description

A range for which `ranges::begin` returns an output iterator.

## 5.29 std::ranges::random\_access\_range Concept Reference

```
#include <ranges_base.h>
```

### 5.29.1 Concept definition

```
template<typename _Tp>
concept std::ranges::random_access_range = bidirectional_range<_Tp> && random_access_iterator<iterator_t<_Tp>>
```

### 5.29.2 Detailed Description

A range for which `ranges::begin` returns a random access iterator.

## 5.30 `std::ranges::range` Concept Reference

```
#include <ranges_base.h>
```

### 5.30.1 Concept definition

```
template<typename _Tp>
concept std::ranges::range = requires(_Tp& __t)
{
    ranges::begin(__t);
    ranges::end(__t);
}
```

### 5.30.2 Detailed Description

[range.range] The range concept.

## 5.31 `std::ranges::sized_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.31.1 Concept definition

```
template<typename _Tp>
concept std::ranges::sized_range = range<_Tp>
    && requires(_Tp& __t) { ranges::size(__t); }
```

### 5.31.2 Detailed Description

[range.sized] The sized\_range concept.

## 5.32 `std::ranges::view` Concept Reference

```
#include <ranges_base.h>
```

### 5.32.1 Concept definition

```
template<typename _Tp>
concept std::ranges::view = range<_Tp> && movable<_Tp> && enable_view<_Tp>
```

### 5.32.2 Detailed Description

[range.view] The ranges::view concept.

## 5.33 `std::ranges::viewable_range` Concept Reference

```
#include <ranges_base.h>
```

### 5.33.1 Concept definition

```
template<typename _Tp>
concept std::ranges::viewable_range = range<_Tp>
    && ((view<remove_cvref_t<_Tp>> && constructible_from<remove_cvref_t<_Tp>, _Tp>)
        || (!view<remove_cvref_t<_Tp>>
            && (is_lvalue_reference_v<_Tp>
                || (movable<remove_reference_t<_Tp>>
                    && !__detail::__is_initializer_list<remove_cvref_t<_Tp>>))))))
```

### 5.33.2 Detailed Description

A range which can be safely converted to a view.

## 5.34 std::regular\_invocable Concept Reference

### 5.34.1 Concept definition

```
template<typename _Fn, typename... _Args>
concept std::regular_invocable = invocable<_Fn, _Args...>
```

### 5.34.2 Detailed Description

[concept.regularinvocable], concept regular\_invocable

## 5.35 std::relation Concept Reference

### 5.35.1 Concept definition

```
template<typename _Rel, typename _Tp, typename _Up>
concept std::relation = predicate<_Rel, _Tp, _Tp> && predicate<_Rel, _Up, _Up>
    && predicate<_Rel, _Tp, _Up> && predicate<_Rel, _Up, _Tp>
```

### 5.35.2 Detailed Description

[concept.relation], concept relation

## 5.36 std::same\_as Concept Reference

### 5.36.1 Concept definition

```
template<typename _Tp, typename _Up>
concept std::same_as = __detail::__same_as<_Tp, _Up> && __detail::__same_as<_Up, _Tp>
```

### 5.36.2 Detailed Description

[concept.same], concept same\_as

## 5.37 std::sortable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.37.1 Concept definition

```
template<typename _Iter, typename _Rel ranges::less, typename _Proj identity>
concept std::sortable = permutable<_Iter>
    && indirect_strict_weak_order<_Rel, projected<_Iter, _Proj>
```

### 5.37.2 Detailed Description

[alg.req.sortable], concept sortable

## 5.38 std::strict\_weak\_order Concept Reference

### 5.38.1 Concept definition

```
template<typename _Rel, typename _Tp, typename _Up>
concept std::strict_weak_order = relation<_Rel, _Tp, _Up>
```

### 5.38.2 Detailed Description

[concept.strictweakorder], concept strict\_weak\_order

## 5.39 std::uniform\_random\_bit\_generator Concept Reference

```
#include <uniform_int_dist.h>
```

### 5.39.1 Concept definition

```
template<typename _Gen>
concept std::uniform_random_bit_generator = invocable<_Gen&> && unsigned_integral<invoke_result_t<_Gen&>>
    && requires
    {
        { _Gen::min() } -> same_as<invoke_result_t<_Gen&>>;
        { _Gen::max() } -> same_as<invoke_result_t<_Gen&>>;
        requires bool_constant<(_Gen::min() < _Gen::max())>::value;
    }
```

### 5.39.2 Detailed Description

Requirements for a uniform random bit generator.

## 5.40 std::weakly\_incrementable Concept Reference

```
#include <iterator_concepts.h>
```

### 5.40.1 Concept definition

```
template<typename _Iter>
concept std::weakly_incrementable = movable<_Iter>
    && requires(_Iter __i)
    {
        typename iter_difference_t<_Iter>;
        requires __detail::__is_signed_integer_like<iter_difference_t<_Iter>>;
        { ++__i } -> same_as<_Iter&>;
        __i++;
    }
```

### 5.40.2 Detailed Description

Requirements on types that can be incremented with ++.

## 6 Class Documentation

### 6.1 \_\_gnu\_parallel::\_\_accumulate\_binop\_reduct<\_BinOp> Struct Template Reference

```
#include <for_each_selectors.h>
```

#### Public Member Functions

- **\_\_accumulate\_binop\_reduct** (\_BinOp &\_\_b)
- template<typename \_Result, typename \_Addend>  
\_Result **operator()** (const \_Result &\_\_x, const \_Addend &\_\_y)

#### Public Attributes

- \_BinOp & **\_\_binop**

### 6.1.1 Detailed Description

```
template<typename _BinOp>
struct __gnu_parallel::__accumulate_binop_reduct<_BinOp>
```

General reduction, using a binary operator.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.2 `__gnu_parallel::__accumulate_selector<_It>` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__accumulate_selector<_It>`:

### Public Member Functions

- `template<typename _Op>`  
[std::iterator\\_traits<\\_It>::value\\_type operator\(\)](#) (`_Op __o, _It __i`)

### Public Attributes

- `_It _M_finish_iterator`

### 6.2.1 Detailed Description

```
template<typename _It>
struct __gnu_parallel::__accumulate_selector<_It>
```

`std::accumulate()` selector.

### 6.2.2 Member Function Documentation

**6.2.2.1 `operator()`** `template<typename _It>`  
`template<typename _Op>`  
[std::iterator\\_traits<\\_It>::value\\_type \\_\\_gnu\\_parallel::\\_\\_accumulate\\_selector<\\_It>::operator\(\)](#)  
 (  
     `_Op __o,`  
     `_It __i` ) `[inline]`

Functor execution.

#### Parameters

<code>__o</code>	Operator (unused).
<code>__i</code>	iterator referencing object.

#### Returns

The current value.

### 6.2.3 Member Data Documentation

**6.2.3.1 `_M_finish_iterator`** `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [inherited]  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**6.3 `__gnu_parallel::__adjacent_difference_selector< _It >` Struct Template Reference**

`#include <for_each_selectors.h>`

Inheritance diagram for `__gnu_parallel::__adjacent_difference_selector< _It >`:

**Public Member Functions**

- `template<typename _Op >`  
`bool operator() (_Op &__o, _It __i)`

**Public Attributes**

- `_It _M_finish_iterator`

**6.3.1 Detailed Description**

`template<typename _It>`

`struct __gnu_parallel::__adjacent_difference_selector< _It >`

Selector that returns the difference between two adjacent \_\_elements.

**6.3.2 Member Data Documentation****6.3.2.1 `_M_finish_iterator`** `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [inherited]  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

**6.4 `__gnu_parallel::__adjacent_find_selector` Struct Reference**

`#include <find_selectors.h>`

Inheritance diagram for `__gnu_parallel::__adjacent_find_selector`:

**Public Member Functions**

- `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`std::pair< _RAIter1, _RAIter2 > _M_sequential_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`bool operator() (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

**6.4.1 Detailed Description**

Test predicate on two adjacent elements.

### 6.4.2 Member Function Documentation

**6.4.2.1 `_M_sequential_algorithm()`** `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`>`  
`std::pair< _RAIter1, _RAIter2 > __gnu_parallel::__adjacent_find_selector::_M_sequential_algorithm`  
`(`  
`_RIter1 __begin1,`  
`_RIter1 __end1,`  
`_RIter2 __begin2,`  
`_Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters

<code>__begin1</code>	Begin iterator of first sequence.
<code>__end1</code>	End iterator of first sequence.
<code>__begin2</code>	Begin iterator of second sequence.
<code>__pred</code>	Find predicate.

**6.4.2.2 `operator()`** `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`bool __gnu_parallel::__adjacent_find_selector::operator() (`  
`_RIter1 __i1,`  
`_RIter2 __i2,`  
`_Pred __pred ) [inline]`

Test on one position.

#### Parameters

<code>__i1</code>	_Iterator on first sequence.
<code>__i2</code>	_Iterator on second sequence (unused).
<code>__pred</code>	Find predicate.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 6.5 `__gnu_cxx::__alloc_traits<_Alloc, typename >` Struct Template Reference

```
#include <alloc_traits.h>
```

Inheritance diagram for `__gnu_cxx::__alloc_traits<_Alloc, typename >`:

### Public Types

- typedef `std::allocator_traits<_Alloc >_Base_type`
- typedef `_Alloc allocator_type`
- typedef `_Base_type::const_pointer const_pointer`
- typedef `const value_type & const_reference`
- using `const_void_pointer = typename _Ptr<__cv_pointer, const void >::type`
- typedef `_Base_type::difference_type difference_type`

- using `is_always_equal` = typename `__detected_or_t< is_empty< _Alloc >, __equal, _Alloc >::type`

### 6.5.1 Detailed Description

```
template<typename _Alloc, typename = typename _Alloc::value_type>
struct __gnu_cxx::__alloc_traits< _Alloc, typename >
```

Uniform interface to C++98 and C++11 allocators.

### 6.5.2 Member Typedef Documentation

### 6.5.2.1 `const_void_pointer` `template<typename _Alloc>`

```
using std::allocator_traits<_Alloc>::const_void_pointer = typename _Ptr<__cv_pointer, const
void>::type [inherited]
```

The allocator's const void pointer type.

```
Alloc::const_void_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<const
void>
```

### 6.5.2.2 is\_always\_equal `template<typename _Alloc >`

```
using std::allocator_traits<_Alloc>::is_always_equal = typename __detected_or_t<is_empty<_Alloc>, __equal, _Alloc>::type [inherited]
```

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

### 6.5.2.3 propagate\_on\_container\_copy\_assignment `template<typename _Alloc >`

```
using std::allocator_traits< __Alloc >::propagate_on_container_copy_assignment = __detected_or_←
t<false_type, __pocca, __Alloc> [inherited]
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

#### 6.5.2.4 propagate\_on\_container\_move\_assignment `template<typename _Alloc >`

```
using std::allocator_traits< __Alloc >::propagate_on_container_move_assignment = __detected_or_  
t<false_type, __pocma, __Alloc> [inherited]
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

### 6.5.2.5 propagate\_on\_container\_swap `template<typename _Alloc >`

```
using std::allocator_traits<_Alloc >::propagate_on_container_swap = __detected_or_t<false_type,
__pocs, _Alloc> [inherited]
```

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

### 6.5.2.6 void\_pointer `template<typename _Alloc >`

```
using std::allocator_traits<_Alloc>::void_pointer = typename _Ptr<__v_pointer, void>::type
[inherited]
```

The allocator's void pointer type.

```
Alloc::void_pointer if that type exists, otherwise pointer_traits<pointer>::rebind<void>
```

### 6.5.3 Member Function Documentation

### 6.5.3.1 allocate() [1/4] `template<typename _Alloc >`

```
static constexpr pointer std::allocator\_traits< _Alloc >::allocate (
    _Alloc & __a,
    size\_type __n ) [inline], [static], [constexpr], [inherited]
```

Allocate memory.

## Parameters

$\leftrightarrow$ _a	An allocator.
$\leftrightarrow$ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`

**6.5.3.2 allocate() [2/4]** `template<typename _Alloc , typename = typename _Alloc::value_type>  
static constexpr pointer std::allocator\_traits< _Alloc >::allocate (  
    _Alloc & __a,  
    size_type __n ) [inline], [static], [constexpr]`

Allocate memory.

## Parameters

$\leftrightarrow$ _a	An allocator.
$\leftrightarrow$ _n	The number of objects to allocate space for.

Calls `a.allocate(n)`

**6.5.3.3 allocate() [3/4]** `template<typename _Alloc >  
static constexpr pointer std::allocator\_traits< _Alloc >::allocate (  
    _Alloc & __a,  
    size_type __n,  
    const_void_pointer __hint ) [inline], [static], [constexpr], [inherited]`

Allocate memory.

## Parameters

__a	An allocator.
__n	The number of objects to allocate space for.
__hint	Aid to locality.

## Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**6.5.3.4 allocate() [4/4]** `template<typename _Alloc , typename = typename _Alloc::value_type>  
static constexpr pointer std::allocator\_traits< _Alloc >::allocate (  
    _Alloc & __a,  
    size_type __n,  
    const_void_pointer __hint ) [inline], [static], [constexpr]`

Allocate memory.

## Parameters

__a	An allocator.
-----	---------------

## Parameters

<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

## Returns

Memory of suitable size and alignment for  $n$  objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**6.5.3.5 `construct()`** `template<typename _Alloc , typename = typename _Alloc::value_type>`  
`template<typename _Tp , typename... _Args>`  
`static constexpr auto std::allocator_traits<_Alloc >::construct (`  
`_Alloc & __a,`  
`_Tp * __p,`  
`_Args &&... __args ) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__`  
`args...))` `[inline], [static], [constexpr], [noexcept]`  
Construct an object of type `_Tp`

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

**6.5.3.6 `deallocate()`** `[1/2]` `template<typename _Alloc >`  
`static constexpr void std::allocator_traits<_Alloc >::deallocate (`  
`_Alloc & __a,`  
`pointer __p,`  
`size_type __n )` `[inline], [static], [constexpr], [inherited]`

Deallocate memory.

## Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**6.5.3.7 `deallocate()`** `[2/2]` `template<typename _Alloc , typename = typename _Alloc::value_type>`  
`static constexpr void std::allocator_traits<_Alloc >::deallocate (`  
`_Alloc & __a,`  
`pointer __p,`  
`size_type __n )` `[inline], [static], [constexpr]`

Deallocate memory.

#### Parameters

$\leftarrow$ _a	An allocator.
$\leftarrow$ _p	Pointer to the memory to deallocate.
$\leftarrow$ _n	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**6.5.3.8 destroy()** `template<typename _Alloc , typename = typename _Alloc::value_type>  
template<typename _Tp >  
static constexpr void std::allocator\_traits< _Alloc >::destroy (`  
`_Alloc & __a,`  
`_Tp * __p ) [inline], [static], [constexpr], [noexcept]`

Destroy an object of type `_Tp`.

#### Parameters

$\leftarrow$ _a	An allocator.
$\leftarrow$ _p	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

**6.5.3.9 max\_size()** `template<typename _Alloc , typename = typename _Alloc::value_type>  
static constexpr size_type std::allocator\_traits< _Alloc >::max_size (`  
`const _Alloc & __a ) [inline], [static], [constexpr], [noexcept]`

The maximum supported allocation size.

#### Parameters

$\leftarrow$ _a	An allocator.
--------------------	---------------

#### Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_`  
`type>::max()`

Referenced by [std::forward\\_list< \\_Tp, \\_Alloc >::max\\_size\(\)](#), and [std::list< \\_Tp, \\_Alloc >::max\\_size\(\)](#).

**6.5.3.10 select\_on\_container\_copy\_construction()** `template<typename _Alloc >  
static constexpr _Alloc std::allocator\_traits< _Alloc >::select_on_container_copy_construction (`  
`const _Alloc & __rhs ) [inline], [static], [constexpr], [inherited]`

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

### 6.9.1 Detailed Description

```
template<typename _InternT, typename _ExternT, typename _StateT>
class std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >
```

Common base for codecvt functions.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

### 6.9.2 Member Function Documentation

**6.9.2.1 `do_out()`** `template<typename _InternT, typename _ExternT, typename _StateT >`  
`virtual result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::do_out (`  
`state_type & __state,`  
`const intern_type * __from,`  
`const intern_type * __from_end,`  
`const intern_type * & __from_next,`  
`extern_type * __to,`  
`extern_type * __to_end,`  
`extern_type * & __to_next ) const [protected], [pure virtual]`

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This function is a hook for derived classes to change the value returned.

See also

`out` for more information.

Implemented in `std::codecvt<_InternT, _ExternT, _StateT >`, `std::codecvt<char, char, mbstate_t >`, `std::codecvt<wchar_t, char, mbstate_t >`, `std::codecvt<char16_t, char, mbstate_t >`, `std::codecvt<char32_t, char, mbstate_t >`, and `std::codecvt<_InternT, _ExternT, encoding_type >`.  
Referenced by `std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::out()`.

**6.9.2.2 `in()`** `template<typename _InternT, typename _ExternT, typename _StateT >`  
`result std::__codecvt_abstract_base<_InternT, _ExternT, _StateT >::in (`  
`state_type & __state,`  
`const extern_type * __from,`  
`const extern_type * __from_end,`  
`const extern_type * & __from_next,`  
`intern_type * __to,`  
`intern_type * __to_end,`  
`intern_type * & __to_next ) const [inline]`

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

## Returns

codecvt\_base::result.

**6.9.2.3 out()** `template<typename _InternT , typename _ExternT , typename _StateT >  
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (`  
`state_type & __state,`  
`const intern_type * __from,`  
`const intern_type * __from_end,`  
`const intern_type *& __from_next,`  
`extern_type * __to,`  
`extern_type * __to_end,`  
`extern_type *& __to_next ) const [inline]`

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This is analogous to wcsrtombs. It does this by calling codecvt::do\_out.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in [from,from\_end) are converted and written to [to,to\_end). from\_next and to\_next are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, from\_next and to\_next are not affected.

The *state* argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how *state* is used.

The result returned is a member of codecvt\_base::result. If all the input is converted, returns codecvt\_base::ok. If no conversion is necessary, returns codecvt\_base::noconv. If the input ends early or there is insufficient space in the output, returns codecvt\_base::partial. Otherwise the conversion failed and codecvt\_base::error is returned.

## Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

## Returns

codecvt\_base::result.

References `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::do_out()`.

**6.9.2.4 unshift()** `template<typename _InternT , typename _ExternT , typename _StateT >  
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift (`  
`state_type & __state,`  
`extern_type * __to,`  
`extern_type * __to_end,`  
`extern_type *& __to_next ) const [inline]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial

conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

The documentation for this class was generated from the following file:

- [codecvt.h](#)

## 6.10 `__gnu_cxx::__common_pool_policy<_PoolTp, _Thread >` Struct Template Reference

```
#include <mt_allocator.h>
```

Inherits `__gnu_cxx::__common_pool_base<_PoolTp, _Thread >`.

### 6.10.1 Detailed Description

```
template<template< bool > class _PoolTp, bool _Thread>
struct __gnu_cxx::__common_pool_policy<_PoolTp, _Thread >
```

Policy for shared `__pool` objects.

The documentation for this struct was generated from the following file:

- [mt\\_allocator.h](#)

## 6.11 `__gnu_parallel::__count_if_selector<_It, _Diff >` Struct Template Reference

```

#### 6.13.1 Detailed Description

```
template<typename _CharT>
class std::__ctype_abstract_base< _CharT >
```

Common base for ctype facet.

This template class provides implementations of the public functions that forward to the protected virtual functions.

This template also provides abstract stubs for the protected virtual functions.

### 6.13.2 Member Typedef Documentation

**6.13.2.1 char\_type** `template<typename _CharT >`  
`typedef _CharT std::__ctype_abstract_base<_CharT>::char_type`  
 Typedef for the template parameter.

### 6.13.3 Member Function Documentation

**6.13.3.1 do\_is()** [1/2] `template<typename _CharT >`  
`virtual const char_type * std::__ctype_abstract_base<_CharT>::do_is (`  
     `const char_type * __lo,`  
     `const char_type * __hi,`  
     `mask * __vec ) const [protected], [pure virtual]`

Return a mask array.

This function finds the mask for each char\_type in the range [lo,hi) and successively writes it to vec. vec must have as many elements as the input.

do\_is() is a hook for a derived facet to change the behavior of classifying. do\_is() must always return the same result for the same input.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__vec</code>	Pointer to an array of mask storage.

#### Returns

`__hi`.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**6.13.3.2 do\_is()** [2/2] `template<typename _CharT >`  
`virtual bool std::__ctype_abstract_base<_CharT>::do_is (`  
     `mask __m,`  
     `char_type __c ) const [protected], [pure virtual]`

Test char\_type classification.

This function finds a mask M for c and compares it to mask m.

do\_is() is a hook for a derived facet to change the behavior of classifying. do\_is() must always return the same result for the same input.

#### Parameters

<code>__c</code>	The char_type to find the mask of.
<code>__m</code>	The mask to compare against.

**Returns**

(M & \_\_m) != 0.

Implemented in [std::ctype< \\_CharT >](#), and [std::ctype< wchar\\_t >](#).

Referenced by [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >::is\(\)](#).

**6.13.3.3 do\_narrow()** [1/2] `template<typename _CharT >`  
`virtual char std::\_\_ctype\_abstract\_base< \_CharT >::do\_narrow (  
     char\_type __c,  
     char __default ) const [protected], [pure virtual]`

Narrow `char_type` to `char`.

This virtual function converts the argument to `char` using the simplest reasonable transformation. If the conversion fails, `default` is returned instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

<code>__c</code>	The <code>char_type</code> to convert.
<code>__default</code>	Char to return if conversion fails.

**Returns**

The converted `char`.

Implemented in [std::ctype< wchar\\_t >](#), and [std::ctype< \\_CharT >](#).

Referenced by [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >::narrow\(\)](#).

**6.13.3.4 do\_narrow()** [2/2] `template<typename _CharT >`  
`virtual const char\_type * std::\_\_ctype\_abstract\_base< \_CharT >::do\_narrow (  
     const char\_type * __lo,  
     const char\_type * __hi,  
     char __default,  
     char * __to ) const [protected], [pure virtual]`

Narrow `char_type` array to `char`.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to `char` using the simplest reasonable transformation and writes the results to the destination array. For any element in the input that cannot be converted, `__default` is used instead.

`do_narrow()` is a hook for a derived facet to change the behavior of narrowing. `do_narrow()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

**Parameters**

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__default</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

## Returns

`__hi`.Implemented in [std::ctype<\\_CharT>](#), and [std::ctype<wchar\\_t>](#).

**6.13.3.5 do\_scan\_is()** `template<typename _CharT>`  
`virtual const char_type * std::__ctype_abstract_base<_CharT>::do_scan_is (`  
`mask __m,`  
`const char_type * __lo,`  
`const char_type * __hi ) const [protected], [pure virtual]`

Find char\_type matching mask.

This function searches for and returns the first char\_type c in [`__lo`,`__hi`) for which `is(__m,c)` is true.`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

## Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

## Returns

Pointer to a matching char\_type if found, else `__hi`.Implemented in [std::ctype<\\_CharT>](#), and [std::ctype<wchar\\_t>](#).Referenced by [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::scan\\_is\(\)](#).

**6.13.3.6 do\_scan\_not()** `template<typename _CharT>`  
`virtual const char_type * std::__ctype_abstract_base<_CharT>::do_scan_not (`  
`mask __m,`  
`const char_type * __lo,`  
`const char_type * __hi ) const [protected], [pure virtual]`

Find char\_type not matching mask.

This function searches for and returns a pointer to the first char\_type c of [`lo`,`hi`) for which `is(m,c)` is false.`do_scan_is()` is a hook for a derived facet to change the behavior of match searching. `do_is()` must always return the same result for the same input.

## Parameters

<code>__m</code>	The mask to compare against.
<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

**Returns**

Pointer to a non-matching `char_type` if found, else `__hi`.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

Referenced by `std::__ctype_abstract_base<_CharT>::scan_not()`.

**6.13.3.7 do\_tolower()** [1/2] `template<typename _CharT >`  
`virtual const char_type * std::__ctype_abstract_base<_CharT >::do_tolower (`  
`char_type * __lo,`  
`const char_type * __hi ) const [protected], [pure virtual]`

Convert array to lowercase.

This virtual function converts each `char_type` in the range `[__lo,__hi)` to lowercase if possible. Other elements remain untouched.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters**

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.

**Returns**

`__hi`.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

**6.13.3.8 do\_tolower()** [2/2] `template<typename _CharT >`  
`virtual char_type std::__ctype_abstract_base<_CharT >::do_tolower (`  
`char_type __c ) const [protected], [pure virtual]`

Convert to lowercase.

This virtual function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument.

`do_tolower()` is a hook for a derived facet to change the behavior of lowercasing. `do_tolower()` must always return the same result for the same input.

**Parameters**

<code>__c</code>	The <code>char_type</code> to convert.
------------------	--

**Returns**

The lowercase `char_type` if convertible, else `__c`.

Implemented in `std::ctype<_CharT>`, and `std::ctype<wchar_t>`.

Referenced by `std::__ctype_abstract_base<_CharT>::tolower()`.

**6.13.3.9 do\_toupper()** [1/2] `template<typename _CharT >`

```
virtual const char_type * std::__ctype_abstract_base<_CharT>::do_toupper (
    char_type * __lo,
    const char_type * __hi ) const [protected], [pure virtual]
```

Convert array to uppercase.

This virtual function converts each char\_type in the range [\_\_lo,\_\_hi) to uppercase if possible. Other elements remain untouched.

do\_toupper() is a hook for a derived facet to change the behavior of uppercasing. do\_toupper() must always return the same result for the same input.

#### Parameters

<a href="#"> __lo</a>	Pointer to start of range.
<a href="#"> __hi</a>	Pointer to end of range.

#### Returns

[!\[\]\(3cb60d42b10e53f9522bb0b392c1c4cd\_img.jpg\) \\_\\_hi](#).

Implemented in [std::ctype<\\_CharT>](#), and [std::ctype<wchar\\_t>](#).

#### 6.13.3.10 do\_toupper() [2/2] template<typename \_CharT>

```
virtual char_type std::__ctype_abstract_base<_CharT>::do_toupper (
    char_type __c ) const [protected], [pure virtual]
```

Convert to uppercase.

This virtual function converts the char\_type argument to uppercase if possible. If not possible (for example, '2'), returns the argument.

do\_toupper() is a hook for a derived facet to change the behavior of uppercasing. do\_toupper() must always return the same result for the same input.

#### Parameters

<a href="#"> __c</a>	The char_type to convert.
---	---------------------------

#### Returns

The uppercase char\_type if convertible, else \_\_c.

Implemented in [std::ctype<\\_CharT>](#), and [std::ctype<wchar\\_t>](#).

Referenced by [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::toupper\(\)](#).

#### 6.13.3.11 do\_widen() [1/2] template<typename \_CharT>

```
virtual char_type std::__ctype_abstract_base<_CharT>::do_widen (
    char __c ) const [protected], [pure virtual]
```

Widen char.

This virtual function converts the char to char\_type using the simplest reasonable transformation.

do\_widen() is a hook for a derived facet to change the behavior of widening. do\_widen() must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See codecvt for that.

## Parameters

<a href="#"><code>_↔</code></a>	The char to convert.
<a href="#"><code>_c</code></a>	

## Returns

The converted `char_type`

Implemented in [std::ctype< \\_CharT >](#), and [std::ctype< wchar\\_t >](#).

Referenced by [std::\\_\\_ctype\\_abstract\\_base< \\_CharT >::widen\(\)](#).

**6.13.3.12 do\_widen()** [2/2] `template<typename _CharT >`  
`virtual const char * std::\_\_ctype\_abstract\_base< \_CharT >::do\_widen (`  
`const char * \_\_lo,`  
`const char * \_\_hi,`  
`char\_type * \_\_to ) const` `[protected], [pure virtual]`

Widen char array.

This function converts each char in the input to `char_type` using the simplest reasonable transformation.

`do_widen()` is a hook for a derived facet to change the behavior of widening. `do_widen()` must always return the same result for the same input.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

## Parameters

<a href="#"><code>_↔</code></a> <a href="#"><code>_lo</code></a>	Pointer to start range.
<a href="#"><code>_↔</code></a> <a href="#"><code>_hi</code></a>	Pointer to end of range.
<a href="#"><code>_↔</code></a> <a href="#"><code>_to</code></a>	Pointer to the destination array.

## Returns

[`\_\_hi`](#).

Implemented in [std::ctype< \\_CharT >](#), and [std::ctype< wchar\\_t >](#).

**6.13.3.13 is()** [1/2] `template<typename _CharT >`  
`const char\_type * std::\_\_ctype\_abstract\_base< \_CharT >::is (`  
`const char\_type * \_\_lo,`  
`const char\_type * \_\_hi,`  
`mask * \_\_vec ) const` `[inline]`

Return a mask array.

This function finds the mask for each `char_type` in the range `[lo,hi)` and successively writes it to `vec`. `vec` must have as many elements as the char array. It does so by returning the value of `ctype<char_type>::do_is()`.

## Parameters

<a href="#"><code>__lo</code></a>	Pointer to start of range.
<a href="#"><code>__hi</code></a>	Pointer to end of range.
<a href="#"><code>__vec</code></a>	Pointer to an array of mask storage.

## Returns

\_\_hi.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_is\(\)](#).

**6.13.3.14 is()** [2/2] `template<typename _CharT >`  
`bool std::__ctype_abstract_base<_CharT>::is (`  
`mask __m,`  
`char_type __c ) const [inline]`

Test char\_type classification.

This function finds a mask M for \_\_c and compares it to mask \_\_m. It does so by returning the value of `ctype<char_↵type>::do_is()`.

## Parameters

<code>_↵c</code>	The char_type to compare the mask of.
<code>_↵m</code>	The mask to compare against.

## Returns

(M & \_\_m) != 0.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_is\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#).

**6.13.3.15 narrow()** [1/2] `template<typename _CharT >`  
`char std::__ctype_abstract_base<_CharT>::narrow (`  
`char_type __c,`  
`char __dfault ) const [inline]`

Narrow char\_type to char.

This function converts the char\_type to char using the simplest reasonable transformation. If the conversion fails, dfault is returned instead. It does so by returning `ctype<char_type>::do_narrow(__c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

## Parameters

<code>__c</code>	The char_type to convert.
<code>__dfault</code>	Char to return if conversion fails.

## Returns

The converted char.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_narrow\(\)](#).

Referenced by [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), and [std::time\\_put<\\_CharT, \\_OutIter>::put\(\)](#).

**6.13.3.16 narrow()** [2/2] `template<typename _CharT >`  
`const char_type * std::__ctype_abstract_base<_CharT>::narrow (`

```

const char_type * __lo,
const char_type * __hi,
char __default,
char * __to ) const [inline]

```

Narrow array to char array.

This function converts each `char_type` in the input to `char` using the simplest reasonable transformation and writes the results to the destination array. For any `char_type` in the input that cannot be converted, *default* is used instead. It does so by returning `ctype<char_type>::do_narrow(__lo, __hi, __default, __to)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__default</code>	Char to use if conversion fails.
<code>__to</code>	Pointer to the destination array.

#### Returns

`__hi`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_narrow\(\)](#).

**6.13.3.17 scan\_is()** `template<typename _CharT >`  
`const char_type * std::__ctype_abstract_base<_CharT>::scan_is (`  
`mask __m,`  
`const char_type * __lo,`  
`const char_type * __hi ) const [inline]`

Find `char_type` matching a mask.

This function searches for and returns the first `char_type` `c` in `[lo,hi)` for which `is(m,c)` is true. It does so by returning `ctype<char_type>::do_scan_is()`.

#### Parameters

<code>↔ __m</code>	The mask to compare against.
<code>↔ __lo</code>	Pointer to start of range.
<code>↔ __hi</code>	Pointer to end of range.

#### Returns

Pointer to matching `char_type` if found, else `__hi`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_scan\\_is\(\)](#).

**6.13.3.18 scan\_not()** `template<typename _CharT >`  
`const char_type * std::__ctype_abstract_base<_CharT>::scan_not (`  
`mask __m,`

```
const char_type * __lo,
const char_type * __hi ) const [inline]
```

Find char\_type not matching a mask.

This function searches for and returns the first char\_type c in [lo,hi) for which is(m,c) is false. It does so by returning ctype<char\_type>::do\_scan\_not().

#### Parameters

<a href="#"> <code>__m</code></a>	The mask to compare against.
<a href="#"> <code>__lo</code></a>	Pointer to first char in range.
<a href="#"> <code>__hi</code></a>	Pointer to end of range.

#### Returns

Pointer to non-matching char if found, else `__hi`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_scan\\_not\(\)](#).

**6.13.3.19 tolower()** [1/2] `template<typename _CharT >`  
`const char_type * std::__ctype_abstract_base<_CharT>::tolower (`  
`char_type * __lo,`  
`const char_type * __hi ) const [inline]`

Convert array to lowercase.

This function converts each char\_type in the range [\_\_lo,\_\_hi) to lowercase if possible. Other elements remain untouched. It does so by returning ctype<char\_type>::do\_tolower(\_\_lo,\_\_hi).

#### Parameters

<a href="#"> <code>__lo</code></a>	Pointer to start of range.
<a href="#"> <code>__hi</code></a>	Pointer to end of range.

#### Returns

`__hi`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_tolower\(\)](#).

**6.13.3.20 tolower()** [2/2] `template<typename _CharT >`  
`char_type std::__ctype_abstract_base<_CharT>::tolower (`  
`char_type __c ) const [inline]`

Convert to lowercase.

This function converts the argument to lowercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning ctype<char\_type>::do\_tolower(c).

## Parameters

<a href="#"></a>	The char_type to convert.
<code>__c</code>	

## Returns

The lowercase char\_type if convertible, else `__c`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_tolower\(\)](#).

Referenced by [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#).

**6.13.3.21 toupper()** [1/2] `template<typename _CharT >`  
`const char_type * std::__ctype_abstract_base<_CharT>::toupper (`  
`char_type * __lo,`  
`const char_type * __hi ) const [inline]`

Convert array to uppercase.

This function converts each char\_type in the range [lo,hi) to uppercase if possible. Other elements remain untouched. It does so by returning `ctype<char_type>::do_toupper(lo, hi)`.

## Parameters

<a href="#"></a>	Pointer to start of range.
<code>__lo</code>	
<a href="#"></a>	Pointer to end of range.
<code>__hi</code>	

## Returns

`__hi`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_toupper\(\)](#).

**6.13.3.22 toupper()** [2/2] `template<typename _CharT >`  
`char_type std::__ctype_abstract_base<_CharT>::toupper (`  
`char_type __c ) const [inline]`

Convert to uppercase.

This function converts the argument to uppercase if possible. If not possible (for example, '2'), returns the argument. It does so by returning `ctype<char_type>::do_toupper()`.

## Parameters

<a href="#"></a>	The char_type to convert.
<code>__c</code>	

## Returns

The uppercase char\_type if convertible, else `__c`.

References [std::\\_\\_ctype\\_abstract\\_base<\\_CharT>::do\\_toupper\(\)](#).

Referenced by [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#).

**6.13.3.23 widen()** [1/2] `template<typename _CharT >`  
`char_type std::__ctype_abstract_base< _CharT >::widen (`  
`char __c ) const [inline]`

Widen char to char\_type.

This function converts the char argument to char\_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

<code>__c</code>	The char to convert.
------------------	----------------------

#### Returns

The converted char\_type.

References `std::__ctype_abstract_base< _CharT >::do_widen()`.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::money_put< _CharT, _Outlter >::do_put()` and `std::time_put< _CharT, _Outlter >::do_put()`.

**6.13.3.24 widen()** [2/2] `template<typename _CharT >`  
`const char * std::__ctype_abstract_base< _CharT >::widen (`  
`const char * __lo,`  
`const char * __hi,`  
`char_type * __to ) const [inline]`

Widen array to char\_type.

This function converts each char in the input to char\_type using the simplest reasonable transformation. It does so by returning `ctype<char_type>::do_widen(c)`.

Note: this is not what you want for codepage conversions. See `codecvt` for that.

#### Parameters

<code>__lo</code>	Pointer to start of range.
<code>__hi</code>	Pointer to end of range.
<code>__to</code>	Pointer to the destination array.

#### Returns

`__hi`.

References `std::__ctype_abstract_base< _CharT >::do_widen()`.

#### 6.15.1 Detailed Description

```
template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>
struct std::tr2::__dynamic_bitset_base<_WordT, _Alloc>
```

Base class, general case.

See documentation for `dynamic_bitset`.

#### 6.15.2 Member Data Documentation

**6.15.2.1 `_M_w`** `template<typename _WordT = unsigned long long, typename _Alloc = std::allocator<_WordT>>`

`std::vector<block_type, allocator_type> std::tr2::__dynamic_bitset_base<_WordT, _Alloc>::_M_w`  
0 is the least significant word.

The documentation for this struct was generated from the following files:

- `dynamic_bitset`
- `dynamic_bitset.tcc`

#### 6.17.1 Detailed Description

`template<typename _FIterator>`  
`struct __gnu_parallel::__find_first_of_selector<_FIterator>`

Test predicate on several elements.

#### 6.17.2 Member Function Documentation

**6.17.2.1 `__M_sequential_algorithm()`** `template<typename _FIterator>`  
`template<typename _RAIter1, typename _RAIter2, typename _Pred>`  
`std::pair<_RAIter1, _RAIter2> __gnu_parallel::__find_first_of_selector<_FIterator>::__M_sequential_algorithm (`  
`_RAITer1 __begin1,`  
`_RAITer1 __end1,`  
`_RAITer2 __begin2,`  
`_Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

##### Parameters

<code>__begin1</code>	Begin iterator of first sequence.
<code>__end1</code>	End iterator of first sequence.
<code>__begin2</code>	Begin iterator of second sequence.
<code>__pred</code>	Find predicate.

**6.17.2.2 `operator()()`** `template<typename _FIterator>`  
`template<typename _RAIter1, typename _RAIter2, typename _Pred>`  
`bool __gnu_parallel::__find_first_of_selector<_FIterator>::operator() (`  
`_RAITer1 __i1,`  
`_RAITer2 __i2,`  
`_Pred __pred ) [inline]`

Test on one position.

##### Parameters

<code>__i1</code>	_Iterator on first sequence.
<code>__i2</code>	_Iterator on second sequence (unused).
<code>__pred</code>	Find predicate.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 6.18 \_\_gnu\_parallel::\_\_find\_if\_selector Struct Reference

```
#include <find_selectors.h>
```

Inheritance diagram for \_\_gnu\_parallel::\_\_find\_if\_selector:

### Public Member Functions

- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`std::pair< _RAIter1, _RAIter2 > \_M\_sequential\_algorithm ( _RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`bool operator() ( _RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

### 6.18.1 Detailed Description

Test predicate on a single element, used for `std::find()` and `std::find_if()`.

### 6.18.2 Member Function Documentation

**6.18.2.1 [\\_M\\_sequential\\_algorithm\(\)](#)** `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`std::pair< _RAIter1, _RAIter2 > __gnu_parallel::__find_if_selector::_M_sequential_algorithm (`  
`_RAIter1 __begin1,`  
`_RAIter1 __end1,`  
`_RAIter2 __begin2,`  
`_Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters

<code>__begin1</code>	Begin iterator of first sequence.
<code>__end1</code>	End iterator of first sequence.
<code>__begin2</code>	Begin iterator of second sequence.
<code>__pred</code>	Find predicate.

**6.18.2.2 [operator\(\)](#)** `template<typename _RAIter1, typename _RAIter2, typename _Pred >`  
`bool __gnu_parallel::__find_if_selector::operator() (`  
`_RAIter1 __i1,`  
`_RAIter2 __i2,`  
`_Pred __pred ) [inline]`

Test on one position.

#### Parameters

<code>__i1</code>	_Iterator on first sequence.
<code>__i2</code>	_Iterator on second sequence (unused).

## Parameters

<code>__pred</code>	Find predicate.
---------------------	-----------------

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

6.19 `__gnu_parallel::__for_each_selector<_It>` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__for_each_selector<_It>`:

## Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

## 6.19.1 Detailed Description

```
template<typename _It>
struct __gnu_parallel::__for_each_selector<_It>
```

`std::for_each()` selector.

## 6.19.2 Member Function Documentation

**6.19.2.1 `operator()()`** `template<typename _It>`  
`template<typename _Op>`  
`bool __gnu_parallel::__for_each_selector<_It>::operator() (`  
`_Op & __o,`  
`_It __i ) [inline]`

Functor execution.

## Parameters

<code>__o</code>	Operator.
<code>__i</code>	iterator referencing object.

## 6.19.3 Member Data Documentation

**6.19.3.1 `_M_finish_iterator`** `template<typename _It>`  
`_It __gnu_parallel::__generic_for_each_selector<_It>::_M_finish_iterator` `[inherited]`  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.20 \_\_cxxabiv1::\_\_forced\_unwind Class Reference

```
#include <cxxabi_forced.h>
```

### 6.20.1 Detailed Description

Thrown as part of forced unwinding.

A magic placeholder class that can be caught by reference to recognize forced unwinding.

The documentation for this class was generated from the following file:

- [cxxabi\\_forced.h](#)

## 6.21 \_\_gnu\_parallel::\_\_generate\_selector<\_It> Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for \_\_gnu\_parallel::\_\_generate\_selector<\_It>:

### Public Member Functions

- `template<typename _Op >`  
`bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It _M_finish_iterator`

### 6.21.1 Detailed Description

```
template<typename _It>
```

```
struct __gnu_parallel::__generate_selector<_It>
```

std::generate() selector.

### 6.21.2 Member Function Documentation

**6.21.2.1 operator>()()** `template<typename _It >`

```
template<typename _Op >
```

```
bool __gnu_parallel::__generate_selector<_It >::operator() (
    _Op & __o,
    _It __i ) [inline]
```

Functor execution.

#### Parameters

<code>__o</code>	Operator.
<code>__i</code>	iterator referencing object.

### 6.21.3 Member Data Documentation

#### 6.21.3.1 `_M_finish_iterator` `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [inherited]  
`_iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.22 `__gnu_parallel::__generic_find_selector` Struct Reference

```
#include <find_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__generic_find_selector`:

### 6.22.1 Detailed Description

Base class of all `__gnu_parallel::__find_template` selectors.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 6.23 `__gnu_parallel::__generic_for_each_selector< _It >` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__generic_for_each_selector< _It >`:

### Public Attributes

- `_It` [\\_M\\_finish\\_iterator](#)

### 6.23.1 Detailed Description

```
template<typename _It>
```

```
struct __gnu_parallel::__generic_for_each_selector< _It >
```

Generic `__selector` for embarrassingly parallel functions.

### 6.23.2 Member Data Documentation

#### 6.23.2.1 `_M_finish_iterator` `template<typename _It >`

`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator`  
`_iterator` on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.24 `__gnu_parallel::__identity_selector< _It >` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__identity_selector< _It >`:

## Public Member Functions

- `template<typename _Op >  
_It operator() (_Op __o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

### 6.24.1 Detailed Description

```
template<typename _It>
struct __gnu_parallel::__identity_selector< _It >
```

Selector that just returns the passed iterator.

### 6.24.2 Member Function Documentation

**6.24.2.1 operator>()** `template<typename _It >  
template<typename _Op >  
_It __gnu_parallel::__identity_selector< _It >::operator() (  
    _Op __o,  
    _It __i ) [inline]`

Functor execution.

#### Parameters

<code>↔ _o</code>	Operator (unused).
<code>↔ _i</code>	iterator referencing object.

#### Returns

Passed iterator.

### 6.24.3 Member Data Documentation

**6.24.3.1 \_M\_finish\_iterator** `template<typename _It >  
_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]  
_Iterator on last element processed; needed for some algorithms (e. g. std::transform()).  
The documentation for this struct was generated from the following file:`

- `for_each_selectors.h`

## 6.25 \_\_gnu\_parallel::\_\_inner\_product\_selector< \_It, \_It2, \_Tp > Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__inner_product_selector< _It, _It2, _Tp >`:

## Public Member Functions

- [`\_\_inner\_product\_selector`](#) (`_It __b1, _It2 __b2`)
- `template<typename _Op>`  
`_Tp operator() (_Op __mult, _It __current)`

## Public Attributes

- [`\_It \_\_begin1\_iterator`](#)
- [`\_It2 \_\_begin2\_iterator`](#)
- [`\_It \_\_M\_finish\_iterator`](#)

### 6.25.1 Detailed Description

```
template<typename _It, typename _It2, typename _Tp>
struct __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>
```

`std::inner_product()` selector.

### 6.25.2 Constructor & Destructor Documentation

**6.25.2.1 `__inner_product_selector()`** `template<typename _It , typename _It2 , typename _Tp>`  
[`\_\_gnu\_parallel::\_\_inner\_product\_selector<\_It, \_It2, \_Tp>::\_\_inner\_product\_selector`](#) (  
`_It __b1,`  
`_It2 __b2 )` `[inline]`, `[explicit]`

Constructor.

#### Parameters

<code>__b1</code>	Begin iterator of first sequence.
<code>__b2</code>	Begin iterator of second sequence.

### 6.25.3 Member Function Documentation

**6.25.3.1 `operator()()`** `template<typename _It , typename _It2 , typename _Tp>`  
`template<typename _Op>`  
[`\_\_gnu\_parallel::\_\_inner\_product\_selector<\_It, \_It2, \_Tp>::operator\(\)`](#) (  
`_Op __mult,`  
`_It __current )` `[inline]`

Functor execution.

#### Parameters

<code>__mult</code>	Multiplication functor.
<code>__current</code>	iterator referencing object.

## Returns

Inner product elemental `__result`.

References [\\_\\_gnu\\_parallel::\\_\\_inner\\_product\\_selector<\\_It, \\_It2, \\_Tp>::\\_\\_begin1\\_iterator](#), and [\\_\\_gnu\\_parallel::\\_\\_inner\\_product\\_selector<\\_It, \\_It2, \\_Tp>::\\_\\_begin2\\_iterator](#).

## 6.25.4 Member Data Documentation

**6.25.4.1 `__begin1_iterator`** `template<typename _It, typename _It2, typename _Tp> _It __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin1_iterator`  
 Begin iterator of first sequence.  
 Referenced by [\\_\\_gnu\\_parallel::\\_\\_inner\\_product\\_selector<\\_It, \\_It2, \\_Tp>::operator\(\)\(\)](#).

**6.25.4.2 `__begin2_iterator`** `template<typename _It, typename _It2, typename _Tp> _It2 __gnu_parallel::__inner_product_selector<_It, _It2, _Tp>::__begin2_iterator`  
 Begin iterator of second sequence.  
 Referenced by [\\_\\_gnu\\_parallel::\\_\\_inner\\_product\\_selector<\\_It, \\_It2, \\_Tp>::operator\(\)\(\)](#).

**6.25.4.3 `_M_finish_iterator`** `template<typename _It> _It __gnu_parallel::__generic_for_each_selector<_It>::_M_finish_iterator` [inherited]  
 Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).  
 The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.26 `std::__is_fast_hash<_Hash>` Struct Template Reference

`#include <functional_hash.h>`

Inheritance diagram for `std::__is_fast_hash<_Hash>`:

### Public Types

- typedef [integral\\_constant<\\_Tp, \\_\\_v>](#) **type**
- typedef `_Tp` **value\_type**

### Public Member Functions

- constexpr **operator value\_type** () const noexcept
- constexpr value\_type **operator()** () const noexcept

### Static Public Attributes

- static constexpr `_Tp` **value**

### 6.26.1 Detailed Description

```
template<typename _Hash>
struct std::__is_fast_hash<_Hash>
```

Hint about performance of hash functions.

If a given hash function object is not fast, the hash-based containers will cache the hash code. The default behavior is to consider that hashers are fast unless specified otherwise.

Users can specialize this for their own hash functions in order to force caching of hash codes in unordered containers. Specializing this trait affects the ABI of the unordered containers, so use it carefully. The documentation for this struct was generated from the following file:

- [functional\\_hash.h](#)

## 6.27 `std::__is_location_invariant< _Tp >` Struct Template Reference

```
#include <std_function.h>
Inherits is_trivially_copyable::type.
```

### 6.27.1 Detailed Description

```
template<typename _Tp>
struct std::__is_location_invariant< _Tp >
```

Trait identifying "location-invariant" types, meaning that the address of the object (or any of its members) will not escape. Trivially copyable types are location-invariant and users can specialize this trait for other types. The documentation for this struct was generated from the following file:

- [std\\_function.h](#)

## 6.28 `std::__is_nullptr_t< _Tp >` Struct Template Reference

Inheritance diagram for `std::__is_nullptr_t< _Tp >`:

### Public Types

- typedef [integral\\_constant](#)< \_Tp, \_\_v > **type**
- typedef \_Tp **value\_type**

### Public Member Functions

- constexpr **operator value\_type** () const noexcept
- constexpr value\_type **operator()** () const noexcept

### Static Public Attributes

- static constexpr \_Tp **value**

### 6.28.1 Detailed Description

```
template<typename _Tp>
struct std::__is_nullptr_t< _Tp >

__is_nullptr_t (deprecated extension).
```

**Deprecated** Non-standard. Use `is_null_pointer` instead.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.29 `__gnu_parallel::__max_element_reduct< _Compare, _It >` Struct Template Reference

```
#include <for_each_selectors.h>
```

### Public Member Functions

- `__max_element_reduct` (`_Compare` & `__c`)
- `_lt operator()` (`_lt __x`, `_lt __y`)

### Public Attributes

- `_Compare` & `__comp`

#### 6.29.1 Detailed Description

```
template<typename _Compare, typename _It>
struct __gnu_parallel::__max_element_reduct< _Compare, _It >
```

Reduction for finding the maximum element, using a comparator.  
The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 6.30 `__gnu_parallel::__min_element_reduct< _Compare, _It >` Struct Template Reference

```
#include <for_each_selectors.h>
```

### Public Member Functions

- `__min_element_reduct` (`_Compare` & `__c`)
- `_lt operator()` (`_lt __x`, `_lt __y`)

### Public Attributes

- `_Compare` & `__comp`

#### 6.30.1 Detailed Description

```
template<typename _Compare, typename _It>
struct __gnu_parallel::__min_element_reduct< _Compare, _It >
```

Reduction for finding the maximum element, using a comparator.  
The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

### 6.31 `__gnu_cxx::__detail::__mini_vector< _Tp >` Class Template Reference

```
#include <bitmap_allocator.h>
```

### Public Types

- `typedef const _Tp & const_reference`
- `typedef std::ptrdiff_t difference_type`
- `typedef pointer iterator`
- `typedef _Tp * pointer`
- `typedef _Tp & reference`
- `typedef std::size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- reference **back** () const throw ()
- iterator **begin** () const throw ()
- void **clear** () throw ()
- iterator **end** () const throw ()
- void **erase** (iterator \_\_pos) throw ()
- void **insert** (iterator \_\_pos, const\_reference \_\_x)
- reference **operator[]** (const size\_type \_\_pos) const throw ()
- void **pop\_back** () throw ()
- void **push\_back** (const\_reference \_\_x)
- size\_type **size** () const throw ()

#### 6.31.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::__detail::__mini_vector< _Tp >
```

`__mini_vector<>` is a stripped down version of the full-fledged `std::vector<>`. It is to be used only for built-in types or PODs. Notable differences are:

1. Not all accessor functions are present.
2. Used ONLY for PODs.
3. No Allocator template argument. Uses operator `new()` to get memory, and operator `delete()` to free it. Caveat: The dtor does NOT free the memory allocated, so this a memory-leaking vector!

The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

## 6.32 `__gnu_parallel::__mismatch_selector` Struct Reference

```
#include <find_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__mismatch_selector`:

### Public Member Functions

- template<typename \_RAIter1 , typename \_RAIter2 , typename \_Pred >  
`std::pair<_RAIter1, _RAIter2 > M\_sequential\_algorithm (_RAIter1 __begin1, _RAIter1 __end1, _RAIter2 __begin2, _Pred __pred)`
- template<typename \_RAIter1 , typename \_RAIter2 , typename \_Pred >  
`bool operator\(\) (_RAIter1 __i1, _RAIter2 __i2, _Pred __pred)`

#### 6.32.1 Detailed Description

Test inverted predicate on a single element.

#### 6.32.2 Member Function Documentation

**6.32.2.1 `_M_sequential_algorithm()`** `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`>`  
`std::pair< _RAIter1, _RAIter2 > __gnu_parallel::__mismatch_selector::_M_sequential_algorithm (`  
`_RAIter1 __begin1,`  
`_RAIter1 __end1,`  
`_RAIter2 __begin2,`  
`_Pred __pred ) [inline]`

Corresponding sequential algorithm on a sequence.

#### Parameters

<code>__begin1</code>	Begin iterator of first sequence.
<code>__end1</code>	End iterator of first sequence.
<code>__begin2</code>	Begin iterator of second sequence.
<code>__pred</code>	Find predicate.

**6.32.2.2 `operator()()`** `template<typename _RAIter1 , typename _RAIter2 , typename _Pred >`  
`bool __gnu_parallel::__mismatch_selector::operator() (`  
`_RAIter1 __i1,`  
`_RAIter2 __i2,`  
`_Pred __pred ) [inline]`

Test on one position.

#### Parameters

<code>__i1</code>	_Iterator on first sequence.
<code>__i2</code>	_Iterator on second sequence (unused).
<code>__pred</code>	Find predicate.

The documentation for this struct was generated from the following file:

- [find\\_selectors.h](#)

## 6.33 `__gnu_cxx::__mt_alloc< _Tp, _Poolp >` Class Template Reference

`#include <mt_allocator.h>`

Inheritance diagram for `__gnu_cxx::__mt_alloc< _Tp, _Poolp >`:

## 6.34 `__gnu_cxx::__mt_alloc_base< _Tp >` Class Template Reference

`#include <mt_allocator.h>`

Inheritance diagram for `__gnu_cxx::__mt_alloc_base< _Tp >`:

#### Public Types

- `typedef const _Tp * const_pointer`
- `typedef const _Tp & const_reference`
- `typedef std::ptrdiff_t difference_type`
- `typedef _Tp * pointer`
- `typedef std::true\_type propagate_on_container_move_assignment`

- `typedef _Tp & reference`
- `typedef std::size_t size_type`
- `typedef _Tp value_type`

#### Public Member Functions

- `const_pointer address (const_reference __x) const` noexcept
- `pointer address (reference __x) const` noexcept
- `template<typename _Up, typename... _Args>`  
`void construct (_Up *__p, _Args &&... __args)`
- `template<typename _Up >`  
`void destroy (_Up *__p)`
- `size_type max_size ()` const noexcept

##### 6.34.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::__mt_alloc_base< _Tp >
```

Base class for `_Tp` dependent member functions.

The documentation for this class was generated from the following file:

- [mt\\_allocator.h](#)

#### 6.35 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _↔ DifferenceTp __length, _Compare __comp)`

##### 6.35.1 Detailed Description

```
template<bool __sentinels, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< __sentinels, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned off.

Note that 3-way merging is always stable!

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

#### 6.36 `__gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, _↔ DifferenceTp __length, _Compare __comp)`

### 6.36.1 Detailed Description

```
template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_3_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 3-way merging with `__sentinels` turned on.

Note that 3-way merging is always stable!

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 6.37 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator __seqs_begin`, `_RAIterIterator __seqs_end`, `_RAIter3 __target`, `__↵ DifferenceTp __length`, `_Compare __comp`)

### 6.37.1 Detailed Description

```
template<bool __sentinels, typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< __sentinels, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare
>
```

Switch for 4-way merging with `__sentinels` turned off.

Note that 4-way merging is always stable!

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

### 6.38 `__gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

#### Public Member Functions

- `_RAIter3 operator()` (`_RAIterIterator __seqs_begin`, `_RAIterIterator __seqs_end`, `_RAIter3 __target`, `__↵ DifferenceTp __length`, `_Compare __comp`)

### 6.38.1 Detailed Description

```
template<typename _RAIterIterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_4_variant_sentinel_switch< true, _RAIterIterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for 4-way merging with `__sentinels` turned on.

Note that 4-way merging is always stable!

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 6.39 `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

### Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, const typename std::iterator\_traits< typename std::iterator\_traits< _RAIterlterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp)`

#### 6.39.1 Detailed Description

```
template<bool __sentinels, bool __stable, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< __sentinels, __stable, _RAIterlterator, _RAIter3, _DifferenceTp,
_Compare >
```

Switch for k-way merging with `__sentinels` turned on.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 6.40 `__gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >` Struct Template Reference

```
#include <multiway_merge.h>
```

### Public Member Functions

- `_RAIter3 operator() (_RAIterlterator __seqs_begin, _RAIterlterator __seqs_end, _RAIter3 __target, const typename std::iterator\_traits< typename std::iterator\_traits< _RAIterlterator >::value_type::first_type >::value_type & __sentinel, _DifferenceTp __length, _Compare __comp)`

#### 6.40.1 Detailed Description

```
template<bool __stable, typename _RAIterlterator, typename _RAIter3, typename _DifferenceTp, typename _Compare>
struct __gnu_parallel::__multiway_merge_k_variant_sentinel_switch< false, __stable, _RAIterlterator, _RAIter3, _DifferenceTp, _Compare >
```

Switch for k-way merging with `__sentinels` turned off.

The documentation for this struct was generated from the following file:

## 6.41 `std::__new_allocator< _Tp >` Class Template Reference

```
#include <memory>
```

Inheritance diagram for `std::__new_allocator< _Tp >`:

### Public Types

- `typedef std::ptrdiff_t difference_type`
- `typedef std::true\_type propagate_on_container_move_assignment`
- `typedef std::size_t size_type`
- `typedef _Tp value_type`

## Public Member Functions

- constexpr `__new_allocator` (const `__new_allocator` &) noexcept
- template<typename `_Tp1` >  
constexpr `__new_allocator` (const `__new_allocator`< `_Tp1` > &) noexcept
- `_Tp` \* `allocate` (size\_type `_n`, const void \*`==static_cast`< const void \* >(0))
- void `deallocate` (`_Tp` \*`_p`, size\_type `_n`)

## Friends

- template<typename `_Up` >  
constexpr bool `operator==` (const `__new_allocator` &, const `__new_allocator`< `_Up` > &) noexcept

### 6.41.1 Detailed Description

```
template<typename _Tp>
class std::__new_allocator< _Tp >
```

An allocator that uses global `new`, as per C++03 [20.4.1].  
This is precisely the allocator defined in the C++ Standard.

- all allocation calls `operator new`
- all deallocation calls `operator delete`

This is the default base-class implementation of `std::allocator`, and is also the base-class of the `__gnu_cxx::new_allocator` extension. You should use either `std::allocator` or `__gnu_cxx::new_allocator` instead of using this directly.

#### Template Parameters

<code>_Tp</code>	Type of allocated object.
------------------	---------------------------

The documentation for this class was generated from the following file:

- [bits/new\\_allocator.h](#)

## 6.42 std::\_\_numeric\_limits\_base Struct Reference

### 6.42.1 Detailed Description

Part of `std::numeric_limits`.

The `static const` members are usable as integral constant expressions.

#### Note

This is a separate class for purposes of efficiency; you should only access these members as part of an instantiation of the `std::numeric_limits` class.

### 6.42.2 Member Data Documentation

**6.42.2.1 digits** constexpr int `std::__numeric_limits_base::digits` [static], [constexpr]

The number of `radix` digits that be represented without change: for integer types, the number of non-sign bits in the mantissa; for floating types, the number of `radix` digits in the mantissa.

**6.42.2.2 digits10** constexpr int `std::__numeric_limits_base::digits10` [static], [constexpr]

The number of base 10 digits that can be represented without change.

**6.42.2.3 has\_denorm** constexpr [float\\_denorm\\_style](#) `std::__numeric_limits_base::has_denorm` [static], [constexpr]

See `std::float_denorm_style` for more information.

**6.42.2.4 has\_denorm\_loss** constexpr bool `std::__numeric_limits_base::has_denorm_loss` [static], [constexpr]

True if loss of accuracy is detected as a denormalization loss, rather than as an inexact result.

**6.42.2.5 has\_infinity** constexpr bool `std::__numeric_limits_base::has_infinity` [static], [constexpr]

True if the type has a representation for positive infinity.

**6.42.2.6 has\_quiet\_NaN** constexpr bool `std::__numeric_limits_base::has_quiet_NaN` [static], [constexpr]

True if the type has a representation for a quiet (non-signaling) Not a Number.

**6.42.2.7 has\_signaling\_NaN** `constexpr bool std::__numeric_limits_base::has_signaling_NaN [static], [constexpr]`

True if the type has a representation for a signaling Not a Number.

**6.42.2.8 is\_bounded** `constexpr bool std::__numeric_limits_base::is_bounded [static], [constexpr]`

True if the set of values representable by the type is finite. All built-in types are bounded, this member would be false for arbitrary precision types.

**6.42.2.9 is\_exact** `constexpr bool std::__numeric_limits_base::is_exact [static], [constexpr]`

True if the type uses an exact representation. All integer types are exact, but not all exact types are integer. For example, rational and fixed-exponent representations are exact but not integer.

**6.42.2.10 is\_iec559** `constexpr bool std::__numeric_limits_base::is_iec559 [static], [constexpr]`

True if-and-only-if the type adheres to the IEC 559 standard, also known as IEEE 754. (Only makes sense for floating point types.)

**6.42.2.11 is\_integer** `constexpr bool std::__numeric_limits_base::is_integer [static], [constexpr]`

True if the type is integer.

**6.42.2.12 is\_modulo** `constexpr bool std::__numeric_limits_base::is_modulo [static], [constexpr]`

True if the type is *modulo*. A type is modulo if, for any operation involving  $+$ ,  $-$ , or  $*$  on values of that type whose result would fall outside the range  $[\text{min}(), \text{max}())$ , the value returned differs from the true value by an integer multiple of  $\text{max}() - \text{min}() + 1$ . On most machines, this is false for floating types, true for unsigned integers, and true for signed integers. See PR22200 about signed integers.

**6.42.2.13 is\_signed** `constexpr bool std::__numeric_limits_base::is_signed [static], [constexpr]`

True if the type is signed.

**6.42.2.14 is\_specialized** `constexpr bool std::__numeric_limits_base::is_specialized [static], [constexpr]`

This will be true for all fundamental types (which have specializations), and false for everything else.

**6.42.2.15 max\_digits10** `constexpr int std::__numeric_limits_base::max_digits10 [static], [constexpr]`

The number of base 10 digits required to ensure that values which differ are always differentiated.

**6.42.2.16 max\_exponent** `constexpr int std::__numeric_limits_base::max_exponent [static], [constexpr]`

The maximum positive integer such that *radix* raised to the power of (one less than that integer) is a representable finite floating point number.

**6.42.2.17 max\_exponent10** `constexpr int std::__numeric_limits_base::max_exponent10 [static], [constexpr]`

The maximum positive integer such that 10 raised to that power is in the range of representable finite floating point numbers.

**6.42.2.18 min\_exponent** `constexpr int std::__numeric_limits_base::min_exponent [static], [constexpr]`  
 The minimum negative integer such that `radix` raised to the power of (one less than that integer) is a normalized floating point number.

**6.42.2.19 min\_exponent10** `constexpr int std::__numeric_limits_base::min_exponent10 [static], [constexpr]`  
 The minimum negative integer such that 10 raised to that power is in the range of normalized floating point numbers.

**6.42.2.20 radix** `constexpr int std::__numeric_limits_base::radix [static], [constexpr]`  
 For integer types, specifies the base of the representation. For floating types, specifies the base of the exponent representation.

**6.42.2.21 round\_style** `constexpr float_round_style std::__numeric_limits_base::round_style [static], [constexpr]`  
 See `std::float_round_style` for more information. This is only meaningful for floating types; integer types will all be `round_toward_zero`.

**6.42.2.22 tinyness\_before** `constexpr bool std::__numeric_limits_base::tinyness_before [static], [constexpr]`  
 True if tininess is detected before rounding. (see IEC 559)

**6.42.2.23 traps** `constexpr bool std::__numeric_limits_base::traps [static], [constexpr]`  
 True if trapping is implemented for this type.

- `static char * _S_start_free`

### 6.48.1 Detailed Description

Base class for `__pool_alloc`.

Uses various allocators to fulfill underlying requests (and makes as few requests as possible when in default high-speed pool mode).

Important implementation properties: 0. If globally mandated, then allocate objects from new

1. If the clients request an object of size  $> \_S\_max\_bytes$ , the resulting object will be obtained directly from new
2. In all other cases, we allocate an object of size exactly `\_S_round_up(requested_size)`. Thus the client has enough size information that we can return the object to the proper free list without permanently losing part of the object.

The documentation for this class was generated from the following file:

- [pool\\_allocator.h](#)

#### 6.50.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class __gnu_cxx::__rc_string_base<_CharT, _Traits, _Alloc>
```

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```

                                     [_Rep]
                                     _M_length
[_rc_string_base<char_type>]         _M_capacity
_M_datapointer                      _M_refcount
_M_p ----->                      unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_refdata()`, and `__rc_string_base::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a C++ string implementation.

## 6.54.4 Member Data Documentation

**6.54.4.1 `__new_val`** `template<typename _It , typename _Op , typename _Tp >`  
`const _Tp& __gnu_parallel::__replace_if_selector< _It, _Op, _Tp >::__new_val`  
Value to replace with.  
Referenced by [\\_\\_gnu\\_parallel::\\_\\_replace\\_if\\_selector< \\_It, \\_Op, \\_Tp >::operator\(\)](#).

**6.54.4.2 `_M_finish_iterator`** `template<typename _It >`  
`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator [inherited]`  
\_iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).  
The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

6.55 `__gnu_parallel::__replace_selector< _It, _Tp >` Struct Template Reference

`#include <for_each_selectors.h>`

Inheritance diagram for `__gnu_parallel::__replace_selector< _It, _Tp >`:

## Public Member Functions

- [\\_\\_replace\\_selector](#) (const `_Tp & __new_val`)
- `bool operator() (_Tp &__v, _It __i)`

## Public Attributes

- const `_Tp & __new_val`
- `_It _M_finish_iterator`

### 6.55.1 Detailed Description

```
template<typename _It, typename _Tp>
struct __gnu_parallel::__replace_selector<_It, _Tp>
```

`std::replace()` selector.

### 6.55.2 Constructor & Destructor Documentation

**6.55.2.1 `__replace_selector()`** `template<typename _It , typename _Tp >`  
`__gnu_parallel::__replace_selector<_It, _Tp>::__replace_selector (`  
 `const _Tp & __new_val ) [inline], [explicit]`

Constructor.

Parameters

<code>__new_val</code>	Value to replace with.
------------------------	------------------------

### 6.55.3 Member Function Documentation

**6.55.3.1 `operator>()`** `template<typename _It , typename _Tp >`  
`bool __gnu_parallel::__replace_selector<_It, _Tp>::operator() (`  
 `_Tp & __v,`  
 `_It __i ) [inline]`

Functor execution.

Parameters

<code>__v</code>	Current value.
<code>__i</code>	iterator referencing object.

References [\\_\\_gnu\\_parallel::\\_\\_replace\\_selector<\\_It, \\_Tp>::\\_\\_new\\_val](#).

### 6.55.4 Member Data Documentation

**6.55.4.1 `__new_val`** `template<typename _It , typename _Tp >`  
`const _Tp& __gnu_parallel::__replace_selector<_It, _Tp>::__new_val`  
 Value to replace with.  
 Referenced by [\\_\\_gnu\\_parallel::\\_\\_replace\\_selector<\\_It, \\_Tp>::operator\(\)\(\)](#).

**6.55.4.2 `_M_finish_iterator`** `template<typename _It >`  
`_It __gnu_parallel::__generic_for_each_selector<_It>::__M_finish_iterator [inherited]`  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).  
 The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.56 `__gnu_cxx::__scoped_lock` Class Reference

```
#include <concurrency.h>
```

### Public Types

- `typedef __mutex __mutex_type`

### Public Member Functions

- `__scoped_lock (__mutex_type &__name)`

#### 6.56.1 Detailed Description

Scoped lock idiom.

The documentation for this class was generated from the following file:

- [concurrency.h](#)

## 6.57 `__gnu_parallel::__transform1_selector<_It>` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__transform1_selector<_It>`:

### Public Member Functions

- `template<typename _Op>  
bool operator() (_Op &__o, _It __i)`

### Public Attributes

- `_It \_M\_finish\_iterator`

#### 6.57.1 Detailed Description

```
template<typename _It>
```

```
struct __gnu_parallel::__transform1_selector<_It>
```

`std::transform()` `__selector`, one input sequence variant.

#### 6.57.2 Member Function Documentation

##### 6.57.2.1 `operator>()()` `template<typename _It>`

```
template<typename _Op>
```

```
bool __gnu_parallel::__transform1_selector<_It>::operator() (  
    _Op & __o,  
    _It __i ) [inline]
```

Functor execution.

## Parameters

<code>_↔ _o</code>	Operator.
<code>_↔ _i</code>	iterator referencing object.

## 6.57.3 Member Data Documentation

6.57.3.1 `_M_finish_iterator` `template<typename _It>`

`_It __gnu_parallel::__generic_for_each_selector<_It>::_M_finish_iterator` [inherited]  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

6.58 `__gnu_parallel::__transform2_selector<_It>` Struct Template Reference

```
#include <for_each_selectors.h>
```

Inheritance diagram for `__gnu_parallel::__transform2_selector<_It>`:

## Public Member Functions

- `template<typename _Op>`  
`bool operator() (_Op &__o, _It __i)`

## Public Attributes

- `_It _M_finish_iterator`

## 6.58.1 Detailed Description

```
template<typename _It>
```

```
struct __gnu_parallel::__transform2_selector<_It>
```

`std::transform()` \_\_selector, two input sequences variant.

## 6.58.2 Member Function Documentation

6.58.2.1 `operator()()` `template<typename _It>`

```
template<typename _Op>
```

```
bool __gnu_parallel::__transform2_selector<_It>::operator() (
    _Op & __o,
    _It __i ) [inline]
```

Functor execution.

## Parameters

<code>_↔ _o</code>	Operator.
------------------------	-----------

## Parameters

<code>_↔</code>	iterator referencing object.
<code>_i</code>	

## 6.58.3 Member Data Documentation

**6.58.3.1 `_M_finish_iterator`** `template<typename _It >`  
`_It __gnu_parallel::__generic_for_each_selector< _It >::_M_finish_iterator` [inherited]  
 \_Iterator on last element processed; needed for some algorithms (e. g. `std::transform()`).  
 The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

6.59 `__gnu_parallel::__unary_negate< _Predicate, argument_type >` Class Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::__unary_negate< _Predicate, argument_type >`:

## Public Types

- typedef [argument\\_type](#) `argument_type`
- typedef bool [result\\_type](#)

## Public Member Functions

- `__unary_negate` (const `_Predicate` &`__x`)
- bool `operator()` (const [argument\\_type](#) &`__x`)

## Protected Attributes

- `_Predicate _M_pred`

## 6.59.1 Detailed Description

```
template<typename _Predicate, typename argument\_type>
class __gnu_parallel::__unary_negate< _Predicate, argument_type >
```

Similar to `std::unary_negate`, but giving the argument types explicitly.

## 6.59.2 Member Typedef Documentation

**6.59.2.1 `argument_type`** typedef `argument_type` `std::unary_function< argument\_type , bool >::argument↔`  
`_type` [inherited]  
`argument_type` is the type of the argument

**6.59.2.2 result\_type** typedef bool `std::unary_function< argument_type , bool >::result_type` [inherited]  
`result_type` is the return type

The documentation for this class was generated from the following file:

- [base.h](#)

## 6.60 `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>` Class Template Reference

```
#include <vstring.h>
```

Inherits `_Base<_CharT, _Traits, _Alloc>`.

### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef `__gnu_cxx::__normal_iterator< const_pointer, __versa_string >` **const\_iterator**
- typedef `_CharT_alloc_traits::const_pointer` **const\_pointer**

#### 6.60.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc, template< typename, typename, typename > class _Base>
class __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >
```

Template class `__versa_string`.

Data structure managing sequences of characters and character-like objects.

#### 6.60.2 Constructor & Destructor Documentation

**6.60.2.1 `__versa_string()` [1/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`  
`template< typename, typename, typename > class _Base>`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (`  
`const _Alloc & __a = _Alloc() ) [inline], [explicit], [noexcept]`

Construct an empty string using allocator `a`.

**6.60.2.2 `__versa_string()` [2/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`  
`template< typename, typename, typename > class _Base>`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (`  
`const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Construct string with copy of value of `__str`.

#### Parameters

<code>__str</code>	Source string.
--------------------	----------------

**6.60.2.3 `__versa_string()` [3/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`

```
template< typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    __versa_string< _CharT, _Traits, _Alloc, _Base > && __str ) [inline], [noexcept]
String move constructor.
```

**Parameters**

<code>__str</code>	Source string.
--------------------	----------------

The newly-constructed string contains the exact contents of `__str`. The contents of `__str` are a valid, but unspecified string.

**6.60.2.4 `__versa_string()` [4/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`  
`template< typename, typename, typename > class _Base>`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (`  
 `std::initializer_list< _CharT > __l,`  
 `const _Alloc & __a = _Alloc() ) [inline]`

Construct string from an initializer list.

**Parameters**

<code>__l</code>	<code>std::initializer_list</code> of characters.
<code>__a</code>	Allocator to use (default is default allocator).

**6.60.2.5 `__versa_string()` [5/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`  
`template< typename, typename, typename > class _Base>`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (`  
 `const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,`  
 `size_type __pos,`  
 `size_type __n = npos ) [inline]`

Construct string as copy of a substring.

**Parameters**

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy (default remainder).

**6.60.2.6 `__versa_string()` [6/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,`  
`template< typename, typename, typename > class _Base>`  
`__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (`  
 `const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,`  
 `size_type __pos,`  
 `size_type __n,`  
 `const _Alloc & __a ) [inline]`

Construct string as copy of a substring.

## Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

**6.60.2.7 `__versa_string()` [7/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base>`

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _CharT * __s,
    size_type __n,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string initialized by a character array.

## Parameters

<code>↔ __s</code>	Source character array.
<code>↔ __n</code>	Number of characters to copy.
<code>↔ __a</code>	Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `"0"` has no special meaning.

**6.60.2.8 `__versa_string()` [8/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base>`

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    const _CharT * __s,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as copy of a C string.

## Parameters

<code>↔ __s</code>	Source C string.
<code>↔ __a</code>	Allocator to use (default is default allocator).

**6.60.2.9 `__versa_string()` [9/10]** `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base>`

```
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::__versa_string (
    size_type __n,
    _CharT __c,
    const _Alloc & __a = _Alloc() ) [inline]
```

Construct string as multiple characters.

## Parameters

<code>__n</code>	Number of characters.
<code>__c</code>	Character to use.
<code>__a</code>	Allocator to use (default is default allocator).

**6.60.2.10** `__versa_string()` [10/10] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>`  
`__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::__versa_string (`  
`_InputIterator __beg,`  
`_InputIterator __end,`  
`const _Alloc & __a = _Alloc() ) [inline]`

Construct string as copy of a range.

## Parameters

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

**6.60.2.11** `~__versa_string()` `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::~__versa_string ( ) [inline], [noexcept]`  
 Destroy the string instance.

**6.60.3 Member Function Documentation**

**6.60.3.1** `append()` [1/7] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`template<class _InputIterator, typename = std::_RequireInputIter<_InputIterator>>`  
`__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (`  
`_InputIterator __first,`  
`_InputIterator __last ) [inline]`

Append a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

**Returns**

Reference to this string.

Appends characters in the range [first,last) to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

**6.60.3.2 append()** [2/7] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append (  
    const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::size\(\)](#).

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::append\(\)](#), [std::getline\(\)](#), [\\_\\_gnu\\_cxx::operator+\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::operator+=\(\)](#).

**6.60.3.3 append()** [3/7] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::append (  
    const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str,  
    size_type __pos,  
    size_type __n ) [inline]`

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of str to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

**6.60.3.4 `append()`** [4/7] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (`  
`const _CharT * __s ) [inline]`

Append a C string.

#### Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

#### Returns

Reference to this string.

**6.60.3.5 `append()`** [5/7] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (`  
`const _CharT * __s,`  
`size_type __n ) [inline]`

Append a C substring.

#### Parameters

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

#### Returns

Reference to this string.

**6.60.3.6 `append()`** [6/7] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (`  
`size_type __n,`  
`_CharT __c ) [inline]`

Append multiple characters.

#### Parameters

<code>__n</code>	The number of characters to append.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

Appends *n* copies of *c* to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.7 append()** [7/7] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::append (   
          std::initializer_list<_CharT> __l ) [inline]`

Append an initializer\_list of characters.

**Parameters**

↩	The initializer_list of characters to append.
↩	
↩	
↩	
↩	

**Returns**

Reference to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::append\(\)](#).

**6.60.3.8 assign()** [1/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (   
          __versa_string<_CharT, _Traits, _Alloc, _Base> && __str ) [inline], [noexcept]`

Set value to contents of another string.

**Parameters**

__str	Source string to use.
-------	-----------------------

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::swap\(\)](#).

**6.60.3.9 assign()** [2/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
template<class _InputIterator , typename = std::RequireInputIter<_InputIterator>>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (   
          _InputIterator __first,  
          _InputIterator __last ) [inline]`

Set value to a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

## Returns

Reference to this string.

Sets value of string to characters in the range [first,last).

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

**6.60.3.10 assign() [3/8]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (   
const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Set value to contents of another string.

## Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

## Returns

Reference to this string.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::assign\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits](#)

**6.60.3.11 assign() [4/8]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::assign (   
const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str,   
size_type __pos,   
size_type __n ) [inline]`

Set value to a substring of a string.

## Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.12 assign()** [5/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (`  
`const _CharT * __s ) [inline]`

Set value to contents of a C string.

#### Parameters

<code>__s</code>	The C string to use.
------------------	----------------------

#### Returns

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.13 assign()** [6/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (`  
`const _CharT * __s,`  
`size_type __n ) [inline]`

Set value to a C substring.

#### Parameters

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

#### Returns

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.14 assign()** [7/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::assign (`  
`size_type __n,`  
`_CharT __c ) [inline]`

Set value to multiple characters.

**Parameters**

<a href="#"><code>__↔ _n</code></a>	Length of the resulting string.
<a href="#"><code>__↔ _c</code></a>	The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.15 assign()** [8/8] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign (   
std::initializer_list< _CharT > __l ) [inline]`

Set value to an `initializer_list` of characters.

**Parameters**

<a href="#"><code>↔ __↔ ↔ __↔ l</code></a>	The <code>initializer_list</code> of characters to assign.
--	--

**Returns**

Reference to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::assign\(\)](#).

**6.60.3.16 at()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::at (   
size_type __n ) [inline]`

Provides access to the data contained in the string.

**Parameters**

<a href="#"><code>__↔ _n</code></a>	The index of the character to access.
---	---------------------------------------

**Returns**

Read/write reference to the character.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.17 at()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::at (size_type __n) const [inline]`

Provides access to the data contained in the string.

## Parameters

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

## Returns

Read-only (const) reference to the character.

## Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.18 back()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::back ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the last element of the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::operator\[\]\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::operator\[\]\(\)](#).

**6.60.3.19 back()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::back ( ) [inline], [noexcept]`

Returns a read/write reference to the data at the last element of the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::operator\[\]\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::operator\[\]\(\)](#).

**6.60.3.20 begin()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**6.60.3.21 begin()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`

```
iterator \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::begin ( ) [inline], [noexcept]
```

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_Traits, \_Alloc, \_Base >::crend(), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_Traits,

**6.60.3.22 c\_str()** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`

```
const _CharT * \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::c_str ( ) const [inline],
[noexcept]
```

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

**6.60.3.23 capacity()** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`

```
size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::capacity ( ) const [inline],
[noexcept]
```

Returns the total number of characters that the string can hold before needing to allocate more memory.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_Traits, \_Alloc, \_Base >::push\_back(), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_T

**6.60.3.24 cbegin()** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::cbegin ( ) const
[inline], [noexcept]
```

Returns a read-only (constant) iterator that points to the first character in the string.

**6.60.3.25 cend()** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`

```
const_iterator \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::cend ( ) const [inline],
[noexcept]
```

Returns a read-only (constant) iterator that points one past the last character in the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_Traits, \_Alloc, \_Base >::size().

**6.60.3.26 clear()** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`

```
void \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::clear ( ) [inline], [noexcept]
```

Erases the string, making it empty.

**6.60.3.27 compare()** [1/6] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`

```
int \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::compare (
    const \_\_versa\_string< _CharT, _Traits, _Alloc, _Base > & __str ) const [inline]
```

Compare to a string.

## Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::data\(\)](#), [std::min\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_](#)

**6.60.3.28 compare()** [2/6] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare (`  
`const _CharT * __s ) const`

Compare to a C string.

## Parameters

<code>__s</code>	C string to compare against.
------------------	------------------------------

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(), s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#).

**6.60.3.29 compare()** [3/6] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare (`  
`size_type __pos,`  
`size_type __n,`  
`const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str ) const`

Compare substring to a string.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::data\(\)](#), [std::min\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_](#)

**6.60.3.30 compare()** [4/6] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`  
`int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare (`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s ) const`

Compare substring to a C string.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

**Returns**

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#).

**6.60.3.31 compare()** [5/6] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`  
`int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::compare (`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s,`  
`size_type __n2 ) const`

Compare substring against a character array.

**Parameters**

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(), __s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `__s` must have at least `n2` characters, `l0` has no special meaning.

References [std::min\(\)](#).

**6.60.3.32 compare()** [6/6] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`

```
int __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::compare (
    size_type __pos1,
    size_type __n1,
    const __versa_string<_CharT, _Traits, _Alloc, _Base> & __str,
    size_type __pos2,
    size_type __n2 ) const
```

Compare substring to a substring.

## Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of <code>str</code> .
<code>__n2</code>	Number of characters in substring of <code>str</code> .

## Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::data\(\)](#), and [std::min\(\)](#).

**6.60.3.33 copy()** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`

```
__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, ↵
_traits, _Alloc, _Base>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0 ) const
```

Copy substring into C string.

**Parameters**

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

**Returns**

Number of characters actually copied

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
--------------------------------	-----------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**6.60.3.34 `crbegin()`** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::end()`.

**6.60.3.35 `crend()`** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> const_reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::crend ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::begin()`.

**6.60.3.36 `data()`** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> const _CharT * __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::data ( ) const [inline], [noexcept]`

Return const pointer to contents.

This is a handle to internal data. Do not modify or dire things may happen.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::compare()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_first_not_of()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find_last_of()`, and `__gnu_cxx::operator==( )`.

**6.60.3.37 `empty()`** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base> bool __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::empty ( ) const [inline], [noexcept]`

Returns true if the string is empty. Equivalent to `*this == ""`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.38 end()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
const_iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end ( ) const [inline],  
[noexcept]`

Returns a read-only (constant) iterator that points one past the last character in the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

**6.60.3.39 end()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::end ( ) [inline], [noexcept]`

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::crbegin\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::crend\(\)](#).

**6.60.3.40 erase()** [1/3] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::erase (   
    const_iterator __first,  
    const_iterator __last ) [inline]`

Remove a range of characters.

#### Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

#### Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**6.60.3.41 erase()** [2/3] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::erase (   
    const_iterator __position ) [inline]`

Remove one character.

#### Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

#### Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**6.60.3.42 erase()** [3/3] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
 __versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::erase (`  
     `size_type __pos = 0,`  
     `size_type __n = npos ) [inline]`

Remove characters.

#### Parameters

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
--------------------------------	---

Removes `__n` characters from this string starting at `__pos`. The length of the string is reduced by `__n`. If there are  $< __n$  characters to remove, the remainder of the string is truncated. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#).

**6.60.3.43 find()** [1/4] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
 __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵  
 _Traits, _Alloc, _Base >::find (`  
     `_CharT __c,`  
     `size_type __pos = 0 ) const [noexcept]`

Find position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.60.3.44 find()** [2/4] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
 size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (`  
     `const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,`  
     `size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a string.

## Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::data\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

```
6.60.3.45 find() [3/4] template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _CharT, ↵
_Traits, _Alloc, _Base >::find (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find position of a C substring.

## Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to search for.

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::find\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::find\(\)](#).

```

typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::find (
    const _CharT * __s,
    size_type __pos = 0 ) const [inline]
```

Find position of a C string.

## Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::find\(\)](#).

**6.60.3.47 find\_first\_not\_of()** [1/4] `template<typename _CharT , typename _Traits , typename _Alloc ,

_Traits, _Alloc, _Base >::find_first_not_of (`  
    `_CharT __c,`  
    `size_type __pos = 0 ) const [noexcept]`

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.60.3.48 find\_first\_not\_of()** [2/4] `template<typename _CharT , typename _Traits , typename _Alloc ,  
template< typename, typename, typename > class _Base>

    `const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,`  
    `size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::data\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

_Traits, _Alloc, _Base >::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find position of a character not in C substring.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.60.3.50 `find_first_not_of()` [4/4]** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base >::find_first_not_of (`  
 `const _CharT * __s,`  
 `size_type __pos = 0 ) const [inline]`

Find position of a character not in C string.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

const_reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) const  
[inline], [noexcept]`

Returns a read-only (constant) reference to the data at the first element of the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< \\_CharT, \\_Traits, \\_Alloc, \\_Base >::operator\[\]\(\)](#).

**6.60.3.64 front()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
reference __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::front ( ) [inline], [noexcept]`

Returns a read/write reference to the data at the first element of the string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< \\_CharT, \\_Traits, \\_Alloc, \\_Base >::operator\[\]\(\)](#).

**6.60.3.65 get\_allocator()** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
allocator_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::get_allocator ( )  
const [inline], [noexcept]`

Return copy of allocator used to construct this string.

**6.60.3.66 insert()** [1/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert (`  
`const_iterator __p,`  
`_CharT __c ) [inline]`

Insert one character.

#### Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

#### Returns

Iterator referencing newly inserted char.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.67 insert()** [2/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
template<class _InputIterator , typename = std::_RequireInputIter<_InputIterator>>  
iterator __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert (`  
`const_iterator __p,`  
`_InputIterator __beg,`  
`_InputIterator __end ) [inline]`

Insert a range of characters.

#### Parameters

<code>__p</code>	Const_iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

#### Returns

Iterator referencing the first inserted char.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range [beg,end). If adding characters causes the length to exceed max\_size(), length\_error is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

**6.60.3.68 insert()** [3/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (`  
`const_iterator __p,`  
`size_type __n,`  
`_CharT __c ) [inline]`

Insert multiple characters.

#### Parameters

<a href="#"><code>__p</code></a>	Const_iterator referencing location in string to insert at.
<a href="#"><code>__n</code></a>	Number of characters to insert
<a href="#"><code>__c</code></a>	The character to insert.

#### Returns

Iterator referencing the first inserted char.

#### Exceptions

<code>std::length_error</code>	If new length exceeds max_size().
--------------------------------	-----------------------------------

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed max\_size(), length\_error is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

Referenced by [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::insert\(\)](#).

**6.60.3.69 insert()** [4/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (`  
`const_iterator __p,`  
`std::initializer_list< _CharT > __l ) [inline]`

Insert an initializer\_list of characters.

#### Parameters

<a href="#"><code>__p</code></a>	Const_iterator referencing location in string to insert at.
<a href="#"><code>__l</code></a>	The initializer_list of characters to insert.

**Returns**

Iterator referencing the first inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::insert\(\)](#).

**6.60.3.70 `insert()` [5/9]** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::insert (`  
`size_type __pos,`  
`const _CharT * __s ) [inline]`

Insert a C string.

**Parameters**

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#).

`size_type __pos,`  
`const _CharT * __s,`  
`size_type __n ) [inline]`

Insert a C substring.

**Parameters**

<code>__pos</code>	Iterator referencing location in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#).

**6.60.3.72 insert()** [7/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (`  
`size_type __pos,`  
`size_type __n,`  
`_CharT __c ) [inline]`

Insert multiple characters.

**Parameters**

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.73 insert()** [8/9] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::insert (`  
`size_type __pos1,`  
`const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Insert value of a string.

## Parameters

## Parameters

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits,](#)

`size_type __pos1,`  
`const __versa_string<_CharT, _Traits, _Alloc, _Base > & __str,`  
`size_type __pos2,`  
`size_type __n ) [inline]`

Insert a substring.

## Parameters

<code>__pos1</code>	Iterator referencing location in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in str to insert.
<code>__n</code>	Number of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .

Starting at `__pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

**6.60.3.75 length()** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>  
size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::length ( ) const [inline],  
[noexcept]`

Returns the number of characters in the string, not including any null-termination.

**6.60.3.76 max\_size()** `template<typename _CharT , typename _Traits , typename _Alloc , template<  
typename, typename, typename > class _Base>  
size_type \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::max_size ( ) const [inline],  
[noexcept]`

Returns the size() of the largest possible string.

Referenced by [std::getline\(\)](#).

**6.60.3.77 operator+=( ) [1/4]** `template<typename _CharT , typename _Traits , typename _Alloc , template<  
typename, typename, typename > class _Base>  
\_\_versa\_string & \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::operator+= (   
_CharT __c ) [inline]`

Append a character.

#### Parameters

<code>__c</code>	The character to append.
------------------	--------------------------

#### Returns

Reference to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< [\\_CharT](#), [\\_Traits](#), [\\_Alloc](#), [\\_Base](#) >::push\_back().

