Attempts to insert an element into the unordered_set.

Parameters

	Element to be inserted.
	

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the unordered_set. An unordered_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered_set.

Insertion requires amortized constant time.

Definition at line 412 of file unordered_set.h.

```
5.1028.4.30 template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
std::allocator<_Value>> std::pair<iterator, bool> std::unordered_set<_Value, _Hash, _Pred, _Alloc>
::insert( value_type &&__x ) [inline]
```

Attempts to insert an element into the unordered_set.

Parameters

	Element to be inserted.
	

Returns

A pair, of which the first element is an iterator that points to the possibly inserted element, and the second is a bool that is true if the element was actually inserted.

This function attempts to insert an element into the unordered_set. An unordered_set relies on unique keys and thus an element is only inserted if it is not already present in the unordered_set.

Insertion requires amortized constant time.

Definition at line 416 of file unordered_set.h.

```
5.1028.4.31  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::insert ( const_iterator
              __hint, const value_type & __x ) [inline]
```

Attempts to insert an element into the unordered_set.

Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

Returns

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 441 of file unordered_set.h.

```
5.1028.4.32  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> iterator std::unordered_set<_Value, _Hash, _Pred, _Alloc>::insert ( const_iterator
              __hint, value_type && __x ) [inline]
```

Attempts to insert an element into the unordered_set.

Parameters

<code>__hint</code>	An iterator that serves as a hint as to where the element should be inserted.
<code>__x</code>	Element to be inserted.

Returns

An iterator that points to the element with key of `__x` (may or may not be the element passed in).

This function is not concerned about whether the insertion took place, and thus does not return a boolean like the single-argument `insert()` does. Note that the first parameter is only a hint and can potentially improve the performance of the insertion process. A bad hint would cause no gains in efficiency.

For more on *hinting*, see: https://gcc.gnu.org/onlinedocs/libstdc++/manual/associative.↵html#containers.associative.insert_hints

Insertion requires amortized constant.

Definition at line 445 of file `unordered_set.h`.

```
5.1028.4.33  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> template<typename _InputIterator > void std::unordered_set<_Value, _Hash, _Pred,
              _Alloc >::insert ( _InputIterator __first, _InputIterator __last ) [inline]
```

A template function that attempts to insert a range of elements.

Parameters

<code>__first</code>	Iterator pointing to the start of the range to be inserted.
<code>__last</code>	Iterator pointing to the end of the range.

Complexity similar to that of the range constructor.

Definition at line 460 of file `unordered_set.h`.

```
5.1028.4.34  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc >::insert ( initializer_list<
              value_type > __l ) [inline]
```

Attempts to insert a list of elements into the `unordered_set`.

Parameters

↵ _↵ ↵ _↵ /	A <code>std::initializer_list<value_type></code> of elements to be inserted.
-------------------------	--

Complexity similar to that of the range constructor.

Definition at line 471 of file `unordered_set.h`.

5.1028.4.35 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> key_equal std::unordered_set<_Value, _Hash, _Pred, _Alloc>::key_eq () const [inline]`

Returns the key comparison object with which the unordered_set was constructed.

Definition at line 567 of file unordered_set.h.

5.1028.4.36 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> float std::unordered_set<_Value, _Hash, _Pred, _Alloc>::load_factor () const [inline], [noexcept]`

Returns the average number of elements per bucket.

Definition at line 698 of file unordered_set.h.

5.1028.4.37 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_bucket_count () const [inline], [noexcept]`

Returns the maximum number of buckets of the unordered_set.

Definition at line 633 of file unordered_set.h.

5.1028.4.38 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> float std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_load_factor () const [inline], [noexcept]`

Returns a positive number that the unordered_set tries to keep the load factor less than or equal to.

Definition at line 704 of file unordered_set.h.

5.1028.4.39 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_load_factor (float __z) [inline]`

Change the unordered_set maximum load factor.

Parameters

<code>__z</code>	The new maximum load factor.
------------------	------------------------------

Definition at line 712 of file unordered_set.h.

5.1028.4.40 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc>::max_size () const [inline], [noexcept]`

Returns the maximum size of the unordered_set.

Definition at line 300 of file unordered_set.h.

```
5.1028.4.41  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= (
              const unordered_set<_Value, _Hash, _Pred, _Alloc> & ) [default]
```

Copy assignment operator.

Referenced by std::unordered_multiset<_Value, _Hash, _Pred, _Alloc>::unordered_multiset(), and std::unordered_↵
_set<_Value, _Hash, _Pred, _Alloc>::unordered_set().

```
5.1028.4.42  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= (
              unordered_set<_Value, _Hash, _Pred, _Alloc> && ) [default]
```

Move assignment operator.

```
5.1028.4.43  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> unordered_set& std::unordered_set<_Value, _Hash, _Pred, _Alloc>::operator= (
              initializer_list<value_type> __l ) [inline]
```

Unordered_set list assignment operator.

Parameters

↵	An initializer_list.
__l	
↵	
__l	
l	

This function fills an unordered_set with copies of the elements in the initializer list __l.

Note that the assignment completely changes the unordered_set and that the resulting unordered_set's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 274 of file unordered_set.h.

```
5.1028.4.44  template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc =
              std::allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::rehash ( size_type __n )
              [inline]
```

May rehash the unordered_set.

Parameters

↵	The new number of buckets.
__n	

Rehash will occur only if the new number of buckets respect the unordered_set maximum load factor.

Definition at line 723 of file unordered_set.h.

5.1028.4.45 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::reserve(size_type __n)`
`[inline]`

Prepare the unordered_set for a specified number of elements.

Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Same as `rehash(ceil(n / max_load_factor()))`.

Definition at line 734 of file unordered_set.h.

5.1028.4.46 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> size_type std::unordered_set<_Value, _Hash, _Pred, _Alloc>::size() const`
`[inline], [noexcept]`

Returns the size of the unordered_set.

Definition at line 295 of file unordered_set.h.

5.1028.4.47 `template<class _Value, class _Hash = hash<_Value>, class _Pred = std::equal_to<_Value>, class _Alloc = std::allocator<_Value>> void std::unordered_set<_Value, _Hash, _Pred, _Alloc>::swap(unordered_set<_Value, _Hash, _Pred, _Alloc> &__x)` `[inline], [noexcept]`

Swaps data with another unordered_set.

Parameters

<code>__x</code>	An unordered_set of the same element and allocator types.
------------------	---

This exchanges the elements between two sets in constant time. Note that the global `std::swap()` function is specialized such that `std::swap(s1,s2)` will feed to this function.

Definition at line 552 of file unordered_set.h.

Referenced by `std::unordered_multiset<_Value, _Hash, _Pred, _Alloc>::reserve()`.

5.1031.1 Detailed Description

```
template<class _Tp>
class std::valarray<_Tp>
```

Smart array designed to support numeric processing.

A valarray is an array that provides constraints intended to allow for effective optimization of numeric array processing by reducing the aliasing that can result from pointer representations. It represents a one-dimensional array from which different multidimensional subsets can be accessed and modified.

Template Parameters

<code>_Tp</code>	Type of object in the array.
------------------	------------------------------

Definition at line 78 of file valarray.

5.1031.2 Constructor & Destructor Documentation

5.1031.2.1 `template<class _Tp> std::valarray<_Tp>::valarray (const _Tp * __restrict__, size_t)`

Construct an array initialized to the first n elements of t .

The documentation for this class was generated from the following file:

5.1032.1 Detailed Description

```
template<typename _Tp, typename _Alloc = std::allocator<_Tp>>
class std::vector<_Tp, _Alloc >
```

A standard container which offers fixed time access to individual elements in any order.

Template Parameters

<code>_Tp</code>	Type of element.
<code>_Alloc</code>	Allocator type, defaults to <code>allocator<_Tp></code> .

Meets the requirements of a [container](#), a [reversible container](#), and a [sequence](#), including the [optional sequence requirements](#) with the exception of `push_front` and `pop_front`.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting (`[]`) access is also provided as with C-style arrays.

Definition at line 214 of file `stl_vector.h`.

5.1032.2 Constructor & Destructor Documentation

5.1032.2.1 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector ()`
`[inline], [noexcept]`

Creates a vector with no elements.

Definition at line 255 of file `stl_vector.h`.

5.1032.2.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (const`
`allocator_type & __a) [inline], [explicit], [noexcept]`

Creates a vector with no elements.

Parameters

<code>__a</code>	An allocator object.
------------------	----------------------

Definition at line 266 of file `stl_vector.h`.

5.1032.2.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (size_type`
`__n, const allocator_type & __a = allocator_type()) [inline], [explicit]`

Creates a vector with default constructed elements.

Parameters

<code>__n</code>	The number of elements to initially create.
<code>__a</code>	An allocator.

This constructor fills the vector with `__n` default constructed elements.

Definition at line 279 of file `stl_vector.h`.

5.1032.2.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (size_type`
`__n, const value_type & __value, const allocator_type & __a = allocator_type()) [inline]`

Creates a vector with copies of an exemplar element.

Parameters

<code>__n</code>	The number of elements to initially create.
<code>__value</code>	An element to copy.
<code>__a</code>	An allocator.

This constructor fills the vector with `__n` copies of `__value`.

Definition at line 291 of file stl_vector.h.

5.1032.2.5 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (const vector<_Tp, _Alloc> & __x) [inline]`

Vector copy constructor.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The newly-created vector uses a copy of the allocation object used by `__x`. All the elements of `__x` are copied, but any extra memory in `__x` (for fast expansion) will not be copied.

Definition at line 320 of file stl_vector.h.

5.1032.2.6 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (vector<_Tp, _Alloc> && __x) [inline], [noexcept]`

Vector move constructor.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The newly-created vector contains the exact contents of `__x`. The contents of `__x` are a valid, but unspecified vector.

Definition at line 337 of file stl_vector.h.

5.1032.2.7 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (const vector<_Tp, _Alloc> & __x, const allocator_type & __a) [inline]`

Copy constructor with alternative allocator.

Definition at line 341 of file stl_vector.h.

5.1032.2.8 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (vector<_Tp, _Alloc> && __rv, const allocator_type & __m) [inline], [noexcept]`

Move constructor with alternative allocator.

Definition at line 350 of file stl_vector.h.

5.1032.2.9 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::vector (initializer_list<value_type> __l, const allocator_type & __a = allocator_type()) [inline]`

Builds a vector from an initializer list.

Parameters

$_l$	An initializer_list.
$_a$	An allocator.

Create a vector consisting of copies of the elements in the initializer_list $_l$.

This will call the element type's copy constructor N times (where N is $_l.size()$) and do no memory reallocation.

Definition at line 375 of file `stl_vector.h`.

```
5.1032.2.10  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator, typename =
std::_RequireInputIter<_InputIterator>>> std::vector<_Tp, _Alloc>::vector ( _InputIterator __first, _InputIterator
__last, const allocator_type & __a = allocator_type() ) [inline]
```

Builds a vector from a range.

Parameters

$_first$	An input iterator.
$_last$	An input iterator.
$_a$	An allocator.

Create a vector consisting of copies of the elements from $[first, last)$.

If the iterators are forward, bidirectional, or random-access, then this will call the elements' copy constructor N times (where N is `distance(first, last)`) and do no memory reallocation. But if only input iterators are used, then this will do at most 2N calls to the copy constructor, and logN memory reallocations.

Definition at line 403 of file `stl_vector.h`.

```
5.1032.2.11  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> std::vector<_Tp, _Alloc>::~~vector ( )
[inline], [noexcept]
```

The dtor only erases the elements, and note that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 425 of file `stl_vector.h`.

5.1032.3 Member Function Documentation

```
5.1032.3.1  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _ForwardIterator> pointer
std::vector<_Tp, _Alloc>::_M_allocate_and_copy ( size_type __n, _ForwardIterator __first, _ForwardIterator __last
) [inline], [protected]
```

Memory expansion handler. Uses the member allocation function to obtain n bytes of memory, and then copies $[first, last)$ into it.

Definition at line 1219 of file `stl_vector.h`.

5.1032.3.2 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::M_range_check (size_type __n) const [inline], [protected]`

Safety check used only from at().

Definition at line 801 of file stl_vector.h.

5.1032.3.3 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::assign (size_type __n, const value_type & __val) [inline]`

Assigns a given value to a vector.

Parameters

<code>__n</code>	Number of elements to be assigned.
<code>__val</code>	Value to be assigned.

This function fills a vector with `__n` copies of the given value. Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 489 of file stl_vector.h.

5.1032.3.4 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator, typename = std::RequireInputIter<_InputIterator>> void std::vector<_Tp, _Alloc>::assign (_InputIterator __first, _InputIterator __last) [inline]`

Assigns a range to a vector.

Parameters

<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

This function fills a vector with copies of the elements in the range `[__first, __last)`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 508 of file stl_vector.h.

5.1032.3.5 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::assign (initializer_list<value_type> __l) [inline]`

Assigns an initializer list to a vector.

Parameters

\leftrightarrow	An initializer_list.
$_ \leftrightarrow$	
\leftrightarrow	
$_ \leftrightarrow$	
$_ l$	

This function fills a vector with copies of the elements in the initializer list $_ l$.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 534 of file `stl_vector.h`.

```
5.1032.3.6  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::at (
              size_type __n ) [inline]
```

Provides access to the data contained in the vector.

Parameters

$_ \leftrightarrow$	The index of the element for which data should be accessed.
$_ n$	

Returns

Read/write reference to data.

Exceptions

<i>std::out_of_range</i>	If $_ n$ is an invalid index.
--------------------------	--------------------------------

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 823 of file `stl_vector.h`.

```
5.1032.3.7  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::at (
              size_type __n ) const [inline]
```

Provides access to the data contained in the vector.

Parameters

$_ \leftrightarrow$	The index of the element for which data should be accessed.
$_ n$	

Returns

Read-only (constant) reference to data.

Exceptions

<code>std::out_of_range</code>	If <code>__n</code> is an invalid index.
--------------------------------	--

This function provides for safer data access. The parameter is first checked that it is in the range of the vector. The function throws `out_of_range` if the check fails.

Definition at line 841 of file `stl_vector.h`.

5.1032.3.8 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::back ()`
`[inline], [noexcept]`

Returns a read/write reference to the data at the last element of the vector.

Definition at line 868 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution<_RealType>::max()`.

5.1032.3.9 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::back () const` `[inline], [noexcept]`

Returns a read-only (constant) reference to the data at the last element of the vector.

Definition at line 876 of file `stl_vector.h`.

5.1032.3.10 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::begin ()`
`[inline], [noexcept]`

Returns a read/write iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 548 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc>::emplace()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq←_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector<_Tp, _Alloc>::operator=()`, `std←::operator=()`, `std::operator>>()`, and `std::vector< sub_match<_Bi_iter>, allocator< sub_match<_Bi_iter>> >::vector()`.

5.1032.3.11 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::begin () const` `[inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 557 of file `stl_vector.h`.

5.1032.3.12 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::capacity () const [inline], [noexcept]`

Returns the total number of elements that the vector can hold before needing to allocate more memory.

Definition at line 735 of file `stl_vector.h`.

Referenced by `std::vector<_Tp, _Alloc>::emplace()`.

5.1032.3.13 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::cbegin () const [inline], [noexcept]`

Returns a read-only (constant) iterator that points to the first element in the vector. Iteration is done in ordinary element order.

Definition at line 621 of file `stl_vector.h`.

5.1032.3.14 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector<_Tp, _Alloc>::cend () const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 630 of file `stl_vector.h`.

5.1032.3.15 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::clear () [inline], [noexcept]`

Erases all the elements. Note that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1209 of file `stl_vector.h`.

5.1032.3.16 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc>::crbegin () const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 639 of file `stl_vector.h`.

5.1032.3.17 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc>::crend () const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 648 of file `stl_vector.h`.

5.1032.3.18 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> _Tp* std::vector<_Tp, _Alloc>::data () [inline], [noexcept]`

Returns a pointer such that `[data(), data() + size())` is a valid range. For a non-empty vector, `data() == &front()`.

Definition at line 891 of file `stl_vector.h`.

Referenced by `std::regex_traits<_Ch_type>::transform_primary()`.

5.1032.3.19 `template<typename _Tp, typename _Alloc> template<typename... _Args> vector<_Tp, _Alloc>::iterator vector::emplace (const_iterator __position, _Args &&... __args)`

Inserts an object in vector before specified iterator.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__args</code>	Arguments.

Returns

An iterator that points to the inserted data.

This function will insert an object of type T constructed with `T(std::forward<Args>(args)...) before the specified location.` Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 302 of file `vector.tcc`.

References `std::__addressof()`, `std::_Destroy()`, `std::advance()`, `std::begin()`, `std::vector< _Tp, _Alloc >::begin()`, `std::vector< _Tp, _Alloc >::capacity()`, `std::cbegin()`, `std::distance()`, `std::end()`, `std::vector< _Tp, _Alloc >::end()`, and `std::vector< _Tp, _Alloc >::size()`.

Referenced by `std::vector< _Tp, _Alloc >::operator=()`.

5.1032.3.20 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> bool std::vector< _Tp, _Alloc >::empty ()`
`const [inline], [noexcept]`

Returns true if the vector is empty. (Thus `begin()` would equal `end()`.)

Definition at line 744 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution< _RealType >::densities()`, `std::piecewise_linear_distribution< _RealType >::intervals()`, `std::piecewise_linear_distribution< _RealType >::max()`, and `std::piecewise_linear_distribution< _RealType >::min()`.

5.1032.3.21 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::end ()`
`[inline], [noexcept]`

Returns a read/write iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 566 of file `stl_vector.h`.

Referenced by `std::vector< _Tp, _Alloc >::emplace()`, `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `std::vector< _Tp, _Alloc >::operator=()`, `std::vector< _Tp, _Alloc >::operator==()`, `std::operator>>()`, and `std::vector< sub_match< _Bi_iter >, allocator< sub_match< _Bi_iter > >::vector()`.

5.1032.3.22 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_iterator std::vector< _Tp, _Alloc >::end ()`
`const [inline], [noexcept]`

Returns a read-only (constant) iterator that points one past the last element in the vector. Iteration is done in ordinary element order.

Definition at line 575 of file `stl_vector.h`.

5.1032.3.23 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector< _Tp, _Alloc >::erase (`
`const_iterator __position) [inline]`

Remove element at given position.

Parameters

<code>__position</code>	Iterator pointing to element to be erased.
-------------------------	--

Returns

An iterator pointing to the next element (or end()).

This function will erase the element at the given position and thus shorten the vector by one.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the element, and that if the element is itself a pointer, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1147 of file `stl_vector.h`.

```
5.1032.3.24  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::erase (
               const_iterator __first, const_iterator __last ) [inline]
```

Remove a range of elements.

Parameters

<code>__first</code>	Iterator pointing to the first element to be erased.
<code>__last</code>	Iterator pointing to one past the last element to be erased.

Returns

An iterator pointing to the element pointed to by `__last` prior to erasing (or end()).

This function will erase the elements in the range `[__first,__last)` and shorten the vector accordingly.

Note This operation could be expensive and if it is frequently used the user should consider using `std::list`. The user is also cautioned that this function only erases the elements, and that if the elements themselves are pointers, the pointed-to memory is not touched in any way. Managing the pointer is the user's responsibility.

Definition at line 1174 of file `stl_vector.h`.

```
5.1032.3.25  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::front ( )
               [inline], [noexcept]
```

Returns a read/write reference to the data at the first element of the vector.

Definition at line 852 of file `stl_vector.h`.

Referenced by `std::piecewise_linear_distribution<_RealType>::min()`.

5.1032.3.26 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::front () const [inline], [noexcept]`

Returns a read-only (constant) reference to the data at the first element of the vector.

Definition at line 860 of file `stl_vector.h`.

5.1032.3.27 `template<typename _Tp, typename _Alloc > vector<_Tp, _Alloc>::iterator vector::insert (const_iterator __position, const value_type & __x)`

Inserts given value into vector before specified iterator.

Parameters

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given value before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 109 of file `vector.tcc`.

References `std::begin()`, `std::cbegin()`, `std::end()`, and `std::vector<_Tp, _Alloc>::operator=()`.

5.1032.3.28 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (const_iterator __position, value_type && __x) [inline]`

Inserts given rvalue into vector before specified iterator.

Parameters

<code>__position</code>	A <code>const_iterator</code> into the vector.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a copy of the given rvalue before the specified location. Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1015 of file `stl_vector.h`.

5.1032.3.29 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (const_iterator __position, initializer_list< value_type > __l) [inline]`

Inserts an initializer_list into the vector.

Parameters

<code>__position</code>	An iterator into the vector.
<code>__l</code>	An initializer_list.

This function will insert copies of the data in the initializer_list *l* into the vector before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1032 of file `stl_vector.h`.

5.1032.3.30 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> iterator std::vector<_Tp, _Alloc>::insert (const_iterator __position, size_type __n, const value_type & __x) [inline]`

Inserts a number of copies of given data into the vector.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__n</code>	Number of elements to be inserted.
<code>__x</code>	Data to be inserted.

Returns

An iterator that points to the inserted data.

This function will insert a specified number of copies of the given data before the location specified by *position*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1052 of file `stl_vector.h`.

5.1032.3.31 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> template<typename _InputIterator, typename = std::_RequireInputIter<_InputIterator>> iterator std::vector<_Tp, _Alloc>::insert (const_iterator __position, _InputIterator __first, _InputIterator __last) [inline]`

Inserts a range into the vector.

Parameters

<code>__position</code>	A const_iterator into the vector.
<code>__first</code>	An input iterator.
<code>__last</code>	An input iterator.

Returns

An iterator that points to the inserted data.

This function will insert copies of the data in the range [`__first`,`__last`) into the vector before the location specified by *pos*.

Note that this kind of operation could be expensive for a vector and if it is frequently used the user should consider using `std::list`.

Definition at line 1096 of file `stl_vector.h`.

```
5.1032.3.32  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::max_size
              ( ) const    [inline], [noexcept]
```

Returns the `size()` of the largest possible vector.

Definition at line 660 of file `stl_vector.h`.

```
5.1032.3.33  template<typename _Tp, typename _Alloc> vector<_Tp, _Alloc> & vector::operator= ( const vector<_Tp,
              _Alloc> & __x )
```

Vector assignment operator.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

All the elements of `__x` are copied, but any extra memory in `__x` (for fast expansion) will not be copied. Unlike the copy constructor, the allocator object is not copied.

Definition at line 168 of file `vector.tcc`.

References `std::_Destroy()`, `std::advance()`, `std::begin()`, `std::vector<_Tp, _Alloc>::begin()`, `std::distance()`, `std::vector<_Tp, _Alloc>::emplace()`, `std::end()`, `std::vector<_Tp, _Alloc>::end()`, `std::fill_n()`, and `std::vector<_Tp, _Alloc>::size()`.

Referenced by `std::vector<_Tp, _Alloc>::insert()`.

```
5.1032.3.34  template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector<_Tp, _Alloc>::operator=
              ( vector<_Tp, _Alloc> && __x )    [inline], [noexcept]
```

Vector move assignment operator.

Parameters

<code>__x</code>	A vector of identical element and allocator types.
------------------	--

The contents of `__x` are moved into this vector (without copying, if the allocators permit it). `__x` is a valid, but unspecified vector.

Definition at line 450 of file `stl_vector.h`.

5.1032.3.35 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> vector& std::vector<_Tp, _Alloc>::operator=(initializer_list< value_type > __l) [inline]`

Vector list assignment operator.

Parameters

<code>↔</code>	An <code>initializer_list</code> .
<code>__↔</code>	
<code>↔</code>	
<code>__↔</code>	
<code>l</code>	

This function fills a vector with copies of the elements in the initializer list `__l`.

Note that the assignment completely changes the vector and that the resulting vector's size is the same as the number of elements assigned. Old data may be lost.

Definition at line 471 of file `stl_vector.h`.

5.1032.3.36 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reference std::vector<_Tp, _Alloc>::operator[](size_type __n) [inline], [noexcept]`

Subscript access to the data contained in the vector.

Parameters

<code>__↔</code>	The index of the element for which data should be accessed.
<code>__n</code>	

Returns

Read/write reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and `out_of_range` lookups are not defined. (For checked lookups see `at()`.)

Definition at line 780 of file `stl_vector.h`.

5.1032.3.37 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reference std::vector<_Tp, _Alloc>::operator[](size_type __n) const [inline], [noexcept]`

Subscript access to the data contained in the vector.

Parameters

$_n$	The index of the element for which data should be accessed.
-------	---

Returns

Read-only (constant) reference to data.

This operator allows for easy, array-style, data access. Note that data access with this operator is unchecked and out_of_range lookups are not defined. (For checked lookups see at().)

Definition at line 795 of file stl_vector.h.

5.1032.3.38 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::pop_back ()`
`[inline], [noexcept]`

Removes last element.

This is a typical stack operation. It shrinks the vector by one.

Note that no data is returned, and if the last element's data is needed, it should be retrieved before pop_back() is called.

Definition at line 950 of file stl_vector.h.

5.1032.3.39 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::push_back (`
`const value_type &__x) [inline]`

Add data to the end of the vector.

Parameters

$_x$	Data to be added.
-------	-------------------

This is a typical stack operation. The function creates an element at the end of the vector and assigns the given data to it. Due to the nature of a vector this operation can be done in constant time if the vector has preallocated space available.

Definition at line 914 of file stl_vector.h.

Referenced by `__gnu_parallel::multiseq_partition()`, `__gnu_parallel::multiseq_selection()`, and `std::operator>>()`.

5.1032.3.40 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector<_Tp, _Alloc>`
`>::rbegin () [inline], [noexcept]`

Returns a read/write reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 584 of file stl_vector.h.

5.1032.3.41 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc>::rbegin () const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to the last element in the vector. Iteration is done in reverse element order.

Definition at line 593 of file `stl_vector.h`.

5.1032.3.42 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> reverse_iterator std::vector<_Tp, _Alloc>::rend () [inline], [noexcept]`

Returns a read/write reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 602 of file `stl_vector.h`.

5.1032.3.43 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> const_reverse_iterator std::vector<_Tp, _Alloc>::rend () const [inline], [noexcept]`

Returns a read-only (constant) reverse iterator that points to one before the first element in the vector. Iteration is done in reverse element order.

Definition at line 611 of file `stl_vector.h`.

5.1032.3.44 `template<typename _Tp, typename _Alloc> void vector::reserve (size_type __n)`

Attempt to preallocate enough memory for specified number of elements.

Parameters

<code>__n</code>	Number of elements required.
------------------	------------------------------

Exceptions

<code>std::length_error</code>	If <code>n</code> exceeds <code>max_size()</code> .
--------------------------------	---

This function attempts to reserve enough memory for the vector to hold the specified number of elements. If the number requested is more than `max_size()`, `length_error` is thrown.

The advantage of this function is that if optimal code is a necessity and the user can determine the number of elements that will be required, the user can reserve the memory in advance, and thus prevent a possible reallocation of memory and copying of vector data.

Definition at line 66 of file `vector.tcc`.

References `std::_Destroy()`.

Referenced by `std::operator>>()`.

5.1032.3.45 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::resize (size_type __new_size) [inline]`

Resizes the vector to the specified number of elements.

Parameters

<code>__new_size</code>	Number of elements the vector should contain.
-------------------------	---

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise default constructed elements are appended.

Definition at line 674 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink_and_double()`, and `__gnu_parallel::multiway_merge_exact_splitting()`.

5.1032.3.46 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::resize (size_type __new_size, const value_type & __x) [inline]`

Resizes the vector to the specified number of elements.

Parameters

<code>__new_size</code>	Number of elements the vector should contain.
<code>__x</code>	Data with which new elements should be populated.

This function will resize the vector to the specified number of elements. If the number is smaller than the vector's current size the vector is truncated, otherwise the vector is extended and new elements are populated with given data.

Definition at line 694 of file `stl_vector.h`.

5.1032.3.47 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::shrink_to_fit () [inline]`

A non-binding request to reduce capacity() to size().

Definition at line 726 of file `stl_vector.h`.

5.1032.3.48 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> size_type std::vector<_Tp, _Alloc>::size () const [inline], [noexcept]`

Returns the number of elements in the vector.

Definition at line 655 of file `stl_vector.h`.

Referenced by `__gnu_parallel::__shrink()`, `__gnu_parallel::__shrink_and_double()`, `std::vector<_Tp, _Alloc>::emplace()`, `__gnu_parallel::list_partition()`, `std::vector<_Tp, _Alloc>::operator=()`, `std::operator==(, std::vector<_Tp, _Alloc>)`, and `std::regex_traits<_Ch_type>::transform_primary()`.

5.1032.3.49 `template<typename _Tp, typename _Alloc = std::allocator<_Tp>> void std::vector<_Tp, _Alloc>::swap (vector<_Tp, _Alloc> & __x) [inline], [noexcept]`

Swaps data with another vector.

Parameters

<code>_↔_X</code>	A vector of the same element and allocator types.
-------------------	---

This exchanges the elements between two vectors in constant time. (Three pointers, so it should be quite fast.) Note that the global `std::swap()` function is specialized such that `std::swap(v1,v2)` will feed to this function.

Definition at line 1195 of file `stl_vector.h`.

5.1033.1 Detailed Description

```
template<typename _Alloc>  
class std::vector< bool, _Alloc >
```

A specialization of vector for booleans which offers fixed time access to individual elements in any order.

Template Parameters

<code>_Alloc</code>	Allocator type.
---------------------	-----------------

Note that `vector<bool>` does not actually meet the requirements for being a container. This is because the reference and pointer types are not really references and pointers to `bool`. See DR96 for details.

See also

[vector](#) for function documentation.

In some terminology a vector can be described as a dynamic C-style array, it offers fast and efficient access to individual elements in any order and saves the user from worrying about memory and size allocation. Subscripting (`[]`) access is also provided as with C-style arrays.

Definition at line 541 of file `stl_bvector.h`.