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator+= (
    std::initializer_list<_CharT> __l ) [inline]
```

Append an `initializer_list` of characters.

#### Parameters

<code>__l</code>	The <code>initializer_list</code> of characters to be appended.
------------------	---

#### Returns

Reference to this string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::append\(\)](#).

**6.60.3.81 `operator=()` [1/5]** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`

```
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator= (
    __versa_string<_CharT, _Traits, _Alloc, _Base> && __str ) [inline], [noexcept]
```

String move assignment operator.

#### Parameters

<code>__str</code>	Source string.
--------------------	----------------

The contents of `__str` are moved into this string (without copying). `__str` is a valid, but unspecified string.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::swap\(\)](#).

**6.60.3.82 `operator=()` [2/5]** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`

```
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (
    _CharT __c ) [inline]
```

Set value to string of length 1.

#### Parameters

	Source character.
<code>__c</code>	

Assigning to a character makes this string length 1 and `(*this)[0] == __c`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< \\_CharT, \\_Traits, \\_Alloc, \\_Base >::assign\(\)](#).

**6.60.3.83 operator=()** [3/5] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`  
`__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (`  
 `const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Assign the value of `str` to this string.

#### Parameters

<code>__str</code>	Source string.
--------------------	----------------

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< \\_CharT, \\_Traits, \\_Alloc, \\_Base >::assign\(\)](#).

`__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (`  
 `const _CharT * __s ) [inline]`

Copy contents of `__s` into this string.

#### Parameters

	Source null-terminated string.
<code>__s</code>	

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string< \\_CharT, \\_Traits, \\_Alloc, \\_Base >::assign\(\)](#).

**6.60.3.85 operator=()** [5/5] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>`  
`__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::operator= (`  
 `std::initializer_list< _CharT > __l ) [inline]`

Set value to string constructed from initializer list.

#### Parameters

	std::initializer_list.
	
	
	
<code>/</code>	

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::assign\(\)](#).

**6.60.3.86 `operator[]()`** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base> const_reference __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::operator[] (size_type __pos) const [inline], [noexcept]`

Subscript access to the data contained in the string.

#### Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

#### Returns

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::size\(\)](#).

reverse_iterator __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::rend ( ) [inline],  
[noexcept]`  
Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.  
References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::begin\(\)](#).

**6.60.3.94 replace()** [1/11] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>  
template<class _InputIterator , typename = std::RequireInputIter<_InputIterator>>  
__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base>::replace (   
    const_iterator __i1,  
    const_iterator __i2,`

```

    __InputIterator __k1,
    __InputIterator __k2 ) [inline]

```

Replace range of characters with range.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.95 `replace()` [2/11]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`

`const_iterator __i1,`  
`const_iterator __i2,`  
`const _CharT * __s ) [inline]`

Replace range of characters with C string.

#### Parameters

<a href="#">↵</a> __i1	Iterator referencing start of range to replace.
<a href="#">↵</a> __i2	Iterator referencing end of range to replace.
<a href="#">↵</a> __s	C string value to insert.

#### Returns

Reference to this string.

#### Exceptions

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Removes the characters in the range [i1,i2). In place, the characters of \_\_s are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string](#)< \_CharT, \_Traits, \_Alloc, \_Base >::replace().

**6.60.3.97 replace()** [4/11] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename > class _Base>  
\_\_versa\_string & \_\_gnu\_cxx::\_\_versa\_string< _CharT, _Traits, _Alloc, _Base >::replace (`  
`const_iterator __i1,`  
`const_iterator __i2,`  
`const _CharT * __s,`  
`size_type __n ) [inline]`

Replace range of characters with C substring.

#### Parameters

<a href="#">↵</a> __i1	Iterator referencing start of range to replace.
<a href="#">↵</a> __i2	Iterator referencing end of range to replace.
<a href="#">↵</a> __s	C string value to insert.
<a href="#">↵</a> __n	Number of characters from s to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, the first `n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#).

**6.60.3.98 replace()** [5/11] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (  
    const_iterator __i1,  
    const_iterator __i2,  
    size_type __n,  
    _CharT __c ) [inline]`

Replace range of characters with multiple characters.

**Parameters**

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.99 replace()** [6/11] `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>  
__versa_string & __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::replace (  
    const_iterator __i1,  
    const_iterator __i2,  
    std::initializer_list<_CharT> __l ) [inline]`

Replace range of characters with `initializer_list`.

## Parameters

<a href="#"><code>↔</code></a> <code>_i1</code>	Iterator referencing start of range to replace.
<a href="#"><code>↔</code></a> <code>_i2</code>	Iterator referencing end of range to replace.
<a href="#"><code>↔</code></a> <code>_l</code>	The initializer_list of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[i1,i2)`. In place, characters in the range `[k1,k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#).

__versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (`  
`size_type __pos,`  
`size_type __n,`  
`const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str ) [inline]`

Replace characters with value from another string.

## Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos,pos+n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::append\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::append\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::append\(\)](#).

`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s ) [inline]`

Replace characters with value of a C string.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos,pos + n1)` from this string. In place, the characters of `__s` are inserted. If `pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base >::replace\(\)](#).

`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s,`  
`size_type __n2 ) [inline]`

Replace characters with value of a C substring.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>__s</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.103 replace()** [10/11] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base> __versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (`  
`size_type __pos,`  
`size_type __n1,`  
`size_type __n2,`  
`_CharT __c ) [inline]`

Replace characters with multiple characters.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.60.3.104 replace()** [11/11] `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base> __versa_string & __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::replace (`  
`size_type __pos1,`  
`size_type __n1,`  
`const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,`  
`size_type __pos2,`  
`size_type __n2 ) [inline]`

Replace characters with value from another string.

## Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of str to use.
<code>__n2</code>	Number of characters from str to use.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos1, pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::replace\(\)](#).

**6.60.3.105 `reserve()`** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::reserve (`  
`size_type __res_arg = 0 ) [inline]`

Attempt to preallocate enough memory for specified number of characters.

## Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

## Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

Referenced by [\\_\\_gnu\\_cxx::operator+\(\)](#), and [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::shrink\\_to\\_fit\(\)](#).

**6.60.3.106 `resize()`** `[1/2] template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize (`  
`size_type __n ) [inline]`

Resizes the string to the specified number of characters.

## Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as char, this means setting them to 0.

References `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize()`.

**6.60.3.107 `resize()` [2/2]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`void __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize (`  
`size_type __n,`  
`_CharT __c )`

Resizes the string to the specified number of characters.

## Parameters

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

Referenced by `__gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::resize()`.

**6.60.3.108 `rfind()` [1/4]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`__versa_string<_CharT, _Traits, _Alloc, _Base>::size_type __gnu_cxx::__versa_string<_CharT, ↵`  
`_Traits, _Alloc, _Base>::rfind (`  
`_CharT __c,`  
`size_type __pos = npos ) const [noexcept]`

Find last position of a character.

## Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.60.3.109 `rfind()` [2/4]** `template<typename _CharT , typename _Traits , typename _Alloc , template<typename, typename, typename> class _Base>`  
`size_type __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::rfind (`

```
const __versa_string< _CharT, _Traits, _Alloc, _Base > & __str,
size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string.

#### Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

_Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const
```

Find last position of a C substring.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#).

```
6.60.3.111 rfind() [4/4] template<typename _CharT , typename _Traits , typename _Alloc , template<
typename, typename, typename > class _Base>
size_type __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::rfind (
    const _CharT * __s,
    size_type __pos = npos ) const [inline]
```

Find last position of a C string.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [\\_\\_gnu\\_cxx::\\_\\_versa\\_string<\\_CharT, \\_Traits, \\_Alloc, \\_Base>::rfind\(\)](#).

**6.60.3.114 `substr()`** `template<typename _CharT, typename _Traits, typename _Alloc, template<typename, typename, typename> class _Base>`  
`__versa_string __gnu_cxx::__versa_string<_CharT, _Traits, _Alloc, _Base>::substr (`  
`size_type __pos = 0,`  
`size_type __n = npos ) const [inline]`

Get a substring.

**Parameters**

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

**Returns**

The new string.

**Exceptions**

<code>std::out_of_range</code>	If <code>pos &gt; size()</code> .
--------------------------------	-----------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

**6.60.3.115 swap()** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`  
`void __gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::swap (`  
`__versa_string< _CharT, _Traits, _Alloc, _Base > & __s )` `[inline], [noexcept]`  
 Swap contents with another string.

#### Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by `__gnu_cxx::__versa_string< _CharT, _Traits, _Alloc, _Base >::assign()`, `__gnu_cxx::__versa_string< _CharT, _Traits, _A` and `__gnu_cxx::swap()`.

## 6.60.4 Member Data Documentation

**6.60.4.1 npos** `template<typename _CharT , typename _Traits , typename _Alloc , template< typename, typename, typename > class _Base>`  
`const __versa_string< _CharT, _Traits, _Alloc, _Base >::size_type __gnu_cxx::__versa_string< _↔`  
`CharT, _Traits, _Alloc, _Base >::npos` `[static]`  
 Value returned by various member functions when they fail.

The documentation for this class was generated from the following files:

- [vstring.h](#)
- [vstring.tcc](#)

## 6.61 \_\_gnu\_debug::\_After\_nth\_from< \_Iterator > Class Template Reference

- `void _M_make_range` (\_CharT \_\_l, \_CharT \_\_r)
- `void _M_ready` ()
- `bool operator()` (\_CharT \_\_ch) const

#### 6.69.1 Detailed Description

```
template<typename _TraitsT, bool __icase, bool __collate>
struct std::__detail::_BracketMatcher<_TraitsT, __icase, __collate >
```

Matches a character range (bracket expression)

The documentation for this struct was generated from the following files:

- [regex\\_compiler.h](#)
- [regex\\_compiler.tcc](#)

## 6.70 `__gnu_cxx::_Caster<_ToType >` Struct Template Reference

```
#include <cast.h>
```

### Public Types

- `typedef _ToType::element_type * type`

#### 6.70.1 Detailed Description

```
template<typename _ToType>
struct __gnu_cxx::_Caster<_ToType >
```

These functions are here to allow containers to support non standard pointer types. For normal pointers, these resolve to the use of the standard cast operation. For other types the functions will perform the appropriate cast to/from the custom pointer class so long as that class meets the following conditions: 1) has a typedef `element_type` which names the type it points to. 2) has a `get()` const method which returns `element_type*`. 3) has a constructor which can take one `element_type*` argument. This type supports the semantics of the pointer cast operators (below.)

The documentation for this struct was generated from the following file:

- [cast.h](#)

## 6.71 `__gnu_cxx::_Char_types<_CharT>` Struct Template Reference

```
#include <char_traits.h>
```

### Public Types

- typedef unsigned long **int\_type**
- typedef [std::streamoff](#) **off\_type**
- typedef [std::streampos](#) **pos\_type**
- typedef [std::mbstate\\_t](#) **state\_type**

### 6.71.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::_Char_types<_CharT>
```

Mapping from character type to associated types.

#### Note

This is an implementation class for the generic version of `char_traits`. It defines `int_type`, `off_type`, `pos_type`, and `state_type`. By default these are unsigned long, `streamoff`, `streampos`, and `mbstate_t`. Users who need a different set of types, but who don't need to change the definitions of any function defined in `char_traits`, can specialize `__gnu_cxx::_Char_types` while leaving `__gnu_cxx::char_traits` alone.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 6.72 `__gnu_pbds::detail::pat_trie_base::_Clter<Node, Leaf, Head, Inode, Is_Forward_Iterator>` Class Template Reference

- `void _M_initialize_map` (size\_t)
- `allocator_type get_allocator` () const noexcept

**Protected Attributes**

- `_Deque_impl _M_impl`

**6.75.1 Detailed Description**

```
template<typename _Tp, typename _Alloc>
class std::Deque_base<_Tp, _Alloc>
```

Deque base class. This class provides the unified face for deque's allocation. This class's constructor and destructor allocate and deallocate (but do not initialize) storage. This makes exception safety easier.

Nothing in this class ever constructs or destroys an actual Tp element. (Deque handles that itself.) Only/All memory management is performed here.

**6.75.2 Member Function Documentation**

**6.75.2.1 `_M_initialize_map()`** `template<typename _Tp, typename _Alloc>`  
`void std::Deque_base<_Tp, _Alloc>::_M_initialize_map (`  
`size_t __num_elements ) [protected]`

Layout storage.

**Parameters**

<code>__num_elements</code>	The count of T's for which to allocate space at first.
-----------------------------	--

**Returns**

Nothing.

The initial underlying memory layout is a bit complicated...

References `std::max()`.

The documentation for this class was generated from the following file:

- [stl\\_deque.h](#)

### 6.76.1 Detailed Description

```
template<typename _Tp, typename _Ref, typename _Ptr>
struct std::Deque_iterator< _Tp, _Ref, _Ptr >
```

A deque::iterator.

Quite a bit of intelligence here. Much of the functionality of deque is actually passed off to this class. A deque holds two of these internally, marking its valid range. Access to elements is done as offsets of either of those two, relying on operator overloading in this class.

All the functions are op overloads except for `_M_set_node`.

### 6.76.2 Member Function Documentation

**6.76.2.1 `_M_set_node()`** `template<typename _Tp , typename _Ref , typename _Ptr >`  
`void std::Deque_iterator< _Tp, _Ref, _Ptr >::_M_set_node (`  
`_Map_pointer __new_node ) [inline], [noexcept]`

Prepares to traverse `new_node`. Sets everything except `_M_cur`, which should therefore be set by the caller immediately afterwards, based on `_M_first` and `_M_last`.

The documentation for this struct was generated from the following files:

- [stl\\_algobase.h](#)
- [stl\\_deque.h](#)

## 6.77 `__gnu_parallel::__DRandomShufflingGlobalData<_RAIter>` Struct Template Reference

#### 6.77.1 Detailed Description

```
template<typename _RAIter>
struct __gnu_parallel::__DRandomShufflingGlobalData<_RAIter>
```

Data known to every thread participating in `__gnu_parallel::__parallel_random_shuffle()`.

#### 6.77.2 Constructor & Destructor Documentation

```
6.77.2.1 _DRandomShufflingGlobalData() template<typename _RAIter>
__gnu_parallel::__DRandomShufflingGlobalData<_RAIter>::__DRandomShufflingGlobalData (
    _RAIter & __source ) [inline]
```

Constructor.

#### 6.77.3 Member Data Documentation

```
6.77.3.1 _M_bin_proc template<typename _RAIter>
_ThreadIndex* __gnu_parallel::__DRandomShufflingGlobalData<_RAIter>::__M_bin_proc
```

Number of the thread that will further process the corresponding bin.  
Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

**6.77.3.2** `_M_dist` `template<typename _RAIter>``_DifferenceType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_dist`

Two-dimensional array to hold the thread-bin distribution.

Dimensions `(_M_num_threads + 1) x (_M_num_bins + 1)`.Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.**6.77.3.3** `_M_num_bins` `template<typename _RAIter>``int __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_num_bins`

Number of bins to distribute to.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.**6.77.3.4** `_M_num_bits` `template<typename _RAIter>``int __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_num_bits`

Number of bits needed to address the bins.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.**6.77.3.5** `_M_source` `template<typename _RAIter>``_RAIter& __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_source`Begin iterator of the `__source`.**6.77.3.6** `_M_starts` `template<typename _RAIter>``_DifferenceType* __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_starts`Start indexes of the threads' `__chunks`.Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`, and `__gnu_parallel::__parallel_random_shuffle_drs_pu()`.**6.77.3.7** `_M_temporaries` `template<typename _RAIter>``_ValueType** __gnu_parallel::_DRandomShufflingGlobalData<_RAIter>::_M_temporaries`

Temporary arrays for each thread.

Referenced by `__gnu_parallel::__parallel_random_shuffle_drs()`.

**6.78** `__gnu_parallel::_DRSSorterPU<_RAIter, _RandomNumberGenerator>` Struct Template Reference`#include <random_shuffle.h>`**Public Attributes**

- `_BinIndex __bins_end`
- `_BinIndex _M_bins_begin`
- `int _M_num_threads`
- `_DRandomShufflingGlobalData<_RAIter> * _M_sd`
- `uint32_t _M_seed`

### 6.78.1 Detailed Description

```
template<typename _RAIter, typename _RandomNumberGenerator>
struct __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >
```

Local data for a thread participating in `__gnu_parallel::_parallel_random_shuffle()`.

### 6.78.2 Member Data Documentation

**6.78.2.1 `__bins_end`** `template<typename _RAIter , typename _RandomNumberGenerator >`  
`_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::__bins_end`

End index for bins taken care of by this thread.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`.

**6.78.2.2 `_M_bins_begin`** `template<typename _RAIter , typename _RandomNumberGenerator >`  
`_BinIndex __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_bins_begin`

Begin index for bins taken care of by this thread.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`.

**6.78.2.3 `_M_num_threads`** `template<typename _RAIter , typename _RandomNumberGenerator >`  
`int __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_num_threads`

Number of threads participating in total.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`, and `__gnu_parallel::_parallel_random_shuffle_drs_pu()`.

**6.78.2.4 `_M_sd`** `template<typename _RAIter , typename _RandomNumberGenerator >`  
`_DRandomShufflingGlobalData<_RAIter>* __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_sd`

Pointer to global data.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`, and `__gnu_parallel::_parallel_random_shuffle_drs_pu()`.

**6.78.2.5 `_M_seed`** `template<typename _RAIter , typename _RandomNumberGenerator >`  
`uint32_t __gnu_parallel::_DRSSorterPU< _RAIter, _RandomNumberGenerator >::_M_seed`

Random `_M_seed` for this thread.

Referenced by `__gnu_parallel::_parallel_random_shuffle_drs()`, and `__gnu_parallel::_parallel_random_shuffle_drs_pu()`.

The documentation for this struct was generated from the following file:

- [random\\_shuffle.h](#)

## 6.79 `__gnu_parallel::_DummyReduct` Struct Reference

```
#include <for_each_selectors.h>
```

### Public Member Functions

- `bool operator() (bool, bool) const`

### 6.79.1 Detailed Description

Reduction function doing nothing.

The documentation for this struct was generated from the following file:

- [for\\_each\\_selectors.h](#)

## 6.80 `__gnu_debug::Equal_to<_Type>` Class Template Reference

```
#include <safe_sequence.h>
```

### Public Member Functions

- `_Equal_to` (const `_Type` &\_\_v)
- `bool operator()` (const `_Type` &\_\_x) const

### 6.80.1 Detailed Description

```
template<typename _Type>
class __gnu_debug::Equal_to<_Type>
```

A simple function object that returns true if the passed-in value is equal to the stored value.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 6.81 `__gnu_parallel::EqualFromLess<_T1, _T2, _Compare>` Class Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::EqualFromLess<_T1, _T2, _Compare>`:

### Public Types

- `typedef _T1` [first\\_argument\\_type](#)
- `typedef bool` [result\\_type](#)
- `typedef _T2` [second\\_argument\\_type](#)

### Public Member Functions

- `_EqualFromLess` (`_Compare` &\_\_comp)
- `bool operator()` (const `_T1` &\_\_a, const `_T2` &\_\_b)

### 6.81.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::EqualFromLess<_T1, _T2, _Compare>
```

Constructs predicate for equality from strict weak ordering predicate.

### 6.81.2 Member Typedef Documentation

**6.81.2.1 `first_argument_type`** `typedef _T1` [std::binary\\_function](#)< `_T1` , `_T2` , `bool` >::`first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

**6.81.2.2 result\_type** typedef bool [std::binary\\_function](#)< \_T1 , \_T2 , bool >::result\_type [inherited]  
result\_type is the return type

**6.81.2.3 second\_argument\_type** typedef \_T2 [std::binary\\_function](#)< \_T1 , \_T2 , bool >::second\_↵  
argument\_type [inherited]

second\_argument\_type is the type of the second argument

The documentation for this class was generated from the following file:

- [base.h](#)

## 6.82 \_\_gnu\_parallel::\_EqualTo< \_T1, \_T2 > Struct Template Reference

#include <base.h>

Inheritance diagram for \_\_gnu\_parallel::\_EqualTo< \_T1, \_T2 >:

### Public Types

- typedef \_T1 [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef \_T2 [second\\_argument\\_type](#)

### Public Member Functions

- bool **operator()** (const \_T1 &\_\_t1, const \_T2 &\_\_t2) const

### 6.82.1 Detailed Description

```
template<typename _T1, typename _T2>  
struct __gnu_parallel::_EqualTo< _T1, _T2 >
```

Similar to std::equal\_to, but allows two different types.

### 6.82.2 Member Typedef Documentation

**6.82.2.1 first\_argument\_type** typedef \_T1 [std::binary\\_function](#)< \_T1 , \_T2 , bool >::first\_argument\_↵  
\_type [inherited]

first\_argument\_type is the type of the first argument

**6.82.2.2 result\_type** typedef bool [std::binary\\_function](#)< \_T1 , \_T2 , bool >::result\_type [inherited]  
result\_type is the return type

**6.82.2.3 second\_argument\_type** typedef \_T2 [std::binary\\_function](#)< \_T1 , \_T2 , bool >::second\_↵  
argument\_type [inherited]

second\_argument\_type is the type of the second argument

The documentation for this struct was generated from the following file:

- [base.h](#)

## 6.83 `std::__detail::_Executor<_Bilter, _Alloc, _TraitsT, __dfs_mode>` Class Template Reference

```
#include <regex_executor.h>
```

### Public Types

- typedef `iterator_traits<_Bilter>::value_type` `_CharT`
- typedef `_TraitsT::char_class_type` `_ClassT`
- typedef `regex_constants::match_flag_type` `_FlagT`
- typedef `_NFA<_TraitsT>` `_NFAT`
- typedef `basic_regex<_CharT, _TraitsT>` `_RegexT`
- typedef `::vector<sub_match<_Bilter>, _Alloc>` `_ResultsVec`

### Public Member Functions

- `_Executor` (`_Bilter __begin`, `_Bilter __end`, `_ResultsVec &__results`, `const _RegexT &__re`, `_FlagT __flags`)
- `bool _M_match ()`
- `bool _M_search ()`
- `bool _M_search_from_first ()`

### Public Attributes

- `_Bilter _M_begin`
- `_ResultsVec _M_cur_results`
- `_Bilter _M_current`
- `const _Bilter _M_end`
- `_FlagT _M_flags`
- `bool _M_has_sol`
- `const _NFAT & _M_nfa`
- `const _RegexT & _M_re`
- `::vector<pair<_Bilter, int>> _M_rep_count`
- `_ResultsVec & _M_results`
- `_State_info<__search_mode, _ResultsVec> _M_states`

#### 6.83.1 Detailed Description

```
template<typename _Bilter, typename _Alloc, typename _TraitsT, bool __dfs_mode>
class std::__detail::_Executor<_Bilter, _Alloc, _TraitsT, __dfs_mode>
```

Takes a regex and an input string and does the matching.

The `_Executor` class has two modes: DFS mode and BFS mode, controlled by the template parameter `__dfs_mode`.

The documentation for this class was generated from the following files:

- `regex.h`
- `regex_executor.h`
- `regex_executor.tcc`

## 6.84 `__gnu_cxx::ExtPtr_allocator<_Tp>` Class Template Reference

```
#include <extptr_allocator.h>
```

## Public Types

- typedef [\\_Pointer\\_adapter](#)< [\\_Relative\\_pointer\\_impl](#)< const \_Tp > > **const\_pointer**
- typedef const \_Tp & **const\_reference**
- typedef std::ptrdiff\_t **difference\_type**
- typedef [\\_Pointer\\_adapter](#)< [\\_Relative\\_pointer\\_impl](#)< \_Tp > > **pointer**
- typedef \_Tp & **reference**
- typedef std::size\_t **size\_type**
- typedef \_Tp **value\_type**

## Public Member Functions

- **\_ExtPtr\_allocator** (const [\\_ExtPtr\\_allocator](#) &\_\_rarg) noexcept
- template<typename \_Up >  
  [\\_ExtPtr\\_allocator](#) (const [\\_ExtPtr\\_allocator](#)< \_Up > &\_\_rarg) noexcept
- const [std::allocator](#)< \_Tp > & **\_M\_getUnderlyingImp** () const
- [const\\_pointer](#) **address** (const\_reference \_\_x) const noexcept
- [pointer](#) **address** (reference \_\_x) const noexcept

- template<typename \_Up >  
  void **destroy** (\_Up \* \_\_p)
- void **destroy** ([pointer](#) \_\_p)
- size\_type **max\_size** () const noexcept
- bool **operator==** (const [\\_ExtPtr\\_allocator](#) &\_\_rarg) const
- template<typename \_Up >  
  bool **operator==** (const [\\_ExtPtr\\_allocator](#)< \_Up > &\_\_rarg) const

## Friends

- template<typename \_Up >  
  void **swap** ([\\_ExtPtr\\_allocator](#)< \_Up > &, [\\_ExtPtr\\_allocator](#)< \_Up > &)

### 6.84.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_ExtPtr_allocator< _Tp >
```

An example allocator which uses a non-standard pointer type.

This allocator specifies that containers use a 'relative pointer' as it's pointer type. (See [ext/pointer.h](#)) Memory allocation in this example is still performed using [std::allocator](#).

The documentation for this class was generated from the following file:

- [extptr\\_allocator.h](#)

### 6.85 \_\_gnu\_cxx::\_\_detail::\_Ffit\_finder< \_Tp > Class Template Reference

```
#include <bitmap_allocator.h>
```

**Public Types**

- typedef `_Block_pair` `argument_type`
- typedef `bool` `result_type`

**Public Member Functions**

- `std::size_t * _M_get ()` `const throw ()`
- `_Counter_type _M_offset ()` `const throw ()`
- `bool operator() (_Block_pair __bp)` `throw ()`

**6.85.1 Detailed Description**

```
template<typename _Tp>
class __gnu_cxx::__detail::_Ffit_finder< _Tp >
```

The class which acts as a predicate for applying the first-fit memory allocation policy for the bitmap allocator. The documentation for this class was generated from the following file:

- [bitmap\\_allocator.h](#)

**6.86 `std::_Function_base` Class Reference**

```
#include <std_function.h>
Inheritance diagram for std::_Function_base:
```

**Public Types**

- using `_Manager_type` = `bool(*)(_Any_data &, const _Any_data &, _Manager_operation)`

**Public Member Functions**

- `bool _M_empty ()` `const`

**Public Attributes**

- `_Any_data _M_functor`
- `_Manager_type _M_manager`

**Static Public Attributes**

- `static const size_t _M_max_align`
- `static const size_t _M_max_size`

**6.86.1 Detailed Description**

Base class of all polymorphic function object wrappers. The documentation for this class was generated from the following file:

- [std\\_function.h](#)

**6.87 `std::_Fwd_list_base< _Tp, _Alloc >` Struct Template Reference**

```
#include <forward_list.h>
Inheritance diagram for std::_Fwd_list_base< _Tp, _Alloc >:
```

## Public Types

## Friends

- bool **operator==** (const [\\_Self](#) & \_\_x, const [\\_Self](#) & \_\_y) noexcept

### 6.88.1 Detailed Description

```
template<typename _Tp>
struct std::_Fwd_list_const_iterator<_Tp>
```

A forward\_list::const\_iterator.

All the functions are op overloads.

### 6.88.2 Friends And Related Function Documentation

#### 6.88.2.1 operator== template<typename \_Tp>

```
bool operator== (
    const \_Self & __x,
    const \_Self & __y ) [friend]
```

Forward list const\_iterator equality comparison.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 6.89 std::\_Fwd\_list\_iterator<\_Tp> Struct Template Reference

```
#include <forward_list.h>
```

## Public Types

- typedef [\\_Fwd\\_list\\_node](#)< \_Tp > **\_Node**
- typedef [\\_Fwd\\_list\\_iterator](#)< \_Tp > **\_Self**
- typedef ptrdiff\_t **difference\_type**
- typedef [std::forward\\_iterator\\_tag](#) **iterator\_category**
- typedef \_Tp \* **pointer**
- typedef \_Tp & **reference**
- typedef \_Tp **value\_type**

## Public Member Functions

- reference **operator\*** () const noexcept
- [\\_Self](#) & **operator++** () noexcept
- [\\_Self](#) **operator++** (int) noexcept
- pointer **operator->** () const noexcept

## Public Attributes

- [\\_Fwd\\_list\\_node\\_base](#) \* **\_M\_node**

## Friends

- bool **operator==** (const [\\_Self](#) & \_\_x, const [\\_Self](#) & \_\_y) noexcept

### 6.89.1 Detailed Description

```
template<typename _Tp>
struct std::_Fwd_list_iterator< _Tp >
```

A forward\_list::iterator.

All the functions are op overloads.

### 6.89.2 Friends And Related Function Documentation

```
6.89.2.1 operator==  template<typename _Tp >
bool operator== (
    const \_Self & __x,
    const \_Self & __y ) [friend]
```

Forward list iterator equality comparison.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

## 6.90 std::\_Fwd\_list\_node< \_Tp > Struct Template Reference

```
#include <forward_list.h>
```

Inheritance diagram for std::\_Fwd\_list\_node< \_Tp >:

**Public Member Functions**

- void **\_M\_reverse\_after** () noexcept
- [\\_Fwd\\_list\\_node\\_base](#) \* **\_M\_transfer\_after** ([\\_Fwd\\_list\\_node\\_base](#) \* \_\_begin, [\\_Fwd\\_list\\_node\\_base](#) \* \_\_end) noexcept
- const [\\_Tp](#) \* **\_M\_valptr** () const noexcept
- [\\_Tp](#) \* **\_M\_valptr** () noexcept

**Public Attributes**

- [\\_Fwd\\_list\\_node\\_base](#) \* **\_M\_next**
- [\\_\\_gnu\\_cxx::\\_\\_aligned\\_buffer](#)< [\\_Tp](#) > **\_M\_storage**

**6.90.1 Detailed Description**

```
template<typename _Tp>
struct std::_Fwd_list_node< _Tp >
```

A helper node class for forward\_list. This is just a linked list with uninitialized storage for a data value in each node. There is a sorting utility method.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

**6.91 std::\_Fwd\_list\_node\_base Struct Reference**

```
#include <forward_list.h>
```

Inheritance diagram for std::\_Fwd\_list\_node\_base:

**Public Member Functions**

- [\\_Fwd\\_list\\_node\\_base](#) ([\\_Fwd\\_list\\_node\\_base](#) && \_\_x) noexcept
- [\\_Fwd\\_list\\_node\\_base](#) (const [\\_Fwd\\_list\\_node\\_base](#) &)=delete
- void **\_M\_reverse\_after** () noexcept
- [\\_Fwd\\_list\\_node\\_base](#) \* **\_M\_transfer\_after** ([\\_Fwd\\_list\\_node\\_base](#) \* \_\_begin, [\\_Fwd\\_list\\_node\\_base](#) \* \_\_end) noexcept
- [\\_Fwd\\_list\\_node\\_base](#) & **operator=** ([\\_Fwd\\_list\\_node\\_base](#) && \_\_x) noexcept
- [\\_Fwd\\_list\\_node\\_base](#) & **operator=** (const [\\_Fwd\\_list\\_node\\_base](#) &)=delete

**Public Attributes**

- [\\_Fwd\\_list\\_node\\_base](#) \* **\_M\_next**

**6.91.1 Detailed Description**

A helper basic node class for forward\_list. This is just a linked list with nothing inside it. There are purely list shuffling utility methods here.

The documentation for this struct was generated from the following file:

- [forward\\_list.h](#)

**6.92 \_\_gnu\_parallel::\_GuardedIterator< \_RAIter, \_Compare > Class Template Reference**

```
#include <multiway_merge.h>
```

## Public Member Functions

- [\\_GuardedIterator](#) ([\\_RAIter](#) \_\_begin, [\\_RAIter](#) \_\_end, [\\_Compare](#) &\_\_comp)
- [operator \\_RAIter](#) () const
- [std::iterator\\_traits](#)< [\\_RAIter](#) >::value\_type & [operator\\*](#) () const
- [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > & [operator++](#) ()

## Friends

- bool [operator<](#) (const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > &\_\_bi1, const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > &\_\_bi2)
- bool [operator<=](#) (const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > &\_\_bi1, const [\\_GuardedIterator](#)< [\\_RAIter](#), [\\_Compare](#) > &\_\_bi2)

### 6.92.1 Detailed Description

```
template<typename _RAIter, typename _Compare>
class __gnu_parallel::_GuardedIterator< _RAIter, _Compare >
```

[\\_Iterator](#) wrapper supporting an implicit supremum at the end of the sequence, dominating all comparisons. The implicit supremum comes with a performance cost. Deriving from [\\_RAIter](#) is not possible since [\\_RAIter](#) need not be a class.

### 6.92.2 Constructor & Destructor Documentation

**6.92.2.1 [\\_GuardedIterator](#)()** `template<typename _RAIter , typename _Compare > \_\_gnu\_parallel::\_GuardedIterator< _RAIter, _Compare >::_GuardedIterator ( \_RAIter __begin, \_RAIter __end, \_Compare & __comp ) [inline]`

Constructor. Sets iterator to beginning of sequence.

#### Parameters

<a href="#">__begin</a>	Begin iterator of sequence.
<a href="#">__end</a>	End iterator of sequence.
<a href="#">__comp</a>	Comparator provided for associated overloaded compare operators.

### 6.92.3 Member Function Documentation

**6.92.3.1 [operator \\_RAIter](#)()** `template<typename _RAIter , typename _Compare > \_\_gnu\_parallel::\_GuardedIterator< _RAIter, _Compare >::operator _RAIter ( ) const [inline]`  
Convert to wrapped iterator.

#### Returns

Wrapped iterator.

**6.92.3.2 `operator*()`** `template<typename _RAIter , typename _Compare >`  
`std::iterator_traits<_RAIter >::value_type & __gnu_parallel::_GuardedIterator<_RAIter, _Compare`  
`>::operator* ( ) const [inline]`

Dereference operator.

Returns

Referenced element.

**6.92.3.3 `operator++()`** `template<typename _RAIter , typename _Compare >`  
`_GuardedIterator<_RAIter, _Compare > & __gnu_parallel::_GuardedIterator<_RAIter, _Compare >↔`  
`::operator++ ( ) [inline]`

Pre-increment operator.

Returns

This.

## 6.92.4 Friends And Related Function Documentation

**6.92.4.1 `operator<`** `template<typename _RAIter , typename _Compare >`  
`bool operator< (`  
`const _GuardedIterator<_RAIter, _Compare > & __bi1,`  
`const _GuardedIterator<_RAIter, _Compare > & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

Parameters

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

Returns

true if less.

**6.92.4.2 `operator<=`** `template<typename _RAIter , typename _Compare >`  
`bool operator<= (`  
`const _GuardedIterator<_RAIter, _Compare > & __bi1,`  
`const _GuardedIterator<_RAIter, _Compare > & __bi2 ) [friend]`

Compare two elements referenced by guarded iterators.

Parameters

<code>__bi1</code>	First iterator.
<code>__bi2</code>	Second iterator.

**Returns**

True if less equal.

The documentation for this class was generated from the following file:

- [multiway\\_merge.h](#)

## 6.93 `__gnu_pbds::detail::pat_trie_base::_Head<_ATraits, Metadata >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Head<_ATraits, Metadata >`:

**Public Types**

- typedef `_ATraits::const_iterator` **a\_const\_iterator**
- typedef `detail::rebind_traits<_Alloc, _ATraits >::const_pointer` **a\_const\_pointer**
- typedef `_ATraits` **access\_traits**
- typedef `_Alloc` **allocator\_type**
- typedef `_Node_base<_ATraits, Metadata >` **base\_type**
- typedef `base_type::node_pointer` **node\_pointer**
- typedef `base_type::type_traits` **type\_traits**

**Public Attributes**

- const `node_type` **m\_type**

### 6.94.1 Detailed Description

```
template<typename _ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Inode<_ATraits, Metadata>
```

Internal node type, PATRICIA tree.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.95 `__gnu_cxx::_Invalid_type` Struct Reference

```
#include <pointer.h>
```

### 6.95.1 Detailed Description

The specialization on this type helps resolve the problem of reference to void, and eliminates the need to specialize `_Pointer_adapter` for cases of `void*`, `const void*`, and so on.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

## 6.96 `__gnu_pbds::detail::pat_trie_base::_Iter< Node, Leaf, Head, Inode, Is_Forward_Iterator >` Class Template Reference

```
#include <pat_trie_base.hpp>
```

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Iter< Node, Leaf, Head, Inode, Is_Forward_Iterator >`:

### Public Types

- typedef allocator\_type **\_Alloc**
- typedef base\_type::allocator\_type **allocator\_type**
- typedef [\\_CIter](#)< Node, Leaf, Head, Inode, Is\_Forward\_Iterator > **base\_type**

### Public Attributes

- node\_pointer **m\_p\_nd**

### Protected Member Functions

- void **dec** (false\_type)
- void **dec** (true\_type)
- void **inc** (false\_type)
- void **inc** (true\_type)

### Static Protected Member Functions

- static node\_pointer **get\_larger\_sibling** (node\_pointer p\_nd)
- static node\_pointer **get\_smaller\_sibling** (node\_pointer p\_nd)
- static leaf\_pointer **leftmost\_descendant** (node\_pointer p\_nd)
- static leaf\_pointer **rightmost\_descendant** (node\_pointer p\_nd)

#### 6.96.1 Detailed Description

```
template<typename Node, typename Leaf, typename Head, typename Inode, bool Is_Forward_Iterator>
class __gnu_pbds::detail::pat_trie_base::Iter< Node, Leaf, Head, Inode, Is_Forward_Iterator >
```

Iterator.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.97 `__gnu_parallel::IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>` Class Template Reference

```
#include <iterator.h>
```

Inheritance diagram for `__gnu_parallel::IteratorPair<_Iterator1, _Iterator2, _IteratorCategory>`:

### Public Types

- typedef `std::iterator_traits<_Iterator1>` **\_TraitsType**
- typedef `_TraitsType::difference_type` **difference\_type**
- typedef `_Iterator1` **first\_type**
- typedef `_IteratorCategory` **iterator\_category**
- typedef `_IteratorPair *` **pointer**

- `constexpr void swap` (`pair` &\_\_p) noexcept(\_\_and\_< \_\_is\_nothrow\_swappable< \_Iterator1 >, \_\_is\_nothrow\_swappable< \_Iterator2 > >::value)

### Public Attributes

- `_Iterator1` `first`
- `_Iterator2` `second`

### Related Functions

(Note that these are not member functions.)

- `constexpr pair< typename __decay_and_strip< _Iterator1 >::__type, typename __decay_and_strip< _Iterator2 >::__type > make_pair` (\_Iterator1 &&\_\_x, \_Iterator2 &&\_\_y)
- `constexpr enable_if< __and_< __is_swappable< _Iterator1 >, __is_swappable< _Iterator2 > >::value >::type swap` (`pair< _Iterator1, _Iterator2 > &__x`, `pair< _Iterator1, _Iterator2 > &__y`) noexcept(noexcept(\_\_x.swap(\_\_y)))
- `constexpr bool operator==` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)
- `constexpr bool operator<` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)
- `constexpr bool operator!=` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)
- `constexpr bool operator>` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)
- `constexpr bool operator<=` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)
- `constexpr bool operator>=` (const `pair< _Iterator1, _Iterator2 > &__x`, const `pair< _Iterator1, _Iterator2 > &__y`)

## 6.97.1 Detailed Description

```
template<typename _Iterator1, typename _Iterator2, typename _IteratorCategory>
class __gnu_parallel::_IteratorPair< _Iterator1, _Iterator2, _IteratorCategory >
```

A pair of iterators. The usual iterator operations are applied to both child iterators.

## 6.97.2 Member Typedef Documentation

**6.97.2.1 first\_type** typedef `_Iterator1 std::pair< _Iterator1 , _Iterator2 >::first_type` [inherited]  
The type of the `first` member.

**6.97.2.2 second\_type** typedef `_Iterator2 std::pair< _Iterator1 , _Iterator2 >::second_type` [inherited]  
The type of the `second` member.

## 6.97.3 Member Function Documentation

**6.97.3.1 swap()** `constexpr void std::pair< _Iterator1 , _Iterator2 >::swap` (`pair< _Iterator1, _Iterator2 > &__p`) [inline], [constexpr], [noexcept], [inherited]  
Swap the first members and then the second members.

## 6.97.4 Friends And Related Function Documentation

**6.97.4.1 make\_pair()** constexpr pair< typename \_\_decay\_and\_strip< \_Iterator1 >::\_\_type, typename \_\_decay\_and\_strip< \_Iterator2 >::\_\_type > make\_pair (   
     \_iterator1 && \_\_x,   
     \_iterator2 && \_\_y ) [related]

A convenience wrapper for creating a pair from two objects.

### Parameters

 __x	The first object.
 __y	The second object.

### Returns

A newly-constructed pair<> object of the appropriate type.

The C++98 standard says the objects are passed by reference-to-const, but C++03 says they are passed by value (this was LWG issue #181).

Since C++11 they have been passed by forwarding reference and then forwarded to the new members of the pair. To create a pair with a member of reference type, pass a `reference_wrapper` to this function.

**6.97.4.2 operator"!="()** constexpr bool operator!= (   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Uses `operator==` to find the result.

**6.97.4.3 operator<()** constexpr bool operator< (   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Defines a lexicographical order for pairs.

For two pairs of the same type, `P` is ordered before `Q` if `P.first` is less than `Q.first`, or if `P.first` and `Q.first` are equivalent (neither is less than the other) and `P.second` is less than `Q.second`.

**6.97.4.4 operator<=()** constexpr bool operator<= (   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Uses `operator<` to find the result.

**6.97.4.5 operator==()** constexpr bool operator== (   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
     const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Two pairs of the same type are equal iff their members are equal.

**6.97.4.6 operator>()** constexpr bool operator> (   
    const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
    const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Uses operator< to find the result.

**6.97.4.7 operator>=()** constexpr bool operator>= (   
    const pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
    const pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Uses operator< to find the result.

**6.97.4.8 swap()** constexpr enable\_if< \_\_and< \_\_is\_swappable< \_Iterator1 >, \_\_is\_swappable< \_Iterator2 > >::value >::type swap (   
    pair< \_Iterator1 , \_Iterator2 > & \_\_x,   
    pair< \_Iterator1 , \_Iterator2 > & \_\_y ) [related]

Swap overload for pairs. Calls std::pair::swap().

#### Note

This std::swap overload is not declared in C++03 mode, which has performance implications, e.g. see <https://gcc.gnu.org/PR38466>

## 6.97.5 Member Data Documentation

**6.97.5.1 first** \_Iterator1 std::pair< \_Iterator1 , \_Iterator2 >::first [inherited]  
The first member.

**6.97.5.2 second** \_Iterator2 std::pair< \_Iterator1 , \_Iterator2 >::second [inherited]  
The second member.

The documentation for this class was generated from the following file:

- [iterator.h](#)

## 6.98 \_\_gnu\_parallel::IteratorTriple< \_Iterator1, \_Iterator2, \_Iterator3, \_IteratorCategory > Class Template Reference

```
#include <iterator.h>
```

### Public Types

- typedef std::iterator\_traits< \_Iterator1 >::difference\_type **difference\_type**
- typedef \_IteratorCategory **iterator\_category**
- typedef \_IteratorTriple \* **pointer**
- typedef \_IteratorTriple & **reference**
- typedef void **value\_type**

**Public Member Functions**

- `_IteratorTriple` (const `_Iterator1` &\_\_first, const `_Iterator2` &\_\_second, const `_Iterator3` &\_\_third)
- `operator _Iterator3` () const
- `_IteratorTriple` `operator+` (difference\_type \_\_delta) const
- `_IteratorTriple` & `operator++` ()
- const `_IteratorTriple` `operator++` (int)
- difference\_type `operator-` (const `_IteratorTriple` &\_\_other) const
- `_IteratorTriple` & `operator--` ()
- const `_IteratorTriple` `operator--` (int)
- `_IteratorTriple` & `operator=` (const `_IteratorTriple` &\_\_other)

**Public Attributes**

- `_Iterator1` `_M_first`
- `_Iterator2` `_M_second`
- `_Iterator3` `_M_third`

**6.98.1 Detailed Description**

```
template<typename _Iterator1, typename _Iterator2, typename _Iterator3, typename _IteratorCategory>
class __gnu_parallel::_IteratorTriple<_Iterator1, _Iterator2, _Iterator3, _IteratorCategory>
```

A triple of iterators. The usual iterator operations are applied to all three child iterators.  
The documentation for this class was generated from the following file:

- [iterator.h](#)

**6.99 `__gnu_parallel::__Job<_DifferenceTp>` > Struct Template Reference**

```
#include <workstealing.h>
```

**Public Types**

- typedef `_DifferenceTp` `_DifferenceType`

**Public Attributes**

- volatile `_DifferenceType` `_M_first`
- volatile `_DifferenceType` `_M_last`
- volatile `_DifferenceType` `_M_load`

**6.99.1 Detailed Description**

```
template<typename _DifferenceTp>
struct __gnu_parallel::__Job<_DifferenceTp>
```

One `__job` for a certain thread.

**6.99.2 Member Data Documentation**

**6.99.2.1 `_M_first`** `template<typename _DifferenceTp >`  
`volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_first`  
 First element.  
 Changed by owning and stealing thread. By stealing thread, always incremented.  
 Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**6.99.2.2 `_M_last`** `template<typename _DifferenceTp >`  
`volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_last`  
 Last element.  
 Changed by owning thread only.  
 Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.

**6.99.2.3 `_M_load`** `template<typename _DifferenceTp >`  
`volatile _DifferenceType __gnu_parallel::_Job< _DifferenceTp >::_M_load`  
 Number of elements, i.e. `_M_last - _M_first + 1`.  
 Changed by owning thread only.  
 Referenced by `__gnu_parallel::__for_each_template_random_access_workstealing()`.  
 The documentation for this struct was generated from the following file:

- [workstealing.h](#)

## 6.100 `__gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >` Struct Template Reference

`#include <pat_trie_base.hpp>`

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Leaf< _ATraits, Metadata >`:

### Public Types

- `typedef _ATraits::const_iterator` **a\_const\_iterator**
- `typedef detail::rebind_traits< _Alloc, _ATraits >::const_pointer` **a\_const\_pointer**
- `typedef _ATraits` **access\_traits**
- `typedef _Alloc` **allocator\_type**
- `typedef _Node_base< _ATraits, Metadata >` **base\_type**
- `typedef type_traits::const_reference` **const\_reference**
- `typedef detail::rebind_traits< _Alloc, _Node_base >::pointer` **node\_pointer**
- `typedef type_traits::reference` **reference**
- `typedef base_type::type_traits` **type\_traits**
- `typedef type_traits::value_type` **value\_type**

### Public Member Functions

- `_Leaf` (const\_reference other)
- reference **value** ()
- const\_reference **value** () const

### Public Attributes

- node\_pointer **m\_p\_parent**
- const [node\\_type](#) **m\_type**

### 6.100.1 Detailed Description

```
template<typename ATraits, typename Metadata>
struct __gnu_pbds::detail::pat_trie_base::_Leaf< ATraits, Metadata >
```

Leaf node for PATRICIA tree.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.101 `__gnu_parallel::_Less<_T1, _T2>` Struct Template Reference

```
#include <base.h>
Inheritance diagram for __gnu_parallel::_Less<_T1, _T2>:
```

### Public Types

- typedef `_T1` [first\\_argument\\_type](#)
- typedef `bool` [result\\_type](#)
- typedef `_T2` [second\\_argument\\_type](#)

### Public Member Functions

- `bool operator()` (`const _T1 &__t1, const _T2 &__t2`) `const`
- `bool operator()` (`const _T2 &__t2, const _T1 &__t1`) `const`

### 6.101.1 Detailed Description

```
template<typename _T1, typename _T2>
struct __gnu_parallel::_Less<_T1, _T2>
```

Similar to `std::less`, but allows two different types.

### 6.101.2 Member Typedef Documentation

**6.101.2.1 `first_argument_type`** typedef `_T1` [std::binary\\_function<\\_T1, \\_T2, bool>::first\\_argument\\_type](#) [inherited]  
`first_argument_type` is the type of the first argument

**6.101.2.2 `result_type`** typedef `bool` [std::binary\\_function<\\_T1, \\_T2, bool>::result\\_type](#) [inherited]  
`result_type` is the return type

**6.101.2.3 `second_argument_type`** typedef `_T2` [std::binary\\_function<\\_T1, \\_T2, bool>::second\\_argument\\_type](#) [inherited]  
`second_argument_type` is the type of the second argument  
The documentation for this struct was generated from the following file:

- [base.h](#)

## 6.102 `__gnu_parallel::_Lexicographic<_T1, _T2, _Compare>` Class Template Reference

```
#include <multiseq_selection.h>
Inheritance diagram for __gnu_parallel::_Lexicographic<_T1, _T2, _Compare>:
```

## Public Types

- typedef [std::pair](#)< \_T1, \_T2 > [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef [std::pair](#)< \_T1, \_T2 > [second\\_argument\\_type](#)

## Public Member Functions

- [\\_Lexicographic](#) (\_Compare &\_\_comp)
- bool [operator\(\)](#) (const [std::pair](#)< \_T1, \_T2 > &\_\_p1, const [std::pair](#)< \_T1, \_T2 > &\_\_p2) const

### 6.102.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_Lexicographic< _T1, _T2, _Compare >
```

Compare \_\_a pair of types lexicographically, ascending.

### 6.102.2 Member Typedef Documentation

**6.102.2.1 [first\\_argument\\_type](#)** typedef [std::pair](#)< \_T1, \_T2 > [std::binary\\_function](#)< [std::pair](#)< \_T1, \_T2 > , [std::pair](#)< \_T1, \_T2 > , bool >::[first\\_argument\\_type](#) [inherited]  
[first\\_argument\\_type](#) is the type of the first argument

**6.102.2.2 [result\\_type](#)** typedef bool [std::binary\\_function](#)< [std::pair](#)< \_T1, \_T2 > , [std::pair](#)< \_T1, \_T2 > , bool >::[result\\_type](#) [inherited]  
[result\\_type](#) is the return type

**6.102.2.3 [second\\_argument\\_type](#)** typedef [std::pair](#)< \_T1, \_T2 > [std::binary\\_function](#)< [std::pair](#)< \_T1, \_T2 > , [std::pair](#)< \_T1, \_T2 > , bool >::[second\\_argument\\_type](#) [inherited]  
[second\\_argument\\_type](#) is the type of the second argument  
The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 6.103 [\\_\\_gnu\\_parallel::\\_LexicographicReverse](#)< \_T1, \_T2, \_Compare > Class Template Reference

```
#include <multiseq_selection.h>
```

Inheritance diagram for [\\_\\_gnu\\_parallel::\\_LexicographicReverse](#)< \_T1, \_T2, \_Compare >:

## Public Types

- typedef \_T1 [first\\_argument\\_type](#)
- typedef bool [result\\_type](#)
- typedef \_T2 [second\\_argument\\_type](#)

## Public Member Functions

- [\\_LexicographicReverse](#) (\_Compare &\_\_comp)
- bool [operator\(\)](#) (const [std::pair](#)< \_T1, \_T2 > &\_\_p1, const [std::pair](#)< \_T1, \_T2 > &\_\_p2) const

### 6.103.1 Detailed Description

```
template<typename _T1, typename _T2, typename _Compare>
class __gnu_parallel::_LexicographicReverse<_T1, _T2, _Compare>
```

Compare \_\_a pair of types lexicographically, descending.

### 6.103.2 Member Typedef Documentation

**6.103.2.1 first\_argument\_type** typedef `_T1 std::binary_function<_T1, _T2, bool>::first_argument_type` [inherited]

`first_argument_type` is the type of the first argument

**6.103.2.2 result\_type** typedef `bool std::binary_function<_T1, _T2, bool>::result_type` [inherited]

`result_type` is the return type

**6.103.2.3 second\_argument\_type** typedef `_T2 std::binary_function<_T1, _T2, bool>::second_argument_type` [inherited]

`second_argument_type` is the type of the second argument

The documentation for this class was generated from the following file:

- [multiseq\\_selection.h](#)

## 6.104 `std::_List_base<_Tp, _Alloc>` Class Template Reference

```
#include <stl_list.h>
```

Inheritance diagram for `std::_List_base<_Tp, _Alloc>`:

### Public Types

**6.110 \_\_gnu\_parallel::\_LoserTreeBase<\_Tp, \_Compare>::\_Loser Struct Reference**

```
#include <losertree.h>
```

**Public Attributes**

- [\\_Tp](#) **\_M\_key**
- int **\_M\_source**
- bool **\_M\_sup**

### 6.110.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser
```

Internal representation of a `_LoserTree` element.

### 6.110.2 Member Data Documentation

**6.110.2.1 `_M_key`** `template<typename _Tp , typename _Compare >`  
`_Tp __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_key`  
`_M_key` of the element in the `_LoserTree`.  
Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.

**6.110.2.2 `_M_source`** `template<typename _Tp , typename _Compare >`  
`int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`  
`__index` of the `__source` `__sequence`.  
Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.

**6.110.2.3 `_M_sup`** `template<typename _Tp , typename _Compare >`  
`bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`  
flag, true iff this is a "maximum" `__sentinel`.  
Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_insert_start()`.  
The documentation for this struct was generated from the following file:

- [losertree.h](#)

## 6.111 `__gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser` Struct Reference

```
#include <losertree.h>
```

### Public Attributes

- `const _Tp * _M_keyp`
- `int _M_source`
- `bool _M_sup`

### 6.111.1 Detailed Description

```
template<typename _Tp, typename _Compare>
struct __gnu_parallel::_LoserTreePointerBase< _Tp, _Compare >::_Loser
```

Internal representation of `_LoserTree` `__elements`.

The documentation for this struct was generated from the following file:

- [losertree.h](#)

## 6.112 `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >`:

## Public Member Functions

- `_LoserTree` (unsigned int `__k`, `_Compare` `__comp`)
- void `__delete_min_insert` (`_Tp` `__key`, bool `__sup`)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` & `__key`, int `__source`, bool `__sup`)

## Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_log_k`
- unsigned int `_M_offset`

### 6.112.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTree< __stable, _Tp, _Compare >
```

Stable `_LoserTree` variant.

Provides the stable implementations of `insert_start`, `__init_winner`, `__init` and `__delete_min_insert`.

Unstable variant is done using partial specialisation below.

### 6.112.2 Member Function Documentation

**6.112.2.1 `__delete_min_insert()`** `template<bool __stable, typename _Tp , typename _Compare >`  
void `__gnu_parallel::_LoserTree< __stable, _Tp, _Compare >::__delete_min_insert` (  
    `_Tp` `__key`,  
    bool `__sup` ) `[inline]`

Delete the smallest element and insert a new element from the previously smallest element's sequence.

This implementation is stable.

**6.112.2.2 `__get_min_source()`** `template<typename _Tp , typename _Compare >`  
int `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source` ( ) `[inline]`, `[inherited]`

Returns

the index of the sequence with the smallest element.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::`

**6.112.2.3 `__insert_start()`** `template<typename _Tp , typename _Compare >`  
void `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start` (  
    const `_Tp` & `__key`,  
    int `__source`,  
    bool `__sup` ) `[inline]`, `[inherited]`

Initializes the sequence "`_M_source`" with the element "`__key`".

Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References `__gnu_parallel::LoserTreeBase<_Tp,_Compare>::M_first_insert`, `__gnu_parallel::LoserTreeBase<_Tp,_Compare>::M_remove`, `__gnu_parallel::LoserTreeBase<_Tp,_Compare>::M_loser`, `__gnu_parallel::LoserTreeBase<_Tp,_Compare>::Loser::M_source`, `__gnu_parallel::LoserTreeBase<_Tp,_Compare>::Loser::M_sup`.

### 6.112.3 Member Data Documentation

### 6.112.3.1 `_M_log_k` `template<typename _Tp , typename _Compare >`

```

unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected], [inherited]
log_2{M_k}

```

Referenced by [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_LoserTreeBase\(\)](#).

The documentation for this class was generated from the following file:

- losertree.h

### 6.113 `__gnu_parallel::_LoserTree< false, _Tp, _Compare >` Class Template Reference

```
#include <losetree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTree< false, _Tp, _Compare >`:

## Public Member Functions

- **\_\_LoserTree** (unsigned int \_\_k, \_\_Compare \_\_comp)
- void **\_\_delete\_min\_insert** (\_\_Tp \_\_key, bool \_\_sup)
- int **\_\_get\_min\_source** ()
- void **\_\_init** ()
- unsigned int **\_\_init\_winner** (unsigned int \_\_root)
- void **\_\_insert\_start** (const \_\_Tp & \_\_key, int \_\_source, bool \_\_sup)

## Protected Attributes

- unsigned int **\_M\_ik**
- unsigned int **\_M\_offset**

### 6.113.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::LoserTree< false, _Tp, _Compare >
```

Unstable \_LoserTree variant.

Stability (non-stable here) is selected with partial specialization.

### 6.113.2 Member Function Documentation

### 6.113.2.1 `__delete_min_insert()` `template<typename _Tp , typename _Compare >`

```
void __gnu_parallel::LoserTree< false, _Tp, _Compare >::__delete_min_insert (
    _Tp __key,
    bool __sup ) [inline]
```

Delete the  $M$  key smallest element and insert the element  $key$  instead.

## Parameters

<code>__key</code>	the <code>_M_key</code> to insert
<code>__sup</code>	true iff <code>__key</code> is an explicitly marked supremum

**6.113.2.2 `__get_min_source()`** `template<typename _Tp , typename _Compare >`  
`int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( )` [inline], [inherited]

## Returns

the index of the sequence with the smallest element.

References [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_losers](#), and [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::](#)

**6.113.2.3 `__init_winner()`** `template<typename _Tp , typename _Compare >`  
`unsigned int __gnu_parallel::_LoserTree< false, _Tp, _Compare >::__init_winner (`  
`unsigned int __root )` [inline]

Computes the winner of the competition at position "`__root`".  
 Called recursively (starting at 0) to build the initial tree.

## Parameters

<code>__root</code>	<code>__index</code> of the "game" to start.
---------------------	--

**6.113.2.4 `__insert_start()`** `template<typename _Tp , typename _Compare >`  
`void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (`  
`const _Tp & __key,`  
`int __source,`  
`bool __sup )` [inline], [inherited]

Initializes the sequence "`_M_source`" with the element "`__key`".

## Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_first\\_insert](#), [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::](#)  
[\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_losers](#), [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_Loser::\\_M\\_sou](#)  
 and [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_Loser::\\_M\\_sup](#).

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.114 `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >`:

## Classes

- struct [\\_Loser](#)

## Public Member Functions

- [\\_LoserTreeBase](#) (unsigned int \_\_k, \_Compare \_\_comp)
- [~\\_LoserTreeBase](#) ()
- int [\\_\\_get\\_min\\_source](#) ()
- void [\\_\\_insert\\_start](#) (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

## Protected Attributes

- \_Compare [\\_M\\_comp](#)
- bool [\\_M\\_first\\_insert](#)
- unsigned int [\\_M\\_ik](#)
- unsigned int [\\_M\\_k](#)
- unsigned int [\\_M\\_log\\_k](#)
- [\\_Loser](#) \* [\\_M\\_losers](#)
- unsigned int [\\_M\\_offset](#)

### 6.114.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeBase< _Tp, _Compare >
```

Guarded loser/tournament tree.

The smallest element is at the top.

Guarding is done explicitly through one flag `_M_sup` per element, `inf` is not needed due to a better initialization routine.

This is a well-performing variant.

#### Parameters

<code>_Tp</code>	the element type
<code>_Compare</code>	the comparator to use, defaults to <code>std::less&lt;_Tp&gt;</code>

### 6.114.2 Constructor & Destructor Documentation

```
6.114.2.1 \_LoserTreeBase\(\) template<typename _Tp , typename _Compare >
__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase (
    unsigned int __k,
    _Compare __comp ) [inline]
```

The constructor.

#### Parameters

<code>__k</code>	The number of sequences to merge.
<code>__comp</code>	The comparator to use.

References [\\_\\_gnu\\_parallel::\\_\\_rd\\_log2\(\)](#), [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_first\\_insert](#), [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_log\\_k](#), and [\\_\\_gnu\\_parallel::\\_LoserTreeBase< \\_Tp, \\_Compare >::\\_M\\_losers](#).

**6.114.2.2** `~_LoserTreeBase()` `template<typename _Tp , typename _Compare >`  
`__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::~~_LoserTreeBase ( )` [inline]

The destructor.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`.

### 6.114.3 Member Function Documentation

**6.114.3.1** `__get_min_source()` `template<typename _Tp , typename _Compare >`  
`int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__get_min_source ( )` [inline]

Returns

the index of the sequence with the smallest element.

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::`

**6.114.3.2** `__insert_start()` `template<typename _Tp , typename _Compare >`  
`void __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::__insert_start (`  
`const _Tp & __key,`  
`int __source,`  
`bool __sup )` [inline]

Initializes the sequence "`_M_source`" with the element "`__key`".

Parameters

<code>__key</code>	the element to insert
<code>__source</code>	<code>__index</code> of the <code>__source</code> sequence
<code>__sup</code>	flag that determines whether the value to insert is an explicit <code>__supremum</code> .

References `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::`  
`__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_source`  
and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_Loser::_M_sup`.

### 6.114.4 Member Data Documentation

**6.114.4.1** `_M_comp` `template<typename _Tp , typename _Compare >`  
`_Compare __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_comp` [protected]  
`_Compare` to use.

**6.114.4.2** `_M_first_insert` `template<typename _Tp , typename _Compare >`  
`bool __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_first_insert` [protected]

State flag that determines whether the `_LoserTree` is empty.

Only used for building the `_LoserTree`.

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::`

**6.114.4.3 `_M_log_k`** `template<typename _Tp , typename _Compare >`  
`unsigned int __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_log_k [protected]`  
`log_2{_M_k}`  
 Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`.

**6.114.4.4 `_M_losers`** `template<typename _Tp , typename _Compare >`  
`_Loser* __gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_M_losers [protected]`  
`_LoserTree __elements.`

Referenced by `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_LoserTreeBase()`, `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`, and `__gnu_parallel::_LoserTreeBase< _Tp, _Compare >::_get_min_source()`.  
 The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.115 `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >` Class Template Reference

`#include <losertree.h>`

Inheritance diagram for `__gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointer` (unsigned int \_\_k, \_Compare \_\_comp=`std::less< _Tp >()`)
- `void __delete_min_insert` (const \_Tp &\_\_key, bool \_\_sup)
- `int __get_min_source` ()
- `void __init` ()
- `unsigned int __init_winner` (unsigned int \_\_root)
- `void __insert_start` (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

### Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

#### 6.115.1 Detailed Description

`template<bool __stable, typename _Tp, typename _Compare>`  
`class __gnu_parallel::_LoserTreePointer< __stable, _Tp, _Compare >`

Stable `_LoserTree` implementation.

The unstable variant is implemented using partial instantiation below.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.116 `__gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >` Class Template Reference

`#include <losertree.h>`

Inheritance diagram for `__gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >`:

**Public Member Functions**

- `_LoserTreePointer` (unsigned int \_\_k, \_Compare \_\_comp=[std::less](#)<\_Tp>())
- void `__delete_min_insert` (const \_Tp &\_\_key, bool \_\_sup)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

**Protected Attributes**

- unsigned int `_M_ik`
- unsigned int `_M_offset`

**6.116.1 Detailed Description**

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointer< false, _Tp, _Compare >
```

Unstable `_LoserTree` implementation.

The stable variant is above.

The documentation for this class was generated from the following file:

- [losertree.h](#)

**6.117 `__gnu_parallel::_LoserTreePointerBase<_Tp, _Compare>` Class Template Reference**

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreePointerBase<_Tp, _Compare>`:

**Classes**

- struct [\\_Loser](#)

**Public Member Functions**

- `_LoserTreePointerBase` (unsigned int \_\_k, \_Compare \_\_comp=[std::less](#)<\_Tp>())
- int `__get_min_source` ()
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool \_\_sup)

**Protected Attributes**

- \_Compare `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- [\\_Loser](#) \* `_M_losers`
- unsigned int `_M_offset`

**6.117.1 Detailed Description**

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerBase<_Tp, _Compare >
```

Base class of `_Loser` Tree implementation using pointers.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.118 `__gnu_parallel::_LoserTreePointerUnguarded< __stable, _Tp, _Compare >` Class Template Reference

`#include <losertree.h>`

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguarded< __stable, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguarded` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- void `__delete_min_insert` (const \_Tp &\_\_key, bool \_\_sup)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

#### 6.118.1 Detailed Description

`template<bool __stable, typename _Tp, typename _Compare>`

`class __gnu_parallel::_LoserTreePointerUnguarded< __stable, _Tp, _Compare >`

Stable unguarded `_LoserTree` variant storing pointers.

Unstable variant is implemented below using partial specialization.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.119 `__gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >` Class Template Reference

`#include <losertree.h>`

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreePointerUnguarded` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- void `__delete_min_insert` (const \_Tp &\_\_key, bool \_\_sup)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

### 6.119.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguarded< false, _Tp, _Compare >
```

Unstable unguarded `_LoserTree` variant storing pointers.

Stable variant is above.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.120 `__gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare>` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreePointerUnguardedBase<_Tp, _Compare>`:

### Public Member Functions

- `_LoserTreePointerUnguardedBase` (unsigned int `__k`, const `_Tp` & `__sentinel`, `_Compare` `__comp`=[std::less<\\_Tp>](#) ())
- int `__get_min_source` ()
- void `__insert_start` (const `_Tp` & `__key`, int `__source`, bool)

### Protected Attributes

- `_Compare` `_M_comp`
- unsigned int `_M_ik`
- unsigned int `_M_k`
- `_Loser` \* `_M_losers`
- unsigned int `_M_offset`

### 6.120.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreePointerUnguardedBase< _Tp, _Compare >
```

Unguarded loser tree, keeping only pointers to the elements in the tree structure.

No guarding is done, therefore not a single input sequence must run empty. This is a very fast variant.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.121 `__gnu_parallel::_LoserTreeTraits<_Tp>` Struct Template Reference

```
#include <multiway_merge.h>
```

### Static Public Attributes

- static const bool `_M_use_pointer`

### 6.121.1 Detailed Description

```
template<typename _Tp>
struct __gnu_parallel::LoserTreeTraits< _Tp >
```

Traits for determining whether the loser tree should use pointers or copies.

The field "`_M_use_pointer`" is used to determine whether to use pointers in the loser trees or whether to copy the values into the loser tree.

The default behavior is to use pointers if the data type is 4 times as big as the pointer to it.

Specialize for your data type to customize the behavior.

Example:

```
template<> struct _LoserTreeTraits<int> { static const bool _M_use_pointer = false; };
template<> struct _LoserTreeTraits<heavyweight_type> { static const bool _M_use_pointer = true; };
```

#### Parameters

<code>_Tp</code>	type to give the loser tree traits for.
------------------	---

### 6.121.2 Member Data Documentation

**6.121.2.1 `_M_use_pointer`** `template<typename _Tp >`  
`const bool __gnu_parallel::LoserTreeTraits< _Tp >::_M_use_pointer [static]`

True iff to use pointers instead of values in loser trees.

The default behavior is to use pointers if the data type is four times as big as the pointer to it.

The documentation for this struct was generated from the following file:

- [multiway\\_merge.h](#)

## 6.122 `__gnu_parallel::LoserTreeUnguarded< __stable, _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::LoserTreeUnguarded< __stable, _Tp, _Compare >`:

#### Public Member Functions

- `_LoserTreeUnguarded` (unsigned int `__k`, const `_Tp` & `__sentinel`, `_Compare` `__comp`=`std::less< _Tp >()`)
- void `__delete_min_insert` (`_Tp` `__key`, bool)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int `__root`)
- void `__insert_start` (const `_Tp` & `__key`, int `__source`, bool)

#### Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

### 6.122.1 Detailed Description

```
template<bool __stable, typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguarded< __stable, _Tp, _Compare >
```

Stable implementation of unguarded `_LoserTree`.

Unstable variant is selected below with partial specialization.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.123 `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguarded` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- void `__delete_min_insert` (\_Tp \_\_key, bool)
- int `__get_min_source` ()
- void `__init` ()
- unsigned int `__init_winner` (unsigned int \_\_root)
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

### Protected Attributes

- unsigned int `_M_ik`
- unsigned int `_M_offset`

### 6.123.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguarded< false, _Tp, _Compare >
```

Non-Stable implementation of unguarded `_LoserTree`.

Stable implementation is above.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.124 `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >` Class Template Reference

```
#include <losertree.h>
```

Inheritance diagram for `__gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >`:

### Public Member Functions

- `_LoserTreeUnguardedBase` (unsigned int \_\_k, const \_Tp &\_\_sentinel, \_Compare \_\_comp=[std::less](#)< \_Tp >())
- int `__get_min_source` ()
- void `__insert_start` (const \_Tp &\_\_key, int \_\_source, bool)

## Protected Attributes

- `_Compare` **\_M\_comp**
- unsigned int **\_M\_ik**
- unsigned int **\_M\_k**
- `_Loser * _M_losers`
- unsigned int **\_M\_offset**

### 6.124.1 Detailed Description

```
template<typename _Tp, typename _Compare>
class __gnu_parallel::_LoserTreeUnguardedBase< _Tp, _Compare >
```

Base class for unguarded `_LoserTree` implementation.

The whole element is copied into the tree structure.

No guarding is done, therefore not a single input sequence must run empty. Unused `__sequence` heads are marked with a sentinel which is `>` all elements that are to be merged.

This is a very fast variant.

The documentation for this class was generated from the following file:

- [losertree.h](#)

## 6.125 `__gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

### Public Types

- typedef `_Alloc` **allocator\_type**
- typedef [detail::rebind\\_traits](#)< `_Alloc`, `Metadata` >::const\_reference **const\_reference**
- typedef `Metadata` **metadata\_type**

### Public Member Functions

- const\_reference **get\_metadata** () const

### Public Attributes

- metadata\_type **m\_metadata**

### 6.125.1 Detailed Description

```
template<typename Metadata, typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< Metadata, _Alloc >
```

`Metadata` base primary template.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.126 `__gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >` Struct Template Reference

```
#include <pat_trie_base.hpp>
```

## Public Types

- typedef `_Alloc` `allocator_type`
- typedef `null_type` `metadata_type`

### 6.126.1 Detailed Description

```
template<typename _Alloc>
struct __gnu_pbds::detail::pat_trie_base::_Metadata< null_type, _Alloc >
```

Specialization for null metadata.

The documentation for this struct was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.127 `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>` Struct Template Reference

```
#include <base.h>
```

Inheritance diagram for `__gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result>`:

## Public Types

- typedef `_Arg1` `first_argument_type`
- typedef `_Result` `result_type`
- typedef `_Arg2` `second_argument_type`

## Public Member Functions

- `_Result operator()` (const `_Tp1` &`__x`, const `_Tp2` &`__y`) const

### 6.127.1 Detailed Description

```
template<typename _Tp1, typename _Tp2, typename _Result = __typeof__(*static_cast<_Tp1*>(0) * *static_cast<_Tp2*>(0))>
struct __gnu_parallel::_Multiplies<_Tp1, _Tp2, _Result >
```

Similar to `std::multiplies`, but allows two different types.

### 6.127.2 Member Typedef Documentation

**6.127.2.1 `first_argument_type`** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Arg1 std::binary\_function<_Arg1, _Arg2, _Result >::first_argument_type` [inherited]  
`first_argument_type` is the type of the first argument

**6.127.2.2 `result_type`** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Result std::binary\_function<_Arg1, _Arg2, _Result >::result_type` [inherited]  
`result_type` is the return type

**6.127.2.3 `second_argument_type`** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Arg2 std::binary\_function<_Arg1, _Arg2, _Result >::second_argument_type` [inherited]  
`second_argument_type` is the type of the second argument

The documentation for this struct was generated from the following file:

- [base.h](#)

## 6.128 `__gnu_pbds::detail::pat_trie_base::_Node_base<_ATraits, Metadata >` Struct Template Reference

`#include <pat_trie_base.hpp>`

Inheritance diagram for `__gnu_pbds::detail::pat_trie_base::_Node_base<_ATraits, Metadata >`:

### Public Types

- typedef `_ATraits::const_iterator` **a\_const\_iterator**
- typedef `detail::rebind_traits<_Alloc, _ATraits >::const_pointer` **a\_const\_pointer**
- typedef `_ATraits` **access\_traits**

- typedef `rebind_traits< _Alloc, Node >::pointer` `node_pointer`

### 6.129.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename \_CIterator, typename Iterator, typename \_Alloc>

class `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >`

Node const iterator.

### 6.129.2 Member Typedef Documentation

**6.129.2.1 `metadata_const_reference`** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
 typedef `rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_const_reference`  
 Const metadata reference type.

**6.129.2.2 `metadata_type`** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
 typedef `Node::metadata_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::metadata_type`  
 Metadata type.

### 6.129.3 Member Function Documentation

**6.129.3.1 get\_child()** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,  
Iterator, _Alloc >::get_child (`  
`size_type i ) const [inline]`

Returns a `__const` node `__iterator` to the corresponding node's i-th child.

References [std::advance\(\)](#).

**6.129.3.2 get\_metadata()** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
metadata_const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode,  
_CIterator, Iterator, _Alloc >::get_metadata ( ) const [inline]`

Metadata access.

**6.129.3.3 num\_children()** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,  
Iterator, _Alloc >::num_children ( ) const [inline]`

Returns the number of children in the corresponding node.

References [std::distance\(\)](#).

Referenced by `__gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*()`,  
and `__gnu_pbds::detail::pat_trie_base::_Node_iter< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc >::operator*()`.

**6.129.3.4 operator"!="()** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,  
_Alloc >::operator!= (`  
`const __Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )`  
`const [inline]`

Compares content (negatively) to a different iterator object.

**6.129.3.5 operator\*()** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
const_reference __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _C  
Iterator, Iterator, _Alloc >::operator* ( ) const [inline]`

Const access; returns the `__const` iterator\* associated with the current leaf.

References [\\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_citer< Node, Leaf, Head, Inode, \\_CIterator, Iterator, \\_Alloc >::num\\_children\(\)](#).

**6.129.3.6 operator==(** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
bool __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator,  
_Alloc >::operator==(`  
`const __Node_citer< Node, Leaf, Head, Inode, _CIterator, Iterator, _Alloc > & other )`  
`const [inline]`

Compares content to a different iterator object.

**6.129.3.7 valid\_prefix()** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
[std::pair< a\\_const\\_iterator, a\\_const\\_iterator > \\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_citer< Node, Leaf, Head, Inode, \\_CIterator, Iterator, \\_Alloc >::valid\\_prefix \( \) const](#) [inline]  
 Subtree valid prefix.

The documentation for this class was generated from the following file:

- [pat\\_trie\\_base.hpp](#)

## 6.130 std::\_Node\_handle< \_Key, \_Value, \_NodeAlloc > Class Template Reference

#include <node\_handle.h>

Inheritance diagram for std::\_Node\_handle< \_Key, \_Value, \_NodeAlloc >:

### Public Types

### 6.134.1 Detailed Description

template<typename Node, typename Leaf, typename Head, typename Inode, typename \_CIterator, typename Iterator, typename \_Alloc>

class \_\_gnu\_pbds::detail::pat\_trie\_base::\_Node\_iter< Node, Leaf, Head, Inode, \_CIterator, Iterator, \_Alloc >

Node iterator.

### 6.134.2 Member Typedef Documentation

**6.134.2.1 metadata\_const\_reference** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
 typedef [rebind\\_traits](#)<\_Alloc,[metadata\\_type](#)>::const\_reference [\\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_citer](#)< Node, Leaf, Head, Inode, \_CIterator, Iterator, \_Alloc >::metadata\_const\_reference [inherited]  
 Const metadata reference type.

**6.134.2.2 metadata\_type** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
 typedef Node::metadata\_type [\\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_citer](#)< Node, Leaf, Head, Inode, \_CIterator, Iterator, \_Alloc >::metadata\_type [inherited]  
 Metadata type.

### 6.134.3 Member Function Documentation

**6.134.3.1 get\_child()** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
[\\_Node\\_iter](#) [\\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_iter](#)< Node, Leaf, Head, Inode, \_CIterator, Iterator, \_Alloc >::get\_child (   
     size\_type i ) const [inline]  
 Returns a node \_\_iterator to the corresponding node's i-th child.  
 References [std::advance\(\)](#).

**6.134.3.2 get\_metadata()** template<typename Node , typename Leaf , typename Head , typename Inode , typename \_CIterator , typename Iterator , typename \_Alloc >  
[metadata\\_const\\_reference](#) [\\_\\_gnu\\_pbds::detail::pat\\_trie\\_base::\\_Node\\_citer](#)< Node, Leaf, Head, Inode, \_CIterator, Iterator, \_Alloc >::get\_metadata ( ) const [inline], [inherited]  
 Metadata access.

**6.134.3.3 `num_children()`** `template<typename Node , typename Leaf , typename Head , typename Inode ,  
typename _CIterator , typename Iterator , typename _Alloc >  
size_type __gnu_pbds::detail::pat_trie_base::_Node_citer< Node, Leaf, Head, Inode, _CIterator,  
Iterator, _Alloc >::num_children ( ) const [inline], [inherited]`

Returns the number of children in the corresponding node.

## 6.135 `__gnu_debug::__Not_equal_to<_Type>` Class Template Reference

```
#include <safe_sequence.h>
```

### Public Member Functions

- `_Not_equal_to` (const `_Type` &\_\_v)
- `bool operator()` (const `_Type` &\_\_x) const

### 6.135.1 Detailed Description

```
template<typename _Type>
class __gnu_debug::_Not_equal_to< _Type >
```

A simple function object that returns true if the passed-in value is not equal to the stored value. It saves typing over using both bind1st and not\_equal.

The documentation for this class was generated from the following file:

- [safe\\_sequence.h](#)

## 6.136 std::\_Not\_fn< \_Fn > Class Template Reference

### 6.138.1 Detailed Description

```
template<typename _Tp, bool = is_trivially_copy_constructible_v<_Tp>, bool = is_trivially_move_constructible_v<_Tp>>
struct std::_Optional_base< _Tp, bool, bool >
```

Class template that provides copy/move constructors of optional.

Such a separate base class template is necessary in order to conditionally make copy/move constructors trivial.

When the contained value is trivially copy/move constructible, the copy/move constructors of `_Optional_base` will invoke the trivial copy/move constructor of `_Optional_payload`. Otherwise, they will invoke `_Optional_payload(bool, const _Optional_payload&)` or `_Optional_payload(bool, _Optional_payload&&)` to initialize the contained value, if copy-ing/moving an engaged optional.

Whether the other special members are trivial is determined by the `_Optional_payload<_Tp>` specialization used for the `_M_payload` member.

### 6.143.1 Detailed Description

```
template<typename _Storage_policy>
class __gnu_cxx::_Pointer_adapter< _Storage_policy >
```

The following provides an 'alternative pointer' that works with the containers when specified as the pointer typedef of the allocator.

The pointer type used with the containers doesn't have to be this class, but it must support the implicit conversions, pointer arithmetic, comparison operators, etc. that are supported by this class, and avoid raising compile-time ambiguities. Because creating a working pointer can be challenging, this pointer template was designed to wrapper an easier storage policy type, so that it becomes reusable for creating other pointer types.

A key point of this class is also that it allows container writers to 'assume' `Allocator::pointer` is a typedef for a normal pointer. This class supports most of the conventions of a true pointer, and can, for instance handle implicit conversion to `const` and base class pointer types. The only impositions on container writers to support extended pointers are: 1) use the `Allocator::pointer` typedef appropriately for pointer types. 2) if you need pointer casting, use the `__pointer_cast<>` functions from `ext/cast.h`. This allows pointer cast operations to be overloaded as necessary by custom pointers.

Note: The `const` qualifier works with this pointer adapter as follows:

```
_Tp* == \_Pointer\_adapter<_Std_pointer_impl<_Tp>>>; const _Tp* == \_Pointer\_adapter<_Std_pointer_impl<const
_Tp>>>; _Tp* const == const \_Pointer\_adapter<_Std_pointer_impl<_Tp>>>; const _Tp* const == const \_Pointer\_
adapter<_Std_pointer_impl<const _Tp>>>;
```

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 6.144 `__gnu_parallel::_PseudoSequence<_Tp, _DifferenceTp>` Class Template Reference

```
#include <base.h>
```

### Public Types

- typedef `_DifferenceTp` **`_DifferenceType`**
- typedef `\_PseudoSequenceIterator<_Tp, uint64_t>` **`iterator`**

### Public Member Functions

- `\_PseudoSequence (const _Tp & __val, _DifferenceType __count)`
- `iterator begin () const`
- `iterator end () const`

### 6.144.1 Detailed Description

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >
```

Sequence that conceptually consists of multiple copies of the same element. The copies are not stored explicitly, of course.

#### Parameters

<code>_Tp</code>	Sequence <code>_M_value</code> type.
<code>_DifferenceTp</code>	Sequence difference type.

### 6.144.2 Constructor & Destructor Documentation

```
6.144.2.1 _PseudoSequence() template<typename _Tp , typename _DifferenceTp >
__gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::_PseudoSequence (
    const _Tp & __val,
    _DifferenceType __count ) [inline]
```

Constructor.

#### Parameters

<code>__val</code>	Element of the sequence.
<code>__count</code>	Number of (virtual) copies.

### 6.144.3 Member Function Documentation

```
6.144.3.1 begin() template<typename _Tp , typename _DifferenceTp >
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::begin ( ) const [inline]
```

Begin iterator.

```
6.144.3.2 end() template<typename _Tp , typename _DifferenceTp >
iterator __gnu_parallel::_PseudoSequence< _Tp, _DifferenceTp >::end ( ) const [inline]
```

End iterator.

The documentation for this class was generated from the following file:

- [base.h](#)

## 6.145 `__gnu_parallel::_PseudoSequenceIterator< _Tp, _DifferenceTp >` Class Template Reference

```
#include <base.h>
```

#### Public Types

- typedef `_DifferenceTp` `_DifferenceType`

**Public Member Functions**

- `_PseudoSequenceliterator` (const `_Tp` &\_\_val, `_DifferenceType` \_\_pos)
- `bool operator!=` (const `_PseudoSequenceliterator` &\_\_i2)
- `const _Tp` & `operator*` () const
- `_PseudoSequenceliterator` & `operator++` ()
- `_PseudoSequenceliterator` `operator++` (int)
- `_DifferenceType` `operator-` (const `_PseudoSequenceliterator` &\_\_i2)
- `bool operator==` (const `_PseudoSequenceliterator` &\_\_i2)
- `const _Tp` & `operator[]` (`_DifferenceType`) const

**6.145.1 Detailed Description**

```
template<typename _Tp, typename _DifferenceTp>
class __gnu_parallel::_PseudoSequenceliterator<_Tp, _DifferenceTp>
```

`_Iterator` associated with `__gnu_parallel::_PseudoSequence`. It features the usual random-access iterator functionality.

**Parameters**

<code>_Tp</code>	Sequence <code>_M_value</code> type.
<code>_DifferenceTp</code>	Sequence difference type.

The documentation for this class was generated from the following file:

- [base.h](#)

**6.146 `__gnu_parallel::__QSBThreadLocal<_RAIter>` Struct Template Reference**

```
#include <balanced_quicksort.h>
```

**Public Types**

- `typedef` `_TraitsType::difference_type` `_DifferenceType`
- `typedef` `std::pair<_RAIter, _RAIter>` `_Piece`
- `typedef` `std::iterator_traits<_RAIter>` `_TraitsType`

**Public Member Functions**

**Public Attributes**

- `volatile _DifferenceType` \* `_M_elements_leftover`
- `_Piece` `_M_global`
- `_Piece` `_M_initial`
- `_RestrictedBoundedConcurrentQueue<_Piece>` `_M_leftover_parts`
- `_ThreadIndex` `_M_num_threads`

**6.146.1 Detailed Description**

```
template<typename _RAIter>
struct __gnu_parallel::__QSBThreadLocal<_RAIter>
```

Information local to one thread in the parallel quicksort run.

## 6.146.2 Member Typedef Documentation

### 6.146.2.1 `_Piece` `template<typename _RAIter >`

`typedef std::pair<_RAIter, _RAIter> __gnu_parallel::__QSBThreadLocal< _RAIter >::_Piece`  
Continuous part of the sequence, described by an iterator pair.

## 6.146.3 Constructor & Destructor Documentation

### 6.146.3.1 `_QSBThreadLocal()` `template<typename _RAIter >`

`__gnu_parallel::__QSBThreadLocal< _RAIter >::_QSBThreadLocal (`  
`int __queue_size ) [inline]`

Constructor.

Parameters

<code>__queue_size</code>	size of the work-stealing queue.
---------------------------	----------------------------------

## 6.146.4 Member Data Documentation

### 6.146.4.1 `_M_elements_leftover` `template<typename _RAIter >`

`volatile _DifferenceType* __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_elements_leftover`

Pointer to a counter of elements left over to sort.

Referenced by `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

### 6.146.4.2 `_M_global` `template<typename _RAIter >`

`_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_global`

The complete sequence to sort.

### 6.146.4.3 `_M_initial` `template<typename _RAIter >`

`_Piece __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_initial`

Initial piece to work on.

Referenced by `__gnu_parallel::__qsb_conquer()`, and `__gnu_parallel::__qsb_local_sort_with_helping()`.

### 6.146.4.4 `_M_leftover_parts` `template<typename _RAIter >`

`_RestrictedBoundedConcurrentQueue<_Piece> __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_leftover_parts`

Work-stealing queue.

Referenced by `__gnu_parallel::__qsb_local_sort_with_helping()`.

### 6.146.4.5 `_M_num_threads` `template<typename _RAIter >`

`_ThreadIndex __gnu_parallel::__QSBThreadLocal< _RAIter >::_M_num_threads`

Number of threads involved in this algorithm.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

The documentation for this struct was generated from the following file:

- [balanced\\_quicksort.h](#)

## 6.147 `std::__detail::__Quoted_string<_String, _CharT>` Struct Template Reference

```
#include <quoted_string.h>
```

### Public Member Functions

- `_Quoted_string` (`_String __str`, `_CharT __del`, `_CharT __esc`)
- `_Quoted_string & operator=` (`_Quoted_string &`)=delete

### Public Attributes

- `_CharT _M_delim`
- `_CharT _M_escape`
- `_String _M_string`

#### 6.147.1 Detailed Description

```
template<typename _String, typename _CharT>
struct std::__detail::__Quoted_string<_String, _CharT>
```

Struct for delimited strings.

The documentation for this struct was generated from the following file:

- [quoted\\_string.h](#)

## 6.148 `__gnu_parallel::__RandomNumber` Class Reference

```
#include <random_number.h>
```

### Public Member Functions

- `_RandomNumber` ()
- `_RandomNumber` (`uint32_t __seed`, `uint64_t _M_supremum=0x100000000ULL`)
- unsigned long `__genrand_bits` (`int __bits`)
- `uint32_t operator()` ()
- `uint32_t operator()` (`uint64_t local_supremum`)

#### 6.148.1 Detailed Description

Random number generator, based on the Mersenne twister.

#### 6.148.2 Constructor & Destructor Documentation

**6.148.2.1** `_RandomNumber()` [1/2] `__gnu_parallel::__RandomNumber::__RandomNumber ( )` [inline]

Default constructor. Seed with 0.

**6.148.2.2** `_RandomNumber()` [2/2] `__gnu_parallel::_RandomNumber::_RandomNumber (`  
`uint32_t __seed,`  
`uint64_t _M_supremum = 0x100000000ULL ) [inline]`

Constructor.

Parameters

<code>__seed</code>	Random <code>__seed</code> .
<code>_M_supremum</code>	Generate integer random numbers in the interval <code>[0,_M_supremum)</code> .

### 6.148.3 Member Function Documentation

**6.148.3.1** `__genrand_bits()` `unsigned long __gnu_parallel::_RandomNumber::__genrand_bits (`  
`int __bits ) [inline]`

Generate a number of random bits, run-time parameter.

Parameters

<code>__bits</code>	Number of bits to generate.
---------------------	-----------------------------

**6.148.3.2** `operator>()` [1/2] `uint32_t __gnu_parallel::_RandomNumber::operator() ( ) [inline]`  
 Generate unsigned random 32-bit integer.

**6.148.3.3** `operator>()` [2/2] `uint32_t __gnu_parallel::_RandomNumber::operator() (`  
`uint64_t local_supremum ) [inline]`

Generate unsigned random 32-bit integer in the interval `[0,local_supremum)`.

The documentation for this class was generated from the following file:

- [random\\_number.h](#)

## 6.149 `__gnu_cxx::_Relative_pointer_impl<_Tp>` Class Template Reference

```
#include <pointer.h>
```

### Public Types

- `typedef _Tp element_type`

### Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Relative\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Relative\_pointer\_impl &__rarg) const`
- `void set (_Tp *__arg)`

### 6.149.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< _Tp >
```

A storage policy for use with `_Pointer_adapter<>` which stores the pointer's address as an offset value which is relative to its own address.

This is intended for pointers within shared memory regions which might be mapped at different addresses by different processes. For null pointers, a value of 1 is used. (0 is legitimate sometimes for nodes in circularly linked lists) This value was chosen as the least likely to generate an incorrect null, As there is no reason why any normal pointer would point 1 byte into its own pointer address.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 6.150 `__gnu_cxx::_Relative_pointer_impl< const _Tp >` Class Template Reference

```
#include <pointer.h>
```

### Public Types

- typedef const \_Tp **element\_type**

### Public Member Functions

- const \_Tp \* **get** () const
- bool **operator**< (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- bool **operator**== (const [\\_Relative\\_pointer\\_impl](#) &\_\_rarg) const
- void **set** (const \_Tp \*\_\_arg)

### 6.150.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Relative_pointer_impl< const _Tp >
```

`Relative_pointer_impl` needs a specialization for `const T` because of the casting done during pointer arithmetic.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 6.151 `__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >` Class Template Reference

```
#include <queue.h>
```

### Public Member Functions

- [\\_RestrictedBoundedConcurrentQueue](#) ([\\_SequenceIndex](#) \_\_max\_size)
- [~\\_RestrictedBoundedConcurrentQueue](#) ()
- bool [pop\\_back](#) (\_Tp &\_\_t)
- bool [pop\\_front](#) (\_Tp &\_\_t)
- void [push\\_front](#) (const \_Tp &\_\_t)

### 6.151.1 Detailed Description

```
template<typename _Tp>
class __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >
```

Double-ended queue of bounded size, allowing lock-free atomic access. `push_front()` and `pop_front()` must not be called concurrently to each other, while `pop_back()` can be called concurrently at all times. `empty()`, `size()`, and `top()` are intentionally not provided. Calling them would not make sense in a concurrent setting.

#### Parameters

<code>_Tp</code>	Contained element type.
------------------	-------------------------

### 6.151.2 Constructor & Destructor Documentation

```
6.151.2.1 _RestrictedBoundedConcurrentQueue()  template<typename _Tp >
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::_RestrictedBoundedConcurrentQueue (
    __SequenceIndex __max_size ) [inline]
```

Constructor. Not to be called concurrent, of course.

#### Parameters

<code>__max_size</code>	Maximal number of elements to be contained.
-------------------------	---

References [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

```
6.151.2.2 ~_RestrictedBoundedConcurrentQueue()  template<typename _Tp >
__gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::~~_RestrictedBoundedConcurrentQueue ( )
[inline]
```

Destructor. Not to be called concurrent, of course.

### 6.151.3 Member Function Documentation

```
6.151.3.1 pop_back()  template<typename _Tp >
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_back (
    _Tp & __t ) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

References [\\_\\_gnu\\_parallel::\\_\\_compare\\_and\\_swap\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_decode2\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

```
6.151.3.2 pop_front()  template<typename _Tp >
bool __gnu_parallel::_RestrictedBoundedConcurrentQueue< _Tp >::pop_front (
    _Tp & __t ) [inline]
```

Pops one element from the queue at the front end. Must not be called concurrently with `pop_front()`.

References [\\_\\_gnu\\_parallel::\\_\\_compare\\_and\\_swap\(\)](#), [\\_\\_gnu\\_parallel::\\_\\_decode2\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_encode2\(\)](#).

### 6.151.3.3 `push_front()` `template<typename _Tp >`

```
void __gnu_parallel::_RestrictedBoundedConcurrentQueue<_Tp >::push_front (
    const _Tp & __t ) [inline]
```

Pushes one element into the queue at the front end. Must not be called concurrently with `pop_front()`.

References `__gnu_parallel::_decode2()`, `__gnu_parallel::_encode2()`, and `__gnu_parallel::_fetch_and_add()`.

The documentation for this class was generated from the following file:

- [queue.h](#)

## 6.152 `__gnu_debug::_Safe_container<_SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >` Class Template Reference

```
#include <safe_container.h>
```

Inheritance diagram for `__gnu_debug::_Safe_container<_SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >`:

### Protected Member Functions

- `_Safe_container` (`_Safe_container` &&)=default
- `_Safe_container` (`_Safe_container` &&\_\_x, const `_Alloc` &\_\_a)
- `_Safe_container` (const `_Safe_container` &)=default
- `void _M_swap` (`_Safe_container` &\_\_x) noexcept
- `_Safe_container` & `operator=` (`_Safe_container` &&\_\_x) noexcept
- `_Safe_container` & `operator=` (const `_Safe_container` &) noexcept

### 6.152.1 Detailed Description

```
template<typename _SafeContainer, typename _Alloc, template< typename > class _SafeBase, bool _IsCxx11AllocatorAware = true>
class __gnu_debug::_Safe_container<_SafeContainer, _Alloc, _SafeBase, _IsCxx11AllocatorAware >
```

Safe class dealing with some allocator dependent operations.

The documentation for this class was generated from the following file:

- [safe\\_container.h](#)

## 6.153 `__gnu_debug::_Safe_forward_list<_SafeSequence >` Class Template Reference

Inheritance diagram for `__gnu_debug::_Safe_forward_list<_SafeSequence >`:

### Public Member Functions

- `void _M_invalidate_if` (`_Predicate` \_\_pred)
- `void _M_transfer_from_if` (`_Safe_sequence` &\_\_from, `_Predicate` \_\_pred)

### Public Attributes

- `_Safe_iterator_base` \* `_M_const_iterators`
- `_Safe_iterator_base` \* `_M_iterators`
- unsigned int `_M_version`

### Protected Member Functions

- `void _M_detach_all` ()
- `void _M_detach_singular` ()
- `__gnu_cxx::__mutex` & `_M_get_mutex` () throw ()

- void `_M_invalidate_all()`
- void `_M_invalidate_all() const`
- void `_M_revalidate_singular()`
- void `_M_swap(_Safe_sequence_base &) noexcept`

### 6.153.1 Detailed Description

```
template<typename _SafeSequence>
class __gnu_debug::_Safe_forward_list< _SafeSequence >
```

Special iterators swap and invalidation for `forward_list` because of the `before_begin` iterator.

### 6.153.2 Member Function Documentation

**6.153.2.1 `_M_detach_all()`** void `__gnu_debug::_Safe_sequence_base::_M_detach_all()` [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::_Safe_sequence_base::~~_Safe_sequence_base()`.

**6.153.2.2 `_M_detach_singular()`** void `__gnu_debug::_Safe_sequence_base::_M_detach_singular()` [protected], [inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**6.153.2.3 `_M_get_mutex()`** `__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex()` throw() [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**6.153.2.4 `_M_invalidate_all()`** void `__gnu_debug::_Safe_sequence_base::_M_invalidate_all() const` [inline], [protected], [inherited]

Invalidates all iterators.

References `__gnu_debug::_Safe_sequence_base::_M_version`.

**6.153.2.5 `_M_invalidate_if()`** void `__gnu_debug::_Safe_sequence<_SafeSequence>::_M_invalidate_if(_Predicate __pred)` [inherited]

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

**6.153.2.6 `_M_revalidate_singular()`** void `__gnu_debug::_Safe_sequence_base::_M_revalidate_singular()` [protected], [inherited]

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**6.153.2.7 `_M_transfer_from_if()`** `void __gnu_debug::_Safe_sequence<_SafeSequence>::_M_transfer_from_if (`  
`\_Safe\_sequence<\_SafeSequence> & __from,`  
`\_Predicate __pred ) [inherited]`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 6.153.3 Member Data Documentation

**6.153.3.1 `_M_const_iterators`** `\_Safe\_iterator\_base\* __gnu_debug::_Safe_sequence_base::_M_const_↵`  
`iterators [inherited]`

The list of constant iterators that reference this container.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#).

**6.153.3.2 `_M_iterators`** `\_Safe\_iterator\_base\* __gnu_debug::_Safe_sequence_base::_M_iterators [inherited]`

The list of mutable iterators that reference this container.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#).

**6.153.3.3 `_M_version`** `unsigned int __gnu_debug::_Safe_sequence_base::_M_version [mutable], [inherited]`

The container version number. This number may never be 0.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_invalidate\\_all\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#).

### 6.154.1 Detailed Description

```
template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>
```

```
class \_\_gnu\_debug::\_\_Safe\_iterator<_Iterator, _Sequence, _Category>
```

Safe iterator wrapper.

The class template `_Safe_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

Note that `_Iterator` must be the first base class so that it gets initialized before the iterator is being attached to the container's list of iterators and it is being detached before `_Iterator` get destroyed. Otherwise it would result in a data race.

### 6.154.2 Constructor & Destructor Documentation

**6.154.2.1 `_Safe_iterator()` [1/5]** `template<typename _Iterator, typename _Sequence, typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>  
\_\_gnu\_debug::\_\_Safe\_iterator<_Iterator, _Sequence, _Category>::__Safe_iterator ( ) [inline],  
[noexcept]`

#### Postcondition

the iterator is singular and unattached

**6.154.2.2 `_Safe_iterator()` [2/5]** `template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>`  
`__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (`  
`_Iterator __i,`  
`const \_Safe\_sequence\_base * __seq ) [inline], [noexcept]`

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**

`seq` is not NULL

**Postcondition**

this is not singular

**6.154.2.3 `_Safe_iterator()` [3/5]** `template<typename _Iterator , typename _Sequence , typename _Category = typename std::iterator_traits<_Iterator>::iterator_category>`  
`__gnu_debug::_Safe_iterator< _Iterator, _Sequence, _Category >::_Safe_iterator (`

- class `_Safe_sequence_base`

#### 6.155.1 Detailed Description

Basic functionality for a *safe* iterator.

The `_Safe_iterator_base` base class implements the functionality of a safe iterator that is not specific to a particular iterator type. It contains a pointer back to the sequence it references along with iterator version information and pointers to form a doubly-linked list of iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

#### 6.155.2 Constructor & Destructor Documentation

**6.155.2.1 `_Safe_iterator_base`()** [1/3] `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base ( )`  
[inline], [protected]

Initializes the iterator and makes it singular.

**6.155.2.2 `_Safe_iterator_base`()** [2/3] `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (`  
    const `_Safe_sequence_base` \* \_\_seq,  
    bool \_\_constant ) [inline], [protected]

Initialize the iterator to reference the sequence pointed to by \_\_seq. \_\_constant is true when we are initializing a constant iterator, and false if it is a mutable iterator. Note that \_\_seq may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference \_\_seq and be nonsingular.

References `_M_attach`().

**6.155.2.3 `_Safe_iterator_base`()** [3/3] `__gnu_debug::_Safe_iterator_base::_Safe_iterator_base (`  
    const `_Safe_iterator_base` & \_\_x,  
    bool \_\_constant ) [inline], [protected]

Initializes the iterator to reference the same sequence that \_\_x does. \_\_constant is true if this is a constant iterator, and false if it is mutable.

References `_M_attach`(), and `_M_sequence`.

#### 6.155.3 Member Function Documentation

**6.155.3.1 `_M_attach()`** `void __gnu_debug::_Safe_iterator_base::_M_attach (`  
    `_Safe_sequence_base * __seq,`  
    `bool __constant ) [protected]`

Attaches this iterator to the given sequence, detaching it from whatever sequence it was attached to originally. If the new sequence is the NULL pointer, the iterator is left unattached.

Referenced by [\\_Safe\\_iterator\\_base\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_M\\_attach\(\)](#).

**6.155.3.2 `_M_attach_single()`** `void __gnu_debug::_Safe_iterator_base::_M_attach_single (`  
    `_Safe_sequence_base * __seq,`  
    `bool __constant ) throw ( ) [protected]`

Likewise, but not thread-safe.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_M\\_attach\\_single\(\)](#).

**6.155.3.3 `_M_attached_to()`** `bool __gnu_debug::_Safe_iterator_base::_M_attached_to (`  
    `const _Safe_sequence_base * __seq ) const [inline]`

Determines if we are attached to the given sequence.

References [\\_M\\_sequence](#).

**6.155.3.4 `_M_can_compare()`** `bool __gnu_debug::_Safe_iterator_base::_M_can_compare (`  
    `const _Safe_iterator_base & __x ) const throw ( )`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**6.155.3.5 `_M_detach()`** `void __gnu_debug::_Safe_iterator_base::_M_detach ( ) [protected]`

Detach the iterator for whatever sequence it is attached to, if any.

Unlink itself

References `_M_next`, and `_M_prior`.

## 6.155.4 Member Data Documentation

**6.155.4.1 `_M_next`** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::_M_next`

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Referenced by `__gnu_debug::Safe_sequence<_SafeSequence>::_M_invalidate_if()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `_M_unlink()`.

**6.155.4.2 `_M_prior`** `_Safe_iterator_base* __gnu_debug::Safe_iterator_base::_M_prior`

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence` != NULL.

Referenced by `__gnu_debug::Safe_sequence<_SafeSequence>::_M_invalidate_if()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_invalidate_if()`, and `_M_unlink()`.

**6.155.4.3 `_M_sequence`** `_Safe_sequence_base* __gnu_debug::Safe_iterator_base::_M_sequence`

The sequence this iterator references; may be NULL to indicate a singular iterator.

Referenced by `__gnu_debug::Safe_iterator<_Iterator, _Sequence, _Category>::_Safe_iterator()`, `_Safe_iterator_base()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::_Safe_local_iterator()`, `__gnu_debug::Safe_local_iterator_base::_Safe_local_iterator_base()`, `_M_attached_to()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::_M_transfer_from_if()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator=()`.

**6.155.4.4 `_M_version`** `unsigned int __gnu_debug::Safe_iterator_base::_M_version`

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by `_M_invalidate()`, `__gnu_debug::Safe_sequence<_Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::_M_transfer_from_if()`, `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::_M_value_initialized()`, `__gnu_debug::Safe_iterator<_Iterator, _Sequence>::_M_value_initialized()`, and `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator=()`.

**6.156.1 Detailed Description**

```
template<typename _Iterator, typename _Sequence>
class __gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>
```

Safe iterator wrapper.

The class template `_Safe_local_iterator` is a wrapper around an iterator that tracks the iterator's movement among sequences and checks that operations performed on the "safe" iterator are legal. In addition to the basic iterator operations (which are validated, and then passed to the underlying iterator), `_Safe_local_iterator` has member functions for iterator invalidation, attaching/detaching the iterator from sequences, and querying the iterator's state.

**6.156.2 Constructor & Destructor Documentation**

**6.156.2.1 `_Safe_local_iterator()` [1/5]** `template<typename _Iterator, typename _Sequence> __gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::__Safe_local_iterator () [inline], [noexcept]`

**Postcondition**

the iterator is singular and unattached

**6.156.2.2 `_Safe_local_iterator()` [2/5]** `template<typename _Iterator, typename _Sequence> __gnu_debug::__Safe_local_iterator<_Iterator, _Sequence>::__Safe_local_iterator ( _Iterator __i, const _Safe_sequence_base * __cont ) [inline]`

Safe iterator construction from an unsafe iterator and its sequence.

**Precondition**

`seq` is not NULL

**Postcondition**

this is not singular

**6.156.2.3 `_Safe_local_iterator()` [3/5]** `template<typename _Iterator , typename _Sequence >`  
`__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (`  
`const _Safe_local_iterator< _Iterator, _Sequence > & __x ) [inline], [noexcept]`

Copy construction.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach()`, `__gnu_debug::_Safe_iterator_base::_M_sequence`,  
`__gnu_debug::_Safe_iterator_base::_M_singular()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_value_initialize`

**6.156.2.4 `_Safe_local_iterator()` [4/5]** `template<typename _Iterator , typename _Sequence >`  
`__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (`  
`_Safe_local_iterator< _Iterator, _Sequence > && __x ) [inline], [noexcept]`

Move construction.

**Postcondition**

`__x` is singular and unattached

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach()`, `__gnu_debug::_Safe_local_iterator_base::_M_de`,  
`__gnu_debug::_Safe_iterator_base::_M_sequence`, `__gnu_debug::_Safe_iterator_base::_M_singular()`, `__gnu_debug::_Safe_local_iterat`  
and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::base()`.

**6.156.2.5 `_Safe_local_iterator()` [5/5]** `template<typename _Iterator , typename _Sequence >`  
`template<typename _MutableIterator >`  
`__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator (`  
`const _Safe_local_iterator< _MutableIterator, typename __gnu_cxx::__enable_if< _Is↵`  
`Constant::_value &&std::__are_same< _MutableIterator, _OtherIterator >::_value, _Sequence >::_↵`  
`__type > & __x ) [inline], [noexcept]`

Converting constructor from a mutable iterator to a constant iterator.

References `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach()`, `__gnu_debug::_Safe_iterator_base::_M_sequence`,  
`__gnu_debug::_Safe_iterator_base::_M_singular()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_value_initialize`

**6.156.3 Member Function Documentation**

**6.156.3.1 `_M_attach()` [1/2]** `template<typename _Iterator , typename _Sequence >`  
`void __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_attach (`  
`_Safe_sequence_base * __seq ) [inline]`

Attach iterator to the given sequence.

References `__gnu_debug::_Safe_local_iterator_base::_M_attach()`, and `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_S`  
Referenced by `__gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_Safe_local_iterator()`, and `__gnu_debug::_Safe_local_iterat`

**6.156.3.2 `_M_attach()`** [2/2] `void __gnu_debug::_Safe_local_iterator_base::_M_attach (`  
`\_Safe\_sequence\_base * __seq,`  
`bool __constant )` [protected], [inherited]

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator\\_base::\\_Safe\\_local\\_iterator\\_base\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_Safe\\_local\\_iterator\(\)](#).

**6.156.3.3 `_M_attach_single()`** [1/2] `template<typename _Iterator , typename _Sequence >`  
`void \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_attach\_single (`  
`\_Safe\_sequence\_base * __seq )` [inline]

Likewise, but not thread-safe.

References [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator\\_base::\\_M\\_attach\\_single\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_attach\\_single\(\)](#).

**6.156.3.4 `_M_attach_single()`** [2/2] `void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (`  
`\_Safe\_sequence\_base * __seq,`  
`bool __constant )` throw ( ) [protected], [inherited]

Likewise, but not thread-safe.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_attach\\_single\(\)](#).

**6.156.3.5 `_M_attached_to()`** `bool __gnu_debug::_Safe_iterator_base::_M_attached_to (`  
`const \_Safe\_sequence\_base * __seq )` const [inline], [inherited]

Determines if we are attached to the given sequence.

References [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_attached\\_to\(\)](#).

**6.156.3.6 `_M_can_compare()`** `bool __gnu_debug::_Safe_iterator_base::_M_can_compare (`  
`const \_Safe\_iterator\_base & __x )` const throw ( ) [inherited]

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**6.156.3.7 `_M_dereferenceable()`** `template<typename _Iterator , typename _Sequence >`  
`bool \_\_gnu\_debug::\_Safe\_local\_iterator<\_Iterator, \_Sequence>::\_M\_dereferenceable ( )` const  
[inline]

Is the iterator dereferenceable?

References [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_dereferenceable\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_dereferenceable\(\)](#).

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator\\*\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator++\(\)](#).

**6.156.3.8 `_M_detach()`** `void __gnu_debug::_Safe_local_iterator_base::_M_detach ( )` [protected],  
[inherited]

Detach the iterator for whatever container it is attached to, if any.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_Safe\\_local\\_iterator\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::~operator\\*\(\)](#).

**6.156.3.9 `_M_detach_single()`** `void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( )`  
throw ( ) [protected], [inherited]

Likewise, but not thread-safe.

### 6.156.3.10 `_M_get_mutex()` `__gnu_cxx::__mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ( )`

throw ( ) [protected], [inherited]

For use in `_Safe_iterator`.

Referenced by `__gnu_debug:: Safe_local_iterator< _Iterator, _Sequence >::operator++()`, `__gnu_debug:: Safe_iterator< _Iterator, _Sequence >::operator++()`, `__gnu_debug:: Safe_iterator< _Iterator, _Sequence, _Category >::operator=()`, and `__gnu_debug:: Safe_local_iterator< _Iterator, _Sequence >::operator=()`.

### 6.156.3.11 `_M_in_same_bucket()` `template<typename _Iterator , typename _Sequence >`

```
template<typename _Other >
```

```
bool __gnu_debug::_Safe_local_iterator<_Iterator, _Sequence >::_M_in_same_bucket (
    const _Safe_local_iterator<_Other, _Sequence > & __other ) const [inline]
```

Is this iterator part of the same bucket as the other one?

References [gnu\\_debug:: Safe\\_local\\_iterator<\\_Iterator, Sequence >::bucket\(\)](#).

### 6.156.3.12 `_M_incrementable()` `template<typename _Iterator , typename _Sequence >`

```
bool __gnu_debug::Safe_local_iterator< _Iterator, _Sequence >::_M_incrementable ( ) const [inline]
```

Is the iterator incrementable?

References [gnu debug:: Safe local iterator< Iterator, Sequence >:: M is\\_end\(\)](#), and [gnu debug:: Safe iterator base:: M sing](#)

Referenced by `__gnu_debug::Safe_local_iterator<_Iterator, _Sequence>::operator++()`.

### 6.156.3.13 **M invalidate()** `void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline],`

[inherited]

Invalidate the iterator, making it singular.

References [\\_\\_gnu\\_debug::Safe\\_iterator\\_base::M\\_version.](#)

### 6.156.3.14 `_M_is_begin()` `template<typename _Iterator, typename _Sequence >`

```
bool __gnu_debug::_Safe_local_iterator< _Iterator, _Sequence >::_M_is_begin ( ) const [inline]
```

Is this iterator equal to the sequence's `begin(bucket)` iterator?

References [\\_\\_gnu\\_debug::Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::base\(\)](#), and [\\_\\_gnu\\_debug::Safe\\_local\\_iterator<\\_Iterator, \\_S](#)

### 6.157.1 Detailed Description

Basic functionality for a *safe* iterator.

The [\\_Safe\\_local\\_iterator\\_base](#) base class implements the functionality of a safe local iterator that is not specific to a particular iterator type. It contains a pointer back to the container it references along with iterator version information and pointers to form a doubly-linked list of local iterators referenced by the container.

This class must not perform any operations that can throw an exception, or the exception guarantees of derived iterators will be broken.

### 6.157.2 Constructor & Destructor Documentation

**6.157.2.1 [\\_Safe\\_local\\_iterator\\_base](#)()** [1/3] `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( ) [inline], [protected]`  
 Initializes the iterator and makes it singular.

**6.157.2.2 [\\_Safe\\_local\\_iterator\\_base](#)()** [2/3] `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( const \_Safe\_sequence\_base * __seq, bool __constant ) [inline], [protected]`

Initialize the iterator to reference the container pointed to by `__seq`. `__constant` is true when we are initializing a constant local iterator, and false if it is a mutable local iterator. Note that `__seq` may be NULL, in which case the iterator will be singular. Otherwise, the iterator will reference `__seq` and be nonsingular.

References [\\_M\\_attach\(\)](#).

**6.157.2.3 [\\_Safe\\_local\\_iterator\\_base](#)()** [3/3] `__gnu_debug::_Safe_local_iterator_base::_Safe_local_iterator_base ( const \_Safe\_local\_iterator\_base & __x, bool __constant ) [inline], [protected]`

Initializes the iterator to reference the same container that `__x` does. `__constant` is true if this is a constant iterator, and false if it is mutable.

References [\\_M\\_attach\(\)](#), and `__gnu_debug::_Safe_iterator_base::_M_sequence`.

### 6.157.3 Member Function Documentation

**6.157.3.1 `_M_attach()`** `void __gnu_debug::_Safe_local_iterator_base::_M_attach (   
     \_Safe\_sequence\_base * __seq,   
     bool __constant ) [protected]`

Attaches this iterator to the given container, detaching it from whatever container it was attached to originally. If the new container is the NULL pointer, the iterator is left unattached.

Referenced by [\\_Safe\\_local\\_iterator\\_base\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_attach\(\)](#).

**6.157.3.2 `_M_attach_single()`** `void __gnu_debug::_Safe_local_iterator_base::_M_attach_single (   
     \_Safe\_sequence\_base * __seq,   
     bool __constant ) throw ( ) [protected]`

Likewise, but not thread-safe.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_attach\\_single\(\)](#).

**6.157.3.3 `_M_attached_to()`** `bool __gnu_debug::_Safe_iterator_base::_M_attached_to (   
     const \_Safe\_sequence\_base * __seq ) const [inline], [inherited]`

Determines if we are attached to the given sequence.

References [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_sequence](#).

**6.157.3.4 `_M_can_compare()`** `bool __gnu_debug::_Safe_iterator_base::_M_can_compare (   
     const \_Safe\_iterator\_base & __x ) const throw ( ) [inherited]`

Can we compare this iterator to the given iterator `__x`? Returns true if both iterators are nonsingular and reference the same sequence.

**6.157.3.5 `_M_detach()`** `void __gnu_debug::_Safe_local_iterator_base::_M_detach ( ) [protected]`

Detach the iterator for whatever container it is attached to, if any.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_Safe\\_local\\_iterator\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator](#)

**6.157.3.6 `_M_detach_single()`** `void __gnu_debug::_Safe_local_iterator_base::_M_detach_single ( )   
     throw ( ) [protected]`

Likewise, but not thread-safe.

**6.157.3.7 `_M_get_mutex()`** `\_\_gnu\_cxx::\_\_mutex & __gnu_debug::_Safe_iterator_base::_M_get_mutex ( )   
     throw ( ) [protected], [inherited]`

For use in `_Safe_iterator`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator++\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence>::operator--\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#).

**6.157.3.8 `_M_invalidate()`** `void __gnu_debug::_Safe_iterator_base::_M_invalidate ( ) [inline], [inherited]`

Invalidate the iterator, making it singular.

References [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_version](#).

**6.157.3.9 `_M_reset()`** `void __gnu_debug::_Safe_iterator_base::_M_reset ( ) throw ( ) [inherited]`

Reset all member variables

**6.157.3.10 `_M_singular()`** `bool __gnu_debug::_Safe_iterator_base::_M_singular ( ) const throw ( )` [inherited]

Is this iterator singular?

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_check\\_singular\\_aux\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_M\\_dereferenceable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_dereferenceable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_incrementable\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#).

**6.157.3.11 `_M_unlink()`** `void __gnu_debug::_Safe_iterator_base::_M_unlink ( ) throw ( )` [inline], [inherited]

Unlink itself

References [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_next](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_prior](#).

## 6.157.4 Member Data Documentation

**6.157.4.1 `_M_next`** `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_next` [inherited]

Pointer to the next iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_unlink\(\)](#).

**6.157.4.2 `_M_prior`** `_Safe_iterator_base* __gnu_debug::_Safe_iterator_base::_M_prior` [inherited]

Pointer to the previous iterator in the sequence's list of iterators. Only valid when `_M_sequence != NULL`.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_SafeSequence>::\\_M\\_invalidate\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_invalidate\\_if\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_unlink\(\)](#).

**6.157.4.3 `_M_sequence`** `_Safe_sequence_base* __gnu_debug::_Safe_iterator_base::_M_sequence` [inherited]

The sequence this iterator references; may be NULL to indicate a singular iterator.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_Safe\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_Safe\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_Safe\\_local\\_iterator\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator\\_base::\\_Safe\\_local\\_iterator\\_base\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_attached\\_to\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#).

**6.157.4.4 `_M_version`** `unsigned int __gnu_debug::_Safe_iterator_base::_M_version` [inherited]

The version number of this iterator. The sentinel value 0 is used to indicate an invalidated iterator (i.e., one that is singular because of an operation on the container). This version number must equal the version number in the sequence referenced by `_M_sequence` for the iterator to be non-singular.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_invalidate\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence<\\_Sequence>::\\_M\\_transfer\\_from\\_if\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::\\_M\\_value\\_initialized\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::\\_M\\_value\\_initialized\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator<\\_Iterator, \\_Sequence, \\_Category>::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator<\\_Iterator, \\_Sequence>::operator=\(\)](#).

### 6.158.1 Detailed Description

```
template<typename _Sequence>
class __gnu_debug::__Safe_node_sequence<_Sequence>
```

Like `_Safe_sequence` but with a special `_M_invalidate_all` implementation not invalidating past-the-end iterators. Used by node based sequence.

### 6.158.2 Member Function Documentation

**6.158.2.1 `_M_detach_all()`** `void __gnu_debug::__Safe_sequence_base::_M_detach_all ()` [protected], [inherited]

Detach all iterators, leaving them singular.

Referenced by `__gnu_debug::__Safe_sequence_base::~~Safe_sequence_base()`.

**6.158.2.2 `_M_detach_singular()`** `void __gnu_debug::__Safe_sequence_base::_M_detach_singular ()` [protected], [inherited]

Detach all singular iterators.

#### Postcondition

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**6.158.2.3 `_M_get_mutex()`** `__gnu_cxx::__mutex & __gnu_debug::__Safe_sequence_base::_M_get_mutex ()` throw () [protected], [inherited]

For use in `_Safe_sequence`.

Referenced by `__gnu_debug::__Safe_sequence<_Sequence>::_M_transfer_from_if()`.

**6.158.2.4 `_M_invalidate_all()`** `void __gnu_debug::_Safe_sequence_base::_M_invalidate_all ( ) const`  
[inline], [protected], [inherited]  
Invalidates all iterators.  
References [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_version](#).

**6.158.2.5 `_M_invalidate_if()`** `template<typename _Sequence >`  
`template<typename _Predicate >`  
`void __gnu_debug::_Safe_sequence< _Sequence >::_M_invalidate_if (`  
`_Predicate __pred )` [inherited]  
Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true.  
`__pred` will be invoked with the normal iterators nested in the safe ones.

**6.158.2.6 `_M_revalidate_singular()`** `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( )`  
[protected], [inherited]  
Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**6.158.2.7 `_M_swap()`** `void __gnu_debug::_Safe_sequence_base::_M_swap (`  
`_Safe_sequence_base & __x )` [protected], [noexcept], [inherited]  
Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**6.158.2.8 `_M_transfer_from_if()`** `template<typename _Sequence >`  
`template<typename _Predicate >`  
`void __gnu_debug::_Safe_sequence< _Sequence >::_M_transfer_from_if (`  
`_Safe_sequence< _Sequence > & __from,`  
`_Predicate __pred )` [inherited]  
Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true.  
`__pred` will be invoked with the normal iterators nested in the safe ones.  
References [std::\\_addressof\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_const\\_iterators](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_details](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_get\\_mutex\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_iterators](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_prior](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_sequence](#), and [\\_\\_gnu\\_debug::\\_Safe\\_iterator\\_base::\\_M\\_transfer\\_from\\_if\(\)](#).

### 6.158.3 Member Data Documentation

**6.158.3.1 `_M_const_iterators`** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_const_iterators` [inherited]  
The list of constant iterators that reference this container.  
Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_transfer\\_from\\_if\(\)](#).

**6.158.3.2 `_M_iterators`** `_Safe_iterator_base* __gnu_debug::_Safe_sequence_base::_M_iterators` [inherited]  
The list of mutable iterators that reference this container.  
Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence< \\_Sequence >::\\_M\\_transfer\\_from\\_if\(\)](#).

**6.158.3.3 `_M_version`** `unsigned int __gnu_debug::_Safe_sequence_base::_M_version` [mutable], [inherited]  
The container version number. This number may never be 0.  
Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::\\_M\\_invalidate\\_all\(\)](#), [\\_\\_gnu\\_debug::\\_Safe\\_iterator< \\_Iterator, \\_Sequence, \\_Category >::operator=\(\)](#), and [\\_\\_gnu\\_debug::\\_Safe\\_local\\_iterator< \\_Iterator, \\_Sequence >::operator=\(\)](#).

#### 6.159.1 Detailed Description

```
template<typename _Sequence>
class __gnu_debug::_Safe_sequence<_Sequence>
```

Base class for constructing a *safe* sequence type that tracks iterators that reference it.

The class template `_Safe_sequence` simplifies the construction of *safe* sequences that track the iterators that reference the sequence, so that the iterators are notified of changes in the sequence that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this sequence. Iterators will then be tracked automatically.

#### 6.159.2 Member Function Documentation

**6.159.2.1 `_M_detach_all()`** `void __gnu_debug::_Safe_sequence_base::_M_detach_all () [protected], [inherited]`

Detach all iterators, leaving them singular.

Referenced by [\\_\\_gnu\\_debug::\\_Safe\\_sequence\\_base::~~\\_Safe\\_sequence\\_base\(\)](#).

**6.159.2.2 `_M_detach_singular()`** `void __gnu_debug::_Safe_sequence_base::_M_detach_singular ( ) [protected], [inherited]`

Detach all singular iterators.

**Postcondition**

for all iterators `i` attached to this sequence, `i->_M_version == _M_version`.

**6.159.2.3 `_M_get_mutex()`** `__gnu_cxx::__mutex & __gnu_debug::_Safe_sequence_base::_M_get_mutex ( ) throw ( ) [protected], [inherited]`

**6.159.2.5 `_M_invalidate_if()`** `template<typename _Sequence>  
template<typename _Predicate>  
void __gnu_debug::_Safe_sequence<_Sequence>::_M_invalidate_if (  
    _Predicate __pred )`

Invalidates all iterators `x` that reference this sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

**6.159.2.6 `_M_revalidate_singular()`** `void __gnu_debug::_Safe_sequence_base::_M_revalidate_singular ( ) [protected], [inherited]`

Revalidates all attached singular iterators. This method may be used to validate iterators that were invalidated before (but for some reason, such as an exception, need to become valid again).

**6.159.2.7 `_M_swap()`** `void __gnu_debug::_Safe_sequence_base::_M_swap (  
    _Safe_sequence_base & __x ) [protected], [noexcept], [inherited]`

Swap this sequence with the given sequence. This operation also swaps ownership of the iterators, so that when the operation is complete all iterators that originally referenced one container now reference the other container.

**6.159.2.8 `_M_transfer_from_if()`** `template<typename _Sequence>  
template<typename _Predicate>  
void __gnu_debug::_Safe_sequence<_Sequence>::_M_transfer_from_if (  
    _Safe_sequence<_Sequence> & __from,  
    _Predicate __pred )`

Transfers all iterators `x` that reference `from` sequence, are not singular, and for which `__pred(x)` returns true. `__pred` will be invoked with the normal iterators nested in the safe ones.

### 6.160.1 Detailed Description

Base class that supports tracking of iterators that reference a sequence.

The `_Safe_sequence_base` class provides basic support for tracking iterators into a sequence. Sequences that track iterators must derived from `_Safe_sequence_base` publicly, so that safe iterators (which inherit `_Safe_iterator_base`) can attach to them. This class contains two linked lists of iterators, one for constant iterators and one for mutable iterators, and a version number that allows very fast invalidation of all iterators that reference the container.

This class must ensure that no operation on it may throw an exception, otherwise *safe* sequences may fail to provide the exception-safety guarantees required by the C++ standard.

### 6.161.1 Detailed Description

```
template<typename _Container>
class __gnu_debug::_Safe_unordered_container<_Container >
```

Base class for constructing a *safe* unordered container type that tracks iterators that reference it.

The class template `_Safe_unordered_container` simplifies the construction of *safe* unordered containers that track the iterators that reference the container, so that the iterators are notified of changes in the container that may affect their operation, e.g., if the container invalidates its iterators or is destructed. This class template may only be used by deriving from it and passing the name of the derived class as its template parameter via the curiously recurring template pattern. The derived class must have `iterator` and `const_iterator` types that are instantiations of class template `_Safe_iterator` for this container and `local_iterator` and `const_local_iterator` types that are instantiations of class template `_Safe_local_iterator` for this container. Iterators will then be tracked automatically.

### 6.161.2 Member Function Documentation

**6.161.2.1 `_M_detach_all()`** void `__gnu_debug::_Safe_unordered_container_base::_M_detach_all` ( )

[protected], [inherited]

Detach all iterators, leaving them singular.

- `const std::pair< char, _TokenT > _M_token_tbl [9]`

### 6.166.1 Detailed Description

```
template<typename _CharT>
class std::__detail::_Scanner< _CharT >
```

Scans an input range for regex tokens.

The `_Scanner` class interprets the regular expression pattern in the input range passed to its constructor as a sequence of parse tokens passed to the regular expression compiler. The sequence of tokens provided depends on the flag settings passed to the constructor: different regular expression grammars will interpret the same input pattern in syntactically different ways.

### 6.166.2 Member Enumeration Documentation

**6.166.2.1 `_TokenT`** `enum std::__detail::_ScannerBase::_TokenT : unsigned [inherited]`

Token types returned from the scanner.

The documentation for this class was generated from the following files:

- [regex\\_scanner.h](#)
- [regex\\_scanner.tcc](#)

## 6.167 `__gnu_debug::_Sequence_traits<_Sequence>` Struct Template Reference

```
#include <safe_iterator.h>
```

### Public Types

- `typedef _Distance_traits< typename _Sequence::iterator > _DistTraits`

### Static Public Member Functions

- `static \_DistTraits::\_\_type _S_size (const _Sequence &__seq)`

### 6.167.1 Detailed Description

```
template<typename _Sequence>
struct __gnu_debug::_Sequence_traits<_Sequence>
```

Sequence traits giving the size of a container if possible.

The documentation for this struct was generated from the following file:

### 6.168.1 Detailed Description

class `_Settings` Run-time settings for the parallel mode including all tunable parameters.

### 6.168.2 Member Function Documentation

**6.168.2.1 `get()`** static const `_Settings` & `__gnu_parallel::_Settings::get ( )` throw ( ) [static]

Get the global settings.

Referenced by `__gnu_parallel::_find_template()`, `__gnu_parallel::_for_each_template_random_access_workstealing()`, `__gnu_parallel::_parallel_nth_element()`, `__gnu_parallel::_parallel_partial_sum()`, `__gnu_parallel::_parallel_partial_sum_linear()`, `__gnu_parallel::_parallel_partition()`, `__gnu_parallel::_parallel_random_shuffle_drs()`, `__gnu_parallel::_parallel_sort()`, `__gnu_parallel::_parallel_sort_qs_conquer()`, `__gnu_parallel::_qsb_local_sort_with_helping()`, `__gnu_parallel::_sequential_random_s`, `__gnu_parallel::multiway_merge_sampling_splitting()`, `__gnu_parallel::parallel_multiway_merge()`, `__gnu_parallel::parallel_sort_mwms()`, and `__gnu_parallel::parallel_sort_mwms_pu()`.

**6.168.2.2 `set()`** static void `__gnu_parallel::_Settings::set (`  
`_Settings` & ) throw ( ) [static]

Set the global settings.

### 6.168.3 Member Data Documentation

**6.168.3.1 `accumulate_minimal_n`** `_SequenceIndex` `__gnu_parallel::_Settings::accumulate_minimal_n`  
 Minimal input size for accumulate.

**6.168.3.2 `adjacent_difference_minimal_n`** unsigned int `__gnu_parallel::_Settings::adjacent_difference↔`  
`_minimal_n`  
 Minimal input size for adjacent\_difference.

**6.168.3.3 `cache_line_size`** unsigned int `__gnu_parallel::_Settings::cache_line_size`  
 Overestimation of cache line size. Used to avoid false sharing, i.e. elements of different threads are at least this amount apart.  
 Referenced by `__gnu_parallel::_for_each_template_random_access_workstealing()`.

**6.168.3.4 `count_minimal_n`** `_SequenceIndex` `__gnu_parallel::_Settings::count_minimal_n`  
 Minimal input size for count and count\_if.

**6.168.3.5 fill\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::fill_minimal_n`

Minimal input size for fill.

**6.168.3.6 find\_increasing\_factor** `double __gnu_parallel::_Settings::find_increasing_factor`

Block size increase factor for find.

**6.168.3.7 find\_initial\_block\_size** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::find_initial_block_size`

Initial block size for find.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#).

**6.168.3.8 find\_maximum\_block\_size** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::find_maximum_block_size`

Maximal block size for find.

**6.168.3.9 find\_scale\_factor** `float __gnu_parallel::_Settings::find_scale_factor`

Block size scale-down factor with respect to current position.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#).

**6.168.3.10 find\_sequential\_search\_size** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::find_sequential_search_size`

Start with looking for this many elements sequentially, for find.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_find\\_template\(\)](#).

**6.168.3.11 for\_each\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::for_each_minimal_n`

Minimal input size for `for_each`.

**6.168.3.12 generate\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::generate_minimal_n`

Minimal input size for generate.

**6.168.3.13 L1\_cache\_size** `unsigned long long __gnu_parallel::_Settings::L1_cache_size`

size of the L1 cache in bytes (underestimation).

**6.168.3.14 L2\_cache\_size** `unsigned long long __gnu_parallel::_Settings::L2_cache_size`

size of the L2 cache in bytes (underestimation).

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_sequential\\_random\\_shuffle\(\)](#).

**6.168.3.15 max\_element\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::max_element_minimal_n`

Minimal input size for `max_element`.

**6.168.3.16 merge\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::merge\_minimal\_n

Minimal input size for merge.

**6.168.3.17 merge\_oversampling** unsigned int \_\_gnu\_parallel::\_Settings::merge\_oversampling

Oversampling factor for merge.

Referenced by [\\_\\_gnu\\_parallel::multiway\\_merge\\_sampling\\_splitting\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_multiway\\_merge\(\)](#).

**6.168.3.18 min\_element\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::min\_element\_minimal\_n

Minimal input size for min\_element.

**6.168.3.19 multiway\_merge\_minimal\_k** int \_\_gnu\_parallel::\_Settings::multiway\_merge\_minimal\_k

Oversampling factor for multiway\_merge.

**6.168.3.20 multiway\_merge\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::multiway\_merge\_minimal\_n

Minimal input size for multiway\_merge.

**6.168.3.21 multiway\_merge\_oversampling** unsigned int \_\_gnu\_parallel::\_Settings::multiway\_merge\_oversampling

Oversampling factor for multiway\_merge.

**6.168.3.22 nth\_element\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::nth\_element\_minimal\_n

Minimal input size for nth\_element.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_nth\\_element\(\)](#).

**6.168.3.23 partial\_sort\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::partial\_sort\_minimal\_n

Minimal input size for partial\_sort.

**6.168.3.24 partial\_sum\_dilation** float \_\_gnu\_parallel::\_Settings::partial\_sum\_dilation

Ratio for partial\_sum. Assume "sum and write result" to be this factor slower than just "sum".

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_partial\\_sum\\_linear\(\)](#).

**6.168.3.25 partial\_sum\_minimal\_n** unsigned int \_\_gnu\_parallel::\_Settings::partial\_sum\_minimal\_n

Minimal input size for partial\_sum.

**6.168.3.26 partition\_chunk\_share** double \_\_gnu\_parallel::\_Settings::partition\_chunk\_share

Chunk size for partition, relative to input size. If > 0.0, this value overrides partition\_chunk\_size.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_partition\(\)](#).

**6.168.3.27 partition\_chunk\_size** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::partition_chunk_size`  
Chunk size for partition.  
Referenced by [\\_\\_gnu\\_parallel::\\_parallel\\_partition\(\)](#).

**6.168.3.28 partition\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::partition_minimal_n`  
Minimal input size for partition.  
Referenced by [\\_\\_gnu\\_parallel::\\_parallel\\_nth\\_element\(\)](#).

**6.168.3.29 qsb\_steals** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::qsb_steals`  
The number of stolen ranges in load-balanced quicksort.

**6.168.3.30 random\_shuffle\_minimal\_n** `unsigned int __gnu_parallel::_Settings::random_shuffle_↵`  
`minimal_n`  
Minimal input size for random\_shuffle.

**6.168.3.31 replace\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::replace_minimal_n`  
Minimal input size for replace and replace\_if.

**6.168.3.32 search\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::search_minimal_n`  
Minimal input size for search and search\_n.

**6.168.3.33 set\_difference\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_difference_↵`  
`minimal_n`  
Minimal input size for set\_difference.

**6.168.3.34 set\_intersection\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_intersection_↵`  
`minimal_n`  
Minimal input size for set\_intersection.

**6.168.3.35 set\_symmetric\_difference\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_↵`  
`symmetric_difference_minimal_n`  
Minimal input size for set\_symmetric\_difference.

**6.168.3.36 set\_union\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::set_union_minimal_n`  
Minimal input size for set\_union.

**6.168.3.37 sort\_minimal\_n** [\\_SequenceIndex](#) `__gnu_parallel::_Settings::sort_minimal_n`  
Minimal input size for parallel sorting.

**6.168.3.38 sort\_mwms\_oversampling** unsigned int \_\_gnu\_parallel::\_Settings::sort\_mwms\_oversampling  
Oversampling factor for parallel std::sort (MWMS).  
Referenced by [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\(\)](#), and [\\_\\_gnu\\_parallel::parallel\\_sort\\_mwms\\_pu\(\)](#).

**6.168.3.39 sort\_qs\_num\_samples\_preset** unsigned int \_\_gnu\_parallel::\_Settings::sort\_qs\_num\_↵  
samples\_preset  
Such many samples to take to find a good pivot (quicksort).

**6.168.3.40 sort\_qsb\_base\_case\_maximal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::sort\_qsb\_↵  
base\_case\_maximal\_n  
Maximal subsequence \_\_length to switch to unbalanced \_\_base case. Applies to std::sort with dynamically load-balanced quicksort.  
Referenced by [\\_\\_gnu\\_parallel::\\_\\_qsb\\_local\\_sort\\_with\\_helping\(\)](#).

**6.168.3.41 TLB\_size** unsigned int \_\_gnu\_parallel::\_Settings::TLB\_size  
size of the Translation Lookaside Buffer (underestimation).  
Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_random\\_shuffle\\_drs\(\)](#), and [\\_\\_gnu\\_parallel::\\_\\_sequential\\_random\\_shuffle\(\)](#).

**6.168.3.42 transform\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::transform\_minimal\_n  
Minimal input size for parallel std::transform.

**6.168.3.43 unique\_copy\_minimal\_n** [\\_SequenceIndex](#) \_\_gnu\_parallel::\_Settings::unique\_copy\_minimal\_n  
Minimal input size for unique\_copy.

## 6.174 `std::__detail::StateSeq< _TraitsT > Class` Template Reference

```
#include <regex_automaton.h>
```

### Public Types

- `typedef _NFA< _TraitsT > \_RegexT`

### Public Member Functions

- `\_StateSeq (\_RegexT &__nfa, \_StateIdT __s)`
- `\_StateSeq (\_RegexT &__nfa, \_StateIdT __s, \_StateIdT __end)`
- `void \_M\_append (\_StateIdT __id)`
- `void \_M\_append (const \_StateSeq &__s)`
- `\_StateSeq \_M\_clone ()`

### Public Attributes

- `\_StateIdT \_M\_end`
- `\_RegexT & \_M\_nfa`
- `\_StateIdT \_M\_start`

#### 6.174.1 Detailed Description

```
template<typename _TraitsT>
class std::__detail::StateSeq< _TraitsT >
```

Describes a sequence of one or more `_State`, its current start and end(s). This structure contains fragments of an NFA during construction.

The documentation for this class was generated from the following files:

- [regex\\_automaton.h](#)
- [regex\\_automaton.tcc](#)

## 6.175 `__gnu_cxx::Std_pointer_impl< _Tp > Class` Template Reference

```
#include <pointer.h>
```

## Public Types

- typedef `_Tp` **element\_type**

## Public Member Functions

- `_Tp * get () const`
- `bool operator< (const \_Std\_pointer\_impl &__rarg) const`
- `bool operator== (const \_Std\_pointer\_impl &__rarg) const`
- `void set (element_type *__arg)`

### 6.175.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::_Std_pointer_impl<_Tp>
```

A storage policy for use with `_Pointer_adapter<>` which yields a standard pointer.

A `_Storage_policy` is required to provide 4 things: 1) A `get()` API for returning the stored pointer value. 2) An `set()` API for storing a pointer value. 3) An `element_type` typedef to define the type this points to. 4) An `operator<()` to support pointer comparison. 5) An `operator==()` to support pointer comparison.

The documentation for this class was generated from the following file:

- [pointer.h](#)

## 6.176 `std::_Temporary_buffer<_ForwardIterator, _Tp>` Class Template Reference

```
#include <std_tempbuf.h>
```

Inheritance diagram for `std::_Temporary_buffer<_ForwardIterator, _Tp>`:

## Public Types

- typedef pointer **iterator**
- typedef value\_type \* **pointer**
- typedef ptrdiff\_t **size\_type**
- typedef `_Tp` **value\_type**

## Public Member Functions

- `\_Temporary\_buffer (_ForwardIterator __seed, size_type __original_len)`
- iterator `begin ()`
- iterator `end ()`
- size\_type `requested\_size () const`
- size\_type `size () const`

## Protected Attributes

- pointer `_M_buffer`
- size\_type `_M_len`
- size\_type `_M_original_len`

### 6.176.1 Detailed Description

```
template<typename _ForwardIterator, typename _Tp>
class std::_Temporary_buffer<_ForwardIterator, _Tp>
```

This class is used in two places: `stl_algo.h` and `ext/memory`, where it is wrapped as the `temporary_buffer` class. See `temporary_buffer` docs for more notes.

## 6.176.2 Constructor & Destructor Documentation

**6.176.2.1 `_Temporary_buffer()`** `template<typename _ForwardIterator, typename _Tp>  
std::_Temporary_buffer<_ForwardIterator, _Tp>::_Temporary_buffer (  
_ForwardIterator __seed,  
size_type __original_len )`

Constructs a temporary buffer of a size somewhere between zero and the given length.

References `std::pair<_T1, _T2>::first`, and `std::pair<_T1, _T2>::second`.

## 6.176.3 Member Function Documentation

**6.176.3.1 `begin()`** `template<typename _ForwardIterator, typename _Tp>  
iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::begin ( ) [inline]`  
As per Table mumble.

**6.176.3.2 `end()`** `template<typename _ForwardIterator, typename _Tp>  
iterator std::_Temporary_buffer<_ForwardIterator, _Tp>::end ( ) [inline]`  
As per Table mumble.

**6.176.3.3 `requested_size()`** `template<typename _ForwardIterator, typename _Tp>  
size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::requested_size ( ) const [inline]`  
Returns the size requested by the constructor; may be `>size()`.

**6.176.3.4 `size()`** `template<typename _ForwardIterator, typename _Tp>  
size_type std::_Temporary_buffer<_ForwardIterator, _Tp>::size ( ) const [inline]`  
As per Table mumble.

The documentation for this class was generated from the following file:

- [stl\\_tempbuf.h](#)

## 6.177 `std::_Tuple_impl<_Idx, _Elements>` Struct Template Reference

### 6.177.1 Detailed Description

```
template<size_t _Idx, typename... _Elements>
struct std::_Tuple_impl<_Idx, _Elements>
```

Contains the actual implementation of the `tuple` template, stored as a recursive inheritance hierarchy from the first element (most derived class) to the last (least derived class). The `Idx` parameter gives the 0-based index of the element stored at this point in the hierarchy; we use it to implement a constant-time `get()` operation.

The documentation for this struct was generated from the following file:

- [tuple](#)

## 6.178 `std::_Tuple_impl<_Idx, _Head, _Tail...>` Struct Template Reference

Inheritance diagram for `std::_Tuple_impl<_Idx, _Head, _Tail...>`:

## Public Types

- typedef `_Head_base<_Idx, _Head>` `_Base`
- typedef `_Tuple_impl<_Idx+1, _Tail...>` `_Inherited`

## Public Member Functions

- `_Tuple_impl` (`_Tuple_impl` &&)=default

## Protected Member Functions

- constexpr void `_M_swap` (`_Tuple_impl` &\_\_in)

### 6.178.1 Detailed Description

```
template<size_t _Idx, typename _Head, typename... _Tail>
struct std::_Tuple_impl<_Idx, _Head, _Tail...>
```

Recursive tuple implementation. Here we store the `Head` element and derive from a `Tuple_impl` containing the remaining elements (which contains the `Tail`).

The documentation for this struct was generated from the following file:

- [tuple](#)

## 6.179 `__gnu_cxx::Unqualified_type<_Tp>` Struct Template Reference

```
#include <pointer.h>
```

### Public Types

- typedef `_Tp` **type**

### 6.179.1 Detailed Description

```
template<typename _Tp>
struct __gnu_cxx::Unqualified_type<_Tp>
```

This structure accommodates the way in which `std::iterator_traits<>` is normally specialized for `const T*`, so that `value_of_type` is still `T`.

The documentation for this struct was generated from the following file:

- [pointer.h](#)

## 6.180 `std::Vector_base<_Tp, _Alloc>` Struct Template Reference

```
#include <std_vector.h>
```

Inheritance diagram for `std::Vector_base<_Tp, _Alloc>`:

### Public Types

- typedef `__gnu_cxx::__alloc_traits<_Alloc>::template rebind<_Tp>::other` **\_Tp\_alloc\_type**
- typedef `_Alloc` **allocator\_type**
- typedef `__gnu_cxx::__alloc_traits<_Tp_alloc_type>::pointer` **pointer**

### Public Member Functions

- constexpr `Vector_base` (`_Tp_alloc_type` &&\_\_a) noexcept
- `Vector_base` (`Vector_base` &&)=default
- constexpr `Vector_base` (`Vector_base` &&\_\_x, const `allocator_type` &\_\_a)
- constexpr `Vector_base` (const `allocator_type` &\_\_a) noexcept
- constexpr `Vector_base` (const `allocator_type` &\_\_a, `Vector_base` &&\_\_x)
- constexpr `Vector_base` (size\_t \_\_n)
- constexpr `Vector_base` (size\_t \_\_n, const `allocator_type` &\_\_a)
- constexpr pointer `M_allocate` (size\_t \_\_n)
- constexpr void `M_deallocate` (pointer \_\_p, size\_t \_\_n)
- constexpr const `_Tp_alloc_type` & `M_get_Tp_allocator` () const noexcept
- constexpr `_Tp_alloc_type` & `M_get_Tp_allocator` () noexcept
- constexpr `allocator_type` `get_allocator` () const noexcept

**Public Attributes**

- `_Vector_impl _M_impl`

**Protected Member Functions**

- `constexpr void _M_create_storage (size_t __n)`

**6.180.1 Detailed Description**

```
template<typename _Tp, typename _Alloc>
struct std::_Vector_base< _Tp, _Alloc >
```

See `bits/stl_deque.h`'s `_Deque_base` for an explanation.

The documentation for this struct was generated from the following file:

- [stl\\_vector.h](#)

**6.181 `std::add_const< _Tp >` Struct Template Reference****Public Types**

- using **type** = `_Tp const`

**6.181.1 Detailed Description**

```
template<typename _Tp>
struct std::add_const< _Tp >
```

`add_const`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**6.182 `std::add_cv< _Tp >` Struct Template Reference****Public Types**

- using **type** = `_Tp const volatile`

**6.182.1 Detailed Description**

```
template<typename _Tp>
struct std::add_cv< _Tp >
```

`add_cv`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

**6.183 `std::add_lvalue_reference< _Tp >` Struct Template Reference****Public Types**

- using **type** = `__add_lval_ref_t< _Tp >`

### 6.183.1 Detailed Description

```
template<typename _Tp>
struct std::add_lvalue_reference< _Tp >
```

add\_lvalue\_reference

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.184 std::add\_pointer< \_Tp > Struct Template Reference

Inherits std::\_\_add\_pointer\_helper< \_Tp, typename >.

### Public Types

- using **type** = \_Tp

### 6.184.1 Detailed Description

```
template<typename _Tp>
struct std::add_pointer< _Tp >
```

add\_pointer

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.185 std::add\_rvalue\_reference< \_Tp > Struct Template Reference

### Public Types

- using **type** = \_\_add\_rval\_ref\_t< \_Tp >

### 6.185.1 Detailed Description

```
template<typename _Tp>
struct std::add_rvalue_reference< _Tp >
```

add\_rvalue\_reference

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.186 std::add\_volatile< \_Tp > Struct Template Reference

### Public Types

- using **type** = \_Tp volatile

### 6.186.1 Detailed Description

```
template<typename _Tp>
struct std::add_volatile< _Tp >
```

add\_volatile

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.187 `std::adopt_lock_t` Struct Reference

```
#include <std_mutex.h>
```

### 6.187.1 Detailed Description

Assume the calling thread has already obtained mutex ownership and manage it.

The documentation for this struct was generated from the following file:

- [std\\_mutex.h](#)

## 6.188 `std::aligned_storage< _Len, _Align >` Struct Template Reference

### 6.188.1 Detailed Description

```
template<std::size_t _Len, std::size_t _Align = __alignof__(typename __aligned_storage_msa<_Len>::__type)>
struct std::aligned_storage< _Len, _Align >
```

Alignment type.

The value of `_Align` is a default-alignment which shall be the most stringent alignment requirement for any C++ object type whose size is no greater than `_Len` (3.9). The member typedef type shall be a POD type suitable for use as uninitialized storage for any object whose size is at most `_Len` and whose alignment is a divisor of `_Align`.

**Deprecated** Deprecated in C++23. Uses can be replaced by an array `std::byte[_Len]` declared with `alignas(_Align)`.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.189 `std::aligned_union< _Len, _Types >` Struct Template Reference

### Public Types

- typedef `aligned_storage< _S_len, alignment_value >::type` `type`

### Static Public Attributes

- static const size\_t `alignment_value`

### 6.189.1 Detailed Description

```
template<size_t _Len, typename... _Types>
struct std::aligned_union< _Len, _Types >
```

Provide aligned storage for types.

[meta.trans.other]

Provides aligned storage for any of the provided types of at least size `_Len`.

See also

`aligned_storage`

**Deprecated** Deprecated in C++23.

### 6.189.2 Member Typedef Documentation

**6.189.2.1 type** `template<size_t _Len, typename... _Types>`

`typedef aligned_storage<_S_len,alignment_value>::type std::aligned_union< _Len, _Types >::type`

The storage.

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.190 `std::alignment_of< _Tp >` Struct Template Reference

Inheritance diagram for `std::alignment_of< _Tp >`:

### Public Types

- `typedef integral_constant< std::size_t, __v > type`
- `typedef std::size_t value_type`

### Public Member Functions

- `constexpr operator value_type () const noexcept`
- `constexpr value_type operator() () const noexcept`

### Static Public Attributes

- `static constexpr std::size_t value`

### 6.190.1 Detailed Description

`template<typename _Tp>`

`struct std::alignment_of< _Tp >`

`alignment_of`

The documentation for this struct was generated from the following file:

- [type\\_traits](#)

## 6.191 `std::allocator< _Tp >` Class Template Reference

`#include <memory>`

Inheritance diagram for `std::allocator< _Tp >`:

### Public Types

- `typedef ptrdiff_t difference_type`
- `using is_always_equal = true_type`
- `using propagate_on_container_move_assignment = true_type`
- `typedef size_t size_type`
- `typedef _Tp value_type`

### Public Member Functions

- `constexpr allocator (const allocator &__a) noexcept`
- `template<typename _Tp1 > constexpr allocator (const allocator< _Tp1 > &) noexcept`
- `constexpr _Tp * allocate (size_t __n)`
- `_Tp * allocate (size_type __n, const void * __p = static_cast< const void * >(0))`
- `constexpr void deallocate (_Tp * __p, size_t __n)`
- `allocator & operator= (const allocator &)=default`

## Friends

- constexpr bool **operator==** (const [allocator](#) &, const [allocator](#) &) noexcept

## Related Functions

(Note that these are not member functions.)

- template<typename \_T1, typename \_T2 >  
constexpr bool **operator==** (const [allocator](#)<\_T1> &, const [allocator](#)<\_T2> &) noexcept

### 6.191.1 Detailed Description

```
template<typename _Tp>  
class std::allocator<_Tp>
```

The *standard* allocator, as per C++03 [20.4.1].

See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/memory.html#std.util.allocator> for further details.

#### Template Parameters

<code>_Tp</code>	Type of allocated object.
------------------	---------------------------

The documentation for this class was generated from the following file:

- [allocator.h](#)

## 6.192 std::allocator< void > Class Reference

```
#include <memory>
```

### Public Types

static constexpr void `destroy` (`_Alloc &__a`, `_Tp *__p`) noexcept(noexcept(`_S_destroy`(`__a`, `__p`, 0)))
- static constexpr `size_type` `max_size` (const `_Alloc &__a`) noexcept
- static constexpr `_Alloc` `select_on_container_copy_construction` (const `_Alloc &__rhs`)

### 6.193.1 Detailed Description

```
template<typename _Alloc>
struct std::allocator_traits<_Alloc>
```

Uniform interface to all allocator types.

Since

C++11

### 6.193.2 Member Typedef Documentation

**6.193.2.1 `allocator_type`** `template<typename _Alloc >`  
`typedef _Alloc std::allocator_traits<_Alloc >::allocator_type`  
 The allocator type.

**6.193.2.2 const\_pointer** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::const_pointer = typename _Ptr<__c_pointer, const value_type>↵  
::type
```

The allocator's const pointer type.

`Alloc::const_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const value_type>`

**6.193.2.3 const\_void\_pointer** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::const_void_pointer = typename _Ptr<__cv_pointer, const  
void>::type
```

The allocator's const void pointer type.

`Alloc::const_void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<const void>`

**6.193.2.4 difference\_type** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::difference_type = typename _Diff<_Alloc, pointer>::type
```

The allocator's difference type.

`Alloc::difference_type` if that type exists, otherwise `pointer_traits<pointer>::difference↵  
_type`

**6.193.2.5 is\_always\_equal** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::is_always_equal = typename __detected_or_t<is_empty<↵  
_Alloc>, __equal, _Alloc>::type
```

Whether all instances of the allocator type compare equal.

`Alloc::is_always_equal` if that type exists, otherwise `is_empty<Alloc>::type`

**6.193.2.6 pointer** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::pointer = __detected_or_t<value_type*, __pointer, _Alloc>
```

The allocator's pointer type.

`Alloc::pointer` if that type exists, otherwise `value_type*`

**6.193.2.7 propagate\_on\_container\_copy\_assignment** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::propagate_on_container_copy_assignment = __detected_or_↵  
t<false_type, __pocca, _Alloc>
```

How the allocator is propagated on copy assignment.

`Alloc::propagate_on_container_copy_assignment` if that type exists, otherwise `false_type`

**6.193.2.8 propagate\_on\_container\_move\_assignment** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::propagate_on_container_move_assignment = __detected_or_↵  
t<false_type, __pocma, _Alloc>
```

How the allocator is propagated on move assignment.

`Alloc::propagate_on_container_move_assignment` if that type exists, otherwise `false_type`

**6.193.2.9 propagate\_on\_container\_swap** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::propagate_on_container_swap = __detected_or_t<false_type,  
__pocs, _Alloc>
```

How the allocator is propagated on swap.

`Alloc::propagate_on_container_swap` if that type exists, otherwise `false_type`

**6.193.2.10 size\_type** `template<typename _Alloc >`

```
using std::allocator_traits< _Alloc >::size_type = typename _Size<_Alloc, difference_type>::type
```

The allocator's size type.

`Alloc::size_type` if that type exists, otherwise `make_unsigned<difference_type>::type`

**6.193.2.11 value\_type** `template<typename _Alloc>`  
`typedef _Alloc::value_type std::allocator_traits<_Alloc>::value_type`  
 The allocated type.

**6.193.2.12 void\_pointer** `template<typename _Alloc>`  
`using std::allocator_traits<_Alloc>::void_pointer = typename _Ptr<__v_pointer, void>::type`  
 The allocator's void pointer type.  
`Alloc::void_pointer` if that type exists, otherwise `pointer_traits<pointer>::rebind<void>`

### 6.193.3 Member Function Documentation

**6.193.3.1 allocate()** [1/2] `template<typename _Alloc>`  
`static constexpr pointer std::allocator_traits<_Alloc>::allocate (`  
     `_Alloc & __a,`  
     `size_type __n ) [inline], [static], [constexpr]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

**6.193.3.2 allocate()** [2/2] `template<typename _Alloc>`  
`static constexpr pointer std::allocator_traits<_Alloc>::allocate (`  
     `__a & __a,`  
     `size_type __n,`  
     `const_void_pointer __hint ) [inline], [static], [constexpr]`

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

#### Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)` if that expression is well-formed, otherwise returns `a.allocate(n)`

**6.193.3.3 construct()** `template<typename _Alloc>`  
`template<typename _Tp, typename... _Args>`

```
static constexpr auto std::allocator_traits<_Alloc>::construct (
    _Alloc & __a,
    _Tp * __p,
    _Args &&... __args ) -> decltype(_S_construct(__a, __p, std::forward<_Args>(__args)...))
    [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Tp`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for <code>Tp</code>
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<Args>(__args)...) if that expression is well-formed, otherwise uses placement-new to construct an object of type _Tp at location __p from the arguments __args...`

**6.193.3.4 deallocate()** `template<typename _Alloc>`  

```
static constexpr void std::allocator_traits<_Alloc>::deallocate (
    _Alloc & __a,
    pointer __p,
    size_type __n ) [inline], [static], [constexpr]
```

Deallocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

**6.193.3.5 destroy()** `template<typename _Alloc>`  
`template<typename _Tp>`  

```
static constexpr void std::allocator_traits<_Alloc>::destroy (
    _Alloc & __a,
    _Tp * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type `_Tp`.

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)` if that expression is well-formed, otherwise calls `__p->~_Tp()`

**6.193.3.6 max\_size()** `template<typename _Alloc>`  

```
static constexpr size_type std::allocator_traits<_Alloc>::max_size (
```

```
const _Alloc & __a ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

#### Parameters

<code>__a</code>	An allocator.
------------------	---------------

#### Returns

`__a.max_size()` or `numeric_limits<size_type>::max()`

Returns `__a.max_size()` if that expression is well-formed, otherwise returns `numeric_limits<size_type>::max()`

#### 6.193.3.7 `select_on_container_copy_construction()` `template<typename _Alloc >`

```
static constexpr _Alloc std::allocator_traits< _Alloc >::select_on_container_copy_construction (
    const _Alloc & __rhs ) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

#### Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

#### Returns

`__rhs.select_on_container_copy_construction()` or `__rhs`

Returns `__rhs.select_on_container_copy_construction()` if that expression is well-formed, otherwise returns `__rhs`

The documentation for this struct was generated from the following file:

- [bits/alloc\\_traits.h](#)

## 6.194 `std::allocator_traits< allocator< _Tp > >` Struct Template Reference

```
#include <alloc_traits.h>
```

### 6.194.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< allocator< _Tp > >
```

Partial specialization for std::allocator.

### 6.194.2 Member Typedef Documentation

**6.194.2.1 [allocator\\_type](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::allocator\_type = [allocator](#)<\_Tp>  
The allocator type.

**6.194.2.2 [const\\_pointer](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::const\_pointer = const \_Tp\*  
The allocator's const pointer type.

**6.194.2.3 [const\\_void\\_pointer](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::const\_void\_pointer = const void\*  
The allocator's const void pointer type.

**6.194.2.4 [difference\\_type](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::difference\_type = std::ptrdiff\_t  
The allocator's difference type.

**6.194.2.5 [is\\_always\\_equal](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::is\_always\_equal = [true\\_type](#)  
Whether all instances of the allocator type compare equal.

**6.194.2.6 [pointer](#)**    template<typename \_Tp >  
using [std::allocator\\_traits](#)< [allocator](#)< \_Tp > >::pointer = \_Tp\*  
The allocator's pointer type.

**6.194.2.7 propagate\_on\_container\_copy\_assignment** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::propagate_on_container_copy_assignment` = `false_type`

How the allocator is propagated on copy assignment.

**6.194.2.8 propagate\_on\_container\_move\_assignment** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::propagate_on_container_move_assignment` = `true_type`

How the allocator is propagated on move assignment.

**6.194.2.9 propagate\_on\_container\_swap** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::propagate_on_container_swap` = `false_type`

How the allocator is propagated on swap.

**6.194.2.10 size\_type** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::size_type` = `std::size_t`

The allocator's size type.

**6.194.2.11 value\_type** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::value_type` = `_Tp`

The allocated type.

**6.194.2.12 void\_pointer** template<typename \_Tp >

using `std::allocator_traits< allocator< _Tp > >::void_pointer` = `void*`

The allocator's void pointer type.

**6.194.3 Member Function Documentation****6.194.3.1 allocate()** [1/2] template<typename \_Tp >

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n ) [inline], [static], [constexpr]
```

Allocate memory.

**Parameters**

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.

Calls `a.allocate(n)`

**6.194.3.2 allocate()** [2/2] template<typename \_Tp >

```
static constexpr pointer std::allocator_traits< allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
```

```
const_void_pointer __hint ) [inline], [static], [constexpr]
```

Allocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__n</code>	The number of objects to allocate space for.
<code>__hint</code>	Aid to locality.

#### Returns

Memory of suitable size and alignment for *n* objects of type `value_type`

Returns `a.allocate(n, hint)`

```
6.194.3.3 construct() template<typename _Tp >
template<typename _Up , typename... _Args>
static constexpr void std::allocator_traits< allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args ) [inline], [static], [constexpr], [noexcept]
```

Construct an object of type `_Up`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17.`  
 Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...) instead.`

```
6.194.3.4 deallocate() template<typename _Tp >
static constexpr void std::allocator_traits< allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n ) [inline], [static], [constexpr]
```

Deallocate memory.

#### Parameters

<code>__↔ __a</code>	An allocator.
<code>__↔ __p</code>	Pointer to the memory to deallocate.
<code>__↔ __n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n)`

```
6.194.3.5 destroy() template<typename _Tp >
template<typename _Up >
```

```
static constexpr void std::allocator_traits< allocator< _Tp > >::destroy (
    allocator_type & __a,
    _Up * __p ) [inline], [static], [constexpr], [noexcept]
```

Destroy an object of type *\_Up*.

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `__a.destroy(__p)`.

#### 6.194.3.6 max\_size() `template<typename _Tp >`

```
static constexpr size_type std::allocator_traits< allocator< _Tp > >::max_size (
    const allocator_type & __a ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

#### Parameters

<code>__a</code>	An allocator.
------------------	---------------

#### Returns

`__a.max_size()`

#### 6.194.3.7 select\_on\_container\_copy\_construction() `template<typename _Tp >`

```
static constexpr allocator_type std::allocator_traits< allocator< _Tp > >::select_on_container←
_copy_construction (
    const allocator_type & __rhs ) [inline], [static], [constexpr]
```

Obtain an allocator to use when copying a container.

#### Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

#### Returns

`__rhs`

The documentation for this struct was generated from the following file:

- [bits/alloc\\_traits.h](#)

## 6.195 std::allocator\_traits< allocator< void > > Struct Reference

```
#include <alloc_traits.h>
```

#### Public Types

### 6.195.1 Detailed Description

Explicit specialization for `std::allocator<void>`.

### 6.195.2 Member Typedef Documentation

**6.195.2.1 `allocator_type`**   using `std::allocator_traits< allocator< void > >::allocator_type` = `allocator<void>`  
The allocator type.

**6.195.2.2 `const_pointer`**   using `std::allocator_traits< allocator< void > >::const_pointer` = `const void*`  
The allocator's const pointer type.

**6.195.2.3 `const_void_pointer`**   using `std::allocator_traits< allocator< void > >::const_void_pointer` = `const void*`  
The allocator's const void pointer type.

**6.195.2.4 difference\_type** using `std::allocator_traits< allocator< void > >::difference_type = std::ptrdiff_t`  
 The allocator's difference type.

**6.195.2.5 is\_always\_equal** using `std::allocator_traits< allocator< void > >::is_always_equal = true_type`  
 Whether all instances of the allocator type compare equal.

**6.195.2.6 pointer** using `std::allocator_traits< allocator< void > >::pointer = void*`  
 The allocator's pointer type.

**6.195.2.7 propagate\_on\_container\_copy\_assignment** using `std::allocator_traits< allocator< void > >::propagate_on_container_copy_assignment = false_type`  
 How the allocator is propagated on copy assignment.

**6.195.2.8 propagate\_on\_container\_move\_assignment** using `std::allocator_traits< allocator< void > >::propagate_on_container_move_assignment = true_type`  
 How the allocator is propagated on move assignment.

**6.195.2.9 propagate\_on\_container\_swap** using `std::allocator_traits< allocator< void > >::propagate_on_container_swap = false_type`  
 How the allocator is propagated on swap.

**6.195.2.10 size\_type** using `std::allocator_traits< allocator< void > >::size_type = std::size_t`  
 The allocator's size type.

**6.195.2.11 value\_type** using `std::allocator_traits< allocator< void > >::value_type = void`  
 The allocated type.

**6.195.2.12 void\_pointer** using `std::allocator_traits< allocator< void > >::void_pointer = void*`  
 The allocator's void pointer type.

## 6.195.3 Member Function Documentation

**6.195.3.1 allocate()** static void \* `std::allocator_traits< allocator< void > >::allocate ( allocator_type & , size_type , const void * = nullptr ) [static], [delete]`  
 allocate is ill-formed for `allocator<void>`

**6.195.3.2 construct()** `template<typename _Up , typename... _Args>  
static constexpr void std::allocator\_traits< allocator< void > >::construct (`  
`allocator\_type & ,`  
`_Up * __p,`  
`_Args &&... __args ) [inline], [static], [constexpr], [noexcept]`

Construct an object of type `_Up`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17.`  
 Changed in C++20 to call `std::construct_at(__p, std::forward<_Args>(__args)...) instead.`  
 References [std::\\_Construct\(\)](#).

**6.195.3.3 deallocate()** `static void std::allocator\_traits< allocator< void > >::deallocate (`  
`allocator\_type & ,`  
`void * ,`  
`size\_type ) [static], [delete]`

`deallocate` is ill-formed for `allocator<void>`

**6.195.3.4 destroy()** `template<typename _Up >  
static constexpr void std::allocator\_traits< allocator< void > >::destroy (`  
`allocator\_type & ,`  
`_Up * __p ) [inline], [static], [constexpr], [noexcept]`

Destroy an object of type `_Up`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Invokes the destructor for `*__p`.

References [std::\\_Destroy\(\)](#).

**6.195.3.5 max\_size()** `static size\_type std::allocator\_traits< allocator< void > >::max_size (`  
`const allocator\_type & ) [static], [delete]`

`max_size` is ill-formed for `allocator<void>`

**6.195.3.6 select\_on\_container\_copy\_construction()** `static constexpr allocator\_type std::allocator\_traits<`  
`allocator< void > >::select_on_container_copy_construction (`  
`const allocator\_type & __rhs ) [inline], [static], [constexpr]`

Obtain an allocator to use when copying a container.

## Parameters

<code>__rhs</code>	An allocator.
--------------------	---------------

## Returns

`__rhs`

### 6.196.1 Detailed Description

```
template<typename _Tp>
struct std::allocator_traits< pmr::polymorphic_allocator< _Tp > >
```

Partial specialization for `std::pmr::polymorphic_allocator`.

## 6.196.2 Member Typedef Documentation

**6.196.2.1 allocator\_type** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocator_type` = `pmr::polymorphic_allocator< _Tp >`  
The allocator type.

**6.196.2.2 const\_pointer** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_pointer` = `const _Tp*`  
The allocator's const pointer type.

**6.196.2.3 const\_void\_pointer** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::const_void_pointer` = `const void*`  
The allocator's const void pointer type.

**6.196.2.4 difference\_type** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::difference_type` = `std::ptrdiff_t`  
The allocator's difference type.

**6.196.2.5 is\_always\_equal** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::is_always_equal` = `false_type`  
Whether all instances of the allocator type compare equal.

**6.196.2.6 pointer** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::pointer` = `_Tp*`  
The allocator's pointer type.

**6.196.2.7 propagate\_on\_container\_copy\_assignment** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_copy_assignment` = `false_type`  
A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**6.196.2.8 propagate\_on\_container\_move\_assignment** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_move_assignment` = `false_type`  
A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**6.196.2.9 propagate\_on\_container\_swap** `template<typename _Tp >`  
using `std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::propagate_on_container_swap` = `false_type`  
A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

**6.196.2.10 size\_type** template<typename \_Tp >

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::size_type = std::size_t
```

The allocator's size type.

**6.196.2.11 value\_type** template<typename \_Tp >

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::value_type = _Tp
```

The allocated type.

**6.196.2.12 void\_pointer** template<typename \_Tp >

```
using std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::void_pointer = void*
```

The allocator's void pointer type.

**6.196.3 Member Function Documentation****6.196.3.1 allocate()** [1/2] template<typename \_Tp >

```
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n ) [inline], [static]
```

Allocate memory.

**Parameters**

 __a	An allocator.
 __n	The number of objects to allocate space for.

Calls a.allocate(n).

**6.196.3.2 allocate()** [2/2] template<typename \_Tp >

```
static pointer std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::allocate (
    allocator_type & __a,
    size_type __n,
    const_void_pointer ) [inline], [static]
```

Allocate memory.

**Parameters**

 __a	An allocator.
 __n	The number of objects to allocate space for.

**Returns**

Memory of suitable size and alignment for n objects of type value\_type.

The third parameter is ignored..

Returns a.allocate(n).

```

6.196.3.3 construct() template<typename _Tp >
template<typename _Up , typename... _Args>
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::construct (
    allocator_type & __a,
    _Up * __p,
    _Args &&... __args ) [inline], [static]

```

Construct an object of type `_Up`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to memory of suitable size and alignment for an object of type <code>_Up</code> .
<code>__args</code>	Constructor arguments.

Calls `__a.construct(__p, std::forward<_Args>(__args)...) in C++11, C++14 and C++17. Changed in C++20 to call std::construct_at(__p, std::forward<_Args>(__args)...) instead.`

```

6.196.3.4 deallocate() template<typename _Tp >
static void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::deallocate (
    allocator_type & __a,
    pointer __p,
    size_type __n ) [inline], [static]

```

Deallocate memory.

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the memory to deallocate.
<code>__n</code>	The number of objects space was allocated for.

Calls `a.deallocate(p, n).`

```

6.196.3.5 destroy() template<typename _Tp >
template<typename _Up >
static constexpr void std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::destroy (
    allocator_type & ,
    _Up * __p ) [inline], [static], [constexpr], [noexcept]

```

Destroy an object of type `_Up`

#### Parameters

<code>__a</code>	An allocator.
<code>__p</code>	Pointer to the object to destroy

Calls `p->_Up()`.

```

6.196.3.6 max_size() template<typename _Tp >

```

```
static constexpr size_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::max_size
(
    const allocator_type & ) [inline], [static], [constexpr], [noexcept]
```

The maximum supported allocation size.

Returns

```
numeric_limits<size_t>::max() / sizeof(value_type)
```

**6.196.3.7 `select_on_container_copy_construction()`** `template<typename _Tp >`  

```
static allocator_type std::allocator_traits< pmr::polymorphic_allocator< _Tp > >::select_on_↵
container_copy_construction (
    const allocator_type & ) [inline], [static], [noexcept]
```

A `polymorphic_allocator` does not propagate when a container is copied, moved, or swapped.

### 6.200.1 Detailed Description

A type-safe container of any type.

An `any` object's state is either empty or it stores a contained object of CopyConstructible type.

Since

C++17

## 6.200.2 Constructor & Destructor Documentation

**6.200.2.1 any() [1/6]** constexpr std::any::any ( ) [inline], [constexpr], [noexcept]

Default constructor, creates an empty object.

Referenced by [operator=\(\)](#).

**6.200.2.2 any() [2/6]** std::any::any ( const any & \_\_other ) [inline]

Copy constructor, copies the state of \_\_other.

References [has\\_value\(\)](#).

**6.200.2.3 any() [3/6]** std::any::any ( any && \_\_other ) [inline], [noexcept]

Move constructor, transfer the state from \_\_other.

**Postcondition**

!\_\_other.has\_value() (this postcondition is a GNU extension)

**6.200.2.4 any() [4/6]** template<typename \_Tp , typename \_VTP = \_Decay\_if\_not\_any<\_Tp>, typename \_Mgr = \_Manager<\_VTP>, enable\_if\_t< is\_copy\_constructible\_v< \_VTP > &&!\_\_is\_in\_place\_type\_v< \_VTP >, bool > = true> std::any::any ( \_Tp && \_\_value ) [inline]

Construct with a copy of \_\_value as the contained object.

**6.200.2.5 any() [5/6]** template<typename \_Tp , typename... \_Args, typename \_VTP = decay\_t<\_Tp>, typename \_Mgr = \_Manager<\_VTP>, \_\_any\_constructible\_t< \_VTP, \_Args &&... > = false> std::any::any ( in\_place\_type\_t< \_Tp > , \_Args &&... \_\_args ) [inline], [explicit]

Construct with an object created from \_\_args as the contained object.

**6.200.2.6 any() [6/6]** template<typename \_Tp , typename \_Up , typename... \_Args, typename \_VTP = decay\_t<\_Tp>, typename \_Mgr = \_Manager<\_VTP>, \_\_any\_constructible\_t< \_VTP, initializer\_list< \_Up > &, \_Args &&... > = false> std::any::any ( in\_place\_type\_t< \_Tp > , initializer\_list< \_Up > \_\_il, \_Args &&... \_\_args ) [inline], [explicit]

Construct with an object created from \_\_il and \_\_args as the contained object.

**6.200.2.7 ~any()** `std::any::~~any ( ) [inline]`  
Destructor, calls `reset ( )`  
References [reset\(\)](#).

### 6.200.3 Member Function Documentation

**6.200.3.1 `emplace()` [1/2]** `template<typename _Tp , typename... _Args>`  
`__emplace_t< decay\_t< _Tp >, _Args... > std::any::emplace (`  
`\_Args &&... \_\_args ) [inline]`  
Emplace with an object created from `__args` as the contained object.

**6.200.3.2 `emplace()` [2/2]** `template<typename _Tp , typename _Up , typename... _Args>`  
`__emplace_t< decay\_t< _Tp >, initializer\_list< _Up > &, _Args &&... > std::any::emplace (`  
`initializer\_list< _Up > \_\_il,`  
`\_Args &&... \_\_args ) [inline]`  
Emplace with an object created from `__il` and `__args` as the contained object.

**6.200.3.3 `has_value()`** `bool std::any::has_value ( ) const [inline], [noexcept]`  
Reports whether there is a contained object or not.  
Referenced by [any\(\)](#), [reset\(\)](#), [swap\(\)](#), and [type\(\)](#).

**6.200.3.4 `operator=()` [1/3]** `template<typename _Tp >`  
`enable\_if\_t< is\_copy\_constructible< \_Decay\_if\_not\_any< _Tp > ::value, any & > std::any::operator=`  
`(`  
`_Tp && \_\_rhs ) [inline]`  
Store a copy of `__rhs` as the contained object.  
References [any\(\)](#).

**6.200.3.5 `operator=()` [2/3]** `any & std::any::operator= (`  
`any && \_\_rhs ) [inline], [noexcept]`  
Move assignment operator.

Postcondition

`!__rhs.has_value()` (not guaranteed for other implementations)

References [reset\(\)](#).

**6.200.3.6 `operator=()` [3/3]** `any & std::any::operator= (`  
`const any & \_\_rhs ) [inline]`  
Copy the state of another object.  
References [any\(\)](#).

**6.200.3.7 reset()** void std::any::reset ( ) [inline], [noexcept]

If not empty, destroy the contained object.

References [has\\_value\(\)](#).

Referenced by [~any\(\)](#), and [operator=\(\)](#).

**6.200.3.8 swap()** void std::any::swap (   
 [any](#) & \_\_rhs ) [inline], [noexcept]

Exchange state with another object.

References [has\\_value\(\)](#).

**6.200.3.9 type()** const [type\\_info](#) & std::any::type ( ) const [inline], [noexcept]

The typeid of the contained object, or typeid(void) if empty.

References [has\\_value\(\)](#).

### 6.201.1 Detailed Description

A type-safe container of any type.

An `any` object's state is either empty or it stores a contained object of `CopyConstructible` type.

### 6.201.2 Constructor & Destructor Documentation

**6.201.2.1 `any()` [1/5]** `std::experimental::fundamentals_v1::any::any ( ) [inline], [noexcept]`

Default constructor, creates an empty object.

Referenced by [operator=\(\)](#).

**6.201.2.2 `any()` [2/5]** `std::experimental::fundamentals_v1::any::any ( const any & __other ) [inline]`

Copy constructor, copies the state of `__other`.

References [empty\(\)](#).

**6.201.2.3 `any()` [3/5]** `std::experimental::fundamentals_v1::any::any ( any && __other ) [inline], [noexcept]`

Move constructor, transfer the state from `__other`.

**Postcondition**

`__other.empty()` (this postcondition is a GNU extension)

**6.201.2.4 `any()` [4/5]** `template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>, typename enable_if<is_constructible<_Tp, _ValueType && >::value, bool >::type = true>`

`std::experimental::fundamentals_v1::any::any ( _ValueType && __value ) [inline]`

Construct with a copy of `__value` as the contained object.

**6.201.2.5 `any()` [5/5]** `template<typename _ValueType , typename _Tp = _Decay<_ValueType>, typename _Mgr = _Manager<_Tp>, typename enable_if<!is_constructible<_Tp, _ValueType && >::value, bool >::type = false>`

`std::experimental::fundamentals_v1::any::any ( _ValueType && __value ) [inline]`

Construct with a copy of `__value` as the contained object.

**6.201.2.6 `~any()`** `std::experimental::fundamentals_v1::any::~~any ( ) [inline]`

Destructor, calls `clear()`

References [clear\(\)](#).

### 6.201.3 Member Function Documentation

**6.201.3.1 clear()** void std::experimental::fundamentals\_v1::any::clear ( ) [inline], [noexcept]

If not empty, destroy the contained object.

References [empty\(\)](#).

Referenced by [~any\(\)](#), and [operator=\(\)](#).

**6.201.3.2 empty()** bool std::experimental::fundamentals\_v1::any::empty ( ) const [inline], [noexcept]

Reports whether there is a contained object or not.

Referenced by [any\(\)](#), [clear\(\)](#), [swap\(\)](#), and [type\(\)](#).

**6.201.3.3 operator=()** [1/3] template<typename \_ValueType >

```
enable_if_t<!is_same< any, decay_t< _ValueType > >::value, any & > std::experimental::fundamentals_v1::any::operator= (
    _ValueType && __rhs ) [inline]
```

Store a copy of \_\_rhs as the contained object.

References [any\(\)](#).

**6.201.3.4 operator=()** [2/3] any & std::experimental::fundamentals\_v1::any::operator= (
 any && \_\_rhs ) [inline], [noexcept]

Move assignment operator.

Postcondition

\_\_rhs.empty() (not guaranteed for other implementations)

References [clear\(\)](#).

**6.201.3.5 operator=()** [3/3] any & std::experimental::fundamentals\_v1::any::operator= (
 const any & \_\_rhs ) [inline]

Copy the state of another object.

References [any\(\)](#).

**6.201.3.6 swap()** void std::experimental::fundamentals\_v1::any::swap (
 any & \_\_rhs ) [inline], [noexcept]

Exchange state with another object.

References [empty\(\)](#).

**6.201.3.7 type()** const type\_info & std::experimental::fundamentals\_v1::any::type ( ) const [inline], [noexcept]

The typeid of the contained object, or typeid(void) if empty.

References [empty\(\)](#).

#### 6.202.1 Detailed Description

```
template<typename _Tp, std::size_t _Nm>
struct std::array< _Tp, _Nm >
```

A standard container for storing a fixed size sequence of elements.

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#).

Sets support random access iterators.

## Template Parameters

<i> Tp </i>	Type of element. Required to be a complete type.
<i> Nm </i>	Number of elements.

The documentation for this struct was generated from the following file:

- [array](#)

**6.203 `__gnu_pbds::associative_tag` Struct Reference**

- **atomic\_ref** (const [atomic\\_ref](#) &)=default
- [atomic\\_ref](#) & **operator=** (const [atomic\\_ref](#) &)=delete

#### 6.222.1 Detailed Description

```
template<typename _Tp>
struct std::atomic_ref< _Tp >
```

Class template to provide atomic operations on a non-atomic variable.  
The documentation for this struct was generated from the following file:

- [atomic](#)

### 6.223 std::auto\_ptr< \_Tp > Class Template Reference

```
#include <memory>
```

### Public Types

- typedef \_Tp [element\\_type](#)

**Public Member Functions**

- `auto_ptr (auto_ptr &__a) throw ()`
- `template<typename _Tp1 >  
auto_ptr (auto_ptr<_Tp1> &__a) throw ()`
- `auto_ptr (auto_ptr_ref< element_type > __ref) throw ()`
- `auto_ptr (element_type *__p=0) throw ()`
- `~auto_ptr ()`
- `element_type * get () const throw ()`
- `template<typename _Tp1 >  
operator auto_ptr<_Tp1> () throw ()`
- `template<typename _Tp1 >  
operator auto_ptr_ref<_Tp1> () throw ()`
- `element_type & operator* () const throw ()`
- `element_type * operator-> () const throw ()`
- `auto_ptr & operator= (auto_ptr &__a) throw ()`
- `template<typename _Tp1 >  
auto_ptr & operator= (auto_ptr<_Tp1> &__a) throw ()`
- `auto_ptr & operator= (auto_ptr_ref< element_type > __ref) throw ()`
- `element_type * release () throw ()`
- `void reset (element_type *__p=0) throw ()`

**6.223.1 Detailed Description**

```
template<typename _Tp>
class std::auto_ptr<_Tp>
```

A simple smart pointer providing strict ownership semantics.  
The Standard says:

An `auto_ptr` owns the object it holds a pointer to. Copying an `auto_ptr` copies the pointer and transfers ownership to the destination. If more than one `auto_ptr` owns the same object at the same time the behavior of the program is undefined.

The uses of `auto_ptr` include providing temporary exception-safety for dynamically allocated memory, passing ownership of dynamically allocated memory to a function, and returning dynamically allocated memory from a function. `auto_ptr` does not meet the CopyConstructible requirements for Standard Library `container` elements and thus instantiating a Standard Library container with an `auto_ptr` results in undefined behavior.

Quoted from [20.4.5]/3.

Good examples of what can and cannot be done with `auto_ptr` can be found in the libstdc++ testsuite.  
\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS

1. `auto_ptr<>` conversion issues These resolutions have all been incorporated.

**Deprecated** Deprecated in C++11, no longer in the standard since C++17. Use `unique_ptr` instead.

**6.223.2 Member Typedef Documentation**

**6.223.2.1 element\_type** `template<typename _Tp>  
typedef _Tp std::auto_ptr<_Tp>::element_type`  
The pointed-to type.

### 6.223.3 Constructor & Destructor Documentation

**6.223.3.1 auto\_ptr()** [1/4] `template<typename _Tp >`  
`std::auto_ptr< _Tp >::auto_ptr (`  
`element_type * __p = 0 ) throw ( )` [inline], [explicit]

An auto\_ptr is usually constructed from a raw pointer.

#### Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`.

**6.223.3.2 auto\_ptr()** [2/4] `template<typename _Tp >`  
`std::auto_ptr< _Tp >::auto_ptr (`  
`auto_ptr< _Tp > & __a ) throw ( )` [inline]

An auto\_ptr can be constructed from another auto\_ptr.

#### Parameters

<code>__a</code>	Another auto_ptr of the same type.
------------------	------------------------------------

This object now *owns* the object previously owned by `__a`, which has given up ownership.

**6.223.3.3 auto\_ptr()** [3/4] `template<typename _Tp >`  
`template<typename _Tp1 >`  
`std::auto_ptr< _Tp >::auto_ptr (`  
`auto_ptr< _Tp1 > & __a ) throw ( )` [inline]

An auto\_ptr can be constructed from another auto\_ptr.

#### Parameters

<code>__a</code>	Another auto_ptr of a different but related type.
------------------	---

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by `__a`, which has given up ownership.

**6.223.3.4 ~auto\_ptr()** `template<typename _Tp >`  
`std::auto_ptr< _Tp >::~~auto_ptr ( )` [inline]

When the auto\_ptr goes out of scope, the object it owns is deleted. If it no longer owns anything (i.e., `get ( )` is NULL), then this has no effect.

The C++ standard says there is supposed to be an empty throw specification here, but omitting it is standard conforming. Its presence can be detected only if `_Tp::~~_Tp()` throws, but this is prohibited. [17.4.3.6]/2

**6.223.3.5 auto\_ptr()** [4/4] `template<typename _Tp >`  
`std::auto_ptr< _Tp >::auto_ptr (`  
`auto_ptr_ref< element_type > __ref ) throw ( )` [inline]

Automatic conversions.

These operations are supposed to convert an auto\_ptr into and from an auto\_ptr\_ref automatically as needed. This would allow constructs such as