5.1034.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
class std::wbuffer_convert< _Codecvt, _Elem, _Tr >
```

Buffer conversions.

Definition at line 318 of file locale_conv.h.

5.1034.2 Member Typedef Documentation

5.1034.2.1 `typedef basic_streambuf<char_type, traits_type> std::basic_streambuf<_Elem, _Tr>::__streambuf_type` [inherited]

This is a non-standard type.

Definition at line 138 of file streambuf.

5.1034.2.2 `typedef _Elem std::basic_streambuf<_Elem, _Tr>::char_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 129 of file streambuf.

5.1034.2.3 `typedef traits_type::int_type std::basic_streambuf<_Elem, _Tr>::int_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 131 of file streambuf.

5.1034.2.4 `typedef traits_type::off_type std::basic_streambuf<_Elem, _Tr>::off_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 133 of file streambuf.

5.1034.2.5 `typedef traits_type::pos_type std::basic_streambuf<_Elem, _Tr>::pos_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 132 of file streambuf.

5.1034.2.6 `typedef _Tr std::basic_streambuf<_Elem, _Tr>::traits_type` [inherited]

These are standard types. They permit a standardized way of referring to names of (or names dependent on) the template parameters, which are specific to the implementation.

Definition at line 130 of file streambuf.

5.1034.3 Constructor & Destructor Documentation

5.1034.3.1 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
std::wbuffer_convert< _Codecvt, _Elem, _Tr >::wbuffer_convert (streambuf * __bytebuf = 0, _Codecvt *
__pcvt = new _Codecvt, state_type __state = state_type())` [inline], [explicit]

Default constructor.

Parameters

<code>__bytebuf</code>	The underlying byte stream buffer.
<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 334 of file `locale_conv.h`.

5.1034.4 Member Function Documentation

5.1034.4.1 `char_type* std::basic_streambuf<_Elem, _Tr>::eback() const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 482 of file `streambuf`.

5.1034.4.2 `char_type* std::basic_streambuf<_Elem, _Tr>::egptr() const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 488 of file `streambuf`.

5.1034.4.3 `char_type* std::basic_streambuf<_Elem, _Tr>::eptr() const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 535 of file `streambuf`.

5.1034.4.4 `void std::basic_streambuf<_Elem, _Tr>::gbump(int __n)` `[inline]`, `[protected]`, `[inherited]`

Moving the read position.

Parameters

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the read position without returning any data.

Definition at line 498 of file `streambuf`.

5.1034.4.5 `locale std::basic_streambuf<_Elem, _Tr>::getloc () const` `[inline]`, `[inherited]`

Locale access.

Returns

The current locale in effect.

If `pubimbue(loc)` has been called, then the most recent `loc` is returned. Otherwise the global locale in effect at the time of construction is returned.

Definition at line 226 of file `streambuf`.

5.1034.4.6 `char_type* std::basic_streambuf<_Elem, _Tr>::gptr () const` `[inline]`, `[protected]`, `[inherited]`

Access to the get area.

These functions are only available to other protected functions, including derived classes.

- `eback()` returns the beginning pointer for the input sequence
- `gptr()` returns the next pointer for the input sequence
- `egptr()` returns the end pointer for the input sequence

Definition at line 485 of file `streambuf`.

5.1034.4.7 `virtual void std::basic_streambuf<_Elem, _Tr>::imbue (const locale & __loc)` `[inline]`, `[protected]`, `[virtual]`, `[inherited]`

Changes translations.

Parameters

<code>__loc</code>	A new locale.
--------------------	---------------

Translations done during I/O which depend on the current locale are changed by this call. The standard adds, *Between*

invocations of this function a class derived from `streambuf` can safely cache results of calls to locale functions and to members of facets so obtained.

Note

Base class version does nothing.

Definition at line 576 of file `streambuf`.

5.1034.4.8 `streamsize std::basic_streambuf<_Elem, _Tr>::in_avail ()` `[inline]`, `[inherited]`

Looking ahead into the stream.

Returns

The number of characters available.

If a read position is available, returns the number of characters available for reading before the buffer must be refilled. Otherwise returns the derived `showmanyc()`.

Definition at line 284 of file `streambuf`.

5.1034.4.9 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> _Wide_streambuf::int_type std::wbuffer_convert<_Codecvt, _Elem, _Tr>::overflow (typename _Wide_streambuf::int_type __c)` `[inline]`, `[protected]`, `[virtual]`

Consumes data from the buffer; writes to the controlled sequence.

Parameters

<code>__c</code>	An additional character to consume.
------------------	-------------------------------------

Returns

`eof()` to indicate failure, something else (usually `__c`, or `not_eof()`)

Informally, this function is called when the output buffer is full (or does not exist, as buffering need not actually be done). If a buffer exists, it is *consumed*, with *some effect* on the controlled sequence. (Typically, the buffer is written out to the sequence verbatim.) In either case, the character `c` is also written out, if `__c` is not `eof()`.

For a formal definition of this function, see a good text such as Langer & Kreft, or [27.5.2.4.5]/3-7.

A functioning output `streambuf` can be created by overriding only this function (no buffer area will be used).

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_Elem, _Tr>`.

Definition at line 378 of file `locale_conv.h`.

5.1034.4.10 `virtual int_type std::basic_streambuf<_Elem, _Tr>::pbackfail (int_type __c = traits_type::eof()) [inline], [protected], [virtual], [inherited]`

Tries to back up the input sequence.

Parameters

<code>_↵</code>	The character to be inserted back into the sequence.
<code>_C</code>	

Returns

`eof()` on failure, *some other value* on success

Postcondition

The constraints of `gptr()`, `eback()`, and `pptr()` are the same as for `underflow()`.

Note

Base class version does nothing, returns `eof()`.

Definition at line 724 of file `streambuf`.

5.1034.4.11 `char_type* std::basic_streambuf<_Elem, _Tr>::pbase () const [inline], [protected], [inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `eptr()` returns the end pointer for the output sequence

Definition at line 529 of file `streambuf`.

5.1034.4.12 `void std::basic_streambuf<_Elem, _Tr>::pbump (int __n) [inline], [protected], [inherited]`

Moving the write position.

Parameters

<code>_↔</code>	The delta by which to move.
<code>_n</code>	

This just advances the write position without returning any data.

Definition at line 545 of file `streambuf`.

5.1034.4.13 `char_type* std::basic_streambuf<_Elem, _Tr>::pptr () const` `[inline]`, `[protected]`, `[inherited]`

Access to the put area.

These functions are only available to other protected functions, including derived classes.

- `pbase()` returns the beginning pointer for the output sequence
- `pptr()` returns the next pointer for the output sequence
- `epptr()` returns the end pointer for the output sequence

Definition at line 532 of file `streambuf`.

5.1034.4.14 `locale std::basic_streambuf<_Elem, _Tr>::pubimbue (const locale & __loc)` `[inline]`, `[inherited]`

Entry point for `imbue()`.

Parameters

<code>__loc</code>	The new locale.
--------------------	-----------------

Returns

The previous locale.

Calls the derived `imbue(__loc)`.

Definition at line 209 of file `streambuf`.

5.1034.4.15 `pos_type std::basic_streambuf<_Elem, _Tr>::pubseekoff (off_type __off, ios_base::seekdir __way, ios_base::openmode __mode = ios_base::in | ios_base::out)` `[inline]`, `[inherited]`

Alters the stream position.

Parameters

<code>__off</code>	Offset.
<code>__way</code>	Value for <code>ios_base::seekdir</code> .
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekoff` function.

Definition at line 251 of file `streambuf`.

5.1034.4.16 `pos_type std::basic_streambuf<_Elem, _Tr>::pubseekpos (pos_type __sp, ios_base::openmode __mode = ios_base::in | ios_base::out) [inline], [inherited]`

Alters the stream position.

Parameters

<code>__sp</code>	Position
<code>__mode</code>	Value for <code>ios_base::openmode</code> .

Calls virtual `seekpos` function.

Definition at line 263 of file `streambuf`.

5.1034.4.17 `basic_streambuf* std::basic_streambuf<_Elem, _Tr>::pubsetbuf (char_type* __s, streamsize __n) [inline], [inherited]`

Entry points for derived buffer functions.

The public versions of `pubfoo` dispatch to the protected derived `foo` member functions, passing the arguments (if any) and returning the result unchanged.

Definition at line 239 of file `streambuf`.

5.1034.4.18 `int std::basic_streambuf<_Elem, _Tr>::pubsync () [inline], [inherited]`

Calls virtual `sync` function.

Definition at line 271 of file `streambuf`.

5.1034.4.19 `int_type std::basic_streambuf<_Elem, _Tr>::sbumpc () [inline], [inherited]`

Getting the next character.

Returns

The next character, or `eof`.

If the input read position is available, returns that character and increments the read pointer, otherwise calls and returns `uflow()`.

Definition at line 316 of file `streambuf`.

5.1034.4.20 `virtual pos_type std::basic_streambuf<_Elem, _Tr>::seekoff (off_type , ios_base::seekdir , ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 602 of file `streambuf`.

5.1034.4.21 `virtual pos_type std::basic_streambuf<_Elem, _Tr>::seekpos (pos_type , ios_base::openmode = ios_base::in | ios_base::out) [inline], [protected], [virtual], [inherited]`

Alters the stream positions.

Each derived class provides its own appropriate behavior.

Note

Base class version does nothing, returns a `pos_type` that represents an invalid stream position.

Definition at line 614 of file `streambuf`.

5.1034.4.22 `virtual basic_streambuf<char_type, Tr>* std::basic_streambuf<_Elem, _Tr>::setbuf (char_type* , streamsize) [inline], [protected], [virtual], [inherited]`

Manipulates the buffer.

Each derived class provides its own appropriate behavior. See the next-to-last paragraph of <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html#io.streambuf.buffering> for more on this function.

Note

Base class version does nothing, returns `this`.

Definition at line 591 of file `streambuf`.

5.1034.4.23 `void std::basic_streambuf<_Elem, _Tr>::setg (char_type* __gbeg, char_type* __gnext, char_type* __gend) [inline], [protected], [inherited]`

Setting the three read area pointers.

Parameters

<code>__gbeg</code>	A pointer.
<code>__gnext</code>	A pointer.
<code>__gend</code>	A pointer.

Postcondition

`__gbeg == eback()`, `__gnext == gptr()`, and `__gend == egptr()`

Definition at line 509 of file `streambuf`.

5.1034.4.24 `void std::basic_streambuf<_Elem, _Tr>::setp(char_type* __pbeg, char_type* __pend)` `[inline]`, `[protected]`, `[inherited]`

Setting the three write area pointers.

Parameters

<code>__pbeg</code>	A pointer.
<code>__pend</code>	A pointer.

Postcondition

`__pbeg == pbase()`, `__pbeg == pptr()`, and `__pend == epptr()`

Definition at line 555 of file `streambuf`.

5.1034.4.25 `int_type std::basic_streambuf<_Elem, _Tr>::sgetc()` `[inline]`, `[inherited]`

Getting the next character.

Returns

The next character, or `eof`.

If the input read position is available, returns that character, otherwise calls and returns `underflow()`. Does not move the read position after fetching the character.

Definition at line 338 of file `streambuf`.

5.1034.4.26 `streamsize std::basic_streambuf<_Elem, _Tr>::sgetn(char_type* __s, streamsize __n)` `[inline]`, `[inherited]`

Entry point for `xsgetn`.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	A count.

Returns `xsgetn(__s,__n)`. The effect is to fill `__s[0]` through `__s[__n-1]` with characters from the input sequence, if possible.

Definition at line 357 of file `streambuf`.

5.1034.4.27 `virtual streamsize std::basic_streambuf<_Elem,_Tr>::showmanyc ()` `[inline],[protected],[virtual],[inherited]`

Investigating the data available.

Returns

An estimate of the number of characters available in the input sequence, or -1.

If it returns a positive value, then successive calls to `underflow()` will not return `traits::eof()` until at least that number of characters have been supplied. If `showmanyc()` returns -1, then calls to `underflow()` or `uflow()` will fail. [27.5.2.4.3]/1

Note

Base class version does nothing, returns zero.

The standard adds that *the intention is not only that the calls [to `underflow` or `uflow`] will not return `eof()` but that they will return immediately.*

The standard adds that *the morphemes of `showmanyc` are **es-how-many-see**, not **show-manic**.*

Definition at line 649 of file `streambuf`.

5.1034.4.28 `int_type std::basic_streambuf<_Elem,_Tr>::snextc ()` `[inline],[inherited]`

Getting the next character.

Returns

The next character, or eof.

Calls `sbumpc()`, and if that function returns `traits::eof()`, so does this function. Otherwise, `sgetc()`.

Definition at line 298 of file `streambuf`.

5.1034.4.29 `int_type std::basic_streambuf<_Elem,_Tr>::sputbackc (char_type __c)` `[inline],[inherited]`

Pushing characters back into the input stream.

Parameters

<code>↵</code> <code>_c</code>	The character to push back.
-----------------------------------	-----------------------------

Returns

The previous character, if possible.

Similar to `sungetc()`, but `__c` is pushed onto the stream instead of *the previous character*. If successful, the next character fetched from the input stream will be `__c`.

Definition at line 372 of file `streambuf`.

5.1034.4.30 `int_type std::basic_streambuf<_Elem,_Tr>::sputc (char_type __c)` `[inline],[inherited]`

Entry point for all single-character output functions.

Parameters

<code>↵</code> <code>_c</code>	A character to output.
-----------------------------------	------------------------

Returns

`__c`, if possible.

One of two public output functions.

If a write position is available for the output sequence (i.e., the buffer is not full), stores `__c` in that position, increments the position, and returns `traits::to_int_type (__c)`. If a write position is not available, returns `overflow (↵ __c)`.

Definition at line 424 of file `streambuf`.

5.1034.4.31 `streamsize std::basic_streambuf<_Elem,_Tr>::sputn (const char_type * __s, streamsize __n)`
`[inline],[inherited]`

Entry point for all single-character output functions.

Parameters

<code>↵</code> <code>_s</code>	A buffer read area.
<code>↵</code> <code>_n</code>	A count.

One of two public output functions.

Returns `xspn(__s, __n)`. The effect is to write `__s[0]` through `__s[__n-1]` to the output sequence, if possible.

Definition at line 450 of file `streambuf`.

5.1034.4.32 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> state_type
std::wbuffer_convert<_Codecvt, _Elem, _Tr>::state () const [inline], [noexcept]`

The conversion state following the last conversion.

Definition at line 370 of file `locale_conv.h`.

5.1034.4.33 `int_type std::basic_streambuf<_Elem, _Tr>::sungetc () [inline], [inherited]`

Moving backwards in the input stream.

Returns

The previous character, if possible.

If a putback position is available, this function decrements the input pointer and returns that character. Otherwise, calls and returns `pbackfail()`. The effect is to *unget* the last character *gotten*.

Definition at line 397 of file `streambuf`.

5.1034.4.34 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>> int
std::wbuffer_convert<_Codecvt, _Elem, _Tr>::sync (void) [inline], [protected], [virtual]`

Synchronizes the buffer arrays with the controlled sequences.

Returns

-1 on failure.

Each derived class provides its own appropriate behavior, including the definition of *failure*.

Note

Base class version does nothing, returns zero.

Reimplemented from [std::basic_streambuf<_Elem, _Tr>](#).

Definition at line 374 of file `locale_conv.h`.

5.1034.4.35 `virtual int_type std::basic_streambuf<_Elem, _Tr>::uflow () [inline], [protected], [virtual], [inherited]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function does the same thing as `underflow()`, and in fact is required to call that function. It also returns the new character, like `underflow()` does. However, this function also moves the read position forward by one.

Definition at line 700 of file `streambuf`.

5.1034.4.36 `template<typename _Codecvt, typename _Elem = wchar_t, typename _Tr = char_traits<_Elem>>
_Wide_streambuf::int_type std::wbuffer_convert<_Codecvt, _Elem, _Tr>::underflow () [inline], [protected], [virtual]`

Fetches more data from the controlled sequence.

Returns

The first character from the *pending sequence*.

Informally, this function is called when the input buffer is exhausted (or does not exist, as buffering need not actually be done). If a buffer exists, it is *refilled*. In either case, the next available character is returned, or `traits::eof()` to indicate a null pending sequence.

For a formal definition of the pending sequence, see a good text such as Langer & Kreft, or [27.5.2.4.3]/7-14.

A functioning input `streambuf` can be created by overriding only this function (no buffer area will be used). For an example, see <https://gcc.gnu.org/onlinedocs/libstdc++/manual/streambufs.html>

Note

Base class version does nothing, returns `eof()`.

Reimplemented from `std::basic_streambuf<_Elem, _Tr>`.

Definition at line 388 of file `locale_conv.h`.

References `std::min()`.

5.1034.4.37 `virtual streamsize std::basic_streambuf<_Elem, _Tr>::xsgetn (char_type * __s, streamsize __n) [protected], [virtual], [inherited]`

Multiple character extraction.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to assign.

Returns

The number of characters assigned.

Fills `__s[0]` through `__s[__n-1]` with characters from the input sequence, as if by `sbumpc()`. Stops when either `__n` characters have been copied, or when `traits::eof()` would be copied.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

5.1034.4.38 `virtual streamsize std::basic_streambuf<_Elem, _Tr>::xspn(const char_type * __s, streamsize __n)`
`[protected], [virtual], [inherited]`

Multiple character insertion.

Parameters

<code>__s</code>	A buffer area.
<code>__n</code>	Maximum number of characters to write.

Returns

The number of characters written.

Writes `__s[0]` through `__s[__n-1]` to the output sequence, as if by `sputc()`. Stops when either `n` characters have been copied, or when `sputc()` would return `traits::eof()`.

It is expected that derived classes provide a more efficient implementation by overriding this definition.

5.1034.5 Member Data Documentation

5.1034.5.1 `locale std::basic_streambuf<_Elem, _Tr>::M_buf_locale` `[protected], [inherited]`

Current locale setting.

Definition at line 192 of file `streambuf`.

5.1034.5.2 `char_type* std::basic_streambuf<_Elem,_Tr>::_M_in_beg` [protected],[inherited]

Start of get area.

Definition at line 184 of file streambuf.

5.1036.1 Detailed Description