```
auto_ptr<Derived> func_returning_auto_ptr(.....);
...
auto_ptr<Base> ptr = func_returning_auto_ptr(.....);
```

But it doesn't work, and won't be fixed. For further details see <http://cplusplus.github.io/LWG/lwg-closed.html#463>

#### 6.223.4 Member Function Documentation

**6.223.4.1 get()** `template<typename _Tp >`  
`element_type * std::auto_ptr<_Tp>::get ( ) const throw ( ) [inline]`

Bypassing the smart pointer.

##### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

##### Note

This auto\_ptr still owns the memory.

**6.223.4.2 operator\*()** `template<typename _Tp >`  
`element_type & std::auto_ptr<_Tp>::operator* ( ) const throw ( ) [inline]`

Smart pointer dereferencing.

If this auto\_ptr no longer owns anything, then this operation will crash. (For a smart pointer, *no longer owns anything* is the same as being a null pointer, and you know what happens when you dereference one of those...)

**6.223.4.3 operator->()** `template<typename _Tp >`  
`element_type * std::auto_ptr<_Tp>::operator-> ( ) const throw ( ) [inline]`

Smart pointer dereferencing.

This returns the pointer itself, which the language then will automatically cause to be dereferenced.

**6.223.4.4 operator=()** [1/2] `template<typename _Tp >`  
`auto_ptr & std::auto_ptr<_Tp>::operator= (`  
`auto_ptr<_Tp> & __a ) throw ( ) [inline]`

auto\_ptr assignment operator.

##### Parameters

<code>__a</code>	Another auto_ptr of the same type.
------------------	------------------------------------

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References `std::auto_ptr<_Tp>::reset()`.

**6.223.4.5 operator=()** [2/2] `template<typename _Tp >`  
`template<typename _Tp1 >`  
`auto_ptr & std::auto_ptr< _Tp >::operator= (`  
`auto_ptr< _Tp1 > & __a ) throw ( ) [inline]`  
 auto\_ptr assignment operator.

#### Parameters

<code>__a</code>	Another auto_ptr of a different but related type.
------------------	---

A pointer-to-Tp1 must be convertible to a pointer-to-Tp/element\_type.

This object now *owns* the object previously owned by `__a`, which has given up ownership. The object that this one *used* to own and track has been deleted.

References `std::auto_ptr< _Tp >::reset()`.

**6.223.4.6 release()** `template<typename _Tp >`  
`element_type * std::auto_ptr< _Tp >::release ( ) throw ( ) [inline]`  
 Bypassing the smart pointer.

#### Returns

The raw pointer being managed.

You can get a copy of the pointer that this object owns, for situations such as passing to a function which only accepts a raw pointer.

#### Note

This auto\_ptr no longer owns the memory. When this object goes out of scope, nothing will happen.

**6.223.4.7 reset()** `template<typename _Tp >`  
`void std::auto_ptr< _Tp >::reset (`  
`element_type * __p = 0 ) throw ( ) [inline]`  
 Forcibly deletes the managed object.

#### Parameters

<code>__p</code>	A pointer (defaults to NULL).
------------------	-------------------------------

This object now *owns* the object pointed to by `__p`. The previous object has been deleted.

Referenced by `std::auto_ptr< _Tp >::operator=()`.

The documentation for this class was generated from the following files:

- [shared\\_ptr\\_base.h](#)
- [auto\\_ptr.h](#)

## 6.224 std::auto\_ptr\_ref< \_Tp1 > Struct Template Reference

```
#include <auto_ptr.h>
```

**Public Member Functions**

- `auto_ptr_ref` (`_Tp1 *__p`)

**Public Attributes**

- `_Tp1 * _M_ptr`

**6.224.1 Detailed Description**

```
template<typename _Tp1>
struct std::auto_ptr_ref< _Tp1 >
```

A wrapper class to provide `auto_ptr` with reference semantics. For example, an `auto_ptr` can be assigned (or constructed from) the result of a function which returns an `auto_ptr` by value.

All the `auto_ptr_ref` stuff should happen behind the scenes.

The documentation for this struct was generated from the following file:

- [auto\\_ptr.h](#)

**6.225 std::back\_insert\_iterator< \_Container > Class Template Reference**

```
#include <stl_iterator.h>
```

Inheritance diagram for `std::back_insert_iterator< _Container >`:

**Public Types**

- typedef `_Container` `container_type`
- using `difference_type` = `ptrdiff_t`
- typedef `output_iterator_tag` `iterator_category`
- typedef void `pointer`
- typedef void `reference`
- typedef void `value_type`

**Public Member Functions**

- constexpr `back_insert_iterator` (`_Container &__x`)
- constexpr `back_insert_iterator` & `operator*` ()
- constexpr `back_insert_iterator` & `operator++` ()
- constexpr `back_insert_iterator` `operator++` (int)
- constexpr `back_insert_iterator` & `operator=` (const typename `_Container::value_type` &\_\_value)
- constexpr `back_insert_iterator` & `operator=` (typename `_Container::value_type` &&\_\_value)

**Protected Attributes**

- `_Container * container`

**6.225.1 Detailed Description**

```
template<typename _Container>
class std::back_insert_iterator< _Container >
```

Turns assignment into insertion.

These are output iterators, constructed from a container-of-T. Assigning a T to the iterator appends it to the container using `push_back`.

Tip: Using the `back_inserter` function to create these iterators can save typing.

## 6.225.2 Member Typedef Documentation

**6.225.2.1 container\_type** `template<typename _Container >  
typedef _Container std::back\_insert\_iterator< _Container >::container_type`  
A nested typedef for the type of whatever container you used.

**6.225.2.2 iterator\_category** `typedef output\_iterator\_tag std::iterator< output\_iterator\_tag , void ,  
void , void , void >::iterator_category` [inherited]  
One of the [tag types](#).

**6.225.2.3 pointer** `typedef void std::iterator< output\_iterator\_tag , void , void , void , void >↵  
::pointer` [inherited]  
This type represents a pointer-to-value\_type.

**6.225.2.4 reference** `typedef void std::iterator< output\_iterator\_tag , void , void , void , void  
>::reference` [inherited]  
This type represents a reference-to-value\_type.

**6.225.2.5 value\_type** `typedef void std::iterator< output\_iterator\_tag , void , void , void , void  
>::value_type` [inherited]  
The type "pointed to" by the iterator.

## 6.225.3 Constructor & Destructor Documentation

**6.225.3.1 back\_insert\_iterator()** `template<typename _Container >  
constexpr std::back\_insert\_iterator< _Container >::back_insert_iterator (   
_Container & __x )` [inline], [explicit], [constexpr]  
The only way to create this iterator is with a container.

## 6.225.4 Member Function Documentation

**6.225.4.1 operator\*()** `template<typename _Container >  
constexpr back\_insert\_iterator & std::back\_insert\_iterator< _Container >::operator* ( )` [inline],  
[constexpr]  
Simply returns \*this.

**6.225.4.2 operator++()** [1/2] `template<typename _Container >  
constexpr back\_insert\_iterator & std::back\_insert\_iterator< _Container >::operator++ ( )` [inline],  
[constexpr]  
Simply returns \*this. (This iterator does not *move*.)

**6.225.4.3 operator++()** [2/2] `template<typename _Container >`

```
constexpr back\_insert\_iterator std::back\_insert\_iterator< _Container >::operator++ (
    int ) [inline], [constexpr]
```

Simply returns `*this`. (This iterator does not *move*.)

**6.225.4.4 operator=()** `template<typename _Container >`

```
constexpr back\_insert\_iterator & std::back\_insert\_iterator< _Container >::operator= (
    const typename _Container::value_type & __value ) [inline], [constexpr]
```

**Parameters**

<code>__value</code>	An instance of whatever type <code>container_type::const_reference</code> is; presumably a reference-to-const T for <code>container&lt;T&gt;</code> .
----------------------	---

**Returns**

This iterator, for chained operations.

This kind of iterator doesn't really have a *position* in the container (you can think of the position as being permanently at the end, if you like). Assigning a value to the iterator will always append the value to the end of the container.

The documentation for this class was generated from the following file:

**6.226 std::bad\_alloc Class Reference**

Inheritance diagram for `std::bad_alloc`:

**Public Member Functions**

- **bad\_alloc** (const [bad\\_alloc](#) &)=default
- [bad\\_alloc](#) & **operator=** (const [bad\\_alloc](#) &)=default
- virtual const char \* **what** () const throw ()

**6.226.1 Detailed Description**

Exception possibly thrown by `new`.

`bad_alloc` (or classes derived from it) is used to report allocation errors from the throwing forms of `new`.

**6.226.2 Member Function Documentation****6.226.2.1 what()** `virtual const char * std::bad\_alloc::what ( ) const throw ( ) [virtual]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [new](#)

**6.227 std::bad\_any\_cast Class Reference**

Inheritance diagram for `std::bad_any_cast`:

## Public Member Functions

- virtual const char \* [what](#) () const noexcept

### 6.227.1 Detailed Description

Exception class thrown by a failed `any_cast`.

### 6.227.2 Member Function Documentation

**6.227.2.1 `what()`** virtual const char \* `std::bad_any_cast::what ( ) const` [inline], [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::bad\\_cast](#).

The documentation for this class was generated from the following file:

- [any](#)

## 6.228 `std::experimental::fundamentals_v1::bad_any_cast` Class Reference

Inheritance diagram for `std::experimental::fundamentals_v1::bad_any_cast`:

## Public Member Functions

- virtual const char \* [what](#) () const noexcept

### 6.228.1 Detailed Description

Exception class thrown by a failed `any_cast`.

### 6.228.2 Member Function Documentation

**6.228.2.1 `what()`** virtual const char \* `std::experimental::fundamentals_v1::bad_any_cast::what ( ) const` [inline], [virtual], [noexcept]

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::bad\\_cast](#).

The documentation for this class was generated from the following file:

- [experimental/any](#)

## 6.229 `std::bad_cast` Class Reference

Inheritance diagram for `std::bad_cast`:

## Public Member Functions

- virtual const char \* [what](#) () const noexcept

### 6.229.1 Detailed Description

Thrown during incorrect typecasting.

If you attempt an invalid `dynamic_cast` expression, an instance of this class (or something derived from this class) is thrown.

### 6.229.2 Member Function Documentation

**6.229.2.1 `what()`** `virtual const char * std::bad_cast::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

Reimplemented in [std::bad\\_any\\_cast](#), and [std::experimental::fundamentals\\_v1::bad\\_any\\_cast](#).

The documentation for this class was generated from the following file:

- [typeinfo](#)

## 6.230 `std::bad_exception` Class Reference

Inheritance diagram for `std::bad_exception`:

### Public Member Functions

- virtual const char \* [what](#) ( ) const noexcept

### 6.230.1 Detailed Description

If an exception is thrown which is not listed in a function's exception specification, one of these may be thrown.

### 6.230.2 Member Function Documentation

**6.230.2.1 `what()`** `virtual const char * std::bad_exception::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [exception](#)

## 6.231 `std::bad_function_call` Class Reference

```
#include <std_function.h>
```

Inheritance diagram for `std::bad_function_call`:

### Public Member Functions

- const char \* [what](#) ( ) const noexcept

### 6.231.1 Detailed Description

Exception class thrown when class template function's `operator()` is called with an empty target.

### 6.231.2 Member Function Documentation

**6.231.2.1 what()** `const char * std::bad_function_call::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [std\\_function.h](#)

### 6.232 std::bad\_optional\_access Class Reference

Inheritance diagram for `std::bad_optional_access`:

#### Public Member Functions

- `const char * what ( ) const noexcept override`

#### 6.232.1 Detailed Description

Exception class thrown when a disengaged optional object is dereferenced.

### 6.232.2 Member Function Documentation

**6.232.2.1 what()** `const char * std::bad_optional_access::what ( ) const [inline], [override], [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [optional](#)

### 6.233 std::experimental::fundamentals\_v1::bad\_optional\_access Class Reference

Inheritance diagram for `std::experimental::fundamentals_v1::bad_optional_access`:

#### Public Member Functions

- `bad\_optional\_access (const char * __arg)`
- `virtual const char * what ( ) const noexcept`

#### 6.233.1 Detailed Description

Exception class thrown when a disengaged optional object is dereferenced.

### 6.233.2 Member Function Documentation

**6.233.2.1 `what()`** `virtual const char * std::logic_error::what ( ) const [virtual], [noexcept], [inherited]`

Returns a C-style character string describing the general cause of the current error (the same string passed to the ctor).

Reimplemented from [std::exception](#).

Reimplemented in [std::future\\_error](#).

The documentation for this class was generated from the following file:

- [experimental/optional](#)

## 6.234 `std::bad_typeid` Class Reference

Inheritance diagram for `std::bad_typeid`:

### Public Member Functions

- virtual const char \* [what](#) ( ) const noexcept

### 6.234.1 Detailed Description

Thrown when a NULL pointer in a `typeid` expression is used.

### 6.234.2 Member Function Documentation

**6.234.2.1 `what()`** `virtual const char * std::bad_typeid::what ( ) const [virtual], [noexcept]`

Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

## 6.235 `std::bad_weak_ptr` Class Reference

`#include <shared_ptr_base.h>`

Inheritance diagram for `std::bad_weak_ptr`:

### Public Member Functions

- virtual char const \* [what](#) ( ) const noexcept

### 6.235.1 Detailed Description

Exception possibly thrown by `shared_ptr`.

### 6.235.2 Member Function Documentation

**6.235.2.1 what()** `virtual char const * std::bad_weak_ptr::what ( ) const [virtual], [noexcept]`  
Returns a C-style character string describing the general cause of the current error.

Reimplemented from [std::exception](#).

The documentation for this class was generated from the following file:

- [shared\\_ptr\\_base.h](#)

## 6.236 \_\_gnu\_parallel::balanced\_quicksort\_tag Struct Reference

`#include <tags.h>`

Inheritance diagram for `__gnu_parallel::balanced_quicksort_tag`:

### Public Member Functions

- **balanced\_quicksort\_tag** ([\\_ThreadIndex](#) \_\_num\_threads)
- [\\_ThreadIndex](#) **\_\_get\_num\_threads** ()
- void **set\_num\_threads** ([\\_ThreadIndex](#) \_\_num\_threads)

### 6.236.1 Detailed Description

Forces parallel sorting using balanced quicksort at compile time.

### 6.236.2 Member Function Documentation

**6.236.2.1 \_\_get\_num\_threads()** [\\_ThreadIndex](#) `__gnu_parallel::parallel_tag::__get_num_threads ( )`  
[inline], [inherited]

Find out desired number of threads.

#### Returns

Desired number of threads.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#).

**6.236.2.2 set\_num\_threads()** `void __gnu_parallel::parallel_tag::set_num_threads (`  
[\\_ThreadIndex](#) \_\_num\_threads ) [inline], [inherited]

Set the desired number of threads.

#### Parameters

<a href="#">__num_threads</a>	Desired number of threads.
-------------------------------	----------------------------

The documentation for this struct was generated from the following file:

- [tags.h](#)

## 6.237 \_\_gnu\_parallel::balanced\_tag Struct Reference

`#include <tags.h>`

Inheritance diagram for `__gnu_parallel::balanced_tag`:

**Public Member Functions**

- [\\_ThreadIndex \\_\\_get\\_num\\_threads\(\)](#)
- void [set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#)

**6.237.1 Detailed Description**

Recommends parallel execution using dynamic load-balancing at compile time.

**6.237.2 Member Function Documentation**

**6.237.2.1 \_\_get\_num\_threads()** [\\_ThreadIndex \\_\\_gnu\\_parallel::parallel\\_tag::\\_\\_get\\_num\\_threads\(\)](#) [inline], [inherited]

Find out desired number of threads.

**Returns**

Desired number of threads.

Referenced by [\\_\\_gnu\\_parallel::\\_\\_parallel\\_sort\(\)](#).

**6.237.2.2 set\_num\_threads()** [void \\_\\_gnu\\_parallel::parallel\\_tag::set\\_num\\_threads\(\\_ThreadIndex \\_\\_num\\_threads\)](#) [inline], [inherited]

Set the desired number of threads.

**Parameters**

<a href="#">__num_threads</a>	Desired number of threads.
-------------------------------	----------------------------

The documentation for this struct was generated from the following file:

- [tags.h](#)

**6.238 std::tr2::bases<\_Tp> Struct Template Reference****Public Types**

- typedef [\\_\\_reflection\\_typelist](#)<\_\_bases(\_Tp)...> **type**

**6.238.1 Detailed Description**

```
template<typename _Tp>
struct std::tr2::bases<_Tp>
```

Sequence abstraction metafunctions for manipulating a typelist.

Enumerate all the base classes of a class. Form of a typelist.

The documentation for this struct was generated from the following file:

- [tr2/type\\_traits](#)

**6.239 \_\_gnu\_pbds::basic\_branch<Key, Mapped, Tag, Node\_Update, Policy\_TI, \_Alloc> Class Template Reference**

```
#include <assoc_container.hpp>
```

Inheritance diagram for [\\_\\_gnu\\_pbds::basic\\_branch<Key, Mapped, Tag, Node\\_Update, Policy\\_TI, \\_Alloc>](#):

## Public Types

- template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 >  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4)
- template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 >  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5)
- template<typename T0 , typename T1 , typename T2 , typename T3 , typename T4 , typename T5 , typename T6 >  
**basic\_branch** (T0 t0, T1 t1, T2 t2, T3 t3, T4 t4, T5 t5, T6 t6)

### 6.239.1 Detailed Description

```
template<typename Key, typename Mapped, typename Tag, typename Node_Update, typename Policy_Tl, typename _Alloc>
class __gnu_pbds::basic_branch< Key, Mapped, Tag, Node_Update, Policy_Tl, _Alloc >
```

A branched, tree-like (tree, trie) container abstraction.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Node_Update</i>	Updates nodes, restores invariants.
<i>Policy_Tl</i>	Policy typelist.
<i>_Alloc</i>	Allocator type.

Base is dispatched at compile time via Tag, from the following choices: `tree_tag`, `trie_tag`, and their descendants.

Base choices are: `detail::ov_tree_map`, `detail::rb_tree_map`, `detail::splay_tree_map`, and `detail::pat_trie_map`.

The documentation for this class was generated from the following file:

- [assoc\\_container.hpp](#)

### 6.240 \_\_gnu\_pbds::basic\_branch\_tag Struct Reference

```
#include <tag_and_trait.hpp>
```

Inheritance diagram for `__gnu_pbds::basic_branch_tag`:

#### 6.240.1 Detailed Description

Basic branch structure.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 6.241 std::basic\_filebuf< \_CharT, \_Traits > Class Template Reference

## Friends

- class [ios\\_base](#)

### 6.241.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_filebuf<_CharT, _Traits>
```

The actual work of input and output (for files).

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits&lt;_CharT&gt;</a> .

This class associates both its input and output sequence with an external disk file, and maintains a joint file position for both sequences. Many of its semantics are described in terms of similar behavior in the Standard C Library's `FILE` streams.

Requirements on `traits_type`, specific to this class:

- `traits_type::pos_type` must be `fpos<traits_type::state_type>`
- `traits_type::off_type` must be `streamoff`
- `traits_type::state_type` must be Assignable and DefaultConstructible,
- `traits_type::state_type()` must be the initial state for `codecvt`.

### 6.241.2 Constructor & Destructor Documentation

**6.241.2.1 basic\_filebuf()** `template<typename _CharT , typename _Traits >  
std::basic_filebuf< _CharT, _Traits >::basic_filebuf`

Does not open any files.

The default constructor initializes the parent class using its own default ctor.

References `std::basic_streambuf< _CharT, _Traits >::_M_buf_locale`.

**6.241.2.2 ~basic\_filebuf()** `template<typename _CharT , typename _Traits >  
virtual std::basic_filebuf< _CharT, _Traits >::~~basic_filebuf ( ) [inline], [virtual]`

The destructor closes the file first.

### 6.241.3 Member Function Documentation

**6.241.3.1 \_M\_create\_pback()** `template<typename _CharT , typename _Traits >  
void std::basic_filebuf< _CharT, _Traits >::_M_create_pback ( ) [inline], [protected]`  
Initializes pback buffers, and moves normal buffers to safety. Assumptions: `_M_in_cur` has already been moved back

**6.241.3.2 \_M\_destroy\_pback()** `template<typename _CharT , typename _Traits >  
void std::basic_filebuf< _CharT, _Traits >::_M_destroy_pback ( ) throw ( ) [inline], [protected]`  
Deactivates pback buffer contents, and restores normal buffer. Assumptions: The pback buffer has only moved forward.

**6.241.3.3 \_M\_set\_buffer()** `template<typename _CharT , typename _Traits >  
void std::basic_filebuf< _CharT, _Traits >::_M_set_buffer (   
    streamsize __off ) [inline], [protected]`  
This function sets the pointers of the internal buffer, both get and put areas. Typically:  
`__off == egptr() - eback()` upon underflow/uflow (**read** mode); `__off == 0` upon overflow (**write** mode); `__off == -1` upon open, setbuf, seekoff/pos (**uncommitted** mode).  
NB: `egptr() - pbase() == _M_buf_size - 1`, since `_M_buf_size` reflects the actual allocated memory and the last cell is reserved for the overflow char of a full put area.  
References `std::ios_base::app`, `std::ios_base::in`, and `std::ios_base::out`.  
Referenced by `std::basic_filebuf< _CharT, _Traits >::close()`.

**6.241.3.4 close()** `template<typename _CharT , typename _Traits >  
basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::close`  
Closes the currently associated file.

#### Returns

`this` on success, NULL on failure

If no file is currently open, this function immediately fails.

If a *put buffer area* exists, `overflow(eof)` is called to flush all the characters. The file is then closed.

If any operations fail, this function also fails.

References `std::basic_filebuf< _CharT, _Traits >::_M_mode`, `std::basic_filebuf< _CharT, _Traits >::_M_pback_init`, `std::basic_filebuf< _CharT, _Traits >::_M_reading`, and `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`.

Referenced by `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, and `std::basic_fstream< _CharT, _Traits >::close()`.

**6.241.3.5 eback()** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::eback ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_beg](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sungetc\(\)](#).

**6.241.3.6 egptr()** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::egptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_end](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::in\\_avail\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::showmanyc\(\)](#), and [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::underflow\(\)](#).

**6.241.3.7 epptr()** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::epptr ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_end](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.241.3.8 gbump()** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::gbump (`  
`int __n ) [inline], [protected], [inherited]`

Moving the read position.

## Parameters

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the read position without returning any data.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sungetc\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::uflow\(\)](#).

**6.241.3.9 getloc()** `template<typename _CharT , typename _Traits >`  
`locale std::basic_streambuf<_CharT, _Traits>::getloc ( ) const [inline], [inherited]`  
 Locale access.

## Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_buf\\_locale](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::pubimbue\(\)](#).

**6.241.3.10 gptr()** `template<typename _CharT , typename _Traits >`  
`char_type * std::basic_streambuf<_CharT, _Traits>::gptr ( ) const [inline], [protected], [inherited]`  
 Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::in\\_avail\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::showmanyc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sungetc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::uflow\(\)](#), and [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::underflow\(\)](#).

**6.241.3.11 imbue()** `template<typename _CharT , typename _Traits >`  
`void std::basic_filebuf<_CharT, _Traits>::imbue (`  
`const locale & __loc ) [protected], [virtual]`

Changes translations.

## Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

## Note

Base class version does nothing.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::ios\\_base::cur](#).

**6.241.3.12 in\_avail()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( )` [inline], [inherited]  
 Looking ahead into the stream.

## Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::egptr\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gpctr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::showmanyc\(\)](#).

**6.241.3.13 is\_open()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_filebuf< _CharT, _Traits >::is_open ( )` const throw ( ) [inline]  
 Returns true if the external file is open.  
 Referenced by [std::basic\\_ifstream< \\_CharT, \\_Traits >::is\\_open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::is\\_open\(\)](#), and [std::basic\\_fstream< \\_CharT, \\_Traits >::is\\_open\(\)](#).

**6.241.3.14 open() [1/3]** `template<typename _CharT , typename _Traits >`  
`template<typename _Path >`  
`_If_fs_path< _Path, __filebuf_type * > std::basic_filebuf< _CharT, _Traits >::open (`  
`const _Path & __s,`  
`ios_base::openmode __mode )` [inline]

Opens an external file.

## Parameters

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

## Returns

`this` on success, NULL on failure

**6.241.3.15 open() [2/3]** `template<typename _CharT , typename _Traits >`  
`basic_filebuf< _CharT, _Traits >::__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (`  
`const char * __s,`  
`ios_base::openmode __mode )`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
------------------	-----------------------

## Parameters

<code>__mode</code>	The open mode flags.
---------------------	----------------------

## Returns

`this` on success, `NULL` on failure

If a file is already open, this function immediately fails. Otherwise it tries to open the file named `__s` using the flags given in `__mode`.

Table 92, adapted here, gives the relation between openmode combinations and the equivalent `fopen()` flags. (NB: lines `app`, `in|out|app`, `in|app`, `binary|app`, `binary|in|out|app`, and `binary|in|app` per DR 596)

ios_base Flag combination					stdio equivalent
binary	in	out	trunc	app	
		+			w
		+		+	a
				+	a
		+	+		w
	+				r

+	+			+	a+b

References [std::ios\\_base::ate](#), [std::ios\\_base::end](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#).

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), and [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#).

```

6.241.3.16 open() [3/3] template<typename _CharT , typename _Traits >
__filebuf_type * std::basic_filebuf< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode ) [inline]

```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

**Returns**

`this` on success, NULL on failure

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::c\\_str\(\)](#).

**6.241.3.17 overflow()** `template<typename _CharT, typename _Traits>  
basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::overflow (  
int_type __c = _Traits::eof() ) [protected], [virtual]`

Consumes data from the buffer; writes to the controlled sequence.

**Parameters**

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

**Returns**

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::app](#), [std::ios\\_base::cur](#), and [std::ios\\_base::out](#).

**6.241.3.18 pbackfail()** `template<typename _CharT, typename _Traits>  
basic_filebuf<_CharT, _Traits>::int_type std::basic_filebuf<_CharT, _Traits>::pbackfail (  
int_type __c = _Traits::eof() ) [protected], [virtual]`

Tries to back up the input sequence.

**Parameters**

<code>__c</code>	The character to be inserted back into the sequence.
------------------	--

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::cur](#), and [std::ios\\_base::in](#).

**6.241.3.19 pbase()** `template<typename _CharT , typename _Traits >  
char_type * std::basic\_streambuf<\_CharT, \_Traits>::pbase ( ) const [inline], [protected],  
[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::M\\_out\\_beg](#).

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#).

**6.241.3.20 pbump()** `template<typename _CharT , typename _Traits >  
void std::basic\_streambuf<\_CharT, \_Traits>::pbump (  
int __n ) [inline], [protected], [inherited]`

Moving the write position.

**Parameters**

<code><a href="#">_</a> <code><a href="#">_</a> <code><a href="#">_</a></code></code></code>	The delta by which to move.
--	-----------------------------

This just advances the write position without returning any data.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.241.3.21 pptr()** `template<typename _CharT , typename _Traits >  
char_type * std::basic\_streambuf<\_CharT, \_Traits>::pptr ( ) const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.241.3.22 pubimbue()** `template<typename _CharT , typename _Traits >  
locale std::basic\_streambuf<\_CharT, \_Traits>::pubimbue (  
const locale & __loc ) [inline], [inherited]`

Entry point for imbue().

#### Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

#### Returns

The previous locale.

Calls the derived imbue(\_\_loc).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_buf\\_locale](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::getloc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::imbue\(\)](#).

#### 6.241.3.23 pubseekoff() `template<typename _CharT , typename _Traits >`

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

#### Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::seekoff\(\)](#).

#### 6.241.3.24 pubseekpos() `template<typename _CharT , typename _Traits >`

```
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]
```

Alters the stream position.

#### Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekpos function.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::seekpos\(\)](#).

#### 6.241.3.25 pubsetbuf() `template<typename _CharT , typename _Traits >`

```
basic_streambuf * std::basic_streambuf< _CharT, _Traits >::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline], [inherited]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::setbuf\(\)](#).

**6.241.3.26 pubsync()** `template<typename _CharT, typename _Traits>`  
`int std::basic_streambuf<_CharT, _Traits>::pubsync ( ) [inline], [inherited]`

Calls virtual sync function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::sync\(\)](#).

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::sync\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#).

**6.241.3.27 sbumpc()** `template<typename _CharT, typename _Traits>`  
`int_type std::basic_streambuf<_CharT, _Traits>::sbumpc ( ) [inline], [inherited]`

Getting the next character.

Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gbump\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::uflow\(\)](#).

Referenced by [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::istreambuf\\_iterator<\\_CharT, \\_Traits>::operator++\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::snextc\(\)](#), and [std::basic\\_istream<char>::sync\(\)](#).

**6.241.3.28 seekoff()** `template<typename _CharT, typename _Traits>`  
`basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<_CharT, _Traits>::seekoff (`  
 `off_type,`  
 `ios_base::seekdir,`  
 `ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::cur](#).

**6.241.3.29 seekpos()** `template<typename _CharT, typename _Traits>`  
`basic_filebuf<_CharT, _Traits>::pos_type std::basic_filebuf<_CharT, _Traits>::seekpos (`  
 `pos_type,`  
 `ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::beg](#).

**6.241.3.30 setbuf()** `template<typename _CharT, typename _Traits>`  
`basic_filebuf<_CharT, _Traits>::__streambuf_type * std::basic_filebuf<_CharT, _Traits>↵`  
`::setbuf (`  
`char_type * __s,`  
`streamsize __n ) [protected], [virtual]`

Manipulates the buffer.

#### Parameters

<code>↵</code> <code>__s</code>	Pointer to a buffer area.
<code>↵</code> <code>__n</code>	Size of <code>__s</code> .

#### Returns

`this`

If no file has been opened, and both `__s` and `__n` are zero, then the stream becomes unbuffered. Otherwise, `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf<_CharT, _Traits>`.

**6.241.3.31 setg()** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::setg (`  
`char_type * __gbeg,`  
`char_type * __gnext,`  
`char_type * __gend ) [inline], [protected], [inherited]`

Setting the three read area pointers.

#### Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

#### Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

References `std::basic_streambuf<_CharT, _Traits>::__M_in_beg`, `std::basic_streambuf<_CharT, _Traits>::__M_in_cur`, and `std::basic_streambuf<_CharT, _Traits>::__M_in_end`.

Referenced by `std::wbuffer_convert<_Codecvt, _Elem, _Tr>::wbuffer_convert()`.

**6.241.3.32 setp()** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::setp (`  
`char_type * __pbeg,`  
`char_type * __pend ) [inline], [protected], [inherited]`

Setting the three write area pointers.

## Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_beg](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_cur](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_end](#).

Referenced by [std::wbuffer\\_convert<\\_Codecv, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#).

**6.241.3.33 sgetc()** `template<typename _CharT, typename _Traits>`  
`int_type std::basic_streambuf<_CharT, _Traits>::sgetc()` [inline], [inherited]  
 Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::underflow\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::istreambuf\\_iterator<\\_CharT, \\_Traits>::operator++\(\)](#), [std::basic\\_istream<char>::get\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::snextc\(\)](#).

**6.241.3.34 sgetn()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (`  
     `char_type * __s,`  
     `streamsize __n )` [inline], [inherited]

Entry point for `xsgetn`.

## Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::xsgetn\(\)](#).

**6.241.3.35 showmanyc()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_filebuf<_CharT, _Traits>::showmanyc` [protected], [virtual]  
 Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::ios\\_base::binary](#), and [std::ios\\_base::in](#).

**6.241.3.36 `snextc()`** `template<typename _CharT, typename _Traits >`  
`int_type std::basic_streambuf< _CharT, _Traits >::snextc ( )` [inline], [inherited]  
 Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_istream< char >::get\(\)](#), [std::basic\\_istream< char >::operator>>\(\)](#), and [std::basic\\_istream< char >::putback\(\)](#).

**6.241.3.37 `sputbackc()`** `template<typename _CharT, typename _Traits >`  
`int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (`  
`char_type __c )` [inline], [inherited]

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::eback\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gbump\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gptr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::pbackfail\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#).

**6.241.3.38 `sputc()`** `template<typename _CharT, typename _Traits >`  
`int_type std::basic_streambuf< _CharT, _Traits >::sputc (`  
`char_type __c )` [inline], [inherited]

Entry point for all single-character output functions.

#### Parameters

$\leftarrow$ __c	A character to output.
---------------------	------------------------

#### Returns

\_\_c, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores \_\_c in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↵__c)`.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::eptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::pbump\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::pptr\(\)](#).

Referenced by [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::operator=\(\)](#), and [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::overflow\(\)](#).

**6.241.3.39 sputn()** `template<typename _CharT, typename _Traits>  
streamsize std::basic_streambuf<_CharT, _Traits>::sputn (  
const char_type * __s,  
streamsize __n) [inline], [inherited]`

Entry point for all single-character output functions.

#### Parameters

$\leftarrow$ __s	A buffer read area.
$\leftarrow$ __n	A count.

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::xspn\(\)](#).

**6.241.3.40 sungetc()** `template<typename _CharT, typename _Traits>  
int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::eback\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gbump\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::pbackfail\(\)](#).

**6.241.3.41 sync()** `template<typename _CharT, typename _Traits>  
int std::basic_filebuf<_CharT, _Traits>::sync [protected], [virtual]`

Synchronizes the buffer arrays with the controlled sequences.

**Returns**

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

**Note**

Base class version does nothing, returns zero.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

**6.241.3.42 uflow()** `template<typename _CharT , typename _Traits >  
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual],  
[inherited]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::gbump\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gptr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::underflow\(\)](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#).

**6.241.3.43 underflow()** `template<typename _CharT , typename _Traits >  
basic_filebuf< _CharT, _Traits >::int_type std::basic_filebuf< _CharT, _Traits >::underflow  
[protected], [virtual]`

Fetches more data from the controlled sequence.

**Returns**

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::ios\\_base::in](#).

**6.241.3.44 xsgetn()** `template<typename _CharT , typename _Traits >  
streamsize std::basic_filebuf< _CharT, _Traits >::xsgetn (   
char_type * __s,  
streamsize __n ) [protected], [virtual]`

Multiple character extraction.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::in](#).

```
6.241.3.45 xspn() template<typename _CharT , typename _Traits >
streamsize std::basic_filebuf< _CharT, _Traits >::xspn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual]
```

Multiple character insertion.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::app](#), and [std::ios\\_base::out](#).

**6.241.4 Member Data Documentation**

```
6.241.4.1 _M_buf template<typename _CharT , typename _Traits >
char_type* std::basic_filebuf< _CharT, _Traits >::_M_buf [protected]
Pointer to the beginning of internal buffer.
```

```
6.241.4.2 _M_buf_locale template<typename _CharT , typename _Traits >
locale std::basic_streambuf< _CharT, _Traits >::_M_buf_locale [protected], [inherited]
Current locale setting.
```

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::basic\\_filebuf\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::getloc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubimbue\(\)](#).

**6.241.4.3 \_M\_buf\_size** `template<typename _CharT , typename _Traits >`  
`size_t std::basic_filebuf< _CharT, _Traits >::_M_buf_size [protected]`

Actual size of internal buffer. This number is equal to the size of the put area + 1 position, reserved for the overflow char of a full area.

**6.241.4.4 \_M\_ext\_buf** `template<typename _CharT , typename _Traits >`  
`char* std::basic_filebuf< _CharT, _Traits >::_M_ext_buf [protected]`

Buffer for external characters. Used for input when `codecvt::always_noconv() == false`. When valid, this corresponds to `eback()`.

**6.241.4.5 \_M\_ext\_buf\_size** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_filebuf< _CharT, _Traits >::_M_ext_buf_size [protected]`

Size of buffer held by `_M_ext_buf`.

**6.241.4.6 \_M\_ext\_next** `template<typename _CharT , typename _Traits >`  
`const char* std::basic_filebuf< _CharT, _Traits >::_M_ext_next [protected]`

Pointers into the buffer held by `_M_ext_buf` that delimit a subsequence of bytes that have been read but not yet converted. When valid, `_M_ext_next` corresponds to `egptr()`.

**6.241.4.7 \_M\_in\_beg** `template<typename _CharT , typename _Traits >`  
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_beg [protected], [inherited]`

Start of get area.

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::eback\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::setg\(\)](#).

**6.241.4.8 \_M\_in\_cur** `template<typename _CharT , typename _Traits >`  
`char_type* std::basic_streambuf< _CharT, _Traits >::_M_in_cur [protected], [inherited]`

Current read area.

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type` & `operator>>` (`bool` &\_\_n)
  - `__istream_type` & `operator>>` (`short` &\_\_n)
  - `__istream_type` & `operator>>` (`unsigned short` &\_\_n)
  - `__istream_type` & `operator>>` (`int` &\_\_n)
  - `__istream_type` & `operator>>` (`unsigned int` &\_\_n)
  - `__istream_type` & `operator>>` (`long` &\_\_n)
  - `__istream_type` & `operator>>` (`unsigned long` &\_\_n)
  - `__istream_type` & `operator>>` (`long long` &\_\_n)
  - `__istream_type` & `operator>>` (`unsigned long long` &\_\_n)
- 
- `__istream_type` & `operator>>` (`float` &\_\_f)
  - `__istream_type` & `operator>>` (`double` &\_\_f)
  - `__istream_type` & `operator>>` (`long double` &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`
- `__istream_type & get (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & get (char_type *__s, streamsize __n)`
- `__istream_type & get (__streambuf_type &__sb, char_type __delim)`
- `__istream_type & get (__streambuf_type &__sb)`
- `__istream_type & getline (char_type *__s, streamsize __n, char_type __delim)`
- `__istream_type & getline (char_type *__s, streamsize __n)`
- `__istream_type & ignore (streamsize __n, int_type __delim)`
- `__istream_type & ignore (streamsize __n)`
- `__istream_type & ignore ()`
- `int_type peek ()`
- `__istream_type & read (char_type *__s, streamsize __n)`
- `streamsize readsome (char_type *__s, streamsize __n)`
- `__istream_type & putback (char_type __c)`
- `__istream_type & unget ()`
- `int sync ()`
- `pos_type tellg ()`
- `__istream_type & seekg (pos_type)`
- `__istream_type & seekg (off_type, ios_base::seekdir)`

- `operator bool () const`
- `bool operator! () const`

- `__ostream_type & operator<< (__ostream_type &(__pf)(__ostream_type &))`
- `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
- `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`
- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put (char_type __c)`
- `__ostream_type & write (const char_type *__s, streamsize __n)`

### 6.242.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_fstream< _CharT, _Traits >
```

Controlling input and output for files.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class supports reading from and writing to named files, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

## 6.242.2 Member Typedef Documentation

6.242.2.1 `__num_put_type` `template<typename _CharT, typename _Traits>`

```
typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]
```

These are non-standard types.

6.242.2.2 `event_callback` `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

## Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

6.242.2.3 `fmtflags` `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`

- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

**6.242.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

**6.242.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

**6.242.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

### 6.242.3 Member Enumeration Documentation

#### 6.242.3.1 event enum std::ios\_base::event [inherited]

The set of events that may be passed to an event callback.

erase\_event is used during ~ios() and copyfmt(). imbue\_event is used during imbue(). copyfmt\_event is used during copyfmt().

### 6.242.4 Constructor & Destructor Documentation

#### 6.242.4.1 basic\_fstream() [1/4] template<typename \_CharT, typename \_Traits>

std::basic\_fstream<\_CharT, \_Traits>::basic\_fstream ( ) [inline]

Default constructor.

Initializes sb using its default constructor, and passes &sb to the base class initializer. Does not open any files (you haven't given it a filename to open).

References [std::basic\\_ios<\\_CharT, \\_Traits>::init\(\)](#).

#### 6.242.4.2 basic\_fstream() [2/4] template<typename \_CharT, typename \_Traits>

std::basic\_fstream<\_CharT, \_Traits>::basic\_fstream (   
 const char \* \_\_s,   
 ios\_base::openmode \_\_mode = ios\_base::in | ios\_base::out ) [inline], [explicit]

Create an input/output file stream.

##### Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

References [std::basic\\_ios<\\_CharT, \\_Traits>::init\(\)](#), and [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#).

#### 6.242.4.3 basic\_fstream() [3/4] template<typename \_CharT, typename \_Traits>

std::basic\_fstream<\_CharT, \_Traits>::basic\_fstream (   
 const std::string & \_\_s,   
 ios\_base::openmode \_\_mode = ios\_base::in | ios\_base::out ) [inline], [explicit]

Create an input/output file stream.

##### Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

References [std::basic\\_ios<\\_CharT, \\_Traits>::init\(\)](#), and [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#).

#### 6.242.4.4 basic\_fstream() [4/4] template<typename \_CharT, typename \_Traits>

template<typename \_Path, typename \_Require = \_If\_fs\_path<\_Path>>

std::basic\_fstream<\_CharT, \_Traits>::basic\_fstream (

```
const _Path & __s,
ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Create an input/output file stream.

#### Parameters

<code>__s</code>	filesystem::path specifying the filename.
<code>__mode</code>	Open file in specified mode (see std::ios_base).

**6.242.4.5** `~basic_fstream()` `template<typename _CharT , typename _Traits >`

`std::basic_fstream< _CharT, _Traits >::~~basic_fstream ( ) [inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

### 6.242.5 Member Function Documentation

**6.242.5.1** `_M_getloc()` `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

#### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

**6.242.5.2** `bad()` `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.242.5.3** `clear()` `template<typename _CharT , typename _Traits >`

`void std::basic_ios< _CharT, _Traits >::clear (`  
`iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::setstate()` and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 6.242.5.4 close() `template<typename _CharT , typename _Traits >`

`void std::basic_fstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

References `std::basic_filebuf< _CharT, _Traits >::close()`, `std::ios_base::failbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

#### 6.242.5.5 copyfmt() `template<typename _CharT , typename _Traits >`

`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

##### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

##### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

#### 6.242.5.6 eof() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]`

Fast error checking.

##### Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

#### 6.242.5.7 exceptions() [1/2] `template<typename _CharT , typename _Traits >`

`iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.242.5.8 exceptions()** [2/2] `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References `std::basic_ios<_CharT, _Traits>::clear()`.

**6.242.5.9 fail()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline], [inherited]`

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, `std::ios_base::failbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<_CharT, _Traits>::operator bool()`, `std::basic_ios<_CharT, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>` and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.242.5.10 fill()** [1/2] `template<typename _CharT, typename _Traits>`  
`char_type std::basic_ios<_CharT, _Traits>::fill ( ) const [inline], [inherited]`

Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

**6.242.5.11 fill()** [2/2] `template<typename _CharT, typename _Traits>`  
`char_type std::basic_ios<_CharT, _Traits>::fill (`  
`char_type __ch ) [inline], [inherited]`

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

**6.242.5.12 flags()** [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.242.5.13 flags()** [2/2] `fmtflags std::ios_base::flags (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.242.5.14 flush()** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush [inherited]`

Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

Referenced by [std::flush\(\)](#).

**6.242.5.15 gcount()** `template<typename _CharT, typename _Traits>`  
[streamsize std::basic\\_istream<\\_CharT, \\_Traits>::gcount \( \) const](#) `[inline], [inherited]`  
 Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.242.5.16 get()** `[1/6] template<typename _CharT, typename _Traits>`  
[basic\\_istream<\\_CharT, \\_Traits>::int\\_type std::basic\\_istream<\\_CharT, \\_Traits>::get \(](#)  
     [void \)](#) `[inherited]`

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets `failbit` and returns `traits::eof()`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#).

**6.242.5.17 get()** `[2/6] template<typename _CharT, typename _Traits>`  
[\\_\\_istream\\_type & std::basic\\_istream<\\_CharT, \\_Traits>::get \(](#)  
     [\\_\\_streambuf\\_type & \\_\\_sb \)](#) `[inline], [inherited]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb, widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.242.5.18 get()** `[3/6] template<typename _CharT, typename _Traits>`  
[basic\\_istream<\\_CharT, \\_Traits> & std::basic\\_istream<\\_CharT, \\_Traits>::get \(](#)  
     [\\_\\_streambuf\\_type & \\_\\_sb,](#)  
     [char\\_type \\_\\_delim \)](#) `[inherited]`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.242.5.19 get()** [4/6] `template<typename _CharT , typename _Traits >`  
[basic\\_istream< \\_CharT, \\_Traits >](#) & [std::basic\\_istream< \\_CharT, \\_Traits >::get](#) (  
     char\_type & \_\_c ) [inherited]

Simple extraction.

#### Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

#### Returns

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.20 get()** [5/6] `template<typename _CharT , typename _Traits >`  
[\\_\\_istream\\_type](#) & [std::basic\\_istream< \\_CharT, \\_Traits >::get](#) (  
     char\_type \* \_\_s,  
     streamsize \_\_n ) [inline], [inherited]

Simple multiple-character extraction.

## Parameters

<a href="#"><code>__s</code></a>	Pointer to an array.
<a href="#"><code>__n</code></a>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s,__n,widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits >::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits >::widen\(\)](#).

**6.242.5.21 `get()` [6/6]** `template<typename _CharT , typename _Traits >`  
[basic\\_istream<\\_CharT, \\_Traits >](#) & [std::basic\\_istream<\\_CharT, \\_Traits >::get](#) (  
char\_type \* `__s`,  
streamsize `__n`,  
char\_type `__delim` ) [inherited]

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream<\\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits >::sgetc\(\)](#).

**6.242.5.22 `getline()` [1/3]** `template<typename _CharT , typename _Traits >`  
[\\_\\_istream\\_type](#) & [std::basic\\_istream<\\_CharT, \\_Traits >::getline](#) (  
char\_type \* `__s`,  
streamsize `__n` ) [inline], [inherited]

String extraction.

## Parameters

<a href="#"><code>__s</code></a>	A character array in which to store the data.
<a href="#"><code>__n</code></a>	Maximum number of characters to extract.

## Returns

\*this

Returns `getline(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.242.5.23** `getline()` [2/3] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

## Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#).

**6.242.5.24** `getline()` [3/3] `basic_istream< char > & std::basic_istream< char >::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Explicit specialization declarations, defined in `src/istream.cc`.

**6.242.5.25 getloc()** `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator>>()`, and `std::ws()`.

**6.242.5.26 good()** `template<typename _CharT, typename _Traits>`

`bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**6.242.5.27 ignore()** [1/3] `template<typename _CharT, typename _Traits>`

`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( void ) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

**6.242.5.28 ignore()** [2/3] `template<typename _CharT, typename _Traits>`

`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n ) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdstate()`, and `std::basic_streambuf<_CharT, _Traits>::sgetc()`.

**6.242.5.29 ignore()** [3/3] `template<typename _CharT, typename _Traits>`

`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore ( streamsize __n, int_type __delim ) [inherited]`

Discarding characters.

## Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

## Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.242.5.30 imbue()** `template<typename _CharT , typename _Traits >`  
`locale std::basic_ios< _CharT, _Traits >::imbue (`  
`const locale & __loc ) [inherited]`

Moves to a new locale.

## Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

## Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

**6.242.5.31 init()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::init (`  
`basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< _CharT, _Traits >::basic_ios()`, `std::basic_istream< _CharT, _Traits >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< _CharT, _Traits >::basic_ostream()`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >::basic_ostreamstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

**6.242.5.32 is\_open()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_fstream< _CharT, _Traits >::is_open ( ) [inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf()->is_open()`

References `std::basic_filebuf<_CharT, _Traits>::is_open()`.

**6.242.5.33** `iword()` `long & std::ios_base::iword (`  
`int __ix ) [inline], [inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.242.5.34** `narrow()` `template<typename _CharT , typename _Traits >`  
`char std::basic_ios<_CharT, _Traits>::narrow (`  
`char_type __c,`  
`char __default ) const [inline], [inherited]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.242.5.35** `open()` `[1/3] template<typename _CharT , typename _Traits >`  
`template<typename _Path >`  
`_If_fs_path<_Path, void> std::basic_fstream<_CharT, _Traits>::open (`  
`const _Path & __s,`  
`ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.242.5.36 open()** [2/3] `template<typename _CharT , typename _Traits >`  
`void std::basic_fstream< _CharT, _Traits >::open (`  
`const char * __s,`  
`ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::failbit](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

Referenced by [std::basic\\_fstream< \\_CharT, \\_Traits >::basic\\_fstream\(\)](#), and [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.242.5.37 open()** [3/3] `template<typename _CharT , typename _Traits >`  
`void std::basic_fstream< _CharT, _Traits >::open (`  
`const std::string & __s,`  
`ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::failbit](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.38 operator bool()** `template<typename _CharT , typename _Traits >`  
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

**6.242.5.39 operator"!"()** `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.242.5.40 operator<<()** `[1/17] template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.242.5.41 operator<<()** `[2/17] template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.242.5.42 operator<<()** `[3/17] template<typename _CharT , typename _Traits >`

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.242.5.43 operator<<()** `[4/17] template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    bool __n ) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.44 operator<<()** [5/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
const void \* \_\_p ) [inline], [inherited]

Pointer arithmetic inserters.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.45 operator<<()** [6/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
double \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.46 operator<<()** [7/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
float \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.47 operator<<()** [8/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`int __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.48 operator<<()** [9/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `io manip` header.

**6.242.5.49 operator<<()** [10/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.50 operator<<()** [11/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long double __f ) [inline], [inherited]`

Floating point arithmetic inserters.

## Parameters

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\leftrightarrow$	
$\_ \leftrightarrow$	
$f$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.51 operator<<()** [12/17] `template<typename _CharT , typename _Traits > \_\_ostream\_type & std::basic\_ostream<_CharT, _Traits>::operator<< ( long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.52 operator<<()** [13/17] `template<typename _CharT , typename _Traits > basic\_ostream<_CharT, _Traits> & std::basic\_ostream<_CharT, _Traits>::operator<< ( short __n ) [inherited]`

Integer arithmetic inserters.

## Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>](#)

**6.242.5.53 operator<<()** [14/17] `template<typename _CharT , typename _Traits > \_\_ostream\_type & std::basic\_ostream<_CharT, _Traits>::operator<< ( unsigned int __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.54 `operator<<()` [15/17]** `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.55 `operator<<()` [16/17]** `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.242.5.56 `operator<<()` [17/17]** `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned short __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.242.5.57 operator>>()** [1/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.242.5.58 operator>>()** [2/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.242.5.59 operator>>()** [3/17] `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> ( __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**6.242.5.60 operator>>()** [4/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( bool & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.61 operator>>()** [5/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.62 operator>>()** [6/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.63 operator>>()** [7/17] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (  
int & __n ) [inherited]`

Integer arithmetic extractors.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.64 operator>>()** [8/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.242.5.65 operator>>()** [9/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.66 operator>>()** [10/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.242.5.67 operator>>()** [11/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.68 `operator>>()` [12/17]** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`short & __n ) [inherited]`

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.69 `operator>>()` [13/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`unsigned int & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.70 `operator>>()` [14/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`unsigned long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.71 operator>>()** [15/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.72 operator>>()** [16/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned short & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.73 operator>>()** [17/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( void *& __p ) [inline], [inherited]`

Basic arithmetic extractors.

## Parameters

<code>_↔</code>	A variable of pointer type.
<code>__p</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.242.5.74 peek()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (  
void ) [inherited]`

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.242.5.75 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.242.5.76 precision()** [2/2] `streamsize std::ios_base::precision (  
streamsize __prec ) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.242.5.77 put()** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (  
char_type __c ) [inherited]`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

Referenced by [std::endl\(\)](#), and [std::ends\(\)](#).

**6.242.5.78 putback()** `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (  
char_type __c ) [inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#).

Referenced by [std::operator<<\(\)](#).

**6.242.5.79 pword()** `void *& std::ios_base::pword (  
int __ix ) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.242.5.80 `rdbuf()`** [1/2] `template<typename _CharT , typename _Traits >`  
`__filebuf_type * std::basic_fstream< _CharT, _Traits >::rdbuf ( ) const [inline]`  
 Accessing the underlying buffer.

#### Returns

The current `basic_filebuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**6.242.5.81 `rdbuf()`** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (`  
`basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.242.5.82 `rdstate()`** `template<typename _CharT , typename _Traits >`  
`iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]`  
 Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iosstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::see_eof()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.242.5.83 `read()`** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (`  
`char_type * __s,`  
`streamsize __n ) [inherited]`

Extraction without delimiters.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

## Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.84 readsome()** `template<typename _CharT, typename _Traits >`

```
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.85 register\_callback()** `void std::ios_base::register_callback (`  
    `event_callback __fn,`  
    `int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.242.5.86 seekg()** [1/2] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (`  
    `off_type __off,`  
    `ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

#### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()` and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.242.5.87 seekg()** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (`  
    `pos_type __pos ) [inherited]`

Changing the current read position.

#### Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

## Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.242.5.88 seekp()** [1/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (  
    off_type __off,  
    ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.242.5.89 seekp()** [2/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (  
    pos_type __pos ) [inherited]`

Changing the current write position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.242.5.90 setf()** [1/2] `fmtflags std::ios_base::setf (  
    fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.242.5.91 setf()** [2/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask )` [inline], [inherited]

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.242.5.92 setstate()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::setstate (`  
`iosstate __state )` [inline], [inherited]

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iosstate` for the possible bit values.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**6.242.5.93 sync()** `template<typename _CharT , typename _Traits >`  
`int std::basic_istream< _CharT, _Traits >::sync (`  
`void )` [inherited]

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.242.5.94 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.242.5.95 tellg()** `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg ( void ) [inherited]`

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#).

**6.242.5.96 tellp()** `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]`

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References [std::ios\\_base::cur](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::out](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**6.242.5.97 tie()** [1/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie ( ) const [inline],  
[inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.242.5.98 tie()** [2/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie (  
 basic_ostream<_CharT, _Traits> * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.242.5.99 unget()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (  
 void ) [inherited]`

Unextracting the previous character.

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.242.5.100 unsetf()** void std::ios\_base::unsetf (   
     fmtflags \_\_mask ) [inline], [inherited]

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.242.5.101 widen()** template<typename \_CharT , typename \_Traits >  
char\_type std::basic\_ios< \_CharT, \_Traits >::widen (   
     char \_\_c ) const [inline], [inherited]

Widens characters.

#### Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.242.5.102 width()** [1/2] streamsize std::ios\_base::width ( ) const [inline], [inherited]  
Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, Outiter>::do_put()`, and `std::operator>>()`.

**6.242.5.103 width()** [2/2] streamsize std::ios\_base::width (   
     streamsize \_\_wide ) [inline], [inherited]

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of width().

**6.242.5.104 write()** `template<typename _CharT, typename _Traits >  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (  
    const char_type * __s,  
    streamsize __n ) [inherited]`

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**6.242.5.105 xalloc()** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`  
Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**6.242.6 Member Data Documentation**

**6.242.6.1 \_M\_gcount** `template<typename _CharT, typename _Traits >  
streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected], [inherited]`  
The number of characters extracted in the previous unformatted function; see `gcount()`.  
Referenced by `std::basic_istream<_CharT, _Traits>::~~basic_istream()`, `std::basic_istream<_CharT, _Traits>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`,

std::basic\_istream< char >::ignore(), std::basic\_istream< char >::operator>>(), std::basic\_istream< \_CharT, \_Traits >::peek(), std::basic\_istream< char >::putback(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::readsome(), std::basic\_istream< char >::readsome(), std::basic\_istream< char >::sync(), and std::basic\_istream< \_CharT, \_Traits >::unget().

**6.242.6.2 adjustfield** const `fmtflags` std::ios\_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of setf.

Referenced by std::num\_put< \_CharT, \_OutIter >::do\_put(), std::internal(), std::left(), and std::right().

**6.242.6.3 app** const `openmode` std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::M\_set\_buffer(), std::basic\_filebuf< \_CharT, \_Traits >::overflow(), and std::basic\_filebuf< \_CharT, \_Traits >::xsputn().

**6.242.6.4 ate** const `openmode` std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::open().

**6.242.6.5 badbit** const `iostate` std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by std::basic\_istream< \_CharT, \_Traits >::sentry::sentry(), std::basic\_ostream< \_CharT, \_Traits >::sentry::~sentry(), std::basic\_ios< \_CharT, \_Traits >::bad(), std::basic\_ios< \_CharT, \_Traits >::fail(), std::basic\_ostream< \_CharT, \_Traits >::flush(), std::basic\_istream< \_CharT, \_Traits >::get(), std::basic\_istream< char >::get(), std::basic\_ostream< \_CharT, \_Traits >::operator<<(), std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< char >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< char >::tellg(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::ws().

**6.242.6.6 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Referenced by std::dec(), std::num\_get< \_CharT, \_InIter >::do\_get(), std::num\_put< \_CharT, \_OutIter >::do\_put(), std::hex(), and std::oct().

**6.242.6.7 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::seekpos().

**6.242.6.8 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by std::basic\_filebuf< \_CharT, \_Traits >::showmanyc().

**6.242.6.9 boolalpha** `const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.242.6.10 cur** `const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.242.6.11 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.242.6.12 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.242.6.13 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.242.6.14 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.242.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.242.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.242.6.17 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.242.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

**6.242.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.242.6.20 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

**6.242.6.21 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, and `std::left()`.

**6.242.6.22 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

**6.242.6.23 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::\\_M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::tellp\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**6.242.6.24 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.242.6.25 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.242.6.26 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.242.6.27 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.242.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.242.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.242.6.30 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.242.6.31 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.242.6.32 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

**6.243.1 Detailed Description**

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename Resize_Policy, bool Store_Hash, type-
name Tag, typename Policy_Tl, typename _Alloc>
```

```
class __gnu_pbds::basic_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Resize_Policy, Store_Hash, Tag, Policy_Tl, _Alloc >
```

A hashed container abstraction.

**Template Parameters**

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key.
<i>Tag</i>	Instantiating data structure type, see <code>container_tag</code> .
<i>Policy_Tl</i>	Policy typelist.
<i>_Alloc</i>	Allocator type.

Base is dispatched at compile time via `Tag`, from the following choices: `cc_hash_tag`, `gp_hash_tag`, and descendants of `basic_hash_tag`.

Base choices are: `detail::cc_ht_map`, `detail::gp_ht_map`

- `__istream_type` & `operator>>` (`ios_base` &(\*`__pf`)(`ios_base` &))

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type` & `operator>>` (`bool` & `__n`)
- `__istream_type` & `operator>>` (`short` & `__n`)
- `__istream_type` & `operator>>` (`unsigned short` & `__n`)
- `__istream_type` & `operator>>` (`int` & `__n`)
- `__istream_type` & `operator>>` (`unsigned int` & `__n`)
- `__istream_type` & `operator>>` (`long` & `__n`)
- `__istream_type` & `operator>>` (`unsigned long` & `__n`)
- `__istream_type` & `operator>>` (`long long` & `__n`)
- `__istream_type` & `operator>>` (`unsigned long long` & `__n`)
- `__istream_type` & `operator>>` (`float` & `__f`)
- `__istream_type` & `operator>>` (`double` & `__f`)
- `__istream_type` & `operator>>` (`long double` & `__f`)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `int_type` `get` ()
- `__istream_type` & `get` (`char_type` & `__c`)
- `__istream_type` & `get` (`char_type` \* `__s`, `streamsize` `__n`, `char_type` `__delim`)

### 6.245.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ifstream<_CharT, _Traits >
```

Controlling input for files.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits&lt;_CharT&gt;</a> .

This class supports reading from named files, using the inherited functions from std::basic\_istream. To control the associated sequence, an instance of std::basic\_filebuf is used, which this page refers to as `sb`.

## 6.245.2 Member Typedef Documentation

**6.245.2.1 \_\_num\_put\_type** `template<typename _CharT , typename _Traits >`  
`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]`

These are non-standard types.

**6.245.2.2 event\_callback** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the ios_base object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.245.2.3 fmtflags** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`

- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

**6.245.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

**6.245.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

**6.245.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- beg
- cur, equivalent to `SEEK_CUR` in the C standard library.
- end, equivalent to `SEEK_END` in the C standard library.

### 6.245.3 Member Enumeration Documentation

**6.245.3.1 event** enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.245.4 Constructor & Destructor Documentation****6.245.4.1 basic\_ifstream() [1/4]** template<typename \_CharT, typename \_Traits>

```
std::basic_ifstream<_CharT, _Traits>::basic_ifstream ( ) [inline]
```

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

References `std::basic_ios<_CharT, _Traits>::init()`.

**6.245.4.2 basic\_ifstream() [2/4]** template<typename \_CharT, typename \_Traits>

```
std::basic_ifstream<_CharT, _Traits>::basic_ifstream (
    const char * __s,
    ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

**Parameters**

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ifstream<_CharT, _Traits>::open()`.

**6.245.4.3 basic\_ifstream() [3/4]** template<typename \_CharT, typename \_Traits>

```
std::basic_ifstream<_CharT, _Traits>::basic_ifstream (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in ) [inline], [explicit]
```

Create an input file stream.

**Parameters**

<code>__s</code>	<code>std::string</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

References `std::basic_ios<_CharT, _Traits>::init()`, and `std::basic_ifstream<_CharT, _Traits>::open()`.

**6.245.4.4 basic\_ifstream() [4/4]** template<typename \_CharT, typename \_Traits>

```
template<typename _Path, typename _Require = _If_fs_path<_Path>>
```

```
std::basic_ifstream<_CharT, _Traits>::basic_ifstream (
    const _Path & __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Create an input file stream.

#### Parameters

<code>__s</code>	filesystem::path specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::in` is automatically included in `__mode`.

**6.245.4.5** `~basic_ifstream()` `template<typename _CharT , typename _Traits >`  
`std::basic_ifstream< _CharT, _Traits >::~~basic_ifstream ( ) [inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

### 6.245.5 Member Function Documentation

**6.245.5.1** `_M_getloc()` `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`  
 Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

**6.245.5.2** `bad()` `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`  
 Fast error checking.

#### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.245.5.3** `clear()` `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::clear (`  
`iostate __state = goodbit ) [inherited]`  
 [Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

**6.245.5.4 close()** `template<typename _CharT, typename _Traits>  
void std::basic_ifstream<_CharT, _Traits>::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_filebuf<\\_CharT, \\_Traits>::close\(\)](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.245.5.5 copyfmt()** `template<typename _CharT, typename _Traits>  
basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (   
const basic_ios<_CharT, _Traits> & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References [std::\\_\\_addressof\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**6.245.5.6 eof()** `template<typename _CharT, typename _Traits>  
bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`

Fast error checking.

#### Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

References [std::ios\\_base::eofbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

**6.245.5.7 exceptions()** [1/2] `template<typename _CharT, typename _Traits>  
iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.245.5.8 exceptions()** [2/2] `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::exceptions (`  
`iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References `std::basic_ios< _CharT, _Traits >::clear()`.

**6.245.5.9 fail()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]`  
 Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References `std::ios_base::badbit`, `std::ios_base::failbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ios< _CharT, _Traits >::operator bool()`, `std::basic_ios< _CharT, _Traits >::operator!()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >` and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**6.245.5.10 fill()** [1/2] `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]`  
 Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References `std::basic_ios< _CharT, _Traits >::widen()`.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::basic_ios< _CharT, _Traits >::fill()`.

**6.245.5.11 fill()** [2/2] `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::fill (`  
`char_type __ch ) [inline], [inherited]`

Sets a new *empty* character.

## Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

## Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

**6.245.5.12 flags()** [1/2] `fmtflags` `std::ios_base::flags ( ) const` [inline], [inherited]

Access to format flags.

## Returns

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.245.5.13 flags()** [2/2] `fmtflags` `std::ios_base::flags (`  
`fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags all at once.

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.245.5.14 gcount()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream<_CharT, _Traits>::gcount ( ) const` [inline], [inherited]

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.245.5.15 get()** [1/6] `template<typename _CharT , typename _Traits >`  
`basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (`  
`void )` [inherited]

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#).

**6.245.5.16 get()** [2/6] `template<typename _CharT, typename _Traits>  
__istream_type & std::basic_istream<_CharT, _Traits>::get (  
__streambuf_type & __sb) [inline], [inherited]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb, widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.245.5.17 get()** [3/6] `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (  
__streambuf_type & __sb,  
char_type __delim) [inherited]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.245.5.18 get()** [4/6] `template<typename _CharT, typename _Traits>`  
`basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::get (`  
`char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

#### Returns

\*this

Tries to extract a character and store it in \_\_c. If none are available, sets failbit and returns traits::eof().

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_ifstream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.245.5.19 get()** [5/6] `template<typename _CharT, typename _Traits>`  
`__istream_type & std::basic_ifstream<_CharT, _Traits>::get (`  
`char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in s.

#### Returns

\*this

Returns `get(__s, __n, widen("\n"))`.

References [std::basic\\_ifstream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.245.5.20 get()** [6/6] `template<typename _CharT, typename _Traits>`  
`basic_ifstream<_CharT, _Traits> & std::basic_ifstream<_CharT, _Traits>::get (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
------------------	----------------------

## Parameters

<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#).

**6.245.5.21 getline()** [1/3] `template<typename _CharT, typename _Traits>`  
`__istream_type & std::basic_istream<_CharT, _Traits>::getline (`  
`char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

`*this`

Returns `getline(__s, __n, widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.245.5.22 getline()** [2/3] `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#).

**6.245.5.23** `getline()` [3/3] `basic_istream< char > & std::basic_istream< char >::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Explicit specialization declarations, defined in `src/istream.cc`.

**6.245.5.24** `getloc()` `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.245.5.25** `good()` `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]`

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.245.5.26 ignore()** [1/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (  
void ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sbumpc()`.

**6.245.5.27 ignore()** [2/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (  
streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sgetc()`.

**6.245.5.28 ignore()** [3/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (  
streamsize __n,  
int_type __delim ) [inherited]`

Discarding characters.

#### Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.245.5.29 imbue()** `template<typename _CharT , typename _Traits >  
locale std::basic_ios< _CharT, _Traits >::imbue (  
const locale & __loc ) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

References [std::ios\\_base::imbue\(\)](#).

**6.245.5.30 init()** `template<typename _CharT, typename _Traits >  
void std::basic_ios<_CharT, _Traits >::init (   
    basic_streambuf<_CharT, _Traits > * __sb ) [protected], [inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic\\_fstream<\\_CharT, \\_Traits >::basic\\_fstream\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits >::basic\\_ifstream\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits >::basic\\_ios\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::basic\\_istream\(\)](#), [std::basic\\_istreamstream<\\_CharT, \\_Traits >::basic\\_istreamstream\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits >::basic\\_ofstream\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits >::basic\\_ostream\(\)](#), [std::basic\\_ostreamstream<\\_CharT, \\_Traits, \\_Alloc >::basic\\_ostreamstream\(\)](#), and [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc >::basic\\_stringstream\(\)](#).

**6.245.5.31 is\_open()** `template<typename _CharT, typename _Traits >  
bool std::basic_ifstream<_CharT, _Traits >::is_open ( ) [inline]`

Wrapper to test for an open file.

**Returns**

`rdbuf()->is_open()`

References [std::basic\\_filebuf<\\_CharT, \\_Traits >::is\\_open\(\)](#).

**6.245.5.32 iword()** `long & std::ios_base::iword (   
    int __ix ) [inline], [inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.245.5.33 narrow()** `template<typename _CharT , typename _Traits >`  
`char std::basic_ios<_CharT, _Traits>::narrow (`  
`char_type __c,`  
`char __default ) const [inline], [inherited]`

Squeezes characters.

#### Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

**6.245.5.34 open()** [1/3] `template<typename _CharT , typename _Traits >`  
`template<typename _Path >`  
`_If_fs_path<_Path, void> std::basic_ifstream<_CharT, _Traits>::open (`  
`const _Path & __s,`  
`ios_base::openmode __mode = ios_base::in ) [inline]`

Opens an external file.

#### Parameters

<code>__s</code>	The name of the file, as a <code>filesystem::path</code> .
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s, __mode|in)`. If that function fails, `failbit` is set in the stream's error state.

References `std::basic_ifstream<_CharT, _Traits>::open()`.

**6.245.5.35 open()** [2/3] `template<typename _CharT , typename _Traits >`  
`void std::basic_ifstream<_CharT, _Traits>::open (`  
`const char * __s,`  
`ios_base::openmode __mode = ios_base::in ) [inline]`

Opens an external file.

#### Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s, __mode|in)`. If that function fails, `failbit` is set in the stream's error state.

References `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::failbit`, `std::ios_base::in`, `std::basic_filebuf<_CharT, _Traits>::open` and `std::basic_ios<_CharT, _Traits>::setstate()`.

Referenced by [std::basic\\_ifstream<\\_CharT, \\_Traits>::basic\\_ifstream\(\)](#), and [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#).

#### 6.245.5.36 open() [3/3] `template<typename _CharT , typename _Traits >`

```
void std::basic_ifstream<_CharT, _Traits>::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::in ) [inline]
```

Opens an external file.

##### Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|in)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::in](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::open](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

#### 6.245.5.37 operator bool() `template<typename _CharT , typename _Traits >`

```
std::basic_ios<_CharT, _Traits>::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#).

#### 6.245.5.38 operator"!() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios<_CharT, _Traits>::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#).

#### 6.245.5.39 operator>>() [1/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `iomanip` header.

#### 6.245.5.40 operator>>() [2/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream<_CharT, _Traits>::operator>> (
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `iomanip` header.

#### 6.245.5.41 operator>>() [3/17] `template<typename _CharT , typename _Traits >`

```
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.245.5.42 operator>>()** [4/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_ifstream<_CharT, _Traits>::operator>> ( bool & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.43 operator>>>()** [5/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_ifstream<_CharT, _Traits>::operator>>> ( double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

## Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.44 operator>>()** [6/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin floating point type.
<code>↵</code>	
<code>↵</code>	
<code>↵</code>	
<code>f</code>	

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.45 operator>>()** [7/17] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`int & __n ) [inherited]`

Integer arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.46 operator>>()** [8/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`ios_base & (*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.  
 For more information, see the `io manip` header.

**6.245.5.47 operator>>()** [9/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.48 operator>>()** [10/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> ( long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>↵</code>	A variable of builtin floating point type.
<code>↵</code>	
<code>↵</code>	
<code>↵</code>	
<code>f</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.49 operator>>()** [11/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_ifstream< _CharT, _Traits >::operator>> ( long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.50 operator>>()** [12/17] `template<typename _CharT , typename _Traits > basic_ifstream< _CharT, _Traits > & std::basic_ifstream< _CharT, _Traits >::operator>> ( short & __n ) [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.245.5.51 operator>>()** [13/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned int & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.52 operator>>()** [14/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.245.5.53 operator>>()** [15/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.54 operator>>()** [16/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned short & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.55 operator>>()** [17/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 void *& __p ) [inline], [inherited]`

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.245.5.56 peek()** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (  
 void ) [inherited]`

Looking ahead in the stream.

**Returns**

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

References `std::basic_istream<_CharT, _Traits>::M_gcount`.

**6.245.5.57 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.245.5.58 precision()** [2/2] [streamsize](#) std::ios\_base::precision (   
 [streamsize](#) \_\_prec ) [inline], [inherited]

Changing flags.

**Parameters**

<a href="#">__prec</a>	The new precision value.
------------------------	--------------------------

**Returns**

The previous value of precision().

**6.245.5.59 putback()** [template<typename \\_CharT, typename \\_Traits>](#)   
 [basic\\_istream<\\_CharT, \\_Traits> & std::basic\\_istream<\\_CharT, \\_Traits>::putback \(](#)   
 [char\\_type \\_\\_c \)](#) [inherited]

Unextracting a single character.

**Parameters**

<a href="#">_↵</a> <a href="#">__c</a>	The character to push back into the input stream.
---	---

**Returns**

\*this

If [rdbuf\(\)](#) is not null, calls [rdbuf\(\)->sputbackc\(c\)](#).

If [rdbuf\(\)](#) is null or if [sputbackc\(\)](#) fails, sets [badbit](#) in the error state.

**Note**

This function first clears [eofbit](#). Since no characters are extracted, the next call to [gcount\(\)](#) will return 0, as required by DR 60.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

Referenced by [std::operator<<\(\)](#).

**6.245.5.60 pword()** void \*& std::ios\_base::pword (   
 int \_\_ix ) [inline], [inherited]

Access to void pointer array.

## Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

## Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.245.5.61 rdbuf()** [1/2] `template<typename _CharT , typename _Traits >  
__filebuf_type * std::basic_ifstream< _CharT, _Traits >::rdbuf ( ) const [inline]`  
Accessing the underlying buffer.

## Returns

The current basic\_filebuf buffer.

This hides both signatures of std::basic\_ios::rdbuf().

**6.245.5.62 rdbuf()** [2/2] `template<typename _CharT , typename _Traits >  
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (   
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument rdbuf(), which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.245.5.63 rdstate()** `template<typename _CharT , typename _Traits >  
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See std::ios\_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::see()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unset()`.

**6.245.5.64 read()** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (`  
    `char_type * __s,`  
    `streamsize __n )` [inherited]

Extraction without delimiters.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.245.5.65 readsome()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream< _CharT, _Traits >::readsome (`  
    `char_type * __s,`  
    `streamsize __n )` [inherited]

Extraction until the buffer is exhausted, but no more.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters

- if  $A > 0$ , extracts  $\min(A, n)$

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.245.5.66 register\_callback()** `void std::ios_base::register_callback (   
    event_callback __fn,   
    int __index ) [inherited]`

Add the callback \_\_fn with parameter \_\_index.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.245.5.67 seekg()** [1/2] `template<typename _CharT , typename _Traits >   
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (   
    off_type __off,   
    ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

#### Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets `failbit`.

#### Note

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.245.5.68 seekg()** [2/2] `template<typename _CharT , typename _Traits >   
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (   
    pos_type __pos ) [inherited]`

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.245.5.69** **setf()** [1/2] [fmtflags](#) `std::ios_base::setf (`  
`fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.245.5.70** **setf()** [2/2] [fmtflags](#) `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask )` [inline], [inherited]

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl & mask`. An example mask is `ios_base::adjustfield`.

**6.245.5.71** **setstate()** `template<typename _CharT , typename _Traits >`

```
void std::basic_ios<_CharT, _Traits>::setstate (
    iostate __state) [inline], [inherited]
```

Sets additional flags in the error state.

#### Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

```
6.245.5.72 sync() template<typename _CharT, typename _Traits>
int std::basic_istream<_CharT, _Traits>::sync (
    void) [inherited]
```

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rddbuf()` is a null pointer, returns -1.

Otherwise, calls `rddbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::pubsync\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rddbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

```
6.245.5.73 sync_with_stdio() static bool std::ios_base::sync_with_stdio (
    bool __sync = true) [static], [inherited]
```

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.245.5.74 `tellg()`** `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits>::pos_type std::basic_istream<_CharT, _Traits>::tellg (`  
`void) [inherited]`

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**6.245.5.75 `tie()` [1/2]** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie ( ) const [inline],`  
`[inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.245.5.76 `tie()` [2/2]** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie (`  
`basic_ostream<_CharT, _Traits> * __tiestr) [inline], [inherited]`

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.245.5.77 unget()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (  
void ) [inherited]`

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**6.245.5.78 unsetf()** `void std::ios_base::unsetf (  
fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.245.5.79 widen()** `template<typename _CharT, typename _Traits>  
char_type std::basic_ios<_CharT, _Traits>::widen (  
char __c ) const [inline], [inherited]`

Widens characters.

#### Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.245.5.80 width()** `[1/2] streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), and [std::operator<>>\(\)](#).

**6.245.5.81 width()** [2/2] `streamsize std::ios_base::width (streamsize __wide ) [inline], [inherited]`

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

#### Returns

The previous value of `width()`.

**6.245.5.82 xalloc()** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 6.245.6 Member Data Documentation

**6.245.6.1 \_M\_gcount** `template<typename _CharT , typename _Traits > streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected], [inherited]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::~~basic\\_istream\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::gcount\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<char>::ignore\(\)](#), [std::basic\\_istream<char>::operator<>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::peek\(\)](#), [std::basic\\_istream<char>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<char>::readsome\(\)](#), [std::basic\\_istream<char>::sync\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unset\(\)](#).

**6.245.6.2 adjustfield** `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of `left|right|internal`. Useful for the 2-arg form of `setf`.

Referenced by [std::num\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), and [std::right\(\)](#).

**6.245.6.3 app** const `openmode` std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**6.245.6.4 ate** const `openmode` std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**6.245.6.5 badbit** const `iostate` std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<char>::tellg()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::ws()`.

**6.245.6.6 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

**6.245.6.7 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**6.245.6.8 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**6.245.6.9 boolalpha** const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.245.6.10 cur** const `seekdir` std::ios\_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::seekoff()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.245.6.11 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**6.245.6.12 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#).

**6.245.6.13 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_time\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::eof\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#), and [std::ws\(\)](#).

**6.245.6.14 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::close\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_time\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#).

**6.245.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**6.245.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.245.6.17 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_year\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::do\\_get\\_time\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::time\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char>::sync\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#), and [std::ws\(\)](#).

[std::basic\\_istream< char >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekpos\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**6.245.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::hex\(\)](#).

**6.245.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::M\\_set\\_buffer\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::showmanyc\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::underflow\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

**6.245.6.20 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.245.6.21 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), and [std::left\(\)](#).

**6.245.6.22 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.245.6.23 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#).

**6.245.6.24 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.245.6.25 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.245.6.26 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.245.6.27 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.245.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.245.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.245.6.30 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for ofstream.

**6.245.6.31 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.245.6.32 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

## 6.246 \_\_gnu\_pbds::basic\_invalidation\_guarantee Struct Reference

`#include <tag_and_trait.hpp>`

Inheritance diagram for `__gnu_pbds::basic_invalidation_guarantee`:

### 6.246.1 Detailed Description

Signifies a basic invalidation guarantee that any iterator, pointer, or reference to a container object's mapped value type is valid as long as the container is not modified.