```
template<typename _RealType = double>
class std::weibull_distribution< _RealType >
```

A `weibull_distribution` random number distribution.

The formula for the normal probability density function is:

$$p(x|\alpha, \beta) = \frac{\alpha}{\beta} \left(\frac{x}{\beta}\right)^{\alpha-1} \exp\left(-\left(\frac{x}{\beta}\right)^{\alpha}\right)$$

Definition at line 4683 of file `random.h`.

5.1036.2 Member Typedef Documentation

5.1036.2.1 `template<typename _RealType = double> typedef _RealType std::weibull_distribution<_RealType>::result_type`

The type of the range of the distribution.

Definition at line 4686 of file `random.h`.

5.1036.3 Member Function Documentation

5.1036.3.1 `template<typename _RealType = double> _RealType std::weibull_distribution<_RealType>::a () const`
[inline]

Return the a parameter of the distribution.

Definition at line 4741 of file `random.h`.

5.1036.3.2 `template<typename _RealType = double> _RealType std::weibull_distribution<_RealType>::b () const`
[inline]

Return the b parameter of the distribution.

Definition at line 4748 of file `random.h`.

5.1036.3.3 `template<typename _RealType = double> result_type std::weibull_distribution<_RealType>::max () const`
[inline]

Returns the least upper bound value of the distribution.

Definition at line 4777 of file `random.h`.

References `std::numeric_limits<_Tp>::max()`.

5.1036.3.4 `template<typename _RealType = double> result_type std::weibull_distribution<_RealType>::min () const`
[inline]

Returns the greatest lower bound value of the distribution.

Definition at line 4770 of file `random.h`.

5.1038.1 Detailed Description

```
template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename _Byte_alloc =
allocator<char>>
class std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >
```

String conversions.

Definition at line 166 of file locale_conv.h.

5.1038.2 Constructor & Destructor Documentation

```
5.1038.2.1 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
_Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
>::wstring_convert ( _Codecvt * __pcvt = new _Codecvt () ) [inline], [explicit]
```

Default constructor.

Parameters

<code>__pcvt</code>	The facet to use for conversions.
---------------------	-----------------------------------

Takes ownership of `__pcvt` and will delete it in the destructor.

Definition at line 181 of file locale_conv.h.

Referenced by `std::wstring_convert<_Codecvt, _Elem, _Wide_alloc, _Byte_alloc>::wstring_convert()`.

```
5.1038.2.2 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
_Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
>::wstring_convert ( _Codecvt * __pcvt, state_type __state ) [inline]
```

Construct with an initial conversion state.

Parameters

<code>__pcvt</code>	The facet to use for conversions.
<code>__state</code>	Initial conversion state.

Takes ownership of `__pcvt` and will delete it in the destructor. The object's conversion state will persist between conversions.

Definition at line 195 of file locale_conv.h.

```
5.1038.2.3 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::wstring_convert( const byte_string & __byte_err, const wide_string & __wide_err = wide_string() )
    [inline], [explicit]
```

Construct with error strings.

Parameters

<code>__byte_err</code>	A string to return on failed conversions.
<code>__wide_err</code>	A wide string to return on failed conversions.

Definition at line 208 of file `locale_conv.h`.

References `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::wstring_convert()`.

5.1038.3 Member Function Documentation

```
5.1038.3.1 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> size_t std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::converted( ) const [inline], [noexcept]
```

The number of elements successfully converted in the last conversion.

Definition at line 298 of file `locale_conv.h`.

```
5.1038.3.2 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::from_bytes( char __byte ) [inline]
```

Convert from bytes.

Definition at line 227 of file `locale_conv.h`.

Referenced by `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`.

```
5.1038.3.3 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::from_bytes( const char * __ptr ) [inline]
```

Convert from bytes.

Definition at line 234 of file `locale_conv.h`.

References `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes()`.

```
5.1038.3.4 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::from_bytes ( const byte_string & __str ) [inline]
```

Convert from bytes.

Definition at line 238 of file locale_conv.h.

References std::basic_string< _CharT, _Traits, _Alloc >::data(), std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::from_bytes(), and std::basic_string< _CharT, _Traits, _Alloc >::size().

```
5.1038.3.5 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> wide_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::from_bytes ( const char * __first, const char * __last ) [inline]
```

Convert from bytes.

Definition at line 245 of file locale_conv.h.

References std::basic_string< _CharT, _Traits, _Alloc >::get_allocator().

```
5.1038.3.6 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> state_type std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::state ( ) const [inline]
```

The final conversion state of the last conversion.

Definition at line 301 of file locale_conv.h.

```
5.1038.3.7 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::to_bytes ( _Elem __wchar ) [inline]
```

Convert to bytes.

Definition at line 261 of file locale_conv.h.

Referenced by std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes().

```
5.1038.3.8 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
    _Byte_alloc = allocator<char>> byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
    >::to_bytes ( const _Elem * __ptr ) [inline]
```

Convert to bytes.

Definition at line 268 of file locale_conv.h.

References std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes().

```
5.1038.3.9  template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename
             _Byte_alloc = allocator<char>>> byte_string std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc
             >::to_bytes ( const wide_string & __wstr )  [inline]
```

Convert to bytes.

Definition at line 274 of file locale_conv.h.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::size()`, and `std::wstring_convert< _Codecvt, _Elem, _Wide_alloc, _Byte_alloc >::to_bytes()`.

```
5.1038.3.10 template<typename _Codecvt, typename _Elem = wchar_t, typename _Wide_alloc = allocator<_Elem>, typename

6.1.1 Detailed Description

Parallel STL function calls corresponding to the `stl_algo.h` header.

The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

_ForwardIterator std::experimental::fundamentals_v1::search (_ForwardIterator __first, _ForwardIterator __last, const _Searcher &__searcher)`

6.6.1 Detailed Description

This is a TS C++ Library header.

6.6.2 Function Documentation

6.6.2.1 `template<typename _InputIterator, typename _RandomAccessIterator, typename _Size, typename _UniformRandomNumberGenerator> _RandomAccessIterator std::experimental::fundamentals_v1::__sample (_InputIterator __first, _InputIterator __last, input_iterator_tag, _RandomAccessIterator __out, random_access_iterator_tag, _Size __n, _UniformRandomNumberGenerator && __g)`

Reservoir sampling algorithm.

Definition at line 62 of file experimental/algorithm.

6.6.2.2 `template<typename _ForwardIterator, typename _OutputIterator, typename _Cat, typename _Size, typename _UniformRandomNumberGenerator> _OutputIterator std::experimental::fundamentals_v1::__sample (_ForwardIterator __first, _ForwardIterator __last, forward_iterator_tag, _OutputIterator __out, _Cat, _Size __n, _UniformRandomNumberGenerator && __g)`

Selection sampling algorithm.

Definition at line 89 of file experimental/algorithm.

6.6.2.3 `template<typename _PopulationIterator, typename _SampleIterator, typename _Distance, typename _UniformRandomNumberGenerator> _SampleIterator std::experimental::fundamentals_v1::sample (_PopulationIterator __first, _PopulationIterator __last, _SampleIterator __out, _Distance __n, _UniformRandomNumberGenerator && __g)`

Take a random sample from a population.

Definition at line 111 of file experimental/algorithm.

6.29.1 Detailed Description

Implementation of a dynamically load-balanced parallel quicksort.

It works in-place and needs only logarithmic extra memory. The algorithm is similar to the one proposed in

P. Tsigas and Y. Zhang. A simple, fast parallel implementation of quicksort and its performance evaluation on SUN enterprise 10000. In 11th Euromicro Conference on Parallel, Distributed and Network-Based Processing, page 372, 2003.

This file is a GNU parallel extension to the Standard C++ Library.

6.43.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

6.43.2 Macro Definition Documentation

6.43.2.1 `#define _BALLOC_ALIGN_BYTES`

The constant in the expression below is the alignment required in bytes.

Definition at line 43 of file `bitmap_allocator.h`.

- Catalogs & `std::get_catalogs ()`

6.57.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

6.58 cassert File Reference

6.58.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `assert.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.59 `cast.h` File Reference

Classes

_ToType [__gnu_cxx::static_pointer_cast](#) (_FromType *__arg)

6.59.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<ext/pointer.h>`.

6.60 `cc_hash_max_collision_check_resize_trigger_imp.hpp` File Reference

6.60.1 Detailed Description

Contains a resize trigger implementation.

6.61 `cc_ht_map_.hpp` File Reference

Classes

- class [__gnu_pbds::detail::cc_ht_map<Key, Mapped, Hash_Fn, Eq_Fn, _Alloc, Store_Hash, Comb_Hash_Fn, Resize_Policy>](#)

Namespaces

- [__gnu_pbds](#)

Macros

- `#define PB_DS_CC_HASH_NAME`
- `#define PB_DS_CC_HASH_TRAITS_BASE`
- `#define PB_DS_CLASS_C_DEC`
- `#define PB_DS_CLASS_T_DEC`
- `#define PB_DS_GEN_POS`
- `#define PB_DS_HASH_EQ_FN_C_DEC`
- `#define PB_DS_RANGED_HASH_FN_C_DEC`

6.61.1 Detailed Description

Contains an implementation class for `cc_ht_map_`.

6.62 ccomplex File Reference

Macros

- `#define _GLIBCXX_CCOMPLEX`

6.62.1 Detailed Description

This is a Standard C++ Library header.

6.63 ccomplex File Reference

Macros

- `#define _GLIBCXX_TR1_CCOMPLEX`

6.63.1 Detailed Description

This is a TR1 C++ Library header.

6.64 cctype File Reference

Namespaces

- [std](#)

Macros

- `#define _GLIBCXX_CCTYPE`

6.64.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `cctype.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.65 cctype File Reference

Macros

- `#define _GLIBCXX_TR1_CCTYPE`

6.65.1 Detailed Description

This is a TR1 C++ Library header.

6.66 cerrno File Reference

Macros

- `#define _GLIBCXX_CERRNO`
- `#define errno`

6.66.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `errno.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.67 cfenv File Reference

Macros

- `#define _GLIBCXX_CFENV`

6.67.1 Detailed Description

This is a Standard C++ Library header.

6.68 **cfenv File Reference**

Macros

- `#define _GLIBCXX_TR1_CFENV`

6.68.1 Detailed Description

This is a TR1 C++ Library header.

6.69 **cfloat File Reference**

Macros

- `#define _GLIBCXX_CFLOAT`
- `#define DECIMAL_DIG`
- `#define FLT_EVAL_METHOD`

6.69.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `float.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.70 **cfloat File Reference**

Macros

- `#define _GLIBCXX_TR1_CFLOAT`

6.70.1 Detailed Description

This is a TR1 C++ Library header.

6.71 char_traits.h File Reference

Classes

- struct [__gnu_cxx::_Char_types<_CharT>](#)
- struct [__gnu_cxx::char_traits<_CharT>](#)
- struct [std::char_traits<_CharT>](#)
- struct [std::char_traits<char>](#)
- struct [std::char_traits<wchar_t>](#)

Namespaces

- [__gnu_cxx](#)
- [std](#)

6.71.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<string>`.

6.72 checkers.h File Reference

Namespaces

- [__gnu_parallel](#)

Functions

- template<typename _Iter, typename _Compare>
bool [__gnu_parallel::__is_sorted](#) (_Iter __begin, _Iter __end, _Compare __comp)

6.72.1 Detailed Description

Routines for checking the correctness of algorithm results. This file is a GNU parallel extension to the Standard C++ Library.

6.73.1 Detailed Description

This is a Standard C++ Library header.

6.73.2 Typedef Documentation

6.73.2.1 `using std::chrono::_V2::high_resolution_clock = typedef system_clock`

Highest-resolution clock.

This is the clock "with the shortest tick period." Alias to `std::system_clock` until higher-than-nanosecond definitions become feasible.

Definition at line 776 of file `chrono`.

6.74 chrono File Reference

Namespaces

- [std](#)

6.74.1 Detailed Description

This is a TS C++ Library header.

6.75 cinttypes File Reference

Macros

- `#define _GLIBCXX_CINTTYPES`

6.75.1 Detailed Description

This is a Standard C++ Library header.

6.76 cinttypes File Reference

Macros

- `#define _GLIBCXX_TR1_CINTTYPES`

6.76.1 Detailed Description

This is a TR1 C++ Library header.

6.77 ciso646 File Reference

6.77.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the `*.h` implementation files.

This is the C++ version of the Standard C Library header `iso646.h`, which is empty in C++.

6.78 climits File Reference

Macros

- `#define _GLIBCXX_CLIMITS`
- `#define LLONG_MAX`
- `#define LLONG_MIN`
- `#define ULLONG_MAX`

6.78.1 Detailed Description

This is a Standard C++ Library file. You should `#include` this file in your programs, rather than any of the *.h implementation files.

This is the C++ version of the Standard C Library header `limits.h`, and its contents are (mostly) the same as that header, but are all contained in the namespace `std` (except for names which are defined as macros in C).

6.79 climits File Reference

Macros

- `#define _GLIBCXX_TR1_CLIMITS`

6.79.1 Detailed Description

This is a TR1 C++ Library header.

6.80 clocale File Reference

Namespaces

6.83.1 Detailed Description

This is a TR1 C++ Library header.

6.84 `cmp_fn_imps.hpp` File Reference

6.84.1 Detailed Description

Contains implementations of `cc_ht_map_'s` entire container comparison related functions.

6.85 `codecvt` File Reference

Namespaces

- [std](#)

Macros

- `#define _GLIBCXX_CODECVT`
- `#define _GLIBCXX_CODECVT_SPECIALIZATION(_NAME, _ELEM)`
- `#define _GLIBCXX_CODECVT_SPECIALIZATION2(_NAME, _ELEM)`

Enumerations

- enum `codecvt_mode` { `consume_header`, `generate_header`, `little_endian` }

6.85.1 Detailed Description

This is a Standard C++ Library header.

6.86 `codecvt.h` File Reference

Classes

- class [std::__codecvt_abstract_base< _InternT, _ExternT, _StateT >](#)
- class [std::codecvt< _InternT, _ExternT, _StateT >](#)

- `void __gnu_parallel::__yield ()`

6.89.1 Detailed Description

Compatibility layer, mostly concerned with atomic operations.

This file is a GNU parallel extension to the Standard C++ Library and contains implementation details for the library's internal use.

6.90 compiletime_settings.h File Reference

Macros

- `#define _GLIBCXX_CALL(__n)`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`
- `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`
- `#define _GLIBCXX_SCALE_DOWN_FPU`
- `#define _GLIBCXX_VERBOSE_LEVEL`

6.90.1 Detailed Description

Defines on options concerning debugging and performance, at compile-time. This file is a GNU parallel extension to the Standard C++ Library.

6.90.2 Macro Definition Documentation

6.90.2.1 `#define _GLIBCXX_CALL(__n)`

Macro to produce log message when entering a function.

Parameters

<code>__↔</code>	Input size.
<code>__n</code>	

See also

`_GLIBCXX_VERBOSE_LEVEL`

Definition at line 44 of file `comPILEtime_settings.h`.

Referenced by `__gnu_parallel::__find_template()`, `__gnu_parallel::__for_each_template_random_access_workstealing()`, `__gnu_parallel::__merge_advance()`, `__gnu_parallel::__parallel_nth_element()`, `__gnu_parallel::__parallel_partial_sum()`, `__gnu_parallel::__parallel_partition()`, `__gnu_parallel::__parallel_random_shuffle_drs()`, `__gnu_parallel::__parallel_sort()`, `__gnu_parallel::__parallel_sort_qs()`, `__gnu_parallel::__parallel_sort_qsb()`, `__gnu_parallel::__parallel_unique_copy()`, `__gnu_parallel::__search_template()`, `__gnu_parallel::__sequential_multiway_merge()`, `__gnu_parallel::__multiseq_partition()`, `__gnu_parallel::__multiseq_selection()`, `__gnu_parallel::__multiway_merge()`, `__gnu_parallel::__multiway_merge_3_variant()`, `__gnu_parallel::__multiway_merge_4_variant()`, `__gnu_parallel::__multiway_merge_loser_tree()`, `__gnu_parallel::__multiway_merge_loser_tree_sentinel()`, `__gnu_parallel::__multiway_merge_loser_tree_unguarded()`, `__gnu_parallel::__multiway_merge_sentinels()`, `__gnu_parallel::__parallel_multiway_merge()`, and `__gnu_parallel::__parallel_sort_mwms()`.

6.90.2.2 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_L1`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the L1 cache for `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 62 of file `comPILEtime_settings.h`.

6.90.2.3 `#define _GLIBCXX_RANDOM_SHUFFLE_CONSIDER_TLB`

Switch on many `_GLIBCXX_PARALLEL_ASSERTions` in parallel code. Consider the size of the TLB for `__gnu_parallel::__parallel_random_shuffle()`.

Definition at line 68 of file `comPILEtime_settings.h`.

6.90.2.4 `#define _GLIBCXX_SCALE_DOWN_FPU`

Use floating-point scaling instead of modulo for mapping random numbers to a range. This can be faster on certain CPUs.

Definition at line 55 of file `comPILEtime_settings.h`.

6.90.2.5 `#define _GLIBCXX_VERBOSE_LEVEL`

Determine verbosity level of the parallel mode. Level 1 prints a message each time a parallel-mode function is entered.

Definition at line 37 of file `comPILEtime_settings.h`.

- `#define __glibcxx_function_requires(...)`

6.94.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<iterator>`.

6.95 `concurrency.h` File Reference

Classes

- class [__gnu_cxx::__scoped_lock](#)

Namespaces

- [__gnu_cxx](#)

Enumerations

- enum `_Lock_policy` { `_S_single`, `_S_mutex`, `_S_atomic` }

Functions

- void `__gnu_cxx::__throw_concurrency_lock_error()`
- void `__gnu_cxx::__throw_concurrency_unlock_error()`

Variables

- static const `_Lock_policy` `__gnu_cxx::__default_lock_policy`

6.95.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

6.96 cond_dealtor.hpp File Reference

Classes

- class [__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >](#)

Namespaces

- [__gnu_pbds](#)

6.96.1 Detailed Description

Contains a conditional deallocator.

6.97 cond_key_dtor_entry_dealtor.hpp File Reference

Classes

- class [__gnu_pbds::detail::cond_dealtor< Entry, _Alloc >](#)

Namespaces

- [__gnu_pbds](#)

6.97.1 Detailed Description

Contains a conditional key destructor, used for exception handling.

6.98 condition_variable File Reference

Classes

- class [std::_V2::condition_variable_any](#)
- class [std::condition_variable](#)

Namespaces

- [std](#)

Macros

- `#define _GLIBCXX_CONDITION_VARIABLE`

Enumerations

- enum [std::cv_status](#) { **no_timeout**, **timeout** }

Functions

- void **std::notify_all_at_thread_exit** (condition_variable &, unique_lock< mutex >)

6.98.1 Detailed Description

This is a Standard C++ Library header.

6.99 [const_iterator.hpp](#) File Reference

Classes

- class [__gnu_pbds::detail::binary_heap_const_iterator_](#)< Value_Type, Entry, Simple, _Alloc >

Namespaces

- [__gnu_pbds](#)

Macros

- #define **PB_DS_BIN_HEAP_CIT_BASE**

6.99.1 Detailed Description

Contains an iterator class returned by the table's const find and insert methods.

6.100 [const_iterator.hpp](#) File Reference

Classes

- class [__gnu_pbds::detail::left_child_next_sibling_heap_const_iterator_](#)< Node, _Alloc >

Namespaces

- [__gnu_pbds](#)

Macros

- `#define PB_DS_BASIC_HEAP_CIT_BASE`
- `#define PB_DS_CLASS_C_DEC`

6.100.1 Detailed Description

Contains an iterator class returned by the table's `const find` and `insert` methods.

6.101 `const_iterator.hpp` File Reference

Classes

- class [const_iterator_](#)

6.101.1 Detailed Description

Contains an iterator class used for `const` ranging over the elements of the table.

6.102 `constructor_destructor_fn_imps.hpp` File Reference

6.102.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.

6.103 `constructor_destructor_fn_imps.hpp` File Reference

6.103.1 Detailed Description

Contains implementations of `gp_ht_map_`'s constructors, destructor, and related functions.

6.104 `constructor_destructor_fn_imps.hpp` File Reference6.105 `constructor_destructor_no_store_hash_fn_imps.hpp` File Reference

6.105.1 Detailed Description

Contains implementations of `cc_ht_map_`'s constructors, destructor, and related functions.

6.106 constructor_destructor_no_store_hash_fn_imps.hpp File Reference

6.106.1 Detailed Description

Contains implementations of gp_ht_map_'s constructors, destructor, and related functions.

6.107 constructor_destructor_store_hash_fn_imps.hpp File Reference

6.107.1 Detailed Description

Contains implementations of cc_ht_map_'s constructors, destructor, and related functions.

6.108 constructor_destructor_store_hash_fn_imps.hpp File Reference

6.108.1 Detailed Description

Contains implementations of gp_ht_map_'s constructors, destructor, and related functions.

6.109 constructors_destructor_fn_imps.hpp File Reference

6.109.1 Detailed Description

Contains an implementation class for binary_heap_.

6.110 constructors_destructor_fn_imps.hpp File Reference

6.110.1 Detailed Description

Contains an implementation for binomial_heap_.

6.111 constructors_destructor_fn_imps.hpp File Reference

6.111.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.112 constructors_destructor_fn_imps.hpp File Reference

6.112.1 Detailed Description

Contains an implementation class for bin_search_tree_.

6.113 constructors_destructor_fn_imps.hpp File Reference

6.113.1 Detailed Description

Contains an implementation class for left_child_next_sibling_heap_.

6.114 constructors_destructor_fn_imps.hpp File Reference

6.114.1 Detailed Description

Contains an implementation class for ov_tree_.

6.115 constructors_destructor_fn_imps.hpp File Reference

6.115.1 Detailed Description

Contains an implementation class for a pairing heap.

6.116 constructors_destructor_fn_imps.hpp File Reference

6.116.1 Detailed Description

Contains an implementation class for pat_trie.

6.117 constructors_destructor_fn_imps.hpp File Reference

6.117.1 Detailed Description

Contains an implementation for rb_tree_.

6.118 constructors_destructor_fn_imps.hpp File Reference

6.118.1 Detailed Description

Contains an implementation for rc_binomial_heap_.

6.119 constructors_destructor_fn_imps.hpp File Reference

6.119.1 Detailed Description

Contains an implementation class for splay_tree_.

6.120 constructors_destructor_fn_imps.hpp File Reference

6.120.1 Detailed Description

Contains an implementation for thin_heap_.

6.150.1 Detailed Description

The header provides an interface to the C++ ABI.

6.150.2 Function Documentation

- 6.150.2.1 **char* __cxxabiv1::__cxa_demangle** (const char * __mangled_name, char * __output_buffer, size_t * __length, int *
__status)

Demangling routine. ABI-mandated entry point in the C++ runtime library for demangling.

Parameters

<code>__mangled_name</code>	A NUL-terminated character string containing the name to be demangled.
<code>__output_buffer</code>	A region of memory, allocated with <code>malloc</code> , of <code>*__length</code> bytes, into which the demangled name is stored. If <code>__output_buffer</code> is not long enough, it is expanded using <code>realloc</code> . <code>__output_buffer</code> may instead be <code>NULL</code> ; in that case, the demangled name is placed in a region of memory allocated with <code>malloc</code> .
<code>__length</code>	If <code>__length</code> is non- <code>NULL</code> , the length of the buffer containing the demangled name is placed in <code>*__length</code> .
<code>__status</code>	<code>*__status</code> is set to one of the following values: 0: The demangling operation succeeded. -1: A memory allocation failure occurred. -2: <code>mangled_name</code> is not a valid name under the C++ ABI mangling rules. -3: One of the arguments is invalid.

Returns

A pointer to the start of the NUL-terminated demangled name, or `NULL` if the demangling fails. The caller is responsible for deallocating this memory using `free`.

The demangling is performed using the C++ ABI mangling rules, with GNU extensions. For example, this function is used in `__gnu_cxx::__verbose_terminate_handler`.

See <http://gcc.gnu.org/onlinedocs/libstdc++/manual/bk01pt12ch39.html> for other examples of use.

Note

The same demangling functionality is available via `libiberty` (`<libiberty/demangle.h>` and `libiberty.h`) in GCC 3.1 and later, but that requires explicit installation (`-enable-install-libiberty`) and uses a different API, although the ABI is unchanged.

6.153.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.154 `debug_allocator.h` File Reference

Classes

- class [__gnu_cxx::debug_allocator<_Alloc>](#)

Namespaces

- [__gnu_cxx](#)

Functions

- `template<typename _Alloc>
bool __gnu_cxx::operator!= (const debug_allocator<_Alloc> &__lhs, const debug_allocator<_Alloc> &__rhs)`

6.154.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

6.155 `debug_fn_imps.hpp` File Reference

6.155.1 Detailed Description

Contains an implementation class for a `binary_heap`.

6.156 `debug_fn_imps.hpp` File Reference

6.156.1 Detailed Description

Contains an implementation for `binomial_heap_`.

6.157 `debug_fn_imps.hpp` File Reference

6.157.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.158 `debug_fn_imps.hpp` File Reference

6.158.1 Detailed Description

Contains an implementation class for `bin_search_tree_`.

6.159 `debug_fn_imps.hpp` File Reference

6.159.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

6.160 `debug_fn_imps.hpp` File Reference

6.160.1 Detailed Description

Contains implementations of `gp_ht_map_`'s debug-mode functions.

6.161 `debug_fn_imps.hpp` File Reference

6.161.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

6.162 `debug_fn_imps.hpp` File Reference

6.162.1 Detailed Description

Contains implementations of `cc_ht_map_`'s debug-mode functions.

6.163 `debug_fn_imps.hpp` File Reference

6.163.1 Detailed Description

Contains an implementation class for `ov_tree_`.

6.164 `debug_fn_imps.hpp` File Reference

6.164.1 Detailed Description

Contains an implementation class for a pairing heap.

6.165 `debug_fn_imps.hpp` File Reference

6.165.1 Detailed Description

Contains an implementation class for `pat_trie_`.

6.166 `debug_fn_imps.hpp` File Reference

6.166.1 Detailed Description

Contains an implementation for `rb_tree_`.

6.167 `debug_fn_imps.hpp` File Reference

6.167.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

6.168 `debug_fn_imps.hpp` File Reference

6.168.1 Detailed Description

Contains an implementation class for `splay_tree_`.

6.169 `debug_fn_imps.hpp` File Reference

6.169.1 Detailed Description

Contains an implementation for `thin_heap_`.

6.170 `debug_map_base.hpp` File Reference

6.170.1 Detailed Description

Contains a debug-mode base for all maps.

6.171 `debug_no_store_hash_fn_imps.hpp` File Reference

6.171.1 Detailed Description

Contains implementations of `cc_ht_map_'s` debug-mode functions.

6.172 `debug_no_store_hash_fn_imps.hpp` File Reference

6.172.1 Detailed Description

Contains implementations of `gp_ht_map_'s` debug-mode functions.

6.173 `debug_store_hash_fn_imps.hpp` File Reference

6.173.1 Detailed Description

Contains implementations of `cc_ht_map_'s` debug-mode functions.