The documentation for this struct was generated from the following file:

- [tag\\_and\\_trait.hpp](#)

## 6.247 std::basic\_ios< \_CharT, \_Traits > Class Template Reference

```
#include <basic_ios.h>
```

Inheritance diagram for std::basic\_ios< \_CharT, \_Traits >:

### Public Types

### 6.247.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ios< _CharT, _Traits >
```

Template class `basic_ios`, virtual base class for all stream classes.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

Most of the member functions called dispatched on stream objects (e.g., `std::cout.foo(bar);`) are consolidated in this class.

### 6.247.2 Member Typedef Documentation

**6.247.2.1 `__ctype_type`** `template<typename _CharT , typename _Traits >`  
`typedef ctype<_CharT> std::basic\_ios< _CharT, _Traits >::__ctype_type`  
 These are non-standard types.

**6.247.2.2 `__num_get_type`** `template<typename _CharT , typename _Traits >`  
`typedef num\_get<_CharT, istreambuf\_iterator<_CharT, _Traits> > std::basic\_ios< _CharT, _Traits`  
`>::__num_get_type`  
 These are non-standard types.

**6.247.2.3 `__num_put_type`** `template<typename _CharT , typename _Traits >`  
`typedef num\_put<_CharT, ostreambuf\_iterator<_CharT, _Traits> > std::basic\_ios< _CharT, _Traits`  
`>::__num_put_type`  
 These are non-standard types.

**6.247.2.4 `char_type`** `template<typename _CharT , typename _Traits >`  
`typedef _CharT std::basic\_ios< _CharT, _Traits >::char_type`  
 These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**6.247.2.5 `event_callback`** `typedef void(* std::ios\_base::event\_callback) (event __e, ios\_base &__b,`  
`int __i) [inherited]`  
 The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.247.2.6 `fmtflags`** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

**6.247.2.7 `int_type`** `template<typename _CharT, typename _Traits>`

`typedef _Traits::int_type std::basic_ios<_CharT, _Traits>::int_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**6.247.2.8 `iostate`** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.247.2.9 off\_type** `template<typename _CharT , typename _Traits >`  
`typedef _Traits::off_type std::basic\_ios< _CharT, _Traits >::off_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**6.247.2.10 openmode** `typedef _Ios_Openmode std::ios\_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.247.2.11 pos\_type** `template<typename _CharT , typename _Traits >`  
`typedef _Traits::pos_type std::basic\_ios< _CharT, _Traits >::pos_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**6.247.2.12 seekdir** `typedef _Ios_Seekdir std::ios\_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.247.2.13 traits\_type** `template<typename _CharT , typename _Traits >`  
`typedef _Traits std::basic\_ios< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

## 6.247.3 Member Enumeration Documentation

**6.247.3.1 event** `enum std::ios\_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

## 6.247.4 Constructor & Destructor Documentation

**6.247.4.1 basic\_ios()** [1/2] `template<typename _CharT , typename _Traits >  
std::basic_ios< _CharT, _Traits >::basic_ios (`  
`basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]`

Constructor performs initialization.

The parameter is passed by derived streams.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.247.4.2 ~basic\_ios()** `template<typename _CharT , typename _Traits >  
virtual std::basic_ios< _CharT, _Traits >::~~basic_ios ( ) [inline], [virtual]`

Empty.

The destructor does nothing. More specifically, it does not destroy the streambuf held by rdbuf().

**6.247.4.3 basic\_ios()** [2/2] `template<typename _CharT , typename _Traits >  
std::basic_ios< _CharT, _Traits >::basic_ios ( ) [inline], [protected]`

Empty.

The default constructor does nothing and is not normally accessible to users.

## 6.247.5 Member Function Documentation

**6.247.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

**6.247.5.2 bad()** `template<typename _CharT , typename _Traits >  
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline]`

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.247.5.3 clear()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::clear (`  
`iostate __state = goodbit )`

[Re]sets the error state.

## Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::seekg\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

**6.247.5.4 copyfmt()** `template<typename _CharT , typename _Traits >`  
`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic_ios< _CharT, _Traits > & __rhs )`

Copies fields of `__rhs` into this.

## Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

## Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [std::\\_\\_addressof\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**6.247.5.5 eof()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline]`

Fast error checking.

## Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

References [std::ios\\_base::eofbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

**6.247.5.6 exceptions() [1/2]** `template<typename _CharT , typename _Traits >`  
`iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline]`

Throwing exceptions on errors.

## Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.247.5.7 exceptions()** [2/2] `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::exceptions (`  
`iostate __except ) [inline]`

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#).

**6.247.5.8 fail()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline]`

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::operator bool\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >](#) and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**6.247.5.9 fill()** [1/2] `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.247.5.10 fill()** [2/2] `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::fill (`  
`char_type __ch ) [inline]`

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

**6.247.5.11 flags()** [1/2] `fmtflags` `std::ios_base::flags ( ) const` [inline], [inherited]

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.247.5.12 flags()** [2/2] `fmtflags` `std::ios_base::flags (`  
`fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.247.5.13 getloc()** `locale` `std::ios_base::getloc ( ) const` [inline], [inherited]

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.247.5.14 good()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::good ( ) const` [inline]

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.247.5.15 imbue()** `template<typename _CharT , typename _Traits >  
locale std::basic_ios< _CharT, _Traits >::imbue (  
    const locale & __loc )`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios\\_base::imbue\(\)](#).

**6.247.5.16 init()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::init (  
    basic_streambuf< _CharT, _Traits > * __sb ) [protected]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic\\_fstream< \\_CharT, \\_Traits >::basic\\_fstream\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::basic\\_ifstream\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::basic\\_ios\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::basic\\_istream\(\)](#), [std::basic\\_istreamstream< \\_CharT, \\_Traits >::basic\\_istreamstream\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::basic\\_ofstream\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::basic\\_ostream\(\)](#), [std::basic\\_ostreamstream< \\_CharT, \\_Traits, \\_Alloc >::basic\\_ostreamstream\(\)](#), and [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >::basic\\_stringstream\(\)](#).

**6.247.5.17 iword()** `long & std::ios_base::iword (  
    int __ix ) [inline], [inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.247.5.18 narrow()** `template<typename _CharT , typename _Traits >`  
`char std::basic_ios< _CharT, _Traits >::narrow (`  
`char_type __c,`  
`char __default ) const [inline]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

`std::use_facet<ctype<char_type> > (getloc()).narrow(c,default)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.247.5.19 operator bool()** `template<typename _CharT , typename _Traits >`  
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.247.5.20 operator"!()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.247.5.21 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
 Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**6.247.5.22 precision()** [2/2] `streamsize std::ios_base::precision ( streamsize __prec ) [inline], [inherited]`

Changing flags.

Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

Returns

The previous value of precision().

**6.247.5.23 pword()** `void *& std::ios_base::pword ( int __ix ) [inline], [inherited]`

Access to void pointer array.

Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.247.5.24 rdbuf()** [1/2] `template<typename _CharT , typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline]`  
Accessing the underlying buffer.

Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< _CharT, _Traits >::readson`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::ws()`.

**6.247.5.25 rdbuf()** [2/2] `template<typename _CharT , typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( basic_streambuf< _CharT, _Traits > * __sb )`

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

**6.247.5.26 `rdstate()`** `template<typename _CharT, typename _Traits >`  
`iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline]`

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.247.5.27 `register_callback()`** `void std::ios_base::register_callback (`  
`event_callback __fn,`  
`int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

## Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.247.5.28 `setf()`** [1/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.247.5.29 setf()** [2/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask )` [inline], [inherited]

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.247.5.30 setstate()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::setstate (`  
`iosstate __state )` [inline]

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**6.247.5.31 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (`  
`bool __sync = true )` [static], [inherited]

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.247.5.32 tie()** [1/2] `template<typename _CharT, typename _Traits >  
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline]`  
Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**6.247.5.33 tie()** [2/2] `template<typename _CharT, typename _Traits >  
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (   
basic_ostream< _CharT, _Traits > * __tiestr ) [inline]`

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.247.5.34 unsetf()** `void std::ios_base::unsetf (   
fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.247.5.35 widen()** `template<typename _CharT, typename _Traits >  
char_type std::basic_ios< _CharT, _Traits >::widen (   
char __c ) const [inline]`

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.247.5.36 width()** [1/2] `streamsize` `std::ios_base::width ( ) const` [inline], [inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.247.5.37 width()** [2/2] `streamsize` `std::ios_base::width ( streamsize __wide )` [inline], [inherited]

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.247.5.38 xalloc()** `static int` `std::ios_base::xalloc ( ) throw ( )` [static], [inherited]

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**6.247.6 Member Data Documentation**

**6.247.6.1 adjustfield** `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.247.6.2 app** `const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::M_set_buffer()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**6.247.6.3 ate** `const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**6.247.6.4 badbit** `const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< char >::tellg()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::ws()`.

**6.247.6.5 basefield** `const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**6.247.6.6 beg** `const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**6.247.6.7 binary** `const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**6.247.6.8 boolalpha** `const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**6.247.6.9 cur** const `seekdir` `std::ios_base::cur` [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, std::basic_istream< _CharT, _Traits >::tellg(), and std::basic_ostream< _CharT, _Traits >::tellp()`.

**6.247.6.10 dec** const `fmtflags` `std::ios_base::dec` [static], [inherited]

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.247.6.11 end** const `seekdir` `std::ios_base::end` [static], [inherited]

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

**6.247.6.12 eofbit** const `iostate` `std::ios_base::eofbit` [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_r`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**6.247.6.13 failbit** const `iostate` `std::ios_base::failbit` [static], [inherited]

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::d`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

**6.247.6.14 fixed** const `fmtflags` `std::ios_base::fixed` [static], [inherited]

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.247.6.15 floatfield** const `fmtflags` `std::ios_base::floatfield` [static], [inherited]

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.247.6.16 goodbit** `const ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

**6.247.6.17 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

**6.247.6.18 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.247.6.19 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

**6.247.6.20 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, and `std::left()`.

**6.247.6.21 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

**6.247.6.22 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**6.247.6.23 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.247.6.24 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.247.6.25 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.247.6.26 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.247.6.27 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.247.6.28 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.247.6.29 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.247.6.30 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.247.6.31 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

The documentation for this class was generated from the following files:

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_istream\\_type](#) & **operator>>** (bool &\_\_n)
- [\\_\\_istream\\_type](#) & **operator>>** (short &\_\_n)

- `__istream_type & operator>> (long double &__f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `int_type get ()`
  - `__istream_type & get (char_type &__c)`
  - `__istream_type & get (char_type * __s, streamsize __n, char_type __delim)`

  - `__ostream_type & operator<< (__ios_type &(__pf)(__ios_type &))`
  - `__ostream_type & operator<< (ios_base &(__pf)(ios_base &))`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
- `__ostream_type & operator<< (unsigned long __n)`
- `__ostream_type & operator<< (bool __n)`
- `__ostream_type & operator<< (short __n)`
- `__ostream_type & operator<< (unsigned short __n)`
- `__ostream_type & operator<< (int __n)`
- `__ostream_type & operator<< (unsigned int __n)`
- `__ostream_type & operator<< (long long __n)`
- `__ostream_type & operator<< (unsigned long long __n)`

- `__ostream_type & operator<< (double __f)`
- `__ostream_type & operator<< (float __f)`
- `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

**6.248.1 Detailed Description**

```
template<typename _CharT, typename _Traits>
class std::basic_istream< _CharT, _Traits >
```

Template class basic\_istream.

**Template Parameters**

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class multiply inherits from the input and output stream classes simply to provide a single interface.

**6.248.2 Member Typedef Documentation**

**6.248.2.1 `__num_put_type`** `template<typename _CharT , typename _Traits >`  
`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits`  
`>::__num_put_type [inherited]`

These are non-standard types.

**6.248.2.2 `event_callback`** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,`  
`int __i) [inherited]`

The type of an event callback function.

**Parameters**

<code>__e</code>	One of the members of the event enum.
------------------	---------------------------------------

**Parameters**

<code>_↔ _b</code>	Reference to the <code>ios_base</code> object.
<code>_↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.248.2.3 `fmtflags`** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

**6.248.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.248.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.248.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.248.3 Member Enumeration Documentation****6.248.3.1 event** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.248.4 Constructor & Destructor Documentation**

**6.248.4.1 basic\_iostream()** `template<typename _CharT , typename _Traits >  
std::basic_iostream< _CharT, _Traits >::basic_iostream (   
    basic_streambuf< _CharT, _Traits > * __sb ) [inline], [explicit]`

Constructor does nothing.

Both of the parent classes are initialized with the same streambuf pointer passed to this constructor.

**6.248.4.2 ~basic\_iostream()** `template<typename _CharT , typename _Traits >  
virtual std::basic_iostream< _CharT, _Traits >::~~basic_iostream ( ) [inline], [virtual]`  
Destructor does nothing.

## 6.248.5 Member Function Documentation

**6.248.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`  
Locale access.

### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, and `std::time_put< _CharT, _Outlter >::put()`.

**6.248.5.2 bad()** `template<typename _CharT , typename _Traits >  
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`  
Fast error checking.

### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.248.5.3 clear()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::clear (   
    iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::se` and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.248.5.4 copyfmt()** `template<typename _CharT , typename _Traits >`  
`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of \_\_rhs into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of \_\_rhs are copied into this object except that rdbuf() and rdstate() remain unchanged. All values in the pword and iword arrays are copied. Before copying, each callback is invoked with erase\_event. After copying, each (new) callback is invoked with copyfmt\_event. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

**6.248.5.5 eof()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]`  
Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

**6.248.5.6 exceptions() [1/2]** `template<typename _CharT , typename _Traits >`  
`iosstate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]`  
Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of exceptions(iostate) for the meaning of the return value.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**6.248.5.7 exceptions() [2/2]** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::exceptions (`  
`iosstate __except ) [inline], [inherited]`

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#).

#### 6.248.5.8 fail() `template<typename _CharT, typename _Traits>`

`bool std::basic_ios<_CharT, _Traits>::fail ( ) const` [inline], [inherited]

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::operator bool\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::operator!\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>](#) and [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#).

#### 6.248.5.9 fill() [1/2] `template<typename _CharT, typename _Traits>`

`char_type std::basic_ios<_CharT, _Traits>::fill ( ) const` [inline], [inherited]

Retrieves the *empty* character.

##### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

#### 6.248.5.10 fill() [2/2] `template<typename _CharT, typename _Traits>`

`char_type std::basic_ios<_CharT, _Traits>::fill (`  
`char_type __ch )` [inline], [inherited]

Sets a new *empty* character.

##### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

## Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

#### 6.248.5.11 `flags()` [1/2] `fmtflags` `std::ios_base::flags ( ) const` [inline], [inherited]

Access to format flags.

## Returns

The format control flags for both input and output.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

#### 6.248.5.12 `flags()` [2/2] `fmtflags` `std::ios_base::flags ( fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags all at once.

## Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

## Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

#### 6.248.5.13 `flush()` `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush` [inherited]

Synchronizing the stream buffer.

## Returns

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits](#)

Referenced by [std::flush\(\)](#).

#### 6.248.5.14 `gcount()` `template<typename _CharT , typename _Traits > streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const` [inline], [inherited]

Character counting.

## Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References [std::basic\\_istream< \\_CharT, \\_Traits >::\\_M\\_gcount](#).

**6.248.5.15 get()** [1/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (  
void ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#).

**6.248.5.16 get()** [2/6] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::get (  
__streambuf_type & __sb ) [inline], [inherited]`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

#### Returns

\*this

Returns `get(__sb,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.248.5.17 get()** [3/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (  
__streambuf_type & __sb,  
char_type __delim ) [inherited]`

Extraction into another streambuf.

#### Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream< \\_CharT, \\_Traits >::\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.248.5.18 get()** [4/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (  
char_type & __c ) [inherited]`

Simple extraction.

#### Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

#### Returns

\*this

Tries to extract a character and store it in \_\_c. If none are available, sets failbit and returns traits::eof().

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.248.5.19 get()** [5/6] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::get (  
char_type * __s,  
streamsize __n ) [inline], [inherited]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in s.

#### Returns

\*this

Returns `get(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.248.5.20 get()** [6/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (  
char_type * __s,  
streamsize __n,  
char_type __delim ) [inherited]`

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

## Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

**6.248.5.21 getline() [1/3]** `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::getline (  
    char_type * __s,  
    streamsize __n ) [inline], [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

## Returns

\*this

Returns `getline(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.248.5.22 getline() [2/3]** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (  
    char_type * __s,  
    streamsize __n,  
    char_type __delim ) [inherited]`

String extraction.

## Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case `eofbit` is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case `failbit` is set in the stream error state

If no characters are extracted, `failbit` is set. (An empty line of input should therefore not cause `failbit` to be set.)

In any case, a null character is stored in the next location in the array.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#).

**6.248.5.23** `getline()` [3/3] `basic_istream< char > & std::basic_istream< char >::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Explicit specialization declarations, defined in `src/istream.cc`.

**6.248.5.24** `getloc()` `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

## Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.248.5.25** `good()` `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]`

Fast error checking.

## Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.248.5.26 ignore()** [1/3] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (`  
`void ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sbumpc()`.

**6.248.5.27 ignore()** [2/3] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (`  
`streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sgetc()`.

**6.248.5.28 ignore()** [3/3] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (`  
`streamsize __n,`  
`int_type __delim ) [inherited]`

Discarding characters.

#### Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.248.5.29 imbue()** `template<typename _CharT , typename _Traits >`  
`locale std::basic_ios< _CharT, _Traits >::imbue (`  
`const locale & __loc ) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

```
6.248.5.30 init()  template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< _CharT, _Traits >::basic_ios()`, `std::basic_istream< _CharT, _Traits >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< _CharT, _Traits >::basic_ostream()`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >::basic_ostreamstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

```
6.248.5.31 iword()  long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

```
6.248.5.32 narrow()  template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.248.5.33 operator bool()** `template<typename _CharT , typename _Traits >`

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

**6.248.5.34 operator"!()** `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

**6.248.5.35 operator<<()** [1/17] `template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ios_type &(*)(__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.248.5.36 operator<<()** [2/17] `template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    __ostream_type &(*)(__ostream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.248.5.37 operator<<()** [3/17] `template<typename _CharT , typename _Traits >`

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (
    __streambuf_type * __sb ) [inherited]
```

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted),

or

- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.248.5.38** `operator<<()` [4/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`bool __n ) [inline], [inherited]`

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.39** `operator<<()` [5/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`const void * __p ) [inline], [inherited]`

Pointer arithmetic inserters.

#### Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.40** `operator<<()` [6/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`double __f ) [inline], [inherited]`

Floating point arithmetic inserters.

#### Parameters

<code>f</code>	A variable of builtin floating point type.
----------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.248.5.41 operator<<()** [7/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream< \_CharT, \_Traits >::operator<< (  
float \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.248.5.42 operator<<()** [8/17] template<typename \_CharT , typename \_Traits >  
basic\_ostream< \_CharT, \_Traits > & std::basic\_ostream< \_CharT, \_Traits >::operator<< (  
int \_\_n ) [inherited]

Integer arithmetic inserters.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.248.5.43 operator<<()** [9/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream< \_CharT, \_Traits >::operator<< (  
ios\_base &(\*) (ios\_base &) \_\_pf ) [inline], [inherited]

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

**6.248.5.44 operator<<()** [10/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream< \_CharT, \_Traits >::operator<< (  
long \_\_n ) [inline], [inherited]

Integer arithmetic inserters.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.45** `operator<<()` [11/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long double __f ) [inline], [inherited]`

Floating point arithmetic inserters.

**Parameters**

<code>↔</code> <code>_↔</code> <code>↔</code> <code>_↔</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.46** `operator<<()` [12/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>_↔</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.47** `operator<<()` [13/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`short __n ) [inherited]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put< \\_CharT, \\_Outiter >::put\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >](#)

**6.248.5.48 operator<<()** [14/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned int __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.49 operator<<()** [15/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned long __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.50 operator<<()** [16/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.51 operator<<()** [17/17] `template<typename _CharT, typename _Traits >  
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (  
    unsigned short __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.248.5.52 operator>>()** [1/17] `template<typename _CharT, typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.248.5.53 operator>>()** [2/17] `template<typename _CharT, typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.248.5.54 operator>>()** [3/17] `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (  
    __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

**Parameters**

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.248.5.55 operator>>()** [4/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( bool & __n ) [inline], [inherited]`

Integer arithmetic extractors.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.56 operator>>()** [5/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

#### Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.57 operator>>()** [6/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

#### Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.248.5.58 operator>>()** [7/17] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`int & __n ) [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.248.5.59 operator>>()** [8/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.  
For more information, see the `io manip` header.

**6.248.5.60 operator>>()** [9/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.248.5.61 operator>>()** [10/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

## Parameters

<code>↔</code>	A variable of builtin floating point type.
<code>↔</code>	
<code>↔</code>	
<code>↔</code>	
<code>f</code>	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.62 operator>>()** [11/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

<code>↔</code>	A variable of builtin integral type.
<code>n</code>	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.63 operator>>()** [12/17] `template<typename _CharT , typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> ( short & __n ) [inherited]`

Integer arithmetic extractors.

## Parameters

<code>↔</code>	A variable of builtin integral type.
<code>n</code>	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.248.5.64 operator>>()** [13/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned int & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>_↔ _n</code>	A variable of builtin integral type.
------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.65 `operator>>()` [14/17]** `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>_↔ _n</code>	A variable of builtin integral type.
------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.66 `operator>>()` [15/17]** `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>_↔ _n</code>	A variable of builtin integral type.
------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.248.5.67 `operator>>()` [16/17]** `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned short & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>_↔ _n</code>	A variable of builtin integral type.
------------------------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.248.5.68 operator>>()** [17/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
void *& __p ) [inline], [inherited]`

Basic arithmetic extractors.

## Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.248.5.69 peek()** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (  
void ) [inherited]`

Looking ahead in the stream.

## Returns

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

References [std::basic\\_istream< \\_CharT, \\_Traits >::\\_M\\_gcount](#).

**6.248.5.70 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

## Returns

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.248.5.71 precision()** [2/2] `streamsize std::ios_base::precision (  
streamsize __prec ) [inline], [inherited]`

Changing flags.

## Parameters

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.248.5.72 `put()`** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (`  
`char_type __c ) [inherited]`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::endl()`, and `std::ends()`.

**6.248.5.73 `putback()`** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (`  
`char_type __c ) [inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::rdstate()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_streambuf< _CharT, _Traits >::sputbackc()`.

Referenced by `std::operator<<()`.

**6.248.5.74 pword()** `void *& std::ios_base::pword (int __ix) [inline], [inherited]`

Access to void pointer array.

#### Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

#### Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.248.5.75 rdbuf()** [1/2] `template<typename _CharT, typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline], [inherited]`

Accessing the underlying buffer.

#### Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< _CharT, _Traits >::readson`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::ws()`.

**6.248.5.76 rdbuf()** [2/2] `template<typename _CharT, typename _Traits > basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (basic_streambuf< _CharT, _Traits > * __sb) [inherited]`

Changing the underlying buffer.

#### Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream foo;           // or some other derived type
```

```
std::streambuf* p = .....;
foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

**6.248.5.77 rdbuf()** `template<typename _CharT, typename _Traits >`  
`ios_base::basic_ios< _CharT, _Traits >::rdbuf ( ) const` `[inline]`, `[inherited]`  
Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::see()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.248.5.78 read()** `template<typename _CharT, typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (`  
`char_type * __s,`  
`streamsize __n )` `[inherited]`

Extraction without delimiters.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.248.5.79 readsome()** `template<typename _CharT, typename _Traits >`  
`streamsize std::basic_istream< _CharT, _Traits >::readsome (`  
`char_type * __s,`  
`streamsize __n )` `[inherited]`

Extraction until the buffer is exhausted, but no more.

## Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

## Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called A here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.248.5.80 register\_callback()** `void std::ios_base::register_callback ( event_callback __fn, int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

## Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.248.5.81 seekg()** [1/2] `template<typename _CharT, typename _Traits > basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg ( off_type __off, ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.248.5.82 seekg()** [2/2] `template<typename _CharT, typename _Traits >  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (  
pos_type __pos) [inherited]`

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.248.5.83 seekp()** [1/2] `template<typename _CharT, typename _Traits >  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (  
off_type __off,  
ios_base::seekdir __dir) [inherited]`

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.248.5.84 seekp()** [2/2] `template<typename _CharT, typename _Traits >`

```
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos ) [inherited]
```

Changing the current write position.

#### Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

#### Returns

\*this

If `fail()` is not true, calls `rdbuf() -> pubseekpos(pos)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.248.5.85** `setf()` [1/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by `std::__detail::operator>>()`.

**6.248.5.86** `setf()` [2/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask ) [inline], [inherited]`

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

#### Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.248.5.87** `setstate()` `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::setstate (`  
`istate __state ) [inline], [inherited]`

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**6.248.5.88 sync()** `template<typename _CharT , typename _Traits >  
int std::basic_istream< _CharT, _Traits >::sync (  
void ) [inherited]`

Synchronizing the stream buffer.

## Returns

0 on success, -1 on failure

If `rddbuf()` is a null pointer, returns -1.

Otherwise, calls `rddbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rddbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.248.5.89 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (  
bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.248.5.90 tellg()** `template<typename _CharT , typename _Traits >`

```
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void ) [inherited]
```

Getting the current read position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

```
6.248.5.91 tellp() template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]
Getting the current write position.
```

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

```
6.248.5.92 tie() [1/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

```
6.248.5.93 tie() [2/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

**6.248.5.94 unget()** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (`  
`void ) [inherited]`

Unextracting the previous character.

**Returns**

\*this

If rdbuf() is not null, calls rdbuf()->sungetc(c).

If rdbuf() is null or if sungetc() fails, sets badbit in the error state.

**Note**

This function first clears eofbit. Since no characters are extracted, the next call to gcount() will return 0, as required by DR 60.

References std::basic\_istream< \_CharT, \_Traits >::M\_gcount, std::basic\_ios< \_CharT, \_Traits >::clear(), std::ios\_base::eofbit, std::ios\_base::goodbit, and std::basic\_ios< \_CharT, \_Traits >::rdstate().

Referenced by std::\_\_detail::operator>>().

**6.248.5.95 unsetf()** `void std::ios_base::unsetf (`  
`fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.248.5.96 widen()** `template<typename _CharT , typename _Traits >  
char_type std::basic_ios< _CharT, _Traits >::widen (`  
`char __c ) const [inline], [inherited]`

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of char to a character of char\_type.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.248.5.97 width()** [1/2] `streamsize std::ios_base::width ( ) const [inline], [inherited]`  
Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.248.5.98 width()** [2/2] `streamsize std::ios_base::width ( streamsize __wide ) [inline], [inherited]`

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

#### Returns

The previous value of `width()`.

**6.248.5.99 write()** `template<typename _CharT , typename _Traits > basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write ( const char_type * __s, streamsize __n ) [inherited]`

Character string insertion.

#### Parameters

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

#### Returns

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

#### Note

This function is not overloaded on signed char and unsigned char.

**6.248.5.100 xalloc()** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pwdword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pwdword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pwdword` arrays.

## 6.248.6 Member Data Documentation

**6.248.6.1 \_M\_gcount** `template<typename _CharT, typename _Traits >`

`streamsize std::basic_istream< _CharT, _Traits >::_M_gcount [protected], [inherited]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream< _CharT, _Traits >::~~basic_istream()`, `std::basic_istream< _CharT, _Traits >::gcount()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< char >::ignore()`, `std::basic_istream< char >::operator>>()`, `std::basic_istream< _CharT, _Traits >::peek()`, `std::basic_istream< char >::putback()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< char >::sync()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.248.6.2 adjustfield** `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.248.6.3 app** `const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**6.248.6.4 ate** `const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**6.248.6.5 badbit** `const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~~sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< char >::tellg()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::ws()`.

**6.248.6.6 basefield** `const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

**6.248.6.7 beg** `const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**6.248.6.8 binary** `const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**6.248.6.9 boolalpha** `const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.248.6.10 cur** `const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.248.6.11 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.248.6.12 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.248.6.13 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.248.6.14 failbit** `const ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.248.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.248.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.248.6.17 goodbit** `const ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unsetg()`, and `std::ws()`.

**6.248.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::hex()`.

**6.248.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.248.6.20 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.248.6.21 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), and [std::left\(\)](#).

**6.248.6.22 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.248.6.23 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekp\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**6.248.6.24 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.248.6.25 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.248.6.26 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.248.6.27 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.248.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.248.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.248.6.30 trunc** const [openmode](#) std::ios\_base::trunc [static], [inherited]  
Truncate an existing stream when opening. Default for ofstream.

**6.248.6.31 unitbuf** const [fmtflags](#) std::ios\_base::unitbuf [static], [inherited]  
Flushes output after each output operation.  
Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.248.6.32 uppercase** const [fmtflags](#) std::ios\_base::uppercase [static], [inherited]  
Replaces certain lowercase letters with their uppercase equivalents in generated output.  
Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### Extractors

All the *operator>>* functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to false. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_istream\\_type & operator>>](#) (`bool &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`short &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`unsigned short &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`int &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`unsigned int &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`long &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`unsigned long &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`long long &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`unsigned long long &__n`)
- [\\_\\_istream\\_type & operator>>](#) (`float &__f`)
- [\\_\\_istream\\_type & operator>>](#) (`double &__f`)
- [\\_\\_istream\\_type & operator>>](#) (`long double &__f`)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to true. This has several effects, concluding with the setting of a status flag; see the *sentry* documentation for more.

If the *sentry* status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

### Friends

- class **sentry**

#### 6.249.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_istream< _CharT, _Traits >
```

Template class basic\_istream.

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is the base class for all input streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual input.

## 6.249.2 Member Typedef Documentation

**6.249.2.1 `__num_put_type`** `template<typename _CharT , typename _Traits >`  
`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits`  
`>::__num_put_type [inherited]`

These are non-standard types.

**6.249.2.2 `event_callback`** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,`  
`int __i) [inherited]`

The type of an event callback function.

### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.249.2.3 `fmtflags`** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`

- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

#### 6.249.2.4 `iostate` `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

#### 6.249.2.5 `openmode` `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

#### 6.249.2.6 `seekdir` `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

### 6.249.3 Member Enumeration Documentation

#### 6.249.3.1 `event` `enum std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

### 6.249.4 Constructor & Destructor Documentation

#### 6.249.4.1 `basic_istream()` `template<typename _CharT, typename _Traits >`

```
std::basic_istream< _CharT, _Traits >::basic_istream (  
    __streambuf_type * __sb ) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

References `std::basic_ios< _CharT, _Traits >::init()`.

#### 6.249.4.2 `~basic_istream()` `template<typename _CharT, typename _Traits >`

```
virtual std::basic_istream< _CharT, _Traits >::~~basic_istream ( ) [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`.

### 6.249.5 Member Function Documentation

#### 6.249.5.1 `_M_getloc()` `const locale & std::ios_base::_M_getloc ( ) const` [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

#### 6.249.5.2 `bad()` `template<typename _CharT, typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.249.5.3 clear()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::clear (`  
`iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::seekg()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.249.5.4 copyfmt()** `template<typename _CharT , typename _Traits >`  
`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy `exceptions()`.

References `std::__addressof()`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

**6.249.5.5 eof()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]`

Fast error checking.

#### Returns

True if the eofbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

**6.249.5.6 exceptions()** [1/2] `template<typename _CharT , typename _Traits >`  
`iostate std::basic_ios< _CharT, _Traits >::exceptions ( ) const [inline], [inherited]`

Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.249.5.7 exceptions()** [2/2] `template<typename _CharT, typename _Traits >`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References `std::basic_ios<_CharT, _Traits>::clear()`.

**6.249.5.8 fail()** `template<typename _CharT, typename _Traits >`  
`bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline], [inherited]`

Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, `std::ios_base::failbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_ios<_CharT, _Traits>::operator bool()`, `std::basic_ios<_CharT, _Traits>::operator!()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.249.5.9 fill()** [1/2] `template<typename _CharT, typename _Traits >`  
`char_type std::basic_ios<_CharT, _Traits>::fill ( ) const [inline], [inherited]`  
 Retrieves the *empty* character.

**Returns**

The current fill character.

It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.249.5.10 fill()** [2/2] `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::fill (`  
`char_type __ch ) [inline], [inherited]`

Sets a new *empty* character.

**Parameters**

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.249.5.11 flags()** [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.249.5.12 flags()** [2/2] `fmtflags std::ios_base::flags (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.249.5.13 gcount()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline]`

Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#).

**6.249.5.14 get()** [1/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (`  
`void )`

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#).

**6.249.5.15 get()** [2/6] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::get (`  
`__streambuf_type & __sb ) [inline]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

\*this

Returns `get(__sb,widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.249.5.16 get()** [3/6] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (`  
`__streambuf_type & __sb,`  
`char_type __delim )`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF

- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.249.5.17 get()** [4/6] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (`  
`char_type & __c )`

Simple extraction.

#### Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

#### Returns

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.249.5.18 get()** [5/6] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::get (`  
`char_type * __s,`  
`streamsize __n ) [inline]`

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

#### Returns

`*this`

Returns `get(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.249.5.19 get()** [6/6] `template<typename _CharT , typename _Traits >`

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (
    char_type * __s,
    streamsize __n,
    char_type __delim )
```

Simple multiple-character extraction.

#### Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

```
6.249.5.20 getline() [1/3] template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::getline (
    char_type * __s,
    streamsize __n ) [inline]
```

String extraction.

#### Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

#### Returns

\*this

Returns `getline(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.249.5.21 getline()** [2/3] `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::getline (`  
     `char_type * __s,`  
     `streamsize __n,`  
     `char_type __delim )`

String extraction.

#### Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Referenced by `std::basic_istream<_CharT, _Traits>::getline()`.

**6.249.5.22 getline()** [3/3] `basic_istream<char> & std::basic_istream<char>::getline (`  
     `char_type * __s,`  
     `streamsize __n,`  
     `char_type __delim )`

Explicit specialization declarations, defined in `src/istream.cc`.

**6.249.5.23 getloc()** `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

#### Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator>>()`, and `std::ws()`.

**6.249.5.24 good()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::good ( ) const [inline], [inherited]`

Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**6.249.5.25 ignore() [1/3]** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
void )`

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

**6.249.5.26 ignore() [2/3]** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
streamsize __n )`

Simple extraction.

**Returns**

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_streambuf<_CharT, _Traits>::sgetc()`.

**6.249.5.27 ignore() [3/3]** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
streamsize __n,  
int_type __delim )`

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file

- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.249.5.28 imbue()** `template<typename _CharT, typename _Traits>`  
`locale std::basic_ios<_CharT, _Traits>::imbue (`  
`const locale & __loc ) [inherited]`

Moves to a new locale.

#### Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

**6.249.5.29 init()** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::init (`  
`basic_streambuf<_CharT, _Traits> * __sb ) [protected], [inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<_CharT, _Traits>::basic_ios()`, `std::basic_istream<_CharT, _Traits>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<_CharT, _Traits>::basic_ostream()`, `std::basic_ostreamstream<_CharT, _Traits, _Alloc>::basic_ostreamstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::basic_stringstream()`.

**6.249.5.30 iword()** `long & std::ios_base::iword (`  
`int __ix ) [inline], [inherited]`

Access to integer array.

#### Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

#### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.249.5.31 narrow()** `template<typename _CharT , typename _Traits >`  
`char std::basic_ios< _CharT, _Traits >::narrow (`  
`char_type __c,`  
`char __dfault ) const [inline], [inherited]`

Squeezes characters.

#### Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.249.5.32 operator bool()** `template<typename _CharT , typename _Traits >`  
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]`  
The quick-and-easy status check.  
This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`  
References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.249.5.36 operator>>()** [3/17] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`__streambuf_type * __sb )`  
Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.249.5.37 operator>>()** [4/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
    bool & __n ) [inline]`

Integer arithmetic extractors.

## Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.38 operator>>()** [5/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
    double & __f ) [inline]`

Floating point arithmetic extractors.

## Parameters

<code>__f</code>	A variable of builtin floating point type.
------------------	--

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.39 operator>>()** [6/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`float & __f ) [inline]`

Floating point arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin floating point type.
<code>↵</code>	
<code>↵</code>	
<code>↵</code>	
<code>f</code>	

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.40 operator>>()** [7/17] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`int & __n )`

Integer arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.41 operator>>()** [8/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`ios_base & (*) (ios_base &) __pf ) [inline]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.249.5.42 operator>>()** [9/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`long & __n ) [inline]`

Integer arithmetic extractors.

#### Parameters

<code>↵</code>	A variable of builtin integral type.
<code>n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.43 operator>>()** [10/17] `template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
 long double & __f ) [inline]`

Floating point arithmetic extractors.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.44 operator>>()** [11/17] `template<typename _CharT , typename _Traits >
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
 long long & __n ) [inline]`

Integer arithmetic extractors.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.45 operator>>()** [12/17] `template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
 short & __n )`

Integer arithmetic extractors.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), [std::num\\_get<\\_CharT, \\_InIter>::get\(\)](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned int & __n ) [inline]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.47 operator>>()** [14/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long & __n ) [inline]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.249.5.48 operator>>()** [15/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned long long & __n ) [inline]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.49 operator>>()** [16/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 unsigned short & __n ) [inline]`

Integer arithmetic extractors.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.50 operator>>()** [17/17] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (  
 void *& __p ) [inline]`

Basic arithmetic extractors.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to parse the input data.

**6.249.5.51 peek()** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::peek (  
 void )`

Looking ahead in the stream.

**Returns**

The next character, or eof().

If, after constructing the sentry object, good() is false, returns traits::eof(). Otherwise reads but does not extract the next input character.

References `std::basic_istream<_CharT, _Traits>::M_gcount`.

**6.249.5.52 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.249.5.53 precision()** [2/2] `streamsize std::ios_base::precision (streamsize __prec) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.249.5.54 putback()** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (char_type __c)`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

Referenced by [std::operator<<\(\)](#).

**6.249.5.55 pword()** `void*& std::ios_base::pword (int __ix) [inline], [inherited]`

Access to void pointer array.

## Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

## Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.249.5.56 rdbuf()** [1/2] `template<typename _CharT , typename _Traits >  
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf ( ) const [inline],  
[inherited]`

Accessing the underlying buffer.

## Returns

The current stream buffer.

This does not change the state of the stream.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::operator<<()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::operator>>()`, `std::tr2::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< _CharT, _Traits >::readson`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::ws()`.

**6.249.5.57 rdbuf()** [2/2] `template<typename _CharT , typename _Traits >  
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (   
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.249.5.58 rdstate()** `template<typename _CharT , typename _Traits >`

```
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]
```

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

```
6.249.5.59 read() template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::read (
    char_type * __s,
    streamsize __n )
```

Extraction without delimiters.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

\*this

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

#### Note

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

```
6.249.5.60 readsome() template<typename _CharT , typename _Traits >
streamsize std::basic_istream< _CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n )
```

Extraction until the buffer is exhausted, but no more.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf() -> in_avail()`, called `A` here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.249.5.61 register\_callback()** `void std::ios_base::register_callback (`  
`event_callback __fn,`  
`int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.249.5.62 seekg()** [1/2] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (`  
`off_type __off,`  
`ios_base::seekdir __dir )`

Changing the current read position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.249.5.63 seekg()** [2/2] `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (  
pos_type __pos )`

Changing the current read position.

#### Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

#### Returns

`*this`

If `fail()` is not true, calls `rdbuf() -> pubseekpos (__pos)`. If that function fails, sets failbit.

#### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::ios_base::in`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, `std::basic_ios< _CharT, _Traits >::setstate()` and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.249.5.64 setf()** [1/2] `fmtflags std::ios_base::setf (  
fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by `std::__detail::operator>>()`.

**6.249.5.65 setf()** [2/2] `fmtflags std::ios_base::setf (  
fmtflags __fmtfl,  
fmtflags __mask ) [inline], [inherited]`

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

**6.249.5.66 setstate()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::setstate (`  
`iostate __state ) [inline], [inherited]`

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::ws()`.

**6.249.5.67 sync()** `template<typename _CharT , typename _Traits >  
int std::basic_istream< _CharT, _Traits >::sync (`  
`void )`

Synchronizing the stream buffer.

**Returns**

0 on success, -1 on failure

If `rddbuf()` is a null pointer, returns -1.

Otherwise, calls `rddbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_streambuf< _CharT, _Traits >::pubsync()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.249.5.68 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (`  
`bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

```
6.249.5.69 tellg() template<typename _CharT , typename _Traits >
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (
    void )
```

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::in`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

```
6.249.5.70 tie() [1/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],
[inherited]
```

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

```
6.249.5.71 tie() [2/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (
    basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]
```

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.249.5.72 unget()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (  
void )`

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**6.249.5.73 unsetf()** `void std::ios_base::unsetf (  
fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.249.5.74 widen()** `template<typename _CharT, typename _Traits>  
char_type std::basic_ios<_CharT, _Traits>::widen (  
char __c ) const [inline], [inherited]`

Widens characters.

#### Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.249.5.75 width()** `[1/2] streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.249.5.76 width()** [2/2] `streamsize std::ios_base::width (`  
`streamsize __wide ) [inline], [inherited]`

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

#### Returns

The previous value of `width()`.

**6.249.5.77 xalloc()** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`

Access to unique indices.

#### Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 6.249.6 Member Data Documentation

**6.249.6.1 \_M\_gcount** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream<_CharT, _Traits>::~~basic_istream()`, `std::basic_istream<_CharT, _Traits>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<char>::ignore()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<char>::putback()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<_CharT, _Traits>::unset()`.

**6.249.6.2 adjustfield** `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.249.6.3 app** const `openmode` std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**6.249.6.4 ate** const `openmode` std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**6.249.6.5 badbit** const `iostate` std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< char >::tellg()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::ws()`.

**6.249.6.6 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of `dec|oct|hex`. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**6.249.6.7 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**6.249.6.8 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**6.249.6.9 boolalpha** const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**6.249.6.10 cur** const `seekdir` std::ios\_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**6.249.6.11 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by [std::dec\(\)](#).

**6.249.6.12 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#).

**6.249.6.13 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_time\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_weekday\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::eof\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< char >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**6.249.6.14 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::close\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< char >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#).

**6.249.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by [std::fixed\(\)](#), and [std::hexfloat\(\)](#).

**6.249.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by [std::defaultfloat\(\)](#), [std::fixed\(\)](#), [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.249.6.17 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), [std::basic\\_istream< char >::get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::ignore\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::put\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_istream< char >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

[std::basic\\_istream< char >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekpos\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::sync\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#), and [std::ws\(\)](#).

**6.249.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by [std::num\\_get< \\_CharT, \\_Inlter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), and [std::hex\(\)](#).

**6.249.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::M\\_set\\_buffer\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::pbackfail\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekpos\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekpos\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::showmanyc\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::showmanyc\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::underflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::underflow\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

**6.249.6.20 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.249.6.21 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put< \\_CharT, \\_Outlter >::do\\_put\(\)](#), and [std::left\(\)](#).

**6.249.6.22 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.249.6.23 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekp\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#).

**6.249.6.24 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.249.6.25 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.249.6.26 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::noshowbase()`, and `std::showbase()`.

**6.249.6.27 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by `std::noshowpoint()`, and `std::showpoint()`.

**6.249.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by `std::noshowpos()`, and `std::showpos()`.

**6.249.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::noskipws()`, `std::__detail::operator>>()`, and `std::skipws()`.

**6.249.6.30 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.249.6.31 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

**6.249.6.32 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- `iosfwd`
- `istream`
- `istream.tcc`

## 6.250 std::basic\_istringstream< \_CharT, \_Traits, \_Alloc > Class Template Reference

Inheritance diagram for `std::basic_istringstream< _CharT, _Traits, _Alloc >`:

### Public Types

### Extractors

All the *operator>>* functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (*noskipws*) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- [\\_\\_istream\\_type](#) & [operator>>](#) (double &\_\_f)
- [\\_\\_istream\\_type](#) & [operator>>](#) (long double &\_\_f)

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

**6.250.1 Detailed Description**

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_istream<_CharT, _Traits, _Alloc>
```

Controlling input for std::string.

**Template Parameters**

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

This class supports reading from objects of type `std::basic_string`, using the inherited functions from `std::basic_istream`. To control the associated sequence, an instance of `std::basic_stringbuf` is used, which this page refers to as `sb`.

**6.250.2 Member Typedef Documentation**

**6.250.2.1 `__num_put_type`** `template<typename _CharT, typename _Traits>`  
`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_put_type [inherited]`  
 These are non-standard types.

**6.250.2.2 `event_callback`** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`  
 The type of an event callback function.

**Parameters**

<code>_↔ _e</code>	One of the members of the event enum.
<code>_↔ _b</code>	Reference to the <code>ios_base</code> object.
<code>_↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.250.2.3 `fmtflags`** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`
- `oct`
- `right`
- `scientific`
- `showbase`
- `showpoint`
- `showpos`
- `skipws`
- `unitbuf`
- `uppercase`
- `adjustfield`
- `basefield`
- `floatfield`

**6.250.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.250.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.250.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.250.3 Member Enumeration Documentation****6.250.3.1 event** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.250.4 Constructor & Destructor Documentation**

**6.250.4.1 basic\_istream()** [1/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream ( ) [inline]`

Default constructor starts with an empty string buffer.

Initializes `sb` using `in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.250.4.2 basic\_istream()** [2/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (   
 ios_base::openmode __mode ) [inline], [explicit]`

Starts with an empty string buffer.

Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::in` is automatically included in `__mode`.

Initializes `sb` using `__mode|in`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.250.4.3 basic\_istream()** [3/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_istream< _CharT, _Traits, _Alloc >::basic_istream (   
 const __string_type & __str,   
 ios_base::openmode __mode = ios_base::in ) [inline], [explicit]`

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

`ios_base::in` is automatically included in `mode`.

Initializes `sb` using `str` and `mode|in`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.250.4.4 ~basic\_istream()** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`std::basic_istream< _CharT, _Traits, _Alloc >::~basic_istream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

## 6.250.5 Member Function Documentation

**6.250.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

#### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::time_put< _CharT, _OutIter >::do_put()`, `std::time_get< _CharT, _InIter >::get()`, and `std::time_put< _CharT, _OutIter >::put()`.

#### 6.250.5.2 bad() `template<typename _CharT, typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

#### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

#### 6.250.5.3 clear() `template<typename _CharT, typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::seekg()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

#### 6.250.5.4 copyfmt() `template<typename _CharT, typename _Traits >`

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

**6.250.5.5 eof()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

**6.250.5.6 exceptions() [1/2]** `template<typename _CharT, typename _Traits>`  
`iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`  
 Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.250.5.7 exceptions() [2/2]** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
```

```
f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#).

#### 6.250.5.8 fail() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::operator bool\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

#### 6.250.5.9 fill() [1/2] `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

##### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

#### 6.250.5.10 fill() [2/2] `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

##### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

##### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

#### 6.250.5.11 flags() [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.250.5.12 flags()** [2/2] `fmtflags std::ios_base::flags (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.250.5.13 gcount()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream<_CharT, _Traits>::gcount ( ) const [inline], [inherited]`  
Character counting.

**Returns**

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.250.5.14 get()** [1/6] `template<typename _CharT , typename _Traits >`  
`basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::get (`  
`void ) [inherited]`

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#).

**6.250.5.15 get()** [2/6] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream<_CharT, _Traits>::get (`  
`__streambuf_type & __sb ) [inline], [inherited]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

**Returns**

`*this`

Returns `get(__sb, widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.250.5.16 `get()` [3/6]** `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (`  
`__streambuf_type & __sb,`  
`char_type __delim ) [inherited]`

Extraction into another streambuf.

**Parameters**

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

**Returns**

`*this`

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.250.5.17 `get()` [4/6]** `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (`  
`char_type & __c ) [inherited]`

Simple extraction.

**Parameters**

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

`*this`

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

## Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.250.5.18** `get()` [5/6] `template<typename _CharT, typename _Traits>`  
`__istream_type & std::basic_istream<_CharT, _Traits>::get (`  
`char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

## Returns

`*this`

Returns `get(__s, __n, widen('\n'))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.250.5.19** `get()` [6/6] `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Simple multiple-character extraction.

## Parameters

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

## Returns

`*this`

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored
- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

**6.250.5.20 getline()** [1/3] `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::getline (  
 char_type * __s,  
 streamsize __n ) [inline], [inherited]`

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

**Returns**

\*this

Returns `getline(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.250.5.21 getline()** [2/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (  
 char_type * __s,  
 streamsize __n,  
 char_type __delim ) [inherited]`

String extraction.

**Parameters**

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)  
 In any case, a null character is stored in the next location in the array.  
 Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#).

**6.250.5.22 getline()** [3/3] [basic\\_istream< char > & std::basic\\_istream< char >::getline \(](#)  
     [char\\_type \\* \\_\\_s,](#)  
     [streamsize \\_\\_n,](#)  
     [char\\_type \\_\\_delim \)](#) [inherited]

Explicit specialization declarations, defined in `src/istream.cc`.

**6.250.5.23 getloc()** [locale std::ios\\_base::getloc \( \) const](#) [inline], [inherited]

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.250.5.24 good()** [template<typename \\_CharT , typename \\_Traits >](#)  
[bool std::basic\\_ios<\\_CharT, \\_Traits>::good \( \) const](#) [inline], [inherited]

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.250.5.25 ignore()** [1/3] [template<typename \\_CharT , typename \\_Traits >](#)  
[basic\\_istream<\\_CharT, \\_Traits> & std::basic\\_istream<\\_CharT, \\_Traits>::ignore \(](#)  
     [void \)](#) [inherited]

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#).

**6.250.5.26 ignore()** [2/3] [template<typename \\_CharT , typename \\_Traits >](#)  
[basic\\_istream<\\_CharT, \\_Traits> & std::basic\\_istream<\\_CharT, \\_Traits>::ignore \(](#)  
     [streamsize \\_\\_n \)](#) [inherited]

Simple extraction.

**Returns**

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#).

**6.250.5.27 ignore()** [3/3] `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::ignore (  
    streamsize __n,  
    int_type __delim ) [inherited]`

Discarding characters.

**Parameters**

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.250.5.28 imbue()** `template<typename _CharT, typename _Traits>  
locale std::basic_ios<_CharT, _Traits>::imbue (  
    const locale & __loc ) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios\\_base::imbue\(\)](#).

```
6.250.5.29  init()  template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic\\_fstream< \\_CharT, \\_Traits >::basic\\_fstream\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::basic\\_ifstream\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::basic\\_ios\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::basic\\_istream\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::basic\\_istream\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::basic\\_ofstream\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::basic\\_ostream\(\)](#), [std::basic\\_ostringstream< \\_CharT, \\_Traits, \\_Alloc >::basic\\_ostringstream\(\)](#), and [std::basic\\_stringstream< \\_CharT, \\_Traits, \\_Alloc >::basic\\_stringstream\(\)](#).

```
6.250.5.30  iword()  long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

#### Parameters

<a href="#"></a> <code>__ix</code>	Index into the array.
---	-----------------------

#### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

```
6.250.5.31  narrow()  template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

#### Parameters

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

```
6.250.5.32  operator bool()  template<typename _CharT , typename _Traits >
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

#### 6.250.5.33 operator"!")() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

#### 6.250.5.34 operator>>() [1/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

#### 6.250.5.35 operator>>() [2/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]
```

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`.

For more information, see the `io manip` header.

#### 6.250.5.36 operator>>() [3/17] `template<typename _CharT , typename _Traits >`

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (
    __streambuf_type * __sb ) [inherited]
```

Extracting into another streambuf.

#### Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, failbit is set.

References [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

#### 6.250.5.37 operator>>() [4/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    bool & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

**Parameters**

<code>_↵</code> <code>_n</code>	A variable of builtin integral type.
------------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.38 `operator>>()` [5/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>↵</code> <code>_↵</code> <code>↵</code> <code>_↵</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.39 `operator>>()` [6/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>↵</code> <code>_↵</code> <code>↵</code> <code>_↵</code> <code>f</code>	A variable of builtin floating point type.
--	--

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.40 `operator>>()` [7/17]** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`int & __n ) [inherited]`

Integer arithmetic extractors.

## Parameters

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.41 operator>>()** [8/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.250.5.42 operator>>()** [9/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

$\_n$	A variable of builtin integral type.
-------	--------------------------------------

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.43 operator>>()** [10/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

## Parameters

$\_f$	A variable of builtin floating point type.
-------	--

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.44 operator>>()** [11/17] `template<typename _CharT, typename _Traits >`

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.45 operator>>()** [12/17] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `short & __n ) [inherited]`

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.250.5.46 operator>>()** [13/17] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `unsigned int & __n ) [inline], [inherited]`

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.47 operator>>()** [14/17] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `unsigned long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.48 `operator>>()` [15/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.49 `operator>>()` [16/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned short & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.50 `operator>>()` [17/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( void *& __p ) [inline], [inherited]`

Basic arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_p$	A variable of pointer type.
-------------------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.250.5.51 peek()** `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (`  
`void ) [inherited]`

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.250.5.52 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
 Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.250.5.53 precision()** [2/2] `streamsize std::ios_base::precision (`  
`streamsize __prec ) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.250.5.54 putback()** `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::putback (`  
`char_type __c ) [inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::_M_gcount`, `std::ios_base::badbit`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, `std::basic_ios<_CharT, _Traits>::rdstate()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_streambuf<_CharT, _Traits>::sputbackc()`.

Referenced by `std::operator<<()`.

**6.250.5.55 pword()** `void *& std::ios_base::pword (int __ix) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.250.5.56 rdbuf()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type * std::basic_istream<_CharT, _Traits, _Alloc>::rdbuf () const [inline]`

Accessing the underlying buffer.

**Returns**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**6.250.5.57 rdbuf()** [2/2] `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

**Parameters**

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

**Returns**

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

**6.250.5.58 rdstate()** `template<typename _CharT, typename _Traits>`

```
ios_base::rdstate() const [inline], [inherited]
```

Returns the error state of the stream buffer.

**Returns**

A bit pattern (well, isn't everything?)

See `std::ios_base::rdstate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ios<_CharT, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::seek()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**6.250.5.59 read()** `template<typename _CharT, typename _Traits>`

```
basic_istream<_CharT, _Traits> & read (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**6.250.5.60 readsome()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream< _CharT, _Traits >::readsome (`  
`char_type * __s,`  
`streamsize __n ) [inherited]`

Extraction until the buffer is exhausted, but no more.

#### Parameters

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

#### Returns

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rddbuf() -> in_avail()`, called A here:

- if `A == -1`, sets eofbit and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, `std::min()`, `std::basic_ios< _CharT, _Traits >::rddbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.250.5.61 register\_callback()** `void std::ios_base::register_callback (`  
`event_callback __fn,`  
`int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.250.5.62 seekg()** `[1/2] template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::seekg (`  
`off_type __off,`  
`ios_base::seekdir __dir ) [inherited]`

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(__off, __dir)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.250.5.63 seekg()** [2/2] `template<typename _CharT, typename _Traits>`  
`basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::seekg (`  
`pos_type __pos ) [inherited]`

Changing the current read position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(__pos)`. If that function fails, sets failbit.

**Note**

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.250.5.64 setf()** [1/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.250.5.65 setf()** [2/2] `fmtflags` `std::ios_base::setf (`  
     `fmtflags __fmtfl,`  
     `fmtflags __mask )` [inline], [inherited]

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

#### Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.250.5.66 setstate()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::setstate (`  
     `iostate __state )` [inline], [inherited]

Sets additional flags in the error state.

#### Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~~sentry()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_istream< _CharT, _Traits >::sync()`, and `std::ws()`.

**6.250.5.67 str()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`__string_type std::basic_istreamstream< _CharT, _Traits, _Alloc >::str ( )` const [inline]

Copying out the string buffer.

#### Returns

`rddbuf() -> str()`

**6.250.5.68 str()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`void std::basic_istreamstream< _CharT, _Traits, _Alloc >::str (`  
     const `__string_type` & `__s )` [inline]

Setting a new buffer.

## Parameters

<code>_↔</code>	The string to use as a new sequence.
<code>_s</code>	

Calls `rdbuf() -> str(s)`.

**6.250.5.69 sync()** `template<typename _CharT, typename _Traits >  
int std::basic_istream< _CharT, _Traits >::sync (  
void ) [inherited]`

Synchronizing the stream buffer.

## Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

## Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.250.5.70 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (  
bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

## Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

## Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.250.5.71 tellg()** `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (  
void ) [inherited]`

Getting the current read position.

## Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References `std::ios_base::badbit`, `std::ios_base::cur`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::ios_base::in`, and `std::basic_ios<_CharT, _Traits>::rdbuf()`.

**6.250.5.72 tie() [1/2]** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie ( ) const [inline],  
[inherited]`

Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.250.5.73 tie() [2/2]** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie (  
basic_ostream<_CharT, _Traits> * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.250.5.74 unget()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::unget (  
void ) [inherited]`

Unextracting the previous character.

**Returns**

`*this`

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream<_CharT, _Traits>::M_gcount`, `std::basic_ios<_CharT, _Traits>::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**6.250.5.75 unsetf()** void std::ios\_base::unsetf (   
     fmtflags \_\_mask ) [inline], [inherited]

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.250.5.76 widen()** template<typename \_CharT , typename \_Traits >  
char\_type std::basic\_ios<\_CharT, \_Traits>::widen (   
     char \_\_c ) const [inline], [inherited]

Widens characters.

#### Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.250.5.77 width()** [1/2] streamsize std::ios\_base::width ( ) const [inline], [inherited]  
Flags access.

#### Returns

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, OutIter>::do_put()`, and `std::operator>>()`.

**6.250.5.78 width()** [2/2] streamsize std::ios\_base::width (   
     streamsize \_\_wide ) [inline], [inherited]

Changing flags.

#### Parameters

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.250.5.79 `xalloc()`** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`  
 Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**6.250.6 Member Data Documentation**

**6.250.6.1 `_M_gcount`** `template<typename _CharT, typename _Traits>  
 streamsize std::basic_istream<_CharT, _Traits>::_M_gcount [protected], [inherited]`

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream<_CharT, _Traits>::~~basic_istream()`, `std::basic_istream<_CharT, _Traits>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<char>::ignore()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<char>::putback()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

**6.250.6.2 `adjustfield`** `const fmtflags std::ios_base::adjustfield [static], [inherited]`

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.250.6.3 `app`** `const openmode std::ios_base::app [static], [inherited]`

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**6.250.6.4 `ate`** `const openmode std::ios_base::ate [static], [inherited]`

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**6.250.6.5 `badbit`** `const iostate std::ios_base::badbit [static], [inherited]`

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`,

std::operator>>(), std::basic\_istream< \_CharT, \_Traits >::operator>>(), std::basic\_ostream< \_CharT, \_Traits >::put(), std::basic\_istream< \_CharT, \_Traits >::putback(), std::basic\_istream< \_CharT, \_Traits >::read(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< char >::seekg(), std::basic\_istream< \_CharT, \_Traits >::seekg(), std::basic\_istream< \_CharT, \_Traits >::sync(), std::basic\_istream< char >::tellg(), std::basic\_istream< \_CharT, \_Traits >::tellg(), and std::ws().

**6.250.6.6 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of setf.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**6.250.6.7 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**6.250.6.8 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**6.250.6.9 boolalpha** const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract bool in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**6.250.6.10 cur** const `seekdir` std::ios\_base::cur [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::imbue()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_filebuf< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::basic_ostream< _CharT, _Traits >::tellp()`.

**6.250.6.11 dec** const `fmtflags` std::ios\_base::dec [static], [inherited]

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.250.6.12 end** const `seekdir` std::ios\_base::end [static], [inherited]

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`, and `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`.

**6.250.6.13 eofbit** const `iostate` std::ios\_base::eofbit [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_date()`, `std::time_get< _CharT, _InIter >::do_get_time()`, `std::time_get< _CharT, _InIter >::do_get_weekday()`, `std::time_get< _CharT, _InIter >::do_get_year()`, and `std::time_get< _CharT, _InIter >::do_get_zone()`.

`std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_istream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**6.250.6.14 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seekg()`, and `std::basic_ostream< _CharT, _Traits >::seekp()`.

**6.250.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.250.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.250.6.17 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::time_get< _CharT, _InIter >::do_get()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::time_get< _CharT, _InIter >::do_get_monthname()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::time_get< _CharT, _InIter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::time_get< _CharT, _InIter >::get()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< char >::readsome()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< char >::sync()`, `std::basic_istream< _CharT, _Traits >::unget()`, and `std::ws()`.

**6.250.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::hex()`.

**6.250.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, and `std::seekpos()`.

std::basic\_filebuf<\_CharT, \_Traits>::showmanyc(), std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::showmanyc(),  
 std::basic\_istream<\_CharT, \_Traits>::tellg(), std::basic\_filebuf<\_CharT, \_Traits>::underflow(), std::basic\_stringbuf<\_CharT, \_Traits, \_Alloc>::underflow(),  
 and std::basic\_filebuf<\_CharT, \_Traits>::xsgetn().

**6.250.6.20 internal** const `fmtflags` std::ios\_base::internal [static], [inherited]

Adds fill characters at a designated internal point in certain generated output, or identical to right if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.250.6.21 left** const `fmtflags` std::ios\_base::left [static], [inherited]

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), and [std::left\(\)](#).

**6.250.6.22 oct** const `fmtflags` std::ios\_base::oct [static], [inherited]

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.250.6.23 out** const `openmode` std::ios\_base::out [static], [inherited]

Open for output. Default for ofstream and fstream.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#),  
[std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekp\(\)](#),  
[std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**6.250.6.24 right** const `fmtflags` std::ios\_base::right [static], [inherited]

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.250.6.25 scientific** const `fmtflags` std::ios\_base::scientific [static], [inherited]

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.250.6.26 showbase** const `fmtflags` std::ios\_base::showbase [static], [inherited]

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.250.6.27 showpoint** const `fmtflags` std::ios\_base::showpoint [static], [inherited]

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.250.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.250.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.250.6.30 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.250.6.31 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.250.6.32 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

The documentation for this class was generated from the following files:

- `void unsetf` (fmtflags \_\_mask)
- `char_type widen` (char \_\_c) const
- `streamsize width` () const
- `streamsize width` (streamsize \_\_wide)
- `__ostream_type & operator<<` (\_\_ostream\_type &(\_\_pf)(\_\_ostream\_type &))
- `__ostream_type & operator<<` (\_\_ios\_type &(\_\_pf)(\_\_ios\_type &))
- `__ostream_type & operator<<` (ios\_base &(\_\_pf)(ios\_base &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<<` (long \_\_n)
- `__ostream_type & operator<<` (unsigned long \_\_n)
- `__ostream_type & operator<<` (bool \_\_n)
- `__ostream_type & operator<<` (short \_\_n)
- `__ostream_type & operator<<` (unsigned short \_\_n)
- `__ostream_type & operator<<` (int \_\_n)
- `__ostream_type & operator<<` (unsigned int \_\_n)
- `__ostream_type & operator<<` (long long \_\_n)
- `__ostream_type & operator<<` (unsigned long long \_\_n)
- `__ostream_type & operator<<` (double \_\_f)
- `__ostream_type & operator<<` (float \_\_f)
- `__ostream_type & operator<<` (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type & put` (char\_type \_\_c)
- `__ostream_type & write` (const char\_type \* \_\_s, streamsize \_\_n)
- `operator bool` () const
- `bool operator!` () const

### 6.251.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ofstream< _CharT, _Traits >
```

Controlling output for files.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This class supports reading from named files, using the inherited functions from `std::basic_ostream`. To control the associated sequence, an instance of `std::basic_filebuf` is used, which this page refers to as `sb`.

### 6.251.2 Member Typedef Documentation

**6.251.2.1** `__num_get_type` `template<typename _CharT, typename _Traits >`  
`typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios< _CharT, _Traits`  
`>::__num_get_type [inherited]`

These are non-standard types.

**6.251.2.2 event\_callback** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the ios_base object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

**6.251.2.3 fmtflags** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

**6.251.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.251.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.251.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.251.3 Member Enumeration Documentation****6.251.3.1 event** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.251.4 Constructor & Destructor Documentation**

**6.251.4.1 basic\_ofstream()** [1/4] `template<typename _CharT , typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream ( ) [inline]`

Default constructor.

Initializes `sb` using its default constructor, and passes `&sb` to the base class initializer. Does not open any files (you haven't given it a filename to open).

References [std::basic\\_ios< \\_CharT, \\_Traits >::init\(\)](#).

**6.251.4.2 basic\_ofstream()** [2/4] `template<typename _CharT , typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (`

`const char * __s,`

`ios_base::openmode __mode = ios_base::out ) [inline], [explicit]`

Create an output file stream.

Parameters

<code>__s</code>	Null terminated string specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::out` is automatically included in `__mode`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::init\(\)](#), and [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.251.4.3 basic\_ofstream()** [3/4] `template<typename _CharT , typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::basic_ofstream (`

`const std::string & __s,`

`ios_base::openmode __mode = ios_base::out ) [inline], [explicit]`

Create an output file stream.

Parameters

<code>__s</code>	<code>std::string</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::out` is automatically included in `__mode`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::init\(\)](#), and [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.251.4.4 basic\_ofstream()** [4/4] `template<typename _CharT , typename _Traits >  
template<typename _Path , typename _Require = _If_fs_path<_Path>>`

`std::basic_ofstream< _CharT, _Traits >::basic_ofstream (`

`const _Path & __s,`

`ios_base::openmode __mode = ios_base::out ) [inline]`

Create an output file stream.

Parameters

<code>__s</code>	<code>filesystem::path</code> specifying the filename.
<code>__mode</code>	Open file in specified mode (see <code>std::ios_base</code> ).

`ios_base::out` is automatically included in `__mode`.

**6.251.4.5 ~basic\_ofstream()** `template<typename _CharT , typename _Traits >  
std::basic_ofstream< _CharT, _Traits >::~~basic_ofstream ( ) [inline]`

The destructor does nothing.

The file is closed by the filebuf object, not the formatting stream.

## 6.251.5 Member Function Documentation

**6.251.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

### Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_date()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_weekday()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::num_put< _CharT, _Outlter >::do_put()`, `std::time_put< _CharT, _Outlter >::do_put()`, `std::time_get< _CharT, _Inlter >::get()`, and `std::time_put< _CharT, _Outlter >::put()`.

**6.251.5.2 bad()** `template<typename _CharT , typename _Traits >  
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`

Fast error checking.

### Returns

True if the badbit is set.

Note that other `iostate` flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.251.5.3 clear()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::clear (   
iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::se` and `std::basic_istream< _CharT, _Traits >::ungetc()`.

**6.251.5.4 close()** `template<typename _CharT , typename _Traits >  
void std::basic_ofstream< _CharT, _Traits >::close ( ) [inline]`

Close the file.

Calls `std::basic_filebuf::close()`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_filebuf< \\_CharT, \\_Traits >::close\(\)](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.251.5.5 copyfmt()** `template<typename _CharT , typename _Traits >`  
`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic\_ios< \_CharT, \_Traits > & \_\_rhs ) [inherited]`

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [std::\\_\\_addressof\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::exceptions\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**6.251.5.6 eof()** `template<typename _CharT , typename _Traits >`  
`bool std::basic\_ios< \_CharT, \_Traits >::eof ( ) const [inline], [inherited]`  
 Fast error checking.

#### Returns

True if the `eofbit` is set.

Note that other `iostate` flags may also be set.

References [std::ios\\_base::eofbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

**6.251.5.7 exceptions() [1/2]** `template<typename _CharT , typename _Traits >`  
`iostate std::basic\_ios< \_CharT, \_Traits >::exceptions ( ) const [inline], [inherited]`  
 Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#).

**6.251.5.8 exceptions() [2/2]** `template<typename _CharT , typename _Traits >`  
`void std::basic\_ios< \_CharT, \_Traits >::exceptions (`  
`iostate __except ) [inline], [inherited]`  
 Throwing exceptions on errors.

## Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#).

#### 6.251.5.9 fail() `template<typename _CharT , typename _Traits >`

`bool std::basic_ios< _CharT, _Traits >::fail ( ) const` [inline], [inherited]

Fast error checking.

## Returns

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other `iosstate` flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::operator bool\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

#### 6.251.5.10 fill() [1/2] `template<typename _CharT , typename _Traits >`

`char_type std::basic_ios< _CharT, _Traits >::fill ( ) const` [inline], [inherited]

Retrieves the *empty* character.

## Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

#### 6.251.5.11 fill() [2/2] `template<typename _CharT , typename _Traits >`

`char_type std::basic_ios< _CharT, _Traits >::fill (`  
`char_type __ch )` [inline], [inherited]

Sets a new *empty* character.

## Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

**Returns**

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.251.5.12 flags() [1/2]** `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.251.5.13 flags() [2/2]** `fmtflags std::ios_base::flags (   
fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.251.5.14 flush()** `template<typename _CharT , typename _Traits >   
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]`  
Synchronizing the stream buffer.**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits](#)

Referenced by [std::flush\(\)](#).

**6.251.5.15 getloc()** `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _OutIter>::do_put()`, `std::chrono::operator<<()`, `std::operator>>()`, and `std::ws()`.

**6.251.5.16 good()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::good() const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**6.251.5.17 imbue()** `template<typename _CharT, typename _Traits>`  
`locale std::basic_ios<_CharT, _Traits>::imbue (`  
`const locale & __loc) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References `std::ios_base::imbue()`.

**6.251.5.18 init()** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::init (`  
`basic_streambuf<_CharT, _Traits> * __sb) [protected], [inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream<_CharT, _Traits>::basic_fstream()`, `std::basic_ifstream<_CharT, _Traits>::basic_ifstream()`, `std::basic_ios<_CharT, _Traits>::basic_ios()`, `std::basic_istream<_CharT, _Traits>::basic_istream()`, `std::basic_istreamstream<_CharT, _Traits>::basic_istreamstream()`, `std::basic_ofstream<_CharT, _Traits>::basic_ofstream()`, `std::basic_ostream<_CharT, _Traits>::basic_ostream()`, `std::basic_ostringstream<_CharT, _Traits, _Alloc>::basic_ostringstream()`, and `std::basic_stringstream<_CharT, _Traits, _Alloc>::bas`

**6.251.5.19 is\_open()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ofstream< _CharT, _Traits >::is_open ( ) [inline]`  
 Wrapper to test for an open file.

**Returns**

`rdbuf() -> is_open()`

References `std::basic_filebuf< _CharT, _Traits >::is_open()`.

**6.251.5.20 iword()** `long & std::ios_base::iword (`  
`int __ix ) [inline], [inherited]`  
 Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.251.5.21 narrow()** `template<typename _CharT , typename _Traits >`  
`char std::basic_ios< _CharT, _Traits >::narrow (`  
`char_type __c,`  
`char __dfault ) const [inline], [inherited]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).narrow(c,dfault)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.251.5.22 open()** [1/3] `template<typename _CharT , typename _Traits >`  
`template<typename _Path >`  
`_If_fs_path< _Path, void > std::basic_ofstream< _CharT, _Traits >::open (`  
`const _Path & __s,`  
`ios_base::openmode __mode = ios_base::out ) [inline]`

Opens an external file.

## Parameters

<code>__s</code>	The name of the file, as a filesystem::path.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.251.5.23 open()** [2/3] `template<typename _CharT , typename _Traits >`

```
void std::basic_ofstream< _CharT, _Traits >::open (
    const char * __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(__s,__mode|out)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::failbit](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), [std::ios\\_base::out](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

Referenced by [std::basic\\_ofstream< \\_CharT, \\_Traits >::basic\\_ofstream\(\)](#), and [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#).

**6.251.5.24 open()** [3/3] `template<typename _CharT , typename _Traits >`

```
void std::basic_ofstream< _CharT, _Traits >::open (
    const std::string & __s,
    ios_base::openmode __mode = ios_base::out ) [inline]
```

Opens an external file.

## Parameters

<code>__s</code>	The name of the file.
<code>__mode</code>	The open mode flags.

Calls `std::basic_filebuf::open(s,mode|out)`. If that function fails, `failbit` is set in the stream's error state.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), [std::ios\\_base::failbit](#), [std::basic\\_filebuf< \\_CharT, \\_Traits >::open\(\)](#), [std::ios\\_base::out](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.251.5.25 operator bool()** `template<typename _CharT , typename _Traits >`

```
std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#).

**6.251.5.26 operator""()** `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`.

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.251.5.27 operator<<()** [1/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`__ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**6.251.5.28 operator<<()** [2/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`__ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**6.251.5.29 operator<<()** [3/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`__streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

#### Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.251.5.30 operator<<()** [4/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`bool __n ) [inline], [inherited]`

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.251.5.31 operator<<()** [5/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ofstream< \_CharT, \_Traits >::operator<< (  
     const void \* \_\_p ) [inline], [inherited]

Pointer arithmetic inserters.

**Parameters**

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.251.5.32 operator<<()** [6/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ofstream< \_CharT, \_Traits >::operator<< (  
     double \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.251.5.33 operator<<()** [7/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ofstream< \_CharT, \_Traits >::operator<< (  
     float \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

<code>__f</code>	A variable of builtin floating point type.
------------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.34 `operator<<()` [8/17]** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`int __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.35 `operator<<()` [9/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `io manip` header.

**6.251.5.36 `operator<<()` [10/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.37 `operator<<()` [11/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long double __f ) [inline], [inherited]`

Floating point arithmetic inserters.

## Parameters

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\leftrightarrow$	
$\_ \leftrightarrow$	
$f$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.251.5.38 operator<<()** [12/17] `template<typename _CharT , typename _Traits > \_\_ostream\_type & std::basic\_ofstream< _CharT, _Traits >::operator<< ( long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.251.5.39 operator<<()** [13/17] `template<typename _CharT , typename _Traits > basic\_ofstream< _CharT, _Traits > & std::basic\_ofstream< _CharT, _Traits >::operator<< ( short __n ) [inherited]`

Integer arithmetic inserters.

## Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put](#)< \_CharT, \_Outiter >::put(), and [std::basic\\_ios](#)< \_CharT, \_Traits >

**6.251.5.40 operator<<()** [14/17] `template<typename _CharT , typename _Traits > \_\_ostream\_type & std::basic\_ofstream< _CharT, _Traits >::operator<< ( unsigned int __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.41 `operator<<()` [15/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`unsigned long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.42 `operator<<()` [16/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`unsigned long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.43 `operator<<()` [17/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`unsigned short __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.251.5.44 precision()** [1/2] `streamsize` `std::ios_base::precision ( ) const` [inline], [inherited]  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**6.251.5.45 precision()** [2/2] `streamsize` `std::ios_base::precision (`  
`streamsize __prec )` [inline], [inherited]

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.251.5.46 put()** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (`  
`char_type __c )` [inherited]

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::endl()`, and `std::ends()`.

**6.251.5.47 pword()** `void *& std::ios_base::pword (`  
`int __ix )` [inline], [inherited]

Access to void pointer array.

## Parameters

<code>_↔ _ix</code>	Index into the array.
-------------------------	-----------------------

## Returns

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.251.5.48 rdbuf()** [1/2] `template<typename _CharT , typename _Traits >  
__filebuf_type * std::basic_ofstream< _CharT, _Traits >::rdbuf ( ) const [inline]`  
Accessing the underlying buffer.

## Returns

The current basic\_filebuf buffer.

This hides both signatures of std::basic\_ios::rdbuf().

**6.251.5.49 rdbuf()** [2/2] `template<typename _CharT , typename _Traits >  
basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (   
    basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument rdbuf ( ) , which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.251.5.50 rdstate()** `template<typename _CharT , typename _Traits >  
iostate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See std::ios\_base::iostate for the possible bit values. Most users will call one of the interpreting wrappers, e.g., good().

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::see()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unset()`.

**6.251.5.51 register\_callback()** `void std::ios_base::register_callback (`  
    `event_callback __fn,`  
    `int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

**Parameters**

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.251.5.52 seekp()** [1/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (`  
    `off_type __off,`  
    `ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.251.5.53 seekp()** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (`  
    `pos_type __pos ) [inherited]`

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::failbit`, `std::ios_base::out`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.251.5.54 setf()** [1/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

#### Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.251.5.55 setf()** [2/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask )` [inline], [inherited]

Setting new format flags.

#### Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

#### Returns

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.251.5.56 setstate()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::setstate (`  
`iostate __state )` [inline], [inherited]

Sets additional flags in the error state.

#### Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic\\_ios< \\_CharT, \\_Traits >::clear\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::close\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::flush\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::read\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::readsome\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sync\(\)](#), and [std::ws\(\)](#).

**6.251.5.57 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.251.5.58 tellp()** `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]`  
Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**6.251.5.59 tie()** [1/2] `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**6.251.5.60 tie()** [2/2] `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

**6.251.5.61 unsetf()** void std::ios\_base::unsetf (   
 `fmtflags __mask` ) [inline], [inherited]

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.251.5.62 widen()** template<typename \_CharT , typename \_Traits >  
char\_type std::basic\_ios<\_CharT, \_Traits>::widen (   
 `char __c` ) const [inline], [inherited]

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.251.5.63 width()** [1/2] `streamsize` std::ios\_base::width ( ) const [inline], [inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.251.5.64 width()** [2/2] `streamsize` std::ios\_base::width (   
 `streamsize __wide` ) [inline], [inherited]

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.251.5.65 `write()`** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (`  
    `const char_type * __s,`  
    `streamsize __n ) [inherited]`

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**6.251.5.66 `xalloc()`** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`  
Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**6.251.6 Member Data Documentation**

**6.251.6.1 adjustfield** const `fmtflags` std::ios\_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put< _CharT, _OutIter >::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.251.6.2 app** const `openmode` std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf< _CharT, _Traits >::_M_set_buffer()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**6.251.6.3 ate** const `openmode` std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf< _CharT, _Traits >::open()`.

**6.251.6.4 badbit** const `iostate` std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::basic_istream< char >::get()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_istream< char >::seek()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< char >::tellg()`, `std::basic_istream< _CharT, _Traits >::tellg()`, and `std::ws()`.

**6.251.6.5 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, `std::hex()`, and `std::oct()`.

**6.251.6.6 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf< _CharT, _Traits >::seekpos()`.

**6.251.6.7 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.binary>.

Referenced by `std::basic_filebuf< _CharT, _Traits >::showmanyc()`.

**6.251.6.8 boolalpha** const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get< _CharT, _InIter >::do_get()`, `std::num_put< _CharT, _OutIter >::do_put()`, and `std::noboolalpha()`.

**6.251.6.9 cur** `const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::seekoff()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.251.6.10 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.251.6.11 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.251.6.12 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.251.6.13 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.251.6.14 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.251.6.15 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.251.6.16 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::time_get< _CharT, _Inlter >::do_get()`, `std::num_get< _CharT, _Inlter >::do_get()`, `std::time_get< _CharT, _Inlter >::do_get_monthname()`, `std::time_get< _CharT, _Inlter >::do_get_year()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::time_get< _CharT, _Inlter >::get()`, `std::basic_istream< _CharT, _Traits >::ignore()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::basic_ostream< _CharT, _Traits >::put()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::sync()`, `std::basic_istream< _CharT, _Traits >::unset()`, and `std::ws()`.

**6.251.6.17 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get< _CharT, _Inlter >::do_get()`, `std::num_put< _CharT, _Outlter >::do_put()`, and `std::hex()`.

**6.251.6.18 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::M_set_buffer()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_filebuf< _CharT, _Traits >::pbackfail()`, `std::basic_istream< _CharT, _Traits >::seekoff()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekpos()`, `std::basic_filebuf< _CharT, _Traits >::showmanyc()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc()`, `std::basic_istream< _CharT, _Traits >::tellg()`, `std::basic_filebuf< _CharT, _Traits >::underflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::xsgetn()`, and `std::basic_filebuf< _CharT, _Traits >::xsgetn()`.

**6.251.6.19 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

**6.251.6.20 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put< _CharT, _Outlter >::do_put()`, and `std::left()`.

**6.251.6.21 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

**6.251.6.22 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf< _CharT, _Traits >::M_set_buffer()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_filebuf< _CharT, _Traits >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::overflow()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekoff()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::seekp()`, `std::basic_ostream< _CharT, _Traits >::tellp()`, and `std::basic_filebuf< _CharT, _Traits >::xsputn()`.

**6.251.6.23 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.251.6.24 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.251.6.25 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.251.6.26 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.251.6.27 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.251.6.28 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.251.6.29 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.251.6.30 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.251.6.31 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

The documentation for this class was generated from the following file:

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- `__ostream_type & operator<< (long __n)`
  - `__ostream_type & operator<< (unsigned long __n)`
  - `__ostream_type & operator<< (bool __n)`
  - `__ostream_type & operator<< (short __n)`
  - `__ostream_type & operator<< (unsigned short __n)`
  - `__ostream_type & operator<< (int __n)`
  - `__ostream_type & operator<< (unsigned int __n)`
  - `__ostream_type & operator<< (long long __n)`

- 
- `__ostream_type & operator<< (double __f)`
  - `__ostream_type & operator<< (float __f)`
  - `__ostream_type & operator<< (long double __f)`

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the `sentry` documentation for more.

If the `sentry` status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- `__ostream_type` & `put` (`char_type __c`)
- `__ostream_type` & `write` (`const char_type * __s`, `streamsize __n`)

- `operator bool` () const
- `bool operator!` () const

## Friends

- class **sentry**

### 6.252.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_ostream< _CharT, _Traits >
```

Template class basic\_ostream.

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is the base class for all output streams. It provides text formatting of all builtin types, and communicates with any class derived from `basic_streambuf` to do the actual output.

### 6.252.2 Member Typedef Documentation

**6.252.2.1 `__num_get_type`** `template<typename _CharT, typename _Traits>`  
`typedef num_get<_CharT, istreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits>::__num_get_type [inherited]`

These are non-standard types.

**6.252.2.2 `event_callback`** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b, int __i) [inherited]`

The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the <code>ios_base</code> object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several `ios_base` and `basic_ios` functions, specifically `imbue()`, `copyfmt()`, and `~ios()`.

**6.252.2.3 `fmtflags`** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- `boolalpha`
- `dec`
- `fixed`
- `hex`
- `internal`
- `left`

- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

#### **6.252.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- badbit
- eofbit
- failbit
- goodbit

#### **6.252.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- app
- ate
- binary
- in
- out
- trunc

**6.252.2.6 seekdir** typedef `_Ios_Seekdir` `std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.252.3 Member Enumeration Documentation****6.252.3.1 event** enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.252.4 Constructor & Destructor Documentation****6.252.4.1 basic\_ostream()** template<typename `_CharT` , typename `_Traits` >

```
std::basic_ostream<_CharT, _Traits>::basic_ostream (
    __streambuf_type * __sb ) [inline], [explicit]
```

Base constructor.

This ctor is almost never called by the user directly, rather from derived classes' initialization lists, which pass a pointer to their own stream buffer.

References `std::basic_ios<_CharT, _Traits>::init()`.

**6.252.4.2 ~basic\_ostream()** template<typename `_CharT` , typename `_Traits` >

```
virtual std::basic_ostream<_CharT, _Traits>::~~basic_ostream ( ) [inline], [virtual]
```

Base destructor.

This does very little apart from providing a virtual base dtor.

**6.252.5 Member Function Documentation****6.252.5.1 \_M\_getloc()** const `locale` & `std::ios_base::_M_getloc ( )` const [inline], [inherited]

Locale access.

Returns

A reference to the current locale.

Like `getloc` above, but returns a reference instead of generating a copy.

Referenced by `std::money_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::time_get<_CharT, _InIter>::get()`, and `std::time_put<_CharT, _OutIter>::put()`.

**6.252.5.2 bad()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]`  
 Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::badbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`.

**6.252.5.3 clear()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios< _CharT, _Traits >::clear (`  
`iostate __state = goodbit ) [inherited]`  
 [Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See `std::ios_base::iostate` for the possible bit values. Most users will not need to pass an argument.

Referenced by `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::__detail::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ios< _CharT, _Traits >::se` and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.252.5.4 copyfmt()** `template<typename _CharT , typename _Traits >`  
`basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (`  
`const basic_ios< _CharT, _Traits > & __rhs ) [inherited]`  
 Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

#### Returns

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios< _CharT, _Traits >::exceptions()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios< _CharT, _Traits >::tie()`, `std::tie()`, and `std::ios_base::width()`.

**6.252.5.5 eof()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::eof ( ) const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

References [std::ios\\_base::eofbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

**6.252.5.6 exceptions() [1/2]** `template<typename _CharT , typename _Traits >`  
`iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`  
 Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.252.5.7 exceptions() [2/2]** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iostate __except ) [inline], [inherited]`  
 Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#).

**6.252.5.8 fail()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if either the badbit or the failbit is set.

Checking the badbit in `fail()` is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::operator bool\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::operator!\(\)](#),

[std::basic\\_istream<\\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits >::tellp\(\)](#).

**6.252.5.9 fill()** [1/2] `template<typename _CharT, typename _Traits >`  
`char_type std::basic_ios<_CharT, _Traits >::fill ( ) const [inline], [inherited]`

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits >::fill\(\)](#).

**6.252.5.10 fill()** [2/2] `template<typename _CharT, typename _Traits >`  
`char_type std::basic_ios<_CharT, _Traits >::fill (`  
`char_type __ch ) [inline], [inherited]`

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via `setw`), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits >::fill\(\)](#).

**6.252.5.11 flags()** [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

#### Returns

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::~~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.252.5.12 flags()** [2/2] `fmtflags std::ios_base::flags (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

#### Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.252.5.13 flush()** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush`  
Synchronizing the stream buffer.

**Returns**

\*this

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::flush()`.

**6.252.5.14 getloc()** `locale std::ios_base::getloc() const [inline], [inherited]`

Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::money_put<_CharT, _Outiter>::do_put()`, `std::chrono::operator<<()`, `std::operator>>()`, and `std::ws()`.

**6.252.5.15 good()** `template<typename _CharT, typename _Traits>  
bool std::basic_ios<_CharT, _Traits>::good() const [inline], [inherited]`  
Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

References `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, and `std::__detail::operator>>()`.

**6.252.5.16 imbue()** `template<typename _CharT, typename _Traits>  
locale std::basic_ios<_CharT, _Traits>::imbue (  
const locale & __loc) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

References `std::ios_base::imbue()`.

```
6.252.5.17 init() template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< _CharT, _Traits >::basic_ios()`, `std::basic_istream< _CharT, _Traits >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< _CharT, _Traits >::basic_ostream()`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >::basic_ostreamstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

```
6.252.5.18 iword() long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

```
6.252.5.19 narrow() template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __default ) const [inline], [inherited]
```

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

## Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.252.5.20 operator bool()** `template<typename _CharT, typename _Traits>`

```
std::basic_ios<_CharT, _Traits>::operator bool ( ) const [inline], [explicit], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#).

**6.252.5.21 operator"!()** `template<typename _CharT, typename _Traits>`

```
bool std::basic_ios<_CharT, _Traits>::operator! ( ) const [inline], [inherited]
```

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#).

**6.252.5.22 operator<<()** [1/17] `template<typename _CharT, typename _Traits>`

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ios_type &(*)(__ios_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.252.5.23 operator<<()** [2/17] `template<typename _CharT, typename _Traits>`

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    __ostream_type &(*)(__ostream_type &) __pf ) [inline]
```

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.252.5.24 operator<<()** [3/17] `template<typename _CharT, typename _Traits>`

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    __streambuf_type * __sb )
```

Extracting from another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted),

or

- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.252.5.25 operator<<() [4/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`bool __n ) [inline]`

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.26 operator<<() [5/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`const void * __p ) [inline]`

Pointer arithmetic inserters.

#### Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.27 operator<<() [6/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`double __f ) [inline]`

Floating point arithmetic inserters.

#### Parameters

<code>f</code>	A variable of builtin floating point type.
----------------	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.252.5.28 operator<<()** [7/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
float \_\_f ) [inline]

Floating point arithmetic inserters.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.252.5.29 operator<<()** [8/17] template<typename \_CharT , typename \_Traits >  
basic\_ostream<\_CharT, \_Traits> & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
int \_\_n )

Integer arithmetic inserters.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.252.5.30 operator<<()** [9/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
ios\_base &(\*) (ios\_base &) \_\_pf ) [inline]

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

**6.252.5.31 operator<<()** [10/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
long \_\_n ) [inline]

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
$\_n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.32 operator<<()** [11/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long double __f ) [inline]`

Floating point arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$f$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.33 operator<<()** [12/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long long __n ) [inline]`

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$	A variable of builtin integral type.
$\_n$	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.34 operator<<()** [13/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`short __n )`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>](#)

**6.252.5.35 operator<<()** [14/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< ( unsigned int __n ) [inline]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.36 operator<<()** [15/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< ( unsigned long __n ) [inline]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

## Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.37 operator<<()** [16/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< ( unsigned long long __n ) [inline]`

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>__n</code>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.38 operator<<()** [17/17] `template<typename _CharT , typename _Traits > __ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< ( unsigned short __n ) [inline]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.252.5.39 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios< _CharT, _Traits >::copyfmt()`, and `std::chrono::operator<<()`.

**6.252.5.40 precision()** [2/2] `streamsize std::ios_base::precision ( streamsize __prec ) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.252.5.41 put()** `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put ( char_type __c )`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert \_\_c.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

Referenced by [std::endl\(\)](#), and [std::ends\(\)](#).

**6.252.5.42 pword()** `void *& std::ios_base::pword (int __ix) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<a href="#">↔</a> __ix	Index into the array.
---------------------------	-----------------------

**Returns**

A reference to a void\* associated with the index.

The pword function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use xalloc to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.252.5.43 rdbuf()** [1/2] `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf () const [inline], [inherited]`

Accessing the underlying buffer.

**Returns**

The current stream buffer.

This does not change the state of the stream.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::getline\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::operator<<\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<char>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readson](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), and [std::ws\(\)](#).

**6.252.5.44 rdbuf()** [2/2] `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf (basic_streambuf<_CharT, _Traits> * __sb) [inherited]`

Changing the underlying buffer.

## Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

## Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.252.5.45 rdbuf()** `template<typename _CharT , typename _Traits >`

`ios_base::basic_ios< _CharT, _Traits >::rdbuf ( ) const` [inline], [inherited]

Returns the error state of the stream buffer.

## Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.252.5.46 register\_callback()** `void std::ios_base::register_callback (`

`event_callback __fn,`  
`int __index )` [inherited]

Add the callback `__fn` with parameter `__index`.

## Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.252.5.47 seekp()** [1/2] `template<typename _CharT , typename _Traits >`

`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (`  
`off_type __off,`  
`ios_base::seekdir __dir )`

Changing the current write position.

## Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.252.5.48 seekp()** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (`  
`pos_type __pos )`

Changing the current write position.

## Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

## Returns

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.252.5.49 setf()** [1/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

## Returns

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.252.5.50 setf()** [2/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask ) [inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

**Returns**

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

**6.252.5.51 setstate()** `template<typename _CharT , typename _Traits >  
void std::basic_ios< _CharT, _Traits >::setstate (`  
`iostate __state ) [inline], [inherited]`

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios< _CharT, _Traits >::clear()`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::~sentry()`, `std::basic_ifstream< _CharT, _Traits >::close()`, `std::basic_ofstream< _CharT, _Traits >::close()`, `std::basic_fstream< _CharT, _Traits >::close()`, `std::basic_ostream< _CharT, _Traits >::flush()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::basic_ifstream< _CharT, _Traits >::open()`, `std::basic_fstream< _CharT, _Traits >::open()`, `std::basic_ofstream< _CharT, _Traits >::open()`, `std::basic_ostream< _CharT, _Traits >::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream< _CharT, _Traits >::operator>>()`, `std::tr2::operator>>()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::read()`, `std::basic_istream< _CharT, _Traits >::readsome()`, `std::basic_istream< _CharT, _Traits >::seekg()`, `std::basic_ostream< _CharT, _Traits >::seekp()`, and `std::ws()`.

**6.252.5.52 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (`  
`bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

**Parameters**

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

**Returns**

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.252.5.53 tellp()** `template<typename _CharT , typename _Traits >  
basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp`

Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rddbuf() -> pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rddbuf()`.

**6.252.554 tie()** [1/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline],`  
 [inherited]

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**6.252.555 tie()** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie (`  
     `basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

#### Returns

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.252.556 unsetf()** `void std::ios_base::unsetf (`  
     `fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.252.557 widen()** `template<typename _CharT , typename _Traits >`  
`char_type std::basic_ios< _CharT, _Traits >::widen (`  
     `char __c ) const [inline], [inherited]`

Widens characters.

#### Parameters

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.252.5.58 width()** [1/2] `streamsize` `std::ios_base::width ( ) const` [inline], [inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.252.5.59 width()** [2/2] `streamsize` `std::ios_base::width (`  
`streamsize __wide )` [inline], [inherited]

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.252.5.60 write()** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (`  
`const char_type * __s,`  
`streamsize __n )`

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

\*this

Characters are copied from \_\_\_s and inserted into the stream until one of the following happens:

- \_\_\_n characters are inserted
- inserting into the output sequence fails (in this case, badbit will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**6.252.5.61 xalloc()** static int std::ios\_base::xalloc ( ) throw ( ) [static], [inherited]

Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the iword and pword functions. The expectation is that an application calls xalloc in order to obtain an index in the iword and pword arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. xalloc is guaranteed to return an index that is safe to use in the iword and pword arrays.

**6.252.6 Member Data Documentation**

**6.252.6.1 adjustfield** const fmtflags std::ios\_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of setf.

Referenced by [std::num\\_put<\\_CharT, \\_Outlttr>::do\\_put\(\)](#), [std::internal\(\)](#), [std::left\(\)](#), and [std::right\(\)](#).

**6.252.6.2 app** const openmode std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::M\\_set\\_buffer\(\)](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**6.252.6.3 ate** const openmode std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::open\(\)](#).

**6.252.6.4 badbit** const iostate std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::bad\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::put\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_istream<char>::seekg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), [std::basic\\_istream<char>::tellg\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), and [std::ws\(\)](#).

**6.252.6.5 basefield** `const fmtflags std::ios_base::basefield [static], [inherited]`

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

**6.252.6.6 beg** `const seekdir std::ios_base::beg [static], [inherited]`

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**6.252.6.7 binary** `const openmode std::ios_base::binary [static], [inherited]`

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**6.252.6.8 boolalpha** `const fmtflags std::ios_base::boolalpha [static], [inherited]`

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.252.6.9 cur** `const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::seekoff()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.252.6.10 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.252.6.11 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.252.6.12 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.252.6.13 failbit** `const ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.252.6.14 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.252.6.15 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.252.6.16 goodbit** `const ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unset()`, and `std::ws()`.

**6.252.6.17 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

**6.252.6.18 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.252.6.19 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.252.6.20 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), and [std::left\(\)](#).

**6.252.6.21 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.252.6.22 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf<\\_CharT, \\_Traits>::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#),

[std::basic\\_filebuf<\\_CharT, \\_Traits>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), [std::basic\\_stringbuf<\\_CharT,](#)

[std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::seekoff\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_stringbuf<\\_CharT,](#)

[std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#), and [std::basic\\_filebuf<\\_CharT, \\_Traits>::xsputn\(\)](#).

**6.252.6.23 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.252.6.24 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.252.6.25 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.252.6.26 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.252.6.27 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.252.6.28 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.252.6.29 trunc** `const openmode std::ios_base::trunc [static], [inherited]`  
 Truncate an existing stream when opening. Default for `ofstream`.

**6.252.6.30 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`  
 Flushes output after each output operation.  
 Referenced by `std::basic_ostream< _CharT, _Traits >::sentry::~~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

**6.252.6.31 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`  
 Replaces certain lowercase letters with their uppercase equivalents in generated output.  
 Referenced by `std::num_put< _CharT, _Outiter >::do_put()`, `std::nouppercase()`, and `std::uppercase()`.  
 The documentation for this class was generated from the following files:

- `iosfwd`
- `ostream`
- `ostream.tcc`

## 6.253 `std::basic_ostringstream< _CharT, _Traits, _Alloc >` Class Template Reference

Inheritance diagram for `std::basic_ostringstream< _CharT, _Traits, _Alloc >`:

### Public Types

- `typedef ctype< _CharT > __ctype_type`
  - `typedef basic_ios< _CharT, _Traits > __ios_type`
  - `typedef num_put< _CharT, ostreambuf_iterator< _CharT, _Traits > > __num_put_type`
  - `typedef basic_ostream< char_type, traits_type > __ostream_type`
  - `typedef basic_streambuf< _CharT, _Traits > __streambuf_type`
  - `typedef basic_string< _CharT, _Traits, _Alloc > __string_type`
  - `typedef basic_stringbuf< _CharT, _Traits, _Alloc > __stringbuf_type`
  - `typedef _Alloc allocator_type`
  - `typedef _CharT char_type`
  - `enum event { erase_event , imbue_event , copyfmt_event }`
  - `typedef void(* event_callback) (event __e, ios_base & __b, int __i)`
  - `typedef _ios_Fmtflags fmtflags`
  - `typedef traits_type::int_type int_type`
  - `typedef _ios_istate iostate`
  - `typedef traits_type::off_type off_type`
  - `typedef _ios_Openmode openmode`
  - `typedef traits_type::pos_type pos_type`
  - `typedef _ios_Seekdir seekdir`
  - `typedef _Traits traits_type`
- 
- `typedef num_get< _CharT, istreambuf_iterator< _CharT, _Traits > > __num_get_type`

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (bool \_\_n)

- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned short \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (int \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned int \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (long long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (unsigned long long \_\_n)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (double \_\_f)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (float \_\_f)
- [\\_\\_ostream\\_type](#) & [operator<<](#) (long double \_\_f)

### Unformatted Output Functions

All the unformatted output functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state. If `badbit` is on in the stream's exceptions mask, the exception will be rethrown without completing its actions.

- [\\_\\_ostream\\_type](#) & [put](#) (char\_type \_\_c)
- [\\_\\_ostream\\_type](#) & [write](#) (const char\_type \* \_\_s, [streamsize](#) \_\_n)
- [operator bool](#) () const
- bool [operator!](#) () const

### 6.253.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_ostringstream<_CharT, _Traits, _Alloc>
```

Controlling output for std::string.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits</a> <_CharT>.
<a href="#">_Alloc</a>	Allocator type, defaults to <a href="#">allocator</a> <_CharT>.

This class supports writing to objects of type std::basic\_string, using the inherited functions from std::basic\_ostream. To control the associated sequence, an instance of std::basic\_stringbuf is used, which this page refers to as *sb*.

### 6.253.2 Member Typedef Documentation

**6.253.2.1** [\\_\\_num\\_get\\_type](#) `template<typename _CharT, typename _Traits>`  
`typedef num\_get<_CharT, istreambuf\_iterator<_CharT, _Traits> > std::basic\_ios<_CharT, _Traits>::__num_get_type` [inherited]

These are non-standard types.

**6.253.2.2** [event\\_callback](#) `typedef void(* std::ios\_base::event\_callback) (event __e, ios\_base &__b,`

```
int __i) [inherited]
```

The type of an event callback function.

#### Parameters

<code>↔ _e</code>	One of the members of the event enum.
<code>↔ _b</code>	Reference to the ios_base object.
<code>↔ _i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

**6.253.2.3 fmtflags** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `fmtflags` are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

**6.253.2.4 iostate** `typedef _Ios_Iostate std::ios_base::iostate [inherited]`

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.253.2.5 openmode** `typedef _Ios_Openmode std::ios_base::openmode [inherited]`

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.253.2.6 seekdir** `typedef _Ios_Seekdir std::ios_base::seekdir [inherited]`

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.253.3 Member Enumeration Documentation****6.253.3.1 event** `enum std::ios_base::event [inherited]`

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.253.4 Constructor & Destructor Documentation**

**6.253.4.1 basic\_ostringstream()** [1/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream ( ) [inline]`

Default constructor starts with an empty string buffer.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.253.4.2 basic\_ostringstream()** [2/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (   
 ios_base::openmode __mode ) [inline], [explicit]`

Starts with an empty string buffer.

#### Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `mode|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.253.4.3 basic\_ostringstream()** [3/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_ostringstream< _CharT, _Traits, _Alloc >::basic_ostringstream (   
 const __string_type & __str,   
 ios_base::openmode __mode = ios_base::out ) [inline], [explicit]`

Starts with an existing string buffer.

#### Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

`ios_base::out` is automatically included in `mode`.

Initializes `sb` using `str` and `mode|out`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.253.4.4 ~basic\_ostringstream()** `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_ostringstream< _CharT, _Traits, _Alloc >::~~basic_ostringstream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the `stringbuf` object, not the formatting stream.

## 6.253.5 Member Function Documentation

**6.253.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

#### Returns

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_date\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_monthname\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_weekday\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::do\\_get\\_year\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::time\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::time\\_get< \\_CharT, \\_InIter >::get\(\)](#), and [std::time\\_put< \\_CharT, \\_OutIter >::put\(\)](#).

#### 6.253.5.2 bad() `template<typename _CharT , typename _Traits >`

```
bool std::basic_ios< _CharT, _Traits >::bad ( ) const [inline], [inherited]
```

Fast error checking.

#### Returns

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#).

#### 6.253.5.3 clear() `template<typename _CharT , typename _Traits >`

```
void std::basic_ios< _CharT, _Traits >::clear (
    iostate __state = goodbit ) [inherited]
```

[Re]sets the error state.

#### Parameters

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::exceptions\(\)](#), [std::basic\\_ifstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_fstream< \\_CharT, \\_Traits >::open\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::seekg\(\)](#), and [std::basic\\_istream< \\_CharT, \\_Traits >::unget\(\)](#).

#### 6.253.5.4 copyfmt() `template<typename _CharT , typename _Traits >`

```
basic_ios< _CharT, _Traits > & std::basic_ios< _CharT, _Traits >::copyfmt (
    const basic_ios< _CharT, _Traits > & __rhs ) [inherited]
```

Copies fields of `__rhs` into this.

#### Parameters

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References `std::__addressof()`, `std::basic_ios<_CharT, _Traits>::exceptions()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::ios_base::flags()`, `std::ios_base::getloc()`, `std::ios_base::precision()`, `std::basic_ios<_CharT, _Traits>::tie()`, `std::tie()`, and `std::ios_base::width()`.

**6.253.5.5 eof()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if the eofbit is set.

Note that other iostate flags may also be set.

References `std::ios_base::eofbit`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

**6.253.5.6 exceptions() [1/2]** `template<typename _CharT, typename _Traits>`  
`iostate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`  
 Throwing exceptions on errors.

**Returns**

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`.

**6.253.5.7 exceptions() [2/2]** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iostate __except ) [inline], [inherited]`

Throwing exceptions on errors.

**Parameters**

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
```

```
f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#).

#### 6.253.5.8 fail() `template<typename _CharT, typename _Traits>`

```
bool std::basic_ios<_CharT, _Traits>::fail ( ) const [inline], [inherited]
```

Fast error checking.

##### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::operator bool\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::operator!\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::tellg\(\)](#), and [std::basic\\_ostream<\\_CharT, \\_Traits>::tellp\(\)](#).

#### 6.253.5.9 fill() [1/2] `template<typename _CharT, typename _Traits>`

```
char_type std::basic_ios<_CharT, _Traits>::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

##### Returns

The current fill character.