6.174 `debug_store_hash_fn_imps.hpp` File Reference

6.174.1 Detailed Description

Contains implementations of `gp_ht_map_'s` debug-mode functions.

6.175 `decimal` File Reference

6.175.1 Detailed Description

This is a Standard C++ Library header.

6.176 deque File Reference

Macros

- `#define _GLIBCXX_DEQUE`

6.176.1 Detailed Description

This is a Standard C++ Library header.

6.177 deque File Reference

Classes

- class `std::__debug::deque< _Tp, _Allocator >`

Namespaces

- `std`
- `std::__debug`

Macros

- `#define _GLIBCXX_DEBUG_DEQUE`

Functions

- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator!= (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator< (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator<= (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator== (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator> (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`bool std::__debug::operator>= (const deque< _Tp, _Alloc > &__lhs, const deque< _Tp, _Alloc > &__rhs)`
- `template<typename _Tp, typename _Alloc >`
`void std::__debug::swap (deque< _Tp, _Alloc > &__lhs, deque< _Tp, _Alloc > &__rhs) noexcept(/*conditional */)`

6.177.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.178 deque File Reference

Classes

- class [std::__profile::deque<_Tp, _Allocator >](#)

Namespaces

- [std](#)
- [std::__profile](#)

Macros

- struct [__gnu_pbds::detail::entry_cmp<_VTp, Cmp_Fn, _Alloc, true >](#)

Namespaces

- [__gnu_pbds](#)

6.187.1 Detailed Description

Contains an implementation class for a `binary_heap`.

6.188 `entry_list_fn_imps.hpp` File Reference

6.188.1 Detailed Description

Contains implementations of `cc_ht_map_`'s entry-list related functions.

6.189 `entry_metadata_base.hpp` File Reference

Namespaces

- [__gnu_pbds](#)

6.189.1 Detailed Description

Contains an implementation for a list update map.

6.190 `entry_pred.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::entry_pred<_VTp, Pred, _Alloc, No_Throw >](#)
- struct [__gnu_pbds::detail::entry_pred<_VTp, Pred, _Alloc, false >](#)
- struct [__gnu_pbds::detail::entry_pred<_VTp, Pred, _Alloc, true >](#)

Namespaces

- [__gnu_pbds](#)

6.190.1 Detailed Description

Contains an implementation class for a `binary_heap`.

6.191 `eq_by_less.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::eq_by_less< Key, Cmp_Fn >](#)

Namespaces

- [__gnu_pbds](#)

6.191.1 Detailed Description

Contains an equivalence function.

6.192 `equally_split.h` File Reference

Namespaces

- [__gnu_parallel](#)

Functions

- template<typename `_DifferenceType` , typename `_OutputIterator` >
`_OutputIterator` [__gnu_parallel::__equally_split](#) (`_DifferenceType` `__n`, `_ThreadIndex` `__num_threads`, `_OutputIterator` `__s`)
- template<typename `_DifferenceType` >
`_DifferenceType` [__gnu_parallel::__equally_split_point](#) (`_DifferenceType` `__n`, `_ThreadIndex` `__num_threads`, `_ThreadIndex` `__thread_no`)

6.192.1 Detailed Description

This file is a GNU parallel extension to the Standard C++ Library.

6.193 erase_fn_imps.hpp File Reference**6.193.1 Detailed Description**

Contains an implementation class for a binary_heap.

6.194 erase_fn_imps.hpp File Reference**6.194.1 Detailed Description**

Contains an implementation class for a base of binomial heaps.

6.195 erase_fn_imps.hpp File Reference**6.195.1 Detailed Description**

Contains an implementation class for bin_search_tree_.

6.196 erase_fn_imps.hpp File Reference**6.196.1 Detailed Description**

Contains implementations of cc_ht_map_'s erase related functions.

6.197 erase_fn_imps.hpp File Reference**6.197.1 Detailed Description**

Contains implementations of gp_ht_map_'s erase related functions.

6.198 erase_fn_imps.hpp File Reference**6.198.1 Detailed Description**

Contains an implementation class for left_child_next_sibling_heap_.

6.199 erase_fn_imps.hpp File Reference

6.199.1 Detailed Description

Contains implementations of lu_map_.

6.200 erase_fn_imps.hpp File Reference

6.200.1 Detailed Description

Contains an implementation class for ov_tree_.

6.201 erase_fn_imps.hpp File Reference

6.201.1 Detailed Description

Contains an implementation class for a pairing heap.

6.202 erase_fn_imps.hpp File Reference

6.202.1 Detailed Description

Contains an implementation class for pat_trie.

6.203 erase_fn_imps.hpp File Reference

6.203.1 Detailed Description

Contains an implementation for rb_tree_.

6.204 erase_fn_imps.hpp File Reference

6.204.1 Detailed Description

Contains an implementation for rc_binomial_heap_.

6.205 `erase_fn_imps.hpp` File Reference

6.205.1 Detailed Description

Contains an implementation class for `splay_tree_`.

6.206 `erase_fn_imps.hpp` File Reference

6.206.1 Detailed Description

Contains an implementation for `thin_heap_`.

6.207 `erase_if.h` File Reference

Namespaces

6.219.1 Detailed Description

Defines on whether to include algorithm variants.

Less variants reduce executable size and compile time. This file is a GNU parallel extension to the Standard C++ Library.

6.219.2 Macro Definition Documentation

6.219.2.1 [#define _GLIBCXX_BAL_QUICKSORT](#)

Include parallel dynamically load-balanced quicksort.

See also

[__gnu_parallel::_Settings::sort_algorithm](#)

Definition at line 55 of file features.h.

6.219.2.2 `#define _GLIBCXX_FIND_CONSTANT_SIZE_BLOCKS`

Include the equal-sized blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 67 of file `features.h`.

6.219.2.3 `#define _GLIBCXX_FIND_EQUAL_SPLIT`

Include the equal splitting variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 74 of file `features.h`.

6.219.2.4 `#define _GLIBCXX_FIND_GROWING_BLOCKS`

Include the growing blocks variant for `std::find`.

See also

`__gnu_parallel::_Settings::find_algorithm`

Definition at line 61 of file `features.h`.

6.219.2.5 `#define _GLIBCXX_MERGESORT`

Include parallel multi-way mergesort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 41 of file `features.h`.

6.219.2.6 `#define _GLIBCXX_QUICKSORT`

Include parallel unbalanced quicksort.

See also

`__gnu_parallel::_Settings::sort_algorithm`

Definition at line 48 of file `features.h`.

6.219.2.7 `#define _GLIBCXX_TREE_DYNAMIC_BALANCING`

Include the dynamic balancing variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 91 of file `features.h`.

6.219.2.8 `#define _GLIBCXX_TREE_FULL_COPY`

In order to sort the input sequence of `_Rb_tree::insert_unique(_Iter beg, _Iter __end)` a full copy of the input elements is done.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 100 of file `features.h`.

6.219.2.9 `#define _GLIBCXX_TREE_INITIAL_SPLITTING`

Include the initial splitting variant for `_Rb_tree::insert_unique(_Iter beg, _Iter __end)`.

See also

`__gnu_parallel::_Rb_tree`

Definition at line 83 of file `features.h`.

6.220 `fenv.h` File Reference

6.220.1 Detailed Description

This is a Standard C++ Library header.

6.221 `filesystem` File Reference

Namespaces

- [std](#)

Macros

- `#define __cpp_lib_experimental_filesystem`

6.222.1 Detailed Description

Parallel implementation base for `std::find()`, `std::equal()` and related functions. This file is a GNU parallel extension to the Standard C++ Library.

6.223 find_fn_imps.hpp File Reference

6.223.1 Detailed Description

Contains an implementation class for a binary_heap.

6.224 find_fn_imps.hpp File Reference

6.224.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.225 find_fn_imps.hpp File Reference

6.225.1 Detailed Description

Contains an implementation class for bin_search_tree_.

6.226 find_fn_imps.hpp File Reference

6.226.1 Detailed Description

Contains implementations of cc_ht_map_'s find related functions.

6.227 find_fn_imps.hpp File Reference

6.227.1 Detailed Description

Contains implementations of gp_ht_map_'s find related functions.

6.228 find_fn_imps.hpp File Reference

6.228.1 Detailed Description

Contains implementations of lu_map_.

6.229 find_fn_imps.hpp File Reference

6.229.1 Detailed Description

Contains an implementation class for a pairing heap.

6.230 `find_fn_imps.hpp` File Reference

6.230.1 Detailed Description

Contains an implementation class for `pat_trie`.

6.231 `find_fn_imps.hpp` File Reference

6.231.1 Detailed Description

Contains an implementation for `rb_tree_`.

6.232 `find_fn_imps.hpp` File Reference

6.232.1 Detailed Description

Contains an implementation class for `splay_tree_`.

6.233 `find_fn_imps.hpp` File Reference

6.233.1 Detailed Description

Contains an implementation for `thin_heap_`.

6.234 `find_no_store_hash_fn_imps.hpp` File Reference

6.234.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is not stored.

6.235 `find_selectors.h` File Reference

6.249.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<experimental/filesystem>`.

6.249.2 Function Documentation

6.249.2.1 size_t std::experimental::filesystem::v1::hash_value (const path &__p) [noexcept]

Compare paths.

Referenced by `std::experimental::filesystem::v1::swap()`.

6.249.2.2 bool std::experimental::filesystem::v1::operator!= (const path &__lhs, const path &__rhs) [inline], [noexcept]

Compare paths.

Definition at line 507 of file `fs_path.h`.

6.249.2.3 path std::experimental::filesystem::v1::operator/ (const path &__lhs, const path &__rhs) [inline]

Append one path to another.

Definition at line 511 of file `fs_path.h`.

6.249.2.4 `bool std::experimental::filesystem::v1::operator< (const path & __lhs, const path & __rhs) [inline],
[noexcept]`

Compare paths.

Definition at line 487 of file fs_path.h.

6.249.2.5 `template<typename _CharT, typename _Traits > basic_ostream<_CharT, _Traits>& std::experimental::filesystem::v1::operator<< (basic_ostream<_CharT, _Traits> & __os, const path & __p)`

Write a path to a stream.

Definition at line 517 of file fs_path.h.

6.249.2.6 `bool std::experimental::filesystem::v1::operator<= (const path & __lhs, const path & __rhs) [inline],
[noexcept]`

Compare paths.

Definition at line 491 of file fs_path.h.

6.249.2.7 `bool std::experimental::filesystem::v1::operator== (const path & __lhs, const path & __rhs) [inline],
[noexcept]`

Compare paths.

Definition at line 503 of file fs_path.h.

6.249.2.8 `bool std::experimental::filesystem::v1::operator> (const path & __lhs, const path & __rhs) [inline],
[noexcept]`

Compare paths.

Definition at line 495 of file fs_path.h.

6.249.2.9 `bool std::experimental::filesystem::v1::operator>= (const path & __lhs, const path & __rhs) [inline],
[noexcept]`

Compare paths.

Definition at line 499 of file fs_path.h.

6.249.2.10 `template<typename _CharT, typename _Traits > basic_istream<_CharT, _Traits>& std::experimental::filesystem::v1::operator>> (basic_istream<_CharT, _Traits> & __is, path & __p)`

Read a path from a stream.

Definition at line 529 of file fs_path.h.

6.249.2.11 `void std::experimental::filesystem::v1::swap (path & __lhs, path & __rhs) [inline], [noexcept]`

Compare paths.

Definition at line 482 of file `fs_path.h`.

References `std::experimental::filesystem::v1::hash_value()`.

6.249.2.12 `template<typename _Source > path std::experimental::filesystem::v1::u8path (const _Source & __source) [inline]`

Compare paths.

Definition at line 542 of file `fs_path.h`.

References `std::experimental::filesystem::v1::u8path()`.

Referenced by `std::experimental::filesystem::v1::u8path()`.

6.249.2.13 `template<typename _InputIterator > path std::experimental::filesystem::v1::u8path (_InputIterator __first, _InputIterator __last) [inline]`

Compare paths.

Definition at line 554 of file `fs_path.h`.

References `std::basic_string< _CharT, _Traits, _Alloc >::data()`, `std::basic_string< _CharT, _Traits, _Alloc >::size()`, and `std::experimental::filesystem::v1::u8path()`.

- `template<typename _Fn >`
`auto std::experimental::fundamentals_v2::not_fn (_Fn &&__fn) noexcept(std::is_nothrow_constructible< std::decay_t< _Fn >, _Fn && >::value)`

Variables

- `template<typename _Tp >`
`constexpr bool std::experimental::fundamentals_v1::is_bind_expression_v`
- `template<typename _Tp >`
`constexpr int std::experimental::fundamentals_v1::is_placeholder_v`

6.255.1 Detailed Description

This is a TS C++ Library header.

6.255.2 Function Documentation

- 6.255.2.1 `template<typename _RAIter, typename _Hash = std::hash<typename std::iterator_traits<_RAIter>::value_type>, typename _BinaryPredicate = equal_to<>>> boyer_moore_horspool_searcher<_RAIter, _Hash, _BinaryPredicate>`
`std::experimental::fundamentals_v1::make_boyer_moore_horspool_searcher (_RAIter __pat_first, _RAIter __pat_last, _Hash __hf=_Hash(), _BinaryPredicate __pred=_BinaryPredicate()) [inline]`

Generator function for boyer_moore_horspool_searcher.

Definition at line 311 of file experimental/functional.

- 6.255.2.2 `template<typename _RAIter, typename _Hash = std::hash<typename std::iterator_traits<_RAIter>::value_type>, typename _BinaryPredicate = equal_to<>>> boyer_moore_searcher<_RAIter, _Hash, _BinaryPredicate>`
`std::experimental::fundamentals_v1::make_boyer_moore_searcher (_RAIter __pat_first, _RAIter __pat_last, _Hash __hf=_Hash(), _BinaryPredicate __pred=_BinaryPredicate()) [inline]`

Generator function for boyer_moore_searcher.

Definition at line 301 of file experimental/functional.

6.255.2.3 `template<typename _ForwardIterator, typename _BinaryPredicate = std::equal_to<>> default_searcher<_ForwardIterator, _BinaryPredicate> std::experimental::fundamentals_v1::make_default_searcher (_ForwardIterator __pat_first, _ForwardIterator __pat_last, _BinaryPredicate __pred = _BinaryPredicate()) [inline]`

Generator function for `default_searcher`.

Definition at line 291 of file `experimental/functional`.

6.255.2.4 `template<typename _Fn > auto std::experimental::fundamentals_v2::not_fn (_Fn && __fn) [inline], [noexcept]`

[func.not_fn] Function template `not_fn`

Definition at line 430 of file `experimental/functional`.

6.255.3 Variable Documentation

6.255.3.1 `template<typename _Tp > constexpr bool std::experimental::fundamentals_v1::is_bind_expression_v`

Variable template for `std::is_bind_expression`.

Definition at line 62 of file `experimental/functional`.

6.255.3.2 `template<typename _Tp > constexpr int std::experimental::fundamentals_v1::is_placeholder_v`

Variable template for `std::is_placeholder`.

Definition at line 66 of file `experimental/functional`.

6.288.1 Detailed Description

This is a Standard C++ Library header.

6.289 insert_fn_imps.hpp File Reference

6.289.1 Detailed Description

Contains an implementation class for a binary_heap.

6.290 insert_fn_imps.hpp File Reference

6.290.1 Detailed Description

Contains an implementation class for a base of binomial heaps.

6.291 insert_fn_imps.hpp File Reference

6.291.1 Detailed Description

Contains an implementation class for bin_search_tree_.

6.292 insert_fn_imps.hpp File Reference

6.292.1 Detailed Description

Contains implementations of cc_ht_map_'s insert related functions.

6.293 insert_fn_imps.hpp File Reference

6.293.1 Detailed Description

Contains implementations of gp_ht_map_'s insert related functions.

6.294 insert_fn_imps.hpp File Reference

6.294.1 Detailed Description

Contains an implementation class for left_child_next_sibling_heap_.

6.295 insert_fn_imps.hpp File Reference**6.295.1 Detailed Description**

Contains implementations of lu_map_.

6.296 insert_fn_imps.hpp File Reference**6.296.1 Detailed Description**

Contains an implementation class for ov_tree_.

6.297 insert_fn_imps.hpp File Reference**6.297.1 Detailed Description**

Contains an implementation class for a pairing heap.

6.298 insert_fn_imps.hpp File Reference**6.298.1 Detailed Description**

Contains an implementation for rb_tree_.

6.299 insert_fn_imps.hpp File Reference**6.299.1 Detailed Description**

Contains an implementation for rc_binomial_heap_.

6.300 insert_fn_imps.hpp File Reference**6.300.1 Detailed Description**

Contains an implementation class for splay_tree_.

6.301 `insert_fn_imps.hpp` File Reference

6.301.1 Detailed Description

Contains an implementation for `thin_heap_`.

6.302 `insert_join_fn_imps.hpp` File Reference

6.302.1 Detailed Description

Contains an implementation class for `pat_trie`.

6.303 `insert_no_store_hash_fn_imps.hpp` File Reference

6.303.1 Detailed Description

Contains implementations of `cc_ht_map_`'s insert related functions, when the hash value is not stored.

6.304 `insert_no_store_hash_fn_imps.hpp` File Reference

6.304.1 Detailed Description

Contains implementations of `gp_ht_map_`'s insert related functions, when the hash value is not stored.

6.305 `insert_store_hash_fn_imps.hpp` File Reference

6.305.1 Detailed Description

Contains implementations of `cc_ht_map_`'s insert related functions, when the hash value is stored.

6.306 `insert_store_hash_fn_imps.hpp` File Reference

6.306.1 Detailed Description

Contains implementations of `gp_ht_map_`'s find related functions, when the hash value is stored.

6.307 `iomanip` File Reference

6.310.1 Detailed Description

This is a Standard C++ Library header.

6.311 iostream File Reference

Namespaces

- [std](#)

Macros

- `#define _GLIBCXX_IOSTREAM`

Variables

- static `ios_base::Init` [std::__ioinit](#)

Standard Stream Objects

The `<iostream>` header declares the eight standard stream objects. For other declarations, see <http://gcc.gnu.org/onlinedocs/libstdc++/manual/io.html> and the [I/O forward declarations](#)

They are required by default to cooperate with the global C library's `FILE` streams, and to be available during program startup and termination. For more information, see the section of the manual linked to above.

- `istream` [std::cin](#)
- `ostream` [std::cout](#)
- `ostream` [std::cerr](#)
- `ostream` [std::clog](#)
- `wistream` [std::wcin](#)
- `wostream` [std::wcout](#)
- `wostream` [std::wcerr](#)
- `wostream` [std::wclog](#)

6.311.1 Detailed Description

6.351.1 Detailed Description

This file is a GNU debug extension to the Standard C++ Library.

6.351.2 Macro Definition Documentation

6.351.2.1 `#define __glibcxx_check_erase(_Position)`

Verify that we can erase the element referenced by the iterator `_Position`. We can erase the element if the `_Position` iterator is dereferenceable and references this sequence.

Definition at line 145 of file macros.h.

6.351.2.2 `#define __glibcxx_check_erase_after(_Position)`

Verify that we can erase the element after the iterator `_Position`. We can erase the element if the `_Position` iterator is before a dereferenceable one and references this sequence.

Definition at line 159 of file macros.h.

6.351.2.3 `#define __glibcxx_check_erase_range(_First, _Last)`

Verify that we can erase the elements in the iterator range `[_First, _Last)`. We can erase the elements if `[_First, _Last)` is a valid iterator range within this sequence.

Definition at line 173 of file macros.h.

6.351.2.4 `#define __glibcxx_check_erase_range_after(_First, _Last)`

Verify that we can erase the elements in the iterator range `(_First, _Last)`. We can erase the elements if `(_First, _Last)` is a valid iterator range within this sequence.

Definition at line 185 of file macros.h.

6.351.2.5 `#define __glibcxx_check_heap_pred(_First, _Last, _Pred)`

Verify that the iterator range `[_First, _Last)` is a heap w.r.t. the predicate `_Pred`.

Definition at line 335 of file macros.h.

6.351.2.6 `#define __glibcxx_check_insert(_Position)`

Verify that we can insert into `*this` with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular, either dereferenceable or past-the-end, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

Definition at line 79 of file macros.h.

6.351.2.7 `#define __glibcxx_check_insert_after(_Position)`

Verify that we can insert into `*this` after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular, either dereferenceable or before-begin, and that it reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the iterator is a `_Safe_iterator`.

Definition at line 96 of file `macros.h`.

6.351.2.8 `#define __glibcxx_check_insert_range(_Position, _First, _Last, _Dist)`

Verify that we can insert the values in the iterator range `[_First, _Last)` into `*this` with the iterator `_Position`. Insertion into a container at a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

Definition at line 113 of file `macros.h`.

6.351.2.9 `#define __glibcxx_check_insert_range_after(_Position, _First, _Last, _Dist)`

Verify that we can insert the values in the iterator range `[_First, _Last)` into `*this` after the iterator `_Position`. Insertion into a container after a specific position requires that the iterator be nonsingular (i.e., either dereferenceable or past-the-end), that it reference the sequence we are inserting into, and that the iterator range `[_First, _Last)` is a valid (possibly empty) range which does not reference the sequence we are inserting into. Note that this macro is only valid when the container is a `_Safe_sequence` and the `_Position` iterator is a `_Safe_iterator`.

Definition at line 132 of file `macros.h`.

6.351.2.10 `#define __glibcxx_check_partitioned_lower(_First, _Last, _Value)`

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value`.

Definition at line 279 of file `macros.h`.

6.351.2.11 `#define __glibcxx_check_partitioned_lower_pred(_First, _Last, _Value, _Pred)`

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

Definition at line 301 of file `macros.h`.

6.351.2.12 `#define __glibcxx_check_partitioned_upper_pred(_First, _Last, _Value, _Pred)`

Verify that the iterator range `[_First, _Last)` is partitioned w.r.t. the value `_Value` and predicate `_Pred`.

Definition at line 314 of file `macros.h`.

6.351.2.13 `#define __glibcxx_check_sorted_pred(_First, _Last, _Pred)`

Verify that the iterator range `[_First, _Last)` is sorted by the predicate `_Pred`.

Definition at line 245 of file `macros.h`.

6.351.2.14 `#define _GLIBCXX_DEBUG_VERIFY_AT(_Condition, _ErrorMessage, _File, _Line)`

Macros used by the implementation to verify certain properties. These macros may only be used directly by the debug wrappers. Note that these are macros (instead of the more obviously *correct* choice of making them functions) because we need line and file information at the call site, to minimize the distance between the user error and where the error is reported.

Definition at line 41 of file `macros.h`.

6.377.1 Detailed Description

Implementation of sequential and parallel multiway merge.

Explanations on the high-speed merging routines in the appendix of

P. Sanders. Fast priority queues for cached memory. ACM Journal of Experimental Algorithmics, 5, 2000.

This file is a GNU parallel extension to the Standard C++ Library.

6.377.2 Macro Definition Documentation

6.377.2.1 `#define _GLIBCXX_PARALLEL_LENGTH(__s)`

Length of a sequence described by a pair of iterators.

Definition at line 54 of file `multiway_merge.h`.

Referenced by `__gnu_parallel::__sequential_multiway_merge()`, `__gnu_parallel::multiway_merge_exact_splitting()`, `__gnu_parallel::multiway_merge_loser_tree()`, `__gnu_parallel::multiway_merge_sampling_splitting()`, and `__gnu_parallel::parallel_multiway_merge()`.

6.381.1 Detailed Description

This is a Standard C++ Library header.

The header `new` defines several functions to manage dynamic memory and handling memory allocation errors; see http://gcc.gnu.org/onlinedocs/libstdc++/18_support/howto.html#4 for more.

6.381.2 Function Documentation

6.381.2.1 `void operator delete (void *) [nothrow]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.2 `void operator delete (void *, const std::nothrow_t &) [nothrow]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.3 `void operator delete (void *, void *) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 152 of file `new`.

6.381.2.4 `void operator delete[] (void *) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.5 `void operator delete[] (void *, const std::nothrow_t &) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.6 `void operator delete[] (void *, void *) [inline], [nothrow]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 153 of file `new`.

6.381.2.7 `void* operator new (std::size_t)`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.8 `void* operator new (std::size_t, const std::nothrow_t &) [nothrow]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.9 `void* operator new (std::size_t, void * __p) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 146 of file `new`.

6.381.2.10 `void* operator new[] (std::size_t)`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.11 `void* operator new[] (std::size_t, const std::nothrow_t &) [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

6.381.2.12 `void* operator new[](std::size_t, void *__p) [inline], [noexcept]`

These are replaceable signatures:

- normal single new and delete (no arguments, throw `bad_alloc` on error)
- normal array new and delete (same)
- `nothrow` single new and delete (take a `nothrow` argument, return `NULL` on error)
- `nothrow` array new and delete (same)

Placement new and delete signatures (take a memory address argument, does nothing) may not be replaced by a user's program.

Definition at line 148 of file `new`.

6.393.1 Detailed Description

Parallel STL function calls corresponding to `stl_numeric.h`. The functions defined here mainly do case switches and call the actual parallelized versions in other files. Inlining policy: Functions that basically only contain one function call, are declared inline. This file is a GNU parallel extension to the Standard C++ Library.

`type __n)`

6.439.1 Detailed Description

Algorithms used by the profile extension.

This file is needed to avoid including `<algorithm>` or `<bits/stl_algo.h>`. Including those files would result in recursive includes. These implementations are oversimplified. In general, efficiency may be sacrificed to minimize maintenance overhead.

6.440 profiler_container_size.h File Reference

6.533.1 Detailed Description

Parallel implementations of set operations for random-access iterators. This file is a GNU parallel extension to the Standard C++ Library.

6.534 settings.h File Reference

Classes

- `struct __gnu_parallel::Settings`

Namespaces

- `__gnu_parallel`

Macros

- `#define GLIBCXX_PARALLEL_CONDITION(__c)`

6.534.1 Detailed Description

Runtime settings and tuning parameters, heuristics to decide whether to use parallelized algorithms. This file is a GNU parallel extension to the Standard C++ Library.

6.534.2 parallelization_decision

The decision whether to run an algorithm in parallel.

There are several ways the user can switch on and __off the parallel execution of an algorithm, both at compile- and run-time.

Only sequential execution can be forced at compile-time. This reduces code size and protects code parts that have non-thread-safe side effects.

Ultimately, forcing parallel execution at compile-time makes sense. Often, the sequential algorithm implementation is used as a subroutine, so no reduction in code size can be achieved. Also, the machine the program is run on might have only one processor core, so to avoid overhead, the algorithm is executed sequentially.

To force sequential execution of an algorithm ultimately at compile-time, the user must add the tag `gnu_parallel↵::sequential_tag()` to the end of the parameter list, e. g.

```
std::sort(__v.begin(), __v.end(), __gnu_parallel::sequential_tag());
```

This is compatible with all overloaded algorithm variants. No additional code will be instantiated, at all. The same holds for most algorithm calls with iterators not providing random access.

If the algorithm call is not forced to be executed sequentially at compile-time, the decision is made at run-time. The global variable `__gnu_parallel::_Settings::algorithm_strategy` is checked. `_`It is a tristate variable corresponding to:

a. `force_sequential`, meaning the sequential algorithm is executed. b. `force_parallel`, meaning the parallel algorithm is executed. c. `heuristic`

For heuristic, the parallel algorithm implementation is called only if the input size is sufficiently large. For most algorithms, the input size is the (combined) length of the input sequence(`_s`). The threshold can be set by the user, individually for each algorithm. The according variables are called `gnu_parallel::_Settings::[algorithm]_minimal_n`.

For some of the algorithms, there are even more tuning options, e. g. the ability to choose from multiple algorithm variants. See below for details.

6.534.3 Macro Definition Documentation

6.534.3.1 `#define GLIBCXX_PARALLEL_CONDITION(__c)`

Determine at compile(?) -time if the parallel variant of an algorithm should be called.

Parameters

<code>__↵</code>	A condition that is convertible to bool that is overruled by <code>__gnu_parallel::_Settings::algorithm_strategy</code> .
<code>_c</code>	Usually a decision based on the input size.

Definition at line 95 of file settings.h.

Referenced by `__gnu_parallel::multiway_merge()`, and `__gnu_parallel::multiway_merge_sentinels()`.

- `#define PB_DS_S_TREE_NAME`

6.546.1 Detailed Description

Contains an implementation class for splay trees.

6.547 `split_fn_imps.hpp` File Reference

6.547.1 Detailed Description

Contains an implementation class for `pat_trie`.

6.548 split_join_fn_imps.hpp File Reference**6.548.1 Detailed Description**

Contains an implementation class for a binary_heap.

6.549 split_join_fn_imps.hpp File Reference**6.549.1 Detailed Description**

Contains an implementation class for a base of binomial heaps.

6.550 split_join_fn_imps.hpp File Reference**6.550.1 Detailed Description**

Contains an implementation class for bin_search_tree_.

6.551 split_join_fn_imps.hpp File Reference**6.551.1 Detailed Description**

Contains an implementation class for ov_tree_.

6.552 split_join_fn_imps.hpp File Reference**6.552.1 Detailed Description**

Contains an implementation class for a pairing heap.

6.553 split_join_fn_imps.hpp File Reference**6.553.1 Detailed Description**

Contains an implementation for rb_tree_.

6.554 `split_join_fn_imps.hpp` File Reference

6.554.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

6.555 `split_join_fn_imps.hpp` File Reference

6.555.1 Detailed Description

Contains an implementation class for `splay_tree_`.

6.556 `split_join_fn_imps.hpp` File Reference

6.556.1 Detailed Description

Contains an implementation for `thin_heap_`.

6.557 `sso_string_base.h` File Reference

6.569.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<algorithm>`.

6.569.2 Function Documentation

6.569.2.1 `template<typename _ForwardIterator > _ForwardIterator std::_V2::__rotate (_ForwardIterator __first, _ForwardIterator __middle, _ForwardIterator __last, forward_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1246 of file `stl_algo.h`.

References `std::_V2::__rotate()`, and `std::iter_swap()`.

Referenced by `std::_V2::__rotate()`.