It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

#### 6.253.5.10 fill() [2/2] `template<typename _CharT, typename _Traits>`

```
char_type std::basic_ios<_CharT, _Traits>::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

##### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

##### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space (' ') in the current locale.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#).

#### 6.253.5.11 flags() [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

**Returns**

The format control flags for both input and output.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::num\\_get<\\_CharT, \\_InIter>::do\\_get\(\)](#), [std::num\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.253.5.12 flags()** [2/2] `fmtflags` `std::ios_base::flags (`  
`fmtflags __fmtfl )` [inline], [inherited]

Setting new format flags all at once.

**Parameters**

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

**Returns**

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.253.5.13 flush()** `template<typename _CharT , typename _Traits >`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::flush` [inherited]  
 Synchronizing the stream buffer.

**Returns**

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets `badbit`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits](#)

Referenced by [std::flush\(\)](#).

**6.253.5.14 getloc()** `locale` `std::ios_base::getloc ( ) const` [inline], [inherited]  
 Locale access.

**Returns**

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_OutIter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.253.5.15 good()** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios<_CharT, _Traits>::good ( ) const` [inline], [inherited]  
 Fast error checking.

**Returns**

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.253.5.16 imbue()** `template<typename _CharT, typename _Traits>  
locale std::basic_ios<_CharT, _Traits>::imbue (  
    const locale & __loc ) [inherited]`

Moves to a new locale.

**Parameters**

<code>__loc</code>	The new locale.
--------------------	-----------------

**Returns**

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>.

References [std::ios\\_base::imbue\(\)](#).

**6.253.5.17 init()** `template<typename _CharT, typename _Traits>  
void std::basic_ios<_CharT, _Traits>::init (  
    basic_streambuf<_CharT, _Traits> * __sb ) [protected], [inherited]`

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by [std::basic\\_fstream<\\_CharT, \\_Traits>::basic\\_fstream\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::basic\\_ifstream\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::basic\\_ios\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::basic\\_istream\(\)](#), [std::basic\\_istreamstream<\\_CharT, \\_Traits>::basic\\_istreamstream\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::basic\\_ofstream\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::basic\\_ostream\(\)](#), [std::basic\\_ostringstream<\\_CharT, \\_Traits, \\_Alloc>::basic\\_ostringstream\(\)](#), and [std::basic\\_stringstream<\\_CharT, \\_Traits, \\_Alloc>::basic\\_stringstream\(\)](#).

**6.253.5.18 iword()** `long & std::ios_base::iword (  
    int __ix ) [inline], [inherited]`

Access to integer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.253.5.19 `narrow()`** `template<typename _CharT , typename _Traits >`  
`char std::basic_ios< _CharT, _Traits >::narrow (`  
`char_type __c,`  
`char __default ) const [inline], [inherited]`

Squeezes characters.

**Parameters**

<code>__c</code>	The character to narrow.
<code>__default</code>	The character to narrow.

**Returns**

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type> >(getloc()).narrow(c,default)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.253.5.20 `operator bool()`** `template<typename _CharT , typename _Traits >`  
`std::basic_ios< _CharT, _Traits >::operator bool ( ) const [inline], [explicit], [inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.253.5.21 `operator"!()`** `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::operator! ( ) const [inline], [inherited]`

The quick-and-easy status check.

This allows you to write constructs such as `if (!a_stream) ...` and `while (a_stream) ...`

References `std::basic_ios< _CharT, _Traits >::fail()`.

**6.253.5.22 `operator<<()`** [1/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`__ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `omanip` header.

**6.253.5.23 `operator<<()`** [2/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`__ostream_type &(*) (__ostream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like "`std::cout << std::endl`". For more information, see the `iomanip` header.

**6.253.5.24 operator<<()** [3/17] `template<typename _CharT, typename _Traits >`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (`  
`__streambuf_type * __sb ) [inherited]`

Extracting from another streambuf.

Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.253.5.25 operator<<()** [4/17] `template<typename _CharT, typename _Traits >`  
`__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (`  
`bool __n ) [inline], [inherited]`

Integer arithmetic inserters.

Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.26 operator<<()** [5/17] `template<typename _CharT, typename _Traits >`  
`__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (`  
`const void * __p ) [inline], [inherited]`

Pointer arithmetic inserters.

Parameters

<code>__p</code>	A variable of pointer type.
------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.27 operator<<()** [6/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`double __f ) [inline], [inherited]`

Floating point arithmetic inserters.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.28 operator<<()** [7/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`float __f ) [inline], [inherited]`

Floating point arithmetic inserters.

**Parameters**

↵	A variable of builtin floating point type.
↵	
↵	
↵	
<i>f</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.29 operator<<()** [8/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`int __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

↵	A variable of builtin integral type.
<i>n</i>	

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.30 operator<<()** [9/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
ios\_base &(\*) (ios\_base &) \_\_pf ) [inline], [inherited]

Interface for manipulators.

Manipulators such as std::endl and std::hex use these functions in constructs like "std::cout << std::endl". For more information, see the iomanip header.

**6.253.5.31 operator<<()** [10/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
long \_\_n ) [inline], [inherited]

Integer arithmetic inserters.

**Parameters**

$\leftarrow$ __n	A variable of builtin integral type.
---------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.32 operator<<()** [11/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
long double \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

$\leftarrow$ $\leftarrow$ $\leftarrow$ $\leftarrow$ f	A variable of builtin floating point type.
---	--

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.33 operator<<()** [12/17] template<typename \_CharT , typename \_Traits >  
\_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
long long \_\_n ) [inline], [inherited]

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.34 `operator<<()`** [13/17] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`short __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put< \\_CharT, \\_Outiter >::put\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >](#)

**6.253.5.35 `operator<<()`** [14/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`unsigned int __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.253.5.36 `operator<<()`** [15/17] `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`unsigned long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

$\leftrightarrow$ _n	A variable of builtin integral type.
-------------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.37 operator<<()** [16/17] `template<typename _CharT, typename _Traits>  
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (  
    unsigned long long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.38 operator<<()** [17/17] `template<typename _CharT, typename _Traits>  
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (  
    unsigned short __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.253.5.39 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, and `std::chrono::operator<<()`.

**6.253.5.40 precision()** [2/2] `streamsize std::ios_base::precision (  
    streamsize __prec ) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.253.5.41 `put()`** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::put (`  
`char_type __c ) [inherited]`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

`*this`

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

Referenced by `std::endl()`, and `std::ends()`.

**6.253.5.42 `pword()`** `void *& std::ios_base::pword (`  
`int __ix ) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.253.5.43 `rdbuf()`** `[1/2] template<typename _CharT , typename _Traits , typename _Alloc >`  
`__stringbuf_type * std::basic_ostringstream< _CharT, _Traits, _Alloc >::rdbuf ( ) const [inline]`

Accessing the underlying buffer.

**Returns**

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**6.253.5.44 rdbuf()** [2/2] `template<typename _CharT , typename _Traits >`  
`basic_streambuf< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::rdbuf (`  
`basic_streambuf< _CharT, _Traits > * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);           // ios == basic_ios<char>
```

**6.253.5.45 rdstate()** `template<typename _CharT , typename _Traits >`  
`iosstate std::basic_ios< _CharT, _Traits >::rdstate ( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios< _CharT, _Traits >::bad()`, `std::basic_ios< _CharT, _Traits >::eof()`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::basic_ios< _CharT, _Traits >::good()`, `std::basic_istream< _CharT, _Traits >::putback()`, `std::basic_istream< _CharT, _Traits >::seek()`, `std::basic_ios< _CharT, _Traits >::setstate()`, and `std::basic_istream< _CharT, _Traits >::unget()`.

**6.253.5.46 register\_callback()** `void std::ios_base::register_callback (`  
`event_callback __fn,`  
`int __index ) [inherited]`

Add the callback `__fn` with parameter `__index`.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.253.5.47 seekp()** [1/2] `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (`  
`off_type __off,`  
`ios_base::seekdir __dir ) [inherited]`

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.253.5.48 seekp()** [2/2] `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::seekp (`  
`pos_type __pos ) [inherited]`

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

`*this`

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets failbit.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

**6.253.5.49 setf()** [1/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set.

Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.253.5.50 setf()** [2/2] `fmtflags std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask ) [inline], [inherited]`

Setting new format flags.

## Parameters

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <i>fmtfl</i> .

## Returns

The previous format control flags.

This function clears *mask* in the format flags, then sets *fmtfl* & *mask*. An example mask is `ios_base::adjustfield`.

**6.253.5.51 setstate()** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::setstate (`  
`iostate __state ) [inline], [inherited]`

Sets additional flags in the error state.

## Parameters

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References `std::basic_ios<_CharT, _Traits>::clear()`, and `std::basic_ios<_CharT, _Traits>::rdstate()`.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::tr2::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_istream<_CharT, _Traits>::sync()`, and `std::ws()`.

**6.253.5.52 str()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc>`  
`__string_type std::basic_ostringstream<_CharT, _Traits, _Alloc>::str ( ) const [inline]`  
 Copying out the string buffer.

## Returns

`rddbuf() -> str()`

**6.253.5.53 str()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc>`  
`void std::basic_ostringstream<_CharT, _Traits, _Alloc>::str (`  
`const __string_type & __s ) [inline]`

Setting a new buffer.

## Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rddbuf() -> str(s)`.

**6.253.5.54 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio ( bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.253.5.55 tellp()** `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits >::pos_type std::basic_ostream< _CharT, _Traits >::tellp [inherited]`  
Getting the current write position.

#### Returns

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf()->pubseekoff(0, cur, out)`.

References `std::ios_base::cur`, `std::basic_ios< _CharT, _Traits >::fail()`, `std::ios_base::out`, and `std::basic_ios< _CharT, _Traits >::rdbuf()`.

**6.253.5.56 tie()** [1/2] `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( ) const [inline], [inherited]`

Fetches the current *tied* stream.

#### Returns

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_ostream< _CharT, _Traits >::sentry::sentry()`, and `std::basic_ios< _CharT, _Traits >::copyfmt()`.

**6.253.5.57 tie()** [2/2] `template<typename _CharT , typename _Traits > basic_ostream< _CharT, _Traits > * std::basic_ios< _CharT, _Traits >::tie ( basic_ostream< _CharT, _Traits > * __tiestr ) [inline], [inherited]`

Ties this stream to an output stream.

#### Parameters

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see tie() for more.

**6.253.5.58 unsetf()** void std::ios\_base::unsetf (   
 `fmtflags __mask` ) [inline], [inherited]

Clearing format flags.

**Parameters**

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.253.5.59 widen()** template<typename \_CharT , typename \_Traits >  
char\_type std::basic\_ios<\_CharT, \_Traits>::widen (   
 `char __c` ) const [inline], [inherited]

Widens characters.

**Parameters**

<code>__c</code>	The character to widen.
------------------	-------------------------

**Returns**

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

`std::use_facet<ctype<char_type>> >(getloc()).widen(c)`

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios<_CharT, _Traits>::fill()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::getline()`, `std::basic_istream<_CharT, _Traits>::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.253.5.60 width()** [1/2] `streamsize` std::ios\_base::width ( ) const [inline], [inherited]

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _Outiter>::do_put()`, and `std::operator>>()`.

**6.253.5.61 width()** [2/2] `streamsize` std::ios\_base::width (   
 `streamsize __wide` ) [inline], [inherited]

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.253.5.62 `write()`** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::write (`  
`const char_type * __s,`  
`streamsize __n ) [inherited]`

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**6.253.5.63 `xalloc()`** `static int std::ios_base::xalloc ( ) throw ( ) [static], [inherited]`  
 Access to unique indices.

**Returns**

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

**6.253.6 Member Data Documentation**

**6.253.6.1 adjustfield** const `fmtflags` std::ios\_base::adjustfield [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

**6.253.6.2 app** const `openmode` std::ios\_base::app [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**6.253.6.3 ate** const `openmode` std::ios\_base::ate [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

**6.253.6.4 badbit** const `iostate` std::ios\_base::badbit [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seek()`, `std::basic_istream<char>::seek()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<char>::tellg()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::ws()`.

**6.253.6.5 basefield** const `fmtflags` std::ios\_base::basefield [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

**6.253.6.6 beg** const `seekdir` std::ios\_base::beg [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**6.253.6.7 binary** const `openmode` std::ios\_base::binary [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**6.253.6.8 boolalpha** const `fmtflags` std::ios\_base::boolalpha [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.253.6.9 cur** `const seekdir std::ios_base::cur [static], [inherited]`

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::seekoff()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.253.6.10 dec** `const fmtflags std::ios_base::dec [static], [inherited]`

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.253.6.11 end** `const seekdir std::ios_base::end [static], [inherited]`

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.253.6.12 eofbit** `const iostate std::ios_base::eofbit [static], [inherited]`

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.253.6.13 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.253.6.14 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.253.6.15 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.253.6.16 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _Inlter>::do_get()`, `std::num_get<_CharT, _Inlter>::do_get()`, `std::time_get<_CharT, _Inlter>::do_get_monthname()`, `std::time_get<_CharT, _Inlter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::time_get<_CharT, _Inlter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.253.6.17 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _Inlter>::do_get()`, `std::num_put<_CharT, _Outlter>::do_put()`, and `std::hex()`.

**6.253.6.18 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsgetn()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.253.6.19 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by `std::internal()`.

**6.253.6.20 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by `std::num_put<_CharT, _Outlter>::do_put()`, and `std::left()`.

**6.253.6.21 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by `std::oct()`.

**6.253.6.22 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_ostream<_CharT, _Traits>::seekp()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::xsputn()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

**6.253.6.23 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.253.6.24 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.253.6.25 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.253.6.26 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.253.6.27 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.253.6.28 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.253.6.29 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.253.6.30 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::nounitbuf\(\)](#), and [std::unitbuf\(\)](#).

**6.253.6.31 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by [std::num\\_put<\\_CharT, \\_Outlter >::do\\_put\(\)](#), [std::nouppercase\(\)](#), and [std::uppercase\(\)](#).

### 6.254.1 Detailed Description

```
template<typename _Ch_type, typename _Rx_traits = regex_traits<_Ch_type>>
class std::basic_regex<_Ch_type, _Rx_traits >
```

A regular expression.

Specializations of this class template represent regular expressions constructed from sequences of character type `_Ch_type`. Use the `std::regex` typedef for `std::basic_regex<char>`.

A character sequence passed to the constructor will be parsed according to the chosen grammar, and used to create a state machine representing the regular expression. The regex object can then be passed to algorithms such as `std::regex_match` to match sequences of characters.

The `syntax_option_type` flag passed to the constructor selects from one of the supported regular expression grammars. The default is ECMAScript and the others are `basic`, `extended`, `awk`, `grep`, and `egrep`, which are variations on POSIX regular expressions.

Since

C++11

### 6.254.2 Constructor & Destructor Documentation

**6.254.2.1 `basic_regex()` [1/8]** template<typename \_Ch\_type, typename \_Rx\_traits = regex\_traits<\_Ch\_type>>

```
std::basic_regex<_Ch_type, _Rx_traits >::basic_regex ( ) [inline], [noexcept]
```

Constructs a basic regular expression that does not match any character sequence.

**6.254.2.2 `basic_regex()` [2/8]** template<typename \_Ch\_type, typename \_Rx\_traits = regex\_traits<\_Ch\_type>>

```
std::basic_regex<_Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    flag_type __f = ECMAScript ) [inline], [explicit]
```

Constructs a basic regular expression from the sequence [`__p`, `__p` + `char_traits<_Ch_type>::length(__p)`) interpreted according to the flags in `__f`.

## Parameters

<code>__p</code>	A pointer to the start of a C-style null-terminated string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

## Exceptions

<code>regex_error</code>	if <code>__p</code> is not a valid regular expression.
--------------------------	--

**6.254.2.3 basic\_regex()** [3/8] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const _Ch_type * __p,
    std::size_t __len,
    flag_type __f = ECMA_Script ) [inline]
```

Constructs a basic regular expression from the sequence [p, p + len) interpreted according to the flags in f.

## Parameters

<code>__p</code>	A pointer to the start of a string containing a regular expression.
<code>__len</code>	The length of the string containing the regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

## Exceptions

<code>regex_error</code>	if <code>__p</code> is not a valid regular expression.
--------------------------	--

**6.254.2.4 basic\_regex()** [4/8] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const basic_regex< _Ch_type, _Rx_traits > & __rhs ) [default]
```

Copy-constructs a basic regular expression.

## Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

**6.254.2.5 basic\_regex()** [5/8] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    basic_regex< _Ch_type, _Rx_traits > && __rhs ) [default], [noexcept]
```

Move-constructs a basic regular expression.

#### Parameters

<code>__rhs</code>	A regex object.
--------------------	-----------------

```
6.254.2.6 basic_regex() [6/8] template<typename _Ch_type , typename _Rx_traits = regex_traits<_↵
_Ch_type>>>
template<typename _Ch_traits , typename _Ch_alloc >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    const std::basic_string< _Ch_type, _Ch_traits, _Ch_alloc > & __s,
    flag_type __f = ECMAScript ) [inline], [explicit]
```

Constructs a basic regular expression from the string `s` interpreted according to the flags in `f`.

#### Parameters

<code>__s</code>	A string containing a regular expression.
<code>__f</code>	Flags indicating the syntax rules and options.

#### Exceptions

<code>regex_error</code>	if <code>__s</code> is not a valid regular expression.
--------------------------	--

```
6.254.2.7 basic_regex() [7/8] template<typename _Ch_type , typename _Rx_traits = regex_traits<_↵
_Ch_type>>>
template<typename _FwdIter >
std::basic_regex< _Ch_type, _Rx_traits >::basic_regex (
    _FwdIter __first,
    _FwdIter __last,
    flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from the range `[first, last)` interpreted according to the flags in `f`.

#### Parameters

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__f</code>	The format flags of the regular expression.

#### Exceptions

<code>regex_error</code>	if <code>[__first, __last)</code> is not a valid regular expression.
--------------------------	--

References `std::basic_regex< _Ch_type, _Rx_traits >::assign()`.

**6.254.2.8 basic\_regex()** [8/8] template<typename \_Ch\_type , typename \_Rx\_traits = regex\_traits<\_Ch\_type>>

```
std::basic_regex<_Ch_type, _Rx_traits>::basic_regex (
    initializer_list<_Ch_type> __l,
    flag_type __f = ECMAScript ) [inline]
```

Constructs a basic regular expression from an initializer list.

#### Parameters

<code>__l</code>	The initializer list.
<code>__f</code>	
<code>__f</code>	
<code>__f</code>	
<code>f</code>	

#### Exceptions

<code>regex_error</code>	if <code>__l</code> is not a valid regular expression.
--------------------------	--

**6.254.2.9 ~basic\_regex()** template<typename \_Ch\_type , typename \_Rx\_traits = regex\_traits<\_Ch\_type>>

```
std::basic_regex<_Ch_type, _Rx_traits>::~~basic_regex ( ) [inline]
```

Destroys a basic regular expression.

### 6.254.3 Member Function Documentation

**6.254.3.1 assign()** [1/7] template<typename \_Ch\_type , typename \_Rx\_traits = regex\_traits<\_Ch\_type>>

```
template<typename _InputIterator>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    _InputIterator __first,
    _InputIterator __last,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object.

#### Parameters

<code>__first</code>	The start of a range containing a valid regular expression.
<code>__last</code>	The end of a range containing a valid regular expression.
<code>__flags</code>	Syntax option flags.

## Exceptions

<i>regex_error</i>	if <i>p</i> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------	--

References [std::basic\\_regex<\\_Ch\\_type, \\_Rx\\_traits >::assign\(\)](#).

**6.254.3.2 assign()** [2/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    basic_regex<_Ch_type, _Rx_traits > && __rhs ) [inline], [noexcept]
```

Move-assigns one regular expression to another.

## Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

References [std::move\(\)](#).

**6.254.3.3 assign()** [3/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    const _Ch_type * __p,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a C-style null-terminated string containing a regular expression pattern.

## Parameters

<code>__p</code>	A pointer to a C-style null-terminated string containing a regular expression pattern.
<code>__flags</code>	Syntax option flags.

## Exceptions

<i>regex_error</i>	if <code>__p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------	--

**6.254.3.4 assign()** [4/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
basic_regex & std::basic_regex<_Ch_type, _Rx_traits >::assign (
    const _Ch_type * __p,
    size_t __len,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a C-style string containing a regular expression pattern.

## Parameters

<code>__p</code>	A pointer to a C-style string containing a regular expression pattern.
<code>__len</code>	The length of the regular expression pattern string.
<code>__flags</code>	Syntax option flags.

## Exceptions

<code>regex_error</code>	if <code>p</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------------	--

**6.254.3.5 `assign()`** [5/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    const basic_regex<_Ch_type, _Rx_traits> & __rhs ) [inline], [noexcept]
```

Assigns one regular expression to another.

## Parameters

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

Referenced by `std::basic_regex<_Ch_type, _Rx_traits>::basic_regex()`, `std::basic_regex<_Ch_type, _Rx_traits>::assign()`, and `std::basic_regex<_Ch_type, _Rx_traits>::operator=()`.

**6.254.3.6 `assign()`** [6/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```
template<typename _Ch_traits , typename _Alloc>
basic_regex & std::basic_regex<_Ch_type, _Rx_traits>::assign (
    const basic_string<_Ch_type, _Ch_traits, _Alloc> & __s,
    flag_type __flags = ECMAScript ) [inline]
```

Assigns a new regular expression to a regex object from a string containing a regular expression pattern.

## Parameters

<code>__s</code>	A string containing a regular expression pattern.
<code>__flags</code>	Syntax option flags.

## Exceptions

<code>regex_error</code>	if <code>__s</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, <code>*this</code> remains unchanged.
--------------------------	--

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.254.3.7 `assign()`** [7/7] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`

```

type>>
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::assign (
    initializer_list< _Ch_type > __l,
    flag_type __flags = ECMAScript ) [inline]

```

Assigns a new regular expression to a regex object.

#### Parameters

<code>__l</code>	An initializer list representing a regular expression.
<code>__flags</code>	Syntax option flags.

#### Exceptions

<code>regex_error</code>	if <code>__l</code> does not contain a valid regular expression pattern interpreted according to <code>__flags</code> . If <code>regex_error</code> is thrown, the object remains unchanged.
--------------------------	--

**6.254.3.8 flags()** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`  
`flag_type std::basic_regex< _Ch_type, _Rx_traits >::flags ( ) const [inline], [noexcept]`  
 Gets the flags used to construct the regular expression or in the last call to `assign()`.

**6.254.3.9 getloc()** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`  
`locale_type std::basic_regex< _Ch_type, _Rx_traits >::getloc ( ) const [inline], [noexcept]`  
 Gets the locale currently imbued in the regular expression object.

**6.254.3.10 imbue()** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`  
`locale_type std::basic_regex< _Ch_type, _Rx_traits >::imbue (`  
     `locale_type __loc ) [inline]`  
 Imbues the regular expression object with the given locale.

#### Parameters

<code>__loc</code>	A locale.
--------------------	-----------

References `std::swap()`.

**6.254.3.11 mark\_count()** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`  
`type>>`  
`unsigned int std::basic_regex< _Ch_type, _Rx_traits >::mark_count ( ) const [inline], [noexcept]`  
 Gets the number of marked subexpressions within the regular expression.

**6.254.3.12 operator=( ) [1/5]** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>`  
`type>>`  
`basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (`  
     `basic_regex< _Ch_type, _Rx_traits > && ) [default]`  
 Move-assigns one regular expression to another.

**6.254.3.13 operator=()** [2/5] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↵_type>>`

```
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
    const _Ch_type * __p ) [inline]
```

Replaces a regular expression with a new one constructed from a C-style null-terminated string.

#### Parameters

<code>↵ _p</code>	A pointer to the start of a null-terminated C-style string containing a regular expression.
-----------------------	---

References [std::basic\\_regex< \\_Ch\\_type, \\_Rx\\_traits >::assign\(\)](#).

**6.254.3.14 operator=()** [3/5] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↵_type>>`

```
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
    const basic_regex< _Ch_type, _Rx_traits > & ) [default]
```

Assigns one regular expression to another.

**6.254.3.15 operator=()** [4/5] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↵_type>>`

```
template<typename _Ch_traits , typename _Alloc >
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
    const basic_string< _Ch_type, _Ch_traits, _Alloc > & __s ) [inline]
```

Replaces a regular expression with a new one constructed from a string.

#### Parameters

<code>↵ _s</code>	A pointer to a string containing a regular expression.
-----------------------	--

References [std::basic\\_regex< \\_Ch\\_type, \\_Rx\\_traits >::assign\(\)](#).

**6.254.3.16 operator=()** [5/5] `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch↵_type>>`

```
basic_regex & std::basic_regex< _Ch_type, _Rx_traits >::operator= (
    initializer_list< _Ch_type > __l ) [inline]
```

Replaces a regular expression with a new one constructed from an initializer list.

#### Parameters

<code>↵ ↵ ↵ ↵ /</code>	The initializer list.
--	-----------------------

**Exceptions**

<i>regex_error</i>	if <code>__l</code> is not a valid regular expression.
--------------------	--

References [std::basic\\_regex<\\_Ch\\_type, \\_Rx\\_traits >::assign\(\)](#).

**6.254.3.17 swap()** `template<typename _Ch_type , typename _Rx_traits = regex_traits<_Ch_type>>  
void std::basic_regex<_Ch_type, _Rx_traits >::swap (  
    basic_regex<_Ch_type, _Rx_traits > & __rhs ) [inline], [noexcept]`

Swaps the contents of two regular expression objects.

**Parameters**

<code>__rhs</code>	Another regular expression object.
--------------------	------------------------------------

References [std::swap\(\)](#).

`_CharT2, _Traits2, _Alloc > &)`
- `class ostreambuf_iterator< char_type, traits_type >`

### 6.255.1 Detailed Description

```
template<typename _CharT, typename _Traits>
class std::basic_streambuf< _CharT, _Traits >
```

The actual work of input and output (interface).

#### Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

This is a base class. Derived stream buffers each control a pair of character sequences: one for input, and one for output.

Section [27.5.1] of the standard describes the requirements and behavior of stream buffer classes. That section (three paragraphs) is reproduced here, for simplicity and accuracy.

1. Stream buffers can impose various constraints on the sequences they control. Some constraints are:

- The controlled input sequence can be not readable.
- The controlled output sequence can be not writable.
- The controlled sequences can be associated with the contents of other representations for character sequences, such as external files.
- The controlled sequences can support operations *directly* to or from associated sequences.
- The controlled sequences can impose limitations on how the program can read characters from a sequence, write characters to a sequence, put characters back into an input sequence, or alter the stream position.

2. Each sequence is characterized by three pointers which, if non-null, all point into the same `charT` array object. The array object represents, at any moment, a (sub)sequence of characters from the sequence. Operations

performed on a sequence alter the values stored in these pointers, perform reads and writes directly to or from associated sequences, and alter *the stream position* and conversion state as needed to maintain this subsequence relationship. The three pointers are:

- the *beginning pointer*, or lowest element address in the array (called *xbeg* here);
- the *next pointer*, or next element address that is a current candidate for reading or writing (called *xnext* here);
- the *end pointer*, or first element address beyond the end of the array (called *xend* here).

3. The following semantic constraints shall always apply for any set of three pointers for a sequence, using the pointer names given immediately above:

- If *xnext* is not a null pointer, then *xbeg* and *xend* shall also be non-null pointers into the same `charT` array, as described above; otherwise, *xbeg* and *xend* shall also be null.
- If *xnext* is not a null pointer and *xnext* < *xend* for an output sequence, then a *write position* is available. In this case, *\*xnext* shall be assignable as the next element to write (to put, or to store a character value, into the sequence).
- If *xnext* is not a null pointer and *xbeg* < *xnext* for an input sequence, then a *putback position* is available. In this case, *xnext*[-1] shall have a defined value and is the next (preceding) element to store a character that is put back into the input sequence.
- If *xnext* is not a null pointer and *xnext* < *xend* for an input sequence, then a *read position* is available. In this case, *\*xnext* shall have a defined value and is the next element to read (to get, or to obtain a character value, from the sequence).

## 6.255.2 Member Typedef Documentation

### 6.255.2.1 \_\_streambuf\_type `template<typename _CharT , typename _Traits >`

```
typedef basic_streambuf<char_type, traits_type> std::basic_streambuf<_CharT, _Traits>::__↵
streambuf_type
```

This is a non-standard type.

### 6.255.2.2 char\_type `template<typename _CharT , typename _Traits >`

```
typedef _CharT std::basic_streambuf<_CharT, _Traits>::char_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

### 6.255.2.3 int\_type `template<typename _CharT , typename _Traits >`

```
typedef traits_type::int_type std::basic_streambuf<_CharT, _Traits>::int_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

### 6.255.2.4 off\_type `template<typename _CharT , typename _Traits >`

```
typedef traits_type::off_type std::basic_streambuf<_CharT, _Traits>::off_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

### 6.255.2.5 pos\_type `template<typename _CharT , typename _Traits >`

```
typedef traits_type::pos_type std::basic_streambuf<_CharT, _Traits>::pos_type
```

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

**6.255.2.6 traits\_type** `template<typename _CharT , typename _Traits >`  
`typedef _Traits std::basic\_streambuf< _CharT, _Traits >::traits_type`

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

### 6.255.3 Constructor & Destructor Documentation

**6.255.3.1 ~basic\_streambuf()** `template<typename _CharT , typename _Traits >`  
`virtual std::basic\_streambuf< _CharT, _Traits >::~~basic_streambuf ( ) [inline], [virtual]`  
 Destructor deallocates no buffer space.

**6.255.3.2 basic\_streambuf()** `template<typename _CharT , typename _Traits >`  
`std::basic\_streambuf< _CharT, _Traits >::basic_streambuf ( ) [inline], [protected]`

Base constructor.

Only called from derived constructors, and sets up all the buffer data to zero, including the pointers described in the `basic_streambuf` class description. Note that, as a result,

- the class starts with no read nor write positions available,
- this is not an error

### 6.255.4 Member Function Documentation

**6.255.4.1 eback()** `template<typename _CharT , typename _Traits >`  
`char\_type * std::basic\_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf](#)< \_CharT, \_Traits >::M\_in\_beg.

Referenced by [std::basic\\_streambuf](#)< \_CharT, \_Traits >::sputbackc(), and [std::basic\\_streambuf](#)< \_CharT, \_Traits >::sungetc().

**6.255.4.2 egptr()** `template<typename _CharT , typename _Traits >`  
`char\_type * std::basic\_streambuf< _CharT, _Traits >::egptr ( ) const [inline], [protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf](#)< \_CharT, \_Traits >::M\_in\_end.

Referenced by [std::basic\\_streambuf](#)< \_CharT, \_Traits >::in\_avail(), [std::basic\\_streambuf](#)< \_CharT, \_Traits >::sbumpc(), [std::basic\\_streambuf](#)< \_CharT, \_Traits >::sgetc(), [std::basic\\_stringbuf](#)< \_CharT, \_Traits, \_Alloc >::showmanyc(), and [std::wbuffer\\_convert](#)< \_Codecvt, \_Elem, \_Tr >::underflow().

**6.255.4.3 epptr()** `template<typename _CharT , typename _Traits >`  
`char_type * std::basic_streambuf< _CharT, _Traits >::epptr ( ) const [inline], [protected]`  
 Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_end](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

**6.255.4.4 gbump()** `template<typename _CharT , typename _Traits >`  
`void std::basic_streambuf< _CharT, _Traits >::gbump (`  
`int __n ) [inline], [protected]`

Moving the read position.

#### Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sungetc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::uflow\(\)](#).

**6.255.4.5 getloc()** `template<typename _CharT , typename _Traits >`  
`locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline]`

Locale access.

#### Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_buf\\_locale](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubimbue\(\)](#).

**6.255.4.6 gptr()** `template<typename _CharT , typename _Traits >`  
`char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- eback() returns the beginning pointer for the input sequence
- gptr() returns the next pointer for the input sequence
- egptr() returns the end pointer for the input sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::in\\_avail\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetc\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::showmanyc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::sungetc\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::underflow\(\)](#), and [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::underflow\(\)](#).

**6.255.4.7 imbue()** `template<typename _CharT, typename _Traits>  
virtual void std::basic_streambuf<_CharT, _Traits>::imbue (  
const locale & __loc ) [inline], [protected], [virtual]`

Changes translations.

#### Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

#### Note

Base class version does nothing.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::pubimbue\(\)](#).

**6.255.4.8 in\_avail()** `template<typename _CharT, typename _Traits>  
streamsize std::basic_streambuf<_CharT, _Traits>::in_avail ( ) [inline]`

Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gpctr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::showmanyc\(\)](#).

**6.255.4.9 overflow()** `template<typename _CharT, typename _Traits>  
virtual int_type std::basic_streambuf<_CharT, _Traits>::overflow (  
int_type __c = traits_type::eof() ) [inline], [protected], [virtual]`

Consumes data from the buffer; writes to the controlled sequence.

#### Parameters

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

**Returns**

eof() to indicate failure, something else (usually \_\_c, or not\_eof())

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character *c* is also written out, if \_\_c is not eof().

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

**Note**

Base class version does nothing, returns eof().

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >, and std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

**6.255.4.10 pbackfail()** `template<typename _CharT , typename _Traits >  
virtual int_type std::basic_streambuf< _CharT, _Traits >::pbackfail (  
 int_type __c = traits_type::eof() ) [inline], [protected], [virtual]`

Tries to back up the input sequence.

**Parameters**

	The character to be inserted back into the sequence.
<code>__c</code>	

**Returns**

eof() on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns eof().

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sungetc\(\)](#).

**6.255.4.11 pbase()** `template<typename _CharT , typename _Traits >  
char_type * std::basic_streambuf< _CharT, _Traits >::pbase ( ) const [inline], [protected]`  
Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence

- `eptr()` returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_beg](#).

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#).

**6.255.4.12 `pbump()`** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::pbump (`  
`int __n ) [inline], [protected]`

Moving the write position.

#### Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the write position without returning any data.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.255.4.13 `pptr()`** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::pptr ( ) const [inline], [protected]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.255.4.14 `pubimbue()`** `template<typename _CharT, typename _Traits>`  
`locale std::basic_streambuf<_CharT, _Traits>::pubimbue (`  
`const locale & __loc ) [inline]`

Entry point for imbue().

#### Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

#### Returns

The previous locale.

Calls the derived `imbue(__loc)`.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_buf\\_locale](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::getloc\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::imbue\(\)](#).

**6.255.4.15 `pubseekoff()`** `template<typename _CharT, typename _Traits>`

```
pos_type std::basic_streambuf<_CharT, _Traits>::pubseekoff (
    off_type __off,
    ios_base::seekdir __way,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Alters the stream position.

#### Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::seekoff\(\)](#).

**6.255.4.16 pubseekpos()** `template<typename _CharT, typename _Traits>`  

```
pos_type std::basic_streambuf<_CharT, _Traits>::pubseekpos (
    pos_type __sp,
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline]
```

Alters the stream position.

#### Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::seekpos\(\)](#).

**6.255.4.17 pubsetbuf()** `template<typename _CharT, typename _Traits>`  

```
basic_streambuf * std::basic_streambuf<_CharT, _Traits>::pubsetbuf (
    char_type * __s,
    streamsize __n ) [inline]
```

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::setbuf\(\)](#).

**6.255.4.18 pubsync()** `template<typename _CharT, typename _Traits>`  

```
int std::basic_streambuf<_CharT, _Traits>::pubsync ( ) [inline]
```

Calls virtual `sync` function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::sync\(\)](#).

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::sync\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#).

**6.255.4.19 sbumpc()** `template<typename _CharT, typename _Traits>`  

```
int_type std::basic_streambuf<_CharT, _Traits>::sbumpc ( ) [inline]
```

Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

References `std::basic_streambuf<_CharT, _Traits>::egptr()`, `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, and `std::basic_streambuf<_CharT, _Traits>::uflow()`.

Referenced by `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::istreambuf_iterator<_CharT, _Traits>::operator++()`, `std::basic_streambuf<_CharT, _Traits>::snextc()`, and `std::basic_istream<char>::sync()`.

```
6.255.4.20 seekoff() template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekoff (
    off_type ,
    ios_base::seekdir ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits>`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::pubseekoff()`.

```
6.255.4.21 seekpos() template<typename _CharT , typename _Traits >
virtual pos_type std::basic_streambuf< _CharT, _Traits >::seekpos (
    pos_type ,
    ios_base::openmode = ios_base::in | ios_base::out ) [inline], [protected], [virtual]
```

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits>`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::pubseekpos()`.

```
6.255.4.22 setbuf() template<typename _CharT , typename _Traits >
virtual basic_streambuf< char_type, _Traits > * std::basic_streambuf< _CharT, _Traits >::setbuf
(
    char_type * ,
    streamsize ) [inline], [protected], [virtual]
```

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

## Note

Base class version does nothing, returns `this`.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< char\\_type, traits\\_type >](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits >](#).  
 Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsetbuf\(\)](#).

**6.255.4.23 setg()** `template<typename _CharT , typename _Traits >`  
`void std::basic_streambuf< _CharT, _Traits >::setg (`  
     `char_type * __gbeg,`  
     `char_type * __gnext,`  
     `char_type * __gend ) [inline], [protected]`

Setting the three read area pointers.

## Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_beg](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_cur](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_end](#).  
 Referenced by [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::wbuffer\\_convert\(\)](#).

**6.255.4.24 setp()** `template<typename _CharT , typename _Traits >`  
`void std::basic_streambuf< _CharT, _Traits >::setp (`  
     `char_type * __pbeg,`  
     `char_type * __pend ) [inline], [protected]`

Setting the three write area pointers.

## Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_beg](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_cur](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_end](#).  
 Referenced by [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::wbuffer\\_convert\(\)](#).

**6.255.4.25 sgetc()** `template<typename _CharT , typename _Traits >`  
`int_type std::basic_streambuf< _CharT, _Traits >::sgetc ( ) [inline]`  
 Getting the next character.

**Returns**

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::underflow\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::istreambuf\\_iterator<\\_CharT, \\_Traits>::operator++\(\)](#), [std::basic\\_istream<char>::get\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::snextc\(\)](#).

**6.255.4.26 sgetn()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (`  
`char_type * __s,`  
`streamsize __n ) [inline]`

Entry point for `xsggetn`.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsggetn(__s, __n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::xsggetn\(\)](#).

**6.255.4.27 showmanyc()** `template<typename _CharT, typename _Traits>`  
`virtual streamsize std::basic_streambuf<_CharT, _Traits>::showmanyc ( ) [inline], [protected],`  
`[virtual]`

Investigating the data available.

**Returns**

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

**Note**

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<char\\_type, traits\\_type>](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits>](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::in\\_avail\(\)](#).

**6.255.4.28 snextc()** `template<typename _CharT , typename _Traits >  
int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline]`  
Getting the next character.

**Returns**

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

References `std::basic_streambuf< _CharT, _Traits >::sbumpc()`, and `std::basic_streambuf< _CharT, _Traits >::sgetc()`.

Referenced by `std::basic_istream< _CharT, _Traits >::sentry::sentry()`, `std::basic_istream< char >::get()`, `std::basic_istream< char >::ig`, `std::basic_istream< char >::operator>>()`, and `std::basic_istream< char >::putback()`.

**6.255.4.29 sputbackc()** `template<typename _CharT , typename _Traits >  
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (  
char_type __c ) [inline]`

Pushing characters back into the input stream.

**Parameters**

<code>__c</code>	The character to push back.
------------------	-----------------------------

**Returns**

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

References `std::basic_streambuf< _CharT, _Traits >::eback()`, `std::basic_streambuf< _CharT, _Traits >::gbump()`, `std::basic_streambuf< _CharT, _Traits >::gptr()`, and `std::basic_streambuf< _CharT, _Traits >::pbackfail()`.

Referenced by `std::basic_istream< _CharT, _Traits >::putback()`.

**6.255.4.30 sputc()** `template<typename _CharT , typename _Traits >  
int_type std::basic_streambuf< _CharT, _Traits >::sputc (  
char_type __c ) [inline]`

Entry point for all single-character output functions.

**Parameters**

<code>__c</code>	A character to output.
------------------	------------------------

**Returns**

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(__c)`.

References `std::basic_streambuf< _CharT, _Traits >::pptr()`, `std::basic_streambuf< _CharT, _Traits >::overflow()`, `std::basic_streambuf< _CharT, _Traits >::pbackfail()`, and `std::basic_streambuf< _CharT, _Traits >::pptr()`.

Referenced by [std::ostreambuf\\_iterator<\\_CharT, \\_Traits>::operator=\(\)](#), and [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::overflow\(\)](#).

**6.255.4.31 sputn()** `template<typename _CharT, typename _Traits>  
streamsize std::basic_streambuf<_CharT, _Traits>::sputn (  
    const char_type * __s,  
    streamsize __n ) [inline]`

Entry point for all single-character output functions.

#### Parameters

<a href="#"> <code>__s</code></a>	A buffer read area.
<a href="#"> <code>__n</code></a>	A count.

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::xspn\(\)](#).

**6.255.4.32 sungetc()** `template<typename _CharT, typename _Traits>  
int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::eback\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gbump\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::pbackfail\(\)](#).

**6.255.4.33 sync()** `template<typename _CharT, typename _Traits>  
virtual int std::basic_streambuf<_CharT, _Traits>::sync ( ) [inline], [protected], [virtual]`  
Synchronizes the buffer arrays with the controlled sequences.

#### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

#### Note

Base class version does nothing, returns zero.

Reimplemented in [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>](#), [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::pubsync\(\)](#).

**6.255.4.34 uflow()** `template<typename _CharT, typename _Traits>`  
`virtual int_type std::basic_streambuf<_CharT, _Traits>::uflow ( ) [inline], [protected], [virtual]`  
 Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`.

References `std::basic_streambuf<_CharT, _Traits>::gbump()`, `std::basic_streambuf<_CharT, _Traits>::gptr()`, and `std::basic_streambuf<_CharT, _Traits>::underflow()`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::sbumpc()`.

**6.255.4.35 underflow()** `template<typename _CharT, typename _Traits>`  
`virtual int_type std::basic_streambuf<_CharT, _Traits>::underflow ( ) [inline], [protected], [virtual]`  
 Fetches more data from the controlled sequence.

#### Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented in `std::wbuffer_convert<_Codecvt, _Elem, _Tr>`, `__gnu_cxx::stdio_sync_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, `std::basic_filebuf<char_type, traits_type>`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::sgetc()`, and `std::basic_streambuf<_CharT, _Traits>::uflow()`.

**6.255.4.36 xsgetn()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_streambuf<_CharT, _Traits>::xsgetn (`  
`char_type * __s,`  
`streamsize __n ) [protected], [virtual]`

Multiple character extraction.

#### Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

**Returns**

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

References `std::min()`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::sgetn()`.

**6.255.4.37 xsputn()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_streambuf<_CharT, _Traits>::xsputn (`  
`const char_type * __s,`  
`streamsize __n ) [protected], [virtual]`

Multiple character insertion.

**Parameters**

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

**Returns**

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in `std::basic_filebuf<_CharT, _Traits>`, `std::basic_filebuf<_CharT, encoding_char_traits<_CharT>>`, `std::basic_filebuf<_CharT, std::char_traits<_CharT>>`, and `std::basic_filebuf<char_type, traits_type>`.

References `std::min()`.

Referenced by `std::basic_streambuf<_CharT, _Traits>::sputn()`.

## 6.256.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>
class __gnu_debug::basic_string<_CharT, _Traits, _Allocator>
```

Class `std::basic_string` with safety/checking/debug instrumentation.

## 6.256.2 Member Function Documentation

**6.256.2.1 `append()` [1/5]** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`template<typename _Tp>`  
`_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::append (`  
`const _Tp &__svt) [inline], [inherited]`

Append a `string_view`.

#### Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to be appended.
--------------------	--

#### Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

**6.256.2.2 `append()` [2/5]** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`template<typename _Tp>`  
`_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::append (`  
`const _Tp &__svt,`  
`size_type __pos,`  
`size_type __n = npos) [inline], [inherited]`

Append a range of characters from a `string_view`.

#### Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to be appended from.
<code>__pos</code>	The position in the <code>string_view</code> to append from.
<code>__n</code>	The number of characters to append from the <code>string_view</code> .

#### Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc >::append()`.

**6.256.2.3 `append()` [3/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::append (  
 const basic_string<_CharT, _Traits, _Alloc > & __str ) [inherited]`

Append a string to this string.

#### Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

#### Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc >::size()`, and `std::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc >::append()`, `std::collate<_CharT >::do_transform()`, `std::basic_string<_CharT, _Traits, _Alloc >::operator+=()`, and `std::operator>>()`.

**6.256.2.4 `append()` [4/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::append (  
 const basic_string<_CharT, _Traits, _Alloc > & __str,  
 size_type __pos,  
 size_type __n = npos ) [inherited]`

Append a substring.

#### Parameters

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

#### Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

References [std::size\(\)](#).

**6.256.2.5 `append()`** [5/5] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::append ( initializer_list<_CharT> __l )` [inline], [inherited]

Append an `initializer_list` of characters.

## Parameters

↵	The <code>initializer_list</code> of characters to append.
↵	
↵	
↵	
/	

## Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.256.2.6 `assign()`** [1/5] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign ( basic_string<_CharT, _Traits, _Alloc> && __str )` [inline], [noexcept], [inherited]

Set value to contents of another string.

## Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

## Returns

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::swap\(\)](#).

**6.256.2.7 `assign()`** [2/5] `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv<_Tp, basic_string & > std::basic_string<_CharT, _Traits, _Alloc>::assign ( const _Tp & __svt )` [inline], [inherited]

Set value from a `string_view`.

**Parameters**

<code>__svt</code>	The source object convertible to <code>string_view</code> .
--------------------	---

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.256.2.8 assign() [3/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp >  
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::assign (  
    const _Tp & __svt,  
    size_type __pos,  
    size_type __n = npos ) [inline], [inherited]`

Set value from a range of characters in a `string_view`.

**Parameters**

<code>__svt</code>	The source object convertible to <code>string_view</code> .
<code>__pos</code>	The position in the <code>string_view</code> to assign from.
<code>__n</code>	The number of characters to assign.

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.256.2.9 assign() [4/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic\_string< _CharT, _Traits, _Alloc > & std::basic\_string< _CharT, _Traits, _Alloc >::assign (  
    const basic\_string< _CharT, _Traits, _Alloc > & __str ) [inherited]`

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::get\\_allocator\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator=\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#).

**6.256.2.10 assign() [5/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic\_string & std::basic\_string< _CharT, _Traits, _Alloc >::assign (  
    const basic\_string< _CharT, _Traits, _Alloc > & __str,`

```
size_type __pos,
size_type __n = npos ) [inline], [inherited]
```

Set value to a substring of a string.

#### Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	if <i>pos</i> is not a valid index.
--------------------------------	-------------------------------------

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.256.2.11** `at()` [1/2] `template<typename _CharT, typename _Traits = std::char_traits<_CharT>,`  
`typename _Allocator = std::allocator<_CharT>>`  
reference `std::basic_string<_CharT, _Traits, _Alloc>::at (`  
`size_type __n ) [inline]`

Provides access to the data contained in the string.

#### Parameters

<code>__↔</code>	The index of the character to access.
<code>__n</code>	

#### Returns

Read/write reference to the character.

#### Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

**6.256.2.12** `at()` [2/2] `template<typename _CharT, typename _Traits = std::char_traits<_CharT>,`  
`typename _Allocator = std::allocator<_CharT>>`  
const\_reference `std::basic_string<_CharT, _Traits, _Alloc>::at (`  
`size_type __n ) const [inline]`

Provides access to the data contained in the string.

**Parameters**

<code>_↔</code>	The index of the character to access.
<code>_n</code>	

**Returns**

Read-only (const) reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

**6.256.2.13 `back()` [1/2]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> reference std::basic_string<_CharT, _Traits, _Alloc >::back ( ) [inline]`

Returns a read/write reference to the data at the last element of the string.

**6.256.2.14 `back()` [2/2]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> const_reference std::basic_string<_CharT, _Traits, _Alloc >::back ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the last element of the string.

**6.256.2.15 `capacity()`** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string<_CharT, _Traits, _Alloc >::capacity ( ) const [inline], [noexcept]`

Returns the total number of characters that the string can hold before needing to allocate more memory.

**6.256.2.16 `compare()` [1/12]** `template<typename _CharT , typename _Traits = std::char_traits<_↔_CharT>, typename _Allocator = std::allocator<_CharT>> int std::basic_string<_CharT, _Traits, _Alloc >::compare ( const _CharT * __s ) const [inline], [noexcept]`

Compare to a C string.

**Parameters**

<code>_↔</code>	C string to compare against.
<code>_s</code>	

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**6.256.2.17 `compare()` [2/12]** `template<typename _CharT , typename _Traits = std::char_traits<_↔`

```
CharT>, typename _Allocator = std::allocator<_CharT>>
template<typename _Tp >
_If_sv< _Tp, int > std::basic\_string<\_CharT, \_Traits, \_Alloc>::compare (
    const _Tp & __svt ) const [inline], [noexcept]
```

Compare to a `string_view`.

#### Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
--------------------	---

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

**6.256.2.18 `compare()` [3/12]** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`int std::basic\_string<\_CharT, \_Traits, \_Alloc>::compare (`  
 `const basic\_string<\_CharT, \_Traits, \_Alloc> & __str ) const [inline], [inherited]`

Compare to a string.

#### Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), [std::min\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.256.2.19 `compare()` [4/12]** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>,`  
`CharT>, typename _Allocator = std::allocator<_CharT>>`  
`int std::basic\_string<\_CharT, \_Traits, \_Alloc>::compare (`  
 `const basic\_string<\_CharT, \_Traits, \_Allocator> & __str ) const [inline]`

Compare to a string.

#### Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

#### Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**6.256.2.20 compare()** [5/12] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`template<typename _Tp >`  
`_If_sv< _Tp, int > std::basic_string< _CharT, _Traits, _Alloc >::compare (`  
`size_type __pos,`  
`size_type __n,`  
`const _Tp & __svt ) const [inline], [noexcept]`

Compare to a string\_view.

#### Parameters

<code>__pos</code>	A position in the string to start comparing from.
<code>__n</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to string_view to compare against.

#### Returns

Integer < 0, 0, or > 0.

**6.256.2.21 compare()** [6/12] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`int std::basic_string< _CharT, _Traits, _Alloc >::compare (`  
`size_type __pos,`  
`size_type __n,`  
`const basic_string< _CharT, _Traits, _Alloc > & __str ) const [inline], [inherited]`

Compare substring to a string.

#### Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::min()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**6.256.2.22 compare()** [7/12] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>,`  
`CharT>, typename _Allocator = std::allocator<_CharT>>`  
`int std::basic_string< _CharT, _Traits, _Alloc >::compare (`  
`size_type __pos,`  
`size_type __n,`  
`const basic_string< _CharT, _Traits, _Allocator > & __str ) const [inline]`

Compare substring to a string.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer  $< 0$  if the substring is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**6.256.2.23 `compare()` [8/12]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`int std::basic_string<_CharT, _Traits, _Alloc>::compare (`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s ) const [inline]`

Compare substring to a C string.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer  $< 0$  if the substring is ordered before `__s`,  $0$  if their values are equivalent, or  $> 0$  if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(), __s, rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

**6.256.2.24 `compare()` [9/12]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`int std::basic_string<_CharT, _Traits, _Alloc>::compare (`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s,`  
`size_type __n2 ) const [inline]`

Compare substring against a character array.

## Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.

**Parameters**

<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of <code>s</code> .

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer  $< 0$  if this substring is ordered before the string from `__s`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

```
6.256.2.25 compare() [10/12] template<typename _CharT , typename _Traits = std::char_traits<_CharT>,
typename _Allocator = std::allocator<_CharT>>
template<typename _Tp >
_If_sv< _Tp, int > std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) const [inline], [noexcept]
```

Compare to a `string_view`.

**Parameters**

<code>__pos1</code>	A position in the string to start comparing from.
<code>__n1</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
<code>__pos2</code>	A position in the <code>string_view</code> to start comparing from.
<code>__n2</code>	The number of characters to compare.

**Returns**

Integer  $< 0$ ,  $0$ , or  $> 0$ .

```
6.256.2.26 compare() [11/12] template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n2 = npos ) const [inline], [inherited]
```

Compare substring to a substring.

## Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, and `std::min()`.

```

6.256.2.27 compare() [12/12] template<typename _CharT , typename _Traits = std::char_traits<_
CharT>, typename _Allocator = std::allocator<_CharT>>
int std::basic_string<_CharT, _Traits, _Alloc>::compare (
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Allocator> & __str,
    size_type __pos2,
    size_type __n2 = npos ) const [inline]

```

Compare substring to a substring.

## Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer  $< 0$  if this substring is ordered before the substring of `__str`,  $0$  if their values are equivalent, or  $> 0$  if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(), str.substr(pos2, n2).data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

```

6.256.2.28 data() template<typename _CharT , typename _Traits , typename _Alloc >
_CharT * std::basic_string<_CharT, _Traits, _Alloc>::data ( ) [inline], [noexcept], [inherited]

```

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

**6.256.2.29 empty()** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`

`bool std::basic_string< _CharT, _Traits, _Alloc >::empty ( ) const [inline], [noexcept]`

Returns true if the string is empty. Equivalent to `*this == ""`.

**6.256.2.30 erase() [1/2]** `template<typename _CharT , typename _Traits , typename _Alloc >`

`basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >↵  
::erase (`

`iterator __first,  
iterator __last ) [inherited]`

Remove a range of characters.

#### Parameters

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

#### Returns

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**6.256.2.31 erase() [2/2]** `template<typename _CharT , typename _Traits , typename _Alloc >`

`iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (`  
`iterator __position ) [inline], [inherited]`

Remove one character.

#### Parameters

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

#### Returns

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**6.256.2.32 find() [1/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>,`  
`typename _Allocator = std::allocator<_CharT>>`

`basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc`  
`>::find (`

`_CharT __c,`  
`size_type __pos = 0 ) const [noexcept]`

Find position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.33 `find()` [2/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`basic_string<_CharT, _Traits, _Alloc>::size_type` `std::basic_string<_CharT, _Traits, _Alloc>::find (`  
`const _CharT * __s,`  
`size_type __pos,`  
`size_type __n ) const [noexcept]`

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.34 `find()` [3/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type` `std::basic_string<_CharT, _Traits, _Alloc>::find (`  
`const _CharT * __s,`  
`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.35 `find()` [4/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`template<typename _Tp >`  
`_If_sv<_Tp, size_type >` `std::basic_string<_CharT, _Traits, _Alloc>::find (`  
`const _Tp & __svt,`  
`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a `string_view`.

## Parameters

<code>__svt</code>	The object convertible to <code>string_view</code> to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of start of first occurrence.

**6.256.2.36 `find()` [5/6]** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::find (`  
`const basic_string<_CharT, _Traits, _Alloc> & __str,`  
`size_type __pos = 0 ) const [inline], [noexcept], [inherited]`

Find position of a string.

## Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::find()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.256.2.37 `find()` [6/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>,`  
`typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::find (`  
`const basic_string<_CharT, _Traits, _Allocator> & __str,`  
`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a string.

## Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search from (default 0).

## Returns

Index of start of first occurrence.

Starting from `__pos`, searches forward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.38 `find_first_not_of()` [1/6]** `template<typename _CharT , typename _Traits = std::char_`  
`traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`

```

basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]

```

Find position of a different character.

#### Parameters

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.39 find\_first\_not\_of() [2/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc`  
`>::find_first_not_of (`  
 `const _CharT * __s,`  
 `size_type __pos,`  
 `size_type __n ) const [noexcept]`

Find position of a character not in C substring.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.40 find\_first\_not\_of() [3/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of (`  
 `const _CharT * __s,`  
 `size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in C string.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.41 `find_first_not_of()` [4/6]** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> template<typename _Tp > _If_sv<_Tp, size_type > std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of ( const _Tp & __svt, size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in a `string_view`.

**Parameters**

<code>__svt</code>	An object convertible to <code>string_view</code> containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

**6.256.2.42 `find_first_not_of()` [5/6]** `template<typename _CharT, typename _Traits, typename _Alloc > size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of ( const basic_string<_CharT, _Traits, _Alloc> & __str, size_type __pos = 0 ) const [inline], [noexcept], [inherited]`

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of()`.

**6.256.2.43 `find_first_not_of()` [6/6]** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_not_of ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.44 find\_first\_of() [1/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>  
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (  
 _CharT __c,  
 size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

**6.256.2.45 find\_first\_of() [2/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>

>::find_first_of (  
 const _CharT * __s,  
 size_type __pos,  
 size_type __n ) const [noexcept]`

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.46 `find_first_of()` [3/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (`  
`const _CharT * __s,`  
`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character of C string.

#### Parameters

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

#### Returns

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.47 `find_first_of()` [4/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`

>::find_last_not_of (  
    _CharT __c,  
    size_type __pos = npos ) const [noexcept]`

```
const _CharT * __s,
size_type __pos,
size_type __n ) const [noexcept]
```

Find last position of a character not in C substring.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to consider.

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.52 `find_last_not_of()` [3/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (`  
`const _CharT * __s,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character not in C string.

#### Parameters

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.53 `find_last_not_of()` [4/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`template<typename _Tp >`  
`_If_sv<_Tp, size_type > std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of (`  
`const _Tp & __svt,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character not in a string\_view.

#### Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

**6.256.2.54 find\_last\_not\_of()** [5/6] `template<typename _CharT, typename _Traits, typename _Alloc > size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of ( const basic_string<_CharT, _Traits, _Alloc> & __str, size_type __pos = npos ) const [inline], [noexcept], [inherited]`

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `std::basic_string<_CharT, _Traits, _Alloc>::data()`, `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of()`.

**6.256.2.55 find\_last\_not\_of()** [6/6] `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of ( const basic_string<_CharT, _Traits, _Allocator> & __str, size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.56 find\_last\_of()** [1/6] `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of ( _CharT __c, size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character.

## Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `rfind(__c, __pos)`.

**6.256.2.57 `find_last_of()` [2/6]** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of ( const _CharT * __s, size_type __pos, size_type __n ) const [noexcept]`

Find last position of a character of C substring.

## Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.58 `find_last_of()` [3/6]** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_of ( const _CharT * __s, size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character of C string.

## Parameters

<code>__s</code>	C string containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.59 find\_last\_of()** [4/6] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`template<typename _Tp >`  
`_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (`  
`const _Tp & __svt,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character of string.

#### Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of last occurrence.

**6.256.2.60 find\_last\_of()** [5/6] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (`  
`const basic_string< _CharT, _Traits, _Alloc > & __str,`  
`size_type __pos = npos ) const [inline], [noexcept], [inherited]`

Find last position of a character of string.

#### Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`.

**6.256.2.61 find\_last\_of()** [6/6] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string< _CharT, _Traits, _Alloc >::find_last_of (`  
`const basic_string< _CharT, _Traits, _Allocator > & __str,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character of string.

#### Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.62 `front()` [1/2]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
reference `std::basic_string<_CharT, _Traits, _Alloc>::front ( )` [inline]

Returns a read/write reference to the data at the first element of the string.

**6.256.2.63 `front()` [2/2]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`const_reference std::basic_string<_CharT, _Traits, _Alloc>::front ( ) const` [inline], [noexcept]  
Returns a read-only (constant) reference to the data at the first element of the string.

**6.256.2.64 `get_allocator()`** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`allocator_type std::basic_string<_CharT, _Traits, _Alloc>::get_allocator ( ) const` [inline], [noexcept]

Return copy of allocator used to construct this string.

**6.256.2.65 `insert()` [1/8]** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`iterator std::basic_string<_CharT, _Traits, _Alloc>::insert (`  
    `iterator __p,`  
    `_CharT __c )` [inline], [inherited]

Insert one character.

**Parameters**

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.256.2.66 `insert()` [2/8]** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`template<class _InputIterator >`  
`void std::basic_string<_CharT, _Traits, _Alloc>::insert (`

```

        iterator __p,
        _InputIterator __beg,
        _InputIterator __end ) [inline], [inherited]

```

Insert a range of characters.

#### Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg, __end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

**6.256.2.67 insert()** [3/8] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`void std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
 `iterator __p,`  
 `initializer_list< _CharT > __l ) [inline], [inherited]`

Insert an initializer\_list of characters.

#### Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The initializer_list of characters to insert.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.256.2.68 insert()** [4/8] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`void std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
 `iterator __p,`  
 `size_type __n,`  
 `_CharT __c ) [inline], [inherited]`

Insert multiple characters.

## Parameters

### Parameters

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.256.2.69 insert()** [5/8] `template<typename _CharT, typename _Traits, typename _Alloc>  
template<typename _Tp>  
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::insert (  
    size_type __pos,  
    const _Tp & __svt) [inline], [inherited]`

Insert a string\_view.

### Parameters

<code>__pos</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert.

## Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.256.2.70 insert()** [6/8] `template<typename _CharT, typename _Traits, typename _Alloc>  
template<typename _Tp>  
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::insert (  
    size_type __pos1,  
    const _Tp & __svt,  
    size_type __pos2,  
    size_type __n = npos) [inline], [inherited]`

Insert a string\_view.

### Parameters

<code>__pos1</code>	Position in string to insert at.
---------------------	----------------------------------

**Parameters**

<code>__svt</code>	The object convertible to <code>string_view</code> to insert from.
<code>__pos2</code>	Position in <code>string_view</code> to insert from.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

```
6.256.2.71 insert() [7/8] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline], [inherited]
```

Insert value of a string.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

```
6.256.2.72 insert() [8/8] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (
    size_type __pos1,
    const basic_string< _CharT, _Traits, _Alloc > & __str,
    size_type __pos2,
    size_type __n = npos ) [inline], [inherited]
```

Insert a substring.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.256.2.73 `length()`** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`

`size_type std::basic_string<_CharT, _Traits, _Alloc>::length ( ) const [inline], [noexcept]`

Returns the number of characters in the string, not including any null-termination.

**6.256.2.74 `max_size()`** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`

`size_type std::basic_string<_CharT, _Traits, _Alloc>::max_size ( ) const [inline], [noexcept]`

Returns the `size()` of the largest possible string.

**6.256.2.75 `operator __sv_type()`** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`std::basic_string<_CharT, _Traits, _Alloc>::operator __sv_type ( ) const [inline], [noexcept],`  
`[inherited]`

Convert to a `string_view`.

**Returns**

A `string_view`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.256.2.76 `operator+=( )`** `[1/2] template<typename _CharT, typename _Traits, typename _Alloc>`

`template<typename _Tp>`

`_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::operator+= (`  
`const _Tp & __svt ) [inline], [inherited]`

Append a `string_view`.

**Parameters**

<code>__svt</code>	The object convertible to <code>string_view</code> to be appended.
--------------------	--

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.256.2.77 operator+=()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+= (  
 const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline], [inherited]`

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.256.2.78 replace()** [1/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp >  
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::replace (  
 const_iterator __i1,  
 const_iterator __i2,  
 const _Tp & __svt ) [inline], [inherited]`

Replace range of characters with string\_view.

**Parameters**

<code>__i1</code>	An iterator referencing the start position to replace at.
<code>__i2</code>	An iterator referencing the end position for the replace.
<code>__svt</code>	The object convertible to string_view to insert from.

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::begin\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

**6.256.2.79 replace()** [2/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
template<class _InputIterator >  
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (  
 iterator __i1,  
 iterator __i2,  
 _InputIterator __k1,  
 _InputIterator __k2 ) [inline], [inherited]`

Replace range of characters with range.

## Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.256.2.80 `replace()` [3/11]** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (`  
`iterator __i1,`  
`iterator __i2,`  
`const _CharT * __s ) [inline], [inherited]`

Replace range of characters with C string.

## Parameters

<code>__↔ __i1</code>	Iterator referencing start of range to replace.
<code>__↔ __i2</code>	Iterator referencing end of range to replace.
<code>__↔ __s</code>	C string value to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

`iterator __i1,`

```

        iterator __i2,
        const _CharT * __s,
        size_type __n ) [inline], [inherited]

```

Replace range of characters with C substring.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

`iterator __i1,`  
`iterator __i2,`  
`size_type __n,`  
`_CharT __c ) [inline], [inherited]`

Replace range of characters with multiple characters.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__n</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.256.2.85 replace() [8/11]** `template<typename _CharT , typename _Traits , typename _Alloc >`

`size_type __pos,`  
`size_type __n,`  
`const basic\_string< _CharT, _Traits, _Alloc > & __str ) [inline], [inherited]`

Replace characters with value from another string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

**Returns**

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[_pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.  
Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::append()`, `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, `std::basic_string<_CharT, _Traits, _Alloc>::insert()`, and `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

`template<typename _Tp>`

```
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::replace (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos) [inline], [inherited]
```

Replace range of characters with string\_view.

## Parameters

<code>__pos1</code>	The position to replace at.
<code>__n1</code>	The number of characters to replace.
<code>__svt</code>	The object convertible to string_view to insert from.
<code>__pos2</code>	The position in the string_view to insert from.
<code>__n2</code>	The number of characters to insert.

## Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

**6.256.2.88 `replace()` [11/11]** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (`

```
    size_type __pos1,
    size_type __n1,
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos2,
    size_type __n2 = npos) [inline], [inherited]
```

Replace characters with value from another string.

## Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

**Parameters**

<code>__pos2</code>	Index of first character of <code>str</code> to use.
<code>__n2</code>	Number of characters from <code>str</code> to use.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos1, __pos1 + n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

**6.256.2.89 reserve()** [1/2] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`void std::basic_string<_CharT, _Traits, _Alloc>::reserve`  
 Equivalent to `shrink_to_fit()`.

**6.256.2.90 reserve()** [2/2] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`void std::basic_string<_CharT, _Traits, _Alloc>::reserve (`  
     `size_type __res_arg )`

Attempt to preallocate enough memory for specified number of characters.

**Parameters**

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

**Exceptions**

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

**6.256.2.91 rfind()** [1/6] `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (`

```

    _CharT __c,
    size_type __pos = npos ) const [noexcept]

```

Find last position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

**6.256.2.92 `rfind()` [2/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (`  

```

    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]

```

Find last position of a C substring.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from <code>s</code> to search for.

#### Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.93 `rfind()` [3/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>> size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (`  

```

    const _CharT * __s,
    size_type __pos = npos ) const [inline], [noexcept]

```

Find last position of a C string.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.94 `rfind()` [4/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`template<typename _Tp >`  
`_If_sv< _Tp, size_type > std::basic_string< _CharT, _Traits, _Alloc >::rfind (`  
`const _Tp & __svt,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a string\_view.

**Parameters**

<code>__svt</code>	The object convertible to string_view to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

**6.256.2.95 `rfind()` [5/6]** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (`  
`const basic_string< _CharT, _Traits, _Alloc > & __str,`  
`size_type __pos = npos ) const [inline], [noexcept], [inherited]`

Find last position of a string.

**Parameters**

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`, and `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`, and `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`.

**6.256.2.96 `rfind()` [6/6]** `template<typename _CharT , typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string< _CharT, _Traits, _Alloc >::rfind (`  
`const basic_string< _CharT, _Traits, _Allocator > & __str,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a string.

## Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

**6.256.2.97 `size()`** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::size ( ) const [inline], [noexcept]`  
 Returns the number of characters in the string, not including any null-termination.

**6.256.2.98 `swap()`** `template<typename _CharT, typename _Traits, typename _Alloc>`  
`void std::basic_string<_CharT, _Traits, _Alloc>::swap (`  
`basic_string<_CharT, _Traits, _Alloc> & __s ) [noexcept], [inherited]`  
 Swap contents with another string.

## Parameters

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::assign()`, and `std::basic_string<_CharT, _Traits, _Alloc>::operator=()`.

## 6.256.3 Member Data Documentation

**6.256.3.1 `npos`** `template<typename _CharT, typename _Traits = std::char_traits<_CharT>, typename _Allocator = std::allocator<_CharT>>`  
`const basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, __`  
`Alloc>::npos [static]`

Value returned by various member functions when they fail.

The documentation for this class was generated from the following file:

- [debug/string](#)

6.257 `std::basic_string<_CharT, _Traits, _Alloc>` Class Template Reference

```
#include <string>

- static const size\_type `npos`

### Protected Types

- typedef iterator `__const_iterator`

### 6.257.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_string< _CharT, _Traits, _Alloc >
```

Managing sequences of characters and character-like objects.

#### Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

Meets the requirements of a `container`, a `reversible container`, and a `sequence`. Of the `optional sequence requirements`, only `push_back`, `at`, and array access are supported.

**Todo** Needs documentation! See [http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation\\_5\\_style.html](http://gcc.gnu.org/onlinedocs/libstdc++/manual/documentation_5_style.html)

Documentation? What's that? Nathan Myers [ncm@cantrip.org](mailto:ncm@cantrip.org).

A string looks like this:

```
[_Rep]
_M_length
_M_capacity
_M_refcount
_M_p ----->
unnamed array of char_type
```

Where the `_M_p` points to the first character in the string, and you cast it to a pointer-to-`_Rep` and subtract 1 to get a pointer to the header.

This approach has the enormous advantage that a string object requires only one allocation. All the ugliness is confined within a single pair of inline functions, which each compile to a single *add* instruction: `_Rep::_M_data()`, and `string↔::_M_rep()`; and the allocation function which gets a block of raw bytes and with room enough and constructs a `_Rep` object at the front.

The reason you want `_M_data` pointing to the character array and not the `_Rep` is so that the debugger can see the string contents. (Probably we should add a non-inline member to get the `_Rep` for the debugger to use, so users can check the actual string length.)

Note that the `_Rep` object is a POD so that you can have a static *empty string* `_Rep` object already *constructed* before static constructors have run. The reference-count encoding is chosen so that a 0 indicates one reference, so you never try to destroy the empty-string `_Rep` object.

All but the last paragraph is considered pretty conventional for a Copy-On-Write C++ string implementation.

## 6.257.2 Constructor & Destructor Documentation

**6.257.2.1 basic\_string()** [1/14] `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( ) [inline], [noexcept]`

Default constructor creates an empty string.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::substr()`.

**6.257.2.2 basic\_string()** [2/14] `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( const _Alloc & __a ) [inline], [explicit]`

Construct an empty string using allocator *a*.

**6.257.2.3 basic\_string()** [3/14] `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]`

Construct string with copy of value of *str*.

### Parameters

<code>__str</code>	Source string.
--------------------	----------------

**6.257.2.4 basic\_string()** [4/14] `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::basic_string ( const basic_string< _CharT, _Traits, _Alloc > & __str, size_type __pos, const _Alloc & __a = _Alloc() )`

Construct string as copy of a substring.

### Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__a</code>	Allocator to use.

**6.257.2.5 basic\_string()** [5/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
`const basic_string< _CharT, _Traits, _Alloc > & __str,`  
`size_type __pos,`  
`size_type __n )`

Construct string as copy of a substring.

#### Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.

**6.257.2.6 basic\_string()** [6/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
`const basic_string< _CharT, _Traits, _Alloc > & __str,`  
`size_type __pos,`  
`size_type __n,`  
`const _Alloc & __a )`

Construct string as copy of a substring.

#### Parameters

<code>__str</code>	Source string.
<code>__pos</code>	Index of first character to copy from.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use.

**6.257.2.7 basic\_string()** [7/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
`const _CharT * __s,`  
`size_type __n,`  
`const _Alloc & __a = _Alloc() ) [inline]`

Construct string initialized by a character array.

#### Parameters

<code>__s</code>	Source character array.
<code>__n</code>	Number of characters to copy.
<code>__a</code>	Allocator to use (default is default allocator).

NB: `__s` must have at least `__n` characters, `'\0'` has no special meaning.

**6.257.2.8 basic\_string()** [8/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename = _RequireAllocator<_Alloc>>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
     `const _CharT * __s,`  
     `const _Alloc & __a = _Alloc() ) [inline]`

Construct string as copy of a C string.

#### Parameters

<code>__s</code>	Source C string.
<code>__a</code>	Allocator to use (default is default allocator).

**6.257.2.9 basic\_string()** [9/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
     `size_type __n,`  
     `_CharT __c,`  
     `const _Alloc & __a = _Alloc() ) [inline]`

Construct string as multiple characters.

#### Parameters

<code>__n</code>	Number of characters.
<code>__c</code>	Character to use.
<code>__a</code>	Allocator to use (default is default allocator).

**6.257.2.10 basic\_string()** [10/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
     `basic_string< _CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]`

Move construct string.

#### Parameters

<code>__str</code>	Source string.
--------------------	----------------

The newly-created string contains the exact contents of `__str`. `__str` is a valid, but unspecified string.

**6.257.2.11 basic\_string()** [11/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (`  
     `initializer_list< _CharT > __l,`  
     `const _Alloc & __a = _Alloc() ) [inline]`

Construct string from an initializer list.

## Parameters

<code>_↔ _l</code>	std::initializer_list of characters.
<code>_↔ _a</code>	Allocator to use (default is default allocator).

**6.257.2.12 basic\_string() [12/14]** `template<typename _CharT , typename _Traits , typename _Alloc >  
template<class _InputIterator >  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (   
    _InputIterator __beg,  
    _InputIterator __end,  
    const _Alloc & __a = _Alloc() ) [inline]`

Construct string as copy of a range.

## Parameters

<code>__beg</code>	Start of range.
<code>__end</code>	End of range.
<code>__a</code>	Allocator to use (default is default allocator).

**6.257.2.13 basic\_string() [13/14]** `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp , typename = enable_if_t<is_convertible_v<const _Tp&, __sv_type>>>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (   
    const _Tp & __t,  
    size_type __pos,  
    size_type __n,  
    const _Alloc & __a = _Alloc() ) [inline]`

Construct string from a substring of a string\_view.

## Parameters

<code>__t</code>	Source object convertible to string view.
<code>__pos</code>	The index of the first character to copy from __t.
<code>__n</code>	The number of characters to copy from __t.
<code>__a</code>	Allocator to use.

**6.257.2.14 basic\_string() [14/14]** `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp , typename = _If_sv<_Tp, void>>  
std::basic_string< _CharT, _Traits, _Alloc >::basic_string (   
    const _Tp & __t,  
    const _Alloc & __a = _Alloc() ) [inline], [explicit]`

Construct string from a string\_view.

## Parameters

<code>_↔ _t</code>	Source object convertible to string view.
<code>_↔ _a</code>	Allocator to use (default is default allocator).

**6.257.2.15** `~basic_string()` `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::~~basic_string ( ) [inline], [noexcept]`

Destroy the string instance.

References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.

**6.257.3 Member Function Documentation**

**6.257.3.1** `append()` [1/9] `template<typename _CharT , typename _Traits , typename _Alloc > template<class _InputIterator > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append ( _InputIterator __first, _InputIterator __last ) [inline]`

Append a range of characters.

## Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

## Returns

Reference to this string.

Appends characters in the range [`__first`,`__last`) to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

**6.257.3.2** `append()` [2/9] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append ( const _CharT * __s ) [inline]`

Append a C string.

## Parameters

<code>_↔ _s</code>	The C string to append.
------------------------	-------------------------

## Returns

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::append()`.

**6.257.3.3 append()** [3/9] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (`  
`const _CharT * __s,`  
`size_type __n )`

Append a C substring.

#### Parameters

<code>__s</code>	The C string to append.
<code>__n</code>	The number of characters to append.

#### Returns

Reference to this string.

References `std::size()`.

**6.257.3.4 append()** [4/9] `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp >  
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::append (`  
`const _Tp & __svt ) [inline]`

Append a string\_view.

#### Parameters

<code>__svt</code>	The object convertible to string_view to be appended.
--------------------	---

#### Returns

Reference to this string.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`.

**6.257.3.5 append()** [5/9] `template<typename _CharT , typename _Traits , typename _Alloc >  
template<typename _Tp >  
_If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::append (`  
`const _Tp & __svt,`  
`size_type __pos,`  
`size_type __n = npos ) [inline]`

Append a range of characters from a string\_view.

#### Parameters

<code>__svt</code>	The object convertible to string_view to be appended from.
<code>__pos</code>	The position in the string_view to append from.
<code>__n</code>	The number of characters to append from the string_view.

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.257.3.6 append()** [6/9] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (  
const basic_string<_CharT, _Traits, _Alloc> & __str )`

Append a string to this string.

**Parameters**

<code>__str</code>	The string to append.
--------------------	-----------------------

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#), and [std::size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#), [std::collate<\\_CharT>::do\\_transform\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator+=\(\)](#), and [std::operator>>\(\)](#).

**6.257.3.7 append()** [7/9] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::append (  
const basic_string<_CharT, _Traits, _Alloc> & __str,  
size_type __pos,  
size_type __n = npos )`

Append a substring.

**Parameters**

<code>__str</code>	The string to append.
<code>__pos</code>	Index of the first character of <code>str</code> to append.
<code>__n</code>	The number of characters to append.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	if <code>__pos</code> is not a valid index.
--------------------------------	---

This function appends `__n` characters from `__str` starting at `__pos` to this string. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is appended.

References [std::size\(\)](#).

**6.257.3.8 append()** [8/9] `template<typename _CharT , typename _Traits , typename _Alloc >`

```
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::append (
    initializer_list< _CharT > __l ) [inline]
```

Append an initializer\_list of characters.

#### Parameters

<code>↵</code>	The initializer_list of characters to append.
<code>↵</code>	
<code>↵</code>	
<code>↵</code>	
<code>/</code>	

#### Returns

Reference to this string.

References `std::basic_string< _CharT, _Traits, _Alloc >::append()`.

```
6.257.3.9 append() [9/9] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::append (
    size_type __n,
    _CharT __c )
```

Append multiple characters.

#### Parameters

<code>↵</code> <code>__n</code>	The number of characters to append.
<code>↵</code> <code>__c</code>	The character to use.

#### Returns

Reference to this string.

Appends `__n` copies of `__c` to this string.

References `std::size()`.

```
6.257.3.10 assign() [1/10] template<typename _CharT , typename _Traits , typename _Alloc >
template<class _InputIterator >
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::assign (
    _InputIterator __first,
    _InputIterator __last ) [inline]
```

Set value to a range of characters.

#### Parameters

<code>__first</code>	Iterator referencing the first character to append.
<code>__last</code>	Iterator marking the end of the range.

**Returns**

Reference to this string.

Sets value of string to characters in the range [`__first`,`__last`).

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::replace\(\)](#).

**6.257.3.11 assign()** [2/10] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign ( basic_string<_CharT, _Traits, _Alloc > && __str ) [inline], [noexcept]`

Set value to contents of another string.

**Parameters**

<code>__str</code>	Source string to use.
--------------------	-----------------------

**Returns**

Reference to this string.

This function sets this string to the exact contents of `__str`. `__str` is a valid, but unspecified string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::swap\(\)](#).

**6.257.3.12 assign()** [3/10] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc >::assign ( const _CharT * __s ) [inline]`

Set value to contents of a C string.

**Parameters**

<code>__s</code>	The C string to use.
------------------	----------------------

**Returns**

Reference to this string.

This function sets the value of this string to the value of `__s`. The data is copied, so there is no dependence on `__s` once the function returns.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::assign\(\)](#).

**6.257.3.13 assign()** [4/10] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string<_CharT, _Traits, _Alloc > & std::basic_string<_CharT, _Traits, _Alloc >::assign ( const _CharT * __s, size_type __n )`

Set value to a C substring.

**Parameters**

<code>__s</code>	The C string to use.
<code>__n</code>	Number of characters to use.

**Returns**

Reference to this string.

This function sets the value of this string to the first `__n` characters of `__s`. If `__n` is larger than the number of available characters in `__s`, the remainder of `__s` is used.

References [std::size\(\)](#).

```
6.257.3.14 assign() [5/10] template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt ) [inline]
```

Set value from a string\_view.

**Parameters**

<code>__svt</code>	The source object convertible to string_view.
--------------------	---

**Returns**

Reference to this string.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::assign\(\)](#).

```
6.257.3.15 assign() [6/10] template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::assign (
    const _Tp & __svt,
    size_type __pos,
    size_type __n = npos ) [inline]
```

Set value from a range of characters in a string\_view.

**Parameters**

<code>__svt</code>	The source object convertible to string_view.
<code>__pos</code>	The position in the string_view to assign from.
<code>__n</code>	The number of characters to assign.

**Returns**

Reference to this string.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::assign\(\)](#).

```
6.257.3.16 assign() [7/10] template<typename _CharT , typename _Traits , typename _Alloc >
basic\_string< _CharT, _Traits, _Alloc > & std::basic\_string< _CharT, _Traits, _Alloc >::assign (
    const basic\_string< _CharT, _Traits, _Alloc > & __str )
```

Set value to contents of another string.

## Parameters

<code>__str</code>	Source string to use.
--------------------	-----------------------

## Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::get\\_allocator\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator=\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#).

**6.257.3.17 assign()** [8/10] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (  
    const basic_string<_CharT, _Traits, _Alloc> & __str,  
    size_type __pos,  
    size_type __n = npos ) [inline]`

Set value to a substring of a string.

## Parameters

<code>__str</code>	The string to use.
<code>__pos</code>	Index of the first character of str.
<code>__n</code>	Number of characters to use.

## Returns

Reference to this string.

## Exceptions

<code>std::out_of_range</code>	if <code>pos</code> is not a valid index.
--------------------------------	---

This function sets this string to the substring of `__str` consisting of `__n` characters at `__pos`. If `__n` is larger than the number of available characters in `__str`, the remainder of `__str` is used.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.18 assign()** [9/10] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign (  
    initializer_list<_CharT> __l ) [inline]`

Set value to an initializer\_list of characters.

## Parameters

<code>↵</code> <code>↵</code> <code>↵</code> <code>↵</code> <code>/</code>	The initializer_list of characters to assign.
--	---

**Returns**

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::assign()`.

**6.257.3.19 assign()** [10/10] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::assign ( size_type __n, _CharT __c ) [inline]`

Set value to multiple characters.

**Parameters**

<code>__n</code>	Length of the resulting string.
<code>__c</code>	The character to use.

**Returns**

Reference to this string.

This function sets the value of this string to `__n` copies of character `__c`.

References `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.257.3.20 at()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > reference std::basic_string<_CharT, _Traits, _Alloc>::at ( size_type __n ) [inline]`

Provides access to the data contained in the string.

**Parameters**

<code>__n</code>	The index of the character to access.
------------------	---------------------------------------

**Returns**

Read/write reference to the character.

**Exceptions**

<code>std::out_of_range</code>	If <code>n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails. Success results in unsharing the string.

References `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.257.3.21 at()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_reference std::basic_string<_CharT, _Traits, _Alloc>::at (`

```
size_type __n ) const [inline]
```

Provides access to the data contained in the string.

#### Parameters

<code>_↔</code>	The index of the character to access.
<code>_n</code>	

#### Returns

Read-only (const) reference to the character.

#### Exceptions

<code>std::out_of_range</code>	If <i>n</i> is an invalid index.
--------------------------------	----------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the string. The function throws `out_of_range` if the check fails.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.22 back()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > reference std::basic_string<_CharT, _Traits, _Alloc>::back ( ) [inline]`

Returns a read/write reference to the data at the last element of the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator\[\]\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.23 back()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_reference std::basic_string<_CharT, _Traits, _Alloc>::back ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the last element of the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator\[\]\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.24 begin()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > iterator std::basic_string<_CharT, _Traits, _Alloc>::begin ( ) [inline]`

Returns a read/write iterator that points to the first character in the string. Unshares the string.

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::crend\(\)](#), [std::regex\\_match\(\)](#), [std::regex\\_replace\(\)](#), [std::regex\\_search\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::rend\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

**6.257.3.25 begin()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_iterator std::basic_string<_CharT, _Traits, _Alloc>::begin ( ) const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first character in the string.

**6.257.3.26 c\_str()** `template<typename _CharT , typename _Traits , typename _Alloc > const _CharT * std::basic_string<_CharT, _Traits, _Alloc>::c_str ( ) const [inline], [noexcept]`

Return const pointer to null-terminated contents.

This is a handle to internal data. Do not modify or dire things may happen.

Referenced by `std::collate<_CharT>::do_compare()`, `std::money_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::collate<_CharT>::do_transform()`, `std::basic_filebuf<_CharT, _Traits>::open()`, `std::regex_replace()`, and `std::experimental::filesystem::v1::filesystem_error::what()`.

**6.257.3.27 capacity()** `template<typename _CharT , typename _Traits , typename _Alloc > size_type std::basic_string<_CharT, _Traits, _Alloc>::capacity ( ) const [inline], [noexcept]`  
Returns the total number of characters that the string can hold before needing to allocate more memory.  
Referenced by `std::basic_string<_CharT, _Traits, _Alloc>::push_back()`.

**6.257.3.28 cbegin()** `template<typename _CharT , typename _Traits , typename _Alloc > const_iterator std::basic_string<_CharT, _Traits, _Alloc>::cbegin ( ) const [inline], [noexcept]`  
Returns a read-only (constant) iterator that points to the first character in the string.

**6.257.3.29 cend()** `template<typename _CharT , typename _Traits , typename _Alloc > const_iterator std::basic_string<_CharT, _Traits, _Alloc>::cend ( ) const [inline], [noexcept]`  
Returns a read-only (constant) iterator that points one past the last character in the string.  
References `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.257.3.30 clear()** `template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_string<_CharT, _Traits, _Alloc>::clear ( ) [inline], [noexcept]`  
Erases the string, making it empty.  
References `std::basic_string<_CharT, _Traits, _Alloc>::get_allocator()`.  
Referenced by `std::basic_stringbuf<_CharT, _Traits, _Alloc>::setbuf()`.

**6.257.3.31 compare()** [1/9] `template<typename _CharT , typename _Traits , typename _Alloc > int std::basic_string<_CharT, _Traits, _Alloc>::compare ( const _CharT * __s ) const [inline], [noexcept]`  
Compare to a C string.

#### Parameters

<code>__s</code>	C string to compare against.
------------------	------------------------------

#### Returns

Integer < 0, 0, or > 0.

Returns an integer < 0 if this string is ordered before `__s`, 0 if their values are equivalent, or > 0 if this string is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and the length of a string constructed from `__s`. The function then compares the two strings by calling `traits::compare(data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.  
References `std::min()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`.

**6.257.3.32 compare()** [2/9] `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv<_Tp, int > std::basic_string<_CharT, _Traits, _Alloc>::compare ( const _Tp & __svt ) const [inline], [noexcept]`

Compare to a `string_view`.

## Parameters

<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
--------------------	---

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

References [std::min\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.33 compare()** [3/9] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`int std::basic_string<_CharT, _Traits, _Alloc>::compare (`  
`const basic_string<_CharT, _Traits, _Alloc> & __str ) const [inline]`

Compare to a string.

## Parameters

<code>__str</code>	String to compare against.
--------------------	----------------------------

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

Returns an integer  $< 0$  if this string is ordered before `__str`,  $0$  if their values are equivalent, or  $> 0$  if this string is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of `size()` and `str.size()`. The function then compares the two strings by calling `traits::compare(data(), str.data(), rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), [std::min\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.34 compare()** [4/9] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`template<typename _Tp >`  
`_If_sv<_Tp, int> std::basic_string<_CharT, _Traits, _Alloc>::compare (`  
`size_type __pos,`  
`size_type __n,`  
`const _Tp & __svt ) const [inline], [noexcept]`

Compare to a `string_view`.

## Parameters

<code>__pos</code>	A position in the string to start comparing from.
<code>__n</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.

## Returns

Integer  $< 0$ ,  $0$ , or  $> 0$ .

**6.257.3.35 compare()** [5/9] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`int std::basic_string<_CharT, _Traits, _Alloc>::compare (`

```

size_type __pos,
size_type __n,
const basic_string< _CharT, _Traits, _Alloc > & __str ) const [inline]

```

Compare substring to a string.

#### Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n</code>	Number of characters in substring.
<code>__str</code>	String to compare against.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n` characters starting at `__pos`. Returns an integer < 0 if the substring is ordered before `__str`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__str.size()`. The function then compares the two strings by calling `traits::compare(substring.data(),str.data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::data\(\)](#), [std::min\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::size\(\)](#).

```

6.257.3.36 compare() [6/9] template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,
    const _CharT * __s ) const [inline]

```

Compare substring to a C string.

#### Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	C string to compare against.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `pos`. Returns an integer < 0 if the substring is ordered before `__s`, 0 if their values are equivalent, or > 0 if the substring is ordered after `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and the length of a string constructed from `__s`. The function then compares the two string by calling `traits::compare(substring.data(),__s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References [std::min\(\)](#).

```

6.257.3.37 compare() [7/9] template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos,
    size_type __n1,

```

```
const _CharT * __s,
size_type __n2 ) const [inline]
```

Compare substring against a character array.

#### Parameters

<code>__pos</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__s</code>	character array to compare against.
<code>__n2</code>	Number of characters of s.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos`. Form a string from the first `__n2` characters of `__s`. Returns an integer < 0 if this substring is ordered before the string from `__s`, 0 if their values are equivalent, or > 0 if this substring is ordered after the string from `__s`. Determines the effective length `rlen` of the strings to compare as the smallest of the length of the substring and `__n2`. The function then compares the two strings by calling `traits::compare(substring.data(),s,rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

NB: `s` must have at least `n2` characters, `'\0'` has no special meaning.

References [std::min\(\)](#).

```
6.257.3.38 compare() [8/9] template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv< _Tp, int > std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
    size_type __n1,
    const _Tp & __svt,
    size_type __pos2,
    size_type __n2 = npos ) const [inline], [noexcept]
```

Compare to a `string_view`.

#### Parameters

<code>__pos1</code>	A position in the string to start comparing from.
<code>__n1</code>	The number of characters to compare.
<code>__svt</code>	An object convertible to <code>string_view</code> to compare against.
<code>__pos2</code>	A position in the <code>string_view</code> to start comparing from.
<code>__n2</code>	The number of characters to compare.

#### Returns

Integer < 0, 0, or > 0.

```
6.257.3.39 compare() [9/9] template<typename _CharT , typename _Traits , typename _Alloc >
int std::basic_string< _CharT, _Traits, _Alloc >::compare (
    size_type __pos1,
```

```

size_type __n1,
const basic_string< _CharT, _Traits, _Alloc > & __str,
size_type __pos2,
size_type __n2 = npos ) const [inline]

```

Compare substring to a substring.