6.569.2.2 `template<typename _BidirectionalIterator > _BidirectionalIterator std::_V2::__rotate (_BidirectionalIterator __first, _BidirectionalIterator __middle, _BidirectionalIterator __last, bidirectional_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1287 of file `stl_algo.h`.

References `std::__reverse()`, `std::_V2::__rotate()`, and `std::iter_swap()`.

6.569.2.3 `template<typename _RandomAccessIterator > _RandomAccessIterator std::_V2::__rotate (_RandomAccessIterator __first, _RandomAccessIterator __middle, _RandomAccessIterator __last, random_access_iterator_tag)`

This is a helper function for the rotate algorithm.

Definition at line 1325 of file `stl_algo.h`.

References `std::_V2::__rotate()`, `std::iter_swap()`, and `std::swap_ranges()`.

6.570 `stl_algobase.h` File Reference

6.573.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<deque>`.

6.573.2 Macro Definition Documentation

6.573.2.1 `#define _GLIBCXX_DEQUE_BUF_SIZE`

This function controls the size of memory nodes.

Parameters

<code>__size</code>	The size of an element.
---------------------	-------------------------

Returns

The number (not byte size) of elements per node.

This function started off as a compiler kludge from SGI, but seems to be a useful wrapper around a repeated constant expression. The **512** is tunable (and no other code needs to change), but no investigation has been done since inheriting the SGI code. Touch `_GLIBCXX_DEQUE_BUF_SIZE` only if you know what you are doing, however: changing it breaks the binary compatibility!!

Definition at line 85 of file `std_deque.h`.

- `template<class _Tp >`
`bool std::rel_ops::operator>= (const _Tp &__x, const _Tp &__y)`

6.588.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<utility>`.

Inclusion of this file has been removed from all of the other STL headers for safety reasons, except `std_`↵
`utility.h`. For more information, see the thread of about twenty messages starting with <http://gcc.gnu.org/ml/libstdc++/2001-01/msg00223.html>, or [http://gcc.gnu.org/onlinedocs/libstdc++/faq.](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads)↵
[html#faq.ambiguous_overloads](http://gcc.gnu.org/onlinedocs/libstdc++/faq.html#faq.ambiguous_overloads)

Short summary: the `rel_ops` operators should be avoided for the present.

6.615.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains two exception-generating types (throw_value, throw_allocator) intended to be used as value and allocator types while testing exception safety in templated containers and algorithms. The allocator has additional log and debug features. The exception generated is of type forced_exception_error.

6.616 time_members.h File Reference

Namespaces

- [std](#)

6.616.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<locale>`.

6.617 `trace_fn_imps.hpp` File Reference

6.617.1 Detailed Description

Contains an implementation class for a `binary_heap`.

6.618 `trace_fn_imps.hpp` File Reference

6.618.1 Detailed Description

Contains implementations of `cc_ht_map_`'s trace-mode functions.

6.619 `trace_fn_imps.hpp` File Reference

6.619.1 Detailed Description

Contains implementations of `gp_ht_map_`'s trace-mode functions.

6.620 `trace_fn_imps.hpp` File Reference

6.620.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

6.621 `trace_fn_imps.hpp` File Reference

6.621.1 Detailed Description

Contains implementations of `lu_map_`.

6.622 `trace_fn_imps.hpp` File Reference

6.622.1 Detailed Description

Contains an implementation class for `pat_trie_`.

6.623 `trace_fn_imps.hpp` File Reference

6.623.1 Detailed Description

Contains an implementation for `rc_binomial_heap_`.

6.624 `trace_fn_imps.hpp` File Reference

6.624.1 Detailed Description

Contains an implementation class for `left_child_next_sibling_heap_`.

6.625 `traits.hpp` File Reference

Classes

- struct [__gnu_pbds::detail::bin_search_tree_traits< Key, Mapped, Cmp_Fn, Node_Update, Node, _Alloc >](#)

6.639.1 Detailed Description

This is a TR2 C++ Library header.

6.640 type_traits File Reference

Namespaces

- [std](#)

Macros

- `#define __cpp_lib_experimental_detect`
- `#define __cpp_lib_experimental_logical_traits`
- `#define __cpp_lib_experimental_type_trait_variable_templates`
- `#define _GLIBCXX_EXPERIMENTAL_TYPE_TRAITS`

Typedefs

- `template<typename _Default, template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::detected_or`** = `std::__detected_or< _Default, _Op, _Args... >`
- `template<typename _Default, template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::detected_or_t`** = `typename detected_or< _Default, _Op, _Args... >::type`
- `template<template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::detected_t`** = `typename std::__detector< nonesuch, void, _Op, ↵
_Args... >::type`
- `template<template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::is_detected`** = `typename std::__detector< nonesuch, void, _Op, ↵
_Args... >::value_t`
- `template<typename _To, template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::is_detected_convertible`** = `is_convertible< detected_t< _Op, ↵
_Args... >, _To >`
- `template<typename Expected, template< typename... > class _Op, typename... _Args>`
using **`std::experimental::fundamentals_v2::is_detected_exact`** = `is_same< Expected, detected_t< _Op, ↵
Args... >>`
- `template<typename... >`
using **`std::experimental::fundamentals_v2::void_t`** = `void`

Variables

- `template<typename _Tp >`
`constexpr size_t std::experimental::fundamentals_v1::alignment_of_v`
- `template<typename... _Bn>`
`constexpr bool std::experimental::fundamentals_v2::conjunction_v`
- `template<typename... _Bn>`
`constexpr bool std::experimental::fundamentals_v2::disjunction_v`
- `template<typename _Tp, unsigned _Idx = 0>`

`constexpr bool std::experimental::fundamentals_v2::negation_v`
- `template<typename _Tp >`
`constexpr size_t std::experimental::fundamentals_v1::rank_v`

6.640.1 Detailed Description

This is a TS C++ Library header.

6.641 `type_traits.h` File Reference

Namespaces

- [`__gnu_cxx`](#)

Functions

- `template<typename _Type >`
`bool __gnu_cxx::__is_null_pointer (_Type * __ptr)`
- `template<typename _Type >`
`bool __gnu_cxx::__is_null_pointer (_Type)`
- `bool __gnu_cxx::__is_null_pointer (std::nullptr_t)`

6.641.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

6.642 type_utils.hpp File Reference

Namespaces

- [__gnu_pbds](#)

Macros

- `#define PB_DS_STATIC_ASSERT(UNIQUE, E)`

Typedefs

- `typedef std::tr1::integral_constant< int, 0 > __gnu_pbds::detail::false_type`
- `typedef std::tr1::integral_constant< int, 1 > __gnu_pbds::detail::true_type`

6.642.1 Detailed Description

Contains utilities for handling types. All of these classes are based on Modern C++ by Andrei Alexandrescu.

6.643 typeindex File Reference

Classes

- struct [std::hash< _Tp >](#)
- struct [std::hash< type_index >](#)
- struct [std::type_index](#)

Namespaces

- [std](#)

Macros

- `#define _GLIBCXX_TYPEINDEX`

6.643.1 Detailed Description

This is a Standard C++ Library header.

6.644 typeinfo File Reference

Classes

- class [std::bad_cast](#)
- class [std::bad_typeid](#)
- class [std::type_info](#)

Namespaces

- [std](#)

Macros

- `#define __GXX_MERGED_TYPEINFO_NAMES`
- `#define __GXX_TYPEINFO_EQUALITY_INLINE`
- `#define _TYPEINFO`

6.644.1 Detailed Description

This is a Standard C++ Library header.

6.645 typelist.h File Reference

Namespaces

- [__gnu_cxx](#)
- [__gnu_cxx::typelist](#)

Macros

- `#define _GLIBCXX_TPELIST_CHAIN1(X0)`
- `#define _GLIBCXX_TPELIST_CHAIN10(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9)`
- `#define _GLIBCXX_TPELIST_CHAIN11(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10)`
- `#define _GLIBCXX_TPELIST_CHAIN12(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11)`
- `#define _GLIBCXX_TPELIST_CHAIN13(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12)`
- `#define _GLIBCXX_TPELIST_CHAIN14(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13)`
- `#define _GLIBCXX_TPELIST_CHAIN15(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14)`
- `#define _GLIBCXX_TPELIST_CHAIN16(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14, X15)`
- `#define _GLIBCXX_TPELIST_CHAIN17(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14, X15, X16)`
- `#define _GLIBCXX_TPELIST_CHAIN18(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14, X15, X16, X17)`

- `#define _GLIBCXX_TYPELIST_CHAIN19(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14, X15, X16, X17, X18)`
- `#define _GLIBCXX_TYPELIST_CHAIN2(X0, X1)`
- `#define _GLIBCXX_TYPELIST_CHAIN20(X0, X1, X2, X3, X4, X5, X6, X7, X8, X9, X10, X11, X12, X13, X14, X15, X16, X17, X18, X19)`
- `#define _GLIBCXX_TYPELIST_CHAIN3(X0, X1, X2)`
- `#define _GLIBCXX_TYPELIST_CHAIN4(X0, X1, X2, X3)`
- `#define _GLIBCXX_TYPELIST_CHAIN5(X0, X1, X2, X3, X4)`
- `#define _GLIBCXX_TYPELIST_CHAIN6(X0, X1, X2, X3, X4, X5)`

- `#define _GLIBCXX_TYPELIST_CHAIN9(X0, X1, X2, X3, X4, X5, X6, X7, X8)`

Functions

- `template<typename Fn, typename Typelist >`
`void __gnu_cxx::typelist::apply (Fn &, Typelist)`
- `template<typename Gn, typename Typelist >`
`void __gnu_cxx::typelist::apply_generator (Gn &, Typelist)`
- `template<typename Gn, typename TypelistT, typename TypelistV >`
`void __gnu_cxx::typelist::apply_generator (Gn &, TypelistT, TypelistV)`
- `template<typename Fn, typename Typelist >`
`void __gnu_cxx::typelist::apply_generator (Fn &fn, Typelist)`
- `template<typename Fn, typename TypelistT, typename TypelistV >`
`void __gnu_cxx::typelist::apply_generator (Fn &fn, TypelistT, TypelistV)`

6.645.1 Detailed Description

This file is a GNU extension to the Standard C++ Library.

Contains `typelist_chain` definitions. Typelists are an idea by Andrei Alexandrescu.

6.646 types.h File Reference

Namespaces

- [__gnu_parallel](#)

Typedefs

- `typedef int64_t __gnu_parallel::CASable`
- `typedef uint64_t __gnu_parallel::SequenceIndex`
- `typedef uint16_t __gnu_parallel::ThreadIndex`

Enumerations

- enum `__gnu_parallel::AlgorithmStrategy` { **heuristic**, **force_sequential**, **force_parallel** }
- enum `__gnu_parallel::FindAlgorithm` { **GROWING_BLOCKS**, **CONSTANT_SIZE_BLOCKS**, **EQUAL_SPLIT** }
- enum `__gnu_parallel::MultiwayMergeAlgorithm` { **LOSER_TREE** }
- enum `__gnu_parallel::Parallelism` {
`__gnu_parallel::sequential`, `__gnu_parallel::parallel_unbalanced`, `__gnu_parallel::parallel_balanced`, `__gnu_parallel::parallel_omp_loop`,
`__gnu_parallel::parallel_omp_loop_static`, `__gnu_parallel::parallel_taskqueue` }
- enum `__gnu_parallel::PartialSumAlgorithm` { **RECURSIVE**, **LINEAR** }
- enum `__gnu_parallel::SortAlgorithm` { **MWMS**, **QS**, **QS_BALANCED** }
- enum `__gnu_parallel::SplittingAlgorithm` { **SAMPLING**, **EXACT** }

Variables

- static const int `__gnu_parallel::_CASable_bits`
- static const `_CASable` `__gnu_parallel::_CASable_mask`

6.646.1 Detailed Description

Basic types and typedefs. This file is a GNU parallel extension to the Standard C++ Library.

6.647 `types_traits.hpp` File Reference

Classes

- struct `__gnu_pbds::detail::no_throw_copies< Key, Mapped >`
- struct `__gnu_pbds::detail::no_throw_copies< Key, null_type >`
- struct `__gnu_pbds::detail::stored_data< _Tv, _Th >`
- struct `__gnu_pbds::detail::stored_data< _Tv, null_type >`
- struct `__gnu_pbds::detail::stored_hash< _Th >`
- struct `__gnu_pbds::detail::stored_value< _Tv >`
- struct `__gnu_pbds::detail::type_base< Key, Mapped, _Alloc, Store_Hash >`
- struct `__gnu_pbds::detail::type_base< Key, Mapped, _Alloc, false >`
- struct `__gnu_pbds::detail::type_base< Key, Mapped, _Alloc, true >`
- struct `__gnu_pbds::detail::type_base< Key, null_type, _Alloc, false >`
- struct `__gnu_pbds::detail::type_base< Key, null_type, _Alloc, true >`
- struct `__gnu_pbds::detail::type_dispatch< Key, Mapped, _Alloc, Store_Hash >`
- struct `__gnu_pbds::detail::types_traits< Key, Mapped, _Alloc, Store_Hash >`

Namespaces

- `__gnu_pbds`

6.647.1 Detailed Description

Contains a traits class of types used by containers.

6.648 `uniform_int_dist.h` File Reference

Classes

- class `std::uniform_int_distribution<_IntType>`
- struct `std::uniform_int_distribution<_IntType>::param_type`

Namespaces

- `std`
- `std::__detail`

Functions

- template<typename `_Tp`>
bool `std::__detail::__Power_of_2` (`_Tp __x`)

6.648.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<random>`.

6.649 `unique_copy.h` File Reference

Namespaces

- `__gnu_parallel`

Functions

- template<typename `_Iter`, class `_OutputIterator`, class `_BinaryPredicate`>
`_OutputIterator` `__gnu_parallel::__parallel_unique_copy` (`_Iter __first`, `_Iter __last`, `_OutputIterator __result`, `__gnu_parallel::__BinaryPredicate __binary_pred`)
- template<typename `_Iter`, class `_OutputIterator`>
`_OutputIterator` `__gnu_parallel::__parallel_unique_copy` (`_Iter __first`, `_Iter __last`, `_OutputIterator __result`)

6.649.1 Detailed Description

Parallel implementations of `std::unique_copy()`. This file is a GNU parallel extension to the Standard C++ Library.

6.650 `unique_ptr.h` File Reference

Classes

- struct `std::default_delete<_Tp>`
- struct `std::default_delete<_Tp[]>`
- struct `std::hash< unique_ptr<_Tp, _Dp>>`
- class `std::unique_ptr<_Tp, _Dp>`
- class `std::unique_ptr<_Tp[], _Dp>`

Namespaces

6.666.1 Detailed Description

This is an internal header file, included by other library headers. Do not attempt to use it directly. Instead, include `<valarray>`.

6.667 valarray_array.h File Reference

6.679.1 Detailed Description

Parallelization of embarrassingly parallel execution by means of work-stealing.

Work stealing is described in

R. D. Blumofe and C. E. Leiserson. Scheduling multithreaded computations by work stealing. *Journal of the ACM*, 46(5):720–748, 1999.

This file is a GNU parallel extension to the Standard C++ Library.