#### Parameters

<code>__pos1</code>	Index of first character of substring.
<code>__n1</code>	Number of characters in substring.
<code>__str</code>	String to compare against.
<code>__pos2</code>	Index of first character of substring of str.
<code>__n2</code>	Number of characters in substring of str.

#### Returns

Integer < 0, 0, or > 0.

Form the substring of this string from the `__n1` characters starting at `__pos1`. Form the substring of `__str` from the `__n2` characters starting at `__pos2`. Returns an integer < 0 if this substring is ordered before the substring of `__str`, 0 if their values are equivalent, or > 0 if this substring is ordered after the substring of `__str`. Determines the effective length `rlen` of the strings to compare as the smallest of the lengths of the substrings. The function then compares the two strings by calling `traits::compare(substring.data(),str.substr(pos2,n2).data(),rlen)`. If the result of the comparison is nonzero returns it, otherwise the shorter one is ordered first.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, and `std::min()`.

```

6.257.3.40 copy() template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::copy (
    _CharT * __s,
    size_type __n,
    size_type __pos = 0 ) const

```

Copy substring into C string.

#### Parameters

<code>__s</code>	C string to copy value into.
<code>__n</code>	Number of characters to copy.
<code>__pos</code>	Index of first character to copy.

#### Returns

Number of characters actually copied

#### Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Copies up to `__n` characters starting at `__pos` into the C string `__s`. If `__pos` is greater than `size()`, `out_of_range` is thrown.

**6.257.3.41 crbegin()** `template<typename _CharT , typename _Traits , typename _Alloc >  
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crbegin ( ) const [inline],  
[noexcept]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References `std::basic_string< _CharT, _Traits, _Alloc >::end()`.

**6.257.3.42 crend()** `template<typename _CharT , typename _Traits , typename _Alloc >  
const_reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::crend ( ) const [inline],  
[noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References `std::basic_string< _CharT, _Traits, _Alloc >::begin()`.

**6.257.3.43 data()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc >  
const _CharT * std::basic_string< _CharT, _Traits, _Alloc >::data ( ) const [inline], [noexcept]`

Return const pointer to contents.

This is a pointer to internal data. It is undefined to modify the contents through the returned pointer. To get a pointer that allows modifying the contents use `&str[0]` instead, (or in C++17 the non-const `str.data()` overload).

Referenced by `std::basic_regex< _Ch_type, _Rx_traits >::assign()`, `std::basic_string< _CharT, _Traits, _Alloc >::compare()`, `std::collate< _CharT >::do_compare()`, `std::collate< _CharT >::do_transform()`, `std::basic_string< _CharT, _Traits, _Alloc >::find()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_first_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_not_of()`, `std::basic_string< _CharT, _Traits, _Alloc >::find_last_of()`, `std::match_results< _Bi_iter, _Alloc >::format()`, `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`, `std::basic_string< _CharT, _Traits, _Alloc >::operator __sv_type()`, `std::basic_string< _CharT, _Traits, _Alloc >::rfind()`, `std::basic_stringbuf< _CharT, _Traits, _Alloc >::str()`, `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes()`, `std::regex_traits< _Ch_type >::transform()`, and `std::filesystem::filesystem_error::what()`.

**6.257.3.44 data()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc >  
_CharT * std::basic_string< _CharT, _Traits, _Alloc >::data ( ) [inline], [noexcept]`

Return non-const pointer to contents.

This is a pointer to the character sequence held by the string. Modifying the characters in the sequence is allowed.

**6.257.3.45 empty()** `template<typename _CharT , typename _Traits , typename _Alloc >  
bool std::basic_string< _CharT, _Traits, _Alloc >::empty ( ) const [inline], [noexcept]`

Returns true if the string is empty. Equivalent to `*this == ""`.

References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::back()`, `std::basic_string< _CharT, _Traits, _Alloc >::front()`, `std::tr2::operator>>()`, and `std::basic_string< _CharT, _Traits, _Alloc >::pop_back()`.

**6.257.3.46 end()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc >  
iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) [inline]`

Returns a read/write iterator that points one past the last character in the string. Unshares the string.

References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

Referenced by `std::basic_string< _CharT, _Traits, _Alloc >::crbegin()`, `std::basic_string< _CharT, _Traits, _Alloc >::rbegin()`, `std::regex_match()`, `std::regex_replace()`, and `std::regex_search()`.

**6.257.3.47 end()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_iterator std::basic_string< _CharT, _Traits, _Alloc >::end ( ) const [inline], [noexcept]`  
 Returns a read-only (constant) iterator that points one past the last character in the string.  
 References `std::basic_string< _CharT, _Traits, _Alloc >::size()`.

**6.257.3.48 erase()** [1/3] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc >::iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (`  
     `iterator __first,`  
     `iterator __last )`  
 Remove a range of characters.

**Parameters**

<code>__first</code>	Iterator referencing the first character to remove.
<code>__last</code>	Iterator referencing the end of the range.

**Returns**

Iterator referencing location of first after removal.

Removes the characters in the range [first,last) from this string. The value of the string doesn't change if an error is thrown.

**6.257.3.49 erase()** [2/3] `template<typename _CharT , typename _Traits , typename _Alloc > iterator std::basic_string< _CharT, _Traits, _Alloc >::erase (`  
     `iterator __position ) [inline]`  
 Remove one character.

**Parameters**

<code>__position</code>	Iterator referencing the character to remove.
-------------------------	---

**Returns**

iterator referencing same location after removal.

Removes the character at `__position` from this string. The value of the string doesn't change if an error is thrown.

**6.257.3.50 erase()** [3/3] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::erase (`  
     `size_type __pos = 0,`  
     `size_type __n = npos ) [inline]`  
 Remove characters.

**Parameters**

<code>__pos</code>	Index of first character to remove (default 0).
<code>__n</code>	Number of characters to remove (default remainder).

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is beyond the end of this string.
--------------------------------	---

Removes *\_\_n* characters from this string starting at *\_\_pos*. The length of the string is reduced by *\_\_n*. If there are  $< \_n$  characters to remove, the remainder of the string is truncated. If *\_\_p* is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

Referenced by [std::getline\(\)](#), [std::operator>>\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::pop\\_back\(\)](#).

**6.257.3.51 find() [1/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc  
>::find (  
          _CharT __c,  
          size_type __pos = 0 ) const [noexcept]`

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from *\_\_pos*, searches forward for *\_\_c* within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

**6.257.3.52 find() [2/5]** `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string<_CharT, _Traits, _Alloc>::size_type std::basic_string<_CharT, _Traits, _Alloc  
>::find (  
          const _CharT * __s,  
          size_type __pos,  
          size_type __n ) const [noexcept]`

Find position of a C substring.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <i>s</i> to search for.

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::data\(\)](#), and [std::size\(\)](#).

Referenced by [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::find\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::find\\_first\\_of\(\)](#).

**6.257.3.53 find()** [3/5] `template<typename _CharT , typename _Traits , typename _Alloc >  
size_type std::basic_string< _CharT, _Traits, _Alloc >::find (  
    const _CharT * __s,  
    size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

Starting from `__pos`, searches forward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::find\(\)](#).

**6.257.3.54 find()** [4/5] `template<typename _CharT , typename _Traits , typename _Alloc >

    const _Tp & __svt,  
    size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a string\_view.

**Parameters**

<code>__svt</code>	The object convertible to string_view to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of start of first occurrence.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::find\(\)](#).

**6.257.3.55 find()** [5/5] `template<typename _CharT , typename _Traits , typename _Alloc >

>::find_first_not_of (
    _CharT __c,
    size_type __pos = 0 ) const [noexcept]
```

Find position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

```
6.257.3.57 find_first_not_of() [2/5] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::find_first_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from <code>__s</code> to consider.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character not in string.

**Parameters**

<code>__str</code>	String containing characters to avoid.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for a character not contained in `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_first\\_not\\_of\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_first\\_not\\_of\(\)](#).

```
6.257.3.61 find_first_of() [1/5] template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string< _CharT, _Traits, _Alloc >::find_first_of (
    _CharT __c,
    size_type __pos = 0 ) const [inline], [noexcept]
```

Find position of a character.

**Parameters**

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for the character `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

Note: equivalent to `find(__c, __pos)`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\(\)](#).

```
6.257.3.62 find_first_of() [2/5] template<typename _CharT , typename _Traits , typename _Alloc >

>::find_first_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find position of a character of C substring.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the first `__n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

**6.257.3.63 find\_first\_of() [3/5]** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`size_type std::basic_string<_CharT, _Traits, _Alloc>::find_first_of (`  
`const _CharT * __s,`  
`size_type __pos = 0 ) const [inline], [noexcept]`

Find position of a character of C string.

**Parameters**

<code>__s</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search from (default 0).

**Returns**

Index of first occurrence.

Starting from `__pos`, searches forward for one of the characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_first\\_of\(\)](#).

>::find_last_not_of (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a different character.

**Parameters**

<code>__c</code>	Character to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character other than `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

```
6.257.3.67 find_last_not_of() [2/5]  template<typename _CharT , typename _Traits , typename _Alloc >

>::find_last_not_of (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find last position of a character not in C substring.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to consider.

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in the first `n` characters of `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

**6.257.3.68 find\_last\_not\_of()** [3/5] `template<typename _CharT, typename _Traits, typename _Alloc> size_type std::basic_string<_CharT, _Traits, _Alloc>::find_last_not_of ( const _CharT * __s, size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character not in C string.

**Parameters**

<code>__s</code>	C string containing characters to avoid.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of last occurrence.

Starting from `__pos`, searches backward for a character not contained in `__s` within this string. If found, returns the index where it was found. If not found, returns `npos`.

`const basic\_string<\_CharT, \_Traits, \_Alloc> & __str,`  
`size_type __pos = npos ) const [inline], [noexcept]`

Find last position of a character of string.

## Parameters

<code>__str</code>	String containing characters to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of last occurrence.

Starting from `__pos`, searches backward for one of the characters of `__str` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_last\\_of\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_last\\_of\(\)](#).

**6.257.3.76 front()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::front ( ) [inline]`

Returns a read/write reference to the data at the first element of the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator\[\]\(\)](#).

**6.257.3.77 front()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc>  
const_reference std::basic\_string<\_CharT, \_Traits, \_Alloc>::front ( ) const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the first element of the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator\[\]\(\)](#).

allocator_type std::basic\_string<\_CharT, \_Traits, \_Alloc>::get\_allocator ( ) const [inline],  
[noexcept]`

Return copy of allocator used to construct this string.

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::~basic\\_string\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::clear\(\)](#), [std::wstring\\_convert<\\_Codecvt, \\_Elem, \\_Wide\\_alloc, \\_Byte\\_alloc>::from\\_bytes\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#), and [std::wstring\\_convert<\\_Codecvt, \\_Elem, \\_Wide\\_alloc, \\_Byte\\_alloc>::to\\_bytes\(\)](#).

**6.257.3.79 insert()** [1/11] `template<typename _CharT, typename _Traits, typename _Alloc>  
iterator std::basic\_string<\_CharT, \_Traits, \_Alloc>::insert (  
    iterator __p,  
    _CharT __c ) [inline]`

Insert one character.

## Parameters

<code>__p</code>	Iterator referencing position in string to insert at.
<code>__c</code>	The character to insert.

**Returns**

Iterator referencing newly inserted char.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts character `__c` at position referenced by `__p`. If adding character causes the length to exceed `max_size()`, `length_error` is thrown. If `__p` is beyond end of string, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.80 insert()** [2/11] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`template<class _InputIterator >`  
`void std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
`iterator __p,`  
`_InputIterator __beg,`  
`_InputIterator __end ) [inline]`

Insert a range of characters.

**Parameters**

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__beg</code>	Start of range.
<code>__end</code>	End of range.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts characters in range `[__beg,__end)`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::replace\(\)](#).

**6.257.3.81 insert()** [3/11] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`void std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
`iterator __p,`  
`initializer_list< _CharT > __l ) [inline]`

Insert an `initializer_list` of characters.

**Parameters**

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__l</code>	The <code>initializer_list</code> of characters to insert.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.257.3.82 insert()** [4/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
void std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
    `iterator __p,`  
    `size_type __n,`  
    `_CharT __c ) [inline]`

Insert multiple characters.

**Parameters**

<code>__p</code>	Iterator referencing location in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

**Exceptions**

<i>std::length_error</i>	If new length exceeds <code>max_size()</code> .
--------------------------	---

Inserts `__n` copies of character `__c` starting at the position referenced by iterator `__p`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.257.3.83 insert()** [5/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
    `size_type __pos,`  
    `const _CharT * __s ) [inline]`

Insert a C string.

**Parameters**

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.

**Returns**

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos</code> is beyond the end of this string.

Inserts the first `n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.257.3.84 insert()** [6/11] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string< _CharT, _Traits, _Alloc > & std::basic_string< _CharT, _Traits, _Alloc >::insert ( size_type __pos, const _CharT * __s, size_type __n )`

Insert a C substring.

## Parameters

<code>__pos</code>	Position in string to insert at.
<code>__s</code>	The C string to insert.
<code>__n</code>	The number of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts the first `__n` characters of `__s` starting at `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos` is beyond `end()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.85 insert()** [7/11] `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::insert ( size_type __pos, const _Tp & __svt ) [inline]`

Insert a string\_view.

## Parameters

<code>__pos</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert.

**Returns**

Reference to this string.

References `std::basic_string<_CharT, _Traits, _Alloc>::insert()`.

**6.257.3.86 insert()** [8/11] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
    `size_type __pos,`  
    `size_type __n,`  
    `_CharT __c ) [inline]`

Insert multiple characters.

**Parameters**

<code>__pos</code>	Index in string to insert at.
<code>__n</code>	Number of characters to insert
<code>__c</code>	The character to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>__pos</code> is beyond the end of this string.

Inserts `__n` copies of character `__c` starting at index `__pos`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos > length()`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.87 insert()** [9/11] `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::insert (`  
    `size_type __pos1,`  
    `const _Tp & __svt,`  
    `size_type __pos2,`  
    `size_type __n = npos ) [inline]`

Insert a string\_view.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__svt</code>	The object convertible to string_view to insert from.
<code>__pos2</code>	Position in string_view to insert from.
<code>__n</code>	The number of characters to insert.

**Returns**

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::replace\(\)](#).

**6.257.3.88 insert()** [10/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::insert (  
size_type __pos1,  
const basic_string<_CharT, _Traits, _Alloc > & __str ) [inline]`

Insert value of a string.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Inserts value of `__str` starting at `__pos1`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::insert\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc >::size\(\)](#).

**6.257.3.89 insert()** [11/11] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc >::insert (  
size_type __pos1,  
const basic_string<_CharT, _Traits, _Alloc > & __str,  
size_type __pos2,  
size_type __n = npos ) [inline]`

Insert a substring.

**Parameters**

<code>__pos1</code>	Position in string to insert at.
<code>__str</code>	The string to insert.
<code>__pos2</code>	Start of characters in <code>str</code> to insert.
<code>__n</code>	Number of characters to insert.

**Returns**

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> or <code>__pos2 &gt; str.size()</code> .

Starting at `pos1`, insert `__n` character of `__str` beginning with `__pos2`. If adding characters causes the length to exceed `max_size()`, `length_error` is thrown. If `__pos1` is beyond the end of this string or `__pos2` is beyond the end of `__str`, `out_of_range` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#).

**6.257.3.90 length()** `template<typename _CharT , typename _Traits , typename _Alloc > size_type std::basic_string< _CharT, _Traits, _Alloc >::length ( ) const [inline], [noexcept]`

Returns the number of characters in the string, not including any null-termination.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

Referenced by [std::collate<\\_CharT>::do\\_compare\(\)](#), [std::collate<\\_CharT>::do\\_transform\(\)](#), [std::regex\\_traits<\\_Ch\\_type>::length\(\)](#), [std::regex\\_replace\(\)](#), and [std::wstring\\_convert<\\_Codecvt, \\_Elem, \\_Wide\\_alloc, \\_Byte\\_alloc>::to\\_bytes\(\)](#).

**6.257.3.91 max\_size()** `template<typename _CharT , typename _Traits , typename _Alloc > size_type std::basic_string< _CharT, _Traits, _Alloc >::max_size ( ) const [inline], [noexcept]`

Returns the `size()` of the largest possible string.

Referenced by [std::getline\(\)](#), and [std::operator>>\(\)](#).

**6.257.3.92 operator \_\_sv\_type()** `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_string< _CharT, _Traits, _Alloc >::operator __sv_type ( ) const [inline], [noexcept]`

Convert to a `string_view`.

## Returns

A `string_view`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.257.3.93 operator+=( )** [1/5] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::operator+=( ( _CharT __c ) [inline]`

Append a character.

## Parameters

<code>__c</code>	The character to append.
<code>__C</code>	

## Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::push\\_back\(\)](#).

**6.257.3.94 operator+=( )** [2/5] `template<typename _CharT , typename _Traits , typename _Alloc >`

```
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= (
    const _CharT * __s ) [inline]
```

Append a C string.

#### Parameters

<code>__s</code>	The C string to append.
------------------	-------------------------

#### Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.257.3.95 operator+=( ) [3/5]** `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv< _Tp, basic_string & > std::basic_string<_CharT, _Traits, _Alloc>::operator+= ( const _Tp & __svt ) [inline]`

Append a string\_view.

#### Parameters

<code>__svt</code>	The object convertible to string_view to be appended.
--------------------	---

#### Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.257.3.96 operator+=( ) [4/5]** `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= ( const basic_string<_CharT, _Traits, _Alloc> & __str ) [inline]`

Append a string to this string.

#### Parameters

<code>__str</code>	The string to append.
--------------------	-----------------------

#### Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.257.3.97 operator+=( ) [5/5]** `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator+= ( initializer_list<_CharT> __l ) [inline]`

Append an initializer\_list of characters.

## Parameters

<a href="#"></a>	The initializer_list of characters to be appended.
<a href="#"></a>	
<a href="#"></a>	
<a href="#"></a>	
<a href="#"></a>	

## Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#).

**6.257.3.98 operator=()** [1/6] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
_CharT __c ) [inline]`

Set value to string of length 1.

## Parameters

<a href="#"></a>	Source character.
<a href="#"></a>	

Assigning to a character makes this string length 1 and `(*this)[0] == c`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.99 operator=()** [2/6] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
basic_string<_CharT, _Traits, _Alloc> && __str ) [inline], [noexcept]`

Move assign the value of *str* to this string.

## Parameters

<a href="#"></a>	Source string.
---	----------------

The contents of *str* are moved into this string (without copying). *str* is a valid, but unspecified string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::swap\(\)](#).

**6.257.3.100 operator=()** [3/6] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
const _CharT * __s ) [inline]`

Copy contents of *s* into this string.

## Parameters

<a href="#"></a>	Source null-terminated string.
<a href="#"></a>	

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.101 operator=()** [4/6] `template<typename _CharT, typename _Traits, typename _Alloc>  
template<typename _Tp>  
_If_sv<_Tp, basic_string &> std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
    const _Tp & __svt ) [inline]`

Set value to string constructed from a string\_view.

#### Parameters

<code>__svt</code>	An object convertible to string_view.
--------------------	---------------------------------------

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.102 operator=()** [5/6] `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
    const basic_string<_CharT, _Traits, _Alloc> & __str ) [inline]`

Assign the value of *str* to this string.

#### Parameters

<code>__str</code>	Source string.
--------------------	----------------

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.103 operator=()** [6/6] `template<typename _CharT, typename _Traits, typename _Alloc>  
basic_string & std::basic_string<_CharT, _Traits, _Alloc>::operator= (  
    initializer_list<_CharT> __l ) [inline]`

Set value to string constructed from initializer list.

#### Parameters

<code>↔</code>	<code>std::initializer_list.</code>
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>/</code>	

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#).

**6.257.3.104 operator[]()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc>  
reference std::basic_string<_CharT, _Traits, _Alloc>::operator[] (  
    size_type __pos ) [inline]`

Subscript access to the data contained in the string.

#### Parameters

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read/write reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out\_of\_range lookups are not defined. (For checked lookups see at().) Unshares the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

```
6.257.3.105 operator[]() [2/2] template<typename _CharT , typename _Traits , typename _Alloc >
const_reference std::basic_string< _CharT, _Traits, _Alloc >::operator[] (
    size_type __pos ) const [inline], [noexcept]
```

Subscript access to the data contained in the string.

**Parameters**

<code>__pos</code>	The index of the character to access.
--------------------	---------------------------------------

**Returns**

Read-only (constant) reference to the character.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out\_of\_range lookups are not defined. (For checked lookups see at().)

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

Referenced by [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::back\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::front\(\)](#).

```
6.257.3.106 pop_back() template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::pop_back ( ) [inline]
```

Remove the last character.

The string must be non-empty.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::erase\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

```
6.257.3.107 push_back() template<typename _CharT , typename _Traits , typename _Alloc >
void std::basic_string< _CharT, _Traits, _Alloc >::push_back (
    _CharT __c ) [inline]
```

Append a single character.

**Parameters**

<code>__c</code>	Character to append.
------------------	----------------------

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::capacity\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::reserve\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

Referenced by [std::collate<\\_CharT>::do\\_transform\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator+=\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::overflow\(\)](#).

```
6.257.3.108 rbegin() [1/2] template<typename _CharT , typename _Traits , typename _Alloc >
reverse_iterator std::basic_string< _CharT, _Traits, _Alloc >::rbegin ( ) [inline]
```

Returns a read/write reverse iterator that points to the last character in the string. Iteration is done in reverse element order. Unshares the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::end\(\)](#).

**6.257.3.109 rbegin()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rbegin ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last character in the string. Iteration is done in reverse element order.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::end\(\)](#).

**6.257.3.110 rend()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend ( ) [inline]`

Returns a read/write reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order. Unshares the string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::begin\(\)](#).

**6.257.3.111 rend()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > const_reverse_iterator std::basic_string<_CharT, _Traits, _Alloc>::rend ( ) const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first character in the string. Iteration is done in reverse element order.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::begin\(\)](#).

**6.257.3.112 replace()** [1/14] `template<typename _CharT , typename _Traits , typename _Alloc > template<typename _Tp > _If_sv<_Tp, basic_string & > std::basic_string<_CharT, _Traits, _Alloc>::replace ( const_iterator __i1, const_iterator __i2, const _Tp & __svt ) [inline]`

Replace range of characters with string\_view.

#### Parameters

<code>__i1</code>	An iterator referencing the start position to replace at.
<code>__i2</code>	An iterator referencing the end position for the replace.
<code>__svt</code>	The object convertible to string_view to insert from.

#### Returns

Reference to this string.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::begin\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

**6.257.3.113 replace()** [2/14] `template<typename _CharT , typename _Traits , typename _Alloc > template<class _InputIterator > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace ( iterator __i1,`

```

        iterator __i2,
        _InputIterator __k1,
        _InputIterator __k2 ) [inline]

```

Replace range of characters with range.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__k1</code>	Iterator referencing start of range to insert.
<code>__k2</code>	Iterator referencing end of range to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.114 replace()** [3/14] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (`  
 `iterator __i1,`  
 `iterator __i2,`  
 `const _CharT * __s ) [inline]`

Replace range of characters with C string.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string< _CharT, _Traits, _Alloc >::replace()`.

**6.257.3.115 replace()** [4/14] `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (  
 iterator __i1,  
 iterator __i2,  
 const _CharT * __s,  
 size_type __n ) [inline]`

Replace range of characters with C substring.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__s</code>	C string value to insert.
<code>__n</code>	Number of characters from s to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, the first `__n` characters of `__s` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

**6.257.3.116 replace()** [5/14] `template<typename _CharT, typename _Traits, typename _Alloc>  
 basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (  
 iterator __i1,  
 iterator __i2,  
 const basic_string<_CharT, _Traits, _Alloc> & __str ) [inline]`

Replace range of characters with string.

#### Parameters

<code>__i1</code>	Iterator referencing start of range to replace.
<code>__i2</code>	Iterator referencing end of range to replace.
<code>__str</code>	String value to insert.

#### Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, the value of `__str` is inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.117 replace()** [6/14] `template<typename _CharT , typename _Traits , typename _Alloc >  
basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (  
    iterator __i1,  
    iterator __i2,  
    initializer_list< _CharT > __l ) [inline]`

Replace range of characters with `initializer_list`.

## Parameters

<code>↵ __i1</code>	Iterator referencing start of range to replace.
<code>↵ __i2</code>	Iterator referencing end of range to replace.
<code>↵ __l</code>	The <code>initializer_list</code> of characters to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1,__i2)`. In place, characters in the range `[__k1,__k2)` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#).

    iterator __i1,  
    iterator __i2,  
    size_type __n,  
    _CharT __c ) [inline]`

Replace range of characters with multiple characters.

## Parameters

<code>↵ __i1</code>	Iterator referencing start of range to replace.
<code>↵ __i2</code>	Iterator referencing end of range to replace.

## Parameters

<a href="#"><code>__n</code></a>	Number of characters to insert.
<a href="#"><code>__c</code></a>	Character to insert.

## Returns

Reference to this string.

## Exceptions

<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .
--------------------------------	---

Removes the characters in the range `[__i1, __i2)`. In place, `__n` copies of `__c` are inserted. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.119 replace()** [8/14] `template<typename _CharT, typename _Traits, typename _Alloc > template<typename _Tp > _If_sv< _Tp, basic_string & > std::basic_string< _CharT, _Traits, _Alloc >::replace (`  
`size_type __pos,`  
`size_type __n,`  
`const _Tp & __svt ) [inline]`

Replace range of characters with string\_view.

## Parameters

<code>__pos</code>	The position to replace at.
<code>__n</code>	The number of characters to replace.
<code>__svt</code>	The object convertible to string_view to insert.

## Returns

Reference to this string.

References [`std::basic\_string<\_CharT, \_Traits, \_Alloc >::replace\(\)`](#).

**6.257.3.120 replace()** [9/14] `template<typename _CharT, typename _Traits, typename _Alloc > basic_string & std::basic_string< _CharT, _Traits, _Alloc >::replace (`  
`size_type __pos,`  
`size_type __n,`  
`const basic_string< _CharT, _Traits, _Alloc > & __str ) [inline]`

Replace characters with value from another string.

## Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is beyond the end of this string.
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos+__n)` from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`, and `std::basic_string<_CharT, _Traits, _Alloc>::size()`. **6.257.3.121 replace()** [10/14] `template<typename _CharT, typename _Traits, typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc>::replace (`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s ) [inline]`

Replace characters with value of a C string.

**Parameters**

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.

**Returns**

Reference to this string.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> > <code>size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the characters of `__s` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References `std::basic_string<_CharT, _Traits, _Alloc>::replace()`.

**6.257.3.122 replace()** [11/14] `template<typename _CharT, typename _Traits, typename _Alloc > basic_string<_CharT, _Traits, _Alloc> & std::basic_string<_CharT, _Traits, _Alloc>::replace (`  
`(`  
`size_type __pos,`  
`size_type __n1,`  
`const _CharT * __s,`

```
size_type __n2 )
```

Replace characters with value of a C substring.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__s</code>	C string to insert.
<code>__n2</code>	Number of characters from <code>s</code> to use.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>pos1 &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[__pos, __pos + __n1)` from this string. In place, the first `__n2` characters of `__s` are inserted, or all of `__s` if `__n2` is too large. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

**6.257.3.123 replace()** [12/14] `template<typename _CharT , typename _Traits , typename _Alloc > basic_string & std::basic_string<_CharT, _Traits, _Alloc >::replace (`  
`size_type __pos,`  
`size_type __n1,`  
`size_type __n2,`  
`_CharT __c ) [inline]`

Replace characters with multiple characters.

#### Parameters

<code>__pos</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__n2</code>	Number of characters to insert.
<code>__c</code>	Character to insert.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range `[pos, pos + n1)` from this string. In place, `__n2` copies of `__c` are inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of result exceeds `max_size()`, `length_error` is thrown. The

value of the string doesn't change if an error is thrown.

**6.257.3.124 replace()** [13/14] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`template<typename _Tp >`  
`_If_sv< _Tp, basic\_string & > std::basic\_string< _CharT, _Traits, _Alloc >::replace (`

`const basic\_string< _CharT, _Traits, _Alloc > & __str,`  
`size_type __pos2,`  
`size_type __n2 = npos ) [inline]`

Replace characters with value from another string.

#### Parameters

<code>__pos1</code>	Index of first character to replace.
<code>__n1</code>	Number of characters to be replaced.
<code>__str</code>	String to insert.
<code>__pos2</code>	Index of first character of <code>str</code> to use.
<code>__n2</code>	Number of characters from <code>str</code> to use.

#### Returns

Reference to this string.

#### Exceptions

<code>std::out_of_range</code>	If <code>__pos1 &gt; size()</code> or <code>__pos2 &gt; __str.size()</code> .
<code>std::length_error</code>	If new length exceeds <code>max_size()</code> .

Removes the characters in the range [`__pos1`, `__pos1 + n`) from this string. In place, the value of `__str` is inserted. If `__pos` is beyond end of string, `out_of_range` is thrown. If the length of the result exceeds `max_size()`, `length_error` is thrown. The value of the string doesn't change if an error is thrown.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::replace\(\)](#).

**6.257.3.126 reserve()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_string< _CharT, _Traits, _Alloc >::reserve`

Equivalent to `shrink_to_fit()`.

Referenced by [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::push\\_back\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::shrink\\_to\\_fit\(\)](#).

**6.257.3.127 reserve()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_string< _CharT, _Traits, _Alloc >::reserve ( size_type __res_arg )`

Attempt to preallocate enough memory for specified number of characters.

#### Parameters

<code>__res_arg</code>	Number of characters required.
------------------------	--------------------------------

#### Exceptions

<code>std::length_error</code>	If <code>__res_arg</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the string to hold the specified number of characters. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the string length that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of string data.

References [std::size\(\)](#).

Referenced by [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::tr2::operator>>\(\)](#), and [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::ov](#).

**6.257.3.128 resize()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc > void std::basic_string< _CharT, _Traits, _Alloc >::resize ( size_type __n ) [inline]`

Resizes the string to the specified number of characters.

#### Parameters

<code>__n</code>	Number of characters the string should contain.
------------------	---

This function will resize the string to the specified length. If the new size is smaller than the string's current size the string is truncated, otherwise the string is extended and new characters are default-constructed. For basic types such as `char`, this means setting them to 0.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::resize\(\)](#).

**6.257.3.129 resize()** [2/2] `template<typename _CharT , typename _Traits , typename _Alloc >`

```
void std::basic_string< _CharT, _Traits, _Alloc >::resize (
    size_type __n,
    _CharT __c )
```

Resizes the string to the specified number of characters.

#### Parameters

<code>__n</code>	Number of characters the string should contain.
<code>__c</code>	Character to fill any new elements.

This function will resize the string to the specified number of characters. If the number is smaller than the string's current size the string is truncated, otherwise the string is extended and new elements are set to `__c`.

References [std::size\(\)](#).

Referenced by [std::money\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::resize\(\)](#).

```
6.257.3.130 rfind() [1/5] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    _CharT __c,
    size_type __pos = npos ) const [noexcept]
```

Find last position of a character.

#### Parameters

<code>__c</code>	Character to locate.
<code>__pos</code>	Index of character to search back from (default end).

#### Returns

Index of last occurrence.

Starting from `__pos`, searches backward for `__c` within this string. If found, returns the index where it was found. If not found, returns `npos`.

References [std::size\(\)](#).

```
6.257.3.131 rfind() [2/5] template<typename _CharT , typename _Traits , typename _Alloc >
basic_string< _CharT, _Traits, _Alloc >::size_type std::basic_string< _CharT, _Traits, _Alloc
>::rfind (
    const _CharT * __s,
    size_type __pos,
    size_type __n ) const [noexcept]
```

Find last position of a C substring.

#### Parameters

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to search back from.
<code>__n</code>	Number of characters from s to search for.

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the first `__n` characters in `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::min\(\)](#), and [std::size\(\)](#).

```
6.257.3.132  rfind() [3/5]  template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const _CharT * __s,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a C string.

**Parameters**

<code>__s</code>	C string to locate.
<code>__pos</code>	Index of character to start search at (default end).

**Returns**

Index of start of last occurrence.

Starting from `__pos`, searches backward for the value of `__s` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::rfind\(\)](#).

```
6.257.3.133  rfind() [4/5]  template<typename _CharT , typename _Traits , typename _Alloc >
template<typename _Tp >
_If_sv<_Tp, size_type> std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const _Tp & __svt,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string\_view.

**Parameters**

<code>__svt</code>	The object convertible to string_view to locate.
<code>__pos</code>	Index of character to search back from (default end).

**Returns**

Index of start of last occurrence.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::rfind\(\)](#).

```
6.257.3.134  rfind() [5/5]  template<typename _CharT , typename _Traits , typename _Alloc >
size_type std::basic_string<_CharT, _Traits, _Alloc>::rfind (
    const basic_string<_CharT, _Traits, _Alloc> & __str,
    size_type __pos = npos ) const [inline], [noexcept]
```

Find last position of a string.

## Parameters

<code>__str</code>	String to locate.
<code>__pos</code>	Index of character to search back from (default end).

## Returns

Index of start of last occurrence.

Starting from `__pos`, searches backward for value of `__str` within this string. If found, returns the index where it begins. If not found, returns `npos`.

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::rfind\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

A non-binding request to reduce capacity() to size().

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::reserve\(\)](#).

**6.257.3.136 size()** `template<typename _CharT , typename _Traits , typename _Alloc > size_type std::basic_string<_CharT, _Traits, _Alloc>::size ( ) const [inline], [noexcept]`

Returns the number of characters in the string, not including any null-termination.

Referenced by [std::tr2::dynamic\\_bitset<\\_WordT, \\_Alloc>::dynamic\\_bitset\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::append\(\)](#), [std::basic\\_regex<\\_Ch\\_type, \\_Rx\\_traits>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::back\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::cend\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::empty\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::end\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_first\\_not\\_of\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_first\\_of\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_last\\_not\\_of\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::find\\_last\\_of\(\)](#), [std::match\\_results<\\_Bi\\_iter, \\_Alloc>::format\(\)](#), [std::wstring\\_convert<\\_Codecvt, \\_Elem, \\_Wide\\_alloc, \\_Byte\\_alloc>::from\\_bytes\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::insert\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::length\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator>>\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::operator\[\]\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::pop\\_back\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::push\\_back\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::replace\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::rfind\(\)](#), [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#), [std::wstring\\_convert<\\_Codecvt, \\_Elem, \\_Wide\\_alloc, \\_Byte\\_alloc>::to\\_bytes\(\)](#), and [std::regex\\_traits<\\_Ch\\_type>::transform\(\)](#).

**6.257.3.137 substr()** `template<typename _CharT , typename _Traits , typename _Alloc > basic_string std::basic_string<_CharT, _Traits, _Alloc>::substr ( size_type __pos = 0, size_type __n = npos ) const [inline]`

Get a substring.

## Parameters

<code>__pos</code>	Index of first character (default 0).
<code>__n</code>	Number of characters in substring (default remainder).

**Returns**

The new string.

**Exceptions**

<code>std::out_of_range</code>	If <code>__pos &gt; size()</code> .
--------------------------------	-------------------------------------

Construct and return a new string using the `__n` characters starting at `__pos`. If the string is too short, use the remainder of the characters. If `__pos` is beyond the end of the string, `out_of_range` is thrown.

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::basic\\_string\(\)](#).

**6.257.3.138 swap()** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`void std::basic_string< _CharT, _Traits, _Alloc >::swap (`  
`basic_string< _CharT, _Traits, _Alloc > & __s ) [noexcept]`

Swap contents with another string.

**Parameters**

<code>__s</code>	String to swap with.
------------------	----------------------

Exchanges the contents of this string with that of `__s` in constant time.

Referenced by [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::assign\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::operator=\(\)](#).

#### 6.258.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::basic_string_view<_CharT, _Traits>
```

A non-owning reference to a string.

#### Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

A `basic_string_view` looks like this:

```
_CharT*    _M_str
size_t     _M_len
```

The documentation for this class was generated from the following files:

- [string\\_view](#)
- [bits/string\\_view.tcc](#)

- constexpr void **swap** (basic\_string\_view & \_\_sv) noexcept
- template<typename \_Allocator = std::allocator<\_CharT>>  
basic\_string<\_CharT, \_Traits, \_Allocator> **to\_string** (const \_Allocator & \_\_alloc=\_Allocator()) const

### Static Public Attributes

- static constexpr size\_type **npos**

#### 6.259.1 Detailed Description

```
template<typename _CharT, typename _Traits = std::char_traits<_CharT>>
class std::experimental::fundamentals_v1::basic_string_view<_CharT, _Traits>
```

A non-owning reference to a string.

#### Template Parameters

<code>_CharT</code>	Type of character
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .

A `basic_string_view` looks like this:

```
_CharT*      _M_str
size_t       _M_len
```

The documentation for this class was generated from the following files:

- [experimental/string\\_view](#)
- [experimental/bits/string\\_view.tcc](#)

## 6.260 `std::basic_stringbuf< _CharT, _Traits, _Alloc >` Class Template Reference

Inheritance diagram for `std::basic_stringbuf< _CharT, _Traits, _Alloc >`:

### Public Types

- `typedef __string_type::size_type __size_type`
- `typedef basic_streambuf< char_type, traits_type > __streambuf_type`
- `typedef basic_string< char_type, _Traits, _Alloc > __string_type`
- `typedef _Alloc allocator_type`
- `typedef _CharT char_type`
- `typedef traits_type::int_type int_type`
- `typedef traits_type::off_type off_type`
- `typedef traits_type::pos_type pos_type`
- `typedef _Traits traits_type`

### Public Member Functions

- `basic_stringbuf ()`
  - `basic_stringbuf (basic_stringbuf &&__rhs)`
  - `basic_stringbuf (const __string_type &__str, ios_base::openmode __mode=ios_base::in|ios_base::out)`
  - `basic_stringbuf (const basic_stringbuf &)=delete`
  - `basic_stringbuf (ios_base::openmode __mode)`
  - `locale getloc () const`
  - `streamsize in_avail ()`
  - `basic_stringbuf & operator= (basic_stringbuf &&__rhs)`
  - `basic_stringbuf & operator= (const basic_stringbuf &)=delete`

**6.260.1 Detailed Description**

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringbuf< _CharT, _Traits, _Alloc >
```

The actual work of input and output (for std::string).

## Template Parameters

<code>_CharT</code>	Type of character stream.
<code>_Traits</code>	Traits for character type, defaults to <code>char_traits&lt;_CharT&gt;</code> .
<code>_Alloc</code>	Allocator type, defaults to <code>allocator&lt;_CharT&gt;</code> .

This class associates either or both of its input and output sequences with a sequence of characters, which can be initialized from, or made available as, a `std::basic_string`. (Paraphrased from [27.7.1]/1.)

For this class, open modes (of type `ios_base::openmode`) have `in` set if the input sequence can be read, and `out` set if the output sequence can be written.

## 6.260.2 Constructor &amp; Destructor Documentation

**6.260.2.1 `basic_stringbuf()` [1/3]** `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ( ) [inline]`

Starts with an empty string buffer.

The default constructor initializes the parent class using its own default ctor.

**6.260.2.2 `basic_stringbuf()` [2/3]** `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ( ios_base::openmode __mode ) [inline], [explicit]`

Starts with an empty string buffer.

## Parameters

<code>__mode</code>	Whether the buffer can read, or write, or both.
---------------------	---

The default constructor initializes the parent class using its own default ctor.

**6.260.2.3 `basic_stringbuf()` [3/3]** `template<typename _CharT , typename _Traits , typename _Alloc > std::basic_stringbuf< _CharT, _Traits, _Alloc >::basic_stringbuf ( const __string_type & __str, ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [explicit]`

Starts with an existing string buffer.

## Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__mode</code>	Whether the buffer can read, or write, or both.

This constructor initializes the parent class using its own default ctor.

## 6.260.3 Member Function Documentation

**6.260.3.1 `eback()`** `template<typename _CharT , typename _Traits > char_type * std::basic_streambuf< _CharT, _Traits >::eback ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_beg](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sungetc\(\)](#).

**6.260.3.2 `egptr()`** `template<typename _CharT , typename _Traits >`  
`char_type * std::basic\_streambuf< \_CharT, \_Traits >::egptr ( ) const` `[inline], [protected],`  
`[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_end](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::in\\_avail\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::showmanyc\(\)](#), and [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::underflow\(\)](#).

**6.260.3.3 `epptr()`** `template<typename _CharT , typename _Traits >`  
`char_type * std::basic\_streambuf< \_CharT, \_Traits >::epptr ( ) const` `[inline], [protected],`  
`[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_end](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

**6.260.3.4 `gbump()`** `template<typename _CharT , typename _Traits >`  
`void std::basic\_streambuf< \_CharT, \_Traits >::gbump (`  
`int __n )` `[inline], [protected], [inherited]`

Moving the read position.

Parameters

<code>__n</code>	The delta by which to move.
------------------	-----------------------------

This just advances the read position without returning any data.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sungetc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::uflow\(\)](#).

**6.260.3.5 getloc()** `template<typename _CharT , typename _Traits >`

`locale std::basic_streambuf< _CharT, _Traits >::getloc ( ) const [inline], [inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_buf\\_locale](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubimbue\(\)](#).

**6.260.3.6 gptr()** `template<typename _CharT , typename _Traits >`

`char_type * std::basic_streambuf< _CharT, _Traits >::gptr ( ) const [inline], [protected], [inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_in\\_cur](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::in\\_avail\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#),

[std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::showmanyc\(\)](#),

[std::basic\\_streambuf< \\_CharT, \\_Traits >::sputbackc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::sungetc\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::uflow\(\)](#).

and [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::underflow\(\)](#).

**6.260.3.7 imbue()** `template<typename _CharT , typename _Traits >`

`virtual void std::basic_streambuf< _CharT, _Traits >::imbue ( const locale & __loc ) [inline], [protected], [virtual], [inherited]`

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between invocations of this function a class derived from streambuf can safely cache results of calls to locale functions and to members of facets so obtained.*

Note

Base class version does nothing.

Reimplemented in [std::basic\\_filebuf< \\_CharT, \\_Traits >](#), [std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >](#), [std::basic\\_filebuf< \\_CharT, std::char\\_traits< \\_CharT > >](#), and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubimbue\(\)](#).

**6.260.3.8 in\_avail()** `template<typename _CharT , typename _Traits >  
streamsize std::basic_streambuf< _CharT, _Traits >::in_avail ( ) [inline], [inherited]`  
Looking ahead into the stream.

#### Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::egptr\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gpctr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::showmanyc\(\)](#).

**6.260.3.9 overflow()** `template<class _CharT , class _Traits , class _Alloc >  
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _  
Alloc >::overflow (   
int_type __c = traits_type::eof() ) [protected], [virtual]`  
Consumes data from the buffer; writes to the controlled sequence.

#### Parameters

<code>_↵</code>	An additional character to consume.
<code>_C</code>	

#### Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output streambuf can be created by overriding only this function (no buffer area will be used).

#### Note

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::assign\(\)](#), [std::ios\\_base::in](#), [std::max\(\)](#), [std::min\(\)](#), [std::ios\\_base::out](#), [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::push\\_back\(\)](#), and [std::basic\\_string< \\_CharT, \\_Traits, \\_Alloc >::reserve\(\)](#).

**6.260.3.10 pbackfail()** `template<class _CharT , class _Traits , class _Alloc >  
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _  
Alloc >::pbackfail (   
int_type __c = traits_type::eof() ) [protected], [virtual]`

Tries to back up the input sequence.

**Parameters**

<code>_↔</code>	The character to be inserted back into the sequence.
<code>_c</code>	

**Returns**

`eof()` on failure, *some other value* on success

**Postcondition**

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

**Note**

Base class version does nothing, returns `eof()`.

Reimplemented from [std::basic\\_streambuf<\\_CharT, \\_Traits>](#).

References [std::ios\\_base::out](#).

**6.260.3.11 pbase()** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::pbase ( ) const` `[inline]`, `[protected]`,  
`[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_beg](#).

Referenced by [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::str\(\)](#).

**6.260.3.12 pbump()** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::pbump (`  
`int __n )` `[inline]`, `[protected]`, `[inherited]`

Moving the write position.

**Parameters**

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputc\(\)](#).

**6.260.3.13 pptr()** `template<typename _CharT, typename _Traits>`  
`char_type * std::basic_streambuf<_CharT, _Traits>::pptr ( ) const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- pbase() returns the beginning pointer for the output sequence
- pptr() returns the next pointer for the output sequence
- epptr() returns the end pointer for the output sequence

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_out\\_cur](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sputc\(\)](#).

**6.260.3.14 pubimbue()** `template<typename _CharT , typename _Traits >  
locale std::basic_streambuf< _CharT, _Traits >::pubimbue (  
    const locale & __loc ) [inline], [inherited]`

Entry point for imbue().

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived imbue(\_\_loc).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::\\_M\\_buf\\_locale](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::getloc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::imbue\(\)](#).

**6.260.3.15 pubseekoff()** `template<typename _CharT , typename _Traits >  
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekoff (  
    off_type __off,  
    ios_base::seekdir __way,  
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]`

Alters the stream position.

Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for ios_base::seekdir.
<code>__mode</code>	Value for ios_base::openmode.

Calls virtual seekoff function.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::seekoff\(\)](#).

**6.260.3.16 pubseekpos()** `template<typename _CharT , typename _Traits >  
pos_type std::basic_streambuf< _CharT, _Traits >::pubseekpos (  
    pos_type __sp,  
    ios_base::openmode __mode = ios_base::in | ios_base::out ) [inline], [inherited]`

Alters the stream position.

## Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::seekpos\(\)](#).

**6.260.3.17 pubsetbuf()** `template<typename _CharT , typename _Traits >`  
`basic_streambuf * std::basic_streambuf<_CharT, _Traits>::pubsetbuf (`  
`char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::setbuf\(\)](#).

**6.260.3.18 pubsync()** `template<typename _CharT , typename _Traits >`  
`int std::basic_streambuf<_CharT, _Traits>::pubsync ( ) [inline], [inherited]`

Calls virtual `sync` function.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::sync\(\)](#).

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::sync\(\)](#), and [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#).

**6.260.3.19 sbumpc()** `template<typename _CharT , typename _Traits >`  
`int_type std::basic_streambuf<_CharT, _Traits>::sbumpc ( ) [inline], [inherited]`

Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gbump\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::uflow\(\)](#).

Referenced by [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::istreambuf\\_iterator<\\_CharT, \\_Traits>::operator++\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::snextc\(\)](#), and [std::basic\\_istream<char>::sync\(\)](#).

**6.260.3.20 seekoff()** `template<class _CharT , class _Traits , class _Alloc >`  
`basic_stringbuf<_CharT, _Traits, _Alloc>::pos_type std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff (`  
`off_type ,`  
`ios_base::seekdir ,`  
`ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::cur`, `std::ios_base::end`, `std::ios_base::in`, and `std::ios_base::out`.

**6.260.3.21 seekpos()** `template<class _CharT , class _Traits , class _Alloc >`  
`basic_stringbuf< _CharT, _Traits, _Alloc >::pos_type std::basic_stringbuf< _CharT, _Traits, _`  
`Alloc >::seekpos (`  
`pos_type ,`  
`ios_base::openmode = ios_base::in | ios_base::out ) [protected], [virtual]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

**Note**

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::ios_base::in`, and `std::ios_base::out`.

**6.260.3.22 setbuf()** `template<typename _CharT , typename _Traits , typename _Alloc >`  
`virtual __streambuf_type * std::basic_stringbuf< _CharT, _Traits, _Alloc >::setbuf (`  
`char_type * __s,`  
`streamsize __n ) [inline], [protected], [virtual]`

Manipulates the buffer.

**Parameters**

<code>__s</code>	Pointer to a buffer area.
<code>__n</code>	Size of <code>__s</code> .

**Returns**

`this`

If no buffer has already been created, and both `__s` and `__n` are non-zero, then `__s` is used as a buffer; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more.

Reimplemented from `std::basic_streambuf< _CharT, _Traits >`.

References `std::basic_string< _CharT, _Traits, _Alloc >::clear()`.

**6.260.3.23 setg()** `template<typename _CharT , typename _Traits >`  
`void std::basic_streambuf< _CharT, _Traits >::setg (`  
`char_type * __gbeg,`  
`char_type * __gnext,`  
`char_type * __gend ) [inline], [protected], [inherited]`

Setting the three read area pointers.

## Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

## Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_beg](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_cur](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_in\\_end](#).

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#).

**6.260.3.24 setp()** `template<typename _CharT, typename _Traits>`  
`void std::basic_streambuf<_CharT, _Traits>::setp (`  
`char_type * __pbeg,`  
`char_type * __pend ) [inline], [protected], [inherited]`

Setting the three write area pointers.

## Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

## Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_beg](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_cur](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::\\_M\\_out\\_end](#).

Referenced by [std::wbuffer\\_convert<\\_Codecvt, \\_Elem, \\_Tr>::wbuffer\\_convert\(\)](#).

**6.260.3.25 sgetc()** `template<typename _CharT, typename _Traits>`  
`int_type std::basic_streambuf<_CharT, _Traits>::sgetc ( ) [inline], [inherited]`

Getting the next character.

## Returns

The next character, or eof.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::egptr\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::underflow\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_istream<char>::get\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::ignore\(\)](#), [std::istreambuf\\_iterator<\\_CharT, \\_Traits>::operator++\(\)](#), [std::basic\\_istream<char>::get\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::snextc\(\)](#).

**6.260.3.26 sgetn()** `template<typename _CharT, typename _Traits>`  
`streamsize std::basic_streambuf<_CharT, _Traits>::sgetn (`

```
char_type * __s,
streamsize __n ) [inline], [inherited]
```

Entry point for xsgetn.

#### Parameters

$\leftrightarrow$ __s	A buffer area.
$\leftrightarrow$ __n	A count.

Returns xsgetn(\_\_s,\_\_n). The effect is to fill \_\_s[0] through \_\_s[\_\_n-1] with characters from the input sequence, if possible.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::xsgetn\(\)](#).

**6.260.3.27 showmanyc()** `template<typename _CharT , typename _Traits , typename _Alloc >  
virtual streamsize std::basic_stringbuf< _CharT, _Traits, _Alloc >::showmanyc ( ) [inline],  
[protected], [virtual]`

Investigating the data available.

#### Returns

An estimate of the number of characters available in the input sequence, or -1.

*If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail.* [27.5.2.4.3]/1

#### Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::\\_M\\_mode](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::egptr\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gptr\(\)](#), and [std::ios\\_base::in](#).

**6.260.3.28 snextc()** `template<typename _CharT , typename _Traits >  
int_type std::basic_streambuf< _CharT, _Traits >::snextc ( ) [inline], [inherited]`  
Getting the next character.

#### Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_istream< char >::get\(\)](#), [std::basic\\_istream< char >::ignore\(\)](#), [std::basic\\_istream< char >::operator>>\(\)](#), and [std::basic\\_istream< char >::putback\(\)](#).

**6.260.3.29 sputbackc()** `template<typename _CharT , typename _Traits >  
int_type std::basic_streambuf< _CharT, _Traits >::sputbackc (  
 char_type __c ) [inline], [inherited]`

Pushing characters back into the input stream.

## Parameters

<a href="#">↔</a> _c	The character to push back.
-------------------------	-----------------------------

## Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::eback\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gbump\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gptr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::pbackfail\(\)](#).

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::putback\(\)](#).

**6.260.3.30 sputc()** `template<typename _CharT , typename _Traits >`  
`int_type std::basic_streambuf< _CharT, _Traits >::sputc (`  
`char_type __c ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

<a href="#">↔</a> _c	A character to output.
-------------------------	------------------------

## Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type(__c)`. If a write position is not available, returns `overflow(↔ __c)`.

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::epptr\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pbump\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::pptr\(\)](#).

Referenced by [std::ostreambuf\\_iterator< \\_CharT, \\_Traits >::operator=\(\)](#), and [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >::overflow\(\)](#).

**6.260.3.31 sputn()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_streambuf< _CharT, _Traits >::sputn (`  
`const char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

Entry point for all single-character output functions.

## Parameters

<a href="#">↔</a> _s	A buffer read area.
<a href="#">↔</a> _n	A count.

One of two public output functions.

Returns `xspn(__s,__n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.  
References [std::basic\\_streambuf<\\_CharT, \\_Traits>::xspn\(\)](#).

**6.260.3.32 str()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc>  
__string_type std::basic_stringbuf<_CharT, _Traits, _Alloc>::str ( ) const [inline]`

Copying out the string buffer.

#### Returns

A copy of one of the underlying sequences.

*If the buffer is only created in input mode, the underlying character sequence is equal to the input sequence; otherwise, it is equal to the output sequence. [27.7.1.2]/1*

References [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::get\\_allocator\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::pbase\(\)](#).

**6.260.3.33 str()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc>  
void std::basic_stringbuf<_CharT, _Traits, _Alloc>::str (   
const __string_type & __s ) [inline]`

Setting a new buffer.

#### Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Deallocates any previous stored sequence, then copies `s` to use as a new one.

References [std::basic\\_stringbuf<\\_CharT, \\_Traits, \\_Alloc>::M\\_mode](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::assign\(\)](#), [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::data\(\)](#), and [std::basic\\_string<\\_CharT, \\_Traits, \\_Alloc>::size\(\)](#).

**6.260.3.34 sungetc()** `template<typename _CharT, typename _Traits>  
int_type std::basic_streambuf<_CharT, _Traits>::sungetc ( ) [inline], [inherited]`

Moving backwards in the input stream.

#### Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

References [std::basic\\_streambuf<\\_CharT, \\_Traits>::eback\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gbump\(\)](#), [std::basic\\_streambuf<\\_CharT, \\_Traits>::gptr\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::pbackfail\(\)](#).

**6.260.3.35 sync()** `template<typename _CharT, typename _Traits>  
virtual int std::basic_streambuf<_CharT, _Traits>::sync ( ) [inline], [protected], [virtual],  
[inherited]`

Synchronizes the buffer arrays with the controlled sequences.

#### Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

## Note

Base class version does nothing, returns zero.

Reimplemented in [std::wbuffer\\_convert< \\_Codecvt, \\_Elem, \\_Tr >, \\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >, std::basic\\_filebuf< \\_CharT, \\_Traits >, std::basic\\_filebuf< \\_CharT, encoding\\_char\\_traits< \\_CharT > >, std::basic\\_filebuf< \\_CharT, std::c](#) and [std::basic\\_filebuf< char\\_type, traits\\_type >](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#).

**6.260.3.36 uflow()** `template<typename _CharT , typename _Traits >  
virtual int_type std::basic_streambuf< _CharT, _Traits >::uflow ( ) [inline], [protected], [virtual],  
[inherited]`

Fetches more data from the controlled sequence.

## Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Reimplemented in [\\_\\_gnu\\_cxx::stdio\\_sync\\_filebuf< \\_CharT, \\_Traits >](#).

References [std::basic\\_streambuf< \\_CharT, \\_Traits >::gbump\(\)](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::gptr\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::underflow\(\)](#).

Referenced by [std::basic\\_streambuf< \\_CharT, \\_Traits >::sbumpc\(\)](#).

**6.260.3.37 underflow()** `template<class _CharT , class _Traits , class _Alloc >  
basic_stringbuf< _CharT, _Traits, _Alloc >::int_type std::basic_stringbuf< _CharT, _Traits, _↵  
Alloc >::underflow [protected], [virtual]`

Fetches more data from the controlled sequence.

## Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input streambuf can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

## Note

Base class version does nothing, returns eof().

Reimplemented from [std::basic\\_streambuf< \\_CharT, \\_Traits >](#).

References [std::ios\\_base::in](#).

**6.260.3.38 xsgetn()** `template<typename _CharT , typename _Traits >  
streamsize std::basic_streambuf< _CharT, _Traits >::xsgetn (   
char_type * __s,  
streamsize __n ) [protected], [virtual], [inherited]`

Multiple character extraction.

## Parameters

<a href="#"><code>__s</code></a>	A buffer area.
<a href="#"><code>__n</code></a>	Maximum number of characters to assign.

## Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

References [std::min\(\)](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sgetn\(\)](#).

```
6.260.3.39 xspn() template<typename _CharT , typename _Traits >
streamsize std::basic_streambuf< _CharT, _Traits >::xspn (
    const char_type * __s,
    streamsize __n ) [protected], [virtual], [inherited]
```

Multiple character insertion.

## Parameters

<a href="#"><code>__s</code></a>	A buffer area.
<a href="#"><code>__n</code></a>	Maximum number of characters to write.

## Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

Reimplemented in [std::basic\\_filebuf<\\_CharT, \\_Traits>](#), [std::basic\\_filebuf<\\_CharT, encoding\\_char\\_traits<\\_CharT>>](#), [std::basic\\_filebuf<\\_CharT, std::char\\_traits<\\_CharT>>](#), and [std::basic\\_filebuf<char\\_type, traits\\_type>](#).

References [std::min\(\)](#).

Referenced by [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputn\(\)](#).

### Extractors

All the `operator>>` functions (aka formatted input functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to false. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `__istream_type & operator>> (double &__f)`
- `__istream_type & operator>> (long double &__f)`

### Unformatted Input Functions

All the unformatted input functions have some common behavior. Each starts by constructing a temporary object of type `std::basic_istream::sentry` with the second argument (`noskipws`) set to true. This has several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to extract whatever data is appropriate for the type of the argument.

The number of characters extracted is stored for later retrieval by `gcount()`.

If an exception is thrown during extraction, `ios_base::badbit` will be turned on in the stream's error state (without causing an `ios_base::failure` to be thrown) and the original exception will be rethrown if `badbit` is set in the exceptions mask.

- `int_type get ()`
- `__istream_type & get (char_type &__c)`

- [\\_\\_ostream\\_type](#) & [operator<<](#) (ios\_base &(\*\_\_pf)(ios\_base &))

### Inserters

All the `operator<<` functions (aka formatted output functions) have some common behavior. Each starts by constructing a temporary object of type `std::basic_ostream::sentry`. This can have several effects, concluding with the setting of a status flag; see the sentry documentation for more.

If the sentry status is good, the function tries to generate whatever data is appropriate for the type of the argument.

If an exception is thrown during insertion, `ios_base::badbit` will be turned on in the stream's error state without causing an `ios_base::failure` to be thrown. The original exception will then be rethrown.

- [\\_\\_ostream\\_type](#) & [operator<<](#) (long \_\_n)

### 6.261.1 Detailed Description

```
template<typename _CharT, typename _Traits, typename _Alloc>
class std::basic_stringstream<_CharT, _Traits, _Alloc>
```

Controlling input and output for std::string.

#### Template Parameters

<a href="#">_CharT</a>	Type of character stream.
<a href="#">_Traits</a>	Traits for character type, defaults to <a href="#">char_traits</a> <_CharT>.
<a href="#">_Alloc</a>	Allocator type, defaults to <a href="#">allocator</a> <_CharT>.

This class supports reading from and writing to objects of type std::basic\_string, using the inherited functions from std::basic\_ostream. To control the associated sequence, an instance of std::basic\_stringbuf is used, which this page refers to as sb.

### 6.261.2 Member Typedef Documentation

**6.261.2.1 \_\_num\_put\_type** `template<typename _CharT, typename _Traits >`  
`typedef num_put<_CharT, ostreambuf_iterator<_CharT, _Traits> > std::basic_ios<_CharT, _Traits`  
`>::__num_put_type [inherited]`

These are non-standard types.

**6.261.2.2 event\_callback** `typedef void(* std::ios_base::event_callback) (event __e, ios_base &__b,`  
`int __i) [inherited]`

The type of an event callback function.

#### Parameters

<code>__e</code>	One of the members of the event enum.
<code>__b</code>	Reference to the ios_base object.
<code>__i</code>	The integer provided when the callback was registered.

Event callbacks are user defined functions that get called during several ios\_base and basic\_ios functions, specifically imbue(), copyfmt(), and ~ios().

**6.261.2.3 fmtflags** `typedef _Ios_Fmtflags std::ios_base::fmtflags [inherited]`

This is a bitmask type.

`_Ios_Fmtflags` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type fmtflags are:

- boolalpha
- dec
- fixed
- hex
- internal
- left
- oct
- right
- scientific
- showbase
- showpoint
- showpos
- skipws
- unitbuf
- uppercase
- adjustfield
- basefield
- floatfield

**6.261.2.4 iostate** typedef `_Ios_Iostate` `std::ios_base::iostate` [inherited]

This is a bitmask type.

`_Ios_Iostate` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `iostate` are:

- `badbit`
- `eofbit`
- `failbit`
- `goodbit`

**6.261.2.5 openmode** typedef `_Ios_Openmode` `std::ios_base::openmode` [inherited]

This is a bitmask type.

`_Ios_Openmode` is implementation-defined, but it is valid to perform bitwise operations on these values and expect the Right Thing to happen. Defined objects of type `openmode` are:

- `app`
- `ate`
- `binary`
- `in`
- `out`
- `trunc`

**6.261.2.6 seekdir** typedef `_Ios_Seekdir` `std::ios_base::seekdir` [inherited]

This is an enumerated type.

`_Ios_Seekdir` is implementation-defined. Defined values of type `seekdir` are:

- `beg`
- `cur`, equivalent to `SEEK_CUR` in the C standard library.
- `end`, equivalent to `SEEK_END` in the C standard library.

**6.261.3 Member Enumeration Documentation****6.261.3.1 event** enum `std::ios_base::event` [inherited]

The set of events that may be passed to an event callback.

`erase_event` is used during `~ios()` and `copyfmt()`. `imbue_event` is used during `imbue()`. `copyfmt_event` is used during `copyfmt()`.

**6.261.4 Constructor & Destructor Documentation**

**6.261.4.1 basic\_stringstream()** [1/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream ( ) [inline]`

Default constructor starts with an empty string buffer.

Initializes `sb` using the mode `in|out`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.261.4.2 basic\_stringstream()** [2/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (   
 ios_base::openmode __m ) [inline], [explicit]`

Starts with an empty string buffer.

Parameters

<code>__m</code>	Whether the buffer can read, or write, or both.
------------------	---

Initializes `sb` using the mode from `__m`, and passes `&sb` to the base class initializer. Does not allocate any buffer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.261.4.3 basic\_stringstream()** [3/3] `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream (   
 const __string_type & __str,   
 ios_base::openmode __m = ios_base::out | ios_base::in ) [inline], [explicit]`

Starts with an existing string buffer.

Parameters

<code>__str</code>	A string to copy as a starting buffer.
<code>__m</code>	Whether the buffer can read, or write, or both.

Initializes `sb` using `__str` and `__m`, and passes `&sb` to the base class initializer.

That's a lie. We initialize the base class with NULL, because the string class does its own memory management.

References `std::basic_ios< _CharT, _Traits >::init()`.

**6.261.4.4 ~basic\_stringstream()** `template<typename _CharT , typename _Traits , typename _Alloc >`

`std::basic_stringstream< _CharT, _Traits, _Alloc >::~basic_stringstream ( ) [inline]`

The destructor does nothing.

The buffer is deallocated by the stringbuf object, not the formatting stream.

## 6.261.5 Member Function Documentation

**6.261.5.1 \_M\_getloc()** `const locale & std::ios_base::_M_getloc ( ) const [inline], [inherited]`

Locale access.

**Returns**

A reference to the current locale.

Like getloc above, but returns a reference instead of generating a copy.

Referenced by [std::money\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::num\\_get<\\_CharT, \\_Inlter>::do\\_get\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_date\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_monthname\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_weekday\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::do\\_get\\_year\(\)](#), [std::num\\_put<\\_CharT, \\_Outlter>::do\\_put\(\)](#), [std::time\\_get<\\_CharT, \\_Inlter>::get\(\)](#), and [std::time\\_put<\\_CharT, \\_Outlter>::put\(\)](#).

**6.261.5.2 bad()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::bad ( ) const [inline], [inherited]`  
 Fast error checking.

**Returns**

True if the badbit is set.

Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#).

**6.261.5.3 clear()** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::clear (`  
`iostate __state = goodbit ) [inherited]`

[Re]sets the error state.

**Parameters**

<code>__state</code>	The new state flag(s) to set.
----------------------	-------------------------------

See [std::ios\\_base::iostate](#) for the possible bit values. Most users will not need to pass an argument.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::se](#) and [std::basic\\_istream<\\_CharT, \\_Traits>::unget\(\)](#).

**6.261.5.4 copyfmt()** `template<typename _CharT, typename _Traits>`  
`basic_ios<_CharT, _Traits> & std::basic_ios<_CharT, _Traits>::copyfmt (`  
`const basic_ios<_CharT, _Traits> & __rhs ) [inherited]`

Copies fields of `__rhs` into this.

**Parameters**

<code>__rhs</code>	The source values for the copies.
--------------------	-----------------------------------

**Returns**

Reference to this object.

All fields of `__rhs` are copied into this object except that `rdbuf()` and `rdstate()` remain unchanged. All values in the `pword` and `iword` arrays are copied. Before copying, each callback is invoked with `erase_event`. After copying, each (new) callback is invoked with `copyfmt_event`. The final step is to copy exceptions().

References [std::\\_\\_addressof\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::exceptions\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fill\(\)](#), [std::ios\\_base::flags\(\)](#), [std::ios\\_base::getloc\(\)](#), [std::ios\\_base::precision\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::tie\(\)](#), [std::tie\(\)](#), and [std::ios\\_base::width\(\)](#).

**6.261.5.5 eof()** `template<typename _CharT, typename _Traits>`  
`bool std::basic_ios<_CharT, _Traits>::eof ( ) const [inline], [inherited]`  
 Fast error checking.

#### Returns

True if the eofbit is set.

Note that other iostate flags may also be set.

References [std::ios\\_base::eofbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

**6.261.5.6 exceptions() [1/2]** `template<typename _CharT, typename _Traits>`  
`iosstate std::basic_ios<_CharT, _Traits>::exceptions ( ) const [inline], [inherited]`  
 Throwing exceptions on errors.

#### Returns

The current exceptions mask.

This changes nothing in the stream. See the one-argument version of `exceptions(iostate)` for the meaning of the return value.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.261.5.7 exceptions() [2/2]** `template<typename _CharT, typename _Traits>`  
`void std::basic_ios<_CharT, _Traits>::exceptions (`  
`iosstate __except ) [inline], [inherited]`

Throwing exceptions on errors.

#### Parameters

<code>__except</code>	The new exceptions mask.
-----------------------	--------------------------

By default, error flags are set silently. You can set an exceptions mask for each stream; if a bit in the mask becomes set in the error flags, then an exception of type `std::ios_base::failure` is thrown.

If the error flag is already set when the exceptions mask is added, the exception is immediately thrown. Try running the following under GCC 3.1 or later:

```
#include <iostream>
#include <fstream>
#include <exception>
int main()
{
    std::set_terminate (__gnu_cxx::__verbose_terminate_handler);
    std::ifstream f ("/etc/motd");
    std::cerr << "Setting badbit\n";
    f.setstate (std::ios_base::badbit);
    std::cerr << "Setting exception mask\n";
    f.exceptions (std::ios_base::badbit);
}
```

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#).

**6.261.5.8 fail()** `template<typename _CharT, typename _Traits>`

```
bool std::basic_ios< _CharT, _Traits >::fail ( ) const [inline], [inherited]
```

Fast error checking.

#### Returns

True if either the badbit or the failbit is set.

Checking the badbit in fail() is historical practice. Note that other iostate flags may also be set.

References [std::ios\\_base::badbit](#), [std::ios\\_base::failbit](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::rdstate\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::operator bool\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::operator!\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::seekg\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_istream< \\_CharT, \\_Traits >::tellg\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#).

**6.261.5.9 fill()** [1/2] `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::fill ( ) const [inline], [inherited]
```

Retrieves the *empty* character.

#### Returns

The current fill character.

It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

Referenced by [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.261.5.10 fill()** [2/2] `template<typename _CharT , typename _Traits >`

```
char_type std::basic_ios< _CharT, _Traits >::fill (
    char_type __ch ) [inline], [inherited]
```

Sets a new *empty* character.

#### Parameters

<code>__ch</code>	The new character.
-------------------	--------------------

#### Returns

The previous fill character.

The fill character is used to fill out space when P+ characters have been requested (e.g., via setw), Q characters are actually used, and Q<P. It defaults to a space ( ' ') in the current locale.

References [std::basic\\_ios< \\_CharT, \\_Traits >::fill\(\)](#).

**6.261.5.11 flags()** [1/2] `fmtflags std::ios_base::flags ( ) const [inline], [inherited]`

Access to format flags.

#### Returns

The format control flags for both input and output.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::sentry::~sentry\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::copyfmt\(\)](#), [std::num\\_get< \\_CharT, \\_InIter >::do\\_get\(\)](#), [std::num\\_put< \\_CharT, \\_OutIter >::do\\_put\(\)](#), [std::operator<<\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.261.5.12 flags()** [2/2] `fmtflags std::ios_base::flags (`  
`fmtflags __fmtfl ) [inline], [inherited]`

Setting new format flags all at once.

#### Parameters

<code>__fmtfl</code>	The new flags to set.
----------------------	-----------------------

#### Returns

The previous format control flags.

This function overwrites all the format flags with `__fmtfl`.

**6.261.5.13 flush()** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::flush [inherited]`  
Synchronizing the stream buffer.

#### Returns

`*this`

If `rdbuf()` is a null pointer, changes nothing.

Otherwise, calls `rdbuf()->pubsync()`, and if that returns -1, sets badbit.

References `std::ios_base::badbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits`

Referenced by `std::flush()`.

**6.261.5.14 gcount()** `template<typename _CharT , typename _Traits >`  
`streamsize std::basic_istream< _CharT, _Traits >::gcount ( ) const [inline], [inherited]`  
Character counting.

#### Returns

The number of characters extracted by the previous unformatted input function dispatched for this stream.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`.

**6.261.5.15 get()** [1/6] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits >::int_type std::basic_istream< _CharT, _Traits >::get (`  
`void ) [inherited]`

Simple extraction.

#### Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::ios_base::badbit`, `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

Referenced by `std::basic_istream< _CharT, _Traits >::get()`.

**6.261.5.16 get()** [2/6] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::get (`  
`__streambuf_type & __sb ) [inline], [inherited]`

Extraction into another streambuf.

## Parameters

<code>__sb</code>	A streambuf in which to store data.
-------------------	-------------------------------------

## Returns

\*this

Returns `get(__sb, widen("\n"))`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::get\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::widen\(\)](#).

**6.261.5.17 get()** [3/6] `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (  
    __streambuf_type & __sb,  
    char_type __delim ) [inherited]`

Extraction into another streambuf.

## Parameters

<code>__sb</code>	A streambuf in which to store data.
<code>__delim</code>	A "stop" character.

## Returns

\*this

Characters are extracted and inserted into `__sb` until one of the following happens:

- the input sequence reaches EOF
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted)
- the next character equals `__delim` (in this case, the character is not extracted)
- an exception occurs (and in this case is caught)

If no characters are stored, failbit is set in the stream's error state.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), and [std::ios\\_base::goodbit](#).

**6.261.5.18 get()** [4/6] `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::get (  
    char_type & __c ) [inherited]`

Simple extraction.

## Parameters

<code>__c</code>	The character in which to store data.
------------------	---------------------------------------

**Returns**

\*this

Tries to extract a character and store it in `__c`. If none are available, sets failbit and returns `traits::eof()`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.261.5.19 get()** [5/6] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::get (`  
`char_type * __s,`  
`streamsize __n ) [inline], [inherited]`

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>s</code> .

**Returns**

\*this

Returns `get(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::get\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.261.5.20 get()** [6/6] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::get (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Simple multiple-character extraction.

**Parameters**

<code>__s</code>	Pointer to an array.
<code>__n</code>	Maximum number of characters to store in <code>__s</code> .
<code>__delim</code>	A "stop" character.

**Returns**

\*this

Characters are extracted and stored into `__s` until one of the following happens:

- `__n-1` characters are stored

- the input sequence reaches EOF
- the next character equals `__delim`, in which case the character is not extracted

If no characters are stored, failbit is set in the stream's error state.

In any case, a null character is stored into the next location in the array.

#### Note

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream< \\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_streambuf< \\_CharT, \\_Traits >::sgetc\(\)](#).

**6.261.5.21 getline() [1/3]** `template<typename _CharT , typename _Traits >  
__istream_type & std::basic_istream< _CharT, _Traits >::getline (  
    char_type * __s,  
    streamsize __n ) [inline], [inherited]`

String extraction.

#### Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.

#### Returns

`*this`

Returns `getline(__s,__n,widen("\n"))`.

References [std::basic\\_istream< \\_CharT, \\_Traits >::getline\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::widen\(\)](#).

**6.261.5.22 getline() [2/3]** `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::getline (  
    char_type * __s,  
    streamsize __n,  
    char_type __delim ) [inherited]`

String extraction.

#### Parameters

<code>__s</code>	A character array in which to store the data.
<code>__n</code>	Maximum number of characters to extract.
<code>__delim</code>	A "stop" character.

#### Returns

`*this`

Extracts and stores characters into `__s` until one of the following happens. Note that these criteria are required to be tested in the order listed here, to allow an input line to exactly fill the `__s` array without setting failbit.

1. the input sequence reaches end-of-file, in which case eofbit is set in the stream error state
2. the next character equals `__delim`, in which case the character is extracted (and therefore counted in `gcount()`) but not stored
3. `__n-1` characters are stored, in which case failbit is set in the stream error state

If no characters are extracted, failbit is set. (An empty line of input should therefore not cause failbit to be set.)

In any case, a null character is stored in the next location in the array.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#).

**6.261.5.23** `getline()` [3/3] `basic_istream< char > & std::basic_istream< char >::getline (`  
`char_type * __s,`  
`streamsize __n,`  
`char_type __delim ) [inherited]`

Explicit specialization declarations, defined in `src/istream.cc`.

**6.261.5.24** `getloc()` `locale std::ios_base::getloc ( ) const [inline], [inherited]`

Locale access.

Returns

A copy of the current locale.

If `imbue(loc)` has previously been called, then this function returns `loc`. Otherwise, it returns a copy of `std::`

`::locale()`, the global C++ locale.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), [std::money\\_put<\\_CharT, \\_Outiter>::do\\_put\(\)](#), [std::chrono::operator<<\(\)](#), [std::operator>>\(\)](#), and [std::ws\(\)](#).

**6.261.5.25** `good()` `template<typename _CharT , typename _Traits >`  
`bool std::basic_ios< _CharT, _Traits >::good ( ) const [inline], [inherited]`

Fast error checking.

Returns

True if no error flags are set.

A wrapper around `rdstate`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::\\_\\_detail::operator>>\(\)](#).

**6.261.5.26** `ignore()` [1/3] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (`  
`void ) [inherited]`

Simple extraction.

Returns

A character, or `eof()`.

Tries to extract a character. If none are available, sets failbit and returns `traits::eof()`.

References [std::basic\\_istream<\\_CharT, \\_Traits>::\\_M\\_gcount](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sbumpc\(\)](#).

**6.261.5.27 ignore()** [2/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (  
    streamsize __n ) [inherited]`

Simple extraction.

#### Returns

A character, or eof().

Tries to extract a character. If none are available, sets failbit and returns traits::eof().

References `std::basic_istream< _CharT, _Traits >::M_gcount`, `std::ios_base::goodbit`, `std::basic_ios< _CharT, _Traits >::rdbuf()`, and `std::basic_streambuf< _CharT, _Traits >::sgetc()`.

**6.261.5.28 ignore()** [3/3] `template<typename _CharT , typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::ignore (  
    streamsize __n,  
    int_type __delim ) [inherited]`

Discarding characters.

#### Parameters

<code>__n</code>	Number of characters to discard.
<code>__delim</code>	A "stop" character.

#### Returns

\*this

Extracts characters and throws them away until one of the following happens:

- if `__n != std::numeric_limits<int>::max()`, `__n` characters are extracted
- the input sequence reaches end-of-file
- the next character equals `__delim` (in this case, the character is extracted); note that this condition will never occur if `__delim` equals `traits::eof()`.

NB: Provide three overloads, instead of the single function (with defaults) mandated by the Standard: this leads to a better performing implementation, while still conforming to the Standard.

**6.261.5.29 imbue()** `template<typename _CharT , typename _Traits >  
locale std::basic_ios< _CharT, _Traits >::imbue (  
    const locale & __loc ) [inherited]`

Moves to a new locale.

#### Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

#### Returns

The previous locale.

Calls `ios_base::imbue(loc)`, and if a stream buffer is associated with this stream, calls that buffer's `pubimbue(loc)`.

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

References `std::ios_base::imbue()`.

```
6.261.5.30 init() template<typename _CharT , typename _Traits >
void std::basic_ios< _CharT, _Traits >::init (
    basic_streambuf< _CharT, _Traits > * __sb ) [protected], [inherited]
```

All setup is performed here.

This is called from the public constructor. It is not virtual and cannot be redefined.

Referenced by `std::basic_fstream< _CharT, _Traits >::basic_fstream()`, `std::basic_ifstream< _CharT, _Traits >::basic_ifstream()`, `std::basic_ios< _CharT, _Traits >::basic_ios()`, `std::basic_istream< _CharT, _Traits >::basic_istream()`, `std::basic_istreamstream< _CharT, _Traits >::basic_istreamstream()`, `std::basic_ofstream< _CharT, _Traits >::basic_ofstream()`, `std::basic_ostream< _CharT, _Traits >::basic_ostream()`, `std::basic_ostreamstream< _CharT, _Traits, _Alloc >::basic_ostreamstream()`, and `std::basic_stringstream< _CharT, _Traits, _Alloc >::basic_stringstream()`.

```
6.261.5.31 iword() long & std::ios_base::iword (
    int __ix ) [inline], [inherited]
```

Access to integer array.

#### Parameters

<code>__ix</code>	Index into the array.
-------------------	-----------------------

#### Returns

A reference to an integer associated with the index.

The `iword` function provides access to an array of integers that can be used for any purpose. The array grows as required to hold the supplied index. All integers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

```
6.261.5.32 narrow() template<typename _CharT , typename _Traits >
char std::basic_ios< _CharT, _Traits >::narrow (
    char_type __c,
    char __dfault ) const [inline], [inherited]
```

Squeezes characters.

#### Parameters

<code>__c</code>	The character to narrow.
<code>__dfault</code>	The character to narrow.

#### Returns

The narrowed character.

Maps a character of `char_type` to a character of `char`, if possible.

Returns the result of

```
std::use_facet<ctype<char_type>> >(getloc()).narrow(c, dfault)
```

Additional l10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

**6.261.5.33 operator bool()** `template<typename _CharT , typename _Traits >

basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (   
__streambuf_type * __sb ) [inherited]`  
Extracting from another streambuf.

#### Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is `NULL`, the stream will set failbit in its error state.

Characters are extracted from `__sb` and inserted into `*this` until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output sequence fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs while getting a character from `__sb`, which sets failbit in the error state

If the function inserts no characters, failbit is set.

**6.261.5.38 operator<<()** [4/17] `template<typename _CharT , typename _Traits >  
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (   
bool __n ) [inline], [inherited]`

Integer arithmetic inserters.

## Parameters

$\_ \leftarrow$	A variable of builtin integral type.
$\_n$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.261.5.39 operator<<()** [5/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
     const void \* \_\_p ) [inline], [inherited]

Pointer arithmetic inserters.

## Parameters

$\_ \leftarrow$	A variable of pointer type.
$\_p$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.261.5.40 operator<<()** [6/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
     double \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

## Parameters

$\leftarrow$	A variable of builtin floating point type.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
$f$	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

**6.261.5.41 operator<<()** [7/17] template<typename \_CharT , typename \_Traits >  
 \_\_ostream\_type & std::basic\_ostream<\_CharT, \_Traits>::operator<< (  
     float \_\_f ) [inline], [inherited]

Floating point arithmetic inserters.

**Parameters**

<code>↔</code>	A variable of builtin floating point type.
<code>_↔</code>	
<code>↔</code>	
<code>_↔</code>	
<code>f</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.261.5.42 `operator<<()` [8/17]** `template<typename _CharT , typename _Traits >`  
`basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`int __n ) [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>↔</code>	A variable of builtin integral type.
<code>_n</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.261.5.43 `operator<<()` [9/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::endl` and `std::hex` use these functions in constructs like `"std::cout << std::endl"`. For more information, see the `iomanip` header.

**6.261.5.44 `operator<<()` [10/17]** `template<typename _CharT , typename _Traits >`  
`__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (`  
`long __n ) [inline], [inherited]`

Integer arithmetic inserters.

**Parameters**

<code>↔</code>	A variable of builtin integral type.
<code>_n</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.261.5.45 `operator<<()` [11/17]** `template<typename _CharT , typename _Traits >`

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long double __f) [inline], [inherited]
```

Floating point arithmetic inserters.

#### Parameters

$\leftrightarrow$	A variable of builtin floating point type.
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$\_ \leftrightarrow$	
$f$	

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

#### 6.261.5.46 operator<<() [12/17] template<typename \_CharT, typename \_Traits>

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
    long long __n) [inline], [inherited]
```

Integer arithmetic inserters.

#### Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

#### 6.261.5.47 operator<<() [13/17] template<typename \_CharT, typename \_Traits>

```
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::operator<< (
    short __n) [inherited]
```

Integer arithmetic inserters.

#### Parameters

$\_ \leftrightarrow$	A variable of builtin integral type.
$\_ n$	

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the num\_get facet) to perform numeric formatting.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::num\\_put<\\_CharT, \\_Outiter>::put\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>](#)

```
__ostream_type & std::basic_ostream<_CharT, _Traits>::operator<< (
```

```
unsigned int __n ) [inline], [inherited]
```

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

```
6.261.5.49 operator<<() [15/17] template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

```
6.261.5.50 operator<<() [16/17] template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned long long __n ) [inline], [inherited]
```

Integer arithmetic inserters.

#### Parameters

<code>__n</code>	A variable of builtin integral type.
------------------	--------------------------------------

#### Returns

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

```
6.261.5.51 operator<<() [17/17] template<typename _CharT , typename _Traits >
__ostream_type & std::basic_ostream< _CharT, _Traits >::operator<< (
    unsigned short __n ) [inline], [inherited]
```

Integer arithmetic inserters.

## Parameters

<code>_↔</code>	A variable of builtin integral type.
<code>_n</code>	

## Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to perform numeric formatting.

**6.261.5.52 operator>>()** [1/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( __ios_type &(*) (__ios_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `ioomanip` header.

**6.261.5.53 operator>>()** [2/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( __istream_type &(*) (__istream_type &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `ioomanip` header.

**6.261.5.54 operator>>()** [3/17] `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::operator>> ( __streambuf_type * __sb ) [inherited]`

Extracting into another streambuf.

## Parameters

<code>__sb</code>	A pointer to a streambuf
-------------------	--------------------------

This function behaves like one of the basic arithmetic extractors, in that it also constructs a sentry object and has the same error handling behavior.

If `__sb` is NULL, the stream will set `failbit` in its error state.

Characters are extracted from this stream and inserted into the `__sb` streambuf until one of the following occurs:

- the input stream reaches end-of-file,
- insertion into the output buffer fails (in this case, the character that would have been inserted is not extracted), or
- an exception occurs (and in this case is caught)

If the function inserts no characters, `failbit` is set.

References `std::ios_base::eofbit`, `std::ios_base::failbit`, `std::ios_base::goodbit`, `std::basic_ios<_CharT, _Traits>::rdbuf()`, and `std::basic_ios<_CharT, _Traits>::setstate()`.

**6.261.5.55 operator>>()** [4/17] `template<typename _CharT, typename _Traits > __istream_type & std::basic_istream<_CharT, _Traits>::operator>> ( bool & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

<code>_↵</code>	A variable of builtin integral type.
<code>_n</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.56 `operator>>()` [5/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>↵</code>	A variable of builtin floating point type.
<code>_↵</code>	
<code>↵</code>	
<code>_↵</code>	
<code>f</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.57 `operator>>()` [6/17]** `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
`float & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

**Parameters**

<code>↵</code>	A variable of builtin floating point type.
<code>_↵</code>	
<code>↵</code>	
<code>_↵</code>	
<code>f</code>	

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.58 `operator>>()` [7/17]** `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
`int & __n ) [inherited]`

Integer arithmetic extractors.

## Parameters

$\_ \leftarrow$	A variable of builtin integral type.
$\_n$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.59 operator>>()** [8/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( ios_base &(*) (ios_base &) __pf ) [inline], [inherited]`

Interface for manipulators.

Manipulators such as `std::ws` and `std::dec` use these functions in constructs like `std::cin >> std::ws`. For more information, see the `io manip` header.

**6.261.5.60 operator>>()** [9/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

## Parameters

$\_ \leftarrow$	A variable of builtin integral type.
$\_n$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.61 operator>>()** [10/17] `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( long double & __f ) [inline], [inherited]`

Floating point arithmetic extractors.

## Parameters

$\leftarrow$	A variable of builtin floating point type.
$\_ \leftarrow$	
$\leftarrow$	
$\_ \leftarrow$	
$f$	

## Returns

$\ast this$  if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.62 operator>>()** [11/17] `template<typename _CharT , typename _Traits >`

```
__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (
    long long & __n ) [inline], [inherited]
```

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.63 operator>>()** [12/17] `template<typename _CharT , typename _Traits >`  
`basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `short & __n ) [inherited]`

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

References `std::ios_base::badbit`, `std::ios_base::failbit`, `std::num_get< _CharT, _InIter >::get()`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::setstate()`.

**6.261.5.64 operator>>()** [13/17] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `unsigned int & __n ) [inline], [inherited]`

Integer arithmetic extractors.

#### Parameters

 __n	A variable of builtin integral type.
--	--------------------------------------

#### Returns

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.65 operator>>()** [14/17] `template<typename _CharT , typename _Traits >`  
`__istream_type & std::basic_istream< _CharT, _Traits >::operator>> (`  
 `unsigned long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.66 `operator>>()` [15/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned long long & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.67 `operator>>()` [16/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( unsigned short & __n ) [inline], [inherited]`

Integer arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_n$	A variable of builtin integral type.
-------------------------------	--------------------------------------

**Returns**

`*this` if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.68 `operator>>()` [17/17]** `template<typename _CharT , typename _Traits > __istream_type & std::basic_istream< _CharT, _Traits >::operator>> ( void *& __p ) [inline], [inherited]`

Basic arithmetic extractors.

**Parameters**

$\_ \leftrightarrow$ $\_p$	A variable of pointer type.
-------------------------------	-----------------------------

**Returns**

\*this if successful

These functions use the stream's current locale (specifically, the `num_get` facet) to parse the input data.

**6.261.5.69 peek()** `template<typename _CharT, typename _Traits>  
basic_istream<_CharT, _Traits>::int_type std::basic_istream<_CharT, _Traits>::peek (  
void ) [inherited]`

Looking ahead in the stream.

**Returns**

The next character, or `eof()`.

If, after constructing the sentry object, `good()` is false, returns `traits::eof()`. Otherwise reads but does not extract the next input character.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#).

**6.261.5.70 precision()** [1/2] `streamsize std::ios_base::precision ( ) const [inline], [inherited]`  
Flags access.

**Returns**

The precision to generate on certain output operations.

Be careful if you try to give a definition of *precision* here; see DR 189.

Referenced by [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#), and [std::chrono::operator<<\(\)](#).

**6.261.5.71 precision()** [2/2] `streamsize std::ios_base::precision (  
streamsize __prec ) [inline], [inherited]`

Changing flags.

**Parameters**

<code>__prec</code>	The new precision value.
---------------------	--------------------------

**Returns**

The previous value of `precision()`.

**6.261.5.72 put()** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::put (  
char_type __c ) [inherited]`

Simple insertion.

**Parameters**

<code>__c</code>	The character to insert.
------------------	--------------------------

**Returns**

\*this

Tries to insert `__c`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

Referenced by [std::endl\(\)](#), and [std::ends\(\)](#).

**6.261.5.73 putback()** `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::putback (  
char_type __c ) [inherited]`

Unextracting a single character.

**Parameters**

<code>__c</code>	The character to push back into the input stream.
------------------	---

**Returns**

\*this

If `rdbuf()` is not null, calls `rdbuf() -> sputbackc(c)`.

If `rdbuf()` is null or if `sputbackc()` fails, sets `badbit` in the error state.

**Note**

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References [std::basic\\_istream<\\_CharT, \\_Traits>::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#), and [std::basic\\_streambuf<\\_CharT, \\_Traits>::sputbackc\(\)](#).

Referenced by [std::operator<<\(\)](#).

**6.261.5.74 pword()** `void *& std::ios_base::pword (  
int __ix ) [inline], [inherited]`

Access to void pointer array.

**Parameters**

<code>__ix</code>	Index into the array.
-------------------	-----------------------

**Returns**

A reference to a `void*` associated with the index.

The `pword` function provides access to an array of pointers that can be used for any purpose. The array grows as required to hold the supplied index. All pointers in the array are initialized to 0.

The implementation reserves several indices. You should use `xalloc` to obtain an index that is safe to use. Also note that since the array can grow dynamically, it is not safe to hold onto the reference.

**6.261.5.75 rdbuf()** [1/2] `template<typename _CharT, typename _Traits, typename _Alloc> __stringbuf_type * std::basic_stringstream<_CharT, _Traits, _Alloc>::rdbuf ( ) const [inline]`  
Accessing the underlying buffer.

#### Returns

The current `basic_stringbuf` buffer.

This hides both signatures of `std::basic_ios::rdbuf()`.

**6.261.5.76 rdbuf()** [2/2] `template<typename _CharT, typename _Traits> basic_streambuf<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::rdbuf ( basic_streambuf<_CharT, _Traits> * __sb ) [inherited]`

Changing the underlying buffer.

#### Parameters

<code>__sb</code>	The new stream buffer.
-------------------	------------------------

#### Returns

The previous stream buffer.

Associates a new buffer with the current stream, and clears the error state.

Due to historical accidents which the LWG refuses to correct, the I/O library suffers from a design error: this function is hidden in derived classes by overrides of the zero-argument `rdbuf()`, which is non-virtual for hysterical raisins. As a result, you must use explicit qualifications to access this function via any derived class. For example:

```
std::fstream    foo;           // or some other derived type
std::streambuf* p = .....;
foo.ios::rdbuf(p);             // ios == basic_ios<char>
```

**6.261.5.77 rdstate()** `template<typename _CharT, typename _Traits> iostate std::basic_ios<_CharT, _Traits>::rdstate ( ) const [inline], [inherited]`

Returns the error state of the stream buffer.

#### Returns

A bit pattern (well, isn't everything?)

See `std::ios_base::iostate` for the possible bit values. Most users will call one of the interpreting wrappers, e.g., `good()`.

Referenced by `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ios<_CharT, _Traits>::good()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::see_eof()`, `std::basic_ios<_CharT, _Traits>::setstate()`, and `std::basic_istream<_CharT, _Traits>::unset()`.

**6.261.5.78 read()** `template<typename _CharT, typename _Traits> basic_istream<_CharT, _Traits> & std::basic_istream<_CharT, _Traits>::read ( char_type * __s, streamsize __n ) [inherited]`

Extraction without delimiters.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

`*this`

If the stream state is `good()`, extracts characters and stores them into `__s` until one of the following happens:

- `__n` characters are stored
- the input sequence reaches end-of-file, in which case the error state is set to `failbit|eofbit`.

**Note**

This function is not overloaded on signed char and unsigned char.

References [std::basic\\_istream<\\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_ios<\\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits >::setstate\(\)](#).

**6.261.5.79 readsome()** `template<typename _CharT, typename _Traits >`

```
streamsize std::basic_istream<_CharT, _Traits >::readsome (
    char_type * __s,
    streamsize __n ) [inherited]
```

Extraction until the buffer is exhausted, but no more.

**Parameters**

<code>__s</code>	A character array.
<code>__n</code>	Maximum number of characters to store.

**Returns**

The number of characters extracted.

Extracts characters and stores them into `__s` depending on the number of characters remaining in the streambuf's buffer, `rdbuf()->in_avail()`, called `A` here:

- if `A == -1`, sets `eofbit` and extracts no characters
- if `A == 0`, extracts no characters
- if `A > 0`, extracts `min(A, n)`

The goal is to empty the current buffer, and to not request any more from the external input sequence controlled by the streambuf.

References [std::basic\\_istream<\\_CharT, \\_Traits >::M\\_gcount](#), [std::ios\\_base::badbit](#), [std::ios\\_base::eofbit](#), [std::ios\\_base::goodbit](#), [std::min\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits >::setstate\(\)](#).

**6.261.5.80 register\_callback()** void std::ios\_base::register\_callback (   
     event\_callback \_\_fn,   
     int \_\_index ) [inherited]

Add the callback \_\_fn with parameter \_\_index.

#### Parameters

<code>__fn</code>	The function to add.
<code>__index</code>	The integer to pass to the function when invoked.

Registers a function as an event callback with an integer parameter to be passed to the function when invoked. Multiple copies of the function are allowed. If there are multiple callbacks, they are invoked in the order they were registered.

**6.261.5.81 seekg()** [1/2] template<typename \_CharT , typename \_Traits >   
 basic\_istream< \_CharT, \_Traits > & std::basic\_istream< \_CharT, \_Traits >::seekg (   
     off\_type \_\_off,   
     ios\_base::seekdir \_\_dir ) [inherited]

Changing the current read position.

#### Parameters

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

#### Returns

\*this

If fail() is not true, calls rdbuf()->pubseekoff(\_\_off, \_\_dir). If that function fails, sets failbit.

#### Note

This function first clears eofbit. It does not count the number of characters extracted, if any, and therefore does not affect the next call to gcount().

References std::ios\_base::badbit, std::basic\_ios<\_CharT, \_Traits>::clear(), std::ios\_base::eofbit, std::basic\_ios<\_CharT, \_Traits>::fail(), std::ios\_base::failbit, std::ios\_base::goodbit, std::ios\_base::in, std::basic\_ios<\_CharT, \_Traits>::rdbuf(), std::basic\_ios<\_CharT, \_Traits> and std::basic\_ios<\_CharT, \_Traits>::setstate().

**6.261.5.82 seekg()** [2/2] template<typename \_CharT , typename \_Traits >   
 basic\_istream< \_CharT, \_Traits > & std::basic\_istream< \_CharT, \_Traits >::seekg (   
     pos\_type \_\_pos ) [inherited]

Changing the current read position.

#### Parameters

<code>__pos</code>	A file position object.
--------------------	-------------------------

#### Returns

\*this

If fail() is not true, calls rdbuf()->pubseekpos(\_\_pos). If that function fails, sets failbit.

**Note**

This function first clears `eofbit`. It does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), [std::ios\\_base::eofbit](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::goodbit](#), [std::ios\\_base::in](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#) and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

```
6.261.5.83 seekp() [1/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    off_type __off,
    ios_base::seekdir __dir ) [inherited]
```

Changing the current write position.

**Parameters**

<code>__off</code>	A file offset object.
<code>__dir</code>	The direction in which to seek.

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekoff(off, dir)`. If that function fails, sets `failbit`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

```
6.261.5.84 seekp() [2/2] template<typename _CharT , typename _Traits >
basic_ostream< _CharT, _Traits > & std::basic_ostream< _CharT, _Traits >::seekp (
    pos_type __pos ) [inherited]
```

Changing the current write position.

**Parameters**

<code>__pos</code>	A file position object.
--------------------	-------------------------

**Returns**

\*this

If `fail()` is not true, calls `rdbuf()->pubseekpos(pos)`. If that function fails, sets `failbit`.

References [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::failbit](#), [std::ios\\_base::out](#), [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::setstate\(\)](#).

```
6.261.5.85 setf() [1/2] fmtflags std::ios_base::setf (
    fmtflags __fmtfl ) [inline], [inherited]
```

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
----------------------	--------------------------

**Returns**

The previous format control flags.

This function sets additional flags in format control. Flags that were previously set remain set. Referenced by [std::\\_\\_detail::operator>>\(\)](#).

**6.261.5.86 setf()** [2/2] `fmtflags` `std::ios_base::setf (`  
`fmtflags __fmtfl,`  
`fmtflags __mask )` [inline], [inherited]

Setting new format flags.

**Parameters**

<code>__fmtfl</code>	Additional flags to set.
<code>__mask</code>	The flags mask for <code>fmtfl</code> .

**Returns**

The previous format control flags.

This function clears `mask` in the format flags, then sets `fmtfl` & `mask`. An example mask is `ios_base::adjustfield`.

**6.261.5.87 setstate()** `template<typename _CharT , typename _Traits >`  
`void std::basic_ios<_CharT, _Traits>::setstate (`  
`iosstate __state )` [inline], [inherited]

Sets additional flags in the error state.

**Parameters**

<code>__state</code>	The additional state flag(s) to set.
----------------------	--------------------------------------

See `std::ios_base::iostate` for the possible bit values.

References [std::basic\\_ios<\\_CharT, \\_Traits>::clear\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdstate\(\)](#).

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::~sentry\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::close\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::flush\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::getline\(\)](#), [std::basic\\_ifstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_fstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ofstream<\\_CharT, \\_Traits>::open\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::operator<<\(\)](#), [std::operator<<\(\)](#), [std::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::operator>>\(\)](#), [std::tr2::operator>>\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::putback\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::read\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::readsome\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::seekg\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::seekp\(\)](#), [std::basic\\_istream<\\_CharT, \\_Traits>::sync\(\)](#), and [std::ws\(\)](#).

**6.261.5.88 str()** [1/2] `template<typename _CharT , typename _Traits , typename _Alloc >`  
`__string_type std::basic_stringstream<_CharT, _Traits, _Alloc>::str ( ) const` [inline]

Copying out the string buffer.

**Returns**

`rddbuf() -> str()`

**6.261.5.89 str()** [2/2] `template<typename _CharT, typename _Traits, typename _Alloc >  
void std::basic_stringstream< _CharT, _Traits, _Alloc >::str (  
 const __string_type & __s ) [inline]`

Setting a new buffer.

#### Parameters

<code>__s</code>	The string to use as a new sequence.
------------------	--------------------------------------

Calls `rdbuf() -> str(s)`.

**6.261.5.90 sync()** `template<typename _CharT, typename _Traits >  
int std::basic_istream< _CharT, _Traits >::sync (  
 void ) [inherited]`

Synchronizing the stream buffer.

#### Returns

0 on success, -1 on failure

If `rdbuf()` is a null pointer, returns -1.

Otherwise, calls `rdbuf() -> pubsync()`, and if that returns -1, sets `badbit` and returns -1.

Otherwise, returns 0.

#### Note

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`.

References [std::ios\\_base::badbit](#), [std::ios\\_base::goodbit](#), [std::basic\\_streambuf< \\_CharT, \\_Traits >::pubsync\(\)](#), [std::basic\\_ios< \\_CharT, \\_Traits >::rdbuf\(\)](#), and [std::basic\\_ios< \\_CharT, \\_Traits >::setstate\(\)](#).

**6.261.5.91 sync\_with\_stdio()** `static bool std::ios_base::sync_with_stdio (  
 bool __sync = true ) [static], [inherited]`

Interaction with the standard C I/O objects.

#### Parameters

<code>__sync</code>	Whether to synchronize or not.
---------------------	--------------------------------

#### Returns

True if the standard streams were previously synchronized.

The synchronization referred to is *only* that between the standard C facilities (e.g., `stdout`) and the standard C++ objects (e.g., `cout`). User-declared streams are unaffected. See <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>

**6.261.5.92 tellg()** `template<typename _CharT, typename _Traits >  
basic_istream< _CharT, _Traits >::pos_type std::basic_istream< _CharT, _Traits >::tellg (  
 void ) [inherited]`

Getting the current read position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, in)`.

**Note**

This function does not count the number of characters extracted, if any, and therefore does not affect the next call to `gcount()`. At variance with `putback`, `unget` and `seekg`, `eofbit` is not cleared first.

References [std::ios\\_base::badbit](#), [std::ios\\_base::cur](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::in](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**6.261.5.93 tellp()** `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits>::pos_type std::basic_ostream<_CharT, _Traits>::tellp [inherited]`  
Getting the current write position.

**Returns**

A file position object.

If `fail()` is not false, returns `pos_type(-1)` to indicate failure. Otherwise returns `rdbuf() -> pubseekoff(0, cur, out)`.

References [std::ios\\_base::cur](#), [std::basic\\_ios<\\_CharT, \\_Traits>::fail\(\)](#), [std::ios\\_base::out](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::rdbuf\(\)](#).

**6.261.5.94 tie()** [1/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie() const [inline],  
[inherited]`  
Fetches the current *tied* stream.

**Returns**

A pointer to the tied stream, or NULL if the stream is not tied.

A stream may be *tied* (or synchronized) to a second output stream. When this stream performs any I/O, the tied stream is first flushed. For example, `std::cin` is tied to `std::cout`.

Referenced by [std::basic\\_istream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), [std::basic\\_ostream<\\_CharT, \\_Traits>::sentry::sentry\(\)](#), and [std::basic\\_ios<\\_CharT, \\_Traits>::copyfmt\(\)](#).

**6.261.5.95 tie()** [2/2] `template<typename _CharT, typename _Traits>  
basic_ostream<_CharT, _Traits> * std::basic_ios<_CharT, _Traits>::tie (  
basic_ostream<_CharT, _Traits> * __tiestr) [inline], [inherited]`

Ties this stream to an output stream.

**Parameters**

<code>__tiestr</code>	The output stream.
-----------------------	--------------------

**Returns**

The previously tied output stream, or NULL if the stream was not tied.

This sets up a new tie; see `tie()` for more.

**6.261.5.96 unget()** `template<typename _CharT, typename _Traits>`

```
basic_istream< _CharT, _Traits > & std::basic_istream< _CharT, _Traits >::unget (
    void ) [inherited]
```

Unextracting the previous character.

#### Returns

\*this

If `rdbuf()` is not null, calls `rdbuf()->sungetc(c)`.

If `rdbuf()` is null or if `sungetc()` fails, sets `badbit` in the error state.

#### Note

This function first clears `eofbit`. Since no characters are extracted, the next call to `gcount()` will return 0, as required by DR 60.

References `std::basic_istream< _CharT, _Traits >::_M_gcount`, `std::basic_ios< _CharT, _Traits >::clear()`, `std::ios_base::eofbit`, `std::ios_base::goodbit`, and `std::basic_ios< _CharT, _Traits >::rdstate()`.

Referenced by `std::__detail::operator>>()`.

**6.261.5.97 unsetf()** `void std::ios_base::unsetf (
 fmtflags __mask ) [inline], [inherited]`

Clearing format flags.

#### Parameters

<code>__mask</code>	The flags to unset.
---------------------	---------------------

This function clears `__mask` in the format flags.

**6.261.5.98 widen()** `template<typename _CharT , typename _Traits >
char_type std::basic_ios< _CharT, _Traits >::widen (
 char __c ) const [inline], [inherited]`

Widens characters.

#### Parameters

<code>_↔</code>	The character to widen.
<code>_C</code>	

#### Returns

The widened character.

Maps a character of `char` to a character of `char_type`.

Returns the result of

```
std::use_facet<ctype<char_type> > (getloc()) .widen(c)
```

Additional I10n notes are at <http://gcc.gnu.org/onlinedocs/libstdc++/manual/localization.html>

Referenced by `std::endl()`, `std::basic_ios< _CharT, _Traits >::fill()`, `std::basic_istream< _CharT, _Traits >::get()`, `std::getline()`, `std::basic_istream< _CharT, _Traits >::getline()`, `std::operator<<()`, and `std::tr2::operator>>()`.

**6.261.5.99 width()** [1/2] `streamsize std::ios_base::width ( ) const [inline], [inherited]`

Flags access.

**Returns**

The minimum field width to generate on output operations.

*Minimum field width* refers to the number of characters.

Referenced by `std::basic_ios<_CharT, _Traits>::copyfmt()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::operator>>()`.

**6.261.5.100 width()** [2/2] `streamsize` `std::ios_base::width (`  
`streamsize __wide )` [inline], [inherited]

Changing flags.

**Parameters**

<code>__wide</code>	The new width value.
---------------------	----------------------

**Returns**

The previous value of `width()`.

**6.261.5.101 write()** `template<typename _CharT, typename _Traits>`  
`basic_ostream<_CharT, _Traits> & std::basic_ostream<_CharT, _Traits>::write (`  
`const char_type * __s,`  
`streamsize __n )` [inherited]

Character string insertion.

**Parameters**

<code>__s</code>	The array to insert.
<code>__n</code>	Maximum number of characters to insert.

**Returns**

`*this`

Characters are copied from `__s` and inserted into the stream until one of the following happens:

- `__n` characters are inserted
- inserting into the output sequence fails (in this case, `badbit` will be set in the stream's error state)

**Note**

This function is not overloaded on signed char and unsigned char.

**6.261.5.102 xalloc()** `static int` `std::ios_base::xalloc ( )` `throw ( )` [static], [inherited]  
 Access to unique indices.

## Returns

An integer different from all previous calls.

This function returns a unique integer every time it is called. It can be used for any purpose, but is primarily intended to be a unique index for the `iword` and `pword` functions. The expectation is that an application calls `xalloc` in order to obtain an index in the `iword` and `pword` arrays that can be used without fear of conflict.

The implementation maintains a static variable that is incremented and returned on each invocation. `xalloc` is guaranteed to return an index that is safe to use in the `iword` and `pword` arrays.

## 6.261.6 Member Data Documentation

### 6.261.6.1 `_M_gcount` `template<typename _CharT, typename _Traits>`

`streamsize std::basic_istream<_CharT, _Traits>::_M_gcount` [protected], [inherited]

The number of characters extracted in the previous unformatted function; see `gcount()`.

Referenced by `std::basic_istream<_CharT, _Traits>::~basic_istream()`, `std::basic_istream<_CharT, _Traits>::gcount()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<char>::ignore()`, `std::basic_istream<char>::operator>>()`, `std::basic_istream<_CharT, _Traits>::peek()`, `std::basic_istream<char>::putback()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<char>::readsome()`, `std::basic_istream<char>::sync()`, and `std::basic_istream<_CharT, _Traits>::unget()`.

### 6.261.6.2 `adjustfield` `const fmtflags std::ios_base::adjustfield` [static], [inherited]

A mask of left|right|internal. Useful for the 2-arg form of `setf`.

Referenced by `std::num_put<_CharT, _Outiter>::do_put()`, `std::internal()`, `std::left()`, and `std::right()`.

### 6.261.6.3 `app` `const openmode std::ios_base::app` [static], [inherited]

Seek to end before each write.

Referenced by `std::basic_filebuf<_CharT, _Traits>::_M_set_buffer()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsputn()`.

### 6.261.6.4 `ate` `const openmode std::ios_base::ate` [static], [inherited]

Open and seek to end immediately after opening.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`.

### 6.261.6.5 `badbit` `const iostate std::ios_base::badbit` [static], [inherited]

Indicates a loss of integrity in an input or output sequence (such as an irrecoverable read error from a file).

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::~sentry()`, `std::basic_ios<_CharT, _Traits>::bad()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<char>::tellg()`, `std::basic_istream<_CharT, _Traits>::tellg()`, and `std::ws()`.

**6.261.6.6 basefield** const `fmtflags` `std::ios_base::basefield` [static], [inherited]

A mask of dec|oct|hex. Useful for the 2-arg form of `setf`.

Referenced by `std::dec()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, `std::hex()`, and `std::oct()`.

**6.261.6.7 beg** const `seekdir` `std::ios_base::beg` [static], [inherited]

Request a seek relative to the beginning of the stream.

Referenced by `std::basic_filebuf<_CharT, _Traits>::seekpos()`.

**6.261.6.8 binary** const `openmode` `std::ios_base::binary` [static], [inherited]

Perform input and output in binary mode (as opposed to text mode). This is probably not what you think it is; see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/fstreams.html#std.io.filestreams.binary>.

Referenced by `std::basic_filebuf<_CharT, _Traits>::showmanyc()`.

**6.261.6.9 boolalpha** const `fmtflags` `std::ios_base::boolalpha` [static], [inherited]

Insert/extract `bool` in alphabetic rather than numeric format.

Referenced by `std::boolalpha()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::noboolalpha()`.

**6.261.6.10 cur** const `seekdir` `std::ios_base::cur` [static], [inherited]

Request a seek relative to the current position within the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::imbue()`, `std::basic_filebuf<_CharT, _Traits>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_filebuf<_CharT, _Traits>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits>::tellg()`, and `std::basic_ostream<_CharT, _Traits>::tellp()`.

**6.261.6.11 dec** const `fmtflags` `std::ios_base::dec` [static], [inherited]

Converts integer input or generates integer output in decimal base.

Referenced by `std::dec()`.

**6.261.6.12 end** const `seekdir` `std::ios_base::end` [static], [inherited]

Request a seek relative to the current end of the sequence.

Referenced by `std::basic_filebuf<_CharT, _Traits>::open()`, and `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`.

**6.261.6.13 eofbit** const `iostate` `std::ios_base::eofbit` [static], [inherited]

Indicates that an input operation reached the end of an input sequence.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_date()`, `std::time_get<_CharT, _InIter>::do_get_time()`, `std::time_get<_CharT, _InIter>::do_get_weekday()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::eof()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::readsome()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<char>::sync()`, `std::basic_istream<_CharT, _Traits>::unget()`, and `std::ws()`.

**6.261.6.14 failbit** `const iostate std::ios_base::failbit [static], [inherited]`

Indicates that an input operation failed to read the expected characters, or that an output operation failed to generate the desired characters.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ostream<_CharT, _Traits>::sentry::sentry()`, `std::basic_ifstream<_CharT, _Traits>::close()`, `std::basic_ofstream<_CharT, _Traits>::close()`, `std::basic_fstream<_CharT, _Traits>::close()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ios<_CharT, _Traits>::fail()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_fstream<_CharT, _Traits>::open()`, `std::basic_ofstream<_CharT, _Traits>::open()`, `std::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<_CharT, _Traits>::seekg()`, and `std::basic_ostream<_CharT, _Traits>::seekp()`.

**6.261.6.15 fixed** `const fmtflags std::ios_base::fixed [static], [inherited]`

Generate floating-point output in fixed-point notation.

Referenced by `std::fixed()`, and `std::hexfloat()`.

**6.261.6.16 floatfield** `const fmtflags std::ios_base::floatfield [static], [inherited]`

A mask of scientific|fixed. Useful for the 2-arg form of `setf`.

Referenced by `std::defaultfloat()`, `std::fixed()`, `std::hexfloat()`, and `std::scientific()`.

**6.261.6.17 goodbit** `const iostate std::ios_base::goodbit [static], [inherited]`

Indicates all is well.

Referenced by `std::basic_istream<_CharT, _Traits>::sentry::sentry()`, `std::time_get<_CharT, _InIter>::do_get()`, `std::num_get<_CharT, _InIter>::do_get()`, `std::time_get<_CharT, _InIter>::do_get_monthname()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::time_get<_CharT, _InIter>::do_get_year()`, `std::basic_ostream<_CharT, _Traits>::flush()`, `std::basic_istream<_CharT, _Traits>::get()`, `std::basic_istream<char>::get()`, `std::time_get<_CharT, _InIter>::get()`, `std::basic_istream<_CharT, _Traits>::ignore()`, `std::basic_ostream<_CharT, _Traits>::operator<<()`, `std::operator>>()`, `std::basic_istream<_CharT, _Traits>::operator>>()`, `std::basic_ostream<_CharT, _Traits>::put()`, `std::basic_istream<_CharT, _Traits>::putback()`, `std::basic_istream<_CharT, _Traits>::read()`, `std::basic_istream<char>::readsomeline()`, `std::basic_istream<_CharT, _Traits>::readsomeline()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_istream<_CharT, _Traits>::sync()`, `std::basic_istream<_CharT, _Traits>::unsetg()`, and `std::ws()`.

**6.261.6.18 hex** `const fmtflags std::ios_base::hex [static], [inherited]`

Converts integer input or generates integer output in hexadecimal base.

Referenced by `std::num_get<_CharT, _InIter>::do_get()`, `std::num_put<_CharT, _OutIter>::do_put()`, and `std::hex()`.

**6.261.6.19 in** `const openmode std::ios_base::in [static], [inherited]`

Open for input. Default for `ifstream` and `fstream`.

Referenced by `std::basic_filebuf<_CharT, _Traits>::M_set_buffer()`, `std::basic_ifstream<_CharT, _Traits>::open()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::overflow()`, `std::basic_filebuf<_CharT, _Traits>::pbackfail()`, `std::basic_istream<_CharT, _Traits>::seekg()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekoff()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::seekpos()`, `std::basic_filebuf<_CharT, _Traits>::showmanyc()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::showmanyc()`, `std::basic_istream<_CharT, _Traits>::tellg()`, `std::basic_filebuf<_CharT, _Traits>::underflow()`, `std::basic_stringbuf<_CharT, _Traits, _Alloc>::underflow()`, and `std::basic_filebuf<_CharT, _Traits>::xsgetn()`.

**6.261.6.20 internal** `const fmtflags std::ios_base::internal [static], [inherited]`

Adds fill characters at a designated internal point in certain generated output, or identical to `right` if no such point is designated.

Referenced by [std::internal\(\)](#).

**6.261.6.21 left** `const fmtflags std::ios_base::left [static], [inherited]`

Adds fill characters on the right (final positions) of certain generated output. (I.e., the thing you print is flush left.)

Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), and [std::left\(\)](#).

**6.261.6.22 oct** `const fmtflags std::ios_base::oct [static], [inherited]`

Converts integer input or generates integer output in octal base.

Referenced by [std::oct\(\)](#).

**6.261.6.23 out** `const openmode std::ios_base::out [static], [inherited]`

Open for output. Default for `ofstream` and `fstream`.

Referenced by [std::basic\\_filebuf< \\_CharT, \\_Traits >::M\\_set\\_buffer\(\)](#), [std::basic\\_ofstream< \\_CharT, \\_Traits >::open\(\)](#),

[std::basic\\_filebuf< \\_CharT, \\_Traits >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::overflow\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekoff\(\)](#), [std::basic\\_ostream< \\_CharT, \\_Traits >::seekp\(\)](#), [std::basic\\_stringbuf< \\_CharT, \\_Traits, \\_Alloc >::seekp\(\)](#), and [std::basic\\_ostream< \\_CharT, \\_Traits >::tellp\(\)](#), and [std::basic\\_filebuf< \\_CharT, \\_Traits >::xsputn\(\)](#).

**6.261.6.24 right** `const fmtflags std::ios_base::right [static], [inherited]`

Adds fill characters on the left (initial positions) of certain generated output. (I.e., the thing you print is flush right.)

Referenced by [std::right\(\)](#).

**6.261.6.25 scientific** `const fmtflags std::ios_base::scientific [static], [inherited]`

Generates floating-point output in scientific notation.

Referenced by [std::hexfloat\(\)](#), and [std::scientific\(\)](#).

**6.261.6.26 showbase** `const fmtflags std::ios_base::showbase [static], [inherited]`

Generates a prefix indicating the numeric base of generated integer output.

Referenced by [std::num\\_put< \\_CharT, \\_Outiter >::do\\_put\(\)](#), [std::noshowbase\(\)](#), and [std::showbase\(\)](#).

**6.261.6.27 showpoint** `const fmtflags std::ios_base::showpoint [static], [inherited]`

Generates a decimal-point character unconditionally in generated floating-point output.

Referenced by [std::noshowpoint\(\)](#), and [std::showpoint\(\)](#).

**6.261.6.28 showpos** `const fmtflags std::ios_base::showpos [static], [inherited]`

Generates a + sign in non-negative generated numeric output.

Referenced by [std::noshowpos\(\)](#), and [std::showpos\(\)](#).

**6.261.6.29 skipws** `const fmtflags std::ios_base::skipws [static], [inherited]`

Skips leading white space before certain input operations.

Referenced by [std::basic\\_istream< \\_CharT, \\_Traits >::sentry::sentry\(\)](#), [std::noskipws\(\)](#), [std::\\_\\_detail::operator>>\(\)](#), and [std::skipws\(\)](#).

**6.261.6.30 trunc** `const openmode std::ios_base::trunc [static], [inherited]`

Truncate an existing stream when opening. Default for `ofstream`.

**6.261.6.31 unitbuf** `const fmtflags std::ios_base::unitbuf [static], [inherited]`

Flushes output after each output operation.

Referenced by `std::basic_ostream<_CharT, _Traits>::sentry::~~sentry()`, `std::nounitbuf()`, and `std::unitbuf()`.

**6.261.6.32 uppercase** `const fmtflags std::ios_base::uppercase [static], [inherited]`

Replaces certain lowercase letters with their uppercase equivalents in generated output.

Referenced by `std::num_put<_CharT, _OutIter>::do_put()`, `std::nouppercase()`, and `std::uppercase()`.

The documentation for this class was generated from the following files:

- `iosfwd`
- `sstream`

## Friends

- bool `operator==` (const `bernoulli_distribution` &\_\_d1, const `bernoulli_distribution` &\_\_d2)

### 6.262.1 Detailed Description

A Bernoulli random number distribution.

Generates a sequence of true and false values with likelihood  $p$  that true will come up and  $(1 - p)$  that false will appear.

### 6.262.2 Member Typedef Documentation

#### 6.262.2.1 `result_type` `typedef bool std::bernoulli_distribution::result_type`

The type of the range of the distribution.

### 6.262.3 Constructor & Destructor Documentation

#### 6.262.3.1 `bernoulli_distribution()` [1/2] `std::bernoulli_distribution::bernoulli_distribution ( )` [inline]

Constructs a Bernoulli distribution with likelihood 0.5.

#### 6.262.3.2 `bernoulli_distribution()` [2/2] `std::bernoulli_distribution::bernoulli_distribution ( double __p )` [inline], [explicit]

Constructs a Bernoulli distribution with likelihood  $p$ .

#### Parameters

<code>__p</code>	[IN] The likelihood of a true result being returned. Must be in the interval $[0, 1]$ .
------------------	---

### 6.262.4 Member Function Documentation

#### 6.262.4.1 `max()` `result_type std::bernoulli_distribution::max ( ) const` [inline]

Returns the least upper bound value of the distribution.

References `std::numeric_limits<_Tp>::max()`.

#### 6.262.4.2 `min()` `result_type std::bernoulli_distribution::min ( ) const` [inline]

Returns the greatest lower bound value of the distribution.

References `std::numeric_limits<_Tp>::min()`.

#### 6.262.4.3 `operator()()` `template<typename _UniformRandomNumberGenerator > result_type std::bernoulli_distribution::operator() ( _UniformRandomNumberGenerator & __urng )` [inline]

Generating functions.

References [operator\(\)](#).

Referenced by [operator\(\)](#).

**6.262.4.4** [p\(\)](#) `double std::bernoulli_distribution::p ( ) const [inline]`

Returns the `p` parameter of the distribution.

**6.262.4.5** [param\(\)](#) `[1/2] param_type std::bernoulli_distribution::param ( ) const [inline]`

Returns the parameter set of the distribution.

Referenced by [std::operator>>\(\)](#).

**6.262.4.6** [param\(\)](#) `[2/2] void std::bernoulli_distribution::param ( const param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

**6.262.4.7** [reset\(\)](#) `void std::bernoulli_distribution::reset ( ) [inline]`

Resets the distribution state.

Does nothing for a Bernoulli distribution.

## 6.262.5 Friends And Related Function Documentation

**6.262.5.1** [operator==](#) `bool operator== ( const bernoulli_distribution & __d1, const bernoulli_distribution & __d2 ) [friend]`

Return true if two Bernoulli distributions have the same parameters.

The documentation for this class was generated from the following files:

- [random.h](#)
- [bits/random.tcc](#)

## 6.263 std::bidirectional\_iterator\_tag Struct Reference

`#include <stl_iterator_base_types.h>`

Inheritance diagram for `std::bidirectional_iterator_tag`:

### 6.263.1 Detailed Description

Bidirectional iterators support a superset of forward iterator operations.

The documentation for this struct was generated from the following file:

- [stl\\_iterator\\_base\\_types.h](#)

## 6.264 `__gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >` Class Template Reference

`#include <point_iterators.hpp>`

Inheritance diagram for `__gnu_pbds::detail::bin_search_tree_const_it_< Node_Pointer, Value_Type, Pointer, Const_Pointer, Reference, Const_Reference, Is_Forward_Iterator, _Alloc >`:

### 6.265.1 Detailed Description

template<typename Node, class Const\_Iterator, class Iterator, typename \_Alloc>

class \_\_gnu\_pbds::detail::bin\_search\_tree\_const\_node\_it\_< Node, Const\_Iterator, Iterator, \_Alloc >

Const node iterator.

## 6.265.2 Member Typedef Documentation

**6.265.2.1 `const_reference`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,`  
`Iterator, _Alloc >::const_reference`  
Iterator's `__const` reference type.

**6.265.2.2 `difference_type`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<`  
`Node, Const_Iterator, Iterator, _Alloc >::difference_type`  
Difference type.

**6.265.2.3 `iterator_category`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↔`  
`Iterator, Iterator, _Alloc >::iterator_category`  
Category.

**6.265.2.4 `metadata_const_reference`** `template<typename Node , class Const_Iterator , class Iterator`  
`, typename _Alloc >`  
`typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<`  
`Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference`  
Const metadata reference type.

**6.265.2.5 `metadata_type`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_↔`  
`Iterator, Iterator, _Alloc >::metadata_type`  
Metadata type.

**6.265.2.6 `reference`** `template<typename Node , class Const_Iterator , class Iterator , typename _↔`  
`_Alloc >`  
`typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,`  
`Iterator, _Alloc >::reference`  
Iterator's reference type.

**6.265.2.7 `value_type`** `template<typename Node , class Const_Iterator , class Iterator , typename _↔`  
`_Alloc >`  
`typedef Const_Iterator __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,`  
`Iterator, _Alloc >::value_type`  
Iterator's value type.

### 6.265.3 Member Function Documentation

**6.265.3.1 `get_l_child()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const [inline]`

Returns the `__const` node iterator associated with the left node.

**6.265.3.2 `get_metadata()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_metadata ( ) const [inline]`

Metadata access.

**6.265.3.3 `get_r_child()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const [inline]`

Returns the `__const` node iterator associated with the right node.

**6.265.3.4 `operator"!="()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator!= ( const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline]`

Compares (negatively) to a different iterator object.

**6.265.3.5 `operator*()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator* ( ) const [inline]`

Access.

**6.265.3.6 `operator==()`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

`bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::operator== ( const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > & other ) const [inline]`

Compares to a different iterator object.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

## 6.266 `__gnu_pbds::detail::bin_search_tree_it` < Node\_Pointer, Value\_Type, Pointer, Const\_Pointer, Reference, Const\_Reference, Is\_Forward\_Iterator, \_Alloc > Class Template Reference

### 6.267.1 Detailed Description

```
template<typename Node, class Const_Iterator, class Iterator, typename _Alloc>
class __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >
```

Node iterator.

### 6.267.2 Member Typedef Documentation

**6.267.2.1 `const_reference`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::const_reference
Iterator's __const reference type.
```

**6.267.2.2 `difference_type`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef trivial_iterator_difference_type __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::difference_type [inherited]
Difference type.
```

**6.267.2.3 `iterator_category`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef trivial_iterator_tag __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::iterator_category [inherited]
Category.
```

**6.267.2.4 `metadata_const_reference`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef rebind_traits<_Alloc,metadata_type>::const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_<
Node, Const_Iterator, Iterator, _Alloc >::metadata_const_reference [inherited]
Const metadata reference type.
```

**6.267.2.5 `metadata_type`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef Node::metadata_type __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc >::metadata_type [inherited]
Metadata type.
```

**6.267.2.6 `reference`** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`

```
typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::reference
Iterator's reference type.
```

**6.267.2.7 value\_type** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`typedef Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >::value_type`  
Iterator's value type.

### 6.267.3 Member Function Documentation

**6.267.3.1 get\_l\_child()** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_node_it_<`  
`Node, Const_Iterator, Iterator, _Alloc >::get_l_child ( ) const [inline]`  
Returns the node iterator associated with the left node.

**6.267.3.2 get\_metadata()** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`metadata_const_reference __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator,`  
`Iterator, _Alloc >::get_metadata ( ) const [inline], [inherited]`  
Metadata access.

**6.267.3.3 get\_r\_child()** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc > __gnu_pbds::detail::bin_search_tree_node_it_<`  
`Node, Const_Iterator, Iterator, _Alloc >::get_r_child ( ) const [inline]`  
Returns the node iterator associated with the right node.

**6.267.3.4 operator"!="()** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc`  
`>::operator!= (`  
`const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &`  
`other ) const [inline], [inherited]`  
Compares (negatively) to a different iterator object.

**6.267.3.5 operator\*()** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`Iterator __gnu_pbds::detail::bin_search_tree_node_it_< Node, Const_Iterator, Iterator, _Alloc >↵`  
`::operator* ( ) const [inline]`  
Access.

**6.267.3.6 operator==(** `template<typename Node , class Const_Iterator , class Iterator , typename _Alloc >`  
`bool __gnu_pbds::detail::bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc`  
`>::operator== (`  
`const bin_search_tree_const_node_it_< Node, Const_Iterator, Iterator, _Alloc > &`  
`other ) const [inline], [inherited]`

Compares to a different iterator object.

The documentation for this class was generated from the following file:

- [bin\\_search\\_tree\\_/node\\_iterators.hpp](#)

## 6.268 `__gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >` Struct Template Reference

```
#include <traits.hpp>
```

### Public Types

- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **const\_reverse\_iterator**
- typedef `Node` **node**
- typedef `bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_const\_iterator**
- typedef `bin_search_tree_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_iterator**
- typedef `Node_Update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc >` **node\_update**
- typedef `__gnu_pbds::null_node_update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc > * null_node_update_pointer`
- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, true, _Alloc >` **point\_const\_iterator**
- typedef `bin_search_tree_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, true, _Alloc >` **point\_iterator**
- typedef `bin_search_tree_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **reverse\_iterator**

### 6.268.1 Detailed Description

```
template<typename Key, typename Mapped, class Cmp_Fn, template< typename Node_Citr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
```

```
struct __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >
```

Binary search tree traits, primary template.

### 6.268.2 Member Typedef Documentation

**6.268.2.1 node\_const\_iterator** `template<typename Key , typename Mapped , class Cmp_Fn , template< typename Node_Citr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node , typename _Alloc >`

```
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

## 6.269 `__gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >` Struct Template Reference

```
#include <traits.hpp>
```

### Public Types

- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, false, _Alloc >` **const\_reverse\_iterator**
- typedef `Node` **node**
- typedef `bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc >` **node\_const\_iterator**
- typedef `node_const_iterator` **node\_iterator**
- typedef `Node_Update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc >` **node\_update**
- typedef `__gnu_pbds::null_node_update< node_const_iterator, node_iterator, Cmp_Fn, _Alloc > * null_node↔_update_pointer`
- typedef `bin_search_tree_const_it_< typename node_alloc_traits::pointer, typename type_traits::value_type, typename type_traits::pointer, typename type_traits::const_pointer, typename type_traits::reference, typename type_traits::const_reference, true, _Alloc >` **point\_const\_iterator**
- typedef `point_const_iterator` **point\_iterator**
- typedef `const_reverse_iterator` **reverse\_iterator**

### 6.269.1 Detailed Description

```
template<typename Key, class Cmp_Fn, template< typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node, typename _Alloc>
```

```
struct __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >
```

Specialization.

### 6.269.2 Member Typedef Documentation

**6.269.2.1 `node_const_iterator`** `template<typename Key , class Cmp_Fn , template< typename Node_CItr, class Node_Itr, class _Cmp_Fn, typename _Alloc > class Node_Update, class Node , typename _Alloc >`

```
typedef bin_search_tree_const_node_it_< Node, point_const_iterator, point_iterator, _Alloc> __gnu_pbds::detail::bin_search_tree_traits< Key, null_type, Cmp_Fn, Node_Update, Node, _Alloc >::node_const_iterator
```

This is an iterator to an iterator: it iterates over nodes, and de-referencing it returns one of the tree's iterators.

The documentation for this struct was generated from the following file:

- [bin\\_search\\_tree\\_/traits.hpp](#)

## 6.270 `__gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >` Class Template Reference

Inheritance diagram for `__gnu_cxx::binary_compose< _Operation1, _Operation2, _Operation3 >`:

### Public Types

- typedef `_Operation2::argument_type` **argument\_type**
- typedef `_Operation1::result_type` **result\_type**

### Public Member Functions

## 6.271 `std::binary_function<_Arg1, _Arg2, _Result >` Struct Template Reference

```
#include <stl_function.h>
```

Inheritance diagram for `std::binary_function<_Arg1, _Arg2, _Result >`:

### Public Types

- typedef \_Arg1 [first\\_argument\\_type](#)
- typedef \_Result [result\\_type](#)
- typedef \_Arg2 [second\\_argument\\_type](#)

#### 6.271.1 Detailed Description

```
template<typename _Arg1, typename _Arg2, typename _Result>
struct std::binary_function< _Arg1, _Arg2, _Result >
```

Helper for defining adaptable binary function objects.

**Deprecated** Deprecated in C++11, no longer in the standard since C++17.

#### 6.271.2 Member Typedef Documentation

**6.271.2.1 first\_argument\_type** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Arg1 std::binary\_function< _Arg1, _Arg2, _Result >::first_argument_type`  
**first\_argument\_type** is the type of the first argument

**6.271.2.2 result\_type** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Result std::binary\_function< _Arg1, _Arg2, _Result >::result_type`  
**result\_type** is the return type

**6.271.2.3 second\_argument\_type** `template<typename _Arg1 , typename _Arg2 , typename _Result >`  
`typedef _Arg2 std::binary\_function< _Arg1, _Arg2, _Result >::second_argument_type`  
**second\_argument\_type** is the type of the second argument  
The documentation for this struct was generated from the following file:

- [stl\\_function.h](#)

## 6.272 `__gnu_pbds::detail::binary_heap< Value_Type, Cmp_Fn, _Alloc >` Class Template Reference

#### 6.273.1 Detailed Description

`template<typename Value_Type, typename Entry, bool Simple, typename _Alloc>`

`class __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >`

Const point-type iterator.

#### 6.273.2 Member Typedef Documentation

**6.273.2.1 `const_pointer`** `template<typename Value_Type , typename Entry , bool Simple, typename _↵`  
`_Alloc >`

typedef `base_type::const_pointer` `__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,`  
`Entry, Simple, _Alloc >::const_pointer`

Iterator's const pointer type.

**6.273.2.2 const\_reference** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef base_type::const_reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,`  
`Entry, Simple, _Alloc >::const_reference`  
 Iterator's const reference type.

**6.273.2.3 difference\_type** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef _Alloc::difference_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,`  
`Entry, Simple, _Alloc >::difference_type`  
 Difference type.

**6.273.2.4 iterator\_category** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef std::forward_iterator_tag __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type,`  
`Entry, Simple, _Alloc >::iterator_category`  
 Category.

**6.273.2.5 pointer** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef base_type::pointer __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,`  
`Simple, _Alloc >::pointer`  
 Iterator's pointer type.

**6.273.2.6 reference** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef base_type::reference __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,`  
`Simple, _Alloc >::reference`  
 Iterator's reference type.

**6.273.2.7 value\_type** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`typedef base_type::value_type __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry,`  
`Simple, _Alloc >::value_type`  
 Iterator's value type.

### 6.273.3 Constructor & Destructor Documentation

**6.273.3.1 binary\_heap\_const\_iterator\_() [1/2]** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_↵`  
`heap_const_iterator_ ( ) [inline]`  
 Default constructor.

**6.273.3.2 `binary_heap_const_iterator_()` [2/2]** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`__gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::binary_↵`  
`heap_const_iterator_ (`  
`const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other )`  
`[inline]`  
Copy constructor.

## 6.273.4 Member Function Documentation

**6.273.4.1 `operator"!=()` [1/2]** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator!=`  
`(`  
`const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other )`  
`const [inline]`  
Compares content (negatively) to a different iterator object.

**6.273.4.2 `operator"!=()` [2/2]** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵`  
`::operator!= (`  
`const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other`  
`) const [inline], [inherited]`  
Compares content (negatively) to a different iterator object.

**6.273.4.3 `operator*()`** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc`  
`>`  
`const_reference __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple,`  
`_Alloc >::operator* ( ) const [inline], [inherited]`  
Access.

**6.273.4.4 `operator->()`** `template<typename Value_Type , typename Entry , bool Simple, typename _↵`  
`_Alloc >`  
`const_pointer __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, ↵`  
`_Alloc >::operator-> ( ) const [inline], [inherited]`  
Access.

**6.273.4.5 `operator==(` [1/2]** `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`  
`bool __gnu_pbds::detail::binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc >::operator==`  
`(`  
`const binary_heap_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other )`  
`const [inline]`  
Compares content to a different iterator object.

**6.273.4.6 `operator==()`** [2/2] `template<typename Value_Type , typename Entry , bool Simple, typename _Alloc >`

```
bool __gnu_pbds::detail::binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc >↵
::operator== (
    const binary_heap_point_const_iterator_< Value_Type, Entry, Simple, _Alloc > & other
) const [inline], [inherited]
```

Compares content to a different iterator object.

### 6.279.1 Detailed Description

```
template<typename _IntType = int>
class std::binomial_distribution< _IntType >
```

A discrete binomial random number distribution.

The formula for the binomial probability density function is  $p(i|t, p) = \binom{t}{i} p^i (1-p)^{t-i}$  where  $t$  and  $p$  are the parameters of the distribution.

### 6.279.2 Member Typedef Documentation

**6.279.2.1 result\_type** template<typename \_IntType = int>  
typedef \_IntType [std::binomial\\_distribution](#)< \_IntType >::result\_type  
The type of the range of the distribution.

### 6.279.3 Member Function Documentation

**6.279.3.1 max()** `template<typename _IntType = int>  
result_type std::binomial_distribution< _IntType >::max ( ) const [inline]`  
Returns the least upper bound value of the distribution.

**6.279.3.2 min()** `template<typename _IntType = int>  
result_type std::binomial_distribution< _IntType >::min ( ) const [inline]`  
Returns the greatest lower bound value of the distribution.

**6.279.3.3 operator()()** [1/2] `template<typename _IntType = int>  
template<typename _UniformRandomNumberGenerator >  
result_type std::binomial_distribution< _IntType >::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`  
Generating functions.  
References [std::binomial\\_distribution< \\_IntType >::operator\(\)\(\)](#).  
Referenced by [std::binomial\\_distribution< \\_IntType >::operator\(\)\(\)](#).

**6.279.3.4 operator()()** [2/2] `template<typename _IntType >  
template<typename _UniformRandomNumberGenerator >  
binomial_distribution< _IntType >::result_type std::binomial_distribution< _IntType >::operator() (   
_UniformRandomNumberGenerator & __urng,  
const param_type & __param )`  
A rejection algorithm when  $t * p \geq 8$  and a simple waiting time method - the second in the referenced book - otherwise.  
NB: The former is available only if `_GLIBCXX_USE_C99_MATH_TR1` is defined.  
Reference: Devroye, L. Non-Uniform Random Variates Generation. Springer-Verlag, New York, 1986, Ch. X, Sect. 4 (+ Errata!).  
References [std::abs\(\)](#), [std::numeric\\_limits< \\_Tp >::epsilon\(\)](#), [std::log\(\)](#), and [std::numeric\\_limits< \\_Tp >::max\(\)](#).

**6.279.3.5 p()** `template<typename _IntType = int>  
double std::binomial_distribution< _IntType >::p ( ) const [inline]`  
Returns the distribution `p` parameter.

**6.279.3.6 param()** [1/2] `template<typename _IntType = int>  
param_type std::binomial_distribution< _IntType >::param ( ) const [inline]`  
Returns the parameter set of the distribution.

**6.279.3.7 param()** [2/2] `template<typename _IntType = int>  
void std::binomial_distribution< _IntType >::param (   
const param_type & __param ) [inline]`  
Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

**6.279.3.8 reset()** `template<typename _IntType = int>`  
`void std::binomial_distribution< _IntType >::reset ( ) [inline]`  
 Resets the distribution state.  
 References [std::normal\\_distribution< \\_RealType >::reset\(\)](#).

**6.279.3.9 t()** `template<typename _IntType = int>`  
`_IntType std::binomial_distribution< _IntType >::t ( ) const [inline]`  
 Returns the distribution `t` parameter.

## 6.279.4 Friends And Related Function Documentation

**6.279.4.1 operator<<** `template<typename _IntType = int>`  
`template<typename _IntType1 , typename _CharT , typename _Traits >`  
`std::basic_ostream< _CharT, _Traits > & operator<< (`  
`std::basic_ostream< _CharT, _Traits > & __os,`  
`const std::binomial_distribution< _IntType1 > & __x ) [friend]`  
 Inserts a binomial\_distribution random number distribution `__x` into the output stream `__os`.

### Parameters

<code>__os</code>	An output stream.
<code>__x</code>	A binomial_distribution random number distribution.

### Returns

The output stream with the state of `__x` inserted or in an error state.

**6.279.4.2 operator==** `template<typename _IntType = int>`  
`bool operator== (`  
`const binomial_distribution< _IntType > & __d1,`  
`const binomial_distribution< _IntType > & __d2 ) [friend]`  
 Return true if two binomial distributions have the same parameters and the sequences that would be generated are equal.

**6.279.4.3 operator>>** `template<typename _IntType = int>`  
`template<typename _IntType1 , typename _CharT , typename _Traits >`  
`std::basic_istream< _CharT, _Traits > & operator>> (`  
`std::basic_istream< _CharT, _Traits > & __is,`  
`std::binomial_distribution< _IntType1 > & __x ) [friend]`  
 Extracts a binomial\_distribution random number distribution `__x` from the input stream `__is`.

### Parameters

<code>__is</code>	An input stream.
<code>__x</code>	A binomial_distribution random number generator engine.

## Returns

The input stream with `___x` extracted or in an error state.

### 6.283.1 Detailed Description

```
template<typename _Tp>
class __gnu_cxx::bitmap_allocator< _Tp >
```

Bitmap Allocator, primary template.

### 6.283.2 Member Function Documentation

**6.283.2.1 \_M\_allocate\_single\_object()**    template<typename \_Tp >  
pointer [\\_\\_gnu\\_cxx::bitmap\\_allocator](#)< \_Tp >::\_M\_allocate\_single\_object ( )    [inline]  
Allocates memory for a single object of size sizeof(\_Tp).

#### Exceptions

<i>std::bad_alloc.</i>	If memory cannot be allocated.
------------------------	--------------------------------

Complexity: Worst case complexity is O(N), but that is hardly ever hit. If and when this particular case is encountered, the next few cases are guaranteed to have a worst case complexity of O(1)! That's why this function performs very well on average. You can consider this function to have a complexity referred to commonly as: Amortized Constant time.  
References [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_bit\\_allocate\(\)](#), [\\_\\_gnu\\_cxx::\\_\\_detail::\\_\\_num\\_bitmaps\(\)](#), and [\\_\\_gnu\\_cxx::Bit\\_scan\\_forward\(\)](#).

**6.283.2.2 \_M\_deallocate\_single\_object()** `template<typename _Tp >`

```
void __gnu_cxx::bitmap_allocator< _Tp >::_M_deallocate_single_object (
    pointer __p ) throw ( ) [inline]
```

Deallocates memory that belongs to a single object of size `sizeof(_Tp)`.

Complexity:  $O(\lg(N))$ , but the worst case is not hit often! This is because containers usually deallocate memory close to each other and this case is handled in  $O(1)$  time by the `deallocate` function.

References `__gnu_cxx::detail::_bit_free()`, `__gnu_cxx::detail::_num_bitmaps()`, and `__gnu_cxx::free_list::_M_insert()`.

The documentation for this class was generated from the following file:

## 6.285.1 Detailed Description

```
template<size_t _Nb>
class std::bitset<_Nb>
```

The `bitset` class represents a *fixed-size* sequence of bits.

(Note that `bitset` does *not* meet the formal requirements of a [container](#). Mainly, it lacks iterators.)

The template argument, *Nb*, may be any non-negative number, specifying the number of bits (e.g., "0", "12", "1024\*1024").

In the general unoptimized case, storage is allocated in word-sized blocks. Let *B* be the number of bits in a word, then  $(Nb+(B-1))/B$  words will be used for storage. *B* - *NbB* bits are unused. (They are the high-order bits in the highest word.)

It is a class invariant that those unused bits are always zero.

If you think of `bitset` as *a simple array of bits*, be aware that your mental picture is reversed: a `bitset` behaves the same way as bits in integers do, with the bit at index 0 in the *least significant / right-hand* position, and the bit at index *Nb*-1 in the *most significant / left-hand* position. Thus, unlike other containers, a `bitset`'s index *counts from right to left*, to put it very loosely.

This behavior is preserved when translating to and from strings. For example, the first line of the following program probably prints *b('a') is 0001100001* on a modern ASCII system.

```
#include <bitset>
#include <iostream>
#include <sstream>
using namespace std;
int main()
{
    long    a = 'a';
    bitset<10> b(a);
    cout << "b('a') is " << b << endl;
    ostringstream s;
    s << b;
    string str = s.str();
    cout << "index 3 in the string is " << str[3] << " but\n"
         << "index 3 in the bitset is " << b[3] << endl;
}
```

Also see: [https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext\\_containers.html](https://gcc.gnu.org/onlinedocs/libstdc++/manual/ext_containers.html) for a description of extensions.

Most of the actual code isn't contained in `bitset<>` itself, but in the base class `_Base_bitset`. The base class works with whole words, not with individual bits. This allows us to specialize `_Base_bitset` for the important special case where the `bitset` is only a single word.

Extra confusion can result due to the fact that the storage for `_Base_bitset` *is* a regular array, and is indexed as such. This is carefully encapsulated.

## 6.285.2 Constructor & Destructor Documentation

### 6.285.2.1 `bitset()` [1/5] `template<size_t _Nb>`

```
constexpr std::bitset< _Nb >::bitset ( ) [inline], [constexpr], [noexcept]
```

All bits set to zero.

### 6.285.2.2 `bitset()` [2/5] `template<size_t _Nb>`

```
constexpr std::bitset< _Nb >::bitset (
    unsigned long long __val ) [inline], [constexpr], [noexcept]
```

Initial bits bitwise-copied from a single word (others set to zero).

### 6.285.2.3 `bitset()` [3/5] `template<size_t _Nb>`

```
template<class _CharT , class _Traits , class _Alloc >
constexpr std::bitset< _Nb >::bitset (
    const std::basic_string< _CharT, _Traits, _Alloc > & __s,
    size_t __position = 0 ) [inline], [explicit], [constexpr]
```

Use a subset of a string.

#### Parameters

<code>__s</code>	A string of 0 and 1 characters.
<code>__position</code>	Index of the first character in <code>__s</code> to use; defaults to zero.

#### Exceptions

<code>std::out_of_range</code>	If <code>pos</code> is bigger the size of <code>__s</code> .
<code>std::invalid_argument</code>	If a character appears in the string which is neither 0 nor 1.

### 6.285.2.4 `bitset()` [4/5] `template<size_t _Nb>`

```
template<class _CharT , class _Traits , class _Alloc >
constexpr std::bitset< _Nb >::bitset (
    const std::basic_string< _CharT, _Traits, _Alloc > & __s,
    size_t __position,
    size_t __n ) [inline], [constexpr]
```

Use a subset of a string.

#### Parameters

<code>__s</code>	A string of 0 and 1 characters.
------------------	---------------------------------

**Parameters**

<code>__position</code>	Index of the first character in <code>__s</code> to use.
<code>__n</code>	The number of characters to copy.

**Exceptions**

<code>std::out_of_range</code>	If <code>__position</code> is bigger the size of <code>__s</code> .
<code>std::invalid_argument</code>	If a character appears in the string which is neither <code>0</code> nor <code>1</code> .

**6.285.2.5 `bitset()` [5/5]** `template<size_t _Nb>`

```
template<typename _CharT >
constexpr std::bitset< _Nb >::bitset (
    const _CharT * __str,
    typename __bitset< _Nb >::__string< _CharT >::size_type __n = __bitset< _Nb >::__
string<_CharT>::npos,
    _CharT __zero = _CharT('0'),
    _CharT __one = _CharT('1') ) [inline], [explicit], [constexpr]
```

Construct from a character array.

**Parameters**

<code>__str</code>	An array of characters <i>zero</i> and <i>one</i> .
<code>__n</code>	The number of characters to use.
<code>__zero</code>	The character corresponding to the value 0.
<code>__one</code>	The character corresponding to the value 1.

**Exceptions**

<code>std::invalid_argument</code>	If a character appears in the string which is neither <code>__zero</code> nor <code>__one</code> .
------------------------------------	--

**6.285.3 Member Function Documentation****6.285.3.1 `all()`** `template<size_t _Nb>`

```
constexpr bool std::bitset< _Nb >::all ( ) const [inline], [constexpr], [noexcept]
```

Tests whether all the bits are on.

**Returns**

True if all the bits are set.

**6.285.3.2 `any()`** `template<size_t _Nb>`

```
constexpr bool std::bitset< _Nb >::any ( ) const [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if at least one bit is set.

**6.285.3.3 count()** template<size\_t \_Nb>

```
constexpr size_t std::bitset<_Nb>::count ( ) const [inline], [constexpr], [noexcept]
```

Returns the number of bits which are set.

**6.285.3.4 flip()** [1/2] template<size\_t \_Nb>

```
constexpr bitset<_Nb> & std::bitset<_Nb>::flip ( ) [inline], [constexpr], [noexcept]
```

Toggles every bit to its opposite value.

Referenced by [std::bitset<\\_Nb>::operator~\(\)](#).

**6.285.3.5 flip()** [2/2] template<size\_t \_Nb>

```
constexpr bitset<_Nb> & std::bitset<_Nb>::flip (
    size_t __position ) [inline], [constexpr]
```

Toggles a given bit to its opposite value.

**Parameters**

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

**6.285.3.6 none()** template<size\_t \_Nb>

```
constexpr bool std::bitset<_Nb>::none ( ) const [inline], [constexpr], [noexcept]
```

Tests whether any of the bits are on.

**Returns**

True if none of the bits are set.

**6.285.3.7 operator&=()** template<size\_t \_Nb>

```
constexpr bitset<_Nb> & std::bitset<_Nb>::operator&= (
    const bitset<_Nb> & __rhs ) [inline], [constexpr], [noexcept]
```

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**6.285.3.8 operator<<()** `template<size_t _Nb>`  
`constexpr bitset< _Nb > std::bitset< _Nb >::operator<< (`  
    `size_t __position ) const [inline], [constexpr], [noexcept]`  
Self-explanatory.

**6.285.3.9 operator<<=()** `template<size_t _Nb>`  
`constexpr bitset< _Nb > & std::bitset< _Nb >::operator<<= (`  
    `size_t __position ) [inline], [constexpr], [noexcept]`  
Operations on bitsets.

Parameters

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

**6.285.3.10 operator==( )** `template<size_t _Nb>`  
`constexpr bool std::bitset< _Nb >::operator==(`  
    `const bitset< _Nb > & __rhs ) const [inline], [constexpr], [noexcept]`  
These comparisons for equality/inequality are, well, *bitwise*.

**6.285.3.11 operator>>()** `template<size_t _Nb>`  
`constexpr bitset< _Nb > std::bitset< _Nb >::operator>> (`  
    `size_t __position ) const [inline], [constexpr], [noexcept]`  
Self-explanatory.

**6.285.3.12 operator>>=()** `template<size_t _Nb>`  
`constexpr bitset< _Nb > & std::bitset< _Nb >::operator>>= (`  
    `size_t __position ) [inline], [constexpr], [noexcept]`  
Operations on bitsets.

Parameters

<code>__position</code>	The number of places to shift.
-------------------------	--------------------------------

These should be self-explanatory.

**6.285.3.13 operator[]()** `[1/2] template<size_t _Nb>`  
`constexpr reference std::bitset< _Nb >::operator[] (`  
    `size_t __position ) [inline], [constexpr]`  
Array-indexing support.

Parameters

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

**Returns**

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

**6.285.3.14 operator[]()** [2/2] `template<size_t _Nb>`  
`constexpr bool std::bitset<_Nb>::operator[] (`  
`size_t __position ) const [inline], [constexpr]`

Array-indexing support.

**Parameters**

<code>__position</code>	Index into the bitset.
-------------------------	------------------------

**Returns**

A bool for a *const bitset*. For non-const bitsets, an instance of the reference proxy class.

**Note**

These operators do no range checking and throw no exceptions, as required by DR 11 to the standard.

\_GLIBCXX\_RESOLVE\_LIB\_DEFECTS Note that this implementation already resolves DR 11 (items 1 and 2), but does not do the range-checking required by that DR's resolution. -pme The DR has since been changed: range-checking is a precondition (users' responsibility), and these functions must not throw. -pme

**6.285.3.15 operator^=()** `template<size_t _Nb>`  
`constexpr bitset<_Nb> & std::bitset<_Nb>::operator^= (`  
`const bitset<_Nb> & __rhs ) [inline], [constexpr], [noexcept]`

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**6.285.3.16 operator" |=()** `template<size_t _Nb>`  
`constexpr bitset<_Nb> & std::bitset<_Nb>::operator|= (`  
`const bitset<_Nb> & __rhs ) [inline], [constexpr], [noexcept]`

Operations on bitsets.

**Parameters**

<code>__rhs</code>	A same-sized bitset.
--------------------	----------------------

These should be self-explanatory.

**6.285.3.17 operator~()** `template<size_t _Nb>`

```
constexpr bitset< _Nb > std::bitset< _Nb >::operator~ ( ) const [inline], [constexpr], [noexcept]
```

See the no-argument `flip()`.

References `std::bitset`< \_Nb >::`flip()`.

**6.285.3.18 reset()** [1/2] `template<size_t _Nb>`

```
constexpr bitset< _Nb > & std::bitset< _Nb >::reset ( ) [inline], [constexpr], [noexcept]
```

Sets every bit to false.

**6.285.3.19 reset()** [2/2] `template<size_t _Nb>`

```
constexpr bitset< _Nb > & std::bitset< _Nb >::reset (
    size_t __position ) [inline], [constexpr]
```

Sets a given bit to false.

**Parameters**

<code>__position</code>	The index of the bit.
-------------------------	-----------------------

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

Same as writing `set(pos, false)`.

**6.285.3.20 set()** [1/2] `template<size_t _Nb>`

```
constexpr bitset< _Nb > & std::bitset< _Nb >::set ( ) [inline], [constexpr], [noexcept]
```

Sets every bit to true.

**6.285.3.21 set()** [2/2] `template<size_t _Nb>`

```
constexpr bitset< _Nb > & std::bitset< _Nb >::set (
    size_t __position,
    bool __val = true ) [inline], [constexpr]
```

Sets a given bit to a particular value.

**Parameters**

<code>__position</code>	The index of the bit.
<code>__val</code>	Either true or false, defaults to true.

**Exceptions**

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

**6.285.3.22 size()** `template<size_t _Nb>`

```
constexpr size_t std::bitset< _Nb >::size ( ) const [inline], [constexpr], [noexcept]
```

Returns the total number of bits.

**6.285.3.23 test()** `template<size_t _Nb>`  
`constexpr bool std::bitset<_Nb>::test (`  
`size_t __position ) const [inline], [constexpr]`

Tests the value of a bit.

#### Parameters

<code>__position</code>	The index of a bit.
-------------------------	---------------------

#### Returns

The value at *pos*.

#### Exceptions

<code>std::out_of_range</code>	If <i>pos</i> is bigger the size of the set.
--------------------------------	--

**6.285.3.24 to\_string()** `template<size_t _Nb>`  
`template<class _CharT , class _Traits , class _Alloc >`  
`constexpr std::basic_string<_CharT, _Traits, _Alloc> std::bitset<_Nb>::to_string ( ) const`  
`[inline], [constexpr]`

Returns a character interpretation of the bitset.

#### Returns

The string equivalent of the bits.

Note the ordering of the bits: decreasing character positions correspond to increasing bit positions (see the main class notes for an example).

**6.285.3.25 to\_ulong()** `template<size_t _Nb>`  
`constexpr unsigned long std::bitset<_Nb>::to_ulong ( ) const [inline], [constexpr]`

Returns a numerical interpretation of the bitset.

#### Returns

The integral equivalent of the bits.

#### Exceptions

<code>std::overflow_error</code>	If there are too many bits to be represented in an unsigned long.
----------------------------------	---

### 6.286.1 Detailed Description

[bool\\_set](#)

See N2136, [Bool\\_set](#): multi-valued logic by Hervé Brönnimann, Guillaume Melquiond, Sylvain Pion.

The implicit conversion to bool is slippery! I may use the new explicit conversion. This has been specialized in the language so that in contexts requiring a bool the conversion happens implicitly. Thus most objections should be eliminated.

### 6.286.2 Constructor & Destructor Documentation

**6.286.2.1 [bool\\_set](#)() [1/2]**   constexpr [std::tr2::bool\\_set::bool\\_set](#) ( )   [inline], [constexpr]  
Default constructor.

**6.286.2.2 [bool\\_set](#)() [2/2]**   constexpr [std::tr2::bool\\_set::bool\\_set](#) (   
                  bool \_\_t )   [inline], [constexpr]  
Constructor from bool.

### 6.286.3 Member Function Documentation

**6.286.3.1 equals()** `bool std::tr2::bool_set::equals (   
 bool\_set \_\_b ) const [inline]`

Return true if states are equal.

**6.286.3.2 is\_emptyset()** `bool std::tr2::bool_set::is_emptyset ( ) const [inline]`

Return true if this is empty.

**6.286.3.3 is\_indeterminate()** `bool std::tr2::bool_set::is_indeterminate ( ) const [inline]`

Return true if this is indeterminate.

**6.286.3.4 is\_singleton()** `bool std::tr2::bool_set::is_singleton ( ) const [inline]`

Return true if this is false or true (normal boolean).

Referenced by [operator bool\(\)](#).

**6.286.3.5 operator bool()** `std::tr2::bool_set::operator bool ( ) const [inline]`

Conversion to bool.

### 6.289.1 Detailed Description

```
template<typename _RealType = double>
class std::cauchy_distribution<_RealType>
```

A cauchy\_distribution random number distribution.

The formula for the normal probability mass function is  $p(x|a,b) = (\pi b(1 + (\frac{x-a}{b})^2))^{-1}$

### 6.289.2 Member Typedef Documentation

**6.289.2.1 result\_type** template<typename \_RealType = double>  
typedef \_RealType [std::cauchy\\_distribution](#)<\_RealType>::result\_type  
The type of the range of the distribution.

### 6.289.3 Member Function Documentation

**6.289.3.1 max()** template<typename \_RealType = double>  
[result\\_type](#) [std::cauchy\\_distribution](#)<\_RealType>::max ( ) const [inline]  
Returns the least upper bound value of the distribution.  
References [std::numeric\\_limits<\\_Tp>::max\(\)](#).

**6.289.3.2 min()** `template<typename _RealType = double>  
result_type std::cauchy_distribution< _RealType >::min ( ) const [inline]`  
Returns the greatest lower bound value of the distribution.  
References `std::numeric_limits< _Tp >::lowest()`.

**6.289.3.3 operator()()** `template<typename _RealType = double>  
template<typename _UniformRandomNumberGenerator >  
result_type std::cauchy_distribution< _RealType >::operator() (   
_UniformRandomNumberGenerator & __urng ) [inline]`  
Generating functions.  
References `std::cauchy_distribution< _RealType >::operator()()`.  
Referenced by `std::cauchy_distribution< _RealType >::operator()()`.

**6.289.3.4 param() [1/2]** `template<typename _RealType = double>  
param_type std::cauchy_distribution< _RealType >::param ( ) const [inline]`  
Returns the parameter set of the distribution.  
Referenced by `std::operator>>()`.

**6.289.3.5 param() [2/2]** `template<typename _RealType = double>  
void std::cauchy_distribution< _RealType >::param (   
const param_type & __param ) [inline]`  
Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

**6.289.3.6 reset()** `template<typename _RealType = double>  
void std::cauchy_distribution< _RealType >::reset ( ) [inline]`  
Resets the distribution state.

## 6.289.4 Friends And Related Function Documentation

**6.289.4.1 operator==** `template<typename _RealType = double>  
bool operator== (   
const cauchy_distribution< _RealType > & __d1,  
const cauchy_distribution< _RealType > & __d2 ) [friend]`

Return true if two Cauchy distributions have the same parameters.  
The documentation for this class was generated from the following files:

- `random.h`
- `bits/random.tcc`

### 6.290.1 Detailed Description

```
template<bool External_Load_Access = false, typename Size_Type = std::size_t>
class __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >
```

A resize trigger policy based on collision checks. It keeps the simulated load factor lower than some given load factor.

### 6.290.2 Member Enumeration Documentation

**6.290.2.1 anonymous enum** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`anonymous enum`

#### Enumerator

<code>external_load_access</code>	Specifies whether the load factor can be accessed externally. The two options have different trade-offs in terms of flexibility, genericity, and encapsulation.
-----------------------------------	---

### 6.290.3 Constructor & Destructor Documentation

**6.290.3.1 cc\_hash\_max\_collision\_check\_resize\_trigger()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`__gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::cc_↵`  
`hash_max_collision_check_resize_trigger (`  
`float load = 0.5 )`

Default constructor, or constructor taking load, a \_\_load factor which it will attempt to maintain.

### 6.290.4 Member Function Documentation

**6.290.4.1 get\_load()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`float __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵`  
`::get_load ( ) const [inline]`  
Returns the current load.

**6.290.4.2 is\_grow\_needed()** `template<bool External_Load_Access = false, typename Size_Type = std↵`  
`::size_t>`  
`bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵`  
`::is_grow_needed (`  
`size_type size,`  
`size_type num_entries ) const [inline], [protected]`

Queries whether a grow is needed. This method is called only if this object indicated is needed.

**6.290.4.3 is\_resize\_needed()** `template<bool External_Load_Access = false, typename Size_Type =`  
`std::size_t>`  
`bool __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵`  
`::is_resize_needed ( ) const [inline], [protected]`  
Queries whether a resize is needed.

**6.290.4.4 notify\_cleared()** `template<bool External_Load_Access = false, typename Size_Type = std↵`  
`::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵`  
`::notify_cleared ( ) [protected]`  
Notifies the table was cleared.

**6.290.4.5 notify\_erase\_search\_collision()** `template<bool External_Load_Access = false, typename Size↵`  
`_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >↵`  
`::notify_erase_search_collision ( ) [inline], [protected]`  
Notifies a search encountered a collision.

**6.290.4.6 `notify_erase_search_end()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_end ( ) [inline], [protected]`  
Notifies a search ended.

**6.290.4.7 `notify_erase_search_start()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erase_search_start ( ) [inline], [protected]`  
Notifies an erase search started.

**6.290.4.8 `notify_erased()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_erased (`  
`size_type num_entries ) [inline], [protected]`  
Notifies an element was erased.

**6.290.4.9 `notify_externally_resized()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_externally_resized (`  
`size_type new_size ) [protected]`  
Notifies the table was resized externally.

**6.290.4.10 `notify_find_search_collision()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_collision ( ) [inline], [protected]`  
Notifies a search encountered a collision.

**6.290.4.11 `notify_find_search_end()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_end ( ) [inline], [protected]`  
Notifies a search ended.

**6.290.4.12 `notify_find_search_start()`** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_find_search_start ( ) [inline], [protected]`  
Notifies a find search started.

**6.290.4.13 notify\_insert\_search\_collision()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_collision ( ) [inline], [protected]`  
 Notifies a search encountered a collision.

**6.290.4.14 notify\_insert\_search\_end()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_end ( ) [inline], [protected]`  
 Notifies a search ended.

**6.290.4.15 notify\_insert\_search\_start()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_insert_search_start ( ) [inline], [protected]`  
 Notifies an insert search started.

**6.290.4.16 notify\_inserted()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_inserted ( size_type num_entries ) [inline], [protected]`  
 Notifies an element was inserted.

**6.290.4.17 notify\_resized()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::notify_resized ( size_type new_size ) [protected]`  
 Notifies the table was resized as a result of this object's signifying that a resize is needed.

**6.290.4.18 set\_load()** `template<bool External_Load_Access = false, typename Size_Type = std::size_t>`  
`void __gnu_pbds::cc_hash_max_collision_check_resize_trigger< External_Load_Access, Size_Type >::set_load ( float load )`  
 Sets the load; does not resize the container.

The documentation for this class was generated from the following file:

- [hash\\_policy.hpp](#)

### 6.291.1 Detailed Description

template<typename Key, typename Mapped, typename Hash\_Fn = typename detail::default\_hash\_fn<Key>::type, typename Eq\_Fn = typename detail::default\_eq\_fn<Key>::type, typename Comb\_Hash\_Fn = detail::default\_comb\_hash\_fn::type, typename Resize\_Policy = typename detail::default\_resize\_policy<Comb\_Hash\_Fn>::type, bool Store\_Hash = detail::default\_store\_hash, typename \_Alloc = std::allocator<char>>>

class `__gnu_pbds::cc_hash_table`< Key, Mapped, Hash\_Fn, Eq\_Fn, Comb\_Hash\_Fn, Resize\_Policy, Store\_Hash, \_Alloc >

A collision-chaining hash-based associative container.

#### Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor.
<i>Eq_Fn</i>	Equal functor.
<i>Comb_Hash_Fn</i>	Combining hash functor. If Hash_Fn is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.)
<i>Resize_Policy</i>	Resizes hash.
<i>Store_Hash</i>	Indicates whether the hash value will be stored along with each key. If Hash_Fn is null_type, then the container will not compile if this value is true
<i>_Alloc</i>	Allocator type.

Base tag choices are: `cc_hash_tag`.

Base is `basic_hash_table`.

## 6.291.2 Constructor & Destructor Documentation

**6.291.2.1 `cc_hash_table()` [1/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

`__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table ( ) [inline]`

Default constructor.

**6.291.2.2 `cc_hash_table()` [2/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

`__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (`

`const hash_fn & h ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `Hash_Fn` object of the container object.

**6.291.2.3 `cc_hash_table()` [3/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

`__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (`

`const hash_fn & h,`

`const eq_fn & e ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, and `r_eq_fn` will be copied by the `eq_fn` object of the container object.

**6.291.2.4 `cc_hash_table()` [4/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

`__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash, _Alloc >::cc_hash_table (`

`const hash_fn & h,`

`const eq_fn & e,`

`const comb_hash_fn & ch ) [inline]`

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, and `r_comb_hash_fn` will be copied by the `comb_hash_fn`

object of the container object.

**6.291.2.5 `cc_hash_table()` [5/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp ) [inline]
```

Constructor taking some policy objects. `r_hash_fn` will be copied by the `hash_fn` object of the container object, `r_eq_fn` will be copied by the `eq_fn` object of the container object, `r_comb_hash_fn` will be copied by the `comb_hash_fn` object of the container object, and `r_resize_policy` will be copied by the `resize_policy` object of the container object.

**6.291.2.6 `cc_hash_table()` [6/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last ) [inline]
```

Constructor taking `__iterators` to a range of `value_types`. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

**6.291.2.7 `cc_hash_table()` [7/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h ) [inline]
```

Constructor taking `__iterators` to a range of `value_types` and some policy objects. The `value_types` between `first_it` and `last_it` will be inserted into the container object.

**6.291.2.8 `cc_hash_table()` [8/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e ) [inline]
```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, and r\_eq\_fn will be copied by the eq\_fn object of the container object.

**6.291.2.9 cc\_hash\_table() [9/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch ) [inline]
```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, and r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object.

**6.291.2.10 cc\_hash\_table() [10/10]** `template<typename Key , typename Mapped , typename Hash_Fn = typename detail::default_hash_fn<Key>::type, typename Eq_Fn = typename detail::default_eq_fn<Key>::type, typename Comb_Hash_Fn = detail::default_comb_hash_fn::type, typename Resize_Policy = typename detail::default_resize_policy<Comb_Hash_Fn>::type, bool Store_Hash = detail::default_store_hash, typename _Alloc = std::allocator<char>>`

```
template<typename It >
__gnu_pbds::cc_hash_table< Key, Mapped, Hash_Fn, Eq_Fn, Comb_Hash_Fn, Resize_Policy, Store_Hash,
_Alloc >::cc_hash_table (
    It first,
    It last,
    const hash_fn & h,
    const eq_fn & e,
    const comb_hash_fn & ch,
    const resize_policy & rp ) [inline]
```

Constructor taking \_\_iterators to a range of value\_types and some policy objects The value\_types between first\_it and last\_it will be inserted into the container object. r\_hash\_fn will be copied by the hash\_fn object of the container object, r\_eq\_fn will be copied by the eq\_fn object of the container object, r\_comb\_hash\_fn will be copied by the comb\_hash\_fn object of the container object, and r\_resize\_policy will be copied by the resize\_policy object of the container object.

#### 6.293.1 Detailed Description

```
template<typename Key, typename Mapped, typename Hash_Fn, typename Eq_Fn, typename _Alloc, bool Store_Hash, typename Comb_Hash_Fn, typename Resize_Policy>
```

```
class __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >
```

A collision-chaining hash-based container.

## Template Parameters

<i>Key</i>	Key type.
<i>Mapped</i>	Map type.
<i>Hash_Fn</i>	Hashing functor. Default is <code>__gnu_cxx::hash</code> .
<i>Eq_Fn</i>	Equal functor. Default <code>std::equal_to&lt;Key&gt;</code>
<i>_Alloc</i>	Allocator type.
<i>Store_Hash</i>	If key type stores extra metadata. Defaults to false.
<i>Comb_Hash_Fn</i>	Combining hash functor. If <i>Hash_Fn</i> is not null_type, then this is the ranged-hash functor; otherwise, this is the range-hashing functor. XXX(See Design::Hash-Based Containers::Hash Policies.) Default <code>direct_mask_range_hashing</code> .
<i>Resize_Policy</i>	Resizes hash. Defaults to <code>hash_standard_resize_policy</code> , using <code>hash_exponential_size_policy</code> and <code>hash_load_check_resize_trigger</code> .

Bases are: `detail::hash_eq_fn`, `Resize_Policy`, `detail::ranged_hash_fn`, `detail::types_traits`. (Optional: `detail::debug_map_base`.)

## 6.293.2 Member Enumeration Documentation

**6.293.2.1 anonymous enum** `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > anonymous enum`

Value stores hash, true or false.

## 6.293.3 Member Function Documentation

**6.293.3.1 empty()** `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > bool __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::empty ( ) const [inline]`  
True if `size() == 0`.

**6.293.3.2 get\_comb\_hash\_fn() [1/2]** `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( )`  
Return current `comb_hash_fn`.

**6.293.3.3 get\_comb\_hash\_fn() [2/2]** `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Comb_Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_comb_hash_fn ( ) const`  
Return current `const comb_hash_fn`.

**6.293.3.4 `get_eq_fn()`** [1/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( )`  
 Return current `eq_fn`.

**6.293.3.5 `get_eq_fn()`** [2/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Eq_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_eq_fn ( ) const`  
 Return current const `eq_fn`.

**6.293.3.6 `get_hash_fn()`** [1/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( )`  
 Return current `hash_fn`.

**6.293.3.7 `get_hash_fn()`** [2/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Hash_Fn & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_hash_fn ( ) const`  
 Return current const `hash_fn`.

**6.293.3.8 `get_resize_policy()`** [1/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( )`  
 Return current `resize_policy`.

**6.293.3.9 `get_resize_policy()`** [2/2] `template<typename Key , typename Mapped , typename Hash_Fn , typename Eq_Fn , typename _Alloc , bool Store_Hash, typename Comb_Hash_Fn , typename Resize_Policy > const Resize_Policy & __gnu_pbds::detail::cc_ht_map< Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy >::get_resize_policy ( ) const`  
 Return current const `resize_policy`.

- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

### 6.294.1 Detailed Description

```
template<typename _CharT>
struct __gnu_cxx::char_traits<_CharT>
```

Base class used to implement `std::char_traits`.

#### Note

For any given actual character type, this definition is probably wrong. (Most of the member functions are likely to be right, but the `int_type` and `state_type` typedefs, and the `eof()` member function, are likely to be wrong.) The reason this class exists is so users can specialize it. Classes in namespace `std` may not be specialized for fundamental types, but classes in namespace `__gnu_cxx` may be.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

The documentation for this struct was generated from the following file:

- [char\\_traits.h](#)

## 6.295 std::char\_traits<\_CharT> Struct Template Reference

```
#include <char_traits.h>
```

Inheritance diagram for `std::char_traits<_CharT>`:

## Public Types

- typedef `_CharT` **char\_type**
- typedef `_Char_types<_CharT>::int_type` **int\_type**
- typedef `_Char_types<_CharT>::off_type` **off\_type**
- typedef `_Char_types<_CharT>::pos_type` **pos\_type**
- typedef `_Char_types<_CharT>::state_type` **state\_type**

### Static Public Member Functions

- static constexpr void **assign** (char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr char\_type \* **assign** (char\_type \*\_\_s, std::size\_t \_\_n, char\_type \_\_a)
- static constexpr int **compare** (const char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static constexpr char\_type \* **copy** (char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static constexpr bool **eq** (const char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr bool **eq\_int\_type** (const int\_type &\_\_c1, const int\_type &\_\_c2)

- static constexpr bool **lt** (const char\_type &\_\_c1, const char\_type &\_\_c2)
- static constexpr char\_type \* **move** (char\_type \*\_\_s1, const char\_type \*\_\_s2, std::size\_t \_\_n)
- static constexpr char\_type **to\_char\_type** (const int\_type &\_\_c)
- static constexpr int\_type **to\_int\_type** (const char\_type &\_\_c)

#### 6.295.1 Detailed Description

```
template<typename _CharT>
struct std::char_traits<_CharT>
```

Basis for explicit traits specializations.

##### Note

For any given actual character type, this definition is probably wrong. Since this is just a thin wrapper around `__gnu_cxx::char_traits`, it is possible to achieve a more appropriate definition by specializing `__gnu_cxx::char_traits`.

See [https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character\\_types](https://gcc.gnu.org/onlinedocs/libstdc++/manual/strings.html#strings.string.character_types) for advice on how to make use of this class for *unusual* character types. Also, check out `include/ext/pod_char_traits.h`.

The documentation for this struct was generated from the following file:

### 6.300.1 Detailed Description

```
template<typename _RealType = double>
class std::chi_squared_distribution<_RealType>
```

A chi\_squared\_distribution random number distribution.

The formula for the normal probability mass function is  $p(x|n) = \frac{x^{(n/2)-1} e^{-x/2}}{\Gamma(n/2) 2^{n/2}}$

### 6.300.2 Member Typedef Documentation

**6.300.2.1 result\_type** template<typename \_RealType = double>  
typedef \_RealType std::chi\_squared\_distribution<\_RealType>::result\_type  
The type of the range of the distribution.

### 6.300.3 Member Function Documentation

**6.300.3.1 max()** template<typename \_RealType = double>  
result\_type std::chi\_squared\_distribution<\_RealType>::max ( ) const [inline]  
Returns the least upper bound value of the distribution.  
References std::numeric\_limits<\_Tp>::max().

**6.300.3.2 min()** template<typename \_RealType = double>  
result\_type std::chi\_squared\_distribution<\_RealType>::min ( ) const [inline]  
Returns the greatest lower bound value of the distribution.

**6.300.3.3 operator()()** template<typename \_RealType = double>  
template<typename \_UniformRandomNumberGenerator>  
result\_type std::chi\_squared\_distribution<\_RealType>::operator() (   
\_UniformRandomNumberGenerator & \_\_urng ) [inline]  
Generating functions.

**6.300.3.4 param()** [1/2] template<typename \_RealType = double>  
param\_type std::chi\_squared\_distribution<\_RealType>::param ( ) const [inline]  
Returns the parameter set of the distribution.

**6.300.3.5 param()** [2/2] `template<typename _RealType = double>`  
`void std::chi_squared_distribution< _RealType >::param (`  
`const param_type & __param ) [inline]`

Sets the parameter set of the distribution.

#### Parameters

<code>__param</code>	The new parameter set of the distribution.
----------------------	--

References [std::gamma\\_distribution< \\_RealType >::param\(\)](#).

**6.300.3.6 reset()** `template<typename _RealType = double>`  
`void std::chi_squared_distribution< _RealType >::reset ( ) [inline]`  
 Resets the distribution state.  
 References [std::gamma\\_distribution< \\_RealType >::reset\(\)](#).

### 6.300.4 Friends And Related Function Documentation

**6.300.4.1 operator<<** `template<typename _RealType = double>`  
`template<typename _RealType1 , typename _CharT , typename _Traits >`  
`std::basic_ostream< _CharT, _Traits > & operator<< (`  
`std::basic_ostream< _CharT, _Traits > & __os,`  
`const std::chi_squared_distribution< _RealType1 > & __x ) [friend]`  
 Inserts a `chi_squared_distribution` random number distribution `__x` into the output stream `__os`.

#### Parameters

<code>__os</code>	An output stream.
<code>__x</code>	A <code>chi_squared_distribution</code> random number distribution.

#### Returns

The output stream with the state of `__x` inserted or in an error state.

**6.300.4.2 operator==** `template<typename _RealType = double>`  
`bool operator== (`  
`const chi_squared_distribution< _RealType > & __d1,`  
`const chi_squared_distribution< _RealType > & __d2 ) [friend]`  
 Return true if two Chi-squared distributions have the same parameters and the sequences that would be generated are equal.

**6.300.4.3 operator>>** `template<typename _RealType = double>`  
`template<typename _RealType1 , typename _CharT , typename _Traits >`  
`std::basic_istream< _CharT, _Traits > & operator>> (`  
`std::basic_istream< _CharT, _Traits > & __is,`  
`std::chi_squared_distribution< _RealType1 > & __x ) [friend]`  
 Extracts a `chi_squared_distribution` random number distribution `__x` from the input stream `__is`.

## Parameters

<code>__is</code>	An input stream.
<code>__x</code>	A chi_squared_distribution random number generator engine.

## Returns

The input stream with `__x` extracted or in an error state.

#### 6.301.1 Detailed Description

```
template<typename _InternT, typename _ExternT, typename _StateT>
class std::codecvt< _InternT, _ExternT, _StateT >
```

Primary class template codecvt.

NB: Generic, mostly useless implementation.

#### 6.301.2 Member Function Documentation

**6.301.2.1 `do_always_noconv()`** `template<typename _InternT , typename _ExternT , typename _StateT >`

virtual bool `std::codecvt< _InternT, _ExternT, _StateT >::do_always_noconv ( )` const throw ( )

[protected], [virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.2 `do_encoding()`** `template<typename _InternT , typename _ExternT , typename _StateT >`

virtual int `std::codecvt< _InternT, _ExternT, _StateT >::do_encoding ( )` const throw ( ) [protected],

[virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.3 `do_in()`** `template<typename _InternT , typename _ExternT , typename _StateT >`

virtual result `std::codecvt< _InternT, _ExternT, _StateT >::do_in (`

state\_type & \_\_state,

const extern\_type \* \_\_from,

const extern\_type \* \_\_from\_end,

const extern\_type \*& \_\_from\_next,

intern\_type \* \_\_to,

intern\_type \* \_\_to\_end,

intern\_type \*& \_\_to\_next ) const [protected], [virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.4 do\_length()** `template<typename _InternT , typename _ExternT , typename _StateT >`  
 virtual int `std::codecvt< _InternT, _ExternT, _StateT >::do_length (`  
     state\_type & ,  
     const extern\_type \* \_\_from,  
     const extern\_type \* \_\_end,  
     size\_t \_\_max ) const [protected], [virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.5 do\_max\_length()** `template<typename _InternT , typename _ExternT , typename _StateT >`  
 virtual int `std::codecvt< _InternT, _ExternT, _StateT >::do_max_length ( )` const throw ( ) [protected],  
 [virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.6 do\_out()** `template<typename _InternT , typename _ExternT , typename _StateT >`  
 virtual result `std::codecvt< _InternT, _ExternT, _StateT >::do_out (`  
     state\_type & \_\_state,  
     const intern\_type \* \_\_from,  
     const intern\_type \* \_\_from\_end,  
     const intern\_type \* \_\_from\_next,  
     extern\_type \* \_\_to,  
     extern\_type \* \_\_to\_end,  
     extern\_type \* \_\_to\_next ) const [protected], [virtual]

Convert from internal to external character set.

Converts input string of intern\_type to output string of extern\_type. This function is a hook for derived classes to change the value returned.

See also

`out` for more information.

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.7 do\_unshift()** `template<typename _InternT , typename _ExternT , typename _StateT >`  
 virtual result `std::codecvt< _InternT, _ExternT, _StateT >::do_unshift (`  
     state\_type & \_\_state,  
     extern\_type \* \_\_to,  
     extern\_type \* \_\_to\_end,  
     extern\_type \* \_\_to\_next ) const [protected], [virtual]

Implements `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >`.

**6.301.2.8 in()** `template<typename _InternT , typename _ExternT , typename _StateT >`  
 result `std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::in (`  
     state\_type & \_\_state,  
     const extern\_type \* \_\_from,  
     const extern\_type \* \_\_from\_end,  
     const extern\_type \* \_\_from\_next,  
     intern\_type \* \_\_to,  
     intern\_type \* \_\_to\_end,  
     intern\_type \* \_\_to\_next ) const [inline], [inherited]

Convert from external to internal character set.

Converts input string of `extern_type` to output string of `intern_type`. This is analogous to `mbsrtowcs`. It does this by calling `codecvt::do_in`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

#### Returns

`codecvt_base::result`.

```
6.301.2.9 out() template<typename _InternT , typename _ExternT , typename _StateT >
result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::out (
    state_type & __state,
    const intern_type * __from,
    const intern_type * __from_end,
    const intern_type *& __from_next,
    extern_type * __to,
    extern_type * __to_end,
    extern_type *& __to_next ) const [inline], [inherited]
```

Convert from internal to external character set.

Converts input string of `intern_type` to output string of `extern_type`. This is analogous to `wcsrtombs`. It does this by calling `codecvt::do_out`.

The source and destination character sets are determined by the facet's locale, internal and external types.

The characters in `[from,from_end)` are converted and written to `[to,to_end)`. `from_next` and `to_next` are set to point to the character following the last successfully converted character, respectively. If the result needed no conversion, `from_next` and `to_next` are not affected.

The `state` argument should be initialized if the input is at the beginning and carried from a previous call if continuing conversion. There are no guarantees about how `state` is used.

The result returned is a member of `codecvt_base::result`. If all the input is converted, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the input ends early or there is insufficient space in the output, returns `codecvt_base::partial`. Otherwise the conversion failed and `codecvt_base::error` is returned.

#### Parameters

<code>__state</code>	Persistent conversion state data.
----------------------	-----------------------------------

## Parameters

<code>__from</code>	Start of input.
<code>__from_end</code>	End of input.
<code>__from_next</code>	Returns start of unconverted data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

## Returns

codecvt\_base::result.

References [std::\\_\\_codecvt\\_abstract\\_base< \\_InternT, \\_ExternT, \\_StateT >::do\\_out\(\)](#).

**6.301.2.10 unshift()** `template<typename _InternT , typename _ExternT , typename _StateT > result std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >::unshift ( state_type & __state, extern_type * __to, extern_type * __to_end, extern_type *& __to_next ) const [inline], [inherited]`

Reset conversion state.

Writes characters to output that would restore *state* to initial conditions. The idea is that if a partial conversion occurs, then the converting the characters written by this function would leave the state in initial conditions, rather than partial conversion state. It does this by calling `codecvt::do_unshift()`.

For example, if 4 external characters always converted to 1 internal character, and input to `in()` had 6 external characters with state saved, this function would write two characters to the output and set the state to initialized conditions.

The source and destination character sets are determined by the facet's locale, internal and external types.

The result returned is a member of `codecvt_base::result`. If the state could be reset and data written, returns `codecvt_base::ok`. If no conversion is necessary, returns `codecvt_base::noconv`. If the output has insufficient space, returns `codecvt_base::partial`. Otherwise the reset failed and `codecvt_base::error` is returned.

## Parameters

<code>__state</code>	Persistent conversion state data.
<code>__to</code>	Start of output buffer.
<code>__to_end</code>	End of output buffer.
<code>__to_next</code>	Returns start of unused output area.

## Returns

codecvt\_base::result.
